3. The problem of universals. — The above doctrine of universals considers the universal as its nature is affected by the precise relation in which the predicate can stand to the subject in a proposition; and the distinction of universals which it sets up affects the consideration of universals taken in their widest sense. The most difficult problem relating to universals—a problem still unsettled—is that concerning their existence. Do they exist only in the mind? If outside the mind, where? Are they mere names?

4. Plato and Aristotle.—

'Two things,' says Aristotle, 'may be fairly ascribed to Socrates—inductive arguments and universal definition, both of which are concerned with the starting-point of science. But Socrates did not make the universals or the definitions exist apart; his successors, however, gave them separate existence, and this was the kind of thing they called Ideas.'[5]

'They at the same time treat the Ideas as universal substances, and again as separable and individual. That this is not possible has been shown before. The reason why those who say the Ideas are universal combined those two views in one, is that they did not make the Ideas substances identical with sensible things. They thought that the sensible particulars were in a state of flux and none of them remained, but that the universal was apart from these and different. And Socrates gave the impulse to this theory, as we said before, by means of his definitions, but he did not *separate* them from the particulars; and in this he thought rightly, in not separating them.'[1]

These remarks of Aristotle are aimed at the Platonic theory of Ideas—the theory as expounded in the earlier dialogues. Whether in the later dialogues the Platonic theory undergoes a change we shall consider below. Aristotle knows of no such change. Plato's theory as conceived by Aristotle is as follows:

Plato supposed that there existed, besides the individual things of sense, which are continually changing and passing away, another kind of beings, apart from matter and movement, which he termed Forms or Ideas, by participation in which each individual and sensible thing is made to be what it is. These Ideas are eternal and self-subsistent. Material things participate in them, and are copies of the Ideas, which in themselves exist in an intelligible region apart from the world. When we, on perceiving sensible things, form general concepts, we, according to Plato, revive by reminiscence the recollection of the Ideas, with which we were familiar in a previous state. What we term a general concept is the Idea in its subjective existence as an intelligible form in our intellect. Archer Butler[2] and others have distinguished the Platonic Idea from the general concepts of the understanding; but this separation is rejected by Bonitz and Zeller.[3]

Whatever may be thought of this theory, it is remarkable that the most essential objections to it have been brought forward by Plato himself in the *Parmenides*.

'Perhaps,' says Jowett, 'there is no passage in Plato showing greater metaphysical power than that in which he assails his own theory of Ideas. The arguments are nearly, if not quite, those of Aristotle.'[4]

The difficulties—how without division or multiplication the Ideas can participate in the many, or the many in the Ideas; the necessity of a still higher universal to unite the Idea itself with its corresponding phenomena; the so-called third-man argument; most serious of all, the uselessness of Ideas for knowledge, arising from their disconnexion with our minds and with phenomena—are here set forth.

'The perplexities,' says Jowett, 'which surround the one and many in the sphere of the Ideas are also alluded to in the Philebus, and no answer is given to them. Nor have they ever been answered by any one else who separates the phenomenal from the real.'[5]

This statement may be allowed to stand, but the question arises: Did Plato separate the phenomenal and the real, or did he unite them? The answer is: He did both. 'Separation' is a category of the spatial and temporal. The Idea is spaceless and timeless,[6] yet it does not exist in total aloofness from phenomena. It is in this way that we answer the difficulties which have been raised in this connexion, and which have led to the theory of a 'later Platonism.' There is in reality no essential change. The force of these objections — perhaps derived from the Megaric school, perhaps pressed home by Aristotle—was no doubt felt by him. But what happened in this case is what in such cases always happens. The old point of view is retained and an effort is made to show that it answers the new questions. In this respect there is a striking parallel between the later philosophy of Plato and that of Fichte. Originally, in Fichte, the Ego projects from itself a purely phenomenal world. Schelling showed

that the world in its turn produces the Ego, and thus 'turned over a leaf' in the history of philosophy. The Absolute is in the world, therefore, as well as in the Ego. Fichte in his later philosophy seeks to show that his Absolute—the Ego, pure Being—is the active living power in phenomena. In the *Philebus*, *Sophist*, and *Timæus* Plato does the same. The Idea is spaceless and timeless, but nevertheless one with mind and life and power in the phenomenal world.

It is just in this that the change wrought in the philosophical standpoint by Aristotle consists. He denies the transcendent existence of the Idea or universal, and places it in the composite world of matter and form. The world thereby ceases to be merely phenomenal. Matter itself becomes something positive. It is no longer a mere negativity. The centre of gravity has passed from the ideal to the real world. Both Plato's and Aristotle's doctrines have been called realism. Both affirm the reality of the Idea or Form; but in Plato it is a reality above the world, in Aristotle in the world. Aristotle rejects the detached existence of the universal. He holds that the subjective concept is related to the objective reality, but in place of the transcendent existence of the Ideas, in contradistinction to individual objects, he regards the Essence or Form as immanent in the things. The precise nature of this immanence, in Aristotle, has been a matter of dispute. According to Hamilton,[1] he has been viewed as 'a Realist, a Conceptualist, and a Nominalist, in the strictest sense.' The questions at issue are formulated by Porphyry thus: whether genera and species do really exist in nature, or in mere conceptions only; whether, if existing, they are bodies or incorporeal; whether they are inherent in the objects of sense or disjoined from them.[2] Even though Aristotle brought down the Idea from its super-celestial sphere and embodied it in things, it still has an existence in the Divine Being, the Form of Forms. If the Divine Mind be one with things, *i.e.*, if Aristotle be interpreted pantheistically, we have still the questions as to the nature of this union—the unity and multiplicity of the Idea. If the Divine Mind be different from things—*i.e.*, if he be interpreted theistically—the Idea has a transcendent existence, if not in itself, still in the Divine Mind where the unification of the Idea lies; and what is the nature of it is the subject of the great controversy between nominalism and realism in the Middle Ages. The difficulty consists in this: that, if the universal is merely something repeated over and over again, in individuals, then genera and species fall asunder into merely resembling individuals, essential community of nature is denied; but, if such repetition be rejected, and the universal be considered as some one thing throughout the individuals, then the plurality becomes merely phenomenal and illusive. Extreme representatives of realism, like William of Champeaux, held that the universal exists for itself as a universal in individual things, and were thus led into pantheism.[3]

5. Moderate realism.—In the moderate realism of St. Thomas Aquinas we have a fusion of Aristotelian and Platonic realism. St. Augustine had already interpreted Plato's Ideas as the thoughts which God had of things before He created them. St. Thomas Aquinas admits the existence of the universal or the Form in a threefold sense, *ante rem*, *in re*, and *post rem*.[4] The universal *ante rem* corresponds to the Platonic Ideas, understood as archetypal ideas in the mind of God—the patterns in the Divine Intellect after which all things were made. With regard to the universal *in re* or *a parte rei*, the universal nature does not exist as the same in the individuals as it exists in them objectively. It is only alike in them. We, in our consideration of it, regard it as a unity or community of nature, as one and the same in all. The universal nature exists as a universal, in the human intellect, by virtue of its power of recognizing the common nature. This is the universal *post res*. But, if the universal, as universal, exists thus only in the act of recognition in the mind, we seem to be impaled on the difficulty of Parmenides, which he put to the youthful Socrates, and which is briefly this: What then is this common nature which is known by the mind? Moderate realism answers this question by its doctrine that universals are fundamentally in things. 'Universalia sunt formaliter in mente fundamentaliter in rebus ipsis.'

'To the universal nature thus fundamentally taken, it does not essentially belong, to be one or many, in the intellect or out of the intellect, in individuals or outside them, communicable to a number or incommunicable.'[1]

If we ponder on this universal, we shall not find it so very different from the timeless and spaceless Idea of the *Philebus* and *Sophistes*. At any rate, it approaches the conception by which Plato sought to allay the difficulties and doubts he himself raised in the *Parmenides*.

6. The Scotist formalism.—It was almost inevitable that this doctrine, placing at the roots of things an Essence or Form in itself subject to no individualizing conditions, should beget a new form of realism. This is precisely what did happen. Duns Scotus distinguishes carefully between the unity of an individual and the unity of a universal nature. The last he conceives almost as certain modern logicians conceive the unity of a variable in a propositional function. The universal appears in the particular individual things, but it is apprehended as universal by the understanding. In itself it is neither particular nor universal, but just what it is. It is something antecedent to universality and particularity, but, as antecedent in itself, indifferent to either.[2] This is what distinguishes the realism of Duns Scotus from the earlier realism of Bernard of Chartres or William of Champeaux, that universals are not apprehended as *actu* such in objective reality.[3] This would be to reduce them to individual unities; or, rather, numerically the same nature would pervade the individuals. In the system of Duns Scotus a primitive universal unity—matter—is progressively pluralized and individualized by form, almost as a single throb of Bergson's *élan vital* is broken into its manifold reverberations in nature. Each throb, however, is in Scotus a system of unities; and it is evident that these universals, if they are neither to be pluralized in the individuals nor consolidated into a single being in a real universal, must be conceived as passing over into the individuals, and yet as each retaining its own unity in them. This is the view that underlies the doctrine of formalism elaborated in the Scotist school. Universality is thus conceived as in the things, not by a distinction of reason, as moderate realism would hold, not by a *distinctio realis*, as extreme realism would hold, but by a formal distinction, which still allowed it to be identified with the series of individual things.

7. The realism of Francis de Mayronis.—It is obvious that such a view approaches very close to

the doctrine which regards the universal as such as existing in things, and, if we regard this universal as numerically one with the universal as contemplated by the Divine Mind, we are in danger of being led back to a pantheism such as was actually held by Bernard of Chartres. If now we are to escape such pantheistic conclusions, there is one, and only one, way of escape within the same general point of view: it is to give the universal a self-existence, as Plato did, independent of the Divine or any mind. This step was taken by the greatest of the disciples of Scotus—Francis de Mayronis. Relations are divided by Mayronis into *relationes secundum esse* and *relationes secundum dici*. The former are between things which in their entire being fall under the category of relation; the latter are between things which, taken by themselves, are absolute, but are understood with reference to something else and remain entitatively distinct from the relation into which they enter.[1] This corresponds to what has been recently called the monistic and the monadistic view of relations. To Mayronis, however, it is a classification of relations, not of theories about relation. Such relations are moreover real, not mere *relationes rationis*, and have a being distinct from the existence of the things between which they exist. The relation between the subject and object of knowledge is so distinct from its terms that it exists separately—from which it follows that ideas are veritable entities.[2] Universals in themselves therefore exist neither in the soul nor in things. They are not a something as against another something; but they are something as against nothing or as against a mere mode or manner of being. They are eternal in the negative sense of being timeless. They are not necessary, nor are they contingent. They have an intelligible being from themselves essentially distinct from God. With Duns Scotus, Mayronis distinguishes between *esse essentiæ* and *esse existentiæ*. It is the latter *esse* that comes from God. To the same kind of being—*esse essentiæ*—belongs the *primum principium complexum, i.e.* the principle of contradiction, which he regards as a hypothetical copulative proposition.[3] In all this we may see in Francis de Mayronis a mediæval 'new realist.'

8. Nominalism.—The realism of the Scotists tends towards pantheism or else to the setting up of uncreated entities independent of the Divine Mind. The only other course is to identify completely the universal with individual things, *i.e.* to give up the universal as such, to recognize only individual things—the doctrine of nominalism. It has been sometimes questioned whether mediæval nominalism is really nominalism and not rather conceptualism. With regard to the early nominalism, it is hard to put any other interpretation on the opinion attributed to Roscellinus by Anselm, that universals are *flatus vocis*. His pupil Abelard is supposed to have approached more nearly to the conceptualist standpoint. But what is cited in support of this points really the other way. Abelard bases his view on that definition of the universal which is given by Aristotle and quoted at the beginning of this article, and which is based on the proposition. What Abelard seems to mean is that the universality arises from the universal statements we are able to make, and not from anything intrinsic in the thing. This metaphysical denial implicitly carries with it the rejection of conceptualism. And the same implicit rejection must be attributed to Occam, although Hamilton says that 'the later Nominalists, of the school of Occam, were really Conceptualists.'[1] Occam's doctrine is called 'terminism.' The *conceptus* is *id quod terminat actum intelligendi*. This is not something that exists *subjectively* in the mind, but something that exists *objectively*. The universality is not therefore something in the mind, but is the result of the act of the mind by which it gives signification to the term. It is in accordance with this that he claims for understanding an intuitive knowledge of objects of sense, rejects *species sensibilis* and *species intelligibilis*, merges the *intellectus possibilis* in the *intellectus agens*.[2]

9. Modern philosophy; the psychological problem.—All the problems of modern philosophy have been set to it by mediæval philosophy. The problem of the universals is no exception. The schools of Aquinas, Scotus, and Occam present to modern philosophy a problem which had to be solved psychologically. What constitutes the community of nature between general thoughts within us and things outside us? We have seen that, metaphysically, philosophy has been driven in Occam to give up the belief in a common nature in things.

(1) *Hobbes.*—In modern philosophy we find the psychological consequence in Hobbes. The idea of a common nature in thoughts is given up. Thoughts are as individual as things. 'There is nothing,' says Hobbes, 'universal but names.'[3]

(2) *Locke.*—To Locke, on the other hand, all knowledge consists in the perception of the agreement or disagreement of ideas. Names can be general only if they stand for general ideas. Locke has been termed a nominalist. It has even been stated that he could be interpreted as a realist. But, if conceptualism means finding the universal in the idea, then Locke is what he has been generally considered, a conceptualist.

According to Locke, 'the mind makes the particular ideas received from particular objects to become general . . . by considering them as they are in the mind, such appearances, separate from all other existences, and the circumstances of real existence, as time, place, or any other concomitant ideas. This is called abstraction, whereby ideas taken from particular beings become general representations of all of the same kind, and their names general names, applicable to whatever exists conformable to such abstract ideas.'[4] 'General ideas are fictions and contrivances of the mind, that carry difficulty with them, and do not so easily offer themselves as we are apt to imagine. For example, does it not require some pains and skill to form the general idea of a triangle (which is yet none of the most abstract, comprehensive, and difficult), for it must be neither oblique nor rectangle, neither equilateral, equicrural nor scalenon; but all and none of these at once? In effect, it is something imperfect, that cannot exist; an idea wherein some parts of several different and inconsistent ideas are put together.'[5]

(3) *Berkeley.*—This doctrine Berkeley, the protagonist of modern nominalism, attacked in the Introduction to *The Principles of Human Knowledge*.

'Whether others have this wonderful faculty of abstracting their ideas, they best can tell. For myself I find indeed I have a faculty of imagining, or representing to myself, the idea of those particular things I have perceived, and of variously compounding and dividing them. I can imagine a man with two heads; or the upper parts of a man joined to the body of a horse. I can consider the hand, the eye, the nose, each by itself abstracted or separated from the rest of the body. But then whatever hand or eye I imagine, it must have some particular shape and colour. Likewise the idea of a man that I frame to myself, must be either of a white, or a black, or a tawny, a straight, or a crooked, a tall, or a low, or a middle-sized man. I cannot by any effort of thought conceive the abstract idea above described. And it is equally impossible for me to form the abstract idea of motion distinct from the body moving, and which is neither swift nor slow, curvilinear nor rectilinear; and the like may be said of all other abstract

general ideas whatsoever. To be plain, I own myself able to abstract in one sense, as when I consider some particular parts or qualities separated from others, with which, though they are united in some object, yet it is possible they may really exist without them. But I deny that I can abstract from one another, or conceive separately, those qualities which it is impossible should exist so separated; or that I can frame a general notion, by abstracting from particulars in the manner aforesaid—which last are the two proper acceptations of *abstraction*.'[1]

Berkeley explains precisely what he means by universality:

'It is, I know, a point much insisted on, that all knowledge and demonstration are about universal notions, to which I fully agree. But then it does not appear to me that those notions are formed by abstraction in the manner premised—*universality*, so far as I can comprehend, not consisting in the absolute, positive nature or conception of anything, but in the relation it bears to the particulars signified or represented by it; by virtue whereof it is that things, names, or notions, being in their own nature *particular*, are rendered universal.'[2]

In the edition of 1734 he says:

'And here it must be acknowledged that a man may *consider* a figure merely as triangular; without attending to the particular qualities of the angles or relations of the sides. *So far he may abstract.* But this will never prove that he can frame an abstract, general, inconsistent *idea* of a triangle. In like manner we may consider Peter so far forth as man, or so far forth as animal, without framing the forementioned abstract idea, either of man or of animal; inasmuch as all that is perceived is not considered.'[3]

(4) *Hume.*—Berkeley's doctrine on this subject was pronounced by Hume to be 'one of the greatest and most valuable discoveries that have been made of late years in the republic of letters,' and he believes that he himself adopts it; but Hume's view was essentially different. Berkeley had said that all general *names* signify indifferently a great number of particular ideas.'[4] Hume attributes to him the opinion 'that all general ideas are nothing but particular ones, annexed to a certain term, which gives them a more extensive signification, and makes them recall upon occasion other individuals, which are similar to them.'[5] This is Hume's own doctrine. He holds that the idea before the mind is always some particular idea. Abstract ideas are in themselves individual, but, when we have found a resemblance among several objects, we apply the same name to all. The name, being applied to other individuals, different in some respects from the idea we have first on hearing it, does not revive the idea of all these individuals, but the custom of applying the name to them and a readiness to survey any of them, which produces any other individual one for which we have occasion. It is clear that Hume differs from Berkeley in this, that he does not recognize, as Berkeley did, the power the mind has of regarding the individual idea as representing and standing for the class to which it belongs. In Hume the idea is particular, and only possesses the power in association with the name of calling up other particular ideas. The nominalist doctrine, as it appears in Berkeley and Hume respectively, determines the counter-conceptualist doctrines of Reid and Brown.

(5) *Reid.*—Reid contends that Berkeley unwillingly or unwarily grants all that is necessary to support abstract and general conceptions:

'If a man may consider a figure merely as triangular, he must have some conception of this object of his consideration; for no man can consider a thing which he does not conceive. He has a conception, therefore, of a triangular figure, merely as such. I know no more that is meant by an abstract general conception of a triangle.' 'He who considers Peter so far forth as man, or so far forth as animal, must conceive the meaning of those abstract general words *man* and *animal*, and he who conceives the meaning of them has an abstract general conception.'[6]

(6) *Brown.*—According to Brown, the feeling of resemblance in certain respects is the true general notion, or general idea, as it has been less properly called, which the corresponding general term expresses.[1] Brown holds that between the perception of two or more objects and the invention and employment of the general term there must rise in the mind an intervening general notion of resemblance, the feeling or notion of the resemblance being immediately subsequent to the perception. It is the omission of this stage of the process that constitutes in his view the error of the nominalists. Thus, as Reid regards the power of considering a figure merely as triangular, or Peter merely as man, as a proof of having the abstract and general conception, so Brown regards the circumstance of felt resemblance between two or more objects as the general notion of such objects. Brown has been criticized by Hamilton, but J. S. Mill in his *Logic* has been influenced by Brown's view.[2]

(7) *James Mill.*—James Mill held that a general idea is that of a combination of individuals belonging to the class. The word 'man' calls up the ideas of an indefinite number of individuals. The name 'man' is the name of every individual and of the whole combination.[3] This confounds general and collective terms. 'Tree' does not mean a wood.

(8) *Hamilton.*—According to Sir W. Hamilton, the opposing parties are really at one. The whole controversy arises from not distinguishing the images of sense and the unpicturable notions of intelligence. The solution depends on the distinction expressed in German by the terms *Begriff* and *Anschauung*. The images of the imagination, which were what Berkeley and the nominalists meant by ideas, are individual.[4]

If it were only this distinction that was wanting, the controversy would have ended long ago. Not to mention the schoolmen, the distinction was present to Berkeley himself.[5] The really important question is, What is the relation between thought proper or pure intellection and imagination? Is the image always necessary to the realization of the concept? Hamilton held that it was:

'The concept *horse*, I say, cannot, if it remain a concept, that is a universal attribution, be represented in imagination; but, except it be represented in imagination, it cannot be applied to any object, and, except it be so applied, it cannot be realised in thought at all.'[6]

This is what Hamilton termed the 'relativity of concepts.'

(9) *J. S. Mill.*—When this view of the relativity of the concept to the image is adopted, there is but little difference between the conceptualism of Hamilton and the nominalism of J. S. Mill.

According to Mill, 'We have only complex ideas of objects in the concrete: but we are able to attend exclusively to certain parts of the concrete idea: and by that exclusive attention, we enable those parts to determine exclusively the course of our thoughts as subsequently called up by association; and are in a condition to carry on a train of meditation or reasoning relating to those parts only, exactly as if we were able to conceive them separately from the rest.'[7]

The distinction between Hamilton's view and Mill's thus reduces itself to that of 'a potential universality as against an universal potentiality,' but in neither writer is there an attempt to account for or to show the necessity of the relativity of the concept, or, what is the same thing, the power of a partial consideration of an idea to lead out beyond it.

(10) *Mansel.*—A different view of the relation

between the concept and the image is taken by Mansel:

'I see lying on the table before me a number of shillings of the same coinage. Examined severally, the image and superscription of each is undistinguishable from that of its fellow; but in viewing them side by side, *space* is a necessary condition of my perception; and the difference of locality is sufficient to make them distinct, though similar, individuals. The same is the case with any representative image whether in a mirror, in a painting, or in the imagination waking or dreaming. It can only be depicted as occupying a certain place; and thus as an individual, and the representation of an individual. It is true I cannot say it represents this particular coin rather than that; and consequently it may be considered as the representative of all, successively but not simultaneously. To find a representative which shall embrace all at once, I must divest it of the condition of occupying space. . . . If we substitute Time for Space the same remarks will be equally applicable to the objects of our internal consciousness.'[1]

Mansel seems thus to have thought that the concept embraces all objects under it, simultaneously. But, if this were so, it would be a collective, not a general, concept. In the case selected—the shillings—the image may be regarded as identical with the concept, and this image and concept are alike indifferently representative of any shilling. As Hamilton says:

'The whole generality [of concepts] consists in this—that though we must realise them in thought under some singular of the class, we may do it under any.'[2]

(11) *Problem of the synthetic power of the concept; Hegel and Lotze.*—This, however, raises the important question of what is meant by 'realising under.' Mansel's doctrine is that the concept, to become universal, must be divested of all present relation to the image. The latter is only called in to verify its possibility. The existence of such imageless thought has been the subject of important investigation by H. J. Watt and others of the Würzburg school.[3] Without entering into the psychological inquiry, it may be pointed out that there must be some element in the concept by which it relates itself to the image and some element in the image by which it corresponds to the concept. Many are inclined to find this element in tendency or will, as that which gives vitality and meaning to the concept. It would be nearer the truth to say that will is will, and tendency is tendency, only through the concept. We have already remarked that Hamilton did not attempt to explain the relativity of the concept. It is nevertheless the underlying problem of his 'law of the conditioned' and 'conditions of the thinkable systematized.' It may be said to be the fundamental principle of Hegel's *Logic*. And it is precisely this feature of the concept as a sort of intussuscipient principle that Lotze has in view when he says:

'Of the true universal, on the other hand, which contains the rule for the entire formation of its species, it may rather be said that its content is always precisely as rich, the sum of its marks precisely as great, as that of its species themselves; only that the universal concept, the genus, contains a number of marks in a merely indefinite and even universal form; these are represented in the species by definite values or particular characterisations, and finally in the singular concept all indefiniteness vanishes, and each universal mark of the genus is replaced by one fully determined in quantity, individuality, and relation to others.'[4]

In the last chapter of the *Posterior Analytics* Aristotle asserts the existence of a faculty—the organ of primary truths, the basis of demonstrative science—by means of which reason can pierce the objects of sense and penetrate to the universal and the cause. The whole of mediæval philosophy assumes such a power. Aquinas, Scotus, Occam, all alike imply it. Modern philosophy uniformly rejects it. Empiricism expressly denies it. Idealism denies any real essences distinct from thought. But, if intellect and its laws are in correlation with, and form an organic unity with, space, if the inner essences of things and the forces which control them determine, and are determined by, spatial relations,[1] it will follow that the formulæ of physical and chemical text-books are no mere descriptive statement, no mere analytical elaboration of working concepts, but that these concepts are, as Hegel, Hamilton, and Lotze by implication describe them, concepts of entities and forms of energy which really exist, move, and are moved.

UNPARDONABLE SIN.—See SIN (Christian).

UPANIṢADS.—The Sanskrit treatises or dialogues known as the *Upaniṣads* are the expression of the philosophical speculation of Indian sages and teachers during many centuries. The period of their fullest fruition, when with most originality and insight Hindu thinkers proposed to themselves and to the circle of their pupils solutions of the world's greatest mysteries, both mental and spiritual, is supposed to have been from the 8th to the 6th cent. before our era. The *terminus a quo* is the age of the *Brāhmaṇas*; for the *Upaniṣad* literature appears as tertiary strata after the early Vedic poetry and the prose treatises of the *Brāhmaṇas* with their minute ritual and ceremonial observances. The strata perpetually overlap, and the limits suggested are to be understood only in a broad and general sense. There can be little doubt, moreover, that substantially the earliest *Upaniṣads* antedate the rise and extension of Buddhism in the 5th and following centuries. Buddhist teaching appears in the most important respects to be dependent on doctrines and premisses already formulated and expounded in the older *Upaniṣad* literature. There are many, however, and perhaps insuperable difficulties in the way of drawing up a precise genealogical scheme of doctrinal and literary development in India or for its sacred books. In their present form neither the Buddhist nor the more ancient *Upaniṣad* treatises are free from the contamination of later elements. For the majority of the *Upaniṣads* no such early origin can be claimed, although all or practically all give more or less definite expression to ancient speculative thought. Many that pass under the name are of comparatively recent date, originating in the early centuries of the Christian era. Some also are to be referred to an altogether later time.

1. **Title and date.**—With regard to the meaning and implication of the title *Upaniṣad* itself there is little or no doubt. It is derived from the

[1] See arts. SPACE, POWER.

Sanskrit root *sad*, 'to sit down,' 'to be seated,' with the prefixed prepositions *upa* and *ni*. Originally therefore it implied the sitting down at the feet of the teacher, the attitude of the pupil who respectfully listens to his master's words. In ordinary usage, however, the word is employed to express the doctrine itself which the teacher inculcates, and, finally, mystical or secret doctrine in general. It is in this sense that the *Upaniṣad* teaching is the *Vedānta*, the end (*anta*) and aim of the Veda, the substance and sum of all true wisdom; and in practice, and in all the Brāhmanical literature, the word is thus confined to the highest and most abstract teaching or knowledge, the speculative doctrines which are regarded as within the province of *śruti*, divine revelation. Its use as a title of the treatises in which the doctrines are conveyed may be compared to the Greek εὐαγγέλιον, or the English 'Gospel.'

The native Indian equivalent of *upaniṣad* is *rahasyam*, 'secret,' 'hidden.' The latter term apparently always connotes the idea of secrecy or concealment of a text or doctrine, the knowledge of which should be communicated only to those who are accounted worthy. Thus in one passage it is enjoined that the father shall teach the doctrine to his eldest son, 'but to no one else, whoever he may be.'[1] This conception of a secret or esoteric knowledge has always determined the treatment by the Hindus of their sacred writings, and in many of the sects is maintained to this day as an inviolable principle of their religion.[2]

The number of these treatises is very considerable. A late collection cites more than 100 names. And, if all works, early or late, that inculcate mystical teaching or propound special theories or doctrines concerning the unseen are to be regarded as having just claim to the title *Upaniṣad*, there would seem to be no reason why such treatises should not be indefinitely multiplied at the present time. The total number, according to Barth,[3] 'amounts to nearly 250,' including an 'Allah' *Upaniṣad*, assigned to the time of Akbar. Most of the later *Upaniṣads* are sectarian in character, and with more or less fidelity expound *Upaniṣad* doctrine from the point of view of the popular religions, exalting Viṣṇu or Śiva, or endeavouring to promote the discipline and teaching of the Yoga, or with other limited aim. Many are attached more especially to the *Atharvaveda*, and of these the majority are of comparatively late origin. The treatises quoted or referred to by Śaṅkara in the 9th cent. in his commentaries on the sacred texts are usually and no doubt correctly supposed to be the oldest. They all, however, contain earlier and later material, strata of thought or language which have been worked up and welded together, and have all undergone modification and interpolation at the hands of later teachers and revisers. These older works are few in number, and together with some of the earlier Atharvan treatises may be regarded as forming the *Upaniṣad* group of the sacred writings in the more restricted sense of the term.[4]

2. Authorship.—Of the authors of these treatises nothing is known with certainty. Many names of teachers or authorities have been preserved, and in some instances the documents themselves contain lists or genealogical tables of descent, which trace the origin of their doctrine and confirm its authority by appeal to ancient divine sanction. It is probable that for a considerable period the teaching was entirely oral, within the care and custody of the schools of learning. The names recorded, so far as they are genuine, are those of the heads of the several schools. Within these schools the doctrines taught were regarded as a sacred and secret trust. On this subject most of the older treatises contain strict and similar injunctions. In the more ancient *Upaniṣads* also the instruction is generally conveyed in the form of dialogue, the teacher replying to the questions or answering the doubts of his disciples, who seek from him an exposition of the highest knowledge or a solution of the problems and mysteries of this life and of the future after death; sometimes also, in Socratic fashion, the teacher is himself the questioner. Essentially therefore the dialogues represent and give expression to the unsatisfied longings of the human mind and heart.

3. Classification.—It is usual to classify these older treatises in three or four groups, which may be distinguished not only by the character and fullness or otherwise of their teaching, but by the style and diction which they employ, and the more or less archaic nature of their composition. It is not possible, however, to go beyond a provisional and general statement or to have much confidence in details of arrangement which may find expression in a definite scheme of chronology. As a whole the *Upaniṣad* literature is later than the *Āraṇyakas* (*q.v.*) and earlier than the condensation of philosophical rule and precept into mnemonic *Sūtras*. The internal dependence and succession set forth below is substantially that of Deussen, to whose work all students of Indian literature and philosophy are greatly indebted. On broad lines and in substance the arrangement may be accepted, at least provisionally. With our present knowledge broad and tentative conclusions only are justified. Earlier and later elements in thought and style and composition are not always separable, or capable of being assigned to their right position in the history of the texts. Some treatises, notably perhaps the *Śvetāśvatara*, which in its extant form and on general grounds is placed comparatively late in the chronological order, contain archaic elements, on which have been imposed later doctrines until the various strands of thought are almost inextricably interwoven, and the teaching presented is with difficulty reduced to self-consistency.

(1) The oldest group consists of six treatises, written in prose of an archaic style. At the head of the group are the *Bṛhadāraṇyaka* and the *Chhāndogya Upaniṣads*, which are acknowledged to be the most complete and authoritative exponents of *Upaniṣad* doctrine. The other members of the group, in the order named, are the *Taittirīya*, *Aitareya*, *Kauṣītaki*, and *Kena*. The last-named is composed partly in verse, and as regards its teaching also seems chronologically to approximate to the second group.

(2) In the second group the composition is almost entirely metrical. The oldest and most independent member of the group is the *Kaṭha* or *Kāṭhaka Upaniṣad*. There follow the *Īśā*, *Śvetāśvatara*, *Muṇḍaka*, and *Mahānārāyaṇa*. The authors of the *Īśā* and *Śvetāśvatara* are said to be directly indebted to the *Kāṭhaka* both in doctrine and in expression; and a similar mutual relation is maintained between the last three treatises on the list. In all these the leading principles of the *Upaniṣad* teaching, which in the earlier group appear to be in a formative stage and open to discussion, are apparently regarded as established doctrines.

(3) In the treatises of the third group there has been a return again to prose, but the prose is of a type distinct from that of the earlier *Upaniṣads*, and approximates to the style of the classical Sanskrit. The group consists of three members only, *Praśna*, *Maitrāyaṇīya*, and *Māṇḍūkya*. The inference with regard to their later origin is hardly disputable, and is

[1] *Chhānd.* III. xi. 5; cf. *Maitr.* vi. 29: 'this most mysterious secret shall be imparted to none who is not a son or a pupil, and who has not yet attained tranquillity.'

[2] Cf. Pr 239, Mt 76; Deussen, *Philosophy of the Upanishads*, Eng. tr., p. 10 f., who points out that in Greek philosophy the same thought recurs of a doctrine too sacred or difficult of apprehension to be allowed to become the property of all.

[3] *Religions of India*[3], Eng. tr., p. 65 *f.*

[4] The eleven *Upaniṣads* known to Śaṅkara, substantially at least in the form in which they are now extant, have been translated by Max Müller in *SBE*, vols. i. and xv. These are the *Chhāndogya*, *Kena*, *Aitareya*, *Kauṣītaki*, *Īśā* (or *Vājasaneyi*), *Kaṭha*, *Muṇḍaka*, *Taittirīya*, *Bṛhadāraṇyaka*, *Śvetāśvatara*, and *Praśna*. Renderings of these and others are available in all the principal languages of Europe and India. It is of course probable that Śaṅkara was acquainted with other treatises of *Upaniṣad* character, some of which may be among those which have been preserved; but, if so, they are now known under different names. The Sanskrit texts are published in many series, and also separately; see the 'Literature' at the end of this article.

sustained by the character of the teaching which they present.[1] Two at least of these, *Praśna* and *Māṇḍūkya*, together with the *Muṇḍaka* in group (2), are attributed to the *Atharvaveda*.

(4) By far the larger number of the *Upaniṣad* treatises are sectarian in character, or belong to the *Atharvaveda* or the systems and schools of the principal sects. For the most part they are written in prose, more rarely in verse, or in prose and verse intermingled. Their doctrine or teaching varies with the sect to which they belong. They apply *Upaniṣad* principles to sectarian ends, and to establish the religious doctrines of their several creeds. The most interesting perhaps and important are those attached to the Yoga philosophy. With not a little force they urge and maintain the fundamental doctrines of the Yoga faith. Many, but not all, of the *Upaniṣads* of this group are accessible in modern renderings. Thirty or more are usually enumerated as the oldest and most instructive: *Ātmabodha*, *Nārāyaṇa*, *Mahā* (Vaiṣṇavite); *Atharvaśiras*, *Kaivalya* (Śaivite); *Brahmavidyā*, *Jābāla*, *Āruṇeya*, *Sannyāsa*, *Yogatattva* (Yoga, or Sannyāsa), etc.

4. **Translation and interpretation.**—The difficulties of translation and interpretation of these treatises are considerable. Like the other scriptures of the Veda, the texts have certainly been preserved in the Śākhās with fidelity and accuracy from ancient times. Previous, however, to a final determination of form and limits they were evidently treated with much freedom, being revised, re-edited, interpolated, or abridged, and in general made to conform to later or individual standards of orthodoxy and belief. A considerable number of them were made accessible for the first time in a Western rendering at the beginning of the 19th cent. by Anquetil du Perron, who worked from a Persian translation in the year 1656 of a collection of 50 *Upaniṣads* known as *Oupnek'hat*.[2] The text itself is the strangest medley of Latin and Persian, with Sanskrit words transliterated or adopted, almost unintelligible without a key. As is well known, Schopenhauer (*q.v.*) regarded the publication as epoch-making in the history of Western philosophy and made it the basis of his own system.[3] Thirty years later Rāmmohun Roy, the great Indian reformer and founder of the Brāhma Samāj (*q.v.*), published English translations of several treatises. He was followed in English, French, or German by H. T. Colebrooke, E. B. Cowell, P. Regnaud, O. Böhtlingk, A. Weber, and others. The most important and satisfactory renderings are those by Max Müller in *SBE*, and by Deussen in his *Sechzig Upanishad's*. The latter contains introductions to the several treatises which are of great value.

5. **Contents and analysis.**—A brief analysis of the older and doctrinally the more significant treatises will enable a fair conception to be formed of their general scope and character. Often the *Upaniṣads* are not easy to analyse on account of the desultory nature of their style and contents. The abrupt changes of subject, the absence of any logical method or arrangement, the universal employment of metaphor are constant stumbling-blocks in the way of classification or orderly analysis. The entire treatment is suggestive rather of intimate oral instruction than of methodical exposition. There is little development of thought, nor is any attempt made to set forth a progressive and complete exposition of the truth as the authors conceive it. The most important writings are the *Bṛhadāraṇyaka* and the *Chhāndogya*.

[1] For a full statement of the reasons for the order adopted, and the mutual dependence of the several treatises, see Deussen, p. 22 ff.

[2] *Oupnek'hat* (*id est*, *Secretum tegendum*), originally published in 1801–02 in 2 vols. Each vol. contains an Introduction: *Monitum ad Lectorem*, followed by a *Dissertatio*, and a prefatory note on the Persian text on which the translation is based. The Latin rendering is succeeded by lengthy *Emendationes et Annotationes*, *Animadvertenda*, and *Supplementum*; and at the close of vol. ii. an explanation is given of the technical Sanskrit terms used in the text. See also Deussen, *Sechzig Upanishad's*, p. 830 ff.

[3] See Max Müller, in *SBE* i. p. lviii ff., who gives an example of du Perron's style from his rendering of the *Chhāndogya Upaniṣad*.

(*a*) The *Bṛhadāraṇyaka Upaniṣad* is the most interesting, as it is the richest in content, of all the *Upaniṣads*, and presents the most systematic exposition of doctrine. It is attached to the Vājasaneyin school of the *Yajurveda*, and in its present form is appended to and forms part of the *Śatapatha Brāhmaṇa*, of which, according to the Mādhyandina śākhā, it forms the last of the fourteen *kāṇḍas*, or collections, into which the *Brāhmaṇa* is divided. In the Kāṇva śākhā, or school, it is the seventeenth book. The *Upaniṣad* in its existing form is composite, and not the work of one author. It comprises six *adhyāyas*, or chapters, of which the last two are of later date and adopt a different theological and philosophical standpoint, especially, as it seems, with regard to the doctrine of transmigration. The first four *adhyāyas* are Vedāntic, and of these the earlier two exhibit the philosophic doctrine of the *ātman*, which is represented as superseding and transcending the polytheistic worship of the gods. The third and fourth chapters may be regarded as the kernel of the treatise, in which is recorded the final teaching of the *Upaniṣads* in its essential and most characteristic form. In reply to questions addressed to him Yājñavalkya with elaborate detail and subtlety expounds the metaphysical doctrine of *Brahman* or the *ātman*. If the name represents a real individuality, and is not merely a title under whose shelter many convergent thoughts and reasonings have found expression, Yājñavalkya may claim a place with the greatest thinkers of the world or of any age.

The earlier chapters of the first *adhyāya* are to a large extent occupied with symbols and fanciful plays upon words. *Mṛtyu*, or death, is at the beginning of things, and produces successively the elements, speech (*vāch*), the Vedas, sacrifice, etc. The whole is explained as intended to promote the worship of Virāj. The third chapter is the *Udgītha Brāhmaṇa*, representing under the form of a contest of the *devas* and *asuras* in song (*udgītha*) the antagonism of good and evil. The *asuras* defeat all the senses in turn, but are themselves overcome by the agency of *prāṇa*, or the breath, and victory remains with the *devas*. The passage is too long to quote, but is a good example of the allegorizing method of the *Upaniṣads*. In the fourth and following chapters various cosmological theories and processes, more or less fanciful, are set forth, concluding with the fundamental assertion of the unity of the self (*ātman*) with the triad *nāma*, *rūpa*, *karma*, or name, form, and work, as examples of which are given *vāch* (speech), *chakshus* (the eye), and *ātman*, *i.e.* the bodily or lower self. 'Thus that being a triad is one, that self (*ātman*); being one, it is that triad (*i.e.* the *ātman*); therefore is it immortal, guarded (covered) by the true. *Prāṇa* (breath) is the immortal, *nāmarūpa* (name and form) are the true; by these is the breath guarded.'

Following upon the teaching of the first *adhyāya*, the second expounds the true *vidyā*, the higher knowledge or doctrine of the *ātman*, with which the last paragraph of the first *adhyāya* seems to form a link. The first chapter, which is found in substance also in *Kaus.* iv., is remarkable in that it represents a Brāhman as seeking enlightenment from a ruler of Kṣatriya race, Ajātaśatru of Benares (Kāśī), who refutes his erroneous conceptions of the *Brahman* and makes known to him the real truth concerning the nature of the *ātman*. This representation of the dependence of a Brāhman upon Kṣatriya instruction is usually understood, and probably rightly, to be indicative of an early condition of Indian society, in which the Brāhmans did not hold the practical monopoly of all knowledge which was theirs in later times; they were equalled or surpassed by members of the warrior caste. The discussion makes free use of metaphor and simile, and many passages present difficulties of interpretation. In the first chapter Gārgya Bālāki, a Brāhman, proposes a series of definitions or identifications of the *Brahman*, which are in turn shown to be defective. Its true nature is then explained under the figure of profound slumber (*suṣupti*); the sleeper is at rest, unconscious, no longer subject to any external disturbance or influence. 'From that *ātman* all *prāṇas* (senses), all worlds, all *devas*, all creatures proceed. The secret (*upaniṣad*) therefore is "the true of the true" (*satyasya satyam*, or "the reality of the reality," *i.e.* the most essential reality). The *prāṇas* are the true, of them he (the *ātman* or *Brahman*) is the true.' . . . 'The forms of *Brahman* are two, material and immaterial, mortal and immortal, the lasting and the transient, being and other-being (*sat* and *tyad*, this and that, the real and the unreal). . . . Further, with regard to the *ātman* this is the material, which is distinct from the breath and the ether within the body (*ātman*); this is the mortal, the permanent, the *sat*. Of this material, this mortal, this permanent, this *sat*, the essence is the eye, for it is the essence of the *sat*. Breath, however, and the ether within the body are

immaterial; this is the immortal, the impermanent, the *tyad*; of this immaterial, this immortal, this impermanent, this *tyad*, the essence is the *puruṣa* (person) in the right eye; for it is the essence of the *tyad*. . . . Accordingly its significance (*ādeśa*, instruction, rule) is expressed by *neti neti* (not so, not so); for beyond this, that you say it is not so (*iti na*), there is nothing further. Its name however is "the reality of reality" (*satyasya satyam*); that is the senses (*prāṇās*) are the real, and it is their real.'[1]

The fourth chapter expounds the doctrine of the true *Brahman*, the all-comprehending and universal Self, in the form of an instruction given by Yājñavalkya, as he is about to abandon the world for the life of a recluse, to his wife Maitreyī. The narrative is repeated with unimportant variations in IV. v., and seems there to be more in place.[2]

'"If, sir, this whole earth, full of wealth, were mine, should I thereby be immortal?" "No, no," Yājñavalkya replied, "as the life of the rich would be thy life. There is no hope of immortality by wealth." And Maitreyī said: "What is the worth to me of that whereby I do not become immortal? What my lord knoweth declare to me." . . . And Yājñavalkya said: "Not indeed for the love of husband is the husband dear; but for the love of the self (*ātman*) the husband is dear. Not indeed for the love of wife is the wife dear; but for the love of the self (*ātman*) the wife is dear."'

The same formula is then repeated for sons, wealth, cattle, the Brāhman and Kṣatriya castes, the worlds, gods (*devas*), Vedas, creatures.

'Not indeed for the love of all is all dear; but for the love of the self (*ātman*) is all dear. The self indeed is to be seen, to be heard, to be perceived, to be heeded, O Maitreyī. When the self indeed has been seen, heard, perceived, known, then all this is known.

Who knows the Brāhman caste other than in the *ātman* (self) him the Brāhman caste rejects; who knows the Kṣatriya caste other than in the *ātman* him the Kṣatriya caste rejects; who knows the worlds other than in the *ātman* him the worlds reject; who knows the gods other than in the *ātman* him the gods reject; who knows the Vedas other than in the *ātman* him the Vedas reject; who knows the creatures other than in the *ātman* him the creatures reject; who knows everything other than in the *ātman* him everything rejects. This Brāhman and Kṣatriya caste, these worlds and gods, these Vedas, all these creatures, this all, it is the self (*ātman*).'

'As the sea is the meeting-place of all waters, of all contacts the skin, of all tastes the tongue, of all scents the nose, of all forms the eye, of all sounds the ear, of all thoughts the mind (*manas*), of all sciences the intellect, of all actions the hands . . . the feet of all movements, speech of all the Vedas; as a lump of salt has no within or without but consists entirely of taste, so indeed that *ātman* has no within or without but consists entirely of knowledge; having arisen from these creatures (elements), into them it again vanishes; after death there is no consciousness.'

'For where there is as it were duality there one sees the other, smells the other, tastes the other, greets the other, hears the other, perceives the other, touches the other, knows the other, but where the self (*ātman*) alone is all this, how should he see another, smell another, taste another, greet another, hear another, perceive another, touch another, know another? How should he know him whereby all this is known? He, the *ātman*, is "not so, not so" (*neti neti*); incomprehensible for he is not comprehended, indestructible for he is not destroyed, unattached for he does not attach himself; unfettered, he is not pained nor suffers harm. How then should one know the Knower?'

After a fifth chapter, in which the doctrine of *Brahman* is set forth and elaborated under the symbol of honey (*mādhu*), the *adhyāya* concludes by reciting the stem or genealogical tree (*vaṁśa*), giving in succession the names of the teachers by whom the doctrine has been transmitted, leading up to *Brahman* and Svayambhū the self-existent.

Apart from the divine or mythological origin to which the succession is traced it is impossible either to affirm or to disprove the correctness of the names given in these lists. It is sufficiently probable that the fame and names of the masters of the schools would be preserved within the schools themselves, and not likely that the lists are entirely due to imagination or invention. The presence of the records here would seem to indicate that the two *adhyāyas* once formed a separate whole, which has been more or less interpolated, and incorporated with other parts into a single treatise. A similar list, coincident with this for two-thirds of its length, is found at the close of the fourth *adhyāya*, and a different and shorter genealogical stem at the end of the *Upaniṣad*. There are variations also in the two recensions of the text.

The Yājñavalkya books, *adhyāyas* III. and IV., begin with his acceptance of a challenge by King Janaka, which none of the other Brāhmans venture to take up. In nine chapters questions on abstract and metaphysical problems touching the life after death and the nature of the self are put to him by his rivals, and by his successful dealing with these he vindicates his claim to be the wisest of all. The ninth chapter concludes with a renewed challenge on the part of Yājñavalkya to meet any questions put to him, but no one ventures to assume the rôle of questioner. The book is in general introductory, asserting the authority and predominance of the great teacher, who is to expound the ultimate truth in the dialogue of the succeeding *adhyāya*.

In the first chapter of the book King Janaka Vaideha repeats various definitions of *Brahman* that have been given to him, as speech (*vāch*), breath (*prāṇa*), sight or the eye (*chakshu*), hearing (*śrotra*), mind or will (*manas*), the heart (*hṛdaya*). Yājñavalkya has no difficulty in proving that these are imperfect explanations, useful approximations to the truth, but not the truth itself. In the second and following chapters Yājñavalkya assumes the part of instructor, still under the control, from which it is difficult or impossible to escape, of simile and metaphor. *Brahman* is the *puruṣa* in the eye, mysterious, and to be described only in negatives (*neti neti*, 'not so, not so'). The self is the true and only light, within the heart, self-illuminating and himself the light of all.

'Then is a father not a father, a mother not a mother, the worlds not worlds, the gods not gods, the Vedas not Vedas. Then a thief is not a thief . . . a mendicant not a mendicant, a hermit not a hermit; unvexed by good, unvexed by evil, he has then overpassed all the sorrows of the heart.

Though he then sees not, yet is he seeing, though he sees not; for there is no interruption of seeing for the Seer, because he is imperishable; but there is no second, no other, distinct from him, that he could see.'[1]

A similar assertion is made with regard to the senses of smell, taste, speech, hearing, thought, sensation or touch, knowledge; all designed to show that the affirmations and predicates of ordinary life are meaningless when applied to the *ātman*:

'Where there is as it were another, then would one see the other, smell the other, taste the other, address the other, hear the other, think the other, feel the other, know the other. A solitary ocean is the Seer, without a second (*advaita*); that is the Brahma-world, O King.'[2]

The fourth chapter further illustrates and explains the nature of the *ātman*, the fifth is the instruction to Maitreyī, as in II. iv., and the sixth and last chapter of the *adhyāya* gives the *vaṁśa*.

The fifth *adhyāya* opens with an invocation, asserting the twofold nature of the *Brahman*, and quotes an old authority for the saying that *Brahman* is space (*kha*, 'ether'), 'the ancient air-filled space.' There follows the well-known parable of Prajāpati and his disciples:

'The three (races of) Prajāpati's sons, gods, men, and *asuras*, lived as students with their father Prajāpati. Their period of studentship finished, the gods said: "Be pleased to tell us, sir." He said to them this syllable *Da*. "Have you understood?" he said. "We have understood," they said, "you bade us subdue ourselves (*dāmyata*)." "Yes," he said, "you have understood."

Then the men said to him: "Be pleased to tell us, sir." He said to them this same syllable *Da*. "Have you understood?" he said. "We have understood," they said, "you bade us be generous (*datta*)." "Yes," he said, "you have understood."

Then the *asuras* said to him: "Be pleased to tell us, sir." He said to them this same syllable *Da*. "Have you understood?" he said. "We have understood," they said, "you bade us be merciful (*dayadhvam*)." "Yes," he said, "you have understood."

This same divine voice, the thunder, repeats *Da Da Da*, that is, Subdue yourselves, Be generous, Be merciful. Therefore should these three be enjoined, self-restraint, generosity, mercy.'

The further chapters of the book relate for the most part to types or similes of *Brahman*, which are explained as more or less adequate representations of the truth. The most interesting is the exposition of the significance of the four feet (*pada*) of the *gāyatrī*, the sacred invocation or 'Magnificat' of the Brāhmans.[3] Each foot has a special meaning. The fourth (*turiya*) is the bright foot (*darśatam padam*), and symbolizes the bright or shining one, the sun or the *puruṣa* in the sun. The last chapter is an invocation of Āditya, or the sun, repeated in *Vājas. Up.* XV.–XVIII.

[1] *Bṛhad.* II. iii.; cf. III. ix. 26, IV. ii. 4, iv. 22, v. 15. It is difficult, perhaps impossible, to find English equivalents for the Sanskrit terms which are employed. The 'lasting' and 'transient' are from the point of view, as it were, of human appreciation, as the hills are lasting and a spiritual vision is fleeting or transient. Max Müller renders by 'solid' and 'fluid'; Deussen has 'das Stehende und das Gehende.' The negative doctrine of *neti neti* is the extreme refinement of *Upaniṣad* teaching with regard to the nature of the higher *Brahman*.

[2] Cf. also *Chhānd. Up.* VI. xiii., VII. xxiv.

[1] *Bṛhad.* IV. iii. 22 f. [2] *Ib.* 31 f.

[3] *Rigveda*, III. lxii. 10, v. lxxxii. 1; cf. VI. iii. 6.

The sixth and final *adhyāya* is *khila*, additional or supplementary.[1] It supplies little new information or teaching, and is in parts even more highly metaphorical and difficult. The usual genealogy or list of successive teachers follows, and Yājñavalkya's authority is claimed for some at least of the instruction offered.

(*b*) It is hardly necessary or worth while to follow through in similar detail the *Chhāndogya*, which shares importance with the *Bṛhadāraṇyaka* as the most ancient written source of *Upaniṣad* doctrine. It is attached to the *Sāmaveda*, and is divided into eight chapters, or *prapāṭhakas*, not all of which are parts of the original treatise. There has been combination, adaptation, and insertion; but no data are available for determining the changes that have been made or for restoring the primitive form. The additions or interpolations are probably more numerous than the losses.

The treatise is highly charged with symbolism. Meditation on the sacred syllable *Om* is enjoined, which is the essence (*rasa*) of all things, and is the *udgītha*, on which in its successive forms as *prāṇa*, *vāch*, etc., the *devas* meditate in their rivalry with the *asuras*.[2] *Om* is the immortal imperishable sound (*svara*), and is identified with *prāṇa*, *praṇava*, or the *udgītha*, to the syllables of which a symbolical interpretation is given.

(*c*) The *Kaṭha* or *Kāṭhaka Upaniṣad* is placed by Deussen at the head of his second class, the ancient metrical *Upaniṣads*. It belongs to the literature of the Black *Yajurveda*, of which the Kaṭhas formed a well-known school; and it is perhaps the best-known of the *Upaniṣads*, having been rendered into English by Rāmmohun Roy in the early part of the 19th century. Since that date many editions and translations have been published. Its historical and literary affinities are not easy to determine. Deussen finds evidence of direct dependence of the *Īśā* and *Śvetāśvatara Upaniṣads* upon the *Kāṭhaka*; and that the *Śvetāśvatara* has exercised an indirect and less powerful influence upon the two other members of the group, the *Muṇḍaka* and *Mahānārāyaṇa*. The general classification may be accepted, but the details of interrelationship are still very obscure.

The text of the *Upaniṣad* consists of two *adhyāyas* or six *vallīs*, the first three of which contain the story of Nachiketas and the three gifts which he obtained from Death, the all-knower. The fourth *vallī* is a further exposition by Death of the mystery of the *Brahman*, and a polemic against pluralism. In the fifth and sixth *vallīs* the *ātman* or *Brahman* is described under various figures or metaphors, the one Self and lord, all-comprehending, self-existent, the eternal thinker. They who discern the Self within are wise and secure to themselves eternal happiness and peace. The legend of Nachiketas is found also in the *Brāhmaṇa* of the Black *Yajurveda*,[3] and is there explanatory of a well-known religious rite. To judge from analogy, the myth was probably invented to account for the existence of a rite which bore this name, the original circumstances or foundation of which had been forgotten.

Nachiketas is the son of Vājaśravasa, a religious householder, who at the call of religion is represented as making the voluntary surrender of all his worldly possessions (*sannyāsa*) in order to provide for his spiritual interests. The name perhaps signifies 'unnoticed,' 'unobserved,' and was designed, as in many other instances, to secure that the child should be inconspicuous, and 'unobserved' by the watchful powers of evil. Vājaśravasa distributes all his goods in alms, and Nachiketas, knowing that the *sannyāsa* of the father involves the giving away of the son also, is anxious to learn his fate. His father replies that he will give him to Yama, signifying thereby that filial relations and claims have thenceforward no meaning for him, as being dead to the world. Nachiketas takes the answer literally, and goes off to the house of Yama, where he stays for three days, and in the absence of the master of the house is left without entertainment. Yama on his return is annoyed that a Brāhman guest has been thus inhospitably treated, and offers him in compensation three gifts, which he is to choose for himself. There is no difficulty with regard to the first two gifts. They are granted in full and without hesitation. For the first Nachiketas asks that the anger or indifference of his father may be overcome, and that he may be moved to kindness and consideration towards himself. The second request is for an explanation of the fire-sacrifice, the ritual of which Yama expounds, and promises that it shall henceforth bear his name, the Nachiketas rite; a knowledge of the three Nachiketas fires and rightful performance of the sacrifice will ensure for the sacrificer heaven and abiding peace. The difficulty arises with the third boon:

'When a man is dead, there is a doubt—some say He is, others He is not. This I would fain know, taught by thee. This is the third gift that I choose.'

'Hereon even the gods of old have been in doubt. Hard to understand and recondite is this subject. Choose another boon, Nachiketas; do not urge me, excuse me this.'

'True that the gods have hereon been in doubt, and thou thyself, O Death, hast acknowledged it to be hard to understand. But no teacher may be found so capable as thou; no other boon is comparable to this.'

'Choose long-lived sons and grandsons, cattle in plenty, elephants, gold, and horses; choose rich possessions on the soil, and life for thyself as many years as thou wilt.

If there is a boon equivalent in thine eyes, choose it—wealth and long life. Be lord over the wide earth, Nachiketas; I grant thee consummation of all desires.

Whatever desires are difficult to realize here below, ask according to thy will—noble maidens with their chariots and music, not to be won by men, I give them thee for service. Ask me not, Nachiketas, concerning death.'

'What profit has a man of these things, O Death, evanescent as they are, that impair the vigour of all the senses? A full life-time even is brief. Keep your chariots, dance and song.

Man's happiness consists not in wealth. Shall we grasp wealth, whensoe'er we see thee? Our life is but as long as thou dost ordain. This boon, however, alone do I choose.

Who that has had foretaste of that which perishes not nor changes, mortal and fettered here to earth, would find pleasure in a long life, when he has given due thought to beauty and indulgence and pleasure?

That, O Death, on which doubt rules here below, declare to us what will be in the great Hereafter. No other boon does Nachiketas choose than that which unlocks this mystery.'[1]

Yama is under the necessity of yielding; and he begins by congratulating Nachiketas on his preference for knowledge rather than wealth or pleasure. But it is not an easy way:

'Though anxiously sought it is not to be gained when taught by common men, and without a teacher access thereto there is none—so small that it eludes the grasp of the mind.

Reasoning will not find the way, but taught by another it is easily learnt. It is thine now; a true seeker art thou; an inquirer such as thou is to be desired.'[2]

The exposition then begins with the identification of the sacred syllable *Om* (*q.v.*) with the *Brahman*. It is one of the most commonly chosen metaphors of the *Upaniṣad* writers:

'This syllable is *Brahman*, this syllable is the Supreme; he who knows this syllable, whatever he wishes is his.'[3]

The text then sets forth in metaphysical terms the nature of the transcendent Seer (the *ātman*) and the conditions under which he may be known.

'The Seer is not born, and does not die; he has no origin and no descent. Unborn, eternal, abiding is that Ancient One. He dies not, when the body dies.

If the slayer thinks that he slays, if the slain thinks himself slain, they both are in error; there is no slayer, and no slain.

Smaller than the small, greater than the great, the Self is concealed here in the heart of the creature. Free from desire and from grief, his senses subdued,[4] a man sees the majesty of the *ātman*.

Sitting he moves far; lying he goes everywhere. That god of joy and not-joy who save myself has power to know?

Bodiless in the bodies, changeless in the changing, the wise man discerns the *ātman*, great, all-pervading, and is saved from sorrow.

Not by dissertation nor by wisdom nor by much sacred lore is that *ātman* to be gained; only by him whom he chooses is he to be gained; to him the *ātman* discovers his own being.

He who has not desisted from evil, who is restless, ill-content, whose mind is not at ease, even by knowledge cannot gain him.

Him to whom Brāhman and Kṣatriya are alike indifferent,[5] and death would be diminution,[6] who could really find?'[7]

In the third *vallī* the Self, the highest *Brahman*, is the charioteer sitting in the chariot (the body), *buddhi* (intellect) guides the car, *manas* (mind or will) is the reins, the senses are the horses, the objects of sense the road on which they run:

[1] Cf. *Chhānd. Up.* v. i. f.; *Kauṣ. Up.* II. iii., III. iii.; *Praśna Up.* II. iii.

[2] Cf. *Bṛhad. Up.* I. iii. 1 ff.

[3] III. i. 8; see *SBE* xv. p. xxi ff.; Deussen, p. 262 f.

[1] I. i. 20 ff. [2] I. ii. 8 ff. [3] *Kaṭha*, I. ii. 16.

[4] *Dhātuprasādāt*, Deussen, *gestillten Sinnendrangs*; cf. *Taitt. Ār.* x. x. 1; *Śvet. Up.* III. xx. The variant reading *dhātu: prasādāt* is followed by Max Müller, 'by the grace of the Creator' (*SBE* xv. 11; Deussen, *Sechzig Upan.* p. 274 f.).

[5] *Odana*, as food merely for the body; cf. *Ep. Phil.* iii. 8.

[6] *Upasechanam*, a diluent, relaxation of power, and therefore inconceivable.

[7] *Kaṭh.* I. ii. 18–25.

'He who has understanding, is self-controlled and ever pure, he reaches that realm whence there is no rebirth.

He who guides his car with understanding, wisely handles the reins (*manas*), he wins through to the goal of his journey; there where is the highest place of Viṣṇu.

Higher than the senses are material things, higher than material things is the mind, higher than the mind is the intellect, higher than the intellect is the great Self (*ātman*).

Higher than the great Self is the undiscerned (*avyaktam*), higher than the undiscerned is the *puruṣa*, higher than the *puruṣa* there is nothing; that is the goal, the highest way.

In all creatures it lies hidden, the *ātman*, invisible, discerned only by the keenest intellect. The touchstone of the finest is the fine.'[1]

Nachiketas therefore obtains his boon:

'He who has perceived that which is beyond hearing or touch or sight, undecaying, without taste or smell, eternal, without beginning or end, higher than the great, unchanging, he is delivered from the jaws of death.'[2]

The remainder of the *Upaniṣad* presents variations of the same theme and is of interest not only for the reiteration and emphasis of central doctrines, but also for the picturesque metaphors which it employs to set them forth. The inadequacy of these and of all metaphors is acknowledged, but they are aids to the mind in its attempts to comprehend the incomprehensible. He is *prāṇa* (breath), *agni* (fire), the *puruṣa* in the midst of the body, lord of the past and the future. In reality the *Brahman* is undifferentiated. 'He goes from death to death who sees difference here.' Through almost the whole of the fourth *valli* there runs the refrain, 'This is that,' reality is one and indivisible.

The *Kāṭhaka Upaniṣad* gives a stronger impression of unity and of singleness of design and thought than most of these treatises. There is little to suggest diversity of authorship or revision and alteration of the text. It is probable that changes of this nature have taken place, but they have been on a comparatively small scale. The recurrence of the name of Nachiketas at the close of the first and second *adhyāyas*, with the assurance of salvation to those who possess the knowledge of the mystery of the *ātman*, expounded to him by Death, has been supposed to indicate the union into one of two treatises, originally distinct. The inference is hardly justified by the context and the form under which the name appears. It is perhaps more probable that the verse in which it occurs at the end of the *Upaniṣad* is an insertion.

(*d*) One of the most difficult of the *Upaniṣad* treatises both in form and in interpretation is the *Śvetāśvatara*. In the introduction to his translation of the *Upaniṣad*[3] Max Müller expresses this view, and further in a few lines controverts the idea that the name ('the white mule') implies Christian authorship or participation. Not only is the language abrupt, entangled, and defiant of the rules of grammar, but the thought seems repeatedly to lose itself and to represent not one but many phases of doctrine and belief. Not the less perhaps on this account it is of very great interest. Among the more important *Upaniṣads* this treatise is the leading exponent and representative of Sāṅkhyan doctrine, and it is in the *Śvetāśvatara* that the earliest use of the name Sāṅkhya with a technical connotation appears to occur. To reconstruct its history with any certainty—a writing doubly palimpsest, as it has been termed—is probably impossible. It is a medley of thought and teaching in which almost every phase of Hindu philosophical speculation seems to struggle for expression. Nothing is known of the Śākhā of the *Śvetāśvatara*, the school within which the scripture was guarded, studied, and taught. Together with the *Kāṭhaka*, *Taittirīya*, and others it was recognized as belonging to the Black *Yajurveda*.

It is probably right to regard the original basis or nucleus of the *Upaniṣad* as Vedāntic. It was known to the author of the *Vedānta Sūtras*, and Saṅkara wrote a commentary upon it. The relation of the individual and the universal Self is asserted and discussed from an entirely Vedāntic point of view. On this basis, however, were superimposed theistic and sectarian statements of belief and doctrine, which introduced freely the dogmas of the sects, and even the names of sectarian divinities. Sāṅkhya and Yoga conceptions also, intermingled and reiterated, and in some parts predominant, contribute to form a whole which, as it appears in the extant literature, is probably the result of some centuries of discussion and revision in the schools. The *Upaniṣad* therefore does not readily lend itself to explication and analysis. Its moods change too rapidly to be fixed and indexed. The text also is in many instances corrupt, and out of various readings, which seem to be more or less conjectural, it is sometimes only possible to select that which appears to give a tolerable sense.

The treatise begins with an interrogation and a challenge: What is the cause, the ultimate principle and groundwork, of all? and the answer is *Brahman*. Whence is our birth, our life, our sustenance, and at whose bidding do the joys and sorrows come that we endure? Speculative replies are dismissed as incredible, as that time, nature, necessity, etc., either alone or in combination, should be the final cause. The individual Self is then depicted, the divine essential force (*devātmaśakti*), revealing itself as self or soul through and under the veil of its qualities (*guṇa*), figuratively described as a wheel with many spokes, etc.; by the practice of meditation and self-discipline (*dhyānayoga*) the seers learnt to know this hidden force. Verse 7 supplies the Vedāntic interpretation: in the highest *Brahman* the triad (of the user, the used, and the governor, *bhoktṛi*, *bhogya*, *preritṛi*, *i.e.* the Self, the universe, and God) become one;[1] nothing further remains to be known, everything has been declared under triple form, and this is *Brahman*. The following verses of the chapter are descriptive of the Self under various figures or illustrations; self-knowledge is to be obtained by meditation on the sacred syllable *Om*.

The first seven verses of the second *adhyāya* are a hymn in praise of Savitṛ, made up for the most part of 'tags' from the *Vājasaneyin* and *Taittirīya Saṁhitās*. The rest of the chapter is written in the spirit of the Yoga, adoration of the god who is above and behind all phenomena.

The opening of the third *adhyāya* again is sectarian; Rudra is creator, sustainer, lord of all. The (impersonal) *Brahman* is higher than all, and those who know the great *puruṣa*, shining as the sun beyond the darkness, are immortal. The *puruṣa* is the incarnate Self (*ātman*).

'Without hands or feet he grasps and moves, eyeless he sees, earless he hears. He knows what can be known, but none knows him; him they name *puruṣa*, the first, the great. Smaller than the small, greater than the great, he dwells as the *ātman* in the heart of the creature. Passionless, by the grace of the creator one sees him unmoved (*akratum*, lit. 'without will,' Deussen, *willensfreien*), the great lord. I know him, the unaging Ancient, the self of all, all-pervading, omnipresent; for him rebirth is stayed, whom the seers proclaimed immortal.'[2]

The fourth *adhyāya* exalts the sun-god, whose functions and attributes are figuratively expounded and interpreted in a Vedāntic sense. Peace and immortality are the possession of him who knows the god, Śiva, the eternal, creator of all, dwelling in the heart of man:

'Of him there is no image whose name is Great Majesty. His form is not visible, none ever sees him with the eye. They who with heart and mind know him thus dwelling in the heart become immortal.'[3]

The section ends with a brief prayer to Rudra.

The fifth *adhyāya* contains teaching on the two themes of knowledge and ignorance, of the means of deliverance from the latter, and of the *Brahman* as transcending all. He manifests himself in various ways, 'migrating through his own works,' and is seen now in this and now in that shape, incarnate under many forms. In the sixth and last *adhyāya* neither nature nor time is the source of all, but *Brahman* alone. He is the beginning and cause of all, the one god, hidden in all beings, without parts or attributes, immortal, the lord, protector and ruler of the universe. This is the supreme mystery in the Vedānta, not to be communicated to one who is unworthy.

6. History of doctrine.—It would seem, therefore, that the characteristic central doctrine of the *Upaniṣads*, the doctrine of *Brahman* or the *ātman*, was at first developed and systematized within Kṣatriya circles and at the courts of kings. This combination of royal functions with the mood of a philosopher or a poet was not unfamiliar to Oriental experience. The Brāhman, on the other hand, occupied himself almost exclusively with

[1] *Kaṭh.* iii. 8–12. [2] *Ib.* iii. 15. [3] *SBE* xv. p. xxxii.

[1] Cf. i. 12. [2] m. xix ff. [3] iv. xix f.

the ritual and the securing of his class ascendancy; and only later adopted a doctrine of the universe which had been formulated by others, but which harmonized with his modes of thought, and lent itself readily to his schemes for the establishment of his own predominance on the basis of secret or superior knowledge. These references to a Kṣatriya monopoly of the highest knowledge, imparted by kings to Brāhmans at their request, have been preserved and handed down within the Brāhman literary schools, and it seems improbable that such statements would have been allowed to pass if they had not been in accord with the facts. Probably also the doctrine and several duties of the *āśramas* (*q.v.*), whether widely practised or not, afforded an opening and facilities for the assimilation of the new knowledge. In later times the position was reversed, and with the establishment of intellectual and class pre-eminence the Brāhmans confirmed their claim to a monopoly of the supreme wisdom; and this was conceded to them the more readily as the other castes became more and more immersed in political intrigue or business enterprise. In the issue, by perseverance and the skilful use of opportunity, the Brāhmans secured the first place in knowledge as in honour, and were regarded as the depositories of the secrets of wisdom and right instruction.

7. Essential doctrine.—This highest and most treasured teaching, for which divine authority was claimed, was formulated as the cardinal doctrine of the *Upaniṣad* literature, an idealistic monism, which consisted essentially in the assertion that all is one, 'one only without a second,' and as a necessary corollary that the material universe as it manifests itself to and is approached through the bodily faculties is unreal (*māyā*). Only *Brahman*, the unknown Self (*ātman*), is in possession of a real existence. *Brahman*, moreover, is an abstract impersonal neuter, not an individual or masculine. The attribute of personality, as all other attributes, is denied to him, and he or 'it' can only be defined, if such may be called definition, by negatives (*neti neti*). The human self, the self of the living being (*ātman* or *jīvātman*), is subject to delusion only so far as it imagines itself to be an individual, distinct from all other selves. In reality it is itself the supreme Self (*ātman*), identical with *Brahman*; there are not two or many selves; but *Brahman* and every so-called individual self are one and the same. There is no 'difference,' in the realm of true understanding and insight. 'One only without a second' (*ekādvitīyam*) expresses the ultimate thought and the fundamental postulate of the speculation of the *Upaniṣads*; or, as the doctrine has been formulated by Deussen and others in the form of an equation which summarizes *Upaniṣad* teaching in this respect,

Brahman = ātman.

The formula is not of course due to or used by the authors of the *Upaniṣads* themselves.

8. Secondary teaching. — This idealistic and monistic doctrine of the sole reality of *Brahman* underlies all the teaching of the *Upaniṣads*. Although not peculiar to the Indian literature, it is there developed in its most complete form and carried to its utmost logical conclusion. A considerable portion, however, of these treatises expounds what is generally known as the doctrine of the lower *Brahman*, a compromise or concession to the view which the ordinary man takes of the universe as stable, for all practical purposes permanent, conditioning his daily life, limiting and satisfying his outlook upon reality. This teaching was avowedly for those, and for those only, who were incapable of comprehending the higher knowledge, whose mind worked within the limitations imposed by the faculties of the body. For these there was constructed or traditionally maintained a cosmology or doctrine of the universe, in which *Brahman* appears as the creator of a real world, which is then informed, sustained, and its working ensured by his universal and vitalizing presence. In this sense *Brahman* is immanent in the universe, which has no existence apart from him, and will ultimately be resolved or cease to be, returning into the source from which it came. *Brahman* therefore in the cosmological theory of the *Upaniṣads*, which is throughout secondary and does not contain or convey the secret of the highest knowledge, becomes individualized, endowed with properties and capacities, and an apparent or provisional reality is allowed to the universe and to the souls therein. The human *ātman* or *jīvātman* possesses a measure of freedom and individuality of its own, it thinks and determines, and of its own free and enlightened will promotes its return to the *paramātman*, the supreme soul whence it was derived. Thus far therefore the *Upaniṣads* may be said to contain the germs at least of a real theism. It is for the most part in the later treatises and especially in the *Śvetāśvatara* that these doctrines are set forth. They were not, however, developed on theistic lines, and it is probable that they represent speculation or belief which was in its origin entirely independent of the severe idealism of the *ātman* doctrine, tentatively harmonized with the latter and subordinated to it in the *Upaniṣad* teaching. All things would ultimately return to their primitive source, and their impermanent and unreal character would be made manifest. Thus the higher doctrine or faith was conserved under the forms and as the ultimate truth of the lower.

9. Psychology.—To the same secondary teaching belongs the psychological doctrine of the *Upaniṣads*, so far as these treatises may be said to present a consistent or coherent doctrine concerning the human soul. It is evident that this teaching also is derived from external sources, originally independent, and only artificially and with difficulty accommodated to the fundamental presupposition of *Upaniṣad* thought. Where all souls are one, and there is no difference, there is no room and no need for a psychology. On the lower plane of teaching, however, souls created by or emanating from *Brahman* are in a certain sense distinct and individual, although this impression or conviction of distinctness is ultimately due to *māyā* and to *māyā* alone. Some provision therefore must be made for their return, their final and universal reunion with *Brahman*, if a permanent duality was to be avoided. The last alternative as a solution of the mystery of the soul's nature and existence did in fact find expression in some of the *Upaniṣads* in premonitions and intimations of the later doctrine of the Sāṅkhya, which is avowedly dualistic. In general, however, the psychological teaching expounds two independent themes or subjects—the states of the soul, and the means or methods of its return. No definite connexion is made between these, or any relation suggested. They are due to different systems of thought, and no attempt apparently is made or regarded as necessary to co-ordinate them. The latter doctrine, including especially that of the two paths, is closely related to the wider doctrine of predestination.

The four conditions or states of the soul are: (1) the waking state; (2) dream-sleep, in which the soul remains conscious and active in its dreams; (3) dreamless slumber, *suṣupti*, *suṣupta*, in which the soul is passive, and unconscious of its environment; (4) *turiya*, *turya*, *chaturtha*, the 'fourth' state, which is more or less artificial, and

is unknown to the older *Upaniṣads*. It was perhaps invented to secure or complete the correspondence with the four *āśramas*, the *turīya* being the sublime but undefinable state to which the *sannyāsin* had attained. The three earlier states received also mystical names: *vaiśvānara*, that which is common to all, the habitual mode or outlook of all men; *taijasa*, luminous, vigorous, intense; *prājña*, intelligent. Similar states or stages are familiar in the experience of European and other mystics.

(1) The waking state is the normal condition of the natural man, who without reflexion accepts the universe as he finds it, believing it to be real. The mystical title *vaiśvānara* is apparently intended to suggest that to the natural faculties of all such men the same physical universe presents itself.

(2) In dream-sleep the soul fashions its own world in the imagery of its dreams, 'the spirit serves as light for itself.'[1] To the dreamer the scenes and experiences through which he passes in his dreams appear real, and in this his dream-world no other has part. The illusion of duality, however, is still maintained; there is one who knows and another that is known. In other passages the spirit is represented as quitting the body during the dream-sleep and wandering hither and thither, returning sometimes only with difficulty to its accustomed home.

(3) In the third state all distinct consciousness of knowing subject and known object is superseded, the human spirit is one with the eternal Knower, the supreme intelligence, *prājña ātman*. In the teaching of the earlier *Upaniṣads* this is apparently the final state, the consummation of bliss in union with *Brahman*. 'When a man has fallen so sound asleep, and has so completely and perfectly been lulled to rest that he knows no dream-image, that is the Self, that is the immortal, the fearless, that is *Brahman*.'[2]

(4) The introduction of a fourth state appears to have been based upon a recognition of the transitory character of the *suṣupti*. The slumber is interrupted, and the spirit of the slumberer may then return to the waking state in which it is troubled and anxious, and the external visible universe is regarded as a real object of knowledge. 'When the three states named have ceased, and the spiritual subsists alone by itself, contrasted like a spectator with all existing things as a substance undifferentiated, set free from all existing things, this spiritual state is called the *turīya*.'[3] In this state the *ātman* has realized a permanent union with *Brahman*, which is not liable to interruption by any return to a lower condition; nor is it interfered with or destroyed by engaging for a time in any of the illusory activities of ordinary life. Worldly duties and employments do not affect the soul that is one with *Brahman*.[4]

10. Eschatology.—The Indian doctrine of the two paths, the *devayāna* and the *pitṛyāna*, the way of the gods and the way of the fathers, by one or the other of which the souls of the dead make their way from this world to a future abode of happiness or misery, presents easily recognized parallels to similar teaching in other faiths. That the theory was of independent origin in India admits of little doubt. Later it was elaborated and brought into close association with the kindred doctrine of transmigration and was then carried far by wandering Indian missionaries; and in this way it may not improbably have suggested or influenced the beliefs of other peoples, especially the Mithraic teaching concerning the ascent of the soul to the highest heaven. As early as the *Rigveda* reference is made to the *devayāna* as the path by which Agni bears the offerings to the gods, and on which the gods themselves descend to partake of the sacrifices. On the same road the faithful worshipper ascends through successive stages or 'stations' to the highest felicity in *Brahman*. The passages in the *Upaniṣads* which enumerate the 'stations' give no indication of the origin of the theory, nor attempt to explain its meaning or significance. The earliest is probably *Chānd.* IV. xv. 5 f.:

'He (who knows this) . . . (after death) goes to light (*archis*, brightness, *i.e.* of the funeral fire), from light to day, from day to the light half of the moon, from the light half of the moon to the six months of the sun's northward movement, from the months to the year, from the year to the sun, from the sun to the moon, from the moon to the lightning. Thereupon an unearthly guide (*puruṣa*) conducts them to *Brahman*. This is the path of the Devas, the path of *Brahman*. They who proceed thereby do not return to the changing life of man.'[1]

The *pitṛyāna*, on the other hand, is the way of darkness, for ignorant and defiled souls, and progress is marked by analogous but contrary stations; *e.g.*, the dark half of the moon is substituted for the light half, etc. Those who travel on this road do not reach the year or the sun, but are detained in the moon till their *karma* is exhausted, after which they return to earth, and are again subject to rebirth:

'But those who in a village fulfil their religious duties and give alms (*i.e. gṛhasthas*) go to the smoke, from the smoke to the night, from the night to the dark half of the moon, from the dark half of the moon to the six months of the sun's southward movement. They do not attain to the year. From the months they go to the world of the fathers (*pitṛloka*), from the world of the fathers to the ether, from the ether to the moon. . . . Here they dwell as long as aught remains (*i.e.* of *karma* and its consequences), then return again by that way to the ether, from the ether to the wind (*vāyu*). Having become wind he (the *gṛhastha*) becomes smoke, having become smoke he becomes vapour, having become vapour he becomes cloud, having become cloud he descends in rain. These then are born as rice or corn, herbs or trees, sesamum or beans. . . . They who have lived a good life in this world will as a reward attain a good rebirth as a Brāhman, or a Kṣatriya, or a Vaiśya; but they who in this world have lived a shameful life will attain a shameful rebirth, as a dog or a pig or an out-caste (*chaṇḍāla*).'[2]

There is thus in the *Upaniṣads* tentative if somewhat indefinite teaching with regard to the fate of the soul at and after death. Two conceptions were apparently involved, which were in all probability originally independent and belonged to different orders of ideas. Neither of them was due in its inception to the thinkers of the *Upaniṣads*, but both were derived from external and pre-existing sources. The thought of a return of the soul to the earth, to be embodied again in human or animal form, or even in the form of an insect or plant, is common to nearly all primitive peoples, and is undoubtedly of great antiquity. The distinct thought of a recompense of felicity or suffering in another world for the deeds done upon earth is neither universal nor so old. It has usually been accepted as an alternative to the earlier view of the soul's future destiny, superseding or displacing but not amalgamating with it. The contribution which the *Upaniṣad* thinkers made was in effect to combine these ideas by transferring the retribution from an unknown and future sphere to the known and visible present, and by asserting the precise equivalence of the recompense after death to the deeds, good or evil, of the earthly life. Thus all the elements of the Indian doctrines of *karma* and transmigration are found in the oldest *Upaniṣads*. They obtain here their final and fullest expression. No evidence or proof, however, is offered in support of these theories, nor is any reference given to previous history or development, which might explain or justify the statements made. They are supported, as is all the teaching of the *Upaniṣads*, by an appeal to the authority of eminent teachers of the past. It seems strange that no attempt should be made to fortify so important a doctrine as transmigration by reference to analogy, or to a wider and reasoned view of life as a whole. They are simply recorded as the definite and complete statement of the final destiny of the soul.

11. Summary.—Thus a very considerable part of this literature is occupied with doctrines that belong to the lower *Brahman*, and are avowedly inferior to the ultimate and supreme truth that *Brahman* is all in all. They are half-truths,

[1] *Bṛhad.* IV. iii. 9.

[2] *Chhānd.* VIII. xi. 1; cf. *Bṛhad.* IV. iii. 21 ff.

[3] *Sarvop.* 8; cf. *Māṇḍ.* vii.; *Maitr.* vi. 19, vii. 17.

[4] On the states of the soul see Deussen, p. 296 ff., and the references there given. Deussen regards the introduction of the fourth stage as due in part to the increasing prevalence of the Yoga doctrine, which involved the belief that by intense meditation, abstinence, and self-control the union of the human spirit with the one eternal spirit might be secured.

[1] *SBE* i. 68; cf. *Chhānd.* V. x. 1 ff., *Bṛhad.* VI. ii. 15 f., *Kauṣ.* I. ii. 3.

[2] *Chhānd.* V. x. 3 ff. (*SBE* i. 80 ff.); cf. Deussen, p. 334 ff. and references.

guiding and controlling the practical life of the universe, which lose interest and significance when the full truth is apprehended by the soul. 'He who knows' need not concern himself about any of these matters, whether of belief or practice. This doctrine, the doctrine of the *ātman*, alone is 'true' in the exact sense of the word. And the consciousness of this seems always to underlie the most precise exposition of doctrines, which in form at least conflict with it. *Brahman* alone is real; all else is *māyā*, illusion. This word appears first in its technical meaning in the *Śvetāśvatara Upaniṣad*, where so many conflicting trains of thought meet and find a home. Essentially, however, and apart from its late literary expression, the doctrine of the universe as shadowy and unreal is far older in India than the literary employment of the term *māyā* would suggest. It is presupposed in most of the teaching that concerns the material universe, and is more or less consciously accepted by all Indian sects at the present day. The man who knows this, that *Brahman* alone exists, is truly wise. He realizes the unreal elusive character of the things that are seen, and has apprehended the supreme truth that *Brahman* only *is*, and that he himself is *Brahman*.

12. **Ethics.**—The *Upaniṣads* also enforce ethical teaching, but in a desultory manner. There is a considerable element of moral and religious instruction, commending a practical life of sobriety and devotion in sincerity and love of the truth. It is undoubtedly this ethical content that has given to these treatises their unique position among the sacred books of the Hindus. Self-restraint, generosity, loving-kindness are cardinal virtues, the observance of which is incumbent upon all who seek deliverance from the entanglements of this world and final union with the Supreme. The aim and purpose for all and each is release from the *saṁsāra*, the perpetual round of rebirths, and return to the original and eternal source of all in God. Thus the ethical teaching of the *Upaniṣads* is essentially self-interested and individualistic; virtue is to be practised for the sake of personal and private advantage in the cessation of rebirth (*punarmṛityu*, repeated or reiterated death), when the soul reaches its final end in the one Supreme. The morality taught in these books is therefore negative rather than positive. It is a doctrine of abstinence from all that would hinder the severance of worldly bonds, rather than of positive delight in that which is good. The ideal of a devout life is that of the *sannyāsin*, the ascetic, who has renounced all, and is self-centred in profound and uninterrupted meditation. The doctrine thus expounded is that upon which Buddhism has drawn, in the Hīnayāna at least, for its ideal of the perfect monk, and is closely connected with the later Yoga, in which the teaching was systematized and carried to extremes of asceticism and self-torture. In its essential elements it is undoubtedly older in India than the period of the *Upaniṣads*, and gives expression to the austere quality which is native apparently to some forms of Indian religious life. The *Upaniṣads*, moreover, never lose their hold of idealism. To this all other teaching is subordinated. The veil of *māyā* is cast over all. And neither in ethics nor in theistic statement is there the same conviction or earnestness that is apparent in the exposition of the monistic doctrine of the *Brahman*.

USURY (Babylonian).—'Usury' is a wide term and commonly covers many transactions, distinct in their origin and purpose; and it is doubtful whether any custom existed in Babylonia which exactly anticipated any modern interpretation of the term. Interest on loans, rent of estates, wages, anything paid to any one for the use of anything the right to which is not thereby alienated, may be brought under the heading usury from one point of view or another. It would not, however, be accurate to regard this as a definition of usury for the purposes of this article, nor would it be advisable to limit the meaning to either the exaction of exorbitant interest or ruinous charge for accommodation. In fact it may be doubted whether the Babylonians contemplated any transaction with which they were acquainted as answering to anything we understand by usury.

We must remember that the foundation of economic affairs was, from the earliest times with which we are acquainted to the latest for which we have evidence from cuneiform sources, the farming of sheep and cattle or of agricultural produce. In consequence, the natural increase

of flocks and herds being at least 200 per cent per annum, that of crops in the fertile soil of Mesopotamia at least 400 to 500 per cent, the rate of interest was excessively high according to our standard. But such returns, given security from loss by misfortune or disorder, must have led to a rapid increase of wealth. A fortunate possessor must soon have owned more than he could possibly protect. He was bound to employ others as shepherds or labourers merely to conserve his property. Unless he could command the services of slaves or subjects, he had to pay for such services. He might, and in Babylonia usually did, allot a portion of his flock to some shepherd to tend, demanding back after the pasturing and breeding season, his own again with a stipulated rate of increase, which we may loosely call usury. He might let out his farm or part of it to husbandmen, demanding a stipulated share of the crops, and leaving the rest as wages for the labour expended. Whether this constituted usury or not may depend on whether the amount demanded as return from the labourer bore a more or less reasonable relation to the average crop likely to be obtained. The reasonableness of the transaction depended upon many considerations which would be differently regarded then and now. In cases where a man's former prosperity had enabled him to realize his profits in the more stable form of money, he might lend that money as an accommodation to one who had less or even none, on the understanding that he was to receive again his own with usury, but where to draw the distinction between fair interest and usury must depend, not only on the custom of the country, but also on the yield it might reasonably be expected to produce when invested directly in agriculture or farming.

So long as the return for the accommodation which a creditor demanded kept well within the naturally expected profit to be made by the borrower, both were sharers in the benefits brought about by the accommodation. The abuses which might constitute usury arose by a demand for excessive return or by failure to accept responsibility and share in unexpected and unavoidable loss which fell on the borrower. It must early have occurred to the lender to demand security for his loan. By an early established custom the person of the debtor was held as security. This personal security extended over all the borrower's possessions. The debtor who failed to pay had to work off his debt somehow, and it was recognized as fair that the members of his family should be called upon to help him to discharge his debt. Thus he might assign any or all of his family—wife, children, or slaves—to work off his debt. This was to their advantage as much as to his, for they were thus secure of a living, though precluded from the profit of their labour, while, if he was bankrupt, he had no means of providing for them any more than for himself.

But the situation was full of possibilities of oppression, and the rich or prosperous man would soon have become master or partial owner of his poorer brethren indebted to him. So long as such a master treated his dependents fairly, and the land was secure from foreign conquest, a few rich men with a large industrious body of well-treated servants, certain of adequate maintenance, might well constitute a prosperous community. But the raids made in war, the spoliation of the rich man's capital, or the failure of a crop must have reduced the dependents to great misery. The tendency to accumulate wealth in the hands of a few avaricious men might work in the same direction through the tendency to strike hard bargains with labour. A benevolent or far-sighted ruler must early have seen that an overworked or underfed population would grow discontented and so be unreliable in case of invasion to maintain the security of the land against foreign aggression. Hence legislation was introduced to check the abuses which might lead to an undue exploitation of labour by capital.

The celebrated Code of Ḫammurabi, the best-known body of legislation dealing with the subject, which we must regard as the outcome of innumerable other attempts in the same direction, devotes a large part of its regulations to controlling the tendencies of the state of society to permit oppression by the exaction of unfair enforcement of the literal terms of what had been entered upon as a free contract. These regulations of the code are already dealt with in the art. LAW (Babylonian), vol. vii. p. 817 f., and may be briefly summarized here. When a debtor owed for rent or share of crops and was unable to pay by reason of the failure of the crops not due to his own negligence, he was allowed to postpone payment to the next year. It was not legal to insist on the payment of any debt in one special form of tender, though this was often specified in a contract. Produce was made legal tender in any case, thus obviating the difficulty of its realization in a land where money was scarce, and equalizing the variations of exchange. The right of a creditor to seize the person of the debtor or of his dependents, and hold him or them in servitude until the debt had been worked off, was an obvious opening for great abuse, but was modified by the Code. By its enactment that such service should not excuse ill-treatment and, in any case, should not extend beyond three years, it clearly eliminated much injustice. The text of the Code as treated in art. LAW (Babylonian) was not then complete; but a contemporary, or at least very early, copy from Nippur[1] gives one of the lost sections enacting that, if a man borrow grain or money from a merchant and has not grain or money sufficient to repay him, he shall give the merchant whatever he has in his power in place of the debt that he owes in the presence of the city elders, and the merchant may not decline to accept it. This was a far-reaching enactment, and may be suspected of aiming specially at indebtedness to foreigners, or at any rate to men not exactly neighbours. By far the larger number of debts of which we have any record were owed to the temples, which stood to the people in the relation of agricultural banks. Their advances were of the nature of loans to tide over scarcity at seed-time, or to meet the expense of harvest operations when the last year's produce had already become exhausted, though a fresh crop was now in sight. They were mostly for a short term without interest, interest being demanded only in the case of delay to repay at the fixed time. Many of these temples were large land-owners, and also owned numerous flocks or herds. They, like other great owners, often farmed on the *metayer* system, furnishing to their tenants seed, agricultural instruments, and working animals, while advancing wages in kind. The numerous records of temple transactions which have reached us, due to the recovery of large temple archives, may easily have distorted the picture that we are able to draw of social life at that period, but they must have dominated the general custom. The landlord on this system was bound by that custom and his own interest, as well as by humanity, to see that his debtor, who was his tenant, should not be oppressed at any period of the year by want, tending to paralyse his efforts for their mutual profit.

In spite of all such regulations it is evident

[1] See *AJSL*, April, 1915, p. 225.

that debt and the servitude to which it led were very common features of Babylonian society. It was further met by a general amnesty from debt, or *seisachtheia*, proclaimed by many a sovereign apparently to inaugurate his new reign, to secure popularity and encourage loyalty and thereby to achieve power to maintain his rule. The ability thus to remit debts doubtless lay in the power which the king had over temple revenues, as the temples were the chief holders of credit. Their responsibility to the citizens who sustained that credit was never lost sight of. They were called upon to redeem members of their city who became captives in war if these were without means to redeem themselves. The temples were stewards of their wealth for the god who watched over the welfare of his people. The loss to certain members of debts unpaid was a loss to the community at large who had furnished the source of their wealth, but, as this was the result of prosperous years, it might fairly be taxed to equalize over a term of years the incidental losses due to accident or bad seasons, to the 'hand of God,' or to enemy action. To grant such an amnesty, which seems to have involved a general release from debt and the restoration of liberty to prisoners and hostages for debt, was regarded as an 'establishment of equity' and was the prelude to fresh legislation. It is not completely clear that this amnesty touched private debts; it had in view rather debts to the temples, which were naturally in the power of the king. If private indebtedness was cancelled, it is difficult to see how injustice to the private creditor was avoided or what compensation he could have received for the forfeit of his capital and interest.

Most writers on the subject appear to have regarded the rates of interest charged for loans as exorbitant, but the high interest is associated in all periods with oriental custom and economic conditions. The multiplication of capitalists and the competition between them for investments have reduced the rate of interest under modern conditions to what we regard as fair, but any national scarcity of raw material or capital is bound to raise the rate again. Practically the risk involved determines the rate charged for a loan. Professional money-lenders were then more rare, and had to take greater risks. The profits which a borrower was able to secure by actual trading or farming were so high that accommodation for interest was less attractive to the lender unless the rate was high.

LITERATURE.—For the laws regarding usury see C. H. W. Johns, *The Oldest Code of Laws in the World*, Edinburgh, 1903, §§ 45–126; for the *metayer* system, *ib.* § 253. Johns, *The Civilization of Babylonia and Assyria*, Philadelphia and London, 1915. For *seisachtheia*, M. Schorr, 'Eine babylonische Seisachthie aus dem Anfang der Kassitenzeit' (*SBAW*, 1915, pt. 4); S. Langdon, *PSBA*, 1914, p. 102.

C. H. W. JOHNS.

USURY (Christian).—**1. In the New Testament.**—The words of Jesus contain allusions to borrowing and lending, but, as we should expect of one who refused to be a judge and divider (Lk 12[14]), there are no direct precepts to guide the Christian conscience. Mt 5[42] and Lk 6[34f.] are but exhortations to an open-hearted charity. The Parable of the Talents (Mt 25[14-30]) and the Parable of the Pounds (Lk 19[11-27]) allude to banking and interest, but in casual phrases, not in the pith and marrow of the teaching. Borrowing itself would be frequent enough in that age and country, not so much of the commercial type,[1] but more of the loose and personal kind, as between friend and friend, kinsman and kinsman. The shiftless Oriental is a ready if somewhat conscienceless borrower, and the Syrian peasant who to-day loans out his earnings in petty usury doubtless had his like-minded ancestor in the changeless East.[1] The ethic of these personal borrowings was adequately covered by the general principles enunciated by Jesus; there was no call, nor was it His method, to deal with usury as an economic and commercial factor.

What mattered for the future centuries was that by His life and example even more than by His words the great Master had suggested a certain attitude towards this world's goods. Himself reared among the poor and needy, He lived the life of a travelling teacher without home or material possessions; to those who left house and kindred and lands for His sake He had promised everlasting life (Mt 19[29]); and to the rich young ruler, morally perfect though he claimed to be, He had given the arresting command to sell all and give to the poor (Mt 19[21]). Among the slaves and the folk of the lower orders who formed the majority of the early converts such teaching was treasured and, it may be, unduly emphasized; its potency appears in the communistic movement of Acts (4[32]) and in the fact that from the beginning dear to the heart of the Christian society was the care of the poor. It is as but one phase of a general attitude to this world's goods that we must explain the Church's dislike of usury. In their simple, fraternal communities, with their pervasive atmosphere of kindly charity, the hard bargainer for gain was a chilling and unwelcome intruder, the personification of the spirit of the alien world without.

2. In the Fathers.—The early Fathers looked upon usury with severe disapproval. They may have been influenced in certain cases by the classical moralists, but the determining standard for them was the OT legislation and the general principles of the NT teaching, more especially a strained interpretation of Lk 6[35].

Tertullian,[2] Cyprian,[3] and Clement of Alexandria[4] accept as still binding on Christians the OT precepts (Ex 22[25], Dt 23[19], Ps 15[5], Ezk 18[8]), the first-named regarding the prohibition of interest as only a preparation for the higher demand of the Gospel to forgo even the capital: 'Quo facilius assuefaceret hominem ipsi quoque foeneri perdendo cuius fructum didicisset amittere.' Apollonius ranks usury with games of chance.[5] Lactantius condemns it.[6] The Fathers of the 4th and 5th centuries write to the same effect, only with a rising vehemence that suggests that the evil was increasing in decadent times. To Chrysostom it is *σύνδεσμος ἀδικίας*,[7] to Ambrose it is *rapina*,[8] Augustine places it in the category of crime: 'Audent etiam foeneratores dicere, non habeo aliud unde vivam. Hoc mihi et latro diceret, deprehensus in fauce; hoc et effractor diceret . . . et leno . . . et maleficus.'[9] Basil[10] and Gregory of Nyssa[11] in homilies of like spirit denounce the usurers as a breed of vipers that gnaw the womb that bears them.

The standpoint of the Fathers, however, is not to be explained as a mere narrow reading of Scripture: it is the view of men whose Christian conscience abhorred the exploitation of the defenceless and unfortunate. The practice of usury is regarded throughout this period not as an economic but as a moral question. Borrowing was still largely for the urgent personal needs of poor men who were fit subjects not for exaction but for charity. It was the soulless miser—living safely and meanly, gloating over his gains ill-gotten by pitilessly farming the necessities of the needy—who sat for the portrait of the usurer and drew the fire of the preacher. The Christian conscience was finely sensitive to the obligation of charity. Wealth was the gift of God, and men were but stewards, *dispensatores* not *possessores*.

[10] *Hom. in Ps.* xiv.
[11] *Oratio c. Usurarios*

[1] See art. 'Interest,' in *DCG*.

'Understand then, ye rich, that ye are in duty bound to do service, having received more than ye yourselves need. . . . Be ashamed of holding fast what belongs to others. Imitate God's equity and none shall be poor.'

This note struck in *The Preaching of Peter* is typical. To a teacher like Ambrose rights of property were a creation of avarice; charity or almsgiving was an act of simple justice.[1] In all this the Church is moving in the realm of precept and ideal; law on the subject is not yet.

3. **In the canons of the Councils.**—Antagonism gradually hardened into prohibition,[2] as the Church developed in power after Constantine. At first she deals only with her own clerics, who, as guardians of ecclesiastical property, must have had practical difficulties and temptations. By the 17th canon of the Council of Nicæa deposition is prescribed for usurious clerics. In the statute of the Council of Elvira (305–306) ordering expulsion from the Church of any person 'si vero in ea iniquitate duraverit' the mention of laymen is doubtful, but by 345 we find the Council of Carthage declaring it reprehensible in laymen. This view is repeated by the Council of Aix-la-Chapelle (789), and by the 9th cent. ecclesiastical law becomes positive in extending the prohibition to the laity: bishops are to require all Christians to abstain from usury and to punish the recalcitrant.[3] Legislation threw its net ever wider as the evil increased, and the whole armoury of ecclesiastical pains and penalties was turned upon the offenders. Thus a canon of the 3rd Lateran Council (1179) ordained that 'manifest usurers shall not be admitted to communion, nor, if they die in their sin, receive Christian burial.' The 2nd Council of Lyons (1274) went farther, forbidding any community, corporation, or individual to permit the letting of houses to foreign usurers. Spiritual penalties are reinforced by civil: by another canon the wills of unrepentant usurers were declared invalid, thus bringing usury definitely within the jurisdiction of the ecclesiastical courts.[4] The Council of Vienne (1311) brought matters to a climax, declaring the civil law on usury as of no effect and branding as a heretic any one who pertinaciously held that usury was not sinful.

4. **In the Middle Ages.**—This growing stringency indicates the advance of a tide that could not be checked. 'Since in almost every place the crime of usury has become prevalent,' admits the canon of the 3rd Lateran. Significant is the concession made in favour of the Jews by the 4th Lateran: only grave and excessive usury is forbidden them. By the 11th cent. commerce was finding new channels; towns were arising, markets opening, and thus problems of trade became urgent. Churchmen themselves needed large sums for building and for Crusades. This activity in the money market called for readjustments and new methods. The Church had to reconsider her whole attitude to trade and economic practice. The old view that business was an evil, with its roots in covetousness, had to go. The interchange of goods by which men lived had to be accepted; only its methods must be jealously examined. Christian principles had to be applied in detail. Over against Roman law, as codified by Justinian and studied in the schools, Churchmen had to set forth their own rule and standards. This task fell to the Schoolmen, pre-eminent among whom stands Thomas Aquinas. Even as he formulates his judgments on usury he has to make concessions, and, once one gap is made in the hedge of restriction, other gaps appear as the centuries pass, until it becomes a question whether there is a hedge at all.

The scholastics based their judgment on more than the OT and gospel precepts.[1] (*a*) They accepted the dictum of Aristotle,[2] made familiar to us from *The Merchant of Venice*, that barren metal does not breed. Money was regarded merely as a medium of exchange; the modern concept of capital had not been evolved. The fact was overlooked that the money borrowed could purchase, *e.g.*, a cow, and a cow does breed. (*b*) Roman law distinguished between consumptibles (*e.g.*, a loaf) and fungibles (*e.g.*, a house). In *mutuum* the thing borrowed was for consumption; its whole value lay in its first use; the use and the substance were inseparable; an adequate compensation was made when an equal quantity was returned. In this category money was ranked. When A borrowed money from B, his ownership over it was absolute; it was more than *possessio*, it was *dominium*; the process of exchange had the quality of a sale, and to sell an article and then charge for the use of it was unjust.

This, then, was the decision of the canonist conscience: in itself the loan of money did not justify a charge for its use. In those days of limited opportunity for investment it was doubtless often a gain to the lender to find a man willing to accept custody of the money, so long as it was returned intact. And the Schoolmen were ready to face the logic of facts and to make allowance for special cases. The custom sprang up of admitting compensation on various extrinsic grounds.[3]

(*a*) Bargains were not kept. A delay in payment might inflict serious loss. Was there to be no compensation? Certainly. So the lender was allowed to fix a fine to be paid if the bargain was not kept, the *pœna conventionalis*, and this fine was frequently as high as the amount of the original debt. This sum represented the difference between the creditor as he actually was and as he should have found himself had the bargain been kept—hence the name *interest*, 'that which is between.' As the civil law had allowed the defaulting debtor to be imprisoned or even to become a slave, this money payment was really a milder punishment.

(*b*) Suppose a man who had lent his money were compelled himself to borrow at a high rate of interest through the failure of the debtor to repay. For such a real expense capable of proof compensation was allowed by practically all Schoolmen —*damnum emergens*.

(*c*) By handing over money to another the lender deprived himself of the gain he might have made in various ways (*lucrum cessans*). Aquinas disapproved of this as a basis of claim, a future gain being regarded as too hypothetical. It was selling what did not exist and by a hundred chances might never exist. But this plea by the 15th cent. gained wide acceptance.

(*d*) Another extrinsic title which won its way to approval later than the others was that based on the risk—*e.g.*, in maritime ventures—that the sum borrowed would not be restored (*periculum sortis*).

(*e*) Once delay in payment (*titulus moræ*) was recognized as a reason for compensation, the practice easily sprang up of lending gratuitously for a short period and charging for delay beyond that period. This was but a step from the modern method of calculating interest.

It was not only by these strictly guarded avenues that money could pass for gain; the Middle Ages offered two other modes of investing money: (*a*) rent-charges, and (*b*) partnership.

(*a*) A squire drawing a fixed rent for a piece of land could transfer to another that right. Real productive property (*res frugifera*) was the indispensable basis for this contract; but the privilege was extended later to shops, toll-rights, etc., so that even the small trader and artisan could raise money to expand their business in this way.

(*b*) The stay-at-home merchant could entrust his goods to an agent—*e.g.*, the owner of a trading ship—and might bargain for a share of the profit of the venture. This partnership assumed many forms, the approval of the canonists requiring two conditions: (1) the investor remained the owner of his capital; and (2) he shared in the risk, thus earning a moral right to a share of the profits.

In view of all these gaps in the hedge, it is difficult to maintain that the ban on usury seriously hampered trade and commerce. Indeed, no school-made dictum would have been suffered

long to impede forces so potent as the trading instinct in man and the international necessity of commerce. The masses during these centuries still lived largely by agriculture and the primitive crafts. Neither artisan nor farmer had a big margin of wealth to tide over ill-health or bad harvests or grievous taxation. In such conditions the petty usurer was a temptation and a snare, as he is to-day in similarly undeveloped communities — *e.g.*, India and Egypt. Moreover, interest calculated per month, as was the system then in vogue, resulted in exorbitant charges. As the zealous guardian of the poor and the distressed, the Church was probably wise to keep her ban on usury. Her policy was certainly a long step in advance of the pagan practice by which the debtor was suffered to fall to the status of a slave. After the inroads of the barbarians, moreover, there was a period of chaos; commerce was stagnant rather than seeking for new outlets. What wealth an impoverished society possessed was swallowed up in the necessities of life; only after her recovery would there be free wealth for development, and that found open channels in partnerships and rent-charges. When capital was thus scarce and lending the monopoly of a few, unlimited freedom to impose interest would have led to abuse and produced a social cancer in that unripe age. Further, the Church was not herself detached from the realities of the economic world. She was one of the largest holders of property and monies, and Churchmen, as stewards of that material wealth, were driven to find ways and means of investment. The lessons of their own practical difficulties were not lost on them, as in their experience of the *montes pietatis*.

The Franciscans, with their sensitiveness to the needs of the poor, instituted at Orvieto (1463), Perugia (1467), and elsewhere these philanthropic loan-funds with a view to giving small loans to the poor on the security of pledges. 'But,' writes Ashley, 'even with papal patronage and the promise of spiritual and temporal advantages to those who should subscribe towards so charitable a work, the managers of the *montes* found it necessary to make a small charge for the loan in order to cover working expenses.'[1]

A wordy warfare followed between the various orders, resulting in the notable judgment of the Lateran Council of 1515 by which the *montes* were allowed to levy moderate interest, provided their object was to cover working expenses and not to make a profit. Such a verdict could not fail to have far-reaching effect. The Church which had resisted usury in the interests of the poor was now compelled to allow moderate interest to an institution which existed on behalf of the poor. The Council itself apparently felt that the question had reached a new phase, and re-defined usury thus:

'This is the proper interpretation of usury, when gain is sought to be acquired from the use of a thing not in itself fruitful (such as a flock or a field), without labour, expense or risk on the part of the lender.'

The controversy on the triple contract in the 16th cent. also shows forces moving towards the admission of interest. A capitalist class was emerging—a process that was aided by the large profits made by traffic in Indulgences for which the Church herself was responsible. The powerful banking house of the Fuggers of Augsburg was behind John Eck who championed this method of investment at the University of Bologna in 1515, and John Major argued with cogency in its favour.[2]

Three different contracts with three different men were allowed: (1) a contract of partnership, (2) a contract of insurance against loss of capital, (3) a contract of insurance against fluctuation of profit. Could a merchant make all three contracts with one man? That meant that his capital was guaranteed, so was a fixed return. Was this usurious?

At Bologna there was no decision. Yet the campaign taken up by Major and others might have achieved success but for the wave of reaction that came with the counter-reformation. Liberal opinion was swamped, and a reversion was made to a stricter standard by the bull *Detestabilis Avaritiæ* of Sixtus v. (1586), which revived the sternest condemnation of usury as 'detestable to God and man, as condemned by the sacred canons, and as contrary to Christian charity.'[1]

5. **The Reformation and after.**—The yoke of authority was broken by the Reformation and it was inevitable that in the freer atmosphere of Protestantism the binding strictures on usury should be cast off. Not that that process was unopposed. On the contrary, the removal of the Church's ban only showed how strong was the popular sentiment against the practice; witness Martin Luther's earlier deliverances on the subject.[2] These are not the scientific judgments of the theologian, but rather the utterance of a son of the people, feeling keenly that oppression at the hands of the nobles and rich city merchants which led to the peasants' rebellion; there was also in the case his Christian fury against the Jewish usurers' ensnaring of his fellow-believers.[3] His zeal for moral reform tended to swing him back to the strictest standard of the Fathers. He called on ministers to preach against usury (1540). In more reasoned mood, however, in cases where the participators are not poor, he allows rent-charges on real land and interest that compensates for actual loss (*damnum emergens* and *lucrum cessans*), provided the charge is moderate (four or five florins to the hundred).[4]

Melanchthon professes to accept the traditional, Scriptural prohibitions.[5] But a practical guiding consideration to his mind is whether the usury is so immoderate as to have a disintegrating effect on the commonwealth, a consideration forced upon him doubtless by his study of classical times:

'Societas civilis non potest esse perpetua cum non servatur aequalitas . . . Exhauritur ergo altera pars et non servatur aequalitas, sicut res ipsa ostendit ubi concessae fuerunt immoderatae usurae. . . .'[6]

He allows a payment 'supra sortem,' not only in cases of *damnum emergens* and *lucrum cessans* to those engaged in lucrative trade, but even where there is no *titulus moræ*, provided always the interest is moderate: 'Licet stipulari de eo quod interest etiam ante moram.'[7]

It was left to Calvin, however, to finally open the sluice, and that, too, without any such intention on his part. His standpoint is really the same as that of his contemporaries.[8] Only he wrote to Œcolampadius a guarded opinion, the substance of which was seized on and the reservations slurred over. The opinion expressed was not for everybody. He hesitated to make any concession, feeling, on the one hand, that to condemn usury altogether was to impose restrictions severer than the Lord Himself desired, and, on the other hand, that, if he yielded an inch, some would take an ell. And what he feared came to pass.

[1] The Catholic Church has been slow to give official sanction to usury. As late as 1745 the *Vix Pervenit* of Benedict xiv. follows canonist lines. Not till 1830 did the Holy Office allow, in a particular case, that interest could lawfully be taken for money lent to merchants who were in lucrative trade. Cf. J. M. Harty, 'Historical Evolution of the Catholic Teaching on Usury,' in *Irish Theol. Quarterly*, iv. [1910] 17.

[6] *Ib.* [7] *Ib.*
[8] *Comm. in Ps* 15[5]: 'Sciamus ergo contractus omnes quibus alter ex alterius damno lucrum inique captat quocunque tandem nomine vestiantur damnari'; cf. *Serm. in Dt. xxiii.*

Lk 6^{35}, the letter runs, has been badly twisted from its real sense; Jesus merely wished to correct the vicious custom of the world whereby men readily lent to the rich, who could pay back, and not to the poor. Dt 23^{19} was political and not to bind us further than reason and equity allowed. The strictures in the Psalms and Prophets were applicable to the Hebrews: our circumstances are different. The Aristotelian argument, to which Ambrose and Chrysostom subscribed ('pecunia non parit pecuniam'), is of no great moment. It is a specious quibble. Interest proceeds from money as naturally as rent from a field or house. A money gain is allowed for the use of a house. So money can be made fruitful when land is purchased and yields a yearly revenue. The argument is clinched by an illustration. A rich man, A, well endowed with landed property and other income, is short of ready money. Another man, B, is not so rich, but has abundance of ready money. A asks B for a loan of money. B could easily buy land for himself or he could have the land bought with his money hypothecated to him till the debt was repaid. Suppose instead of that he contents himself with the interest, the fruit of the money, is that to be condemned when the harsher contract is reckoned fair? That would be nothing else than playing with God, a child's game.

While thus Calvin does not condemn all usury, he does not give it indiscriminate approval, nor will he countenance it as a trade. Finally, he lays down seven conditions, the important being that usury was not to be demanded of men in need or distress; poor brethren were to be considered; the welfare of the State was to be safeguarded; and the legal rate was not to be exceeded.[1]

A world eager for commercial freedom found it convenient to drop Calvin's qualifications, while his concessions were seized on as authority for a new standard. When the theologian had yielded the principle, the jurist was ready to rush in and establish the case at all points. Molinæus[2] demolished with meticulous detail the old arguments of the canonists. Though his book was placed on the Index, it was freely republished and circulated widely. More especially in the Netherlands, where Reformation principles were spreading and commerce was developing, the new views found open ears. Salmasius preached the cause in a series of brilliant volumes;[3] but practical needs were probably more eloquent than argument. In Germany early in the 16th cent. several State legislatures began to allow *Interesse*, when stipulated in advance, and in 1654 the imperial diet did likewise. In Italy, under the shadow of Roman Catholicism, discussion did not arise till late, but in the busy commercial towns, by allowing interest to be bargained for beforehand from an early period and exploring other avenues of ingenuity, the prohibition of usury was rendered ineffective. In France the power of the Church maintained the ban until the Revolution. Not till 1789 was the prohibition removed. Turgot's *Mémoire sur les prêts d'argent*, the classic vindication of usury in France, did not see the light till 1789.

6. Opinion in England.—Christianity arrived in the infancy of English civilization and stamped her character from the beginning on social and political developments. Accordingly, the attitude of mind shown towards usury in popular literature[4] and in early statutes is in harmony with the teaching of the Church. Indeed it would appear that not till the Jews arrived after the Conquest did the trade become a problem at all. The English people have always been healthily disposed towards commerce—indeed their very existence depends upon it—and they would be prompt to protest if the ban on usury were found restricting trade. What emerges is the opposite: a keen desire to grapple with and shackle the traffickers in usury. Complaints were often made that the ecclesiastical courts were not stringent enough.[5] Progressive civilians sought further powers to stamp out the evil—*e.g.*, in the ordinance framed by the London municipality in 1363.[1] The exact point of offence is defined in the revised statute (1390) which describes usury as 'a promise for certain without risk.' The wide-spread bitterness towards the Jew was one other illustration of the popular verdict against usury. The very exorbitance of the interest allowed—2d a week per £1, *i.e.* 43⅓ per cent—was enough to breed odium, and kings made rather a questionable use of these strangers. Feeling rose so high that the Jews were expelled in 1290, and in the following century (1376) the citizens of London called for the same measure against the Lombards, the agents of the grievous papal exactions, who had taken over the detested trade.

The way to change was prepared by the relaxations of the canonists themselves, but more by the fact that in the 15th cent. money transactions were altering in character. The borrowers were no longer poor men in need, nor barons suddenly confronted with some savage taxation or a levy for a crusade. Traders making good profits now needed money for developing business; they were willing and ready to pay for loans. And many began to find themselves in better times with a margin to invest: the phenomenon of capital was emerging. Still, when Henry VIII. in 1545, under the guise of limiting charges, really sanctioned interest at 10 per cent, he was probably in advance of public opinion. At any rate a wave of reaction followed, and the Act was repealed under Edward VI. Warm controversy marked the closing decades of the century. On the one side, divines who 'too much squinted towards Moses' preached a stricter standard than even the canonists and attacked rent-charges and partnerships.

> The 'little more' of interest was likened to a sixth finger, a monstrosity; the usurers were as ivy on the oak, all-devouring. 'To what shall I liken this generation? They are like a butler's box; for as the counters at last come to the butler, so all the money cometh to the usurer.'[2]

There are indications of resentment of another kind caused by the arrival of a 'new rich' and the dispossession of old families by these 'ungracious pettie Brokers.'[3] Irresistible forces, however, drove the other way. 'But goode Lorde, how is the worlde changed,' writes Thomas Rogers, 'that which Infidels cannot abide, Gospellers allowe.'[4] The Reformation had broken the old spell of authority, and disciples of Calvin found ready listeners. Henry Bullinger and others spread abroad the newer view that usury was forbidden only so far as it was 'biting.' But, as Cunningham has it,

> 'The most important factor was the revolution in English commerce which occurred during the 16th century; for various circumstances had combined to bring about an entire recasting of the ordinary business system of the country. For one thing, the exclusive trading of the great gilds had suffered a series of severe blows and it was open to anyone to engage in commerce and win its rewards. The great improvements in the management of estates—as well as the planting of new industries—brought much wealth into the hands of many citizens all through the country. . . . For the first time in the history of England the circumstances were present which rendered the general formation of capital possible.'[5]

The Act of 1571 marks the victory of the liberal school. The rate was lowered to 8 per cent in 1624, but more significant was the fact that in that measure no attempt was now made to distinguish between usury and interest. The controversy smouldered on, but really for the time being the question had been settled by the advent of capital and the consequent changed conditions of commerce. The point at issue altered to the rate

of interest, for the limitation of which Thomas Culpepper, Josiah Child, and others pled. John Locke entered the lists with *Some Considerations of the Consequences of lowering the Interest and raising the Value of Money* (1691), but it was in another connexion that he made his most significant utterance, anticipating the next phase of the controversy: 'For it is labour indeed that puts the difference of value on everything.'[1] Jeremy Bentham's classic *Defence of Usury* also indicates a fundamental fact which makes this a perennial question, 'The children who have eaten their cake are the natural enemies of the children who have theirs.'[2]

The repeal of the usury laws in 1839 appeared to be 'the end of an auld sang.' But the freedom was abused. The usurer with his merciless exactions again came under control by the Money-Lenders Act of 1900, which requires the registration of their business names and addresses and allows the court, where the lender prosecutes for debt, to cancel the contract if the rates are excessive. Petty loan business, however, still survives.

7. The modern phase of the problem.—History repeats itself in the present phase of the controversy. Usury has come to mean exorbitant interest, but the legitimacy of interest is still debated. The early attacks on usury were motived by the Church's sympathy with the oppressed poor; the latest attack finds its strength in the plea that interest is an unjust tax on the labouring classes.

'But observe, my Lord,—and observe as a final and inevitable truth—that whether you lend your money to provide an invalided population with crutches, stretchers, hearses, or the railroad accommodation which is so often synonymous with the three, *the tax on the use* of these, which constitutes the shareholder's dividend, is a permanent burden upon them, exacted by avarice, and by no means an aid granted by benevolence.'[3]

Henry Smith said that the usurer was like a butler to whom all the counters returned. What offends the moralist to-day is that money is lent by those who have abundance and returns to them to increase that abundance, the increase being the unpaid dues of labour, which alone, the argument runs, produces wealth.

'It is not only that "every gate is barred with gold," but that year by year the burden of the past is becoming heavier on the present. Wealth passes down from father to son like a gathering snowball, at the same time as industry gets massed into larger and larger organizations, and the guidance and spirit of industry is taken more and more out of the hands of the worker and given to the capitalist.'[4]

By interest, then, the socialist claims, the rich are made richer and the poor poorer and the stability of the social organism is disturbed—the evil that Melanchthon had feared.

Is interest, then, an unjustifiable tax that could be eliminated? The experience of the Franciscans with their *montes pietatis* and Proudhon with his Exchange Bank[5] may well give pause. In spite of the strength of the socialist indictment, neither in theory nor in practice has the way out been demonstrated. The contention that labour alone creates value and that interest is the unpaid wage of the labourer and therefore wrong is not established unless it is reckoned that the service rendered by capital involves no sacrifice. The waiting or abstinence of the capitalist has not been swept out of court in spite of Lassalle's picture of the 'ascetic millionaires of Europe . . . like Indian penitents or pillar saints . . . holding a plate towards the people to collect the wages of their abstinence.'

'It is not true that the spinning of yarn in a factory after allowance has been made for the wear-and-tear of the machinery, is the product of the labour of the operatives. It is the product of their labour, together with that of the employer and subordinate managers, and of the capital employed; and that capital itself is the product of labour and waiting: and therefore the spinning is the product of labour of many kinds, and of waiting.'[1]

Could even a socialist community abolish interest and so give the labourer the full value of his labour? The difficulty lies in the fact that so many kinds of labour are not immediately productive. A vintage is harvested in 1920 and valued at hundreds of pounds. But in 1940 that value has increased enormously. Can labour be recompensed according to the value in 1940? It would be simple if the labourers could wait till 1940. But can they? Somebody must wait, and that is the plea for interest—the price of waiting. Interest has been defined as 'human impatience crystallized into a market rate . . . the premium that a man is willing to pay for this year's over next year's goods.'[2]

Only if all labour yielded products of immediate use could the community return to each man each year value for his whole labour. But in a progressive society effort must constantly be made for bettering conditions: expenditure must be put forth on schemes that can yield no immediate return. If the present generation is to hand on to the next finer means of transport and a nobler social equipment, can they do so without denying themselves a portion of the value of their labour? Is sacrifice not inherent in progress? A socialist state might possess itself of much capital, but that capital would not be inexhaustible. Some day the question would arise: where is the capital to come from for these improvements? How can a wage be paid to those engaged in these enterprises with deferred returns except by raising some contribution from other fields of labour? This could be done only by raising the price of other goods above the cost of their labour value, or by paying the labourers less than the value of their labour. Thus the socialist society has to impose a burden upon its citizens and deny them the full value of their labour just because of this fact that certain goods take time to mature; *i.e.* the element of waiting cannot be eliminated, and the price of that waiting must be paid.

'The complaint against interest is after all only a complaint that the great advantages of rapid progress cannot be had for nothing.'[3]

What practical policy can be suggested? It is admitted that laws directed against the usurer simply lead to more exorbitant charges to cover the risk of breaking the law. The most successful antidote is the co-operative bank, which meets the needs of those most subject to temporary distress, such as the artisan and the peasant farmer. The popular dislike of interest springs from the worker's resentment towards the idle rich. That privileged individuals should draw from a community enough for a life of idleness and luxury 'will always be regarded as a fundamental immorality.'[4] But, as Cassel goes on to point out, that really calls for a more equal distribution of the nation's wealth rather than tampering with the method of interest. Society must consider rather the methods by which superabundant wealth comes into a few idle hands—as the laws of inheritance, unearned increment, and all forms of monopoly. Meantime the concern of the Christian Church is not to dictate any particular economic method but to maintain a zealous watchfulness over all developments in behalf of her ideals of justice, charity, and brotherhood.

JOHN DOW.

USURY (Hebrew).—**1. Terms.**—These do not throw much light on the moral and religious ideas connected with the subject.

לָוָה, 'borrow,' also means 'join,' and has been supposed to imply the dependence of the borrower on the lender, but it is more probable that there is no connexion between the two uses of the root. שָׁאַל, 'ask,' is also used in the sense of 'borrow,' and the *Hiph.* in that of 'lend.' עָבַט is used for 'borrow on pledge (or security),' and the *Hiph.* for 'lend on security'; חָבַל is similarly used. As the last two roots are also used in the sense of 'bind,' they have been supposed to imply the binding of the debtor to the creditor. Nouns from these roots are used for 'pledge' or 'security.' עֵרֶב is used for 'be surety,' 'give pledges,' etc. For 'lend at interest' we find נָשָׁה, נֶשֶׁךְ and נָשַׁךְ; נֶשֶׁךְ='interest.' *Nmashakh* also means 'bite'; and *neshekh* is supposed to mean 'something bitten off,' or to refer to the injurious and ruthless behaviour of a creditor in exacting interest. The AV 'usury' for *neshekh* simply meant 'interest' when AV was translated, and the suggestion which it now makes of exorbitant interest is misleading; it is simply 'interest,' as far as the mere word is concerned, apart from the implications of any special context. Thus the obviously neutral word תַּרְבִּית, EV 'increase,' from רִבָּה, 'to be great,' is often used as a parallel and synonym of *neshekh*; and the word is rendered in the LXX by τόκος, and in the Vulg. by *usura*, which are simply the ordinary words for 'interest.'

2. History.—Debt plays only a small part in the OT, partly, no doubt, because it was not an important factor in primitive times, though it became more so as Israel grew more civilized and life more complex. In an agricultural community the failure of the crops might lead to borrowing (Neh 5[3]). A man might be involved in debt by becoming security for a friend (Pr 6[1]). In later times taxation for a native government or for the payment of tribute to a foreign suzerain was a source of debt (Neh 5[4]). As far as the OT is concerned, debt always seems to have originated from such causes; the OT has little or nothing to say about the spendthrift who got into debt through sloth or extravagance. Moreover, commercial borrowing, which is a source of profit to the borrower, though known at a very early period in Babylon—*e.g.*, in the time of Ḫammurabi—does not seem to have existed in ancient Israel. There is no certain and definite information as to the rate of interest. The clause Neh 5[11], 'Restore . . . the hundredth part of the money,' has been understood to mean that interest was at the rate of one per cent per month, 12 per cent per annum, and that creditors were to forgo their interest; but most recent authorities—*e.g.*, Batten, *ICC*—read *mashsha'th*, 'interest,' for *me'ath*, 'hundredth.' Twelve per cent would probably be too moderate, the interest being determined mainly by the urgent need of the borrower. The consequences of debt might be serious; loans were sometimes obtained on the security of land or houses, *i.e.* on mortgage; when the debtor could not pay, the creditor took the property. Where there was no such security, the debtor and his family might be sold as slaves (2 K 4[1-7], Neh 5[4f.]).

3. Moral and religious significance.—Like other misfortunes, the distress which necessitates borrowing is sometimes regarded as judgment on sin (Dt 15[6] 28[12. 44]), and it is one of the characteristics of the wicked man that he borrows and does not repay (Ps 37[21]). But usually the OT sympathizes with the debtor and seeks to help and protect him; his position is regarded as the result of unavoidable misfortune. It is the duty of the prosperous man to help his poor neighbour in distress by benevolent loans; it is not to be a pure matter of business (Dt 15[7-11], Ps 37[26] 112[5], Pr 19[17]). Necessaries are not to be pledged; thus the widow's ox, or her clothing, or a millstone are not to be taken in pledge (Dt 24[6. 17], Job 24[3]); clothing when pledged must not be kept over night (Ex 22[26] JE, Dt 24[13]). In fact the OT does not regard with approval the practice of taking pledges (Job 22[6] 24[9]).

In view of the fact that the insolvent debtor and his family might be sold as slaves, Ex 21[2-11], which directs the emancipation of the Israelite slave at the end of the seventh year, was an attempt to give some measure of relief to the debtor. This attempt is carried to an extreme in Dt 15[1-6], which appoints a שְׁמִטָּה, EV 'release,' at the end of every seven years, when all debts were to be cancelled. The sequel shows what a large-hearted generosity the Deuteronomic writer demanded from his fellow-countryman: 'Beware that there be not a base thought in thine heart, saying, The seventh year, the year of release, is at hand; and thine eye be evil against thy poor brother, and thou give him nought' (15[9]). There is, however, no evidence that the law was ever enforced; it is on the face of it impracticable. Indeed, the Deuteronomic writer himself seems conscious that he is only setting forth an ideal. This appears from 15[4]. We may set aside the AV 'Save when there shall be no poor among you,' and adopt the RV 'Howbeit there shall be no poor with thee,' *i.e.* no one shall need to borrow, 'for Jahweh will surely bless thee . . . if only thou diligently hearken unto the voice of Jahweh thy God, to observe to do all this commandment.' As Driver says in his comment on this passage, there will be 'no occasion for the present law to come into operation, if only the nation so comports itself as to merit Jehovah's blessing.' On the other hand, if Israel disobeyed other commandments, so that there were poor, the nation was not likely to observe this particular ordinance; in either case, it would be a dead letter; so it seems to have been. Other authorities propose the less probable rendering, 'Howbeit there *should* be no poor in thee,' *i.e.* the nation should establish a social system which would make poverty impossible. The Priestly Law of jubile (Lv 25) has a similar object to the release. It provides that at the year of jubile all land shall go back to the family to which it originally belonged, and that an Israelite sold for a slave through poverty shall be treated as a hired servant and released. As the loss of the family inheritance or of personal freedom was often due to debt, this law would have mitigated the unhappy consequences of what we should call bankruptcy. Here again this law, like that of the release, was a dead letter. Nevertheless, these laws are evidence of the anxiety of the legislators that neither an individual nor a family should be permanently ruined by insolvency.

A persistent feature of OT teaching is the prohibition of interest as between Israelite and Israelite, although interest may lawfully be taken from a foreigner (Ex 22[25] JE, Dt 23[19. 20], Lv 25[36. 37] H, Ps 15[5], Pr 28[8], Ezk 18[8-17] 22[12], Neh 5).

Interest would often be exorbitant, and indebtedness the occasion or pretext for fraudulent and unjust claims, successfully asserted through the corrupt administration of the law or by sheer violence. There can be no doubt that borrowing and its consequences contributed to the transference of the land from the yeoman farmers to comparatively few wealthy landlords against which the prophets protested. Doubtless the evils of the system largely arose from exorbitant interest, and from the rapacious and unscrupulous behaviour of creditors; but, as has already been pointed out, *neshekh*, EV 'usury,' is not usury in its modern sense of excessive interest, and we cannot give it that meaning in the OT passages in which it occurs; it means interest generally. It is true that Ex 22[25] specially refers to the poor, but even there Benzinger and Nowack are probably wrong in holding that it means only excessive interest; and in later passages there is no ground for any such limitation. As we have said above, the writers had not commercial loans in view, and their teaching was not intended to apply to interest in that connexion. The objection to interest seems to rest on two main grounds: (1) that the prosperous man with a superfluity should help those in difficulties, suffering from want; if gifts were impossible or undesirable, at least there should be free loans; (2) as in modern times, it was constantly the interest that ruined the debtor, where he might have repaid the capital, so that the social evils which crushed the poor were largely associated with interest; the simplest and most effective remedy seemed to be to prohibit interest altogether. In other words, the principle involved is that wealthy men should see in the misfortunes of their fellows a claim for generous assistance and not an opportunity for adding to their wealth by exploiting the need of the unfortunate.

The prohibition of interest and the other provisions in favour of debtors, like many other humane provisions in the OT, apply only to Israelites; lending to foreigners is expressly allowed (Dt 23[20]), and is spoken of as a privilege granted by God to the faithful Israelite (Dt 28[12]). This is another example of the particularist attitude often found in the OT.

LITERATURE.—See sections on 'Debt' in *Heb. Arch.* of Ewald, Benzinger, and Nowack; the commentaries on the passages cited, especially Driver on Ex 22[25] (*Cambridge Bible*, Cambridge, 1911) and Dt 15[1-8] (*ICC*, Edinburgh, 1896); and the present writer's artt. 'Debt' and 'Usury' in *HDB*.

W. H. BENNETT.

USURY (Jewish).—**1. General views of Mishnāh and Talmud.**—In the Mishnāh and Talmud usury is indicated either by the Biblical word נֶשֶׁךְ or, as is more frequently the case, by the term רִבִּית. Both terms denote money, food, or any article which a man gives on loan to his fellow-man, on the condition that the latter repays something for the loan in addition to the original sum lent. The discrimination made in modern times between 'usury' and 'interest' is unknown to Jewish law. All 'increase,' whether large or small, is prohibited. Judaism has ever regarded the lending of money by one Jew to another Jew as merely a way of relieving the latter's temporary distress, an act of pure charity. The basic assumption is that the borrower is poor and wants money to satisfy his own personal wants. It is one of the 365 'negative' precepts of Judaism that a Jew may not lend on interest to another Jew. This prohibition is based on Lv 25[37], 'Thou shalt not give him thy money upon usury, nor lend him thy victuals for increase.' Another of the 365 'negative' precepts of Judaism is that a Jew may not borrow from another Jew on interest. This is derived from Dt 23[19], 'Thou shalt not lend upon usury to thy brother'—the peculiar 'Hiphil' form of the verb (תַּשִּׁיךְ) leading the Rabbis to infer that the prohibition is aimed in this case at the borrower.[1] Likewise the Judaism of Talmud and Mishnāh forbids any Jew to be an intermediary or agent or surety or witness in any usurious transaction between Jew and Jew. The Rabbis by a curious exegesis derived this prohibition from the redundancy of the phraseology in Ex 22[25], 'If thou lend money to any of my people that is poor by thee, thou shalt not be to him as an usurer, neither shalt thou lay upon him usury.' The mediæval Jewish codes lay it down that, in the case of a Jew who has become a convert to another religion, it is forbidden to a Jew to lend to, or borrow from, him on interest. Likewise it is forbidden to a Jew to lend to, or borrow from, a Karaite Jew on interest.

2. Different kinds of usury.—The Talmud and the mediæval Jewish codes enumerate several kinds of 'increase' (רִבִּית). These are (*a*) רִבִּית קְצוּצָה, *i.e.* 'fixed increase,' (*b*) אֲנָכָ֫ךְ רִבִּית, *i.e.* 'the mere dust of increase,' (*c*) כְּמַ֫חֲוֵי רִבִּית, *i.e.* 'the semblance of increase,' (*d*) רִבִּית דְּבָרִים, *i.e.* 'increase payable by some means other than money.' They all refer, of course, to dealings between Jew and Jew. The first of these denotes the ordinary transaction where interest in money is paid direct on a loan, in violation of the express command of Scripture. The second (often called 'Rabbinical increase' as distinguished from the first, which is frequently known as 'increase under the Mosaic Law') denotes interest paid in some indirect way connected with bargain and sale, or interest the amount of which was not stipulated nor mentioned at all when the loan was first transacted but which was paid more or less gratuitously by the borrower or taken voluntarily by the lender with the consent of the borrower. It also covers cases where interest was paid by the borrower on the mere anticipation of a loan. A rule of this kind would forbid, on the ground of usury, the sale of futures, made when the market-price has not yet been fixed. Thus the Talmud says:

'A man should not say to his neighbour "Give me a kor of wheat and I will return it at threshing-time" because the market-price of wheat might rise in the meantime and the lender would profit.'[2] Or, again, 'a lender may not lodge in the borrower's house free of charge nor may he rent anything from him at less than the standard rate.'[3]

The third of the four above-mentioned kinds of 'increase' refers to interest paid out of sheer gratitude for a past loan or as the motive for inducing a future one. *E.g.*, after repayment of a loan a borrower might send a gift to the lender on the mere grounds that the lender's money had been in his (the borrower's) hands. This is forbidden. Or, again, if A has received a loan from B, he should not greet B in the street (out of gratitude) unless he had been in the habit of doing so before. A borrower should not consent to be a tutor to the son of the lender, gratuitously, unless he had been this before receiving the loan. The fourth form of 'increase' is illustrated by the case of a Jew who, after receiving a loan from a friend, honoured the latter by allowing him to perform some religious duty in connexion with synagogue-worship or home-ritual.

It is astonishing to read what an emphasis the Talmudic Rabbis laid on all these sins of 'moral' usury. A loan from one Jew to another should be an act of kindness without the least expectation of profit. This, the OT view, was upheld by the Rabbis inexorably, in spite of changed times and conditions.

Turning again to the already-mentioned four species of 'increase,' we should say that (*a*) רִבִּית

[3] *Ib.* 64*a*.

נְשִׁיָּה, where charged, was recoverable at law, before the Jewish court ('Beth Din'). If the defendant refused, he was flogged by order of the court, until he consented to pay. The case of (*b*), אֶבֶן רְבִית, was different. This was not recoverable. But, if the lender desired 'to fulfil his duty in the sight of Heaven,' it was obligatory on him to return the interest to the borrower. In other words, it was an act of religion, not of law.

According to the mediæval Jewish codes, the prohibition against taking or giving interest was suspended in the two following cases:

(*a*) Acting Rabbis or teachers of the Law, in borrowing from, or lending to, one another articles of food such as grain, etc., were allowed a fixed interest up to 20 per cent. But such charges were not to be made with frequency lest they might thereby set an undesirable example to the laity. As Rabbis were not commercial men, such transactions were not to be regarded as usurious. It was merely one of the ways of Rabbis helping one another and helping themselves at the same time. It hence came under the heading of 'charity' rather than 'usury.' (*b*) Money left by bequest or gathered for the support of orphans or the poor, or for the upkeep of schools for religious instruction or for the building of a synagogue, might be lent out on interest. This relaxation was made inevitable by the fact that in most countries of mediæval Europe Jews were precluded by the prevailing laws from investing any funds in landed property, and, as all the usual avenues of commerce were closed to them, they felt complete justification in investing public funds on what was, in the strict sense, an undeniably usurious basis.

3. Usury as between Jew and Gentile.—According to Maimonides,[1] a Jew lending money to a Gentile is religiously bidden to charge interest. Maimonides regards this as one of the 'affirmative' precepts of Judaism, deriving it from Dt 23[20], which, according to him, should be translated 'unto a stranger thou *must* lend money on *interest*.' But this view of Maimonides has been severely criticized by the later Jewish legalists and codifiers, and has never found acceptance generally. The prevailing Jewish doctrine is simply that in all transactions between Jew and Gentile interest may be given and taken by both parties.

Commerce is unsectarian. Usurious transactions, as was natural, frequently involved both Jew and Gentile. Hence it was only to be expected that, where Gentile intervention took place in a loan between Jew and Jew (and *vice versa*, where Jewish intervention took place in a loan between Jew and Gentile), there should be a temptation on the part of a Jewish lender or borrower to find a loophole for taking or paying interest, and thus evading the Jewish prohibition of usury as between Jew and Jew. The mediæval Jewish codifiers were well aware of all these contingencies, and their enactments on many a nice point in this connexion are very searching. Here, *e.g.*, are a few specimens culled from the *Shûlḥān 'Árûkh* of Qaro:[2]

'Suppose the money of a Jew is deposited in the hands of a non-Jew who went and lent it to another Jew on interest. If the non-Jew was responsible for the safety of the money then the Jew is allowed to receive the accruing interest. But if the non-Jew is not responsible for the safety of the money, then interest is prohibited.' 'Suppose the money of a non-Jew is deposited with a Jew. If the latter is responsible for its safety then he may not lend it to a Jew on interest. But if he assumed no responsibility for the money, then he is allowed by Jewish law to lend it to a Jew. But he must not do this because it might convey a wrong impression.' 'A Jew says to a non-Jew, Come and lend out my money for me on interest [to Jews] and I will pay you wages for your work. This is prohibited, because the money belongs to the Jew and his clerk has no responsibility. But if a non-Jewish money-lender asks his Jewish clerk to do the same, the latter is allowed by Jewish Law to do it. But, in fact he must not do it on account of the wrong impression which might be conveyed.' 'Suppose a Jew borrows from a non-Jew on interest, then it is forbidden for a fellow-Jew to be a surety unless the lender distinctly stipulated that in case of default of payment he would not make the first claim against the surety [who would then sue the borrower and thus infringe the prohibition of usury as between Jew and Jew].'

These are but a few instances out of a large number given in the *Shûlḥān 'Árûkh*.

4. History underlying the Jewish laws concerning usury.—In OT times the Israelites were essentially an agricultural people with no genius for commerce. It was feared that usurious transactions between one Israelite and another might result in the alienation of one tribe's inheritance into the hands of another. This would mean an open violation of the law in Nu 36[7], 'So shall not the inheritance of the children of Israel remove from tribe to tribe; for every one of the children of Israel shall keep himself to the inheritance of the tribe of his fathers.' But usurious dealings between Israelite and non-Israelite were not looked upon as likely to lead to an infringement of this Mosaic Law. On the contrary, it was felt that any gain accruing to the Israelites from such transactions might be most usefully applied to the development and enrichment of the soil of the Holy Land. In later times, in the epoch of the Mishnāh and the Talmud up to the 5th cent. A.D., the Jews mostly dwelt in agricultural settlements in Babylonia, Palestine, and other parts of the world. The Talmudic legislators then found it necessary to enact the law of אֶבֶן רְבִית as mentioned above. Jewish farmers and agriculturists were to be financed by their co-religionists free of all interest. Such was the humanitarian spirit of brotherliness breathed by the Mosaic Law. Were usury permitted even in the slightest degree, debts would grow to such proportions that the creditors would eventually confiscate the entire property of the debtor, and the solidarity of the Jewish people would be utterly broken up. But no such enactments were applicable to the cases of usurious dealings between Jews and Gentiles. There was no love between these two branches of mankind; and, as the Gentile was allowed by law to charge the Jew exorbitant interest, the Jew had no alternative but to do likewise. In fact so hard did the lot of the Jew become through the oppressive measures of the Church that he felt himself justified in adopting no matter what expedients for protecting himself and defeating the foe. In Judaism the duty of self-preservation eclipses all other laws.

The year 1179, however, brought about a vital change. Pope Alexander III. in that year excommunicated all Christian usurers, so that henceforward Christians were debarred by canon law from taking usury. The Church decreed that all taking of interest was forbidden by Scripture as well as opposed to the laws of nature. It made no difference whether interest was low and reasonable, or high and extortionate. But, as canon law did not apply to Jews, the Church put no bar in the way of Jewish usurers; and kings soon found out how useful these Jews could be to the depleted exchequers of their realms. There are many instances in European history generally where wealth amassed by Jewish money-lenders fell into the hands of the king either during the life-time of its owner or after his death. There was a process of squeezing the Jew, sponge-like. Indeed, so indispensable did Jews become to the impoverished coffers of the State that many a mediæval monarch objected to their forced conversion to Christianity, because, once Christians, they would come within the net of canon law, and the annexation of their money would be forbidden. Thus, as Joseph Jacobs has shown, kings actually demanded to be compensated for every Jew converted to Christianity. In spite of the strongest protestations by the papal authority against usury in any form, the kings and princes of mediæval Europe were really the arch-usurers of their day. The rate of interest charged by the Jewish money-lenders was excessively high. But they were forced to this course by the pitiless rapacity of the governments as well as by the inhuman laws then in vogue which put the severest restrictions upon the Jews

[1] *Yad Hā-ḥăzākā*, 'Laws of Lending and Borrowing,' vi. 6.
[2] *Yōrēh Dē'āh*, 'Laws of Usury,' 169.

in their efforts to earn an honest and reputable livelihood. The would-be Jewish trader was shackled. In England, Spain, and many other European countries he was absolutely forbidden by law to follow most of the trades and handicrafts which were open, without question, to all other citizens; and when, in rare instances, freedom was given, it was penalized and embittered by the imposition of special taxation. The Church left the Jews nothing to do except to deal in money or second-hand clothing.

But it would be erroneous to suppose that the usurers of the Middle Ages were confined solely to Jews. The increasing spread of commerce and commercial enterprises in those days made it imperative for governments to devise expedients for evading the canonical embargo upon usury. Italy was the first European country to start this evasion. Others soon followed—with the result that the competition between the Christian (chiefly Italian) and Jewish money-lenders in England became so keen as to render the Jews less indispensable than they formerly were to the English Exchequer. Their expulsion from England by Edward I. was the corollary of this fact.

5. The views of modern Judaism on usurers and usury.—The somewhat disproportionate tendency of Jews in recent times to follow the trade of money-lending may be set down as a piece of sheer atavism. Racial characteristics have a way of surviving long after the original causes which created them have disappeared. But it must be strongly emphasized that money-lending is considerably on the decrease among Jews of the 20th century. Commerce, handicraft, the professions of law, medicine, dentistry, literature, art and science generally—the young Jews of the present day are entering these callings in great numbers and with great gusto. Many of them are recruited from the ranks of the poorest parents. The trade of usury is looked upon with shame; and the usurer is stigmatized as a reproach to his people. In some Jewish communities to-day the money-lender is forbidden to have any voice in the affairs of the Synagogue and is socially tabued by the better classes among his co-religionists.

In fine, the attitude of modern Judaism towards usury practically coincides with the attitude of the Judaism of the OT, the Mishnāh, the Talmud, and the mediæval codes. The attitude of the OT is summarized in Ezk 18[13], '[He] hath given forth upon usury, and hath taken increase: shall he then live? he shall not live . . . his blood shall be upon him.' On this passage the comment of the Talmud is, 'The money-lender is compared to a murderer.'[1] The Mishnāh[2] includes the usurer among those who are disqualified from giving evidence in a court of law. The *Shūlḥān 'Ārūkh*—the code on which modern orthodox Judaism, whether as creed, law, or life, is based—says:

'When can usurers be considered as having returned from their evil ways and as being again admissible as witnesses in a court of law? When they have torn up all the documents on which the principal and interest due to them from clients are recorded, with the complete and final resolution that they will never again lend on interest, not even to non-Jews. They must also restore to their former clients all the interest they have ever taken from them. If they can no longer identify all their clients they must devote the money to communal purposes.'[3]

These voices of the past are still expressive of general Jewish opinion to-day.

UTILITARIANISM.—I. *INTRODUCTORY.*—The term 'Utilitarianism' is used for both an ethical theory and a practical movement. The practical movement will be dealt with under II. 3. ii. below. As an ethical theory it signifies that the ultimate end is and ought to be general happiness, and that those actions are right which bring the greatest happiness to the greatest number. In Mill's words: 'The creed which accepts as the foundation of morals, Utility, or the Greatest Happiness Principle, holds that actions are right in proportion as they tend to promote happiness, wrong as they tend to produce the reverse of happiness. By happiness is intended pleasure, and the absence of pain; by unhappiness, pain, and the privation of pleasure.'[1] Or, as Sidgwick says, 'By Utilitarianism is here meant the ethical theory,' first distinctly formulated by Bentham, 'that the conduct which, under any given circumstances is objectively right, is that which will produce the greatest amount of happiness on the whole; that is, taking into account all whose happiness is affected by the conduct.'[2] By happiness Sidgwick means pleasure and absence of pain; and pleasure he defines as 'feeling which the sentient individual at the time of feeling it implicitly or explicitly apprehends to be desirable;—desirable, that is, when considered merely as feeling.'[3]

For utilitarianism Sidgwick prefers 'some such name as Universalistic Hedonism.'[4] He says 'universalistic' in order to show that the utilitarian end is general, not individual, happiness. Cf. Mill: The utilitarian standard 'is not the agent's own greatest happiness, but the greatest amount of happiness altogether.'[5] Hedonism (*q.v.*) is a general term including all systems of ethics which regard pleasure as the end actually aimed at (psychological hedonism), or as the end that ought to be aimed at (ethical hedonism). We may say that strictly the latter is alone worthy of consideration, for psychological hedonism, if true, makes any system of ethics irrelevant. But the earlier utilitarians based their theory of general happiness on the psychological assumption that man always desires pleasure. 'Nature has placed mankind under the governance of two sovereign masters, *pain* and *pleasure*. It is for them alone to point out what we ought to do, as well as to determine what we shall do.'[6] Even J. S. Mill did not clearly distinguish between psychological and ethical hedonism.

The name 'utilitarian' (taken from 'utility' in the sense of pleasure and exemption from pain) was first used by Bentham in 1781. In 1802, writing to Dumont, he said: 'To be sure a new religion would be an odd sort of a thing without a name: accordingly there ought to be one for it—at least for the professors of it. Utilitarian (Angl.), Utilitairien (Gall.) would be the more *propre*.'[7]

In his earlier writings Bentham used the word 'utility' with great freedom. In later life he preferred to speak of 'felicity' or 'happiness' as pointing more clearly to the ideas of pleasure and absence of pain. 'Utilitarian' had been so little used by Bentham that J. S. Mill believed himself to be the first to apply it to those who accepted the greatest happiness principle. Mill tells us that he found the word in Galt's *Annals of the Parish*. It is there used to designate people who held certain revolutionary views current at the end of the preceding century. It was through Mill that 'utilitarian' and 'utilitarianism' became the generally accepted names for the party and the creed.

II. *HISTORICAL.*—Utilitarianism, both as an ethical theory and as a practical movement, is English. The idea of the greatest good for the greatest number is no doubt to be found in Greek philosophy, in the Stoic conception of the 'citizen-

ship of the world.' Leibniz, again, by establishing the general good or happiness as the end of law and of morality, is spoken of as the precursor of utilitarianism.[1] And the French materialists of the 18th cent., especially Helvétius, Montesquieu, and von Holbach, were to some extent occupied with the same ideas. But the movement to which the name is given is an English movement, and, while it demands fairly exhaustive treatment historically, the historical account may be confined to English writers.

1. We must begin with **Hobbes**. The theory of association, which played so large a part in the earlier utilitarian speculation, can be traced to him, although he never worked it out. His influence, which continued for two centuries, is best seen in the effect it produced upon those who opposed his theories. His conception of man as an unsocial and egoistic being with an insatiable desire for power, and his notion of morality as political obligation, had to be answered. And these answers were often the means of modifying the philosophical beliefs of his opponents, among whom were the utilitarians.

The answer to Hobbes made by the Cambridge Platonists does not concern us here. A contemporary of theirs, however, Richard **Cumberland**, foreshadowed utilitarianism in his *De Legibus Naturæ*, published in 1672. This work was lengthy and confused, and utilitarian principles were combined with others. Cumberland's object was to prove, as against Hobbes, that morality was natural, man being by nature social. He defined good as 'preservation,' following Hobbes here, but he included in preservation both perfection and happiness. Most stress was laid on the latter, and most practical use was made of it in the working out of the theory. Individual happiness, he held, must coincide with the good of all because of the Divine sanction: 'The greatest Benevolence of every rational Agent towards all, forms the happiest state of every, . . . and therefore the Common Good is the supreme Law.'[2]

A popular fallacy makes **Locke** (*Essay concerning Human Understanding*, 1690) the founder of English utilitarianism. Moral action was necessarily felicific to Locke, but this he held in common with other non-utilitarian moralists. He did not adopt the greatest happiness principle, and he did not work out the pleasure side of his theory. Empiricism, largely due to him, was, of course, of immense importance in the development of utilitarianism.

An answer in the 18th cent. to the unmitigated egoism of Hobbes came from the Moral Sense school. Their method was psychological rather than rationalistic, and took the form of a new account of human nature. Of this school **Hutcheson**, through his emphasis on benevolence, approached nearest to the position which utilitarianism was to take up, and from Hutcheson came the formula 'the greatest happiness for the greatest numbers' which, slightly changed, becomes so familiar in Bentham. Bentham states that he got this formula from Priestley. That was probably a mistake, as it does not occur in Priestley's works.[3] The exact formula used by Bentham, 'the greatest happiness of the greatest number,' is found in a translation (1767) of Beccaria's *Dei Delitti e delle Pene*. Whether it was suggested to him by Hutcheson is not known.

In 1731 there was published anonymously a small dissertation prefixed to Law's translation of King's *Origin of Evil*. It was entitled *Preliminary Dissertation: concerning the Fundamental Principle of Virtue or Morality*. The author was **John Gay**. This was the first definite statement of the utilitarian position. Brown, Tucker, and Paley are the logical successors of Gay. Their theories, so far as essentials are concerned, may be regarded as expansions of Gay's outline. In the *Dissertation* Gay treats first of the criterion of virtue, then of motive, and lastly of the theory of association, which was the psychological groundwork of his theory of ethics. The 'immediate criterion' of virtue Gay found in the will of God. But, as God must will the happiness of men, the latter is the 'criterion' of God's will. Happiness is defined as a 'sum of pleasures.' The motive of the moral agent is egoistic, for all desire is desire of pleasure. Gay is then faced with the fundamental difficulty which beset all the utilitarians, up to and including John Stuart Mill, of proving the coincidence of the pleasure of the individual and of society. For, if men were and could be actuated only by a desire for their own pleasure, it was manifest that the coincidence of the pleasure of the individual with general pleasure must be proved before the latter could become an object of desire. Gay met this difficulty with his theory of 'sanctions.' He enumerated four sanctions—the natural, the social, the legal, and the religious. He emphasized the last, for he realized that there is no sanction which can ensure the complete coincidence of the pleasure of society and the pleasure of the individual except the supernatural sanction. It is their emphasis on this sanction which constitutes Gay, Brown, Tucker, and Paley theological utilitarians, and which, starting as they did with the selfish theory of the moral motive, renders their system of utilitarianism alone consistent. In his discussion of the supernatural sanction Gay brings out clearly his theory of obligation, which became the accepted one. The moral imperative was not categorical but conditional, he held—conditional on the required action being a means to the happiness of the individual. Complete obligation to virtue could then come from God only, for He alone could make the coincidence between 'my happiness and general happiness' perfect.

'Thus those who either expressly exclude, or don't mention the will of God . . . must either allow that virtue is not in all cases *obligatory* . . . or they must say that the good of mankind is a sufficient obligation. But how can the good of mankind be any obligation to *me*, when perhaps in particular cases, such as laying down my life, or the like, it is contrary to my happiness?'[1]

The latter part of the *Dissertation* is given up to the discussion of psychology. The psychological basis for ethics Gay found in association. Through the law of association other things beyond the pleasure of the individual might be desired as proximate ends, though the ultimate end was pleasure. In this way altruistic desires might be developed. Gay held it unimportant that the ultimate motive was always egoistic. If a man helped another, his immediate motive being kindness, the fact that his ultimate object was to benefit himself was of no consequence.

It has seemed worth while to discuss Gay's treatise rather fully because, though it consisted of only 30 pages, was published anonymously, and attracted little notice at the time, it contained all the essentials of theological utilitarianism. In fact we find no important modification of Gay's utilitarianism made by any one until we come to John Stuart Mill.

In 1740 **David Hume** published his first treatise on Ethics, being book iii. of the *Treatise of Human Nature*. The *Inquiry concerning the Principles of Morals* was published in 1751. Hume's standpoint was very different in the two works. It is

[1] *Dissertation*, p. xxi.

unnecessary to discuss the cause of this change; so far as concerns ethics, the *Inquiry* seems to represent his real position. In his analysis of the moral motive in this work Hume approaches modern utilitarianism. But he exercised no influence until the time of J. S. Mill. In the *Treatise* Hume makes the moral motive ultimately egoistic; his position is substantially that held by Gay, and afterwards found in Hartley, Brown, Tucker, Paley, Bentham, and James Mill; whereas in the *Inquiry* his account of human nature implies originally altruistic as well as egoistic tendencies. Disinterested benevolence is natural.

'Whatever contradiction may vulgarly be supposed between the *selfish* and *social* sentiments or dispositions, they are really no more opposite than selfish and ambitious, selfish and revengeful, selfish and vain.'[1]

Hume's treatment of the moral motive is more important than his treatment of the principle of utility. He accepted the latter, but he did not use it consistently in his analysis of the virtues.

Between Hume's two works there appeared *Observations on Man, his Frame, his Duty, and his Expectations* (1749) by the physician **David Hartley.** In this work Hartley elaborated the theory of the association of ideas in a way which greatly influenced the later associational school and especially James Mill.[2] Hartley was not a typical associationist-utilitarian. Much of his work was given up to theological discussions. He accepted the utility principle, but, like J. S. Mill, he held that there were qualitative differences in pleasures. In practice also he seems to have held that conduct should be guided by 'obedience to the Scripture precepts' rather than by consideration of consequences. He was probably the first to raise the difficulty of the hedonistic calculus.

'It is impossible,' he says, 'for the most sagacious and experienced persons to make any accurate estimate of the future consequences of particular actions, so as, . . . to determine justly, what action would contribute most to augment happiness and lessen misery.'[3]

2. Theological utilitarianism. — Just twenty years after Gay's *Dissertation* there appeared the *Essays on the Characteristics* (1751) by **John Brown.** In 1768 the first volumes of Tucker's *The Light of Nature Pursued* were published, and in 1785 came Paley's *Principles of Moral and Political Philosophy.* Brown, Tucker, and Paley, along with Gay, are the exponents of theological utilitarianism, the first definite form which utilitarianism took, and which in its time exercised an immense influence. A generation trained in Locke was not disposed to adopt the system of the Moral Sense school, but welcomed the rival system whose groundwork was a conception of consciousness as composed of separable atoms, sensations and ideas, aggregated into clusters.

The outline of theological utilitarianism was found in Gay's *Dissertation,* and neither Brown, Tucker, nor Paley added anything vital to it, though they amplified and popularized it. J. S. Mill says that Brown in his *Essays* on Shaftesbury's *Characteristics* produced an able argument for utilitarianism. It is to the second of the essays that Mill refers. Brown's argument was, in brief, that common sense pointed to conduciveness to happiness as being the essence of virtue. He argues that 'those very affections and actions, which, in the ordinary course of things, are approved as virtuous, do change their nature, and become vicious in the strictest sense, when they contradict this fundamental law, of the greatest public happiness.'[4]

[1] IX. ii. (*Essays Moral, Political, and Literary*, London, 1907, ii. 255).
[2] See art. ASSOCIATION.
[3] *Observations*[6], London, 1834, p. 504.
[4] '*On the Characteristics of the Earl of Shaftesbury*'[2]; *Essays*, II. iii. 134.

The ultimate end Brown gives as the 'voluntary production of the greatest happiness.'[1] The moral motive, he holds, is egoistic. 'The only reason or motive, by which individuals can possibly be induced to the practice of virtue, must be the feeling immediate, or the prospect of future private happiness.'[2] How can the end and the motive be reconciled? 'The lively and active belief of an all-seeing and all-powerful God' alone can do it, a God 'who will hereafter make them happy or miserable, according as they designedly promote or violate the happiness of their fellow-creatures.'[3] This is all entirely in line with Gay. Brown did not touch psychology. For that he definitely refers his readers to Gay.

Abraham Tucker was an extraordinarily prolix writer. There are seven volumes of *The Light of Nature Pursued.* The first four appeared under the name of 'Edward Search' in 1768; the last three were issued posthumously. Like Gay, Tucker turned his attention to psychology, and, like him, he held that ultimately men were egoists—though not in the sense of Hobbes. Altruistic tendencies were explained by contiguity and translation. Tucker was a convinced determinist. Free agency is to him no more than the dependency of actions upon volition.[4] The will follows the strongest motive. All this was thoroughly consistent with the Lockean groundwork and with the ordinary utilitarian theory of obligation. Two points remain to be stated. Tucker says that there are no qualitative distinctions in pleasure. This had been implicit in Gay and others. The second point has reference to the hedonistic calculus. Tucker argued, and Paley followed him here, that there must be general rules of expediency, and that these must be followed rather than any effort made to calculate the probable felicific consequences of any particular act. Tucker states many of the modern objections to the calculus.

'Our tastes,' he says, 'varying as much as our faces makes us very bad judges of one another's enjoyments. . . . Nor do we judge much better of our own pleasures, for want of being well aware of their aptness to cloy upon repetition and to change their relish perpetually according to our disposition of body or mind or the circumstances we happen to stand in.'[5]

In 1785 **William Paley** published his *Principles of Moral and Political Philosophy.* Paley received a complete philosophical system from his predecessors, and he acknowledged freely the debt he owed, in especial to Tucker's *Light of Nature Pursued.* But he applied and popularized their principles, and that so successfully that they are now associated almost exclusively with his name. His definition of virtue—'the doing good to mankind, in obedience to the will of God, and for the sake of everlasting happiness'[6]—lends itself easily to caricature. Though his views did not differ in any essential from those of the previous theological utilitarians, he emphasized more unpleasantly than any of his predecessors the selfishness of the moral motive, and the doctrine of rewards and punishments after death. He was consistent on obligation. 'We can be obliged,' he said, 'to nothing, but what we ourselves are to gain or lose something by.'[7] It is possible, however, to make too much of the weaknesses of theological utilitarianism as found in Paley, and to forget the sound sense of most of his teaching. In computing the consequences of actions he taught that we must consider what would ensue if all men acted as the individual was acting. '"Whatever is expedient, is right." But then it must be expedient on the whole, at the long run.'[8] The particular consequence of

forgery is a damage of twenty or thirty pounds to the man who accepts the forged bill: the general consequence is the stoppage of paper-currency.[1] And he brushed aside the specious argument that an act done in secrecy brings no general ill consequences. 'Those who reason in this manner do not observe, that they are setting up a general rule, of all others the least to be endured: namely, that secrecy, whenever secrecy is practicable, will justify any action.'[2] Paley analysed the commonly accepted morality of his time to prove that considerations of utility underlay it, and he applied the utility criterion to pressing problems of the age. He exercised very considerable influence, and his *Principles* became the standard text-book at Cambridge.

3. **Empirical utilitarianism and the philosophical radicals.**—i. *Ethical theory of Bentham.*—**Jeremy Bentham** was born five years after Paley, but he lived until 1832, Paley having died twenty-seven years before. Paley went to Cambridge, and Cambridge became the centre of his form of utilitarianism. Bentham went to Oxford, but it was in London that he gathered disciples round him and founded his school. The *Introduction to the Principles of Morals and Legislation* was printed in 1780, but it was not published until 1789, four years after Paley's *Principles* had appeared, and only then through the insistence of Bentham's disciples, jealous of their master's fame.

Bentham made little mention of his indebtedness to his predecessors, but of Hume's *Treatise* and of the treatment of utility in it he said: 'For my own part, I well remember, no sooner had I read that part of the work which touches on this subject, than I felt as if scales had fallen from my eyes.'[3] Priestley also, according to his own account, influenced him. Apart from these acknowledgments, and those to French and Italian utilitarian writers, he states his ethical position as though it were original to himself. So far as his theory is concerned, the only originality lay in his treatment of the hedonistic calculus. At the same time utilitarianism will always be associated with the name of Bentham. There is no doubt that the hold it obtained on men's minds was largely due to his thorough application of the utility principle in the spheres of economics, jurisprudence, and politics, and to his gathering round him a devoted group of followers who applied, taught, and popularized his doctrines.

Bentham's ethical theory is found chiefly in three works—*A Fragment on Government* (1776); *The Principles of Morals and Legislation* (1789), where, however, the author's first concern is with jurisprudence rather than with ethics; and the *Deontology* published posthumously in 1834. J. S. Mill held that the *Deontology* had been considerably altered by John Bowring, who edited it. The crude egoism of Bentham's theory is more apparent in it than elsewhere, but there seems no reason to doubt that it substantially represents his views.

Bentham assumed dogmatically the hedonistic end, 'the greatest happiness of the greatest number.' His 18th cent. individualism led him to picture society as composed of a number of separate and largely antagonistic units. As J. S. Mill put it in his 'Essay on Bentham,' written at a time when he was emerging from the influence of Bentham:

'Bentham's idea of the world is that of a collection of persons pursuing each his separate interest or pleasure, and the prevention of whom from jostling one another more than is unavoidable, may be attempted by hopes and fears derived from three sources—the law, religion and public opinion.'[4]

[4] Mill, 'Essay on Bentham,' in *Dissertations and Discussions*, I. 362.

Bentham's point of view with regard to sanctions was somewhat different from that of the theological utilitarians. They used sanctions to prove the ultimate harmony of the interests of each with the interests of all. For this reason they laid stress on the religious sanction. Bentham's attitude was that of a political reformer rather than a theorist. He strove for reform of the constitution and of law—for a system of penalties which would make it the interest of the individual to act for the general good. He did not attack the problem of cases where no system of legal rewards and punishments could bring about this coincidence.

The list and number of sanctions differed in the three ethical works, but in the *Principles* Bentham mentioned four. They are practically the sanctions of Gay—the physical sanction, or the material consequences of actions such as 'disease produced by dissipation'; the political sanction, or legal penalties and rewards; the moral sanction, or public praise and blame; the religious sanction, or the effect of religious hopes and fears. The last was of little importance: 'As to such of the pleasures and pains belonging to the religious sanction, as regard a future life, of what kind these may be, we cannot know. These lie not open to our observation.'[1] Bentham's teaching on sanctions is summarized by himself in the following passage:

'It has been shown that the happiness of the individuals, of whom a community is composed, that is, their pleasures and their security, is the end and the sole end which the legislator ought to have in view: the sole standard, in conformity to which each individual ought, as far as depends upon the legislator, to be *made* to fashion his behaviour. But whether it be this or any thing else that is to be *done*, there is nothing by which a man can ultimately be *made* to do it, but either pain or pleasure. . . . There are four distinguishable sources from which pleasure and pain are in use to flow: considered separately, they may be termed the *physical*, the *political*, the *moral*, and the *religious*: and inasmuch as the pleasures and pains belonging to each of them are capable of giving a binding force to any law or rule of conduct, they may all of them be termed *sanctions*.' In a footnote he adds: 'Sanctio, in Latin, was used to signify the *act of binding*, and, by a common grammatical transition, *any thing which serves to bind a man*: to wit, to the observance of such or such a mode of conduct.'[2]

Bentham, driven by the determination to have some weapon with which to attack abuses consecrated by custom, elaborated the hedonistic calculus. The morality of an act, he said, was to be decided not by 'intuition,' but by a scientific calculation of the consequences of the act in terms of pleasure. In order that the calculation should be scientific certain things must be taken into account, viz. the intensity and duration of the pleasure, its certainty, its propinquity (Sidgwick points out that this has no *locus standi* unless it affects the certainty), its fecundity, or 'the chance it has of being followed by sensations of the same kind,' and its purity, or 'the chance it has of not being followed by sensations of the opposite kind.' The extent of the pleasure, or the number of people affected, should also be taken into account and the whole so balanced that the total quantity of pleasure attendant on an act should be known.

Quite consistently Bentham disallowed any difference in quality in pleasure: Other things being equal, pushpin is as good as poetry. 'Each to count for one and no one for more than one' was the principle according to which pleasure should be distributed.

ii. *The practical movement.*—Bentham used his greatest happiness principle for the reform of the constitution of law, especially criminal law. His political theory was in harmony with his psychology. Members of Parliament, he held, must be restrained, and constrained, to act for the general good; so he urged that government should be put into the hands of all, and advocated universal suffrage, voting by ballot, and annual parliaments.

[1] *Principles*, I. iii. § 10. [2] *Ib.* I. iii. §§ 1, 2.

In 1776 Bentham's first work, *A Fragment on Government*, was published anonymously. Towards the end of his life the *Catechism of Parliamentary Reform* appeared, and *The Constitutional Code* was published posthumously. Not only political theory but also jurisprudence received attention at his hands. 'He found the philosophy of law a chaos,' Mill said, 'and left it a science.'

Bentham attracted a band of disciples and founded a school. It is to the efforts of his disciples that we owe the publication of the bulk of his works, for Bentham seems to have been indifferent to the fate of his writings. Among all Bentham's followers James Mill had the greatest ability. He joined Bentham in 1802. From that time the philosophical radicals were a group of men with a definite ethical, political, and economic faith. J. S. Mill said of this creed:

'It was not mere Benthamism but rather a combination of Bentham's point of view with that of the modern political economy and with the Hartleian metaphysics. Malthus' population principle was quite as much a banner and point of union among us as any opinion specifically belonging to Bentham.'[1]

Bentham and James Mill were contemporary rather than successive leaders of the school, as Leslie Stephen makes them out to be. Mill lived only four years after Bentham's death. A prominent part was also played by George Grote, the two Austins, and, last of all, J. S. Mill. In 1824 the *Westminster Review*, the organ of the school, was first published, and did much to spread its creed. Psychology was supplied by James Mill in his *Analysis of the Phenomena of the Human Mind*. Mill adopted the association psychology of Hartley, but discarded his cumbersome physiological theory. His theories of the self, the external world, and belief — largely Hume's position—were also accepted by the school. In economics the views of Ricardo and Malthus were adopted. As they held the theory of the iron law of wages, the only method of amelioration lay, they thought, in restraining the increase of population. Their general policy was one of laissez-faire, and this attitude was a contributory cause to their disappearance from politics. They returned some members to the first reformed parliament, but they were afterwards swallowed up by the Whigs.

iii. *John Stuart Mill.*—J. S. Mill spoke of his father as 'the last of the 18th century.' He himself was a transition thinker, and many of his inconsistencies are explained by his endeavour to reconcile hedonism and idealism—to reconcile Bentham and Coleridge, styled by him 'the two great seminal minds of England in this age.'

J. S. Mill gradually moved away from the position of Bentham and his father. In 1826 came what he called 'a crisis in my mental history,' when he fell under the influence of German idealism.

'I never, indeed, wavered in the conviction that happiness is the test of all rules of conduct, and the end of life. But I now thought that this end was only to be obtained by not making it the direct end. Those only are happy (I thought) who have their minds fixed on some object other than their own happiness; on the happiness of others, on the improvement of mankind, even on some art or pursuit, followed not as a means, but as itself an ideal end.'[2]

In 1835 Mill published in the *London Review* an answer to Adam Sedgwick's criticism of Paley. Under the influence very largely of Sedgwick and of W. Whewell the theological utilitarianism of Paley had lost its prestige in Cambridge. In his reply to Sedgwick Mill indicated what was his own theory of human nature—that man is originally altruistic. After his father's death he spoke out more plainly, and in 1838 there appeared in the *London and Westminster Review* his 'Essay on Bentham.' The substance of his criticism of Bentham is that his reading of human nature was too narrow. He 'failed in deriving light from other minds.' Nor were his nature and circumstances such as to furnish him with a 'correct and complete picture of man's nature and circumstances.'[1] The influence of the idealism of Coleridge, Wordsworth, Carlyle, Sterling, and Maurice can be traced in the following paragraph:

'Man is never recognised by him as a being capable of pursuing spiritual perfection as an end; of desiring, for its own sake, the conformity of his own character to his standard of excellence, without hope of good or fear of evil from other source than his own inward consciousness. Even in the more limited form of Conscience, this great fact in human nature escapes him. Nothing is more curious than the absence of recognition in any of his writings of the existence of conscience, as a thing distinct from philanthropy, from affection for God or man, and from self-interest in this world or in the next.'[2]

In his small work *Utilitarianism* Mill united the two ends of pleasure and spiritual perfection by his theory of qualitative differences in pleasure, and conscience reappeared there as the internal sanction to be added to Bentham's external sanctions. In an essay published in the *Westminster Review* in 1852, entitled 'Dr. Whewell on Moral Philosophy,' Mill, probably under the influence of Mrs. Taylor, whom he had just married, reverted to the narrower and more orthodox utilitarianism which he held in early life. This essay of Mill's, however, was only one move in the controversy between himself and the leaders of the school of 'Paley reversed.' That school, led by Sedgwick and Whewell, after superseding Paley in Cambridge, found itself confronted with a new Benthamism—a Benthamism which in the hands of Mill maintained its hold on men's minds by means of a wider interpretation of human nature.

Mill's defence of utilitarianism which appeared in *Fraser's Magazine* in 1861, and was published in book form in 1863, was largely directed against the Cambridge school.

'I must again repeat,' he said, '. . . that the happiness which forms the utilitarian standard of what is right in conduct, is not the agent's own happiness, but that of all concerned. As between his own happiness and that of others, utilitarianism requires him to be as strictly impartial as a disinterested and benevolent spectator. In the golden rule of Jesus of Nazareth, we read the complete spirit of the ethics of utility. To do as one would be done by, and to love one's neighbour as oneself, constitute the ideal perfection of utilitarian morality.'[3]

As Sorley says, Mill claimed for utilitarianism that 'it is not selfish, because it regards the pleasures of all men as of equal moment; it is not sensual, because it recognizes the superior value of intellectual, artistic, and social pleasures as compared with those of the senses.'[4]

Mill separated himself most completely from his predecessors in teaching that pleasures differ not only quantitatively but qualitatively. 'It is quite compatible,' he said, 'with the principle of utility to recognize the fact, that some *kinds* of pleasure are more desirable and more valuable than others';[5] and again, in the oft-quoted words, 'It is better to be a human being dissatisfied than a pig satisfied; better to be Socrates dissatisfied than a fool satisfied'[6]—in all of which he really surrenders the utilitarian position and strikes a responsive note in the hearts of those who feel the inadequacy of a hedonistic ethic. For hedonism Bentham's position is the only consistent one: Quantity of pleasure being equal, pushpin is as good as poetry. If there are higher and lower pleasures—and common opinion would seem to agree with Mill here—some other standard than pleasure is set up. Pleasure is no longer the criterion. It would not, moreover, be correct to regard this as a passing phase in Mill's mental

development. In *Liberty* his mind was turning that way when he took for the motto of his third chapter von Humboldt's saying, 'the end of man is . . . the highest and most harmonious development of his powers to a complete and consistent whole.' His paragraph on qualitative differences in pleasure contrasts, however, with his statement a few pages earlier in the *Utilitarianism* as to the theory of life on which the utilitarian ethic was grounded—'namely, that pleasure, and freedom from pain, are the only things desirable as ends; and that all desirable things . . . are desirable either for the pleasure inherent in themselves, or as means to the promotion of pleasure and the prevention of pain.'[1]

Mill departed from Bentham also in his emphasis on the internal sanction of conscience, which he defined as 'a feeling in our own mind; a pain, more or less intense, attendant on violation of duty.'[2] That the growth of conscience was largely dependent on right education—on the attaching of the appropriate sanctions to acts—that psychologically it was to be explained by association, Mill held with Bentham. But he also held that the core of conscience was the 'social feelings of mankind; the desire to be in unity with our fellow creatures. . . . The social state is at once so natural, so necessary, and so habitual to man, that, except in some unusual circumstances or by an effort of voluntary abstraction, he never conceives himself otherwise than as a member of a body.'[3] Here he follows Hume and Hartley in attributing to man natural altruistic tendencies, in crediting him with 'sympathy,' as opposed to Bentham's theory of self-interest as the motive of action.

Mill's often criticized 'proof' of utilitarianism rested on the doctrine of psychological hedonism.

'The only proof capable of being given,' he said, 'that an object is visible, is that people actually see it. . . . In like manner, I apprehend, the sole evidence it is possible to produce that anything is desirable, is that people do actually desire it. . . . No reason can be given why the general happiness is desirable, except that each person, so far as he believes it to be attainable, desires his own happiness. This, however, being a fact, we have not only all the proof which the case admits of, but all which it is possible to require, that happiness is a good: that each person's happiness is a good to that person, and the general happiness, therefore, a good to the aggregate of all persons.'[4]

The word 'desirable' may mean 'what can be desired' or 'what ought to be desired.' If we interpret it in the former sense, Mill meant that it was psychologically possible to will 'general happiness.' It is more probable that he meant 'ought to be desired.' Sidgwick says:

'Mill must be understood to mean in saying that "the general happiness is *desirable*" that it is what each individual *ought* to desire. . . . But this proposition is not established by Mill's reasoning, even if we grant that what is actually desired may be legitimately inferred to be in this sense desirable'—and this passing from the is to the ought is surely by no means an obvious step. He continues: 'For an aggregate of actual desires, each directed towards a different part of the general happiness, does not constitute an actual desire for the general happiness, existing in any individual; and Mill would certainly not contend that a desire which does not exist in any individual can possibly exist in an aggregate of individuals.'[5]

Thus Mill's attempt to prove that general happiness is the ethical end failed.

His account of sympathy also, though important, is not always consistent. From his statement of psychological hedonism it appeared that man was originally a wholly selfish being actuated by desire for his own personal interest. In that case sympathy would be originally selfish. Mill never admitted that. At times he laid the greatest stress on man's social disposition. But if man is social, he is sympathetic by nature.

[3] *Ib.* p. 46. [4] *Ib.* p. 52 *f.*
[5] H. Sidgwick, *The Methods of Ethics*[7], III. xiii. 388.

For fuller account of the Mills see art. MILL, JAMES AND JOHN STUART.

The most distinguished of Mill's younger associates was Alexander Bain of Aberdeen. Bain was a thoroughgoing utilitarian. His most important work, however, was done in psychology: *The Senses and the Intellect* was published in 1855 and *The Emotions and the Will* in 1859. For associationism he said the last word that can be said. The point of chief interest in his ethics is his treatment of disinterestedness. 'To obtain virtue in its highest purity, its noblest hue,' he said, 'we have to abstain from the mention of both punishment and reward.'[1] 'So far as I am able to judge of our disinterested impulses, they are wholly distinct from the attainment of pleasure and the avoidance of pain. They lead us, as I believe, to sacrifice pleasures, and incur pains, without any compensation.'[2] Sorley says of Bain: 'He had no illusions—except the great illusion that mind is a bundle of sensations tied together by laws of association.'[3] In the light of this metaphysical theory of the self—with slight variations the accepted theory of the utilitarians—it is easier to understand the utilitarian conception of an end which is a succession of pleasant feelings, 'a sum of pleasures,' and which left reason out of account.

4. Evolutional utilitarianism; Herbert Spencer and Leslie Stephen.—Spencer's ethical views are found chiefly in the first and last parts of the *Social Statics* and in *The Principles of Ethics.* The first part of the latter, *The Data of Ethics*, was published separately in 1879; the remainder of the *Principles* in 1892–93. The *Social Statics* was published in 1851, eight years before Darwin's *Origin of Species.* But even at that date the evolutionary hypothesis had taken hold of Spencer's mind—it was in the air. Then Darwin, by his investigations into the origin of species, by his researches into the variation of forms found in different natural surroundings, by his emphasis on the principle of natural selection as explaining these variations, gave a wide-spread currency to the evolutionary theory. Nor must the part which A. Russel Wallace played be forgotten. Darwin also saw, however, that natural selection alone would not explain evolved conduct, for the more evolved conduct is, the smaller a part does natural selection play, because civilized society protects the unfit and does not allow them to be exterminated. This difficulty was overcome by the—now largely discredited—hypothesis of the transmissibility of acquired characters. Evolution by natural selection—or, in his own phrase, 'survival of the fittest'—and by means of the transmission of acquired characters was for Spencer the explanatory and synthesizing principle of all knowledge.

Ethics, however, was Spencer's main interest. Everything else led up to this. For his ethics see art. SPENCER, HERBERT, 2 (5). Our concern here is with the relation of Spencer's ethical system to utilitarianism. We have to see why he himself called it 'rational utilitarianism' as opposed to the empirical utilitarianism of Mill, and why it is generally known as evolutional utilitarianism. Spencer's opposition was directed against the method of utilitarianism, not against its greatest happiness principle. He accepted pleasure as the good, though even here he was not consistent. 'Life is good or bad,' he said, 'according as it does, or does not, bring a surplus of agreeable feeling.' 'The good is universally the pleasurable.' Pleasure is the end and is 'as much a necessary form of moral intuition as space is a necessary

[1] A. Bain, *The Emotions and the Will*[3], London, 1880, p. 297.
[2] *Ib.* p. 295. [3] *Hist. of English Philosophy*, p. 262.

form of intellectual intuition.' But Spencer was an evolutionist as well as a utilitarian, and at other times we find the good defined as 'preservation of human society' or 'quantity of life measured in breadth as well as length.' It is true that he stated that conduct tending to preservation of life was good because life involved a 'surplus of agreeable feeling.' 'The implication . . . is that conduct should conduce to preservation of the individual, of the family, and of the society, only supposing that life brings more happiness than misery.'[1] This supposition is never proved. At times he emphasized progress and pictured an ideal society, rather than happiness, as the ethical end. At times the emphasis was on being, at other times on happiness or well-being.

It was the method, however, rather than the end of empirical utilitarianism that Spencer opposed. His object was to find 'for the principles of right and wrong in conduct at large, a scientific basis.' He criticized specifically the hedonistic calculus of Bentham, and emphasized the value of general rules (as indeed had been done by most utilitarians with the exception of Bentham) rather than particular decisions in individual cases. He wrote to Mill:

'The view for which I contend is that morality properly so-called—the science of right conduct—has for its object to determine *how* and *why* certain modes of conduct are detrimental, and certain other modes beneficial. These good and bad results cannot be accidental, but must be necessary consequences of the constitution of things; and I conceive it to be the business of moral science to deduce, from the laws of life and the conditions of existence, what kinds of action necessarily tend to produce happiness, and what kinds to produce unhappiness. Having done this, its deductions are to be recognized as laws of conduct; and are to be conformed to irrespective of a direct estimation of happiness or misery.'[2]

To get the premisses whence deductions could be made Spencer turned his attention to 'absolute ethics' as opposed to 'relative ethics'—absolute ethics being the ethics of an ideal society where conduct was perfectly adapted and produced pleasure unalloyed with pain. Spencer did not seem to appreciate the fact that, if such a society existed, the question of morality would not arise, for by hypothesis all conduct was perfectly adapted to social environment—there was no conflict of desires. From study of this ideal society Spencer considered it possible to deduce general rules as to what 'conduct must be detrimental and what conduct must be beneficial.' He had then to consider further how these general rules were applicable to existing society. By this method relative ethics would be derived from absolute ethics. The extraordinary artificiality of this is apparent. Spencer himself admitted that the method had not turned out to be so fruitful as he expected. The four principles which he found for the guidance of conduct cannot be said to be derived from absolute ethics. They were justice, negative beneficence, positive beneficence, and enlightened self-interest. Justice was non-interference.

'Every man has freedom to do all that he wills, provided he infringes not the equal freedom of any other man.'[3] This principle owed its origin to Spencer's pronounced individualism rather than to any study of absolute ethics. Negative beneficence required that each man must perfectly fulfil his own nature 'without giving unhappiness to other men in any direct or indirect way.'[4] Besides positive beneficence there was enlightened self-interest which demanded that, 'whilst duly regardful of the preceding limitations, each individual shall perform all those acts required to fill up the measure of his own private happiness.'[5]

Spencer's system is not held, at least in Spencer's form, by any thinker of the present day.

In 1882 Leslie Stephen published *The Science of Ethics*. In the preface he associated himself with the utilitarians in the words 'writers belonging to what I may call my own school, to Hume, Bentham, the Mills, G. H. Lewes, and Mr. Herbert Spencer.'[1] He did not follow Spencer in defining the good as length and breadth of life; he defined it as the 'health of the social organism.' 'Society may be regarded as an organism,' he said. This organism implied 'a social tissue, modified in various ways so as to form the organs adapted to various specific purposes.' The working of evolution could be seen in the social organism.

Leslie Stephen was opposed, like Spencer, to the hedonistic calculus. 'Life is not a series of detached acts,' he said, 'in each of which a man can calculate the sum of happiness or misery attainable by different causes.' Like Spencer he held that the evolved state was necessarily a happy one. The radical criticism of Stephen's theory, as of all evolutionary theories of ethics, is that he took what is, namely the trend of evolution, and identified it with the ideal, with what ought to be.

5. **Rational utilitarianism; Henry Sidgwick.**—E. Albee in his *History of English Utilitarianism*, published in 1902, spoke of Sidgwick's *Methods of Ethics* as 'the last authoritative utterance of traditional utilitarianism.' Though a utilitarian, Sidgwick differed in some ways from all his predecessors. He was 'a Utilitarian,' but 'on an Intuitional basis.'[2] He found in certain fundamental 'intuitions' the basis of his system, whereas the earlier utilitarians were opposed to all forms of intuitionism, though in J. S. Mill a new spirit of understanding and appreciation of the rival school had begun to show itself. Sidgwick, further, though an ethical hedonist, discarded psychological hedonism, which had formed part of the stock-in-trade of preceding utilitarian writers, including J. S. Mill.

Sidgwick's analysis of the nature of desire was very similar to Butler's. 'Our conscious active impulses,' he said, 'are so far from being always directed towards the attainment of pleasure or avoidance of pain for ourselves, that we can find everywhere in consciousness extra-regarding impulses, directed towards something that is not pleasure, nor relief from pain.'[3] He naturally discarded also the utilitarian theory that extra-regarding impulses were not primary but were due to 'association' and 'translation.'

'So far as we can observe the consciousness of children, the two elements, extra-regarding impulse and desire for pleasure, seem to coexist in the same manner as they do in mature life. In so far as there is any difference, it seems to be in the opposite direction; as the actions of children, being more instinctive and less reflective, are more prompted by extra-regarding impulse, and less by conscious aim at pleasure.'[4]

By ridding utilitarianism of psychological hedonism Sidgwick did good service. And he cleared the ground of the psychological difficulty as to how the individual can will the pleasure of others when it conflicts with his own pleasure. Only the form of the difficulty, however, was changed, not the reality; for, though Sidgwick saw the possibility, he found himself, at the end of his analysis, unable to see the reasonableness of gratifying a desire for the happiness of others when opposed to individual interest. The problem took the following shape for him. A fundamental moral intuition (at one time called a deduction from two intuitions and expressed differently at different times) directed a man to prefer his own lesser good to the greater good of another. This was the formal principle of benevolence (formal because the nature of the good was not yet known) which provided the 'proof' of utilitarianism. Sidgwick's further 'proof' that the nature of the good was pleasure

amounted to little more than the acceptance of what purported to be the verdict of common sense. He arrived too rapidly at the conclusion that the good was desirable sentient life, and from that it was no great step to define it as pleasure.

Sidgwick found a second principle—the maxim of prudence, that 'one ought to aim at one's own good on the whole'—to be as fundamental as that of benevolence. This maxim, when one's own good or pleasure is emphasized rather than good 'on the whole,' brought confusion into Sidgwick's theory. He admitted that there were times when a choice had to be made between individual and general pleasure and when all mundane sanctions failed to reconcile them. To rationalize his system a harmony between universal and particular reason had to be shown. This harmony depended on the existence of a supernatural Being. Unable to accept the Christian faith and gaining no positive assurance from psychical research of an all-good and all-powerful Being, Sidgwick left his system with the dualism in it unresolved. For a further account of Sidgwick's ethics see art. SIDGWICK (HENRY).

6. Present-day utilitarianism.—Little has to be said about utilitarianism after the time of Henry Sidgwick. To-day it is not a theory of paramount importance in ethics. As J. S. Mackenzie says, it is still the dominant view among writers on economics, but it has ceased to have much hold on English ethical thought.[1] Two schools can be distinguished. One contains Sidgwick's disciples. E. E. Constance Jones, who may be taken as representative of this school, has under the title *Rational Hedonism* re-stated Sidgwick's position and met objections to it.[2] Another school, that of the rationalist utilitarians, has found a spokesman in J. M. Robertson. In his *Short History of Morals* Robertson calls Sidgwick's ethical logic inconclusive, 'leaving as it did that earnest thinker conscious of a need for a future state.'[3] There is, however, an unresolved antagonism in Robertson's own theory. For, while accepting the greatest happiness principle as the ethical end, he says, 'there can be no stronger "obligation" than that of following your own happiness as you see it.' The two ends, he thinks, would often be in harmony owing to the individual's natural altruistic tendencies, or to pressure exerted by society or the working of conscience. A man 'cannot, unless he is abnormally selfish, escape discomfort in knowing that he has practised injustice or failed in reciprocity.'[4] But what of the 'abnormally selfish' man? In Robertson's theory, no blame, in the ethical sense, attaches to him for his failure to act for the common good. He is what he is through no fault of his own. The criminal is the result of 'pathological conditions,' or a 'product of maleducation or stress of circumstances.' Free will is demolished and with it moral responsibility. 'For the critical utilitarian . . . the bad character remains bad, baseness remains baseness, the liar a liar, the thief a thief; and his task is simply to try to guard himself and society against each form of evil in the best way, as society guards against the madman, in whose case even the free-willer recognizes the physical causation.'[5] And what of the man, not necessarily abnormally selfish, who in spite of the discomfort of conscience, acts contrary to the interests of others, doing what appears to himself to be for his own pleasure? He is, on Robertson's principles, doing that which is his own strongest 'obligation'; nor does any blame attach to his action, for by hypothesis he cannot act otherwise than he does—which does not seem to leave much room for either ethical theory or moral conduct.

III. *CRITICAL.*—**1. The utilitarian theory of duty.**—Utilitarianism failed signally in dealing with duty. It tended to 'identify duty with coercion; to change the "ought" if not into a physical "must," at least into the psychological "must" of fear of pain and hope of pleasure.'[1] This was the natural outcome of the psychological hedonism on which the ethical theory was based. Bentham said of pleasure and pain that it was for them alone not only 'to point out what we ought to do' but 'to determine what we shall do.'[2] On this basis he was consistent in adding in the *Deontology* that it was 'very idle to talk about duties,' and that 'ought is a word that ought to be banished from our vocabulary.'

According to psychological hedonism, all desire was desire for pleasure, and the strongest desire excited by the keenest pleasure moved to action. Bain said:

> 'Wherever two present sensations dictate opposite courses, there is an experiment upon the relative strength of the two. The resulting volition discloses the stronger, and is the ultimate canon of appeal.'[3]

On such a foundation as this no place is left for the concept of moral obligation.

But the consciousness of duty could not be ignored—the consciousness of something higher than and conflicting with inclination, in the light of which inclination 'ought' to be suppressed. Utilitarians accordingly dealt with the duty consciousness empirically by explaining its genesis and function. It owed its origin, they said, to sanctions external or internal; pleasures and pains so attached to acts that the individual forbore to follow his first inclination and to act for his own selfish interest, and acted for the interests of all. Now there is no doubt that an individual is brought to a consciousness of moral obligation and to a knowledge of particular duties through social influences. It is not here, but in its account of the ultimate nature of moral obligation, that the utilitarian explanation is inadequate.

Later utilitarianism, as represented by Sidgwick and his school, was not hampered by psychological hedonism. Sidgwick said:

> 'It seems then that the notion of "ought" or "moral obligation" . . . does not merely import (1) that there exists in the mind of the person judging a specific emotion . . . nor (2) that certain rules of conduct are supported by penalties which will follow on their violation. . . . What then, it may be asked, does it import? What definition can we give of "ought," "right," and other terms expressing the same fundamental notion? To this I should answer that the notion which these terms have in common is too elementary to admit of any formal definition.'[4]

Sidgwick thus refused to resolve the 'ought' into anything else. As we have seen in the account of the views of J. M. Robertson, rationalist utilitarianism has no place in its system for moral obligation. The 'ought,' as understood by the ordinary moral consciousness, is excluded from any determinist system. For this reason, it is not certain that on a thoroughgoing analysis of the system of Sidgwick and his school any logical place would be found for the concept of moral obligation.

2. Motive and intention.—The controversy as to whether the proper object of moral praise and blame is 'motive' ('spring of action') or 'intention' (the 'object of desire') is a historic one. 'An action done from duty,' Kant said, 'derives its moral worth, *not from the purpose* which is to be obtained by it, but from the maxim by which it

is determined.'[1] In opposition to this we have the utilitarian position. 'There is no such thing,' Bentham said, 'as any sort of motive that is in itself a bad one.'[2] And J. S. Mill: 'The morality of the action depends entirely upon the intention.'[3] 'Intention' Mill defined as 'what the agent wills to do,' as opposed to motive, 'the feeling which makes him will so to do.' It is important to note that Bentham and the Mills were entirely consistent in holding that moral quality did not lie in motive. On their own theory, that pleasure was the only motive, they could have come to no other conclusion.

'Let a man's motive be ill-will; call it even malice, envy, cruelty; it is still a kind of pleasure that is his motive: the pleasure he takes at the thought of the pain which he sees, or expects to see, his adversary undergo. Now even this wretched pleasure, taken by itself, is good.'[4]

The sharp line drawn by utilitarianism between motive and intention has had a considerable influence. It has tended to induce other moral theories which rested on a truer psychological basis to make a separation between motive and intention, attributing moral quality to one only. Secondly, it has tended to make morality external. With regard to the first point the truer attitude seems to be to regard motive and intention as distinguishable but not separable—as the affective and ideational sides of the same thing—and to hold that moral judgment belongs to the two taken together, to the whole moral act. Dewey's definition of motive and intention puts this well: 'Intention is the outcome foreseen and wanted; motive, this outcome *as* foreseen and wanted.'[5]

With regard to the second point, utilitarianism, finding moral quality to reside in consequences, though in 'attempted' consequences, made morality an external thing. According to Mill:

'The morality of the action depends entirely upon the intention—that is, upon what the agent *wills to do*. But the motive, that is, the feeling which makes him will so to do, when it makes no difference in the act, makes none in the morality: though it makes a great difference in our moral estimation of the agent, especially if it indicates a good or a bad habitual *disposition*—a bent of character from which useful, or from which hurtful actions are likely to arise.'[6]

The last part of this paragraph seems to point to character as the final object of moral judgment, and to make it a good in itself. This, however, is illusory. At the end of ch. iv. Mill states the position clearly in the following words:

'This state of the will [will to do right] is a means to good, not intrinsically a good; and does not contradict the doctrine that nothing is a good to human beings but in so far as it is either itself pleasurable, or a means of attaining pleasure or averting pain.'[7]

3. The hedonistic calculus.—J. M. Robertson says that the great task which faces moralists to-day is a system of 'applied ethics.'[8] Utilitarianism professes to supply a scientific calculus—the hedonistic calculus of Bentham—which renders this system of applied ethics possible.

Bentham summed up his schema of mensuration in the lines:

'*Intense, long, certain, speedy, fruitful*, pure—
Such marks in *pleasures* and in *pains* endure.
Such pleasures seek, if *private* be thy end:
If it be *public*, wide let them *extend*.
Such *pains* avoid, whichever be thy view:
If pains *must* come, let them *extend* to few.'[1]

While still adopting Bentham's calculus, most of his successors plead not for a fresh inquiry into every act but for rules founded on well-considered utility.

Is the utilitarian calculus *theoretically* possible? Some moralists, including J. S. Mackenzie, have denied that it is. The calculus implies that a quantitative judgment is applicable to pleasures, that a certain intensity can be balanced by a certain duration of pleasure. The difficulty about the calculus, however, is not theoretical but practical. There is no known unit of mensuration. Further, pleasure-pain values vary according to persons, times, and circumstances. Albee says that the one really fatal objection to the calculus in his opinion is that urged by Spencer in the *Social Statics* that 'there would necessarily be an important shifting of the scale of hedonic values with every stage of intellectual or moral progress (or decadence), whether on the part of the individual, the community, the nation, or the race.'[2] This practical difficulty, the lack of scientific precision, is intensified when we remember that the pleasure-pain consequences have to be estimated for all 'whose interests appear to be concerned.'[3] Who are these? Our own family? Our fellow-countrymen? The present generation? Or must we act so as to promote the welfare of future generations? J. S. Mill did not limit happiness to mankind. The good act is one by which happiness is 'to the greatest extent possible, secured to all mankind; and not to them only, but, so far as the nature of things admits, to the whole sentient creation.'[4] This widening of the scope of the calculus is in keeping with the modern conception of organic life as a whole. In practice, however, utilitarians have narrowed the scope of the calculus, which seems to point to its failure as a scientific rule.

4. Pleasure the ethical end.—Against those utilitarians who said that pleasure was the only thing which could be desired some critics of utilitarianism have held that pleasure cannot be the object of desire at all, and that, if not an object of desire, it cannot be the ethical end. It seems, however, truer to hold that pleasure may be desired, and further that pleasurable things may be, and often are, desired because they are pleasant. Nor should we, with Green, deny the possibility of a 'sum of pleasures' as the ethical end, for by this is meant no more than pleasure lasting as long as possible and as intense as possible.

The first criticism of pleasure as the ethical end that must be made is that it lacks the *quality of virtue* which the moral consciousness demands in the good and affords no explanation of the essence of the particular virtues. Huxley's statement, 'If it can be shown by observation or experiment that theft, murder, and adultery do not tend to diminish the happiness of society, then, in the absence of any but natural knowledge, they are not social immoralities,'[5] has simply to be denied.

J. S. Mill's admission of a qualitative difference in pleasures is really an admission that for moral conduct one must transcend pleasure as either the supreme standard or the supreme good. Further, as Green said, there must be permanence in the ethical end. Pleasure does not fulfil this requisite. 'And after all it does seem a pretty definite and

[7] *Ib.* p. 61. The controversy between the utilitarian and the intuitionist is perhaps the most far-reaching of ethical discussions, and Spencer's reconciliation is a false one, while Sidgwick's position is really a confession that both are true but irreconcilable—a dualism. James Martineau is the greatest modern exponent of intuitionalism, as against either utilitarianism or evolutionism, and there can be little doubt that in general men of high moral sense feel that 'because right is right to follow right were wisdom in the scorn of consequence.' As Mill agreed, it makes a great difference in our estimation of the person what motive he acts from, and our estimation of the person is the main factor in the case.

important point to take, that transient pleasures have in them no element of progress, contribute nothing to the permanent interests which unify (or, in fact, constitute) a life.'[1] And it is too *simple*. Utilitarianism attracts by its simplicity, but it is simple because it fails to do justice to all the facts of life. Man's nature cannot be explained in terms of feeling only.

Again, pleasure lacks *motive efficiency*. Utilitarianism has dispensed with the categorical imperative, and in itself it has no driving power.

Is there no truth, then, in the theory that the good is pleasure? There is the truth that the good must be pleasant, otherwise it cannot be an object of desire. The nature of the good is not pleasure, and yet pleasure is a result and accompaniment of the good. 'Man's chief end is to glorify God,' but those who glorify God will experience pleasure in the highest degree. They 'enjoy Him for ever.' And the glorifying of God involves the promotion of the well-being of humanity, which is not inconsistent with the promotion of pleasure. Kant based his argument for immortality on the fact that reason demands the harmony of pleasure and virtue, and since they do not always or ever perfectly unite here they must on the ground of rational congruity be at one somewhere.

Utilitarianism as an ethical theory is weak, but as a principle of political action it is not without its working value.

LITERATURE.—In addition to the books referred to in the article, mention may be made of the following: W. L. Courtney, *Constructive Ethics*, new ed., London, 1895; C. VAIŚĀLI.—The ancient city of Vaiśālī (Viśālā of *Rāmāyaṇa*;[2] Pali Visālī; Chinese Fei-shê-li) was equally sacred to the Jains and the Buddhists long ago. It is now represented unquestionably by the village named Basār or Basāṛh (not Besarh or Bēsārh, as in nearly all books), situated in the Hājīpur subdivision of the Muzaffarpur District of the Bihār and Orissa Province, in 25° 59′ N. and 85° 8′ E. The site of the city occupies a space about ten miles in circuit, which includes several villages besides Basāṛh and many ruined mounds. The most interesting group of remains, situated near the village of Bakhirā at the north-west corner of the site, probably stands outside the line of the city walls, which, so far as is known, appear to have been built of mud, not masonry. The largest and most prominent mound, evidently the site of the fortified palace or headquarters of the local ruler, stands in the south-east corner of the city area and is called Bisālgaṛh, 'the fort of Rājā Bisāl,' the eponymous hero of the place. The village of Basārh is on the south and south-west of that mound. The identity of Vaiśāli with the group of remains associated with the village of Basāṛh is conclusively proved by the survival of the ancient name with only slight modifications; by geographical bearings taken from Patna and other places; by topographical details as compared with the description recorded by Hiuen-Tsiang (Yuan-Chwang), the Chinese pilgrim in the 7th cent.; and by the finding on the spot of sealings of letters inscribed with the name Vesāli. The documents, which were addressed to officials and other residents, have totally disappeared. The sealings found number about 1000, of which two or three bear the name of the town. The collection ranges in date from about 200 B.C. to A.D. 500, and is of much interest for many reasons, but need not be further described here, as it gives no information concerning the history of religion.

Although the site of Vaiśāli has been visited and described by three professional archæologists, Cunningham, Bloch, and Spooner, their explorations, owing to limitations of opportunity, have been extremely slight and superficial, so that in reality very little is known concerning the local remains of antiquity. The area of the city seems to offer tempting possibilities for future inquirers. No distinct local tradition of the ancient glories of the city has survived. The identity of the site has been completely forgotten by the people, and is known only to a few students of Indian antiquities. No pilgrims visit the ruins, and no considerable modern temple or shrine exists among them. Yet few places in India have stronger claims upon the veneration of both Jains and Buddhists. Vardhamāna Mahāvīra, commonly spoken of as the founder of the Jain Church, belonged to a noble family of Vaiśāli, where he was born and spent all his earlier life. After he had entered upon the ascetic career, he is said to have resided in his native town or the immediate neighbourhood for twelve rainy seasons, during which travelling was unlawful for persons of his profession. The Jain scriptures often mention Vaiśāli.[1] The archæologists have not sought for Jain remains on the site, and nothing in their reports would lead the reader to suppose that the Basāṛh area was the birthplace of Jainism, as it is known to moderns.

Brāhmanical tradition ignores Vaiśāli almost completely, and no remarkable event in the history of orthodox Hinduism seems to be connected with the locality, although in the 7th cent. the territory of which Vaiśāli was the capital contained several scores of Hindu temples, besides hundreds of Buddhist monasteries, mostly dilapidated and deserted. The Jain establishments at that time were still numerous, and remains of them must survive. Nobody has thought of even looking for them. Such attention as the site has received has been bestowed almost exclusively on efforts to trace Buddhist holy places described by Hiuen-

[1] H. Barker, in *Mind*, 1904, p. 418.

[2] i. l. 47, st. 13 in Schlegel's text.

[1] The best account of the life of Mahāvīra is that in ch. iii. of Mrs. Sinclair Stevenson's *The Heart of Jainism*, which gives a summary of the conflicting legends of the various sects. See also H. Jacobi, *Jaina Sūtras*, pt. i. (*SBE* xxii.), and art. AJĪVIKAS.

Tsiang. The discovery of the sealings mentioned above was accidental in the first instance. The earlier Chinese pilgrim, Fa-Hian, who visited Vaiśāli at the beginning of the 5th cent., mentions only a few of the most notable sacred buildings which were then standing. His account implies that in his time the city was inhabited and that the holy places were maintained. The sealings establish beyond doubt the fact that during the reign of Chandragupta II. (*c.* A.D. 375–413), at the time when Fa-Hian was travelling, Vaiśāli was an important place, governed by a prince of the imperial Gupta family. It was in the province of Tīra or Tirabhukti, the modern Tirhut. The decay of the city and the gradual desertion of the Buddhist institutions took place in the interval between A.D. 405 and 637, the approximate respective dates of the visits of Fa-Hian and Hiuen-Tsiang. The ruin of the city may be ascribed to the decline of the Gupta power and the troubles connected with the Hun invasions of the 5th and 6th centuries. Nothing is known concerning the local history between the days of Buddha, about 500 B.C., and the visit of Fa-Hian nine centuries later.

In the time of Buddha Vaiśāli was the capital of the Lichchhavis, a tribe, people, or nation who were regarded as a section of the Vṛji (Pali Vajji) nation. But Hiuen-Tsiang distinguishes the Vaiśāli territory from the Vṛji country to the north-east, roughly equivalent to the modern Darbhangā District. The origin and affinities of the Lichchhavis, who certainly were foreigners, afford much room for speculation. Spooner seems to suggest that they were domiciled Persians. The writer of this article believes that they were of Mongolian race, akin to the Tibetans and other Himalayan peoples. They had many peculiar customs, quite different from those of ordinary Hindus. Manu[1] treats them as Vrātya Kṣatriyas, who did not observe fully Hindu *dharma*. They lived under the government of an aristocratic oligarchy or senate, of which the president was called king. The legendary splendours of their capital are often mentioned in Buddhist books. The *Dulva*, or Tibetan *Vinaya*, thus describes them:

'There were three districts in Vaiśāli. In the first district were 7000 houses with golden towers; in the middle district were 14,000 houses with silver towers; and in the last district were 21,000 houses with copper towers: in these lived the upper, the middle, and the lower classes, according to their positions.'

The city was imagined as a kind of earthly paradise, beautified by splendid buildings and charming parks, in which countless birds made melody. The Lichchhavis were believed to have lived in a round of continuous festivities. The chiefs waged war with both Bimbisāra and Ajātaśatru, the kings of Magadha with whom Buddha had dealings. The city, according to an early tradition in the *Dulva*, was reckoned among the six great cities, the other five being Śrāvastī, Saketa, Champā, Varāṇasi (Benares), and Rājagṛha.

The political pre-eminence of Vaiśāli at an extremely ancient period is indicated by the strange story in the *Bhadda-Sāla Jātaka*.[2]

We are told that the wife of Bandhula, commander-in-chief of the Śrāvastī kingdom, felt a longing incident to the condition of pregnancy, and insisted on her lord taking her to Vaiśāli, because, she said, 'I desire to go and bathe and drink the water of the tank in Vesāli City where the families of the kings get water for the ceremonial sprinkling.' Although it is impossible to explain the allusion fully, it is clear that the water from a particular tank at Vaiśāli was essential for the lawful consecration of 'the kings,' whoever they may have been. The Lichchhavis resisted Bandhula and were all killed.

Vaiśāli stood on the ancient royal road leading from Pāṭaliputra (Patna) to Nepāl, the line of which is marked by four Aśoka pillars and other notable ancient remains. The city thus was in direct communication with the imperial capital and with many places of high importance in the olden time. The distance from Patna is about 27 miles in a direction a little west of north. The Lichchhavis and their city disappear from view for about eight centuries from 500 B.C. to A.D. 300, when they reappear as the source from which Chandragupta I. (*q.v.*), the founder of the imperial Gupta dynasty, derived his power. That chief married a Lichchhavi princess, and his powerful son, Samudragupta (*c.* A.D. 330–375), habitually described himself as the 'son of the daughter of the Lichchhavi.' Probably the Lichchhavis of Vaiśāli had been subject to the suzerainty of the Kushans, had become independent when the Indo-Scythian dynasty waned, and then had made themselves masters of Pāṭaliputra. Their own city certainly held an honourable position in the reign of Samudragupta's successor, Chandragupta II. (*q.v.*). At a later date we hear of a Lichchhavi dynasty of Nepāl. The city then vanishes again from history. When Hiuen-Tsiang visited it about A.D. 637, it was almost deserted, and he had to lodge in a small monastery occupied by a few monks of the Lesser Vehicle. They showed him all the sites of the Buddhist holy places according to the notions they had adopted 1100 years after the events of Buddha's lifetime. Among the show-places was the site of the meeting of the Second Council.[1]

The group of remains near Bakhirā at the north-west corner of the city alone can be identified satisfactorily with objects described by Hiuen-Tsiang. It is impossible to doubt that the Aśoka lion-pillar still standing is that seen by him, or that the tank beside it is his 'monkey-tank.' If the locality should ever be explored properly at any future time, as the site of Taxila is being examined by Sir John Marshall, many interesting discoveries may be anticipated, and further identifications of monuments may be possible.

LITERATURE.—Vaiśāli is mentioned eight times in the Pali *Jātakas* (see Eng. tr. ed. E. B. Cowell, Cambridge, 1895–1913, Index vol., *s.v.*). Other Buddhist literature frequently refers to the town in connexion with the Second Council (see art. COUNCILS [Buddhist]), the residence of Buddha (*q.v.*), and the distribution of his relics (see art. RELICS [Eastern]). The accounts of the Chinese pilgrims Fa-Hian (ch. xxv.), and Hiuen-Tsiang (Yuan-Chwang) may be read in any of the trr. with variations. The statements of the Tibetan *Dulva* are tr. by W. W. Rockhill, *The Life of the Buddha*, London, 1884. The copious Jain literature about Mahāvira is cited by A. F. R. Hoernle, annual address in *Proceedings ASB*, 1898, and H. Jacobi, *Jaina Sūtras*, pts. i. and ii. (*SBE* xxii. [1884], xlv. [1895]). See also A. A. Guérinot, *Essai de bibliographie Jaina*, Paris, 1906, and 'Notes de Bibliographie Jaina,' in *JA*, 1909, pp. 47–148. Ch. iii. ('The Life of Mahāvira') in Mrs. Sinclair Stevenson, *The Heart of Jainism*, London, 1915, supplies particulars not available elsewhere.

The geographical position, topography, and ancient remains of the site are discussed in *IGI* vii. [1908] *s.v.* 'Basārh'; A. Cunningham, *Archæol. Survey of India Rep.*, i. [Simla, 1871], xvi. [Calcutta, 1883]; T. Bloch, *Ann. Rep. Archæol. Survey of India for 1903–04*, Calcutta, 1906, pp. 73–122, with survey map; D. B. Spooner, *ib. for 1913–14*, do. 1917, pp. 98–185; V. A. Smith, 'Vaiśāli,' *JRAS*, 1902, pp. 267–288; and F. E. Pargiter, *JASB*, vol. lxvi. pt. i. [1897], p. 89.

For the Lichchhavis (*al.* Nichchhavi, Litsabi) see V. A. Smith, 'Tibetan Affinities of the Lichchhavis,' *IA* xxxii. [1903] 233–236; and S. C. Vidyabhusana, 'The Licchavi Race of Ancient India,' *JASB* lxxx. [1902], no. 2; but the subject needs further investigation.

VINCENT A. SMITH.

VAIŚEṢIKA.—The name of one of the six philosophical systems of the Brāhmans. Just as we are able to establish a close relationship between the two oldest systems, the Sāṅkhya and the Yoga, and between the third and fourth, the Mīmāṁsā and the Vedānta, a third pair is formed by the Vaiśeṣika philosophy in connexion with the Nyāya, the latest of the systems. Both the Vaiśeṣika and the Nyāya teach the origin of the universe from atoms (*aṇu*, *paramāṇu*, *kaṇa*), and

[1] *Laws*, x. 22. [2] No. 465 of Cambridge tr., vol. iv. p. 94.

[1] See art. COUNCILS (Buddhist).

therefore introduce an entirely new element into the world of Brāhman thought. Further, both systems have in common the precise definition and arrangement of logical ideas upon which their influence and fame depend. These common characteristics have led to a complete fusion of the two systems in the later philosophical literature of India, and to a failure to distinguish Vaiśeṣika and Nyāya doctrines on the part of earlier European students of Indian thought. Now, however, for a long time access to the original sources has enabled us to determine the originally distinctive character of the two systems. The Nyāya used to be regarded erroneously as the earlier, and it is only recently that the priority of the Vaiśeṣika has been recognized.

Its founder bears the name of Kaṇāda, Kaṇabhakṣa, or Kaṇabhuj. All three names have the same meaning, viz. 'devourer of atoms'; whence it follows that these titles must have been originally terms of mockery bestowed on account of the atomistic character of the Vaiśeṣika doctrines. Such harmless nicknames, which in course of time have become real names, are often met with in the Indian world of letters.

Kaṇāda is supposed to have composed his textbook, the *Vaiśeṣikasūtras*, between 200 and 400 A.D. In it he proposes to teach the true discernment of all that may be known, and for that purpose assumes six categories, which in his judgment comprehend all existing things. In discussing these categories and their subdivisions, he treats of the most diverse problems, especially in cosmology and psychology, so that a complete system of philosophy is built up upon his doctrine of the categories. The following are the categories: 1. substance (*dravya*); 2. quality (*guṇa*); 3. movement or action (*karman*); 4. association (*sāmānya*); 5. difference (*viśeṣa*); 6. inherence (*samavāya*).

To the category of substance are assigned: earth (*i.e.* all organic bodies and all inorganic substances with the exception of the remaining four elements), water, fire, air, ether, time, space, soul, and the organ of thought (*manas*). To begin with, it appears to us strange that time and space are included among substances. Kaṇāda's conception of substance, however, is wider than ours; he intends by it that which has qualities and movement, and is the immediate basis of phenomena. The difficult question as to the nature of time and space, to which Kant was the first to give a final answer, is discussed, strangely enough, only incidentally and occasionally, in the whole of Indian philosophy. In this respect the Sāṅkhya philosophy has made a distinct advance, in that it regards time and space as two qualities of the eternal matter regarded as a unity.

The exposition of the category of substance affords Kaṇāda the opportunity of setting forth his atomic doctrine, which is derived from Buddhist sources. This has been shown by W. Handt in his treatise on the Vaiśeṣika philosophy.[1] According to the doctrine of Kaṇāda, the atoms of earth, water, fire, and air are eternal and uncreated. Although they themselves have no extension, their heterogeneous nature is the cause of the extension and visibility of the combinations of atoms. How this is to be understood, and where the visibility of these combinations begins, on these points Kaṇāda himself—to judge from the silence of the *Vaiśeṣikasūtras*—does not seem to have propounded any definite views. Later teachers of the school set forth the theory that an aggregate of three atoms (*try-aṇuka*)—others say, of three double atoms (*dvy-aṇuka*)—possesses extension, and that it is visible in the shape of the dust mote (*trasareṇu*) dancing in the sun light.

The whole of this doctrine is vigorously combated in the philosophical works of the Vedānta and Sāṅkhya, and indeed for reasons obvious on both sides. The adherents of these two systems assert that, if the individual atoms do not possess extension, the aggregate cannot be extended; for every quality of a product is determined by the similar quality of its material cause.

The cosmogony of the Vaiśeṣika system depends upon its theory of the atoms. It is also dominated by the wide-spread Indian conception, that periods of creation and destruction of the universe follow one another in regular order; and on each occasion the evolution and decay of the universe are effected in the same way and by the same causes. The following explanations are in conformity with the exposition of W. Handt,[1] only that they do not begin, as he does, with the dissolution of the universe, but with its development.

During the period of dissolution, by which, however, the three infinitely great and therefore eternal and unchanging substances, ether, space, and time, are unaffected, no combination of the four elements of gross matter takes place, nor any union between the numberless individual souls and the atoms. But the souls retain their merit and demerit in a latent condition in the shape of dispositions. When the retributive force of merit and demerit with all its inevitable consequences, which here also, just as in the other systems of Indian philosophy, is the power that urges the universe on its course, is again aroused, the period of dissolution comes at once to an end. The souls therefore unite afresh with the atoms; and by this means a movement is started in the atomic elements which marks the beginning of a new creation of the material universe. This movement first originates in the atoms of the air, giving rise to double atoms, and through them to the gross material air which rushes forth and fills space. Thereupon within the elements of air the atoms of water combine together, whence in the same way the great ocean of the universe is produced. Within this ocean again the earth atoms come together, and form after the rise of double and triple atoms the solid mass of the firm earth. Finally, the element of fire comes into being, its atoms also combining in the same way within the water. Its origin is effected within the water, which in a certain sense represents the guard that restrains the destructive force of the fiery element, in order that its destroying power may be prevented from interfering with the organic course of the evolution of the universe. After the material universe has thus come into being, empirical existence begins afresh for the souls. These unite with bodies in accordance with the consequences of their work, still unexhausted from the preceding world-cycle; and in a new series of existences heap up for themselves merit and guilt, and earn reward and punishment until the cycle comes to an end. In the Sāṅkhya philosophy no cause is assigned compelling the dissolution of the universe; but in the Vaiśeṣika the process of its dissolution is accounted for in a very remarkable way. By their continual wandering through numberless bodies the souls are so weakened and exhausted that they need a long period to recruit. Just as living creatures upon earth after the sufferings and toils of the day sink at night to sleep, and remain for a time unconscious and without experience of pleasure or pain, so a universal night spreads over the universe, wherein the individual souls may recover from the sufferings of the *saṃsāra*. It is evident that so remarkable an explanation was not possible in a system which,

[1] *Die atomistische Grundlage der Vaiśeshika-Philosophie nach den Quellen dargestellt*, Rostock, 1900.

[1] *Op. cit.* pp. 56–58.

like the Sāṅkhya, maintained that souls were destitute of qualities. Only a soul that actually experiences, wills, and knows could be thought of as in a condition of exhaustion. That, in fact, the Vaiśeṣika philosophy does conceive of souls as endowed with qualities of their own will be understood from a consideration of the second category.

The process of the dissolution of the universe goes on, then, in the following manner. The affections disappear which are evoked by the action of merit and demerit in the individual souls, and which form the bond between body, the senses, and the external world. The motive force therefore is restrained which maintains the cycle of existence. The bond is consequently broken which exists by the power of merit and demerit between the material atoms and individual souls. The four atomic elements are now dissolved in regular succession, the earth in water, the water in fire, the fire in air. The process of the dissolution of the atomic elements is effected in the reverse order to that of the formation of the material products from the atoms, affecting first the triple atoms, and after their destruction, when only double atoms remain, seizing in turn upon these, so that finally each of the four elements maintains its existence in the form of isolated atoms.

From this statement of the cosmology of the Vaiśeṣika system, which the original texts present in connexion with the category of substance, we turn to the category of *quality*. This category comprises the ideas of colour, taste, smell, touch (together with temperature), number, extension, individuality, connexion, separation, priority, posteriority, knowledge, joy, pain, desire, aversion, and will. This list Śaṅkaramiśra enlarges in his commentary on *Vaiśeṣikasūtra* I. i. 6, with seven other qualities, which, though included in the seventeen preceding, yet in his opinion deserve special mention. They are weight, fluidity, adhesiveness, sound (the characteristic quality of the ether, which is the medium of the undulations), after-effect (or self-reproduction, *saṃskāra*, manifesting itself in three ways, as continuance of movement in obedience to a given impulse, elasticity, and memory), finally, merit and demerit.

It will be seen that this enumeration comprises mental as well as material properties. This affords Kaṇāda an opportunity under the category of quality of developing his psychology. Contrary to the philosophical teaching of the Vedānta and Sāṅkhya, mental qualities according to the Vaiśeṣika system are attached directly to the soul, as has been indicated above, but only in the form of dispositions. For no psychological process is possible for the soul that finds itself in an isolated condition. It is only in consequence of the soul's union with the organ of thought (*manas*) that its faculties are capable of activity. Both souls and the organ of thought are eternal substances; but the soul is all-pervading, *i.e.* not bound down to time and space, while the organ of thought is an atom. The latter is the intermediary between the soul and the senses, since urged by the soul it betakes itself on each occasion to that sense through which the soul desires to perceive or to act (for the capacities of walking, speaking, etc., are, according to the Indian view, comprised under the idea of the senses; a distinction is therefore made between the senses of perception and action). Thus the organ of thought continues to move as long as it is actuated by a process of perception or a bodily activity. If it rests motionless in the soul, the union of the latter with the senses ends, and no perception or act or experience is possible.

Kaṇāda declares the organ of thought to be an atom, because in his view different perceptions or other psychological processes do not take place simultaneously, but always one after the other, though frequently in exceedingly swift succession. On account of its minute size as an atom the organ of thought can unite at any given instant only with a single sense, and can only convey the idea of a single object. If the organ of thought were omnipresent like the soul, or if the soul could enter into immediate relation with the objects of knowledge, all objects would be simultaneously perceived. As the organ of thought, on the one hand, imparts the quickening power to the soul, so, on the other, it acts as a kind of check by preventing the soul from exercising more than one function at the same time.

The subdivisions of the third and fourth categories, those of movement (or action) and association, are of little significance. Difference, the fifth category, on the contrary, holds an important place in the Vaiśeṣika system, inasmuch as by virtue of it the difference of the atoms renders possible the formation of the universe. The name, therefore, of the entire system, Vaiśeṣika, is derived from the word for difference (*viśeṣa*).

From the very beginning, the sixth category, inherence (or inseparability), the enunciation of which reflects great credit on the insight of Kaṇāda, attracted the attention of Sanskrit scholars. This conception is clearly distinguished from that of occasional or separable connexion, which is regarded as a subdivision of the category of quality. The relation expressed by inherence subsists, for example, between the whole and its parts, the genus and the species, the particular object and the general idea with which it is associated, between a thing and its properties, between movement and that which is moved.

Later teachers added to these six categories a seventh, *non-existence*. This conception is one which has proved very injurious not only to the development of logic, but also to philosophical speculation in the later works of all schools. Bearing in mind the negative tendency of all Indian thinking, we can readily understand how Indian philosophers were led to work out this idea with ever-increasing refinement. Of this the division of the category of non-existence into four subdivisions furnishes a ready proof. Instead of 'future existence' the Indian says 'prior non-existence'; 'posterior non-existence' for 'past existence.' The simple relation existing between two things that are not identical (to give the usual example, between a pot and a cloth) is described as 'mutual (or reciprocal) non-existence,' and the actual impossibility of a thing (as of the son of a barren woman) as 'absolute non-existence.'

R. GARBE.

VAIṢṆAVISM.—1. Introductory.—The term 'Vaiṣṇava' is applied to that Hindu sect the members of which worship in a special way Viṣṇu, as contrasted with the two other greater sects, the Śaiva, or worshippers of Śiva, and the Śākta, or worshippers of Śakti, the female personification of energy. Their worship is not to be confounded with the orthodox worship paid by the higher classes of Hindus to Viṣṇu as their individual patron deity (*iṣṭa-devatā*). Like Śaivism, Vaiṣṇavism is a form of monotheism, the setting aside of the triune equality of Brahmā, Śiva, and Viṣṇu in favour of a single god.

No attempt has been made at the more recent enumerations to collect statistics of the numbers of these sects. Few of the rural classes follow any

distinctive sect, and it has been found impossible to record the numbers of their adherents with any approach to precision.[1]

2. The development of the worship of Viṣṇu.—Since the Vedic period the development of the cult of Viṣṇu has undergone many modifications. Though he is an important deity in the mythology of the *Brāhmaṇas*, Viṣṇu occupies only a subordinate position in the *Rigveda*, his essential feature being that he takes three strides, interpreted by some authorities to mean the rising, culminating, and setting of the sun, but more probably meaning the course of the solar deity through the three divisions of the universe.[2] The later development of his personality has been fully investigated by R. G. Bhandarkar, who traces its stages as follows: in the 5th cent. B.C. a religious reform arose like that which gave origin to Buddhism and Jainism, but based on theistic principles; this soon assumed a sectarian type in the form of the Pāñcharātra or Bhāgavata religion;[3] this, again, was combined with the cult of Nārāyaṇa, 'the resting-place or goal of gods'; soon after the Christian era the Abhīra tribe of shepherds contributed to it their tribal hero Kṛṣṇa; in the 8th cent. this faith, the predominant feature of which was *bhakti*, or love, came into contact with the doctrine of spiritual monism and world-illusion promulgated by Śaṅkarāchārya (*q.v.*); the hostility to spiritual monism gathered to a head in the 11th cent., when Rāmānuja (*q.v.*) made strenuous efforts to displace it by the religion of *bhakti* in a re-invigorated form; he was followed in the north by Nimbārka, who advocated the cow-herd element and enjoined the cult of Rādhā, mistress of Kṛṣṇa; the same policy was continued in the 13th cent. by Madhva or Ānandatīrtha, who established the doctrine of pluralism and brought into prominence the name of Viṣṇu as supreme god; in the north Rāmānanda added the cult of Rāma, and his successor Rāmānuja that of Nārāyaṇa; Kabīr in the 15th cent. preached strict monotheism, the cult of Rāma, and condemned idolatry; Vallabha in the 16th cent. founded the erotic cult of Kṛṣṇa and Rādhā, and Chaitanya in Bengal that of the boy Kṛṣṇa and Rādhā, a corruption which led to the degradation of Vaiṣṇavism; in the Deccan Nāmdev and Tukārām discarded the worship of Kṛṣṇa-Rādhā, cultivated a more sober type of worship, disseminated their ideas not in Sanskrit but in the vernacular languages, preached pure love of God, and laid stress on personal purification of heart and morals as necessary to salvation.[4]

3. Viṣṇu and his incarnations.—Vaiṣṇavism has thus developed on several distinct lines according as the object of devotion, Viṣṇu, varies in his manifestations, incarnations, or 'descents' (*avatāra*). This theory tends towards syncretism, the absorption of the lower animal-gods or totems of the more primitive tribes into the Brāhmanical pantheon. The incarnations of Viṣṇu are sometimes enumerated as six, ten, or twenty in number; but the most important are those of Kṛṣṇa and Rāma.[5] The cult of Rāma goes back in the *Vāyu Purāṇa* to about the 5th cent. B.C.; in the *Rāmāyaṇa* of Vālmīki, which in its original form is based on pre-Buddhistic materials, while its kernel was probably composed before 500 B.C., and the more recent portion was probably not added till the 2nd cent. B.C. and later,[1] Rāma is depicted as a high-souled hero, and thus with his faithful wife Sītā he won the affections of the Indian people. But it was not till the 11th cent. of our era that his cult was fully developed. This cult is described in the *Viṣṇu Purāṇa*, which seems to go back to the Gupta period (A.D. 320–455).[2] The tenth book of the *Bhāgavata Purāṇa* has exercised a more powerful influence than any other work of its class, was translated into Hindī by Lallū Rām Kavī under the title of *Prema Sāgara*, 'The Ocean of Love,' and is now the most popular manual of the cult of Kṛṣṇa.[3] The cult of Vāsudeva-Kṛṣṇa seems to be mentioned by the Greek traveller Megasthenes; and, if it prevailed in the period of the first Maurya emperors, it must have originated long before that time, and probably owes its development to that stream of thought which began with the *Upaniṣads* and culminated in Buddhism and Jainism.[4] Kṛṣṇa seems to have been a local deity known as Gopāla, 'cow-herd,' or Govinda, probably a later form of Govid, 'finder of cows,' which was an epithet of Indra.[5] He was worshipped by the Abhīra shepherds, who wandered with their flocks over the region from Mathurā to Dwārkā. With this pastoral deity, by a process of syncretism, was combined the cult of an ocean-god of the western sea localized at Dwārkā. How far this cult was influenced by Christianity, brought by nomad tribes like the Gurjaras from Central Asia, is still a question of controversy.[6] The imperfect combination of the cults of Mathurā and Dwārkā is shown by the vagueness and inconsistencies of the legends which were invented to account for the later Kṛṣṇa cult.

4. The subdivisions of the Vaiṣṇavas: influence of the creed: sacred places.—The subdivisions of the Vaiṣṇavas follow the teaching of the great missionaries, of whom an account has elsewhere been given.[7] The most important is that of the Śrī Vaiṣṇavas, founded by Rāmānuja, the followers of whom are more numerous in Southern than in Northern India. The second school is that of Madhva, or Ānandatīrtha, who preached the doctrine of duality (*dvaita*), in opposition to the non-duality of Śaṅkarāchārya. The third follows the teaching of Rāmānanda, whose characteristics were that no distinction was made between the Brāhmans and the so-called 'untouchables,' and the use of the vernacular tongues as the medium of his teaching. The fourth is the Vallabhāchārya, whose worship of the *guru* has led to much scandal.[8]

Vaiṣṇavism is essentially monotheistic, while Śaivism is often ultimately pantheistic or, rather, is apt to relapse into pantheism, though it, too, is monotheistic.[9]

'Taken as a whole, one of the chief characteristics of the United Provinces population is a real and unaffected kindliness. Vaishnavism would certainly appeal to them, and if adopted, would tend to enhance the very quality which would cause its adoption.'[10]

It represents to a large extent the Buddhistic

[10] *Ib.* p. 130.

type of life and morals, in which regard for the sanctity of life (*ahiṃsa*), human and animal, is a predominant feature.[1] Tod records that the spread of Kṛṣṇa-worship among some of the Rājputs (who generally, being warriors, favoured the Śaiva cult) exercised an ameliorating influence on their life and manners.[2] On the other hand, Dubois expresses a less favourable view of the sect in S. India.

'The feeling of aversion which orthodox Brahmins entertain for Vishnavite Brahmins is shared by Hindus of all castes. A stigma of reproach appears to cling to them. It cannot be the the case, however, that the disfavour with which they are regarded is entirely due to their worship of Vishnu. I think it must be largely imputed to their excessive pride and arrogance, their extreme severity, and their supercilious manners; for though all Brahmins share these characteristics, it is generally acknowledged that the Vishnavites display them in an intensified form.'[3]

Again, the erotic tendency of some Vaiṣṇava literature, particularly in connexion with the cult of Kṛṣṇa and Rādhā, has aroused opposition among the more sober-minded Hindus, and it must be noted that the rival cult of Rāma is singularly free from excesses of this kind. Growse remarks on one set of their poems:

'If ever the language of the brothel was borrowed for temple use, it has been so here.'[4]

In Bengal the licentious habits of some orders are notorious.

'The Bairāgī and Bairāgan [male and female] Vaishnavas are of evil repute, their ranks being recruited by those who have no relatives, by widows, by individuals too idle and depraved to lead a steady working life, and by prostitutes. Vaishnavī or Boistubī, according to the vulgar pronunciation, has come to mean a courtezan.'[5]

In N. India the cult of Viṣṇu or Kṛṣṇa is specially observed at Mathurā (*q.v.*) and the adjoining towns of Brindāban and Gokul (*qq.v.*); Viṣṇu is worshipped at Purī as Jagannāth (*q.v.*); he has a famous shrine at Badarīnāth (*q.v.*); in Gujarat Kṛṣṇa is worshipped at Dwārkā; at Pandharpur in the Sholāpur District, the Deccan, Viṣṇu is worshipped as Viṭhobā; in the south his chief seats are Conjeeveram and Tirupatī. The Vallabhāchāryas have their chief temples at Gokul and at Nāthdwāra in the Mewār State of Rājputānā. Rāma-worship centres in the scenes described in the *Rāmāyaṇa*, Ayodhyā, Chitrakūt, and Nāsik.

LITERATURE.—Many of the authorities have been quoted in the article. The Vedic texts connected with Viṣṇu have been collected by J. Muir, *Original Sanskrit Texts*, London, 1858–72, iv.[2] [1873] 63 ff. The Vaiṣṇava sects are described by H. H. Wilson, *Essays and Lectures on the Religion of the Hindus*, London, 1861–62, i. 30 ff. On the connexion of Kṛṣṇa-worship and Christianity see J. Kennedy, 'The Child Krishna, Christianity, and the Gujars,' *JRAS*, October, 1907, p. 951 ff.; G. A. VALENTINIANISM. — Valentinianism is a form of Gnostic teaching which originated with Valentinus, about the middle of the 2nd century. The term is a somewhat vague one, for Valentinus was generally regarded as the chief master of gnosis, and all the Gnostic schools were affected in some degree by his influence. His name was often attached to systems which had borrowed from him superficially, as well as to those which had grown directly out of his teaching.

1. **Life and writings of Valentinus.**—Of the life of Valentinus only a few scattered notices have come down to us. He was born on the coast of Egypt, at the end of the 1st or the beginning of the 2nd cent., and was educated at Alexandria. For some time he worked in that city as a Christian teacher, but eventually migrated to Rome, where he lived during the period between the episcopates of Hyginus and Anicetus (A.D. 137–166). He must have come forward as a Gnostic teacher before his arrival in Rome, for Justin mentions him among the conspicuous heretics,[1] and appears to have discussed his theories in the *Syntagma*, written about A.D. 160. Epiphanius states that he first became the head of a sect in Cyprus, and that he broke with the Church because he was passed over in the election of a bishop. A personal grudge of this kind is, however, commonly imputed to famous heretics in the controversial writings, and there is no reason to doubt that Valentinus advanced towards his later position by a natural process of reflexion, which would be stimulated by the Gnostic atmosphere of the Alexandrian Church. It is more than probable that he never formally detached himself from orthodox Christianity.

Valentinus was the author of a number of writings which have now perished, with the exception of a few fragments. His works included hymns, homilies, epistles, and possibly a treatise entitled *Sophia*. A late tradition makes him the author of a Gospel, but of this there is no evidence. His adversaries themselves pay tribute to his eloquence and intellectual power, and their testimony is fully borne out by the meagre specimens of his own writing which have been preserved. His system as a whole is known to us only from hostile witnesses, whose acquaintance with it had been formed at second hand; but through this obscuring medium it is still possible to recognize in Valentinus the foremost of the Gnostics, and one of the most gifted and versatile minds of the early Church. He was at once a poet, a philosopher, and a great religious teacher. Out of the chaotic materials of Gnostic tradition he constructed a harmonious body of thought in which there are not a few elements of real speculative value.

2. **Sources.**—Of the patristic accounts of Valentinus the earliest was that of Justin, and an outline of it has possibly been preserved in Irenæus, *adv. Hær.* I. xi. 1–3. Hippolytus described the system in an early work which is now lost, but can be partially reproduced from pseudo-Tertullian, Philaster, and Epiphanius. Our remaining sources are Irenæus, Tertullian, and the *Philosophumena* of Hippolytus; but Tertullian is for the most part directly dependent on Irenæus. Hippolytus and Irenæus—the two cardinal authorities—are broadly in agreement, but their differences are sufficient to prove that they worked independently. Preference has often been given to the account of Hippolytus, which is shorter, clearer, and more symmetrical. But a number of indications make it almost certain that Irenæus is closer to original sources, although he has presented his material with little discrimination, and has confused the teaching of Valentinus himself with that of his disciples. The notices of the controversial writers are supplemented by the *Excerpts from Theodotus*, a selection of passages from an early Valentinian writer which is appended to the *Stromata* of Clement of Alexandria. The value of this source is much impaired by the difficulty of arranging the detached sentences in any intelligible order, and by the intrusion of comments which cannot with certainty be distinguished from the text. A curious problem arises from the similarities in thought, and occasionally in lan-

[1] *Trypho*, 35.

guage, between the *Excerpts* and the account in Irenæus. A direct connexion is not probable, but there is reason to believe that the writer quoted by Clement and the main authority consulted by Irenæus have made use of the same document. In addition to the sources enumerated, we have the *Fragments* of Valentinus himself, by which we are enabled in some degree to check and interpret the evidence of the patristic writers. A number of fragments have also been preserved from the works of later Valentinian teachers—notably the Letter of Ptolemæus to Flora, which is quoted at full length by Epiphanius,[1] and the extracts from the commentaries of Heracleon, which are given by Clement and Origen.

3. **The system of Valentinus.**—It is stated by Irenæus[2] that Valentinus adapted the principles of current Gnosticism to a doctrine of his own; and his system clearly betrays this dependence on earlier phases of the Gnostic movement. At Alexandria he can hardly have failed to come into personal contact with Basilides, and the influence of the older teacher is apparent in various details of his system (*e.g.*, the multiplication of æons, the doctrine of the passions as alien spirits invading the soul, the conception of the hebdomad as the sphere of the Demiurge). To Basilides, too, he may have owed the impulse to build a philosophical theory on the basis of Gnostic tradition. For the most part, however, he reverts from Basilides to the older Gnostic constructions. It seems to have been his purpose to form a comprehensive system which should gather up in itself the more valuable elements of all previous gnosis. To this we may attribute the complexity of detail which marks the system, and which has sometimes been set down to later elaboration. From this too we can best explain the remarkable diffusion of Valentinian gnosis. All the Gnostic sects were able to recognize in it their own characteristic tenets, brought into a larger context, and impregnated with a deeper meaning. As Valentinus borrowed from the earlier types of Gnosticism, so he adopted many suggestions from those Eastern religions which lay behind the whole Gnostic movement. The division of æons into groups of eight, ten, and twelve recalls the similar grouping of divinities in the Egyptian religion. The conception of the Pleroma as made up of thirty æons has its obvious counterpart in the thirty supreme gods of Zoroastrianism. Some of the details in the history of Sophia and the Soter appear to be taken directly from the Syrian and Phrygian myths of the mother-goddess rather than from their Gnostic analogies. But, while thus elaborating the mythological framework, Valentinus informs it, to a far greater extent than any of his predecessors, with a philosophical significance. Hippolytus may be right in his contention that the system is largely indebted to the Pythagorean theory of numbers; but the chief philosophical influence (as Hippolytus himself acknowledges) is undoubtedly that of Plato. Valentinus endeavours in his own fashion to work out the Platonic conception of an ideal world reflecting itself in the world of visible things. His doctrine of the soul as longing to be restored to the kingdom of light from which it has fallen is ultimately derived from Plato. The Gnostic mythology, as remoulded by him, partakes in some measure of the character of the Platonic myths. His æons are no longer separate divine beings but aspects of the nature and activity of God. They spring from one another not by a process of birth, but by one of emanation. The traditional episodes of the Gnostic history of redemption are more than half allegorized into inward experiences in the life of the soul. Gnosticism in the hands of Valentinus attempts to transform itself into a real philosophy, offering a solution of the metaphysical problems of the origin of evil, the relation of spirit to matter, the creation of the world, the nature and destiny of man.

With Valentinus the distinctively Christian element is much more pronounced than in earlier Gnosticism. He had begun his career as a Christian teacher, and perhaps never regarded himself as alienated from the Church. So far as can be ascertained, he instituted no peculiar rites or sacraments to mark out his following as a separate sect. All through his system we can trace the desire to bring his thought into as close relation as possible to the Christian teaching, and with this intention he makes a continual appeal to Scripture. In no recorded instance does he fall back on the esoteric writings which were favoured in Gnostic circles. His practice is rather to make use of the Scriptures acknowledged by the Church, OT and NT alike, and to read the esoteric meaning into them by a forced application of the allegorical method. But, while he thus appeals to Scripture in order to commend his teaching to orthodox Christians, he regards it as at best a secondary source of revelation. This is apparent as well from his highly subjective mode of interpretation as from his explicit statement:

'Many of the things written in the public books are found also written in the Church of God. . . . The law written in the heart is the people of the Beloved' (*i.e.* the spiritual race has come from God, and is itself an immediate source of divine knowledge).[1]

Not only does Valentinus accept the Christian Scriptures, but in his scheme of redemption he makes room for Christian believers as the 'psychical' class, intermediate between the 'pneumatic' and the 'hylic.' Earlier Gnosticism had allowed only for the higher class, predestined to life, and the lower, in which all spiritual potentialities were lacking. In the Valentinian system the third class is also capable of salvation, although in an inferior degree. This estimate of the 'psychic' natures was not due, as the Fathers complain, to arrogance and exclusiveness, but to a genuine solicitude for the mass of ordinary Christians. But the Christian affinities of the system are most clearly discernible in its central motive; for its various speculations all converge in a doctrine of redemption, in which the chief place is assigned to Jesus. The redemption is conceived, in the first instance, as the deliverance of the spiritual element from matter, but it was connected, at least in Valentinus's own teaching, with a pure and lofty ethic.

'The heart is cleansed by the expulsion of every evil spirit; . . . and when the only good Father visits it, it is sanctified, and gleams with light; and he who possesses such a heart is so blessed that "he shall see God."'[2]

It would be too much to say that with Valentinus Gnosticism joined hands with Christianity, but we may fairly credit him with a sincere endeavour to mediate between the two forms of teaching. He sought, on the one hand, to bring Gnosticism into closer sympathy with the Church and, on the other, to secure the Church's recognition of the elements of truth in Gnosticism.

The Valentinian system as described by the Fathers, whose evidence is consistent, in the main, with that of the *Fragments*, falls into two clearly marked divisions: (1) the events within the Pleroma, (2) the history of the creation and redemption. One difficulty, however, which has often been considered as of paramount importance, meets us at the outset. According to Irenæus, the æon who stands at the head of the Pleroma has a female consort, while Hippolytus, who is here supported by the *Fragments* and the *Exc. Theod.*, speaks of one supreme principle who is the

[1] *Hær.* xxxiii. 3. [2] I. xi. 1.

[1] *Frag.*, quoted in Clem. *Strom.* vi. 6.
[2] *Ib.*, in *Strom.* ii. 20.

source of all being. Irenæus himself admits that on this point there was difference of opinion among the Valentinian schools. The discrepancy is not, perhaps, so serious as might appear at first sight, especially when we remember that for Valentinus the æons tend to be little more than metaphysical abstractions. He apprehends the supreme principle as a unity, but as still containing within itself the possibility of distinction. This, indeed, is the presupposition of the whole system—that the original unity was capable from the first of a self-unfolding into the multiplicity of being.

The supreme æon, whether conceived as monad or as dyad, is moved by an inner necessity of love to impart his fullness, and by a process of emanation there arises the series of æons which constitutes the Pleroma. Bythos and Sige put forth Nous and Aletheia, from whom proceed the two pairs, Logos-Zoe and Anthropos-Ecclesia. These four pairs, or 'syzygies,' make up the ogdoad, which is complete in itself—a Pleroma within the Pleroma. The process of emanation is then continued by the two lower pairs of the ogdoad. Logos and Zoe project the five syzygies of the decad: Bythios-Mixis, Ageratos-Henosis, Autophues-Hedone, Akinetos-Syncrasis, Monogenes-Makaria. From Anthropos and Ecclesia proceed the six syzygies of the dodecad: Paracletos-Pistis, Patrikos-Elpis, Metrikos-Agape, Aeinous-Synesis, Ekklesiastikos-Makariotes, Theletos-Sophia. When the Pleroma is thus constituted, it is enclosed within itself by Horos (the boundary), which, according to Irenæus, is also interposed between Bythos and Sige and the remaining æons. The doctrine of the Pleroma is borrowed by Valentinus from older Gnosticism, but is modified in the light of metaphysical principles. Absolute Being goes forth from itself in the æons of the ogdoad, while in the decad and dodecad the powers immanent in these higher æons are drawn out and determined, first on the ontological, then on the more active, side. It will be noted that in these lower pairs the male is designated by an adjective, the female by a substantive—in keeping, apparently, with the Valentinian doctrine that the female contributes a vague substance, on which the male imposes form. The harmony of the Pleroma is broken by the presumption of Sophia, the youngest æon, who aspires, by one account, to comprehend the unknowable Father, by another, to create like the Father in virtue of her sole activity. She produces an abortion, but, on the prayer of the other members of the Pleroma, two new æons, Christos and the Holy Spirit, are put forth by Nous and Aletheia, and separate Sophia from her formless offspring. It falls out of the Pleroma, but is sought out by Christos and the Spirit, who endow it with form and then return. As a thank-offering for the restored harmony the thirty æons in fellowship put forth a new æon, Jesus.[1]

The second part of the system is concerned with the events outside of the Pleroma, after the departure of Christos from the lower Sophia (called in Irenæus by the Aramaic equivalent 'Achamoth'). Bereft of her helper, she is afflicted by the four passions of fear, grief, perplexity, and supplication; and Jesus, the common fruit of the Pleroma, is sent forth to be her consort and deliver her. Her passions are detached from her and become independent principles—the fear changing into psychic, the grief into hylic, the perplexity into demonic, substance, while the supplication takes the form of a path of repentance. (A simpler type of the myth derives the four material elements from the passions of Sophia.) The psychic sphere is called, as in Basilides, the hebdomad, and is presided over by the Demiurge, while below this sphere is the cosmos, and lowest of all the chaos of unformed matter. From the Demiurge proceed the souls of men, but he is controlled, unawares to himself, by his mother Sophia, and as a result of this twofold influence certain souls are spiritual, others psychic, the rest belonging wholly to the element of matter in which they are incarnated. For the redemption of human souls Jesus is produced by the immediate power of Sophia, and is born of Mary. It was assumed by all Valentinian schools that his body was non-material, and Valentinus compares it, in one of the extant *Fragments*, to water conveyed by a canal. As to the nature of his body, however, there was a divergence of views which led, as will presently be noted, to important consequences. The redemption accomplished by Jesus extends to all souls that are not hopelessly estranged from the higher world, but the pneumatic and psychic partake of it in different mode and measure. The former belong by their nature to the higher sphere, and require nothing for their deliverance but the moulding influence of gnosis imparted by Jesus. Their goal is an ascent into the Pleroma, where they are finally mated with angelic beings. Psychic souls attain to salvation by faith and good works, by which, with the aid of Jesus, they make up for their inherent deficiency; and the sphere to which they are raised is the heaven of the fallen Sophia. In each of the three worlds, therefore (the Pleroma, the lower heaven, the cosmos), a deliverance is necessary, and is effected in each case by a different redeemer. Sophia is saved by Christos, her offspring by Jesus, the fruit of the Pleroma, while Jesus, the son of Mary, redeems the souls of men. It may be inferred from several indications in the *Exc. Theod.* and the earlier account of Hippolytus that the three Saviours were sometimes conceived as aspects of a single redeeming power, and this may have been the original teaching of Valentinus.

From this brief survey of the system it is evident that Valentinus conserves, and even accentuates, the mythological traits of older Gnosticism, while seeking, as far as possible, to rationalize them. Instead of unmeaning names, the æons bear designations which imply intellectual or religious qualities. The several stages of the history are determined not by astral conceptions but by a speculative scheme, carefully thought out, though in many respects obscure. Valentinus, moreover, has made a deliberate attempt to overcome the dualism implicit in all Gnostic thought. The cause of Sophia's fall, and of the consequent origin of evil, is not so much a sin as a presumption, due to an impulse in itself good. Her fall takes place within the Pleroma, where she continues to abide. The Pleroma no longer stands in sharp opposition to the lower world but is linked up with it and is the ground of its existence. The Demiurge, though an inferior power, is imperfect rather than evil, and his work is capable of being transformed into something higher. The worlds without the Pleroma are copies of it on a lower plane, and at each descending stage its history is repeated. One of the most significant of the changes due to Valentinus is the addition of Horos to the Gnostic cosmogony. For the Oriental conception of two opposite realms of being he substitutes the Greek one of a limit, preserving all existences in their due place and order. To a Greek instinct we may likewise assign the pervading thought that the divine activity, at each stage of the cosmic process, impresses form on formless substance. But with all his effort Valentinus does not succeed in resolving the dualism which lay at the foundation of Gnostic theory. It is tacitly assumed that from the beginning there existed along with God a world of alien matter or not-being. This is capable, in varying degrees, of being moulded by the divine Artist, but in the end there is a residuum with which He can do nothing. The world of utter chaos is left over to the demons; the 'material' souls can look for no participation in the Redeemer's gift.

4. Underlying purpose of the system.—Valentinus is at once a philosopher and a religious teacher, and from this double point of view we must consider the underlying purpose of his system.

(1) On the one hand, he seeks to bring the abstract and inaccessible God into relation to the actual world. The Pleroma is the first outgoing of God from Himself, the manifestation of the Absolute in a sphere of being which is still, in some sense, one with Him. This process of self-unfolding is continued on an ever-descending scale until at last the divine principle is merged in the depths of matter. A hymn of Valentinus, preserved by Hippolytus, gives vivid expression to this normative idea.

'I behold all things suspended by spirit; I perceive all things borne on by spirit—flesh suspended from soul, soul upheld by air, air suspended from æther, and fruits produced from Bythos, and the child born from the womb.'

Matter, it is here implied, is linked with the cosmos, the cosmos with the lower heaven, this with the Pleroma, and this again with Bythos, from which absolute source all being has its birth. In another striking passage[1] Valentinus compares the world to an imperfect image of God, which is inscribed, however, with the name of Him whom it represents so as to authenticate it:

[1] Quoted in *Strom.* iv. 13.

[1] A variant account in Iren. I. xi. 1 (apparently supported by the *Exc. Theod.*) makes Sophia herself fall from the Pleroma, and give birth to Christos, along with a kind of shadow. Christos separates himself from his mother and returns to the Pleroma, and Sophia, left with the shadow, produces another son, the Demiurge.

'The form is not exactly to the life, but the name supplies what is wanting in the effigy; the invisibility of God co-operates with that which has been fashioned.'

Thus the whole universe is conceived as an infinite gradation of being, instinct, though ever more faintly, with the power which has called it forth. Valentinus, in other words, is struggling with the idea which had hovered before the minds of Greek thinkers ever since the days of Plato, and which finally received its classical form in Plotinus. His thought is disguised and hampered by the Gnostic imagery in which he clothes it, but from the philosophical point of view he may be classed as one of the chief precursors of Neo-Platonism.

(2) The philosophical interest is, however, subordinate. Valentinus was primarily a theologian, and it was in the effort to solve religious problems that he was led to the speculations on which he bases his system. The controversial writers, who are intent on exposing the absurdities of the heretical teaching, are chiefly occupied with these strange speculations; but they are far less prominent in the surviving utterances of the Valentinians themselves. The *Fragments* and the *Exc. Theod.* only touch on them incidentally. Heracleon, in the extracts from his commentaries which we possess, makes hardly any reference to the Pleroma, and the questions which he discusses are intrinsically as much Christian as Gnostic. His suggestions are considered seriously and sometimes accepted by Clement and Origen. The Valentinian theology, like that of the Church, has its centre in the problem of redemption, but this is approached from the metaphysical, instead of the ethical or mystical, side. Redemption, as understood by the Gnostic thinkers, is the deliverance of spirit from the material element in which it has become entangled. How is this fall of spirit out of its native sphere to be explained? No answer is possible except that some disaster has taken place in the spiritual world, and the Gnostic sets himself to discover its nature and origin. Not only so, but he is required to show how the primal error has been corrected. There can be no redemption for men on earth unless we have the assurance that order has been re-established in the upper world; the restoration, like the fall, must begin from above. Valentinus, therefore, sets out from the doctrine of the Pleroma, and the redemption achieved in heavenly places after Sophia, by her error, had destroyed the original harmony. But these speculations form only the background of the system. They supply a prologue in heaven, which is not to be mistaken for the real drama, although it provides the key by which it must be interpreted. Valentinus, like the orthodox teachers, is occupied all along with the redemption accomplished by Jesus, and differs from them chiefly in his endeavour to correlate it with a universal redemption. This involves him, however, in further differences, which affect his whole religious attitude. In spite of his desire to construe the universe as the harmonious unfolding of a single principle of being, he is compelled, like other Gnostic thinkers, to fall back on an ultimate dualism. The fall of spirit cannot be metaphysically explained unless it is assumed that from the beginning there existed something alien to God. This duality reveals itself in the world of men as well as in the cosmos generally. Souls differ from one another in kind, and are not capable of the same redemption. Valentinus makes a genuine effort to break through the exclusiveness to which all previous Gnostics had stood committed. At the risk of inconsistency he recognizes the intermediate class of 'psychical' men, and it is one of the chief objects of his system to find a place for them within the scope of the redeeming process. But in the end he is driven back on the traditional Gnostic doctrine that only the spiritual can be truly saved, and that their salvation is nothing else than the inherent prerogative of their nature.

'Ye are originally immortal, and children of eternal life, and ye would have death distributed to you, that ye might spend and lavish it, and that death may die in you and by you; for when ye dissolve the world, and are not yourselves dissolved, ye have dominion over creation and all corruption.'[1]

In this remarkable saying Valentinus appears to hint at a lofty doctrine of the obligation resting on 'spiritual' men in virtue of their privilege. They are placed in this world of death, or have voluntarily entered it, in order that they may co-operate with the higher powers, and that through them the dominion of death may at last be utterly destroyed. In the light of such a saying it is impossible to doubt the noble religious temper of the great Gnostic. The very doctrine which in other leaders of the movement had served to foster a spirit of egoism and of contempt for the inferior mass of men is transformed by him into a supreme motive for human service. Yet the conception of one class of men who are marked out as essentially different from others is none the less made prominent. These higher natures alone are destined to a true redemption, and for them the work of a redeemer is hardly necessary. Like others they acknowledge Jesus as their Saviour, but what they receive from him is little more than the apprehension of their own native excellence as the children of light. It is this failure on the part of its noblest representative to reconcile the Gnostic teaching with Christian ideas that stamps it most unmistakably as alien, in its fundamental character, to the gospel.

5. **Subsequent history of Valentinianism.**—The history of Valentinianism after the founder's death is very imperfectly known to us, but there is evidence that the sect extended itself rapidly, and found adherents in Italy, Gaul, N. Africa, Egypt, Syria, and Asia Minor. Tertullian describes it as in his time 'frequentissimum plane haereticorum collegium.' According to Hippolytus, it came to be divided at an early date into two schools—the Eastern, or Anatolic, and the Western, or Italic—and the fact of this division is confirmed by the *Exc. Theod.*, which purport to give the doctrines of 'the so-called Eastern Valentinianism.' The schism, we are told, was brought about by a difference of opinion as to the nature of the earthly body of Jesus. The Easterns maintained that he assumed a pneumatic body, while the Westerns taught that his body was psychical, the Spirit descending on him at his baptism in the likeness of a dove. Both of these views are represented in the *Exc. Theod.*, and from this it has been inferred that the division cannot have been so sharp as Hippolytus affirms, or that it must have followed some other line of cleavage. Clement, however, may have made his extracts from several writers, belonging to different schools, or Theodotus himself may have quoted from other Valentinians, with whom he was not in full agreement. Why the dispute should have turned on an issue that appears so secondary and artificial it is difficult to say. It may be that the Christological controversy which was to rend the Church a century later was anticipated in some fashion by the Gnostic thinkers. More probably the question as to the nature of the Redeemer's body served merely to focus some radical difference of view as to the scope and purpose of the redemption itself. At all events, it is significant that the sect was divided on a matter that concerned not the speculative construction, but the doctrine of the Person of Christ. We have here a strong confirmation of the view that Valentinianism was much more closely allied to

[1] *Strom.* iv. 13.

orthodox Christianity than the records of the Fathers might lead us to suppose. This conclusion is further borne out by the extant writings of the two leaders of the school who were next in influence to Valentinus himself, and both of whom appear to have been his personal disciples—Ptolemæus and Heracleon.

(*a*) *Ptolemæus.* — In his system as a whole Ptolemæus adhered closely to Valentinus — so much so that Irenæus has made little effort to discriminate his separate teaching. He added, we are told, new and more complicated details to the æonology, and thought of the æons as personal beings, not merely as modes and aspects of the divine nature. In his doctrine of redemption he laid peculiar emphasis on the relation of the work of Christ to that of the Demiurge. But besides the notices in the Fathers we possess the Letter of Ptolemæus to Flora—the one document of 2nd cent. gnosis which has come down to us complete. In writing to a Christian of whom he hoped to make a convert, Ptolemæus would no doubt present his views with studied moderation, but his Letter, however we regard it, must be taken as an authentic statement of Valentinian doctrine. It deals with the specific question of the validity of the Law, and distinguishes (1) a Law given by God Himself, (2) a Law proceeding from Moses, (3) a Law appended by the elders to this Mosaic code. In the Law given by God three elements are likewise distinguished: (1) spiritual precepts, which are of permanent value and were endorsed by Jesus; (2) commandments, which were only for a time and were abrogated by Jesus; (3) ordinances that must be interpreted in a typical or symbolic sense. The teaching of Jesus is accepted throughout as the one criterion of truth. Ptolemæus betrays his Gnostic presuppositions by identifying the God of the Law with the Demiurge, whom he conceives as an inferior and imperfect God, just rather than absolutely good. But the Letter is evidence that the Valentinians not only were interested in Christian problems but also could discuss them with a sober and critical judgment which we too often miss in the orthodox theologians.

(*b*) *Heracleon.* — The name of Heracleon is attached by Epiphanius to a fantastic mythological system, but this account of his teaching may confidently be set aside, in view of the considerable fragments which have been preserved from his own commentaries. It may be gathered from these that he accepted the Valentinian construction, but that he employed it chiefly as a background for understanding the redemptive work of Jesus. Like Valentinus, he recognizes three classes of men, and makes the salvation of the 'spiritual' consist in an inner enlightenment by means of gnosis. He appears to concede, however, that even the spiritual natures are capable of a fall. He holds, too, that after being saved themselves they must re-enter the world and help to redeem the 'psychic.' In his conception of the Person of Christ he adopts a strongly docetic position.

(*c*) *Marcus.*—If Ptolemæus and Heracleon stand for a Valentinianism which had much in common with orthodox Christianity, a different tendency is represented by Marcus, who flourished about the same time. For the doctrines of Marcus we have practically no other source than Irenæus, whose account of their superstitious and immoral character is perhaps coloured by prejudice. None the less it is evident that Marcus developed the ideas of Valentinus in a one-sided fashion and thereby distorted them. The characteristic feature of his system is number-symbolism. From the numerical values of divine names he seeks to discover the nature and order of the æons and the mode by which the world has come into being. The Valentinian theory of redemption is connected by Marcus with the ideas of contemporary magic and astrology. He formed a sect which seems to have stood quite outside of the Church, with institutions of its own and special baptismal rites, accompanied by exorcisms. From such a development as that of Marcus it was manifest that the Valentinian system, in anything like its original form, could not long maintain itself. In the hands of the master and his more enlightened disciples it was capable of serving a genuine philosophical and religious interest. But it had been evolved by an artificial process from the crude speculations of primitive Gnosticism, and reverted in course of time to the earlier type.

For several centuries Gnostic sects continued to arise which called themselves Valentinian, and which preserved the language and occasionally some of the ideas of Valentinus. The *Pistis Sophia* and the other Coptic writings may on this ground be assigned to the Valentinian school, although their connexion with it is otherwise remote. We hear of Valentinians in Italy about A.D. 360, and in Spain at the end of the 4th century. But these late survivals belong to the general history of the decline of Gnosticism, and the true Valentinian movement had exhausted itself within two or three generations of the founder's death.

LITERATURE.—The subject of Valentinianism is discussed in all the general works bearing on Gnosticism (*q.v.*). The *Fragments* of Valentinus were first collected in J. F. Grabe, *Spicilegium SS. Patrum*[2], 2 vols., Oxford, 1714, which is still valuable. They are reproduced, with commentary, in A. Hilgenfeld, *Ketzergesch. des Urchristentums*, Leipzig, 1884, in which the patristic accounts of the system are also fully discussed. One of the ablest of modern accounts of Valentinianism is that of E. de Faye, *Gnostiques et gnosticisme*, Paris, 1913, pp. 39–245. The relation of the *Exc. Theod.* to Irenæus is discussed by F. W. Dibelius, *ZNTW* ix. [1908], x. [1909] 230 ff. G. Heinrici, *Die Valentinianische Gnosis und die heilige Schrift*, Berlin, 1871, and R. A. Lipsius, art. 'Valentinus,' in Smith's *DCB* iv. 1076 ff., are still indispensable. The most useful work on later Valentinianism is A. E. Brooke, *The Fragments of Heracleon newly edited from the MSS*, Cambridge, 1891 (=*TS* i. 4).

VALHALLA.—See BLEST, ABODE OF THE (Teutonic).

VALIDITY.—1. Introductory.—The notion of validity (from Lat. *validitas*, *validus*, *valere*, 'to be strong') is largely employed in modern post-Kantian thought, and receives a wide and various application. A comprehensive discussion of the notion is a desideratum, and would form a useful introduction to the philosophical and scientific disciplines, including philosophy of religion. In treating of it one must reckon with the fact that validity is a 'nebulous phrase'[1] in philosophical usage, so that it is difficult to invest it with a clear and unambiguous meaning. The terms with which it appears to be most frequently associated, with which indeed it is often identified, are those of truth and value. Thus the validity of a judgment has been described as its corrected value,[2] the validity of an argumentation or inference its truth-producing virtue,[3] or—as it might otherwise be expressed—its truth-conveying capacity. Lotze's valuable and suggestive treatment of the term[4] has done much to fix its use in philosophy; and it seems to the present writer that an examination of Lotze's discussion will serve to bring out the general nature and scope of validity. An examination, further, of the distinction between

origin and validity will illustrate the application of the notion.

2. The datum of thought.—With Lotze the discussion of validity belongs to the doctrine of thought, and the problem of validity arises first in connexion with the ideas or rudimentary concepts composing the material with which thought sets out upon its work of reflexion. The first operation of thought is to convert impressions (its ultimate antecedents) into ideas or meanings, so as to prepare 'logical building-stones'[1] for its subsequent structures. As a result of this operation each impression receives a certain objectivity or validity.

Thus 'green' or 'red,' *e.g.*, remains an object for consciousness as such after the cessation of the external stimulus which produces the impression. We no longer present it to ourselves 'as a condition which we undergo, but as a something which has its being and its meaning in itself, and which continues to be what it is and to mean what it means whether we are conscious of it or not.'[2]

Moreover, its validity or objectivity of meaning for ourselves is confirmed and tested in the experience of others.[3] But the validity or objectivity of an idea, meaning, or thought-content is not validity or objectivity in the sense of some kind of real existence independent of thought. Logical objectification, which converts subjective impressions into objective ideas, cannot give external reality, or reality beyond thought; so that no question of ontological as distinguished from logical validity is here raised. Indeed it is matter of indifference whether certain parts of the world of thought indicate something 'which has besides an independent reality outside the thinking minds, or whether all that it contains exists only in the thoughts of those who think it, but with equal validity for them all.'[4]

In his discussion of the Platonic world of ideas[5] Lotze offers a sharper representation of the nature of validity, describing it as an ultimate and underivable conception designative of reality apart from existence and occurrence. The reality of an idea or thought-content is similar to that which belongs to truths and laws; and, though wholly unlike the reality belonging to things or events, it is a form of reality which the mind cannot but acknowledge.

'We all feel certain in the moment in which we think any truth, that we have not created it for the first time but merely recognized it; it was valid before we thought about it and will continue so without regard to any existence of whatsoever kind, of things or of us.'[6]

The idea or thought-content is thus essentially eternal or timeless, being independent of its manifestations in the reality of existence or of its realization in the reality of thought (as occurrence or event). So Plato taught. It is true that Plato ascribes existence to the ideas or universal notions, but it is Lotze's contention that he does not thereby seek to hypostatize their eternal validity into an existence at all resembling the existence of things or events. Here the traditional interpretation of the Platonic doctrine is affirmed to be on wrong lines.[7] Plato's supercelestial world of ideas, without local habitation, and composed of pure intelligence, has no sort of affinity with what we ordinarily call the real world (and Plato may be said to indicate this in the very sublimity of the language in which he describes its wondrous landscape).[8] But the traditional interpretation, though false, is not without excuse. For in the Greek tongue there was no technical equivalent for validity or reality not inclusive of existence, and it was impossible for Plato to predicate reality of the ideas without at the same time substantiating them, or subsuming them under the general denomination of substance, existence, or real being (τὸ ὄν, οὐσία). Even Aristotle was forced to attribute to the ideas a secondary sort of existence (δευτέρα οὐσία). From all which it should appear that validity may be regarded with Lotze as the designation in modern philosophy of reality apart from actual existence—yet predicable of the existent.

The doctrine of validity, as we may have gathered, grows in the course of Lotze's discussions, and attaches in its developed form to the product of thought, but our chief interest in it under this head is in relation to the datum of thought, or the object of thought as such; and the question may now be asked, Can we accept the test by which Lotze would recognize the validity of the idea or thought-content—the test or mark, as already noted, of being a self-identical object for all consciousness? The sameness of the presentation of the idea is declared to be the sufficient criterion of its validity. This is, at any rate, the consistent Lotzean doctrine, and it goes hand in hand with the notion that thought is equipped at the outset of its reflective task with a systematic body of ideas or concepts. But, just as this notion is vigorously assailed in recent logical theory, so also is the aforesaid criterion of validity. Validity belongs to an idea, it is urged, not because it is an identical object or content of thought for all consciousness (any subjective construction like the 'chimæra' or the 'centaur' might be made to acquire validity according to the Lotzean measure of it), but because it is a determining factor in controlling or directing the movement of experience. 'Validity always refers to rightfulness or adequacy of performance in an asserting of connection—not to the meaning as detached and contemplated.'[1] Or, as it is otherwise put, the meaning or idea as such possesses its validity in its 'dynamic' and not its 'static' reference.

3. The process of thought.—The problem of validity is here concerned with the relation of thought as a logical process or activity to thought as a product or issue. The distinction involved is depicted by Lotze, in a well-known metaphor, as the distinction between the winding ascent and the clear prospect.[2] According to Lotze, the thinking act or process is essentially subjective, and the formed product essentially objective. This he illustrates, on the one hand, from the variety of the paths leading to the summit and, on the other, from the sameness of the scene which eventually unfolds itself before the eyes of the wayfarers. But is it a purely formal or subjective validity that belongs to logical forms and laws? A purely formal validity, implying no kind of relation between the logical activity and real existences and events is—as we may well agree—inconceivable. No single logical operation could be carried through, even as a mere subjective process of thought, 'unless the object upon which it is exercised contained in itself some characteristic which invited or at least allowed it.'[3] As the tool must fit the hand, so it must also fit the thing.[4] The forms and laws of thought cannot be 'mere singularities of our mental organisation,' but must exhibit 'a constant and regular adaptation to reality.'[5] Or—to recur to the former metaphor—just as the ascent and the summit are comprised within the same geographical territory as the landscape which opens at length to the traveller's gaze, so there must be some sort of relationship between the logical operation and

[1] J. Dewey, in *Studies in Logical Theory*, Chicago, 1903, p. 75; see also footnote, p. 76.
[2] ii. 279. [3] ii. 253. [4] i. 8. [5] i. 6.

what takes place in the object-matter[1]—unless the sceptical contention holds that, for aught we know, the process of thought may not mediate a valid knowledge of reality at all.

But, while the subjective processes of thought are more than merely formal, they are not to be regarded as constitutive of the valid world. In forming conceptions, in classification, in judgment and inference, we do not go through processes which take place in things.

'The world of valid truth does not' in Lotze's view of it 'undergo a series of contortions and evolutions, paralleling in any way the successive steps and missteps, the succession of tentative trials, withdrawals, and retracings, which mark the course of our own thinking.'[2]

The activity of the various logical processes is not of a constitutive but of a strictly intermediate and instrumental value. The winding path is only a means to the attainment of the prospect, and must be left behind; the scaffolding[3]—to cite another well-known illustration—is only a means to the construction of the building, and must be taken down to allow the full view of the result. In each case, however, it is a necessary and indispensable means. This illustrates Lotze's contention that, despite the subjectivity of the thinking process, its results may still be objectively valid. Although the principle of reality is not discoverable in the process, it may still be present in the product. How this may be Lotze is hard put to it to show; but that it is so, that subjectivity does not necessarily imply invalidity, is one of his 'most invincible convictions.'[4]

The difficulties that beset Lotze in his endeavour to interpose between the scepticism that could not admit the validity of thought for reality and the idealism that in making thought determine reality seemed to find an ultimate identity between them were largely due to the externalism of his representation of the relation between the thought-process and the thought-product; and one sympathizes with the plea of the 'genetic logic' that the activity and the content of thought should be viewed more historically, from the standpoint of their generating conditions in the movement and readjustment of experience. 'It is no mere accident of language that "building" has a double sense—meaning at once the process and the finished product.'[5] The product of thought is simply the process carried on to its completion. There can be no possible divorce or separation between the formal and the material in thought. In the activity of thought we are not cast loose from dependence upon material conditions and circumstances. It is only when thinking is improperly regarded as a merely formal activity, having validity or meaning in abstraction from the actual content of experience, that the general problem arises of the validity of the thinking process.

4. **The product of thought.**—What now of the validity of the ideas which result from the reflective process, after the work of thought has been done upon them, and they have been harmonized and made coherent with the rest of experience? That it is a real validity we do not doubt, though Lotze's test of it—namely, sameness of presentation for all consciousness—remains unconvincing. But is it a real validity in more than a logical sense? Is it ontologically or metaphysically real? It must be freely admitted that on Lotzean principles the final product of thought belongs still to the sphere of ideas and falls short of the reality of existence. If the reality of existence is not found in the logical forms of the concept, judgment, or inference, no more is it to be found in the logical thoughts themselves.

Lotze's failure to bridge the gulf between the world of organized ideas and the reality of existence, so that 'no shade that wanders in that realm which is valid without existing, can take upon itself the body of actuality, and be,'[1] may be chiefly traced again to the externalism involved in his initial assumptions. For, in discovering the sole material for thought in the inner world of ideas, he makes a separation in the very beginning between thought and real existence. Thus it is the externalistic relation, not of the process of thought to the product, but of the datum of thought to reality, that is now in question. On Lotzean principles the realm of thought is, as it were, an inviolate continent that reality cannot invade, only surging and breaking upon its coast. Or, rather, reality is the inviolate continent, and thought is the surging sea. Accordingly, in the end thought must still be confined in its operations to the inner world of ideas, and the ideal remain separated from the real—although, as already noticed, Lotze himself clung resolutely, even in face of the principles of his logic, to his belief in the ontological reference in the subjective idea. But it is left to other faculties than thought—to perception, experience, intuition, feeling—to be the means of enabling the mind to establish contact with reality and attain objective truth.

From the 'genetic' standpoint in logic it is maintained that this twofold objective reference, in the beginning and the end of the work of reflexion, should be interpreted historically, 'as indicating a particular place of generation and a particular place of fulfilment in the drama of evolving experience.'[2] Again, from a standpoint of metaphysical idealism according to which the relation between thought and reality is organically conceived it is maintained that reality must be present in the beginning of the thinking process if it is to be reached at the end, and must co-operate with the activities of thought in the production of results.[3]

5. **Origin and validity.**—(*a*) *Introductory.*—A consideration of the question of origin and validity should throw further light upon the notion of validity. From the revolutionary standpoint of pragmatism it may be a 'musty old antithesis'[4] that is here involved, but the distinction between origin and validity is generally regarded as one of real importance in philosophy, and as worthy of fresh discussion in the light of the new emphasis upon development or evolutionary growth.[5] In the thought of D. G. Ritchie it was a distinction of cardinal significance, and it received a many-sided application at his hands.[6] R. R. Marett[7] offers a statement of the distinction in application to ethical theory. But his statement may readily be generalized; when generalized, it might run thus: origin represents the point of view from which judgments are explained by reference to their historical development, validity is the point of view from which they are explained by reference to their present worth and significance. There appears to be fairly general agreement among recent writers that, while the difference between the two points of view is not to be glossed over, there is a danger of falsifying judgments in abstracting from conditions of origin and development.

[7] In *Personal Idealism*, ed. H. Sturt, London, 1902, p. 224.

(*b*) *In logic.*—First consider the distinction between origin and validity as applied to logic, taking logic as designative of the whole philosophical discipline which has to do with the question of validity in knowledge. Here the problem of origin and validity is that of the relation between psychology and logic in respect of the treatment of thought. A clear distinction between the two disciplines used to be drawn in this respect. Psychology, it was said, describes the conditions under which thought originates as a psychical process; logic views thought apart from such conditions and in reference to the standard of truth and reality. In other words, psychology was held to be a purely descriptive science, and logic purely normative or regulative. To psychology fall questions of genesis and history; to logic questions of authority, worth, value.

'Logic is not concerned with the manner in which the elements utilized by thought come into existence, but with their value, when they have somehow or other come into existence, for the carrying out of intellectual operations.'[1]

But in the recent logical movement there is a strong tendency to supersede or dispose of this antithesis between origin and validity, or, as it is expressed less epistemologically, origin and value. It is said that judgment, with conception and inference, depends for its significance, for the measure of its validity, upon the stage of organization in which it begins; and, accordingly, the appraisement of the claim to validity should not be made in abstraction from the actual conditions and circumstances of origination.[2] Psychology should enter into logical evaluation.

None the less 'philosophical logic' abides by its essential position. While acknowledging the importance of genetic and historical considerations, it still affirms with Lotze that psychological analysis fails to reveal the complete significance of the operations of thought. The problem of validity or worth transcends the natural history of mental products. Indeed, as B. Bosanquet puts it, natural selection is not at all interested in natural history. 'It is being equal to the whole situation' (*i.e.* to the situation not of yesterday but of to-day) 'that is the criterion for logic as for morals.'[3]

(*c*) *In ethics and politics.*—From the above it would appear that in logic there is no irreconcilable difference between the 'genetic' and the 'philosophical' theorists, between the standpoints of origin and of validity; and one is prepared for a similar conclusion in ethics and politics. The tendency to dispose of the distinction between origin and validity certainly here exists, and again reflects the recent emphasis upon the genetic and historical. But, if the study of ethics and politics means only 'translating the present into terms of the past,'[4] then we need not be astonished at the prevalence in our time of ethical and political scepticism. To trace the ancient pedigree of an idea or institution is not, however, to explain it fully or really, much less to explain it away, and empty it of all ideal meaning. The line of ethical development, *e.g.*, may be traced from the lowest stage of customary morality to the recognition of the inherent goodness of the moral life,[5] without thereby necessarily affecting the question of the validity of the moral judgment. A pernicious custom or fantastic belief may be the antecedent and the partial cause of a moral rule now rightly regarded as binding. Sociological fact spells in philosophy neither validity nor invalidity.[1] On the other hand, it may be contended from the side of philosophy that but for the immanence of the ideal in the historical process there would be no ethical and political, *i.e.* no sociological development at all. The evolution of society is only properly interpreted in teleological as distinguished from mechanical terms—in terms of the *vis a fronte* rather than the *vis a tergo*. Validity is to be put before origin, intuition before evolution. But, while this is said, we are not compelled to recognize with the intuitionist or formalist in ethics, or with the 'natural rights' theorist in politics, the existence of any *a priori* norm independent of the life of society. To recognize such a norm or standard would indeed reduce to confusion the notion of moral or political personality. The categorical imperatives of intuitionism in ethics and of the theory of 'natural rights' in politics are not immediate self-evident data, but possess the mediate validity attaching to moral and political ideals which must be shown to be constitutive of ideal society.[2]

(*d*) *In religion.*—The distinction between origin and validity should be maintained also in religion, if at the same time the effort should be made, as in logic, ethics, and politics, to reconcile the two standpoints. Recent study in the history and psychology of religion has accentuated the tendency to neglect or confuse the distinction between the origin and the validity of religious ideas. Religion is traced in its historical development from its beginnings in the animism or spiritism of tribal religion,[3] through the polytheism of national religion, to the monotheism of universal or spiritual religion; and it is sometimes thought that the history of the evolution of religious belief is its sufficient explanation. Or, again, religion is investigated in its psychological origin and stated in terms of human need, emotional, cognitive, practical; and, again, it is sometimes thought that the psychological genesis of the religious experience is its sufficient explanation. But the question of validity is not superseded by the historical and psychological methods of study. Religion no more than morals or logic is to be handed over to the historian or the psychologist. Their explanations are provisional, their interpretations but working hypotheses. The last word on religion is not with the historian or psychologist as such, but with the metaphysical philosopher. And, even if the metaphysician can find no place for religion within the system of his thought, it does not follow that the idea of God is false and the religious consciousness an illusion.

If we are truly to interpret the historical religious development of mankind, must we not again postulate—as in the history of morals—the immanence and directing activity of the ideal? And, if we are truly to interpret the nature of religious experience, must we not postulate a reality corresponding to the object of faith? At every stage of religious culture the object of faith and worship is claimed to be trans-subjectively real. Inasmuch, however, as the reality of religion transcends the mundane order of experience, this ontological claim is incapable of scientific proof. But the cognitive element implied in religious faith should not on that account be ignored or its claim disallowed. Apart indeed from belief in the validity of the objective reference of religion the values of the religious experience can hardly

[3] For a pre-animistic or non-animistic theory of the origin of religion see R. R. Marett, *The Threshold of Religion*, London, 1909.

be maintained. 'Faith divorced from reality, like the flower severed from its roots in the earth, is doomed to wither and die.'[1]

Where the objective reference of religious faith is held to be a reality and no illusion, it must still be allowed to the standpoint of origin that it is impossible to make a rigid separation between psychological fact and logical meaning. Just as in secular and scientific knowledge a judgment having the appearance of immediate certainty is often found to involve subjective experience, so a palpable element of subjectivity enters often into the judgments of religion. *E.g.*, when the mystical visions of the mediæval saint shape themselves into direct and immediate revelations of the transcendent mysteries of Catholic dogma, we can hardly fail to detect the influence of the subjective or psychological factor in experience, especially if we have followed the course of the dogmatic development in Christendom.[2] A parallel might be cited in the claims of modern 'spiritualism,' whose communications from the dead — even granted that they have a real foundation—are sometimes quite obviously the product of a liberal Protestant eschatology.

Yet, when all allowance is made for subjectivity in religious experience, the consciousness of the Beyond—of the Beyond that is within—still remains, with the problem attaching to it of the validity of religious knowledge. While we have asserted that the ontological postulate implied in the religious consciousness is not scientifically verifiable, we do not thereby confess the invalidity or irrationality of the analogical mode of reasoning which religious philosophy has perforce to adopt in common with scientific theory, but of which it makes a more characteristic use. We must not here enter into a defence of the method of analogy in theistic argumentation, and in particular of the application to divine reality of the anthropomorphic ideas of personality, purpose, and value. It is a merit, to our mind, of the personalistic trend in recent philosophical thought that it finds the only possible clue to the interpretation of God and divine things in the analogy of human experience at its best and highest. But we may be permitted to observe that in the modern theistic use of the *analogia hominis*, which is reflective and critical, only a general agreement and correspondence, and not an identity, is affirmed between God and man in their personal aspects. Nor does it follow from the vindication of the analogical method in religious philosophy that any particular analogy is ultimately valid. Beyond the general logical or epistemological question, Is the method of analogy capable of conveying religious truth?, lies the ontological inquiry, Does the method of analogy actually convey it in such and such a case? Thus here, as in connexion with the process of thought in general, the problem of validity passes into the wider problem of truth.[3]

VALLABHA, VALLABHĀCHĀRYA.—

The strength of Hinduism lies in its manysidedness, its power of adapting itself to the various tendencies of human nature, both the good and the evil. Of this we have a conspicuous illustration in the numerous sects that arose in the course of the development of the Vaiṣṇava form of this religion.[1] Already in Śaivism (*q.v.*) the same desire to appeal to different sides of human nature had been manifested in the various aspects in which the character of the god Śiva had been presented—as the impersonation of the dissolving processes of nature as well as of its eternal reproductive power, as the typical ascetic and as the learned sage. But this variety in the characters ascribed to the god does not appear to have resulted in a corresponding variety of sects of the type that is seen in Vaiṣṇavism (*q.v.*). In Vaiṣṇavism, with its worship of a god who was believed to have manifested his sympathy with the world's suffering by frequent descents upon the earth (*avatār*), the masses of the people found the elements of a religion that seemed to bring God near to their faith and love. The personal element in religious life began to have fuller play, and with this the tendency to split into subdivisions or sects speedily revealed itself. Notwithstanding its rigid conservatism in religion regarded as a social institution, the Hindu mind has always shown a marvellous receptivity of new doctrine, provided the new teacher fulfils the Hindu idea of a religious leader and does not place himself in antagonism to the social system with which Hindu life is bound up. Of this type were Rāmānuja (*q.v.*) and Madhva (*q.v.*) of S. India, and the founders of the two earliest sects of Vaiṣṇavism, Vallabha in Upper and Western India, and Chaitanya (*q.v.*) in Bengal. The teaching of the former two was based on distinctive philosophic views as to the ultimate problem of the relation of the Supreme Spirit to the human spirit and to the material world; the latter two, while also holding their own distinctive doctrines in regard to the philosophical question, made devotion to Kṛṣṇa and his worship the real centre of their systems. The sects founded by these four teachers are the principal sects of Vaiṣṇavism. In addition to these many other minor sects came into existence such as the Rāmānandīs (*q.v.*), or Rāmāwats. Among the Vaiṣṇava sects are also included reforming movements such as that of Svāmī Nārāyaṇa, whose teaching was a protest against the revolting immoralities of the Vallabhāchāryans, while the theistic Kabīrpanthīs (*q.v.*) and the Sikh sect founded by Nānak (*q.v.*) find a place in the same list.

1. **Life of Vallabha.**—The Vallabhāchārya sect owes its foundation to Vallabha, who, together with his direct descendants who succeeded him in the headship of the community, was regarded as an incarnation of Kṛṣna or as embodying a portion of Kṛṣna's essence. The story of Vallabha's birth has come to us with many legendary accretions intended to enhance his authority as a religious teacher and to increase the reverence of his followers.

Vallabha was born about A.D. 1479. He was the second son of a Tailinga Brāhman named Lakṣmaṇa Bhaṭṭ, who along with his wife fled from Benares, where a violent dispute had taken

[1] See art SECTS (Hindu).

place between Muhammadans and Sannyāsīs. They found themselves in a wild spot called Champāraṇya, and here the child was born. The legend narrates how a palace of gold sprang up on the lonely spot where the child was born, how the gods showered down flowers, and how divine music filled the air. The parents, trusting in the promise of Kṛṣṇa that their child should be one of his incarnations, left their infant to the protection of the god. On their return journey, after peace had been restored at Benares, they again passed through the place where they had deserted the helpless infant. They found the child alive and well, playing in the midst of a flame of sacrificial fire. They brought him to Benares and gave him the name of Vallabha. When the child reached the age of six or seven, he was placed under the tuition of Nārāyaṇa Bhaṭṭ. The legend, which is written in Brjbhāṣā, goes on to describe the rapidity of his apprehension, which enabled him in the course of four months to master the four *Vedas*, the six *Śāstras* (schools of philosophy), and the eighteen *Purāṇas*. At the age of eleven he lost his father, and, bidding farewell to Gokul, a village on the left bank of the Jumnā, he started on a pilgrimage through India. At a certain town in the south of India he made a rich merchant of the place, named Damodardās, a convert to his doctrine. These two travelled thence to Vijayanagar, where the ancestors of Vallabha on his mother's side lived. At the court of Kṛṣṇa Dēva, the king of the place, Vallabha engaged in a religious disputation with the Śaivas. The king was so pleased that he bestowed on Vallabha rich presents of gold and silver, one portion of which he devoted to the manufacture of a handsome golden waist ornament for the image of the deity in a temple in the city, another to the discharge of debts incurred by his father, retaining only a fourth for his own use.

His success in disputation led to his being elected by the Vaiṣṇavas as their chief with the title of *ācharya*. From this dates the rise of his great influence. He continued his pilgrimage for nine years throughout different parts of India, accomplishing a journey of over 12,000 miles. Returning to Brindāban, he is said to have been honoured by a visit from the god Kṛṣṇa in person, who enjoined him to introduce the worship of Bāla Kṛṣṇa, the infant Kṛṣṇa, Kṛṣṇa in his adolescence, which subsequently became widely diffused under the name of Rudra Sāmpradaya.

Vallabhāchārya ultimately settled at Benares. Among the works which he produced there during this residence or during earlier visits to the city was a commentary on the *Bhāgavata-Purāṇa*. During his lifetime Vallabhāchārya is said to have made 84 devoted proselytes to his doctrine.

2. The Mahārājā Gosāinji. — Vallabhāchārya was succeeded in his *gādī*, *i.e.* his position as *ācharya*, by his son Viṭhalnāth, his eldest son having died soon after his father. This Viṭhalnāth, the second *guru* of the sect, proved an able successor. Like his father, he made long journeys, visiting the same places and in addition extending his travels to Dvārka, through Cutch, and to Mālva and Mevār. Turning southwards, he came to Paṇḍharpur, the seat of the worship of Viṭhoba among the Marāṭhās of the Deccan. He is said to have made 252 disciples. His proselytes came from many classes — Banias, Bhāṭṭias, Kunbīs, Sutārs, Lohārs; a few Brāhmans and Musalmāns were also among his adherents. All, though of various castes, enjoyed the privilege of eating together at the same table—a privilege that was soon rescinded.

Viṭhalnāth, who was known by the name Gosāinji, took up his residence at Gokul, the birthplace of Kṛṣṇa, and was frequently designated Gokul Gosāinji, a name adopted by his male descendants. After his death each of his seven sons established his own *gādi*. They dispersed themselves throughout India in order to diffuse their doctrines. Each claimed to be an incarnation of Kṛṣṇa and made numerous proselytes.

The fourth son, Gokalnāth, was the most celebrated of these propagators of the new doctrine. He infused vitality into the tenets of the community both by his teaching and by his writings, and his descendants have always claimed pre-eminence among the members of the sect. They keep themselves separate from the other communities, while these profess equal veneration for all. It was probably about this period of the dispersion of the sons of Viṭhalnāth that those religious heads first acquired the title of Mahārājā or Mahārājā Gosāinji. The descendants of these Mahārājās now number probably over 70, of whom about ten have their seats in Bombay and one or two at each of the following places: Surat, Ahmadabad, Nagar, Cutch, Porabandar, Amreli, Jodpur, Bundi, Koti. Only two or three of them have any knowledge of Sanskrit; the rest are grossly ignorant and indulge in the worst forms of luxurious living. They endeavour to live up to the title which has been given them in respect of costly apparel and dainty viands. They aspire to the acquisition of wealth and property, and, as their votaries are drawn very largely from the wealthier and more luxurious communities and are for the most part very scrupulous in the observance of religious custom, and as the Mahārājās, on the other hand, are not modest in their exactions, the opportunities of the latter for fulfilling their worldly ambitions are ample. At their various seats they possess temples with residences attached. There they celebrate daily their special worship in the presence of crowds of followers, men and women, and indulge in those licentious practices which have won for them, especially in later times, a shameful notoriety.

The process by which this development was reached is profoundly instructive to the student of Indian religion and is in strict analogy with the history of many other religious and spiritual movements.

3. Hedonistic tenets. — The Vallabhāchāryans have often been called the Epicureans of India, and the history of their cult can be traced through stages similar to those which marked the development of Epicurean morals. Epicurus started from a particular view of the constitution of the world. On it he based his conception of the *summum bonum* as *ἀταραξία*, freedom from anxiety and mental disturbance, but having no explicit association with grossness and sensuality of life. In the hands of his successors these features soon revealed themselves in the coarsest type of hedonism—a result which might have been anticipated from the hedonistic root of the founder's teaching. As of Epicurus, so of Vallabha it may be said that there is no reason to believe that he held the doctrine or sanctioned the practice which by a natural process evolved themselves in the teaching of his successors. His life was not unlike those of the other founders of religious sects in his time. His personal activity was that of a teacher of religion. He made long pilgrimages and gathered, through the influence acquired by his life and teaching, devoted disciples. But his teaching contained the hedonistic root from which all subsequent evils were to spring. He too started from a specific conception of the relation of the Supreme Spirit to the finite spirit. His philosophical tenets have been traced back to the teaching of Viṣṇu Svāmī, a commentator on the texts of the *Veda*; Vallabha taught that individual human spirits were like sparks from the Supreme Spirit and, though separate, identical in essence with it.

On this he based his view that asceticism was not the way by which man should commend himself to God. He maintained that God was not to be worshipped by fasting and self-mortification, that the individual soul was entitled to reverence as a portion of the Supreme Soul, and that the body which enshrined it should be fostered and not subjected to the austerities enjoined in ascetic systems. The 'way' which he advocated was summed up in the name *pushṭi-mārga*, the way of eating, drinking, and enjoyment.

It has been already indicated that the Vallabhāchārya cult attached itself to Kṛṣṇa, *avatār* of Viṣṇu, and especially to Kṛṣṇa in his adolescence, Bāla Kṛṣṇa, whose amorous sports with the *gopīs*, or cowherdesses, of Mathurā, the modern Mattrā, are the theme of the tenth book of the *Bhāgavata-Purāṇa*. This book was translated from Sanskrit

into Brjbhāṣā under the name of *Premsāgar* ('Ocean of Love'). It was selected by Vallabhāchārya as the foundation of his system. The original purpose of the book was, it is held, to symbolize spiritual devotion under the figure of earthly love; but in its interpretation by succeeding Mahārājās of the sect it was converted into a code of vicious immorality, not only sanctioning, but enjoining, the most hideous sensuality.

4. Cult of the guru.—The *Siddhānta Rahasya*, ascribed to Vallabhāchārya and claimed by him as a direct revelation from God, deals with themes of a different order. It contains the doctrine of the origin of sin and the mode of its expiation. It consists of only about a dozen lines in Sanskrit, in the course of which we find a characteristic suggestion as to the supreme importance of the *guru*, the Gosāinji, the mediator between God and the sinner:

'The offering which has (in the first instance) been enjoyed by its owner is not acceptable by the god of gods. Therefore, in the first instance, in all doings everything should be dedicated.'[1]

The dedication in the first instance, here referred to, is that which takes place when the offering is made to the *guru*, through whom it reaches Kṛṣṇa, of whom he is the manifestation. Of the terrible use made of this doctrine evidence is given below. Another writer of this school is even more explicit in his assertion of the lofty claims of the Gosāinji:

'Whoever holds his *guru* and Śrī Thākurji [the god] to be different and distinct shall be born a *sichāna* [a kind of bird]. Whoever disobeys the orders of his *guru* shall go to Asipatra and other dreadful hells and lose all religious merits.'[2]

Śri Gokalnāth, that fourth son of Viṭhalnāth above referred to, in his *Vachanāmṛt* ('Nectar of Precept'), in his exposition of the *pushṭi-mārga*, dwells with even more precision on the fate of those who disobey their preceptors:

'He who getting angry in his heart maligns his *guru* and utters harsh terms towards his *guru* becomes dumb, and after that he becomes a serpent. He is then born a creature of the region of the vegetable kingdom, and after that he is born a creature of the region of the dead. As he remembers Śri Bhagavān [god], in the same way he remembers and repeats in his mind the name of his *guru*.'[3]

Another of the books of the sect runs riot in its laudation of Śri Gosāinji or Viṭhalnāth, the second in this dynasty of *gurus*.

'He is possessed of all virtues; he is the very personification of the most excellent being [God]; he is all incarnations. He is himself the creator of the endless crores of worlds wherein his glory is diffused all over.'[4]

In the *Gurusevā*, another production in the same line, it is said:

'When Hari [God] is displeased with any one, the *guru* saves him [the sinner] from the effects of the god's displeasure. Therefore a Vaiṣṇava should serve his *guru* with his body and money. The principal *gurus* are Śri Āchāryaji and Śri Gosāinji and the whole family called the Vallabha family. The worship of the *guru* is to be performed in the same way as the worship of God.'[5]

This high claim made on behalf of the *guru* is not confined to this one sect. The attitude of many Hindus towards their chosen *gurus* is often marked by a similar reverence; the peculiarity of the claim made on behalf of these Vallabhāchārya *gurus* is that it is put forth on behalf of a family line, a kind of religious dynasty, not of a *guru* chosen in each case by the devotee, but of one who is set over him in virtue of the right of birth and natural succession. This is quite in keeping with the title borne by these Mahārājās and the worldly ambitions with which it was associated. It may also be said to be the root of all the degeneracy and moral corruption that have made their name and the name of their sect so notorious.

5. Initiation rites.—In all Vaiṣṇava sects there is a special ceremony of initiation into the community accompanied by the repetition of a formula expressing reverence for either Kṛṣṇa or Rāma. In the Vallabhāchāryan sect this rite may be administered at the early age of three or four years. In some parts of India it is performed at a somewhat later age. A rosary or necklace, called *kaṇṭhi*, of 108 beads made of *tulsi*-wood is passed round the neck of the candidate for initiation, and he is taught the use of the eight-syllabled prayer: '*Śri Kṛshṇaḥ śaraṇam mama*,' 'The blessed Kṛṣṇa is my refuge.'[1]

There is a second initiation called *samarpaṇa*, or dedication, which, in the case of males, takes place in the eleventh or twelfth year, and, in the case of females, upon marriage or shortly before it. This rite is also called *Brahmasambandha* ('union with Brahma'). The formula repeated on this occasion begins with the eight-syllabled formula of the first initiation and continues thus:

'I who am suffering the infinite pain and torment produced by enduring for a thousand measured years separation from Kṛṣṇa do to the worshipped Kṛṣṇa dedicate my body, organs of sense, life, heart and other faculties, and wife, house, family, property with my own self; I am thy slave, O Kṛṣṇa.'

There is nothing in this formula that goes much beyond the expressions of devotion that one meets with in other forms of Hindu worship. In form it does not go beyond the '*tan, man*, and *dhan*' that enters so constantly into the expression of Hindu devotion. But the sense in which this dedication was enjoined and accepted by the Vallabhāchāryas is made clear in a commentary on Vallabha's *Siddhānta Rahasya*. The commentator, who was no other than the celebrated Gokalnāth, the grandson of Vallabha, the famous fourth son of the second *guru*, Viṭhalnath, thus expounds the formula:

'Therefore in the beginning, even before ourselves enjoying, wives, sons, etc. [*putrādi* includes daughters along with sons] should be made over because of the expression *sarva vastu* ['all things'] occurring in the text. After marriage, even before using her ourselves, the offering of her [the wife] should be made with a view to her becoming usable [by ourselves].'

6. Sensual practices.—In this conception we have the *fons et origo* of the gross sensuality that is bound up with the religious practices of this sect. The amorous deeds of the adolescent Kṛṣṇa, who is the object of its worship, were understood in their literal carnal sense, and union with Kṛṣṇa was sought through carnal union with the *guru*, or religious head, who claimed to be the incarnation of the god, through whom alone the god was accessible to the worshipper. It is only when one realizes the hold which this interpretation of the above-quoted formula of initiation took of the blind votaries of these *gurus* that one can conceive the possibility of the debauchery that has so long disgraced the religious exercises of this community, through so many generations. The husband who regards with complacence the desecration of the virtue of his wife, the father who consents to the violation of his daughter by these debauched pretenders to religious sanctity, is obsessed with the monstrous delusion that spiritual gain can come to him and his through the sensual indulgence of his spiritual guide. The male worshipper is himself eager to submit to any degradation that appears to do reverence to these high-priests of defilement. He drinks with avidity the water that has been wrung out of the wet garments of this filthy being, eats with relish the remnants of his meals, chews over again the *pān supāri* (leaf with betel-nut) which has been spat out of the mouth of this divine *guru*.

[1] Monier-Williams, *Brāhmanism and Hindūism*[4], p. 135 f.

The immorality of the temple-worship quickly spread itself into the whole life of the community. The *rās mandalī* (carnal love-meeting) became a well-known institution in many places. The purpose of these gatherings was to re-enact the scenes of the mythological story of Kṛṣṇa's amorous sporting with the *gopīs* by the waters and in the woods of Mathurā.

Doctrines and practices such as have been described were bound to call forth, sooner or later, protests from within the community itself. With the spread of education and other enlightening influences some of the better spirits awoke to shame and indignation. One of these was Karsandas Mulji, a resident of Bombay, who in 1856 raised his voice and in the columns of the *Satya Prakāsh* ('The Light of Truth'), a weekly paper, began to fulminate against the exactions and corrupt practices of the Vallabhāchāryan Mahārājās. The Mahārājās had at that time suffered a few set-backs to their pretensions. These furnished an opportunity to the dissatisfied in the community. The Mahārājās had begun an attack on the Brāhmans, of whose influence with the people they appear to have become jealous. Those of their own community who were eager to see abuses among themselves corrected undertook to assist the Mahārājās in their conflict with the Brāhmans on condition that they would reform their own practices. The Mahārājās, yielding to this pressure, agreed to accept the proposed reforms, which, among other things, demanded the cessation of the adulterous behaviour of the Mahārājās towards the women of their families, especially in the winter temple-service at four o'clock in the morning, and of the violation of the young girls of the community. The reformers aimed also at relief from the heavy money exactions which the Mahārājās knew so well how to levy by means of threats of their displeasure. To these and to some other demands of a minor character the alarmed Mahārājās gave an unwilling consent, stipulating that the agreement should not come into operation for a year. Further, the Mahārājās had been worsted in their attempt to secure exemption from appearance in courts of justice, their objection to appear in person being due to the idea that it would be a degradation to them to sit lower than a European. The High Court of Bombay refused to entertain their claim. When, during an action, a litigant proposed to subpœna the Mahārājās as witnesses, they closed their temples, and their followers, who could not take their meals without paying the morning adoration to the Mahārājās and the image, were kept without, fasting. These fasting followers were released from their unhappy plight only on their subscribing a bond which pledged them to obey the Mahārājās and to undertake in no circumstances to summon them to a court of justice. All this gave rise to a large amount of newspaper criticism, which tended to weaken the prestige of the Mahārājās.

In 1860 the Mahārājā of Surat came to Bombay and, by presiding at the distribution of prizes at the Gujarāti Girls' Schools, appeared to place himself on the side of social reform. Invited to a meeting at which the question of the remarriage of widows was to be discussed, the Mahārājā appeared among the opponents of the suggested reform and apparently got the worst of it in this public discussion. The editor of the *Satya Prakāsh* then challenged the Mahārājā to a discussion in the press. The Mahārājā ventilated his views through the columns of the *Svadharmavardhak* ('Promoter of our Religion'), a paper published under his patronage. The editor of the *Satya Prakāsh* replied in an article entitled 'The Primitive Religion of the Hindus and the Present Heterodox Opinions,' which set forth the heterodox character of the sect of the Mahārājās. In the course of this article he made certain allegations regarding the Mahārājās which became the subject of an action for libel. This article appeared in the year 1860. In the following May the Mahārājā filed an action for libel against the editor and the printer of the paper. The leading men of the Bhāṭṭia community, at the instigation of the Mahārājā, attempted to interfere with the course of justice by resolving that none of the caste, under pain of excommunication, should give evidence against the Mahārājā. This action on the part of the leaders of the community led to a charge being brought against them for conspiracy, on which they were found guilty and sentenced to heavy fines. The Mahārājā libel case came on for hearing on 26th Jan. 1862. This *cause célèbre* occupied the High Court during 24 sittings spread over a period of 40 days. Thirty witnesses were examined for the plaintiff and the same number for the defendant (Karsandas Mulji), some of the latter being men of learning and eminence in the community. The case excited the most profound interest among the different communities in the city. It led to a complete exposure of the lives and practices of the Vallabhāchāryan Mahārājās. The verdict was in favour of the defendant on the main issue of justification, with costs, and for the plaintiff on the defendant's plea of 'not guilty,' without costs. With respect to this part of the plea the Chief Justice took the view that a public writer could not make an attack on the character of an individual in his private capacity, although he might be depraved and an adulterer, and besides that the defendant was not justified, without previous knowledge of the plaintiff's misconduct, in publishing an attack on him, although the allegation subsequently turned out to be true. The Puisne Judge, on the other hand, held that the article was an attack not on the private character of the plaintiff, but on his character as a Mahārājā, or religious preceptor, and that the defendant was quite aware of the existing practices of the sect. The issue of the trial was a complete success for the defendant reformer, an important victory for the cause for which he stood, and a crushing exposure of licentiousness in the high places of religion.

Many who witnessed this trial more than fifty years ago must have hoped that the death-blow had been given to the prestige and to the licentious practices of the Vallabhāchāryan Mahārājās. But the astounding fact is that the Vallabhāchāryan Mahārājās still continue to flourish. About twenty years after the trial a Mahārājā of the sect was found guilty of complicity in a mail robbery and sentenced at Rajkot to a term of imprisonment. One might have expected that the entire Vallabhāchāryan community would have been shocked by this revelation of depravity in a religious leader. This aspect of the case seems to have affected them little. The sentence to imprisonment moved the community on other and quite different grounds. They were stricken with horror at the thought of the danger to the caste of their Mahārājā that was involved in his being condemned to eat the prison food. Leading merchants in Bombay organized a meeting at which it was resolved to petition the Government to relax the prison rules in favour of this sacred personage! Needless to say, their petition was unheeded. Probably in no other country than India would it have been possible for any system to survive such exposure.

This episode in the history of the Vallabhāchāryas has been narrated here for these reasons, that it led to the full disclosure of the real character of the teaching of this sect and of the width of the gulf which lies between morality and religion in the current conceptions of multitudes of the people of India, and that it also illustrates the powerlessness of public opinion, as it exists in India, to grapple with social customs that rest on religious sanctions having their roots deep down in the amorphous soil that is the product of ages of pantheistic thinking.

LITERATURE.—A clear statement of the place of the Vallabhāchāryans is contained in M. Monier-Williams, *Brāhmanism and Hindūism*[4], London, 1891. A very full history of the sect, with a detailed account of the Mahārājā libel case, will be found in a *Hist. of the Sect of Mahārājās or Vallabhāchāryas in W. India*, London, 1865. The chief authority of the sect is the *Bhāgavata-Purāṇa*, the tenth book of which, containing the history of Kṛṣṇa, was translated into Brjbhāṣā with the title *Premsāgar* ('Ocean of Love'). Among the books of the sect are the following: the *Bhagavat Tīkā Subodhini*, the *Siddhānta Rahasya*, both ascribed to Vallabha, the *Vachanāmṛt* ('Nectar of Precept'), ascribed to Śrī Gokalnāth (a kind of commentary on the *Pushti-mārga*), *Guruseva* ('Guru-Worship'), *Virchita Bhakti Siddhānta Vivṛti* (a commentary by Gokalnāth on the above *Siddhānta Rahasya*, the work of his grandfather), the *Pushti Pravāha Maryādā Tika* by Harārāya, the *Viṭhalesha-ratnavivarana*, and numerous minor tracts in Sanskrit ascribed to the chief founders of the sect.

D. MACKICHAN.

VALUE.—1. **The nature of value.**—Value is one of the last of the great philosophic topics to have received recognition, and even now the *Encyclopædia Britannica* has an article only on economic value. Its discovery was probably the greatest philosophic achievement of the 19th cent., but opinions on the subject are not yet crystallized, and it is still one of the growing points of philosophy and one which seems likely to overshadow older issues. Reflexion at present commonly starts from the antithesis of 'fact' and 'value,' and the difference between the standpoints of 'description' and 'appreciation.' It is widely held that consciousness of value differs in kind from consciousness of fact. It is posterior to the latter, and represents a reaction upon fact. It is an attitude assumed towards fact, a weighing of fact in relation to an agent, and his feelings, desires, interests, purposes, needs, and acts; and it expresses his appreciation (approbation) or reprobation (depreciation) of it in this relation. It follows (1) that a certain subjectivity, or, better, a relation to personality, is inherent in all values; (2) that values arise out of the mind's practical attitude, when it reacts upon stimulation, and that for a purely theoretic or contemplative view no values would exist; (3) that values are something superadded upon the other qualities of objects by the mind, in order to express their relation to its purpose and acts, and do not inhere in objects *per se*. Indeed they seem to be even more subjective, variable, and personal than the 'secondary' qualities of objects, and hence are often called 'tertiary' qualities. Nevertheless they are also objectified and projected into objects, when these are regarded as valuable objectively and *per se*, or when the 'validity' of actual valuations and of existing values is called in question. Hence 'superpersonal' or 'over-individual,' and even 'eternal' and 'absolute,' values are recognized by many philosophers. Moreover, the genesis of values and their relations to the objects of desire to which they refer, to the value-feelings which accompany them, and the *valuation-processes* and value-judgments by which they are reached, instigate to a number of psychological inquiries, while their validity raises the deepest questions of epistemology, metaphysics, and religion. All the questions raised, moreover, are complex and contentious, and have had a history which it is not easy to unravel.

2. **The history of the notion.**—Historically the importance of the problem of value has been recognized very slowly, gradually, and grudgingly, and, moreover, its philosophic history is obscure, no early philosophy having made it central, or even expressly considered it. In the light of subsequent developments, however, we may trace its emergence to the Platonic doctrine (in *Republic*, vi.) of the Idea of Good. When Plato conceived the Good as the culmination of the Ideal world and as the principle which was to unify, systematize, and organize all the other 'forms,' he was really putting 'value' above 'being,' conceiving it as the supreme principle of explanation, and expressing the same thought as Lotze, when he declared that the beginning of metaphysics lies in ethics. For he was proposing to view all being teleologically, and to make its relation to a 'good' or end (an ethical notion) essential to its being. This was to affirm not only the objective validity of the 'tertiary' qualities, but also their supremacy over the others. Plato, however, did not himself develop this line of reflexion, nor succeed in inducing philosophers in general to investigate the problem of values. To the more naturalistic they seemed all too human to be attributed to ultimate reality. Spinoza's wholesale repudiation of their objectivity, at the end of bk. i. of his *Ethic*, is typical in this respect. The modern developments of the subject proceed from Kant, who, however, came upon it rather incidentally at the end of his philosophic career, and apprehended its significance very imperfectly. Kant's philosophizing had ended in the theoretic *impasse* that certain vitally essential beliefs (in God, freedom, and immortality) could not be scientifically justified. Yet they had to be presupposed, he believed, for purposes of action; *i.e.*, to carry on life it was necessary to act *as if* they were true. He devised therefore the notion of a practical postulate, which was to be practically imperative without being theoretically cogent, attaching it to the Moral Law of unconditional obligation, and endowing it with objects of 'faith,' which were to be carefully distinguished from objects of knowledge. He thus established (1) a dualism between faith and knowledge which had obvious interest for theology, and (2) a supremacy of the practical over the theoretic reason, which was more fruitful, because less naive, than Plato's. The latter result tended to raise 'values' above 'facts,' though the former at first masked this consequence, and it took subsequent philosophy a long time to overcome the Kantian dualism. Both, however, were prolific of further developments, divergent from the main line of post-Kantian speculation, which was too intellectualistic to notice that, just as the existence of fact must be conditioned for us by our knowledge, so our knowledge must in turn be conditioned by our interests and the prospective value of the objects of our cognitive endeavours. For a long time the investigation of value was carried on only in Germany, and even there progress was slow. The first (probably) to see that here was a new problem was F. E. Beneke (1797–1854), the only empirical psychologist among the German philosophers of his time, and hence a victim of Hegel's intolerance. Already in his *Grundlegung zur Physik der Sitten* (1821) he sees that, if the science of morals is practical, the notion of value lies at the root of it. He lays it down that the value which we attribute to a thing is determined by the pleasure which it has excited in us, and he makes the whole of ethics depend on feelings of value. In his *Grundlinien des natürlichen Systems der praktischen Philosophie* (1837–40) he makes it more explicit that valuations arise in the mind as reactions upon stimulations and depressions produced by the things of the external world, distinguishes between subjective and objective valuation (*Wertgebung*), and traces the growth of 'dispositions' to value and to desire. R. H. Lotze (1817–81) revived the Platonic idea that good ranks above being, wanting metaphysic to show that what *ought* to be conditions what *is* (*Metaphysik* of 1841), and that 'Nature is directed to the accomplishment of Good,'[1] and interpreted the 'ontological' proof of the existence of God as meaning that the totality of value cannot be utterly divorced from existence. In the endeavour to vindicate value he had the sympathy of his theological colleague at Göttingen, Albrecht Ritschl (1822–89), who agrees with him that the facts of concrete experience are the source of our general notions, and not, as Platonism has always held, pale reflexions of the latter. Hence personal experience is not deducible from metaphysics, but *vice versa*.[2] Ritschl, however, started rather from the Kantian dualism of faith and knowledge and tried to differentiate them still further. Faith he equipped with distinct objects, those of religion—an independent method, which it shared with ethics and æsthetics—distinct from that of metaphysics and science, and formulated in value-judgments, differ-

[1] *Microcosmus*, Eng. tr., Edinburgh, 1894, i. 396.
[2] *Theologie und Metaphysik*, Bonn, 1881, pp. 32–40.

ent in kind from theoretical judgments, though equally capable of validity and certainty. It was therefore to misconstrue the essential meaning of religious affirmations to take them as expressions of theoretic insight rather than of moral trust. It is mainly to Ritschl that is due the current antithesis between value-judgments and judgments of fact, and the attempt to regard the sciences as different in kind according as they use the one or the other. Ritschl, however, recognized that this separation could not be really carried through. He observes:

'All continuous cognition of the things which excite sensation is not only accompanied but also guided by feeling' (pleasure-pain, as indicative of value for self, by way of enhancement or inhibition), and 'in so far as attention is necessary to attain the end of knowledge, will becomes the vehicle of the purpose of exact cognition; the proximate motive of will, however, is feeling, as expressing that a thing or an activity is worth desiring. . . . Value-judgments therefore are what determine all connected knowledge of the world, even when it is carried out in the most objective fashion. Attention during scientific observation . . . always declares that such knowledge has a value for him who exercises it.'[1]

This seems to render all theoretic judgments dependent on, and subordinate to, value-judgments; but Ritschl distinguishes between concomitant and independent value-judgments. In the sciences value-judgments accompany the theoretic, whereas 'independent value-judgments are all cognitions of moral ends or impediments thereto in so far as they excite moral pleasure or displeasure, or otherwise set the will in motion to appropriate goods or to ward off evils.' The religions also are composed of such independent value-judgments expressing man's attitude towards the world. From Ritschl's position it was easy to pass to that of W. Windelband (1848–1915), who, while sharply distinguishing between judgments and evaluations or judgments about judgments (*Beurteilungen*), emphasized that the latter are involved in every judgment in that it affirms or denies, approves or disapproves. Logic, therefore, becomes a science of values, a third normative science, along with ethics and æsthetics, and like them aims at the discovery of universally valid 'norms.' Philosophy becomes the critical study of the universally valid values; their recognition is its duty and its aim.[2] Windelband was followed by H. Rickert[3] and H. Münsterberg (1863–1916).[4] The Austrian schools of C. von Ehrenfels (1850–) and A. Meinong (1853–1920) devote themselves to the discussion of the objects and sorts of values, and their relation to desire and will, the laws of the valuation-process, and the accompanying feelings, and apply to all values the economic law of marginal utility. The rise of pessimism and the influence of Schopenhauer (1788–1860), by raising the question of the value of life as a whole, emphasized the importance of values. F. W. Nietzsche (1844–1900) effectively drew attention to the transformations of values, and set himself, before he went mad, to bring about a 'transvaluation' (*Umwertung*) of all the accepted values. Josiah Royce (1848–1917) acclimatized the distinction between appreciation and description in the English-speaking world with his *Spirit of Modern Philosophy* (1892), and since then there has been a good deal of (rather unsystematic) discussion of the problems of value, especially in America, though the intellectualistic bias of the dominant 'idealism' has been unfavourable to it. The pragmatists, however, were glad to recognize the presence of valuations in cognitive processes, as a proof of the fictitious nature of 'pure' thought and 'absolute' truth. They emphasize the human, purposive, and personal character of value, tend to regard all values as relative, primarily to the particular situation which is valued, and declare the existence and efficacy of values to be plain, empirical facts.

3. Sorts and criteria of value.—As the result of this historical development it is generally admitted that distinct species of value exist, though there is no agreement as to what they are. However, it is clear that several sciences have been specialized to study them. Thus (1) *economic* value has long been recognized as a fundamental notion of political economy, which, ever since Adam Smith, has divided it into value in use, *i.e.* the utility of objects for human purposes, or, as J. S. Mill said, their 'capacity to satisfy a desire or serve a purpose,' and value in exchange, *i.e.* their power to induce or compel people to pay (other valuables) for the use of them. The former is simply teleological value, which refers to the relation of means and end; the latter arises when an object is not only useful but also difficult to procure, and is the special concern of economics (*q.v.*).

(2) That *ethics* deals with values is also agreed, though there is much dispute as to what the specific ethical values are and how they are related.

(3) *Æsthetic* values are also beyond dispute.

(4) *Pleasure* must be regarded as a positive and *pain* (unpleasantness) as a negative value, since even the most ascetic do not really succeed in holding that pleasure is, or in denying that pain is, as such bad. The opposite doctrine, that all values are ultimately reducible to pleasure-pain, is commoner, but need not disturb the classification of values. For, even if the question whether objects are valuable because they give pleasure or give pleasure because they are desired (valued) were decided in favour of the former alternative, it would still be true that the other values are at least relatively independent. Consciousness of value does not directly imply consciousness of pleasure-pain, nor vary concomitantly with it; *e.g.*, in conscious wrongdoing an ethical value which is felt not as pleasant, but as painful, is nevertheless recognized. Similarly the æsthetic value of a work of art may be recognized, which is yet declared to give no pleasure and to leave the spectator 'cold.'

(5) It has been mentioned that, according to the school of Ritschl, the objects of the *religious* consciousness are really values, and affirmations about them are essentially value-judgments. And, though other theologians dissent from it, this view gets considerable support both from the psychology of religion, which interprets religious beliefs as expressions of spiritual needs, and from every theological admission that faith, as well as reason, is operative in the apprehension of religious truth.

(6) There are good reasons for recognizing the distinctiveness of *biological* or *survival*-values. For they are capable of objective scientific study, and cannot be simply represented, as Herbert Spencer thought, by the hedonic values. Pleasures are not always conducive to life, nor are all pains evil. The relations of survival to pleasure-pain are complex; so are its relations to the ethical values, as is vividly brought out by the ethics of pessimism. Moreover, the survival-values enter into all other values: the value of every being, belief, and institution is affected by its survival-value—between the limits of such a high degree of positive value as to compel universal assent and so high a negative value as to entail complete extinction and universal reprobation.

(7) Several schools of philosophy hold that logic is the science of *cognitive* values, and that truth is the positive, error the negative, value; and this

treatment is often implied also where it is not avowed. It would seem to be borne out by the far-reaching analogy between logic, ethics, and æsthetics as 'normative' sciences, and proved by the conformity of logic with the criteria generally used to distinguish values.

As criteria two primary oppositions appear to be used: (1) that between existence and value, the 'is' and the 'ought.' Even though there are in man natural tendencies to approve of what has succeeded in establishing itself, and to bring into being what is considered worthy of being—*i.e.* both to realize ideals and to idealize the actual—there remains a considerable discrepancy between the existent and the valuable. It cannot (ordinarily) be argued that, because a thing exists, it is valuable, or that, because it is valuable, it must exist. What is need not be what ought to be, nor need what ought to be exist. Hence the 'laws' of a science of values are not natural uniformities, but 'norms,' *i.e.* precepts or imperatives; they formulate not what actually does happen, but what ought to happen 'normally,' *i.e.* if the persons concerned recognize and submit to the order proper to the subject.

(2) Values appear to be positive and negative. As they express the attitude of a subject to an object, they indicate the acceptance or rejection, pursuit or avoidance, of the former, the attractiveness or repulsiveness of the latter. They occur therefore in couples of antithetical predicates, both admitting of degrees of intensity. Hence values may compensate, cancel, or neutralize each other, and the final value of an object may vary according to the balance between its positive and negative value, or become practically *nil*. A state of consciousness which is 'neutral,' and an object which is 'indifferent,' are cases of such zero values.

(3) All values are disputable. They involve a relation to a valuer whose valuation need not be correct, and need not be accepted. The allegation of a value, therefore, is not equivalent to its validity. All values are to be understood as primarily claims to value, which may be allowed, disallowed, or reversed, when other values are considered. In some cases such reversal is normal: thus, if *A* and *B* are enemies or have opposite interests, what is 'good' for *A* is normally 'bad' for *B*, and *vice versa*.

With the aid of these criteria the following kinds of value can now be enumerated. (1) *Hedonic* values are the pleasant (positive) and the unpleasant or painful (negative). (2) *Æsthetic* values are the beautiful (positive) and the ugly (negative); also the attractive-repulsive, the fitting-improper, the noble-vulgar, the elegant-coarse, and many others. (3) *Utility* values are the good (positive) and the bad (negative); also the useful-useless. These last, though they properly have reference to the relation of means and ends ('the good'), naturally pass over into ethics, when this science is conceived 'teleologically,' *i.e.* as the science of the final end or supreme good. (4) Other *ethical* values, relative to other conceptions of ethics, are marked by the oppositions of 'good' and 'evil,' 'right' and 'wrong,' 'ought' and 'ought not.' 'Good' and 'bad' seem sometimes to be used absolutely in ethics, but this usage hardly proves the existence of 'absolute' values. On closer inspection, the meaning is seen to be good or bad *for* the ethical end, however that is conceived. (5) *Religious* conceptions reveal their character as values by the frequency of such dualistic antitheses as God-devil, salvation-damnation, election-reprobation, holy-sinful, sacred-profane; also by the frequency with which religious arguments turn out to be postulates of faith. (6) *Logic* falls into line with the values 'true' and 'false,' 'truth' and 'error.' These also claim to be absolute; but whether what is believed true is so may be disputed, just as whether what is believed good, or right, or beautiful, or valuable, or conducive to survival actually has the value which it claims. Even what is felt as pleasant is not always conceded to be a 'true' pleasure, nor is every 'imaginary' pain said to be 'real.' This illustrates also a further confirmation of the whole doctrine, that the various value-predicates are freely transferable from one species of value to another.

4. Value and fact.—The recognition of logic as a science of values entails a radical revision of the antitheses between fact and value, existence and value, the 'theoretic' and the 'practical.' If all 'truths' are values, there can be no absolute separation of the practical, the sphere of values, from the theoretic, the sphere of facts. Facts, being the objects of truths, must all imply values, and it must be vain to search for any existence which is wholly free from valuations. Now this is precisely what history shows. (1) The search for 'true reality' in pure and unadulterated 'fact,' uncontaminated by any work of the mind, in an unconditional datum which has merely to be recognized, has always been vain. Only the moral to be drawn is not, as idealism supposes, that reality is the work of 'pure thought.' The thought which cannot be rooted out is a valuing thought, which is aiming at ends and selecting means, and accepting, rejecting, and variously manipulating the data presented to it in the whole process of 'recognizing' reality. Thus the absolute antithesis between fact and value collapses, because fact without value cannot be found. (2) The very fact that it is considered so desirable to find it proves that it is impossible to do so. For the importance attributed to the discovery of fact, and the eulogistic sense in which 'reality' is opposed to 'appearance' or 'illusion,' are, in fact, values. This comes out especially in doctrines about the 'degrees of reality,' which are plainly degrees of value, or about the distinction between 'reality' and 'existence.' (3) It is not psychologically possible to reach any 'fact,' except by a process permeated throughout by values, viz. a purposive endeavour to attain an end ('good') by a choice of the 'right' means, which implies selective attention, preferences for what seems valuable, and the influence of concomitant value-feelings and of a variety of prejudices and forms of bias. (4) Lastly, it seems a conclusive logical reason for holding that every 'fact' alleged must contain a latent value, that it claims not only to be 'true' but also implicitly to be better than any other judgment it was possible to make under the circumstances. Its maker was probably aware of this, and consciously preferred it to all alternatives that occurred to him; but, even where he did not think of any, they remain logically conceivable, and hence the actual judgment is only justifiable by its logical claim to be the best. Hence the value-relation and attitude can never be eradicated from even the merest and most stubborn 'fact.'

Nor, conversely, can a recognition of fact be wholly eliminated from knowledge. Pure value exists as little as pure fact. It would be pure fancy or sheer postulation, and neither fancies nor postulates are elaborated without regard to fact. They are made to be realized, and, when they are recognized as impossible, their value is destroyed or impaired. It is said to be 'no use' to postulate the impossible or to cherish utterly unrealizable ideals. This recognition of fact, however, is always relative to the existing state of knowledge, and may be modified as knowledge grows. Knowers are often conscious of this, and assume their facts for the purposes of an inquiry or a science, hypo-

thetically and experimentally. Hence it is not to be supposed that what is taken as fact, and formally is 'fact,' must remain so. It may turn out to be only a methodologically convenient 'fiction.' In general it may be concluded that, since values inhere in all the 'facts' that are recognized as such, they are themselves facts, and that the antithesis between values and facts cannot be made absolute. Values are not simply fortuitous and gratuitous additions to facts, which are merely subjective and should be eliminated by strict science, but are essential to cognitive process and compatible with any sort and degree of objectivity. Facts too are always reactions—upon prior facts—and are generated by their evaluation; and, moreover, these prior facts may have been merely hypothetical constructs recommended by their prospective value.

5. Value and existence.—It would seem to follow from the relations between value and fact that values cannot be denied existence in any world that can exist for man, and this in several senses. (1) They are operative in and on human minds, and find expression in human acts and embodiment in human institutions; (2) they can occur in, and relatively to, any universe of diction, however fanciful; (3) hence also in ideals and fictions, both of which are sometimes said to be incapable of real existence, and cited as objections to the connexion of values with existence. But both must be so related to real existence as to be applicable to it and to conduce to its successful manipulation. Otherwise they become false ideals and futile fictions. Also an ideal which is recognized as impossible appears to lose *pro tanto* its obligatoriness and power of attraction. 'Ultra posse nemo obligatur.'

Whether it is possible to infer the existence of a valuable object from a recognition of its value alone is a question of great importance for religion. For the objects of the religious consciousness appear to be largely or wholly of this kind, and the religious 'proofs' of their existence to be ultimately such inferences. They are, moreover, stubbornly persisted in, in spite of the protests of common sense against their validity, and have an important function also in the other sciences, in which they are not recognized so openly, but masquerade as 'axioms' and '*a priori* truths.' In discussing then in its generality this inference from value to existence, we should remember that all values are initially claims, which may fail of validation; hence it will hardly seem valid to rest the reality of the valuable objects on what may be an unsound claim, viz. on the demand for them alone, unsupported and unconfirmed by experience. Logically they are to start with nothing but postulates. It may be legitimate to take them as methodological principles, but even then they must be regarded as hypotheses to be assumed experimentally, until they have adequately approved and verified themselves by their applications to the actual problems which they concern. For example, it may be legitimate to extract from the actual pursuit of ends and of happiness by men the methodological assumptions that all things are to be regarded as tending towards a supreme all-embracing end and towards universal happiness; but can it be maintained that *therefore* such an end is actually operative, or that perfect happiness (*i.e.* everlasting and unalloyed pleasure unaccompanied by pain) is possible? To justify such inferences two further assumptions would seem to be required, viz. that the whole of reality is conformable with human nature and bound to satisfy its demands. Now these assumptions, traditionally described as the axiom of the ultimate rationality of existence, are evidently themselves nothing but values for which existence is postulated, and, if they are to be admitted as axiomatic truths on their own assurance, it is difficult to see what limits can be set to the postulation of objects of desire. Even as it is, methodological postulates are given great, and perhaps undue, facilities in verifying themselves, because, so long as they work at all, their failures can always be ascribed to the imperfection of our knowledge, and so are not counted against them. Thus nothing short of total failure to predict the course of events need lead us to abandon the postulate of their 'causal connexion.' Hence the testing of a value-postulate always, in a sense, presupposes its truth—though not in any sense that makes this presupposition alone a sufficient reason for regarding it as absolutely true; still it is better to get a postulated value confirmed by experience than to accept the mere recognition of value as an adequate guarantee of its existence. What kinds and amounts of experimental confirmation are to be considered adequate to verify the existence of postulated objects of value will naturally depend on the specific subject-matter, and, as in addition the various values sought and got need not be in harmony with each other, and some may prefer one sort and others another, and as, moreover, the relevance of some of the values found to the existences to be proved may be called in question, opinions will probably long continue to differ on these matters.

6. Value and validity. — It follows from the above that the transition from value to validity is by no means a matter of course, though this is often assumed, both as regards ethical and as regards logical values. In both cases the motive is the difficulty of validating value-claims, which is a long, and indeed theoretically an unending, process. Hence the temptation to allege absolute and self-proving values which are independent of their working in experience. The absolute values alleged, however, are only formal claims, as comes out very clearly in Kant's account of the absolute value of personality and of the 'law' of duty. The declaration that every person should be treated as an end in himself is merely a recognition of the formal claim that every person makes to be so treated (even though he never is so treated, and apparently could not be, in the actual order of things), which may serve as a definition of personality; while the moral 'law,' that duty should be unconditionally fulfilled, is merely a paraphrase of the obligatoriness of the ought-value; in neither case is any light thrown on the questions how, concretely, any one should be treated, or what, concretely, his 'duties' are. Similarly every judgment formally claims to be true, absolutely and unconditionally, and, as it mentions no restrictions to its claim, it may be said to be so; but, as this is so, however false a judgment may turn out to be, it establishes no presumption in favour of its real truth. Thus it is quite possible, and indeed necessary, to inquire whether the values claimed are really possessed, and to question the validity of the values actually recognized. This indeed is one of the chief occupations of a critical philosophy. It means that the problem of value occurs also in the sphere of values; the antithesis of 'ought' and 'is,' which was supposed to differentiate value and fact, arises again over the value of values, when they are taken as facts for the purpose of assessing their value. The explanation perhaps is that error and failure are possible in all human operations, and hence also in the estimation of values. The values which are claimed are subject to revision and correction, and, if it is decided that they are, but ought not to be, they can be called either 'false' or 'wrong'; for it is intrinsically as legitimate to use the value-

predicates of logic as those of ethics to describe their failure.

The difficulty of determining the precise connexion between value and validity is, however, largely due to the obscurity of the notion of validity itself. We are accustomed to regard validity at first as an absolute and (theoretically) unquestionable degree of value, and to illustrate it from the ideal validity of logic and of ethics. On examination, however, this sense of validity appears to be merely formal, and to be nugatory or null as a guarantee of real value. For in both these sciences the valid and the valuable fall apart. Neither is the valuable necessarily valid, nor is the valid necessarily valuable. Every moral order makes extensive use of inferior moral motives; every science uses probable but invalid reasonings. Whether the ideal validity is ever reached, or would be valuable if it were, seems more than doubtful. Hence it seems proper to reduce the meaning of validity to a high, or generally recognized and practically indisputable, degree of value, and to make value determine validity, and not validity value.

7. Value and valuation.—If value is conferred upon an object by a personal attitude towards it, it is clear that all objects can be valued by being included in a valuation-process. Many objects, however, are so variously valued according to circumstances, or are so rarely important enough to be valued at all, that they are conceived as neutral or indifferent *per se*. So it is only if an object is constantly valued in a particular way that its value adheres to it and it comes to seem intrinsically valuable. For it then emancipates itself from the personal valuation and makes its valuation look like a mere recognition of an already existing value. Values acquire objectivity in other ways also. Thus the personal reaction expressed in a value-judgment carries a formal claim to universality, since every one initially regards himself as the measure of all things, until he is instructed by the dissent of others. This claim therefore maintains itself only while it is not disputed, and should not be taken as more than methodological. By the comparison of value-judgments it appears that different persons value very differently; hence many value-judgments, being in dispute, are regarded as 'merely subjective.' About others many or all are found to agree, and these may thereby acquire every degree of 'objectivity.' Thus objects which have obtained social recognition as valuable come to rank as objective values. A value that has risen to be objective may then maintain itself without continuing to be valued, and even though, under the circumstances, its value may have been converted into the opposite. Thus, once a literary work is ranked as a 'classic,' its value remains uncontested, even though few care for it or even read it, except for examination purposes; and King Midas no doubt continued to think gold most valuable in spite of his inability to digest it. It cannot always be assumed therefore that, because a value is current and is recognized, it is fully functional, any more than that it is right.

There are then plenty of objective values, which any valuer encounters and has to recognize as given. But they may nevertheless all be conceived as products of valuation-processes, and as presupposing prior value-judgments. For when the valuation of an object has been repeated and has grown familiar, the conscious and reflective value-judgment becomes superfluous, and an immediate apprehension of value results, just as immediate perception supersedes judgment about familiar objects of cognition. In other cases, it is true, this process does not occur in the history of the individual, but it can then be traced in that of the race, whose achievements the individual inherits. An object may, *e.g.*, be apprehended as pleasant, beautiful, or right, without a judgment or process of valuation; but the immediacy of its value-claim is no bar to any inquiry into why it is so valued, how it has come to be so, and whether it ought to be so, and really is as beautiful, right, or pleasant as it seems to be. Hence the values which are psychically data, and psychologically immediate, may always be logically mediated and made objects of valuation-processes and explicit value-judgments. They then function as facts to be evaluated.

8. Transvaluations. — The process of reflective reconsideration of given values continually leads to changes in their status. Hence 'transvaluations' must be regarded as normal and entirely legitimate occurrences in every sphere of values, though they are not everywhere as socially prominent as in the annual changes of the fashions.

As Dewey says, 'All valuation is in some degree a revaluation. Nietzsche would probably not have made so much of a sensation, but he would have been within the limits of wisdom, if he confined himself to the assertion that all judgment, in the degree in which it is critically intelligent, is a transvaluation of prior values.'[1]

One sufficient reason for this is that, strictly speaking, it is not psychologically possible to repeat a valuation. The second time the valuation has lost its novelty, and the delight of discovery is gone; it is acquiring familiarity and beginning to breed contempt or indifference; or again it is growing easier, and the resistance to it is diminishing, as habituation renders it less repugnant. Moreover, valuations necessarily vary according to the changes in the organic needs which condition them. His tenth penny bun will neither taste as good nor be valued as highly by a hungry boy as his first. No doubt these changes in value are little noticed because many of them are slight, unimportant, and ephemeral; but they would anyhow be obscured by the general bias in favour of stability. Unless it is discounted, it will hardly be recognized that stable values are exceptions rather than the rule. They bulk large because they are attended to and selected. Their stability is always more or less a construction for methodological purposes, like the extraction of stable objects out of the flux of happenings. It is always to some extent a fiction, because it is never absolute, and because there are no eternal values, none that endure unchanged and untransformed by new valuations for ever, unless it be life itself —so long as that lasts. It may even become a dangerous illusion, if its character is not understood, and it is made an obstacle to salutary and necessary changes. In such changes the old values always condemn the new, and *vice versa*, often with tragic results. Transvaluations are the stuff out of which heroes and martyrs of 'reform' or 'loyalty' are made, at every step in human progress. The question of what is the right value is unanswerable for the time being, because it is precisely the question which is being fought out. But we can predict that such changes will always be opposed, for there is always a conservative and a progressive party with respect to any change. These party attitudes are essentially valuations, as any one can discover from himself, if he is open-minded, and also distracted, enough to have a 'cross-bench mind' and to feel the force of both the opposite contentions. Nor are these the only conflicts which may lead to a change of values. Every society, and nearly every soul, is full of conflicts between opposing valuations, and any variation in their relative strengths may entail a change in values. The chief agency which blinds

[1] *Essays in Experimental Logic*, London, 1916, p. 386.

us to these transvaluations is the stability of words; for these change their form much less rapidly than their meaning.

9. Conclusions.—The above survey of the problems of value may be regarded as confirming most of the preliminary points noticed in § 1. The philosophic importance of the subject has been attested by the great variety and universal prevalence of values. The provisional definition of value as essentially a personal attitude, as a recognition of the supremacy of the category of personality, has maintained itself and proved a clue to the labyrinth of values. It also renders somewhat nugatory the psychological debates of the schools of Meinong and von Ehrenfels as to whether values are rooted in feeling, will, or desire. For a personal attitude is a concern of the whole man and not of psychological abstractions. If, however, it is thought necessary to pick one among such psychological phrases, it is probably best to say that value is a personal attitude, of welcome or the reverse, towards an object of interest. For few are likely to dispute that 'interests' are relative to personality. This relativity, however, is not to be regarded as importing any objectionable subjectivity into values, just because it proves to be the source also of their objectivity. For it turns out that all objects are pervaded by values and constituted for man by valuations, and hence their avowed values may just as rightfully belong to them as the values latent in their other qualities. Accordingly the opposition between value and fact breaks down. 'Facts' are themselves values, values established in the endeavour to analyse out the factor of givenness contained in experience, and presupposing purposive manipulation of apparent 'facts.' They are thus 'made' things, though they are not made out of nothing, but out of previously recognized facts which are subjected to criticism to determine what they 'really are.' Values are also acts in so far as they presuppose valuations, purposive manipulations of data, and judgments; also in that they have prospective reference to action, and are intended to guide it. Accordingly, the belief that values belong to the practical side of life is well founded, and even truer than it seemed; for in ultimate analysis logic also is a science of values. Its 'theoretic' values presuppose purposes, selections, choices, and judgments which are acts, and do not differ in kind from those which are openly 'practical.' It is clear also that the notion of value as something gratuitously superadded upon fact must be modified, if it is interpreted as meaning that values are something unreal, artificial, and optional. Reality in its fullness contains and exhibits values, and they are ejected from it only by an effort of abstraction, which is relative to certain restricted purposes, and is never quite successful. Values therefore are not to be regarded as gratuitous additions to reality, made out of the superfluity of human perversity, but as its highest qualities and the culminating points of its significance for us.

LITERATURE.—The literature is extensive but scattered, and often raises the questions about value only incidentally and in connexion with other problems. The historical part of it has been mentioned above in § 2; the modern is still largely contained in periodicals, in English especially in the *Journal of Philosophy and Psychology* (from 1915), in discussions conducted between W. M. Urban (vol. xiii. [1916] nos. 17, 25, xiv. [1917] 12, 26, xv. [1918] 15), J. Dewey (xii. [1915] 19, xv. 10), H. W. Schneider (xiv. 6, 26), R. B. Perry (xiv. 7), D. W. Fisher (xiv. 21), F. C. S. Schiller (xii. 25, xv. 19), W. R. Wells (xv. 18), etc. In *Mind* artt. by S. Alexander (new ser., i. [1892] 31 ff.), J. S. Mackenzie (iv. [1895] 425 ff.), O. C. Quick (xix. [1910] 218 ff.), may be mentioned. From the German literature on 'axiology,' A. Meinong, *Psychologisch-ethische Untersuchungen zur Werttheorie*, Graz, 1894, *Ueber Annahmen*, Leipzig, 1902; C. von Ehrenfels, *System der Werttheorie*, 2 vols., do. 1897–98; J. C. Kreibig, *Psychologische Grundlegung eines Systems der Werttheorie*, Vienna, 1902; G. Simmel, *Einleitung in die Moralwissenschaft*, 2 vols., Berlin, 1892–93, and *Philosophie des Geldes*, Leipzig, 1900; H. Maier, *Psychologie des emotionalen Denkens*, Tübingen, 1908, must be mentioned. In English W. M. Urban, *Valuation its Nature and Laws*, London, 1909, is as yet the only work expressly and solely devoted to the theory of values, but the importance of the subject is being recognized in all quarters. Cf. B. Bosanquet's Gifford Lectures, *The Principle of Individuality and Value*, London, 1912, and *The Value and Destiny of the Individual*, do. 1913, for the absolutist attitude towards the subject; H. W. Stuart, in *Studies in Logical Theory*, by J. Dewey and others, Chicago, 1903, and in *Creative Intelligence*, New York, 1917; H. M. Kallen, 'Value and Existence in Philosophy, Art and Religion,' *ib.*; F. C. S. Schiller, *passim*, esp. in *Humanism*[2], London, 1912, chs. i., iii., and ix., for the pragmatist; also J. Ward, *Psychological Principles*, Cambridge, 1918, ch. xvi. § 2; and C. T. H. Walker, *The Construction of the World in Terms of Fact and Value*, Oxford, 1919.

F. C. S. SCHILLER.

VAMPIRE.—1. Introduction.—A vampire may be defined as (1) the spirit of a dead person, or (2) his corpse, re-animated by his own spirit or by a demon, returning to sap the life of the living, by depriving them of blood or of some essential organ, in order to augment its own vitality. This forms a particular aspect of the general belief that ghosts, or spirits sent by sorcerers, can annoy the living in various ways, or cause their sickness or death.[1] The vampire is often one who has died an untimely death, or whose after life is unhappy, or a dead sorcerer, wizard, or other obnoxious person. Blood being a well-known soul- or life-vehicle, it was supposed that ghosts (or vampires) were eager to obtain it, as is seen from the well-known example of the shades for whom Odysseus sacrificed sheep on his visit to Hades,[2] as well as from the custom of pouring blood upon graves. Tylor suggests that, when it was seen how certain persons grew thin and bloodless day after day, the easy explanation was that a nocturnal ghost or demon was sucking out their life.[3] Hence the vampire belief might originate. The superstition is also connected with the fear which is aroused by the dead, partly because they are often seeking or calling the living, and, in those aspects of it which concern the return of the revitalized corpse, it is an extension of what may have been a primitive conception, viz. that the dead have a life of their own in the grave, which was, in fact, often erected as a kind of house, more elaborate than the houses of the living. Many tales both from savage and from barbaric peoples show that the dead are still living in the tomb and can encounter any intruder upon it (as in Scandinavian belief), or come forth from it to talk and feast with the living or to cause them annoyance. It was also held that a malicious spirit might take possession of a corpse and vitalize it for sinister purposes. The boundary-line between life and death seems to have been but vaguely defined. To prevent the return of the dead, whether bodily or as a ghost, many precautions were in use—*e.g.*, enclosing the grave with a high fence, piling heavy stones upon it, diverting the course of a stream in order to bury in its bed and then permitting it to flow as before, binding the corpse securely (though this was done for other reasons also) or mutilating it.[4]

2. Range and examples of the vampire superstition.—While the most gruesome examples of this superstition (the vampire as a revitalized corpse) are to be met with among the Slavic peoples, in modern Greece, and in China, it is found in many other parts of the world and has been entertained in remote ages. It is not easily separated from

[4] Numerous examples are given by J. G. Frazer, 'On Certain Burial Customs as illustrative of the Primitive Theory of the Soul,' *JAI* xv. [1886] 65; and in artt. DEATH AND DISPOSAL OF THE DEAD (Introductory), § XI., INDONESIANS, § 12; J. Déchelette, *Manuel d'archéologie*, Paris, 1908–10, i. 471; H. F. Osborn, *Men of the Old Stone Age*[2], London, 1916, p. 271.

other beliefs of a like kind. Not only the dead, whether in bodily or in ghostly form, prey upon the living, but demons also, who sometimes have originated from ghosts, suck the blood of the living or feed on corpses.

Beliefs of this kind regarding spirits of certain dead persons are found sporadically in Polynesia, Melanesia, Indonesia, in India, and among African and South American tribes. Among higher races traces of the idea of the dead feeding on the living are found among the ancient Babylonians and other Semites, and in Egypt regarding the *khu*. In ancient Scandinavia the idea that the dead were alive in their barrows gave rise to the belief that they might become unhallowed monsters of the vampire kind, as is seen from the *Grettis Saga*. Parallels occur in Saxon England and among the early Teutons and Celts. In modern Greece the vampire belief has prevailed for many centuries, but largely moulded by Slavic influences.[1] The Slavic superstition holds that various persons become vampires after death. The corpse is revitalized and thirsts for blood. Its ravages begin with relatives, then it attacks other victims, and these in turn become vampires. When the grave of a suspected vampire is opened, the corpse is found undecayed, the lips stained with blood. Its ravages occur by night: the grave must be re-entered by cock-crow, else the vampire must remain wherever he is, stiff and helpless. A great epidemic of vampire superstition occurred in Hungary in the 18th cent., which was investigated by a royal commission.[2] In China a vampire belief exists, and offers a curious parallel to that of the Slavs.[3]

3. Rites of riddance.—Among the Slavs, when a grave is opened and the corpse is found to be fresh, swollen with blood, and life-like, it is transfixed through the region of the heart with a stake of aspen or maple (Russia), blackthorn or hawthorn (Serbia), but this must be done with one blow, for two blows would restore it to life. A suspected corpse is also buried in this way. A vampire at Laibach in 1672 is said to have pulled out the stake and thrown it back.[4] A person who committed suicide was often buried at cross-roads, the body transfixed with a spear or stake, in Britain and elsewhere, in order that the ghost might not walk, but perhaps in earlier superstition lest it should become a vampire. This was forbidden in England by law in 1824.[5]

Sometimes also the head of the vampire was cut off.[6] The heads of murderers whose spirits the living feared were also cut off and destroyed, or set between the legs or beneath the body. Another effectual way was to burn the corpse to ashes, but care was taken to drive back into the fire every creature which might come from it—worms, snakes, beetles, birds, etc.—lest the vampire should have embodied itself in one of them, and so resume its foul work. This was done among the Slavs, and in Bulgaria a sorcerer armed with a saint's picture is supposed to drive the vampire into a bottle containing some of its foul food, and, when corked up, the bottle is thrown into the fire.[1] In Greece any corpse which is found not to have suffered dissolution, as well as any suspected of being a vampire, was, and even now still is, exhumed, cut to pieces, and burned, to prevent its further wandering as a *revenant*. Boiling water or oil was poured on the grave, and the heart was torn out of the body and dissolved in vinegar.[2] This is a reversion to the old pagan custom of cremation of the dead, and, in spite of Slavic influences, the Slavic method of staking the body is not in use.

In China suspected corpses were allowed to decay in the open air before burial, or, when buried, were often exhumed and burned. In the absence of the corpse from the grave, the coffin-lid was removed, thus letting in fresh air, which prevents the body from re-entering it. When the corpse was roaming about, rice, red peas, and pieces of iron were strewn round the grave; it could not pass these, and was found stiff and dead on the ground, and could then be burned.[3]

To guard against the attacks of vampires, various charms, amulets, sacred symbols, and magic herbs are commonly used in the various countries where the belief exists.

4. Love motive in the vampire belief.—Sometimes the vampire may have intercourse with the widow or other woman. This is part of a widespread belief that the dead or ghosts can have sexual union with the living, and, as far as revitalized corpses are concerned, this motive is found in the ancient Greek story of the girl Philinnion, who after her death was found with the youth Machates in her father's house as his lover, leaving him at dawn.[4] In such stories as this the vampire is linked to the ghostly *mahr*, or nightmare, in its erotic aspect on the one hand—the *mahr* comes into a room through the keyhole, as the vampire does—and to the mediæval *succuba* on the other, in so far as the latter, like other erotic demons, preys upon the vital powers of man, so destroying them.

The vampire-lover theme is also illustrated by the 'Dead Rider' cycle, as in Burger's *Lenore* or Scott's spirited version, *William and Helen*. Burger's poem is based on the folk-belief that a dead man appears to those dearly loved—lover, wife, or child—because they sorrow so much, or in order to draw them to the grave. The living person rides with him on horseback or follows him, ignorant that he is really dead. Usually they reach the churchyard. The corpse sinks into his house—the grave—and the living barely escapes being entombed, or sometimes dies at the grave. Of this there are Scandinavian, Icelandic, Albanian, Breton, Scots, and English versions, and it is even found among the Araucanians as a purely native tale.[5]

5. Vampire and wer-wolf.—Attention has been drawn elsewhere[6] to the connexion between the kindred superstitions of the vampire and the wer-animal. The main links are that the dead may become wer-wolves or other wer-animals and prey on the living,[7] and, as in Greece and among the

Slavs, that the man who was a wer-wolf in his lifetime becomes a vampire after death.

A further link of connexion is found in the fact that both vampires and wer-wolves are believed to cause storms, drought, famine, and cattle-plague; both are killed by an aspen stake; and the vampire is sometimes the offspring of a witch and a wer-wolf (or the devil).[1] While the wer-wolf is often a witch or wizard who has assumed animal form, both of these are often blood-suckers and eaters of human flesh, with all the perverted tastes of a vampire.[2]

The earth personified, occasionally as Cerberos, was sometimes supposed to be an eater of the dead.[3] Demoniac beings of the under world were also represented as eaters of the dead—Chimæra, Eurynomos, the Egyptian 'eater of hearts' or 'eater of the dead,' etc.[4]

6. The vampire in literature.—Such a superstition has naturally attracted some attention in literature. Byron has an effective passage referring to it in *The Giaour*. His prose work on the subject (unfinished) was completed by Polidori and dramatized by Charles Nodier. Hoffmann introduces it in one of the tales in *The Serapion Brethren*. It is also the subject of Théophile Gautier's *La Morte amoureuse*, and of a story in J. S. Le Fanu's *Green Tea*. But the whole superstition has received the most effective treatment, with the greatest verisimilitude, from Bram Stoker in his *Dracula*,[5] which embodies in a striking manner all that is believed on the subject in Transylvania.

J. A. MACCULLOCH.

VANCOUVER ISLAND INDIANS.—The Indians of Vancouver Island are not a homogeneous people, but belong to three clearly defined groups. The northern part of the island is occupied by tribes of Kwakiutl speech; they are closely related to tribes occupying the mainland of British Columbia to the east and for a considerable distance north of Vancouver Island. The south-eastern part of the island is occupied by Coast Salish tribes. These are but a comparatively small section of the widely spread Salish stock, who are distributed south into the United States as far as the lower Columbia Valley. The remainder of the island — roughly speaking, the southern two-thirds of the west coast—is inhabited by a group of tribes variously known as Nutka (from one of the best known tribes of the group) or Aht. These Indians are almost entirely confined to Vancouver Island; the extreme north-western part of Washington, however, in the neighbourhood of Cape Flattery, is occupied by the Makah Indians, an offshoot of the Nutka group. The Kwakiutl and Nutka tribes are quite clearly, if somewhat remotely, related in speech. The Salish languages may also prove to be related to Kwakiutl and Nutka, but only remotely so at best. These three groups of tribes exhibit numerous interinfluences, the dominant position, on the whole, being held by the Kwakiutl Indians of the north. In this article the religion of the Nutka Indians will be taken as the type for the aborigines of Vancouver Island. Data on the other tribes will be found in art. SALISH.

Beliefs and practices of a more or less definitely religious character enter so largely into almost every phase of Nutka life that it is not altogether easy to mark off religion as a separate subject for ethnologic treatment. For practical purposes the subject of Nutka religion may be considered as embracing the beliefs in supernatural beings of various sorts, prayer, the acquisition of 'power' either by means of amulets and the help of definite beings or by means of the performance of secret rituals of predominantly magical content, shamanism and witchcraft, beliefs in souls, tabus of various sorts and other beliefs of more or less clearly religious reference, and public rituals.

1. Supernatural beings.—It is very difficult to classify the various beings of a supernatural order that are recognized in Nutka belief. They range all the way from a Sky Being, who seems almost on the point of becoming comparable to our own conception of a Supreme Being, down to patrons or guardian spirits (*genii loci*) of specific objects, such as individual cedar trees or house-beams. The line between beings endowed with a more or less distinctive personality and mere amulets is strangely difficult to draw, as, midway between these two types, there are a considerable number of monsters whose only *raison d'être*, so far as humanity is concerned, is that some part of their body can be utilized for amuletic purposes. On the whole, the personality of the majority of Nutka supernatural beings cannot be said to be very firmly defined. As regards their relation to humanity, they might be classified as objects of prayer, beings capable of granting 'powers' of a great many different sorts, beings that are impersonated in rituals, generally in ritualistic dances, beings that figure in myths and family legends, and beings that are visibly represented, by those privileged to do so, as crests. This classification is not a mutually exclusive one, however, as many supernatural beings appear in more than one connexion.

Thus, the Wolf is important in ritual, legend, and crest representation, and is believed to grant 'powers' or 'medicines.' On the other hand, the Whale is important as a crest and mythological being, but does not figure in public ritual, while hunting powers and other gifts are bestowed by him in legends and by virtue of inheritance of such legendary gifts rather than directly in the actual present. Differing from the Whale is the Thunder-bird, in that he is not identified with an actual animal species, and that he is very frequently, perhaps most frequently of all beings, impersonated in ritual performances. Again, such a being as the Ahlmakoh, a kind of demonic wood-spirit, plays an important part in ritual and as an amulet-dispenser, but is never represented as a crest (his mask is used only in connexion with a ritual).

It is difficult in some cases to tell whether a particular type of being is conceived of as a single personality, like the more important gods and goddesses of the Greeks, or as embracing a class of numerous individuals, like our fairies. The latter is probably far more often the case, though true examples of individualized beings undoubtedly also occur. Sometimes the Indians themselves seem to waver between contradictory conceptions, as in the case of the Thunder-bird. He is generally, it seems, thought of as a distinct individuality (legend has it that there were originally four Thunder-bird brothers, but that three of them were destroyed by the Woodpecker), yet the tendency to localize his home on some particular mountain-peak and the necessarily different localizations current among the different tribes have led in the

minds of some to the rationalizing conclusion that there is more than one Thunder-bird in existence.

In a class by himself is the Sky Chief, who enters hardly at all into the life of the natives except as an object of prayer. He is believed to dwell in the sky and to be, in a general way, the dispenser of life and happiness to mortals. He is not represented either pictorially or in rituals, and never, so far as known, occurs as a character in the mythology, not even as creator or transformer. So pale is his personality that one might be tempted to look for Christian influence, were it not for the obviously standardized form, and hence presumably great age, of the prayers addressed to him.

As in all Indian mythologies, a large number of animals are represented as human or semi-human characters in Nutka myths, many of them being endowed with supernatural powers. Few of these, however, can be considered as of interest in a purely religious connexion; the attitude of the Indian towards many of them is comparable to our own in reference to the fantastic characters of a romance or fairy-tale or even, not infrequently, to the purely human characters of a modern novel. The Raven, *e.g.*, while important in some of the more northern Pacific Coast tribes as a creator or transformer, plays the part in Nutka mythology purely of a greedy trickster or buffoon, comparable to the European Reynard the Fox. The belief that animals are descended from human-like beings of the mythological period finds its counterpart in the belief that animals to-day, when out of sight of people, divest themselves of their animal blankets and look, talk, and act like ordinary human beings. Most of the animals represented in the mythology and a large number not so represented are impersonated, by means of face paints, masks, and ceremonial regalia, in the dances of the Wolf ritual (a few of these dances are the Raven, the Woodpecker, the Sea-gull, the Wasp, the Halibut, the Octopus, and the Deer). Even in this connexion, however, it is doubtful if the animal beings themselves, as a whole, have further religious significance than that their representation has become associated with a ritual which is charged with the quality of religious emotion. The animal dances as such seem to be of interest largely as pantomimic performances. Among all these animal beings, however, there are at least some that have a degree of religious importance. 'Powers' may be obtained (or were legendarily obtained) from the Wolf, the Whale, the Hair-seal, the Sea-otter, the Shark, the Beaver, and others. Of particular importance among these is the Wolf. The Wolves are believed to form a supernatural community of their own, with four special fast runners of the chief and the Raven as news-teller. They are looked upon with great reverence—an attitude that finds its fullest expression in the Wolf ritual, founded, according to its origin legends, by the Wolves themselves.

In the mythology we also meet with a number of human-like figures that belong to the supernatural world without being identified with either animals or monsters. Here belongs the creator Kapkimiyis, who created the first man out of the thigh of the first already existent woman, made the island of Tsisha, the home of the Tsishaath tribe descended from them, and assigned them the various foods, animal and vegetable, that they and their descendants were to use. Kapkimiyis is evidently a purely local figure, and he is doubtless paralleled by local creators in the other Nutka tribes. Another important figure in the mythology is Kwatiyat, a sort of creator or, better, transformer, who experienced many curious adventures and did much to give the world its present shape. The rock-carvings in the interior of Vancouver Island are believed to be his work. He is still alive, but it is not known where he resides. With him is often associated his brother, who, like the Raven, is a trickster. Another transformer is known as Causing-everything-to-be-different. His work consisted chiefly in transforming various maleficent monsters into the relatively harmless animals that we know to-day.

We need no more than refer to a few of the host of powers with which the Nutka Indian peoples the land, the sea, and the air. The Heitlik, 'Wont-to-glide-to-the-ground,' is a snake-like, scaly being who darts out lightning with his red tongue. He is generally represented as gliding on the rocks, coiling up or down a tree, or coiled like a belt about the Thunder-bird. When seen, a bit of his tail should be lopped off and preserved as an amulet for success in whaling and other sea-mammal hunting. The Yaai are fairy-like folk that dwell on the summits of mountains. They wear feathers on their heads and are associated with fire and the *aurora borealis*. They are peculiarly elusive beings, frequently dissolving into foam. A supernatural bird, the Mikhtach, said to resemble a female mallard duck, is a potent source of luck in hunting. The Ahlmakoh, already referred to, is a kind of forest ogre, evidently related to the Nutlmis, or Fool-dancer, of the Kwakiutl; his nasal mucus is valued as an amulet for invulnerability. The Chiniath are brownie-like woods-folk who do all sorts of strange things, such as hunting for sea-cucumbers as though they were seals; they give power to those who are fortunate enough to see them. The Pokumis are wild and elusive beings, transformed from human beings that have become estranged from human ways or overcome by intense cold. The Pokumis are often represented in the pantomimic dances of the Wolf ritual. The Shishchikuhl is a large animal-like monster who lives inside a mountain and whose red hair is a powerful amulet for success in war. A two-headed being, the Totohtsaktso, reddish in colour and with a tail attached to each of his heads, is particularly virulent as 'medicine'; a small part of his body is a powerful amulet in both war and hunting. He is doubtless the Nutka equivalent of the Sisiutl so often represented in the art of the Kwakiutl Indians. The Tsatsokhta is an enormously strong being with red, shaggy hair and with his right foot large, his left extremely small. The earth of his tracks is a strength-giving 'medicine.' One of the most important of Nutka supernatural powers, in ritual and legend as in the acquirement of 'medicine,' is the Hena, a class of beings conventionally represented by, but not actually believed to be identical with, quartz crystals. They have the power of incredibly rapid flight and make a loud, whizzing noise. They have become closely associated in Nutka belief with the Wolf ritual, their characteristic sound being identified with the supernatural whistling that is believed to emanate from the wolves and that is imparted to the initiates of the ritual. It is therefore not surprising that the quartz-like Hena is held to be found also in the body of a wolf, of whom it forms a sort of subsidiary soul.

It is remarkable that the power emanating from most of the supernatural beings of the Nutka is intimately bound up with some amulet-like or fetish-like object, generally some part of his body that is, often with considerable violence, taken from him. The conception of a benevolent attitude towards the seeker after 'power' and of a spiritual guardianship over him—a conception that prevails among so many American Indian tribes—is, on the whole, signally absent here. It is present in some degree in the legendary accounts of ancestral experiences of the acquisition of power, yet even here the chief emphasis is always placed on the supernatural object acquired and handed down or on the privilege of ceremonially representing such an experience, not on the notion of a mystic relationship.

2. Prayer.—Prayer is often held to represent religious feeling at its purest, particularly when the prayer is individual and of unstandardized form. Among the Nutka Indians prayers are, so far as known, always of strictly standardized form. They are either sacred songs sung at a ritual by a group or by an individual in the presence of the community (such prayers, *e.g.*, are addressed to the Wolves of the Wolf ritual or in the rite of exorcism in the same ritual) or they are private, and indeed secret, spell-like formulæ addressed to the Sky Chief in the course of the important secret rituals referred to below. The feeling that animates the former class of prayers is perhaps more intensely emotional; it may be characterized as fear or awe glorified into exaltation. The latter class have more of a magical

than purely religious connotation, and this in spite of the fact that they are addressed to the nearest approach that the Nutka have to a generalized Supreme Being. They are self-seeking in tone; more often than not they directly plead for a superiority in success at the expense of others.

Generally the secret ritual prayers are for some specific gift, as wealth, success in hunting or fishing, good luck in love, proficiency in the performance of a ritualistic act, or whatever else, good or evil, one may desire the fulfilment of. As a rule, however, the specific prayer is preceded by a more general *tichsimich*, or prayer for life.

A typical example of such a 'life prayer' is: 'Look down on me, O Chief, have pity on me. Cause me to be alive. Cause to be sent back whatever evil words may be said of me by any one. If at any time one prays in secret for my death, may I cause his curses to recoil on himself; may I cause him to swallow his own [evil words]. Cause me to be without affliction, O Chief. Grant me, O Chief, thy wealth [or whatever else one desires]. . . .'

While the private prayers of the Nutka are strictly standardized in form, the texts of the prayers seem to differ considerably according to the varying family traditions. Here, as throughout Nutka life, family exclusiveness in matters of privilege and secret lore is much in evidence.

3. **Acquisition of power; secret rituals.**—Like so many other primitive peoples, the Nutka feel the necessity of continuous supernatural assistance in the pursuit of the ends of life. The individual must, whenever possible, eke out his own powers by the support of some of the mysterious influences that surround him. Prayer can do much for him; the mere possession of an amulet or fetish or 'medicine' probably more; still more efficacious is a token resulting from an encounter with a supernatural being. The handling of all such tokens, as well as of all supernatural objects or animals not actually identifiable with specific beings, is regularly hedged about by various tabus. Generally fasting and a period of sexual continence are required, also absence from the home. A token may not be lightly rejected, if disaster is to be avoided. One must also know beforehand just how it is to be utilized, what one must do or say in order to secure the benefits of its supernatural influence. Frequently one must be careful to take only the right half. Frequently, also, it may not be taken into the house, but must be kept in a secret spot in the woods. Its power may be communicated by rubbing or other handling, or a small piece of it may be directly used as an amulet; thus a bit of it may be inserted in the cedar-bark wrapping of a sealing or whaling harpoon. Every Indian possesses a considerable number of 'medicines,' for various purposes and of different degrees of potency. Their possession is generally a secret to all but the immediate heirs of their acquirer or inheritor; certain 'life medicines' may even be kept entirely secret until the approach of death. It is interesting to note that the mere possession of secret or magical lore is itself 'good medicine.' As one parts with knowledge, his power of resistance to adverse influences is lessened.

It is not always possible to secure the special assistance derived from supernatural helpers or inherited fetishes. Hence the main reliance of the Nutka Indian for the success of his hunting, fishing, or other ventures is on the punctilious performance of certain private magical ceremonies that we have termed 'secret rituals.' There is an astonishing number and a bewildering variety of such rituals. Every family possesses, by secret inheritance, enough to guide it safely through life. Sometimes several versions of a magical ritual—one derived, say, from the paternal, the other from the maternal, tradition—are known by an individual, but they may never be combined or confused. The secret rituals are always performed in a hidden spot at a considerable distance from the house; for the more elaborate rituals the various families have prepared spots deep in the woods, often near pools or in caves. The rituals range in complexity from comparatively simple magical performances, prayers, and spell-pronouncements lasting but a single night to elaborate ceremonies extended over a month or more. The former are either abbreviated versions of more elaborate rituals or relate to the easier quests, such as salmon-trolling; the latter are concerned with the more hazardous or exacting pursuits, such as whaling, sea-lion hunting, or sealing. Each secret ritual is in effect a prayer and magical compulsion toward some desired end—success in trapping fish, spearing cod, harpooning sea-otter, whaling, acquiring wealth, gaining love, bewitching an enemy; even the satisfaction of such unusual desires as success in stealing or the learning of a raven's speech may be compassed by the performance of a magical ritual. The details of each ritual differ according to specific family tradition and the nature of the end sought. The constant features seem to be prayer, the pronouncement of spells, the observance of tabus, rubbing with 'medicines,' bathing and rubbing down with hemlock branches (until the skin peeled, in the practice of the hardier aspirants for success), the wearing of cedar-bark and feather regalia and the laying on of symbolic face-paints, and, most important of all, the performance of magical actions. In principle these actions are dominated by the philosophy of sympathetic magic and by the symbolic efficacy of imitation and the handling of effigies.

Thus, the aspirant for success in whaling may spend hours diving into a pool and coming up to the surface and blowing in imitation of a whale or, bent over the ground, in humping his back like that of the whale; or he may make out of twigs rude effigies of a whaling canoe, its occupants, harpoon and floats, and the hunted sea-mammal.

The magical practices not infrequently included bizarre or revolting features, such as rubbing with the skulls of one's ancestors or the use of a newborn babe that had been stolen, killed, and had its eyes gouged out (a symbolic representation of the whale that is blind to his pursuer and allows himself to be caught). Needless to say, these secret rituals have little or no purely social bearing. The magic ritualist may, however, be accompanied by a close relative, say a son or nephew—frequently, in the more elaborate types, by his wife. Not the least interesting thing about the secret rituals is their dependence for success on a proper calendric placing. The most auspicious season for their performance is the period between the winter and summer solstices, when the days are progressively longer; during a given month it is the days of the waxing moon that should be chosen. The symbolism of this is as obvious as it is world-wide. Indeed, there is every reason to believe that what little precision of solar and lunar observation the Nutka Indians attained was conditioned by the necessity of correctly delimiting the span of auspicious days.

4. **Shamanism.**—The Nutka shaman, or medicine-man, is such by virtue of supernatural power personally acquired by him or, at least theoretically, by right of inheritance from an ancestor who had himself (or herself) acquired such power. Properly speaking, the acquirement of shamanistic power[1] is on a par with the acquirement of any other type of supernatural power, as for hunting or fishing. In either case the possession of power may be due to the magic inhering in the performance of a secret ritual, to the acquirement of a supernatural token or amulet-like object ('medicine'), with or without the inter-

[1] See art. SHAMANISM.

position of a supernatural being, or to the inheriting of a family 'medicine.' What distinguishes the medicine-man is the function exercised by his power, the class of being from whom it is derived, and the manner of holding and exercising this power.

The main functions of the medicine-man are the location of disease, generally conceived of as a worm-like malefic object that has been lodged in the body of the sufferer by an ill-wisher, the detection, if required, of the causes of the disease, and its removal. The divining, in a trance-like state, of future or distant events and the supernatural causation of disease are also frequently within the province of the medicine-man, but need not be.

The supernatural beings and 'medicines' that bestow shamanistic power are rarely the same as those that give power for other purposes. There is a long list of eerie or unusual objects whose discovery and retention are believed to make a man a shaman—at least to a limited extent, for a really powerful shaman has generally a number of sources of supernatural guidance. The specific beings that grant shamanistic power belong to two classes, 'birds' and 'fish.' Certain birds—*e.g.*, ducks—certain land animals, and certain fish are believed to be powerful shamans themselves and to meet once a year in a doctoring contest. The leader of the 'birds' is a supernatural bird known as Khwini, or Khwili, who is said to belong to the Sky Chief; the leader of the 'fish' is a small eel-like marine fish. The former has the greatest shamanistic power of all. The shamanistic being (animal) bestows power not so much by way of a dream, as so commonly in aboriginal America, as by the amuletic virtue of his own body. This is in accord with the general materializing tendency that pervades Nutka religion.

The power of the 'medicine' amulet or being is, in the case of the Nutka shaman, exercised by virtue of its actual presence in his body. A shaman's supernatural power (*manitu* [*q.v.*]) is not a mystic influence that guides him, but resides in a concrete object that he is believed to keep inside his hand or chest. A powerful shaman may have half-a-dozen or more such 'medicines' in his chest, in supernaturally reduced form. These are never made visible to the laity except on special occasions, such as at a very severe illness or during the *tsayek* ritual, when the shaman may hold them up for inspection. The shamans are believed to have the power of causing their 'medicines' to fly through the air to any place or person desired. The wide-spread conception of the 'flying' or 'shooting' of disease-causing substances seems, by an easy transition, to have been transferred to the Nutka materializations of the *manitu* concept. The *modus operandi* of the Nutka shaman differs according to circumstances. The usual methods are: sucking of the part affected (actually or supposedly), manipulation after rubbing the fists against the hands, resuscitation by uttering certain syllables in a conventional manner, and the singing of specific medicine songs. These songs are often dreamed during the performance of a secret ritual for the attainment of shamanistic power.

5. Soul beliefs and supernatural phenomena.—The Nutka Indians say that the course of life is like the walking of a man on a straight line as thin as a hair. If he misses a single step, he drops down and dies. The soul or living essence of a human being is conceived of as a wee mannikin, a shadowy doublet, which can be held in the palm of a shaman. It may leave the body through the crown of the head, but may either return of its own accord or be brought back through the ministrations of a shaman. If it fails to return, it means that it has reached the land of disembodied spirits, that its possessor, in other words, is dead. It is then referred to by a term, *cheha*, which may be rendered 'ghost,' but which is more freely used to refer to any discarnate spirit and even to any eerie or highly unusual being, such as an elephant. The ghost is always thought of as evil, and great efforts are taken to rid of its malign influence a house in which a person has died.

Distinct from the soul is the *hlimaksti*, often translated 'heart.' This is not the anatomical heart, but the mind or 'soul' in its psychological, not theological, sense. It is the seat or principle of intelligence characteristic of human beings alone, and is generally localized in the heart or breast.

According to one legend, the creator Kapkimiyis made a vertical column of ten faces, stuck close together, and put it into the breast of the first man as his seat of intelligence. This is the *hlimaksti* of to-day. If all ten faces look in one direction, the man's will is strong; if five look one way, five the other, he is in a state of evenly-balanced hesitation. The first woman had no *hlimaksti* put inside of her; hence women are believed to be more flighty and less intelligent than men.

The life after death is supposed to be located in an under world, which is divided into a 'good' and a 'bad' section. In the 'good' quarter are little streams in which spring-salmon run and form the food of the ghostly inhabitants. The spring-salmon of the world of the living are believed to be sent up here by departed spirits. The occupants of the 'bad' quarter of the underground world eat lice. In the opinion of some Indians, the dead turn into wolves or owls. This belief does not necessarily exclude the other.

As among all primitive peoples, there is a vast number of beliefs current among the Nutka in regard to supernatural phenomena and relations. Only a very few of these need be touched upon here. An eclipse of the sun or moon is caused by a supernatural being known as Codfish-in-the-sky, who holds the luminary in his mouth. During an eclipse each of the Indians would rush off to perform a secret ritual for trolling fish. The magical concept at the basis of this practice is evident: the fish eventually trolled for was to bite just as the Codfish was biting the eclipsed sun or moon. Another very curious belief is referred to by the term 'going off to another place.' The Indians believe that at two unknown periods during the year a big tide comes in at night and shifts about everything in the village, houses and all. After a short time, during which it is difficult to keep awake, everything is shifted back to its proper place. Should one be lucky enough to keep awake during this periodic shift, and be engaged in a secret ritual, he is certain to prove successful in whatever he is praying for.

Perhaps the most interesting belief concerning the relation of human beings to the supernatural world is that which regards twins as salmon incarnations. So much is this taken as a matter of course that it is believed that a twin child involuntarily bursts into tears when it sees a salmon being treated cruelly. Both twin children and their father are subject to many onerous tabus, and the children are not expected to live long. The significant thing about twin fatherhood is that it makes of the father a mere instrument of the salmon-world. The appearance of twins is looked upon as a harbinger of an unusually big salmon run, and the father devotes all his energies during the fishing-season to the singing of songs, the performance of secret rituals, and the observance of tabus intended to propitiate the salmon and provide his fellow-villagers with a maximum catch. Should he disregard the injunctions of the

salmon-world implied by the birth of twins, dire misfortune is certain to befall him.

6. Rituals. — Ceremonialism, both social and religious in character, is very prominent in Nutka life. It is somewhat arbitrary to divide ceremonies into the two classes, as, on the one hand, a religious quality (some sort of legendary or supernatural background) is rarely absent from even the most matter-of fact or casual ceremony (say, a naming feast or invitation ceremony), while, on the other, every more properly religious ceremony, such as the elaborate and peculiarly sacred Wolf ritual, is given the setting of a secular *potlatch* (giving feast) and regularly contains numberless features that have a purely social, not religious, significance. The two major ceremonies of primarily religious connotation are the Wolf ritual (known by the natives as *tlokwana*) and a shamanistic performance termed *tsayek*. The former undoubtedly has a native Nutka nucleus, but has been much influenced by the winter feast of the Kwakiutl Indians. The latter ceremony is primarily at home among the more southern Nutka tribes; it is also found among the Coast Salish and Quileute (north-west coast of Washington).

The Wolf ritual differs considerably among the various Nutka tribes in its origin legend and in its ceremonial details. In essence it is a quasi-dramatic representation, at least in native theory, of certain legendary occurrences.

Just as a young man or woman, in the legendary past, is believed to have been carried away by the wolves to their supernatural home, to have been taught many religious dances and songs, and to have returned to his people with these immaterial gifts, so, in the ceremony of to-day, the novices, who are to be initiated into the ceremony, are represented as seized by wolves that break into the village and as carried off into the woods, there to be taught particular dances, which, after they are rescued by the villagers and exorcized, they perform among their own people in a state of religious frenzy. The dances vary greatly in character, but are largely pantomimic, referring either to animals, occupations, or supernatural beings. Many of them are inspired by a spirit of savage recklessness that may take the form of self-torture or ceremonial killing. The association of all those (novices and old initiates) who dance a particular dance into a 'secret society' is a very much more weakly developed concept than among the Kwakiutl. On the other hand, the individuals who are banded together throughout the ceremony as wolf-performers, by hereditary right, may be looked upon as constituting a true confraternity.

In a rather vague way the Wolf ritual may be interpreted as a kind of placating of the powerful supernatural beings that appear to us as wolves, but there can, in actual fact, be no talk of a definite function of the ceremony. It is a complex historical growth that serves as a traditional setting for the public expression of religious emotion (awe and exaltation) and for the satisfaction of certain artistic needs. Even the spirit of ribald humour finds expression in it. To a large extent, also, the purely religious and artistic motives are overlaid by the desire, so characteristic of West Coast culture, to enhance one's social prestige by display and a lavish expenditure of wealth. As usual with great tribal ceremonies, it undoubtedly means different things to different temperaments.

The *tsayek* ceremony is ostensibly undertaken, like so many other great tribal ceremonies among American Indians, for the cure of a sick person who has not profited by ordinary shamanistic treatment. The main feature of the ceremony is the singing of a peculiar type of songs, accompanied by beating of sticks and certain conventional gesticulations and jumps. Each Indian that takes part in the ceremony sings a number of such *tsayek* songs that have become his property by family inheritance. Novices who are to be initiated into the *tsayek* ceremony sing these songs for the first time. In the course of the ceremony another and more advanced type of initiation takes place—that of those who have had some supernatural shamanistic experience, or who have a hereditary shamanistic right, into the formal status, often theoretical rather than actual, of shaman. This part of the ceremony offers suggestive parallels to the well-known Midē'wiwin of the Ojibwa and other Algonquian tribes. Indeed, the two types of initiation, *tsayek* proper and shamanistic, may be looked upon as constituting a series of degrees not unlike the more intricately developed system of shamanistic degrees current among the Algonquian tribes.

EDWARD SAPIR.

VANNIC RELIGION.—See ARMENIA.

VASUBANDHU.—Vasubandhu (*c.* A.D. 420–500), the second of three brothers of a Kauśika Brāhman family, was born at Puruṣapura (Peshawar) in Gandhāra (Kandahar), and is one of the most prominent figures in the history of Buddhism. His not less celebrated elder brother, Asaṅga, is well known as the first propounder of the Yogāchāra school of Buddhism, *i.e.* Buddhist idealism. Of the youngest brother, Viriñchivatsa, we know nothing.

1. **Life.**—There are three different traditions concerning Vasubandhu's life: (1) *The Life of Vasubandhu*, translated by Paramārtha into Chinese;[1] (2) *passim* in *Si-yu-ki* ('Records of the Western Countries') by Hiuen-Tsiang, (3) the Tibetan tradition in Tāranātha, etc. The general drift of them is as follows:

Vasubandhu, a contemporary of Vikramāditya (=Skandagupta, A.D. 455–480), and his son Bālāditya (*c.* 485–) took orders in the Sarvāstivāda (realism) school, having studied under Buddhamitra (Manoratha, according to Hiuen-Tsiang) the whole of the sacred books, *i.e.* the three collections (*Tripiṭaka*), of the school to which he belonged. Afterwards he studied the doctrines of the Sautrāntika (the school which accepts the *Sūtra* as its sole authority), thinking them more reasonable, in many points, than those of his own school, and he determined to formulate an eclectic system out of the two lines of doctrine along which his mental activity had been directed. In order to do so, it was indispensable for him first

[1] B. Nanjio, *Catalogue of the Chinese Translation of the Buddhist Tripiṭaka*, Oxford, 1883, no. 1463.

to acquire a thorough knowledge of the Sautrāntika doctrines. With this object he went to Kaśmīra (Kashmīr), the headquarters of the study of the doctrine, carefully disguising himself and assuming a false name, lest the scholars of that country should be jealous and refuse to instruct him. There, for many years, under the guidance of Saṅghabhadra, he studied the doctrine, against which he would, however, frequently dispute, basing his objections on the teachings of the Sautrāntika itself. Skandila, the teacher of Saṅghabhadra, had his suspicions aroused by the extraordinary ability of the unknown student, and at last ascertained that he was none other than Vasubandhu, whereupon he advised him secretly to go back to his own land, lest some factious people should kill him. Vasubandhu therefore returned to his home, where he composed a poem of 600 verses called the *Abhidharmakośa*,[1] a compendium of *Abhidharma-mahāvibhāṣā*,[2] and sent it to Kaśmīra. The king of Kaśmīra and the scholars were at first delighted with it, imagining that he was expounding and propagating their doctrine; but, on the advice of Skandila, who knew that the compendium was not quite favourable to their sect, the author was asked to write an explanation. So he expounded the verses in a prose commentary, with the addition of seven verses and one chapter on the non-Ego. These verses together with the commentary are called *Abhidharma-kośa-śāstra*.[3] Vasubandhu afterwards travelled to Ayodhyā (Oudh) and was converted by his brother Asaṅga to the faith of the Mahāyāna, and composed many treatises in defence of his new creed, with commentaries on various Mahāyāna works. He died there (in Nepāl, according to Tibetan tradition) at eighty years of age.[4]

2. Works.—Vasubandhu's first literary undertaking seems to have been the composition of his *Paramārthasaptati* ('Seventy [Verses] on the First Principle'), in which he refuted and destroyed all the ground principles of the Sāṅkhya philosophy as put forth in the *Sāṅkhya-śāstra* by Vindhyavāsa, by whom Buddhamitra, Vasubandhu's teacher, had been defeated in an ecclesiastical dispute. This fact gave general satisfaction, and King Vikramāditya rewarded him with three lacs of gold.

Before turning to his Buddhist works, we may make a few additional remarks. First, it must be borne in mind that about the 2nd cent. B.C. Kātyāyanīputra founded the Sarvāstivāda school and composed the *Jñānaprasthāna* ('First Steps to Knowledge'), a simple catalogue *raisonnée* of the technical terms of his doctrine as contained in previously published 'six-branch-treatises' (*ṣaṭpāda-śāstra*). At the beginning of the 2nd cent. A.D. a very detailed commentary on this work, called *Abhidharma-mahāvibhāṣā* ('Thorough Discussion of the *Abhidharma*'), was composed by 500 *arhats* of Kaśmīra. In this work we have not only a detailed explanation of the text, but also a minute discussion of each topic, so that the commentary became immediately a mine of dogmatics and the sole authority for the sect, by whom it was widely studied in Kaśmīra. Hence its special name *Kaśmīra-vaibhāṣika* ('Vibhāṣā-follower of Kaśmīra'). This Sarvāstivāda doctrine is realistic and teaches a direct perception of external objects. Its rival doctrine is that of the Sautrāntika, which, though also realistic, asserts an indirect perception instead of a direct one. The two doctrines were the most influential in Hīnayānism. Vasubandhu, though originally a Sarvāstivādin, was a free-thinker, and did not blindly follow either his orthodox tenets or his lately adopted Sautrāntika ideas. Scholars designated his guiding principle 'a preference of reason,' and his eclecticism is shown in his celebrated work *Abhidharmakośa*, called by native scholars 'the ingenious treatise.'

It is divided into eight treasure-houses (*kośasthāna*):

(1) Elements	natural and supernatural in general.
(2) Power	
(3) Worlds—effect	natural in special.
(4) Actions—cause	
(5) Passions—auxiliary circumstances	
(6) Sages—effect	supernatural in special.
(7) Sacred knowledge—cause	
(8) Meditation—auxiliary circumstances	

In addition to the above eight sections, one section, called *Pudgala-viniśchaya* ('Exposition of Personality'), is devoted to the argument of the non-Ego. This he composed when invited by the Kaśmīrean Vaibhāṣika to explain the object of his work. To the first chapter a dogmatical explanation of the word *Abhidharma* is prefixed. It says that *Abhidharma* means 'confronting the thing,' *i.e.* insight. The thing to be confronted is of two kinds. The one aimed at is *nirvāṇa*, or final beatitude; the other mediated by is the four verities, or immanent characters of things. This confronting of things, *i.e.* insight, is called pure. It is the final *Abhidharma*. This pure insight can be called into existence by preliminary insight and teaching; the former consists in innate, acquired, and exercised insight; the latter implies the use of many standard works of the sect indirectly conducive to the origination of pure insight. These preliminary elements are called the conventional *Abhidharma*. As Vasubandhu in his work sums up the essential contents of the *Abhidharma* literature of his predecessors, and as this literature is the main source of his treatise, his work is entitled *Abhidharmakośa* ('Repository of the *Abhidharma*'). In this way he set forth concisely all noumena and phenomena and the *rationale* of the non-Ego, derived chiefly from the sources of the Sarvāstivāda school, but some tenets were taken from the Sautrāntika school and sometimes he introduced his own views.

Although Vasubandhu sympathized in his work with the Sautrāntika and showed his preference for it as the more reasonable, he was by no means satisfied with these realistic speculations, in which he was immersed until he came to the second stage of his philosophical development. When converted to Mahāyānism, he adopted the subjective idealism of that school, which he completed and systematized in his not less celebrated epitomic composition *Vijñaptimātratā-triṁśaka* ('Thirty [Verses] on "Mere Idea"').[1] The philosophical school based on this treatise teaches that all phenomena, both material and non-material, originate in mind, which is divided according to its action into eight 'ideas' (*vijñānāni*), viz. (1–5) five ideas belonging to the five sense organs, (6) idea of mind (*mano-vijñāna*), (7) mind-idea (*mano-vijñāna*), or stained mind-idea (*kliṣṭa-mano-vijñāna*), (8) receptacle-idea (*ālaya-vijñāna*). The seeds (*bīja*) or possibilities of all phenomena are retained in the eighth idea, whence comes the so-called objective world, in consequence of which we are disturbed and rove about in painful efforts after peace. If we once fully understand that nothing else exists but mind, then the objective world ceases to exist for us, and those eight confused ideas are turned into eight kinds of enlightened wisdom (*jñāna*) by means of which we can unite in the *tathatā* ('thusness') which transcends speech and thought.

The *Abhidharmakośa* and *Vijñaptimātratā-triṁśaka* are the two most celebrated of Vasubandhu's twenty odd works, and represent the successive development of his philosophical views.

It seems that towards the end of his life he reached a quite different phase of belief. He composed 24 verses entitled *Longing for the Birth* (in Sukhāvatī, *i.e.* the Paradise of the West), being a summary of the *Aparimitāyus-sūtra*,[2] to which he subsequently added a commentary. These verses with the commentary, regarded as one work, are called the *Aparimitāyus-sūtrōpadeśa*.[3] From them we see that he believed in the Amitābha (*alias* Aparimitāyus) doctrine, *i.e.* the doctrine of salvation by the grace of the Author, while in the two former phases of Buddhism through which he had passed no such idea occurs, nor is the name of Amitābha even mentioned.

VEDAS.—See LITERATURE (Vedic and Classical Sanskrit), VEDIC RELIGION.

VEDĀNTA.—*Vedānta* in Sanskrit signifies the 'end or final aim of the Veda.' The word was employed at first to denote the older *Upaniṣads* (see art. UPANIṢADS), but generally serves as the name of the most wide-spread of the six philosophical systems of the Brāhmans (*i.e.* Sāṅkhya, Yoga, Mīmāṁsā, Vedānta, Vaiśeṣika, Nyāya). In the Vedānta the pantheistic doctrine of the Brahman, the All-One, is systematically developed, and placed on a philosophical foundation. The founder of the Vedānta, or rather the first teacher who made a formal presentation of it (in the *Vedāntasūtras* or *Brahmasūtras*) was Bādarāyaṇa.[1] Since, however, his treatise is set forth in the form of aphorisms—precisely like the *sūtras* or 'clues' of the other philosophical schools of India—which in themselves are completely unintelligible, it is impossible to gain a satisfactory knowledge of the system from his work alone. This is first supplied by the expositions of the numerous native commentators, of whom the most important was the renowned Vedāntist Śaṅkara, who lived *c.* A.D. 800. Besides expounding the *Brahmasūtras*, Śaṅkara composed a large number of commentaries on the *Upaniṣads*, and wrote several independent treatises on the Vedānta philosophy. It is reasonable to suppose that the conceptions of Śaṅkara agree in all essentials with the views set forth by Bādarāyaṇa. Nearly all educated Hindus in modern India, except in so far as they have embraced European ideas, are adherents of the Vedānta; and three-fourths of these accept Śaṅkara's interpretation of the *Brahmasūtras*, while the rest are divided among the varying explanations of the system offered by one or other of the remaining commentators.

The fundamental proposition of the Vedānta philosophy is in agreement with the doctrine of the ancient *Upaniṣads*, viz.: 'the ātman (*i.e.* our self or our soul) is identical with the Brahman, the All-Soul.' Since, then, the eternal and infinite Brahman, the power that works in everything, cannot consist of parts, or be subject to change (for everything that consists of parts, and is liable to change, is perishable), it follows that every one is essentially not a part or an emanation of the Brahman, but is Brahman entire and indivisible. Nothing real exists besides Brahman; 'there is one only, without a second.' Therefore in India the Vedānta doctrine in the form in which Śaṅkara has presented it is called the 'doctrine of non-duality.'

In opposition to the fundamental thought of the Vedānta, as thus set forth, is arrayed not only experience, which teaches the existence of a manifold variety of persons and things, but also the ceremonial law of the Veda; for the latter is based upon the belief in transmigration and retribution, and therefore takes for granted a multitude of individual souls. This twofold contradiction is refuted by the assertion that both experience and the ceremonial law of the Veda depend upon the 'ignorance' (*avidyā*) natural to every man, by which the soul is prevented from distinguishing itself from the body, the psychical organs and other controlling influences, and from recognizing that the empirical universe is an illusion (*māyā*). In truth, the entire world of phenomena is merely a delusion, comparable to a *fata morgana*, which disappears on closer examination; or like a dream-image, which seems real only to the sleeper, but vanishes in waking hours.

There is only one thing in the universe which is unaffected by this power of illusion—our self, the soul. This self admits of no proof, but it also stands in no need of proof, for it is in itself the basis of all argument, and therefore is already established antecedent to any possibility of proof. Similarly, also, it cannot be denied, for every one in denying it assumes and testifies to its existence. The self, moreover, cannot be anything distinct from Brahman, since Brahman alone exists. Everything that is asserted of the Brahman—pure, spiritual nature, omnipresence, eternity, etc.—holds good, therefore, of our soul. Here in our inner self we must look for knowledge. In himself alone, in the depths of his own being, can man find the solution of the riddle of the universe, and know the only true real.

Whence 'ignorance' arises, by which the true condition of things is hidden from us, the Vedānta philosophy does not inquire. It tells us only that ignorance is removed by 'knowledge' (*vidyā*), or 'universal perception' (*saṁyag-darśana*). If this universal perception has been attained, and thereby the illusory nature of everything that is not soul, and the absolute identity of the soul with Brahman understood, the determining conditions for the earthly existence of the soul are removed. For this earthly existence is itself indeed only an illusory appearance. He who knows 'I am Brahman' has gained emancipation from the *saṁsāra*.

Since Saṅkara recognizes the unconditional authority of the *Upaniṣads*, he is compelled to take account of their entire contents, which to a considerable extent are in opposition to the doctrine here set forth. He accomplishes this by setting up two systems side by side with one another—(1) the higher or esoteric knowledge (*parā vidyā*), which adopts the metaphysical standpoint, and proclaims the doctrine of the non-dualistic Brahman, as it has just been stated, to be the absolute truth; and (2) the lower or exoteric knowledge (*aparā vidyā*), which takes its stand at the popular empirical point of view, and offers a popularly religious explanation of the universe. While in the 'higher knowledge' the Brahman is free from all attributes and qualities (*nirguṇa*), in the 'lower knowledge' it appears endowed with the attributes of personality (*saguṇa*). It is owing to ignorance that these attributes are ascribed to the Brahman, for men who cannot rise to the height of the metaphysical standpoint need an object of worship. In the lower knowledge, therefore, the Brahman appears as a personal God, who creates and rules the universe, and rewards or punishes men according to their deeds. The universe also is looked upon as real, and the statements of the Upaniṣads with regard to the wandering of the soul through innumerable bodies hold good. The lower knowledge teaches that the soul is constrained by the psychical organs, the bodily senses, the vital principle, and the moral determination, that under such limitations it completes the cycle of metempsychosis, and that by believing worship it may attain to the lower personal Brahman. Union, however, with the lower Brahman, the Brahman of attributes, is merely an inferior temporary lot. Complete deliverance is attainable from the metaphysical point of view solely by the knowledge of the higher Brahman, the Brahman without attributes. Everything that is taught in the lower knowledge is worthless for him who has learnt to know himself as the eternal indivisible Brahman; for he understands that the lower Brahman is a product of ignorance, that qualities are attributed to it merely for the purposes of worship which do not really belong to it, and in the light of the supreme knowledge are seen to be an illusion. He who has attained to this knowledge is no

[1] For a remark regarding his date see art. MIMĀṂSĀ.

longer led astray by the delusive appearance that surrounds him. In complete indifference towards the course of the world he awaits the end of his life, the continuance of which is explained on exactly the same principles as in the Sāṅkhya (see the art. SĀṄKHYA). At death the wise man is lost in Brahman.

Among the commentators who dissent from Śaṅkara's interpretation of the Vedānta, and who represent one or other of the philosophical and religious standpoints of various sects, the most renowned is Rāmānuja, who lived in the 11th cent. after Christ. Rāmānuja (*q.v.*) in his exposition of the system approximates to the lower exoteric knowledge of Saṅkara, and as an adherent of the Pāncharātra doctrine introduces into Bādarāyaṇa's treatise views which are nearly related to the Christian standpoint, but are alien to the true Vedānta doctrine. In his view the individual souls are not identical with the supreme soul, *i.e.*, as he represents it, with God, but are separate and distinct as in the Sāṅkhya-Yoga. The cause of their earthly existence is not 'ignorance,' but unbelief; and deliverance is union with God, to be gained not by 'knowledge,' but by believing love (*bhakti*) towards God. In the history of the Vedānta philosophy, therefore, the same theistic tendency makes its appearance which may be observed under the form of the system of Yoga in the further development of the Sāṅkhya doctrine.

LITERATURE.—In his *Bibliography of the Indian Philosophical Systems* (Allahabad, 1859) F. E. Hall enumerates no fewer than 310 Sanskrit works on the Vedānta; and even in the most recent times no year passes without the appearance in all parts of India of numerous treatises on this philosophy written partly in Sanskrit and partly in the vernaculars. The best and most detailed presentation of the Vedānta doctrine as interpreted by Saṅkara is to be found in P. Deussen's *System des Vedānta*, Leipzig, 1883; cf. also A. Barth, *Religions of India*[3], London, 1891; F. Max Müller, *Six Systems of Indian Philosophy*, London, 1899, ch. iv., and *Vedānta Philosophy*, London, 1894; M. Monier-Williams, *Indian Wisdom*[4], London, 1893; H. Haigh, *Leading Ideas of Hinduism*, London, 1903; P. Deussen, *Philosophie der Upanishads*, Leipzig, 1899, Eng. tr., Edinburgh, 1906; *Vedānta-Sūtras*, with commentaries of Saṅkara and Rāmānuja, tr. by G. Thibaut in *SBE*, vols. xxxiv. xxxviii. xlviii.; P. Deussen, *Die Sūtras des Vedānta*, tr. Leipzig, 1887; *Sarvadarśana-saṅgraha*, tr. by Cowell and Gough, 2nd ed., London, 1894, ch. xvi.; M. Walleser, *Der ältere Vedānta*, Heidelberg, 1910.

R. GARBE.

VEDDAS.—1. Geographical distribution and mode of life.—The Veddas, the aboriginal inhabitants of Ceylon, are to be regarded as the island representatives of the short, long-headed, pre-Dravidian jungle tribes of India. Formerly they extended over the whole island (for there is no reason to doubt that the Yakkas of the *Mahāvamsa* were Veddas); now the few surviving relatively pure-blooded Veddas who do not practise agriculture are to be found in the park country of Uva, while communities carrying on a rough cultivation, whose members have more foreign blood in their veins, exist in the poorer part of the Eastern Province and that part of the North Central Province known as Tamankaduwa.

At the present day the Veddas may be divided into three classes, viz. forest, village, and coast Veddas, each showing certain characteristic social features. The forest Veddas, reduced in number to a few families in the wildest parts of the island, have alone kept up their old mode of life. Living on game, honey, yams, and fruit, they are still able to collect these in sufficient quantity not only to support life, but to leave a surplus to barter with the 'Moormen' on their annual visits or to take into the nearest Sinhalese village to exchange for iron, cloth, pots, and occasionally rice and coco-nuts. So long as this sort of life is possible, communities are necessarily small and the old mode of habitation in caves and rock shelters persists, but where the country is less wild the Sinhalese have killed down the game to such an extent—even where they have not settled—that the Veddas have been obliged to take to cultivation, and for this purpose they have organized themselves in villages and at the same time have commonly intermarried with the Sinhalese. It is in this way that the second class of Veddas, the village Veddas, have originated; indeed the process has been going on for hundreds of years, and there is evidence that centuries ago there were 'Vedda' communities—*i.e.* communities with enough Vedda blood to be called Veddas by their contemporaries—politically organized and having chiefs who were in constant relation with the Sinhalese court. This process of contact metamorphosis has had as its most striking result the complete loss of the original Vedda (non-Aryan) language, while the identity of the relationship systems of the Veddas and Sinhalese is presumably to be attributed to the same cause. The coast Veddas are Veddas settled in the coastal area of the Eastern Province who have intermarried with the local Tamils, whose physical type they have acquired and whose beliefs they largely share. In the following account the term 'Vedda' must be taken to mean forest Veddas, unless village Veddas are specifically mentioned.

The Veddas have never been metal workers, and, although they have no traditions concerning the use of stone implements, the quartz artefacts described by the cousins Sarasin and others must, at least provisionally, be attributed to them. The iron blades to their arrows, their axe-heads and irons for 'flint and steel' strike-a-lights, are the only metal tools they use. These arrow heads and axes were noted in the 17th cent. by Robert Knox, who mentions the silent trade for metal in exchange for flesh and honey practised by the wilder Veddas.

Apart from their skill as hunters the Veddas have but the bare beginnings of a few arts and crafts. They make no pottery except where they have learnt it from the Sinhalese. Personal ornaments scarcely exist, yet the rocks of some of the caves bear very rough drawings of men and animals and the skin bag in which honey is collected. They are drawn by women and were said to have no religious or other special significance. The Veddas have no musical instruments, but during their dances they frequently beat time with their hands on the abdomen; and C. S. Myers, who has examined phonograph records of their songs, considers that they are simpler in structure than any other native songs hitherto published, and indeed represent the very beginning of melody-building.

2. Social organization.—The Veddas have a clan organization with descent in the female line; the clans are exogamous, though this rule is not strictly adhered to. Two intermarrying clans, the Morane and Unapane, are considered superior to the others, with whom they should not intermarry. Monogamy is the rule and divorce is unknown, the correct marriage being the cross cousin, especially with the daughter of the mother's younger brother. A high standard of sexual morality is maintained in both the married and unmarried. There is close comradeship between a man and his wife's father; an unmarried man assists his mother's brother, his actual or potential father-in-law, in most activities, and this association continues after marriage. A man's *baena* (sister's son, daughter's husband) is always welcome to hospitality in cave or hut, when other relatives would not intrude. Though descent is in the female line, inheritance is in the male line. A Vedda has little personal property, his axe and bow and arrows being his most important possessions, but land, or, more strictly speaking, hunting and fishing rights, the tenancy of certain caves, as well as the right to the combs of the rock bee on definite tracts of land, descend from father to son, or are presented to a son-in-law on his marriage.

The Veddas have no regular chieftainship, but the eldest man of each small group exercises considerable authority, the importance of such men being enhanced by the Sinhalese and other officials,

who naturally make a point of dealing with the most intelligent and authoritative member of a group.

3. Religion.—The basis of the Vedda religion is the cult of the dead, and the Vedda point of view can be best appreciated by considering the customs observed when a death takes place. When a man, woman, or child dies, the body is left in the cave or rock shelter in which death from sickness occurred. The body is not washed, dressed, or ornamented in any way, but is allowed to lie in the natural supine position and is covered over with leaves and branches. The cave is then deserted for some years, and, if any bones are left when the Veddas return, they are thrown into the jungle. When an attempt is made to discover the reason for the desertion of the place of death, the usual answer is to the effect that 'if we stayed we should be pelted with stones,' and some Veddas, including the least contaminated, definitely stated that it was the spirit, or *yaka* (fem. *yakini*, pl. *yaku*), of the dead man who would cause stones to rain on anybody staying near the corpse. Although fear of the dead (expressed by leaving the site of death) occurs among all the wilder Veddas, a few old men were by no means confident that all men on their death became *yaku*; no doubt the spirits of important and influential men survived, but whether this applied to quite ordinary individuals was more doubtful, and in one community there was a special ceremony the object of which was to settle this point.

Each Vedda community consists of a small number of families who, since cousin marriage prevails, are doubly related by blood and marriage; the *yaku* of the recently dead, called collectively the Nae Yaku, are supposed to stand towards the surviving members of the group in the light of friends and relatives who, if well treated, will continue to show loving kindness to their survivors, and only if neglected will show disgust and anger by withdrawing their assistance or even becoming actively hostile.[1] Hence it is generally considered necessary to present an offering to the newly dead, usually within a week or two after death, though a few Veddas stated that they would not hold a Nae Yaku ceremony until they specially required the help of the *yaku*, or until misfortune threatened or overtook them. Among most Veddas the offering must consist of cooked rice and coco-nut milk, the food that every Vedda esteems above all others; but betel-leaves and areca-nut are often added, and the oldest survivor of a small group of 'wild' Veddas said that this offering would in the old days have consisted of yams and water, if, as was often the case, coco-nuts and rice could not be obtained.

In each community there is one man, called *kapurale* or *dugganawa*, who has the power and knowledge requisite to call the *yaku*; and in the ceremony of presenting the offering called *Nae Yaku Natanawa* (literally, 'the dancing of the Nae Yaku') this man calls upon the *yaka* of the recently dead man to come and take the offering. The *kapurale* (who may conveniently be spoken of as the shaman) becomes possessed by the *yaka* of the dead man, who speaks through the mouth of the shaman in hoarse, guttural accents, saying that he approves of the offering, that he will assist his kinsfolk in hunting, and often stating the direction in which the next hunting party should go. Besides the shaman, one or more of the near relatives of the dead man may become possessed, but this, though common, is not invariable. The *yaka* leaves the shaman soon after he has promised his favour and success in hunting, the shaman always collapsing as the spirit goes. After the ceremony all the men, women, and children of the group who are present eat the offering, usually on the spot on which the invocation took place, though this is not absolutely necessary. It was clear that this eating of food which had been offered to the *yaku* was an act of communion, and an essential part of the ceremony which was thought to bring health and good fortune; for some communities even anointed the heads of their dogs with the milk of the offering, explaining that this was done because of their value.

Besides the *yaku* of the recently dead there are other important *yaku*, chief among whom are Kande Yaka and his brother Bilindi Yaka. Kande Yaka is the spirit of an ancestor, a mighty hunter in his day; he is invoked to give success in hunting, and during the ceremonial dance given in his honour a realistic pantomime of tracking and killing a deer is performed. Spirits of the dead were believed to go to Kande Yaka and become his attendants, and immediately after death it was necessary for a spirit to resort to Kande Yaka in order to obtain permission to accept offerings from his living relatives, and to obtain power from him to assist them in return for their offerings, or to cause them injury in the event of their bad behaviour. Thus Kande Yaka, who is of especial assistance in hunting, becomes lord of the dead. We have, however, little doubt that to the majority of Veddas Kande Yaka is especially the *yaka* who gives success in hunting, and that his relation to the dead does not leap to their minds on the mention of his name as does the idea of his helpfulness in hunting; for Kande Yaka was essentially a friendly and helpful *yaka*, who, unlike many other *yaku* usually beneficent, never sent sickness; in fact, Kande Yaka the spirit scarcely differs as patron of hunters from Kande Wanniya the mighty hunter, still living and showing kindness and helpfulness towards the people among whom he dwelt.

The Nae Yaku, Kande Yaka, Bilindi Yaka, and certain other *yaku* doubtless belong to the primitive Vedda culture, and to this day these are the important *yaku* among the wilder Veddas. But centuries of contact with Sinhalese and Tamils have led to the recognition of a number of Sinhalese and Tamil dæmons (or gods) as *yaku*. Thus, running roughly parallel with the three conditions of Veddas mentioned in § 1, three stages of development can be recognized in the Vedda religion: (1) the cult of the dead, including the cult of the spirits of recent ancestors, *i.e.* of the Nae Yaku and the *yaku* of certain Veddas who have been long dead and may well be regarded as heroes; the most important of these is Kande Yaka; (2) the cult of foreign spirits, who have become naturalized and have taken the friendly protective nature of the Vedda *yaku*; the cult of the *yaku* of a number of named 'Vedda chiefs' may be considered to belong to this stratum; one of these, Panikkia Yaka, is the canonized spirit of one Panikki Vedda, *i.e.* Panikki the Vedda, who is mentioned in a 16th cent. manuscript; this man, who seems to have been the chief of a group of mixed Vedda and Sinhalese blood, was in fairly intimate contact with the Sinhalese court; (3) the cult of foreign spirits who, though not generally regarded as such, have retained their foreign nature and are, in the main, terrible or even hostile. Another feature of this stratum of thought is the endowment of true Vedda *yaku*

[1] The benevolent nature of the Vedda *yaku* is very noticeable and contrasts with the malignant character of almost all Sinhalese *yaku*. The Sinhalese attitude towards the spirits of the dead generally is fear, while that of the Veddas may be called love; there is certainly a desire for, and belief in, the possibility of companionship and communion with the kindly dead on appropriate occasions.

with foreign attributes. The god Skanda, or Kanda Swami, as he is often called in Ceylon, is worshipped at Kataragam in the south of the island, chiefly by Tamils. There are no Veddas in this district now, but formerly the forests in the neighbourhood were inhabited by Veddas who were known as the Kovil Vanamai Veddas, *i.e.* 'Veddas of the temple precincts,' and they cannot but have been much influenced by the worship at the great temple. In the Eastern province the present writers met some Veddas who were known by the same name, and witnessed a dance performed seven days after the death of a member of the community. Here the *yaka* of the dead man was said to go to 'the Kataragam God' before joining Kande Yaka. Among most village Veddas Indigollae Yaka had taken the place of Kande Yaka; he gives good fortune in hunting and is invoked in the Nae Yaku ceremony. Gale Yaka was also important among village Veddas, but possibly in some localities this is only another name for Indigollae Yaka. Among the wilder Veddas Gale Yake was never mentioned, and Indigollae Yaka, if known at all, was looked upon as a foreign spirit attendant upon Kande Yaka.

The *kiriamma*, literally 'the grandmothers,' are the spirits of Vedda women; many are named and seem to be specially associated with rocks and hill-tops. From one aspect they have a malignant character, for, though they are said to love children, they often steal them and cause their death through sickness. Veddas gathering rock-honey will usually propitiate them by an offering of honey.

The worship of the *yaku* consists essentially of ceremonies during which the shaman or chief performer dances himself into an ecstasy—a condition, we have no doubt, of genuine dissociation of consciousness—during which he is thought to be possessed by the *yaka* whom he invokes. These dances are often pantomimic, and, though in different localities the ceremonial varies, especially as regards elaboration, the ritual of each dance is fixed by tradition. Various objects are proper to certain *yaku*, the most important being the *aude*, a ceremonial representation of an arrow, the blade from 8 to 16 inches long, hafted into a wooden handle considerably shorter than the blade. Ordinary arrows are also used in dances, while for some ceremonies an elaborate set of properties is required. It was noticed that, once an article was used in connexion with the *yaku*, it was not placed on the ground. The *kirikoraha*, literally 'milk bowl,' a vessel filled with the white juice squeezed from coco-nut meat, was a necessary part of the ceremonies in which Kande Yaka, Bilindi Yaka, or the Nae Yaku were invoked, and the main features of the dance centred round this bowl. No attempt is made here to describe any of these ceremonies;[1] it may, however, be mentioned that women never take part in the dances, though they are always present, and may become possessed by the *yaku*.

The method of invocation of the *yaku* is essentially the same in all Vedda ceremonies; an invocation is sung by the shaman and often by the onlookers, while the shaman slowly dances, usually round the offering that has been prepared for the *yaku*. Sometimes the invocations are quite appropriate and consist of straightforward appeals to the *yaka* for help, or recite the deeds and prowess of the *yaka* when he too was a man. But at other times the words seem singularly inappropriate; probably in many of these instances they are merely the remains of old Sinhalese charms that are not only displaced from their proper position and function, but have become so mangled in the process as to have become incomprehensible. As the verses are recited over and over again, the shaman dances more and more quickly, he unties his hair, which falls over his face as he throws his head forward, his voice becomes hoarse, his speech staccato, his movements spasmodic, and his eyes take on a fixed expression; he is then possessed by the *yaka*, and, although he does not lose consciousness completely and can co-ordinate his movements, he does not in his normal condition retain any precise recollection of what he has said and has only a general idea of the movements he has performed. When the shaman is in this condition, another member of the community always follows him, often with hands upon his waist, ready to support him if he should fall. This often happens, the shaman falling backwards apparently unconscious; the condition does not, however, last long, the performer suddenly regaining his feet and continuing to dance. Trembling and shivering—which certainly occurs—is said to mark the entry of the *yaka* into the shaman. When the *yaka* leaves the shaman, the latter always falls back exhausted. Partial collapse during the ceremony does not necessarily indicate the departure of the *yaka*.

[1] See for these C. G. and B. Z. Seligman, *The Veddas*.

The invocations by which the Veddas call upon the *yaku* fall into two main groups: the first, distinguished by their simple form, are straightforward requests to the spirits of the dead to provide game and yams, or to show their loving kindness by partaking of the food provided by their descendants; the second group, embracing a considerable range of beliefs, are all longer and more complicated and often contain references to events which happened before the spiritual beings to whom they are addressed attained their full power as *yaku*. In nearly all the invocations animals and articles of food are not mentioned by their usual name, but described by periphrases. Only the simplest invocations have been selected as examples; many are very complicated and undoubtedly show Sinhalese influence, while the Veddas themselves either give them meanings quite different from those of the texts or have lost the significance entirely and are content to intone sounds almost or quite meaningless to them. The two following invocations (nos. 1 and 2)[1] to the Nae Yaku are from a forest and a village community respectively:

(1) 'Salutation! Salutation! Part of (our) relatives! Multitude of relatives! Having called (you) at the (right) time (we) gave (you) white sambā (rice); (you) ate, (you) drank. Do not think any wrong (of us); we also eat (and) drink.'

(2) 'Our father who went to that world come to this world. Take the rice. Come quickly to place (for us) the sambar deer, to place the spotted deer. Take this betel leaf. Come very quickly. Come quickly my mother's people. Take the rice, take the rock honey, take the betel leaf. To place the sambar deer, to place the spotted deer, come very quickly.'

The next (no. 16) is an invocation to Kande Yaka, and the fourth (no. 24) is sung when collecting rock-honey:

(16) 'King of the Hills, who continues to go from hill to hill, cause rain. (He is) the Wanniyā of the Chief place of the hill, who causes to fall the hoofs of excellent sambar deer, from foot (print) to foot (print), from Rērannē Damanē (the grass plain of teals) to Kandē Damanē (the grass plain of the hill).'

(24) 'Lady New Goddess, (you) must show (me) a bee-hive to-day. Having chopped (it out) I will hide (it) and go.'

As already stated, possession by the *yaka* is to be considered as due to a dissociation of personality; the traditional movements, words, and music all tend to bring about a more or less automatic condition which seems to be more easily induced the longer the practitioner has been shamanizing. Nor must the somewhat prolonged training of the shaman be forgotten. The present writers are convinced that there is no trickery about these ceremonies.

The shaman invoking a *yaka* holds or exhibits the special object (*e.g.*, the *aude*) proper to that *yaka*, and it seemed to be thought that the *yaka* first comes to this and then enters the body of the shaman. Each *yaka* has his traditional mode of behaviour. The shaman possessed by Kande Yaka goes through the pantomime of tracking and killing sambar deer; Bambura Yaka spears a wild boar and is wounded by it before he succeeds in killing it; Dola Yaka smokes out rock-bees' nests and collects the honey. These pantomimes are often extremely dramatic. The *yaku* examine the offerings set out for them, and, if favourable, express approval, some straightway prophesying

[1] The numbers preceding the invocations here given refer to those in ch. x. of the present writers' monograph, where all the invocations collected are printed and their meaning discussed.

good hunting (each in his own department); for, though Kande Yaka is patron of all food supplies, there are other *yaku* each of whom is separately invoked for help in getting yams, rock-honey, and tree-honey. The *yaku* have their methods of showing approval of the offerings; usually they scatter some of the food, sometimes they feed a favoured member of the community or place leaves dipped in the sacred food upon his chest, or, putting his arms on his shoulders, the shaman, gasping and quivering, delivers a message of good omen from the *yaku*. Sometimes a *yaka* asks why he has been called. Is it because any one is sick? And, if any one is brought forward, he will feed him or anoint him with sacred food which is thought to cure the sickness.

The manifest object of most ceremonies is to obtain food, but there is no suggestion that any of them are performed to increase the food supply, as are the *intichiuma* ceremonies of Australia. They are also performed to cure sickness, and it is in this connexion that the *Pata Yaku* ceremony may be mentioned. This ceremony is held for a pregnant woman, that she may have safe delivery. Masses of bast are used on all the various properties necessary for the *yaku*; hence the name, signifying 'bark *yaku*.' No reason could be given for any figure in the dance, nor was there any known tradition connected with it, as was the case with most other ceremonies. A noticeable feature of the dance was that it was necessary for the woman's father to take part in it and that he dropped an arrow on the ground several times and leapt over it. Certain Sinhalese demons known as the Pata Yaku personify disease, but these have no connexion with bast, and it is impossible to say why the Pata Yaku should have been taken over from the Sinhalese.

Apart from the tendency, already mentioned, of certain *yaku* to be associated with hill-tops, no definite locality is considered their home; on the other hand, they are certainly not thought of as being habitually in close proximity with the living. Magical practices play a very small part in the life of the Veddas; their charms we believe to have been taken over from the Sinhalese, and it certainly is no exaggeration to say that the Vedda conception of the supernatural is embodied in their *yaku* beliefs, to whose influence usual or unusual events are alike attributed. No creation traditions or myths referring to the natural features of the country could be discovered among the wilder groups of Veddas.

VEDIC RELIGION.—DEFINITIONS.—With a view to avoiding confusion, it is advisable to define at the outset the sense in which each of the three terms 'religion,' 'mythology,' and 'magic' (witchcraft) is to be employed in the present article. Religion means, on the one hand, the body of beliefs entertained by men regarding the divine or supernatural powers, and, on the other, that sense of dependence on those powers which is expressed by word in the form of prayer and praise, or by act in the form of ritual and sacrifice. Mythology means the body of myths or stories which give an account of gods and heroes, describing their origin and surroundings, their deeds and activities. Mythology is thus included in, though not coextensive with, that aspect of religion which is concerned with belief. Magic means that body of practices which, instead of seeking to gain the goodwill of divine, beneficent powers by acts of worship, is largely directed against demoniac and hostile agencies, and aims at affecting the course of things directly, without the intervention of deities. Magic as such, being essentially different from religion and representing a more primitive stage of belief, is excluded from the scope of this article except where, as is sometimes the case, it is inextricably mixed up with religious ritual.

1. MEANING AND IMPORTANCE OF THE SUBJECT.

By the general term 'Vedic religion' is here understood the religion of the Vedic period of Indian literature, which extends from some time after the Aryan immigration into the north-west of India, that is, from at least as early as B.C. 1300, down to about B.C. 200.

Vedic religion is peculiarly important as a branch of study. It is not only the earliest body of religious beliefs preserved in a literary form, but it also represents a more primitive phase of thought than is recorded in any other literature. It can, moreover, be traced step by step through the various stages of its development. It is, finally, the source of the religion of the modern Hindus, which can thus be historically followed up to its origin throughout a period of well over 3000 years. As a natural result of its value to the investigator of religious thought in general, the study of Vedic religion gave birth, in the latter half of the 19th cent., to the sciences of Comparative Mythology and Comparative Religion.

2. STAGES OF VEDIC RELIGION.

Three main successive stages may be clearly distinguished in the religion which is recorded in three corresponding phases of Vedic literature, viz. in (*a*) the Vedas, (*b*) the Brāhmaṇas together with the Sūtras, (*c*) the Upaniṣads.

(*a*) The religion of the four **Vedas**, regarded as a whole, is concerned with the worship of gods largely representing personifications of the powers of nature; the propitiation of demoniac beings comes only to a limited extent within its sphere.

The oldest and most important of the four Vedas, the Rigveda, from which considerable portions of the others are borrowed, is a collection of metrical hymns containing a large mythological element. These hymns are mainly invocations of the gods meant to accompany the oblation of Soma juice and the fire sacrifice of melted butter. The polytheism of this Veda assumes in its latest hymns a pantheistic colouring. Only a very few of its hymns are connected with witchcraft.

The hymns of the Atharvaveda, on the other hand, consist largely of spells meant for magical application, while their religion is pronounced pantheism.

The contents of the two other Vedas are entirely sacrificial in purpose. The Sāmaveda is almost exclusively composed of verses borrowed from the Rigveda to be applied in the ritual of the Soma sacrifice. The Yajurveda consists of ritual formulas, largely in prose, which, not being directly addressed to the gods, are practically of a magical type. The religious phase which it represents is, in spirit, identical with that of the Brāhmaṇas.

(*b*) The **Brāhmaṇas** are discursive theological treatises in prose dealing with the Vedic ritual; while the Sūtras, text-books composed in a very concise style, largely condense and systematize the contents of the Brāhmaṇas or add new material on domestic and everyday observances. The main difference in the mythology of the Brāhmaṇas, as compared with the Rigveda, is their recognition of a father-god as chief of the deities; while the general character of their religious belief is explicit pantheism. As to cult, they represent a ritual system which, in complexity of detail, far surpasses anything the world has elsewhere known.

(*c*) Though generally forming a part of the Brāhmaṇas, as a continuation of their speculative side, the **Upaniṣads** really represent a new religion

which is in virtual opposition to their ritual or practical side. This new, purely pantheistic religion is dominated by the doctrine of transmigration, a doctrine unknown to the Vedas, and only incipient in one of the Brāhmaṇas. A world-soul takes the place of the father-god of the Brāhmaṇas. Its nature is the main object of speculation; and the identity with it of the individual soul is the great fundamental doctrine of the Upaniṣads. The religious aim now is no longer the obtaining of earthly and heavenly happiness by sacrificing correctly to the gods, but the release, as a result of true knowledge, from re-birth by absorption in the world-soul.

3. Vedic Religious Beliefs.

The following account of Vedic beliefs, which are almost entirely mythological, starts from the statements of the Rigveda, to which the subsequent developments of the Vedic period are, if of sufficient importance, in each case added.

(*a*) Cosmogonic beliefs.—Judged by their fragmentary references to the origin of the world, the poets of the Rigveda usually regarded it as having been mechanically produced like a building, the material being wood, and heaven and earth being supported by posts. The agents in the construction are regularly either the gods in general or various individual gods.

The last book of the Rigveda, however, contains a few cosmogonic hymns which represent other views. One of these (x. 90), though among the latest of the period, preserves a very primitive belief. It accounts for the origin of the world from the body of a primeval giant, whom the gods sacrificed. His head became the sky, his navel the air, and his feet the earth; while from his various members the four castes were produced. This being, called Puruṣa, or man, and interpreted pantheistically in the hymn itself as 'all this, both what has become and what shall be,' reappears as the world-soul in the Atharvaveda and the Upaniṣads.

There are, again, two cosmogonic hymns of the Rigveda which explain the origin of the universe, philosophically rather than mythologically, as a kind of evolution of the existent (*sat*) from the non-existent (*asat*). In another hymn of the same type, the agency of a creator (*dhātā*) is, after the evolution of the ocean through heat (*tapas*), introduced to produce in succession sun and moon, heaven and earth, air and ether. There is also a hymn (x. 121) in which heaven and earth and the great waters are described as the creation of Hiraṇya-garbha, the golden germ, who is said to have arisen in the beginning, to be the one god above all gods, and is finally invoked as Prajāpati, lord of all created things. It is to be noted that in the cosmogonic hymns the waters are commonly thought of as coming into existence first. In the Atharvaveda the all-god appears as a creator under several new names, especially as Skambha, 'support'; also as Prāṇa, 'breath'; Kāma, 'desire,' and others.

The cosmogony of the Brāhmaṇas requires the agency of the creator Prajāpati, who is not, however, always the starting-point. Sometimes the waters come first: on them floats the golden germ (*hiraṇya-garbha*), from which arises the spirit that produces the universe. This contradiction is due to the theories of evolution and of creation being combined. One cosmogonic myth of the Brāhmaṇas describes how the submerged earth was raised by a boar. The latter in post-Vedic mythology developed into an *avatār* of Viṣṇu.

(*b*) Theogonic beliefs.—Heaven and earth are ordinarily regarded in the Rigveda as the parents of the gods in general. It is only very rarely that other gods are spoken of as parents of the rest; thus Dawn is once said to be the mother of the gods, and both Brahmaṇaspati and Soma are mentioned as their father. The cosmogonic hymns connect the origin of the gods chiefly with the element of water; but one of them describes the gods as born after the creation of the universe.

(*c*) Origin of man.—The Vedic beliefs regarding the origin of the human race were somewhat fluctuating; the ultimate source of man was, however, always thought to be divine. Agni, the god of fire, is at least once said to have begotten the race of men, and certain families of seers are regarded as independently descended through their founders from the gods. Usually, however, the human race is traced to a first man, either Manu or Yama, both of whom are sons of Vivasvat, a solar deity.

4. The Vedic Gods.

The Vedic Indian believed in the existence of a large number of supernatural beings, varying in character and power. They comprise two main groups: on the one hand, gods who are almost exclusively benevolent and receive worship; on the other hand, demons who are hostile and whose operations have to be counteracted by the help of the gods or by ritual expedients. The divine powers, again, may be classed as higher gods, whose power pervades the world and controls the great phenomena of nature; and as lesser divinities, whose activities are restricted to a limited sphere or are conducted on a smaller scale: for instance, tutelary deities and elves. The divine nature is further shared by men of days gone by: ancient heroes who are associated with the deeds of the gods, and ancestors who live with the gods and receive worship like them. Finally, at the bottom of the scale, we find many inanimate objects and implements which are deified, being invoked and worshipped like divine beings.

A. *The Higher Gods.*

The gods are usually stated in the Rigveda and Atharvaveda, as well as the Brāhmaṇas, to be thirty-three in number; but there are occasional deviations or inconsistencies in regard to this belief. Troops of deities, such as the storm-gods, are, of course, not regarded as included in this number. The thirty-three are, in the Rigveda, divided into three groups of eleven, distributed in earth, air, and heaven, the three divisions of the universe. These three groups, now containing eight, eleven, and twelve deities respectively, appear in the Brāhmaṇas under the name of Vasus, Rudras, and Ādityas.

Gods originally mortal.—The gods, as has already been shown, were believed to have had a beginning. But they were not thought to have all come into being at the same time; for the Rigveda occasionally refers to earlier gods, and the Atharvaveda speaks of ten gods as having existed before the rest. Certain deities are, moreover, described as the offspring of others. The Atharvaveda and the Brāhmaṇas also expressly state that the gods were originally mortal, adding that they overcame death by the practice of austerity. The same thing is implied in the Rigveda, where the gods are said to have acquired immortality by drinking Soma or by receiving it as a gift from Agni and Savitṛ. In the post-Vedic view, the immortality of the gods was limited to a cosmic age.

Their physical attributes.—The gods of the Veda are anthropomorphic in appearance. The parts of their bodies, which are frequently mentioned, are in many cases, however, little more than figurative

illustrations of the phenomena of nature represented by the deity. Thus the arms of the sun are nothing more than his rays; and the tongue and limbs of Agni merely denote his flames. Some of the gods appear equipped as warriors, especially Indra; others are described as priests, especially Agni and Bṛhaspati. All of them drive through the air in luminous cars, drawn chiefly by steeds, but sometimes by other animals.

Their food.—The favourite food of men is also that of the gods, consisting of milk, butter, grain, and the flesh of sheep, goats, and cattle. It is offered to them in the sacrifice; this is either conveyed to them in heaven by the god of fire, or they come in their cars to partake of it on the litter of grass prepared for their reception. Their favourite beverage is the exhilarating juice of the Soma plant.

Their abode.—The home of the gods is described as heaven, the third heaven, or the highest step of Viṣṇu (the zenith), where, cheered by draughts of Soma, they live a life of bliss.

Their attributes.—The most prominent characteristic of the Vedic gods is power; for they are constantly described as 'great' and 'mighty.' They regulate the order of nature and vanquish the great powers of evil. They hold sway over all creatures: no one can thwart their ordinances or live beyond the time they appoint; and the fulfilment of wishes is dependent on them. Their omniscience, which is restricted within narrow limits, is seldom referred to. It is an attribute which is emphasized in the case of Varuṇa only. The Vedic gods are benevolent beings who bestow prosperity on mankind, the only one in whom injurious traits appear being Rudra. They are, moreover, moral according to the standard of an early stage of civilization. They are described as 'true' and 'not deceitful,' being friends and protectors of the honest and righteous, but punishing sin and guilt. They are not, however, above employing craft against the hostile, and occasionally practise deceit even without the justification of a good end.

Since, in most cases, the Vedic gods have not yet become dissociated from the physical phenomena which they represent, their figures are indefinite in outline and deficient in individuality. Having many features, such as power, brilliance, benevolence and wisdom in common with others, each god exhibits very few distinctive attributes. This vagueness is further increased by the practice of invoking deities in pairs—a practice making both gods share characteristics properly belonging to one alone. When nearly every power can thus be attributed to every god, the identification of one deity with another becomes easy. There are, in fact, several such identifications in the Rigveda. The idea is even found in more than one late passage that various deities are but different forms of a single divine being. This idea, however, never developed into monotheism, for none of the regular sacrifices in the Vedic period were offered to a single god. Finally, in other late hymns of the Rigveda, we find the deities Aditi and Prajāpati identified not only with all the gods, but with nature as well. This brings us to the beginning of that pantheism which became characteristic of later Indian thought.

Henotheism.—The practice of invoking individual gods as the highest, frequent even in the older parts of the Rigveda, gave rise to Max Müller's theory of the 'henotheism' or 'kathenotheism' of that Veda, which he defines as 'the belief in individual gods alternately regarded as the highest,' the god addressed being for the moment treated as an independent and supreme deity, alone present to the mind. Criticism has, however, shown that we have here only to do with an exaggerated form of praise which does not amount to a distinct type of religious thought.

The Vedic gods may most conveniently be classified as deities of heaven, air, and earth, according to the threefold division suggested by the Rigveda itself.

1. Celestial gods.—The historically oldest among the gods of the sky, as going back to the Indo-European period and identical with the Greek Zeus, is Dyaus, Heaven. The personification here hardly went beyond the notion of paternity (Dyauṣ pitar = Ζεῦ πάτερ, Jūp-piter). Dyaus is generally coupled with Pṛthivī, Earth, when the two are celebrated as universal parents. He is once described as armed with a bolt, and, in another passage, as smiling through the clouds in allusion to the lightening sky.

Another and much more prominent deity of the sky is Varuṇa, the greatest of the Vedic gods beside Indra. He, too, dates from an earlier period, for in name he is probably identical with the Greek Οὐρανός, and in character he is allied to the Avestic Ahura Mazda. Varuṇa is the chief upholder of physical and moral order (*ṛta*). By his ordinance heaven and earth are held apart; he regulates the course of sun, moon, and stars; he causes the rivers to flow and the clouds to fertilize the earth with rain. Omniscient, he witnesses men's truth and falsehood. He is angry with sinners, whom he severely punishes, binding them with his fetters. But he is gracious to the penitent, releasing men not only from their own sins, but from those committed by their fathers. The prayer for forgiveness of guilt is characteristic of the Varuṇa hymns, which in general are the most exalted and ethical in the Veda. With the development of Prajāpati as creator and supreme god in the later Vedas, the importance of Varuṇa waned, till in the post-Vedic period he retained only the dominion of the waters as god of the sea.

Five gods represent various aspects of solar activity. The oldest of these, Mitra, the 'friend,' probably a personification of the sun's beneficent power, is an inheritance from the Indo-Iranian period, being identical with the Persian sun-god Mithra, whose cult became so widely diffused in the Roman empire during the 3rd and 4th centuries A.D. In the Rigveda he has almost entirely lost his individuality, and is hardly ever invoked except in association with Varuṇa.

Sūrya, etymologically allied to the Greek Ἥλιος is the most concrete of the solar deities, this being the regular name of the luminary. He is the husband of Dawn. His car, often referred to, is generally described as drawn by seven steeds. He is the soul of all that moves or is fixed, all creatures depending on him. He prolongs life, and drives away disease. His eye and his all-seeing power are often spoken of; and he is besought to declare men sinless to Mitra and Varuṇa.

Savitṛ, the 'stimulator,' represents the quickening activity of the sun. Bestowing immortality on the gods as well as length of life on man, he also conducts the spirits of the dead to where the righteous dwell. To him is addressed the most famous stanza of the Rigveda (iii. 62. 10), with which he was in ancient times invoked at the beginning of Vedic study, and which is still repeated by every orthodox Brāhman in his morning prayers. It is called the *Sāvitrī* from the deity, or the *Gāyatrī* from the metre:

> 'May we attain that excellent
> Glory of Savitṛ the god,
> That he may stimulate our thoughts.'

Pūṣan, the 'prosperer,' personifying probably the bountiful power of the sun, appears chiefly as a pastoral deity, who protects cattle and guides

them with his goad. He is a guardian of paths; and, knowing the ways of heaven, he conducts the dead to the abode of the fathers.

Though occupying quite a subordinate position in the Rigveda, and less frequently invoked than the four gods just mentioned, Viṣṇu is historically the most important of the solar deities; for he has become one of the two great gods of modern Hinduism. His three strides, typifying doubtless the course of the sun through the three divisions of the universe, constitute the central feature in his mythology. His highest step is heaven, the abode of the gods. He is frequently said to have taken his three strides for the benefit of man. This general trait is illustrated by the Brāhmaṇa myth in which Viṣṇu assumes the form of a dwarf as an artifice to recover the earth, now in possession of demons, by taking his three strides. Viṣṇu's characteristic benevolence was in post-Vedic mythology further developed in the doctrine of his *avatārs* ('descents' to earth), or incarnations for the good of humanity.

Uṣas (cognate to 'Ηώς and *Aurora*), goddess of dawn, the daughter of Dyaus, is the only female deity invoked with frequency in the Rigveda, and is the most graceful creation of the Vedic seers. Being a poetical rather than a religious figure, she did not, like the other gods, receive a share in the Soma offering.

The **Aśvins** ('lords of steeds'), twin gods of morning, sons of Dyaus, eternally young and handsome, are addressed in many hymns. They very frequently receive the epithet *nāsatya*, 'true.' Uṣas is born at the yoking of their car, on which their spouse Sūryā, daughter of the sun, accompanies them. They are characteristically succouring deities. Delivering from distress in general and from shipwreck in particular, they are also divine physicians. They have several traits in common with the two famous horsemen of Greek mythology, the Διόσκουροι, sons of Zeus and brothers of Helen. The origin of these twin deities is obscure; it is perhaps most likely that they represent either the twilight, half dark, half light, or the morning and evening star.

2. ATMOSPHERIC GODS.—Indra is the dominant deity in the aerial sphere. While Varuṇa is the great moral ruler, Indra is the mighty warrior. Indra is, indeed, the favourite and national god of the Vedic Indian. An indication of this is the fact that more than one-fourth of the Rigveda is devoted to his praise. He is a mythological creation of an earlier period; for Indra is a demon in the Avesta. Though he is more anthropomorphic than any other Vedic god, his original character is still tolerably clear. He is primarily the thunder-god, and his conquest of the demon Vṛtra is the central feature of the mythology which surrounds him. Hence *Vṛtra-han*, 'slayer of Vṛtra,' is his chief and specific epithet. Armed with his bolt (*vajra*), elated by copious draughts of Soma, and aided by the Maruts, or storm-gods, Indra engages in the fray. The fight is terrific; for heaven and earth tremble with fear as the conflict rages. The constant repetition of the combat corresponds to the perpetual renewal of the phenomena of the thunderstorm which underlie the myth. The result of the victory is the release of the waters for man and the recovery of the light of the sun. Indra thus became a god of battle whose aid is constantly invoked in conflicts with earthly foes. He is often described as the protector of the Aryan colour, and vanquisher of the black race. One of his commonest epithets is *śakra*, the 'mighty one' (which in the Pāli form of Sakka became his regular name in Buddhist literature). Certain immoral traits appear in Indra's character. He occasionally indulges in acts of capricious violence, such as slaying his father or shattering the car of Dawn. He is greatly addicted to Soma, which he drinks in enormous quantities to stimulate him in his warlike exploits. One entire hymn of the Rigveda (x. 119) consists of a monologue in which Indra, inebriated with Soma, boasts of his greatness and power. While Varuṇa, after the period of the Rigveda, gradually sank into obscurity, Indra in the Brāhmaṇas became the chief of the Indian heaven (*svarga*), and even maintained this position in the period of the Purāṇas, though, of course, subordinate to the trinity Brahmā-Viṣṇu-Śiva.

Three of the less important deities of the air are connected with lightning. **Trita**, a somewhat obscure god with the epithet *āptya*, 'watery,' mentioned only in detached verses of the Rigveda, seems to represent the 'third' (*tritas* = Greek τρίτος) form of fire. He goes back to the Indo-Iranian period, both his name and his epithet occurring in the Avesta. In the Rigveda he appears as a presser of Soma, who aids Indra in slaying Vṛtra and the three-headed demon Viśvarūpa, or performs the latter exploit himself. He kindles the celestial fire, and even appears as a form of fire. His home is hidden and remote. As almost identical in origin with Indra, he was ousted by the latter at an early period. In the Brāhmaṇas he appears as one of three sons of Agni, the other two being Ekata and Dvita. In the epic poetry Trita survives only as the name of a human seer.

Apāṃ napāt, 'son of waters,' also goes back to the Indo-Iranian period. Rarely mentioned in the Rigveda, he is described as clothed in lightning and shining without fuel in the waters. He thus represents the lightning form of fire as produced from the thundercloud.

Mātariśvan is referred to only in scattered verses of the Rigveda as a divine being who (like the Greek Prometheus) brought down the hidden fire from heaven to earth. He was originally, in all likelihood, conceived as an aerial form of Agni, with whom he is sometimes actually identified. His character then underwent a transformation; for in the later Vedas, the Brāhmaṇas, and the post-Vedic literature he appears as a wind-god.

It is somewhat remarkable that **Rudra**, the early form of the post-Vedic Śiva, who in the Rigveda occupies a very subordinate position, like that of Viṣṇu, should have risen to parallel pre-eminence with Viṣṇu in a later age. Rudra is usually described as armed with bow and arrows, but sometimes he appears with a thunderbolt and lightning shaft. He is fierce and destructive like a wild beast, being 'the ruddy boar of heaven.' The most striking feature of the hymns addressed to him is fear of his terrible shafts and deprecation of his wrath. For he slays men and cattle, and assails with disease. He is, indeed, the one malignant deity of the Vedas. His malevolence, however, unlike that of a demon, is not the only side of his character. For he is a healer as well as a destroyer, being even lauded as the greatest of physicians. Thus he is often besought not only to preserve from calamity, but to bestow welfare on man and beast. The euphemistic epithet **Śiva**, 'auspicious,' which begins to be applied to him in the Rigveda, grows more frequent in the later Vedas, till it finally becomes his regular name in post-Vedic mythology. With the increasing use of this epithet, the malevolence of Rudra becomes more pronounced in the later Vedas. The White Yajurveda, which adds various disgraceful attributes, furnishes the transition to the terrific and repulsive Śiva of Hindu mythology. The exact basis of Rudra is somewhat obscure; but the inference from the evidence of the Rigveda seems to be justified that he originally represented the destructive agency of the thunderstorm. His un-

canny and baleful traits have, however, also been explained as starting from the conception of a deity of mountain and forest whence storm and disease attack man and beast.

The sons of Rudra and Pṛśni (the 'mottled' cloud-cow) are the Maruts, or storm-gods, also often called Rudras, a group of thrice seven or thrice sixty deities, the constant allies of Indra in his conflicts. They are described as like fires at their birth, and as 'born from the laughter of lightning.' They are young warriors, armed with spears and battle-axes, wearing helmets and decked with golden ornaments. Their headlong course is often graphically depicted. They ride on golden cars which gleam with lightning: with their fellies they rend the mountains and shatter the lordly trees of the forest. They share to some extent the destructive as well as the beneficent traits of their father Rudra. Their lightning-bolt slays men and kine. But they also bring healing remedies, apparently the rains with which they fertilize the earth.

The god of wind is not a prominent deity in the Rigveda. Under the more anthropomorphic form of Vāyu he is chiefly associated with Indra. As Vāta (the ordinary name of wind), he is described in a more concrete manner (often in connexion with the verb *vā*, 'to blow,' from which the word is derived), being coupled only with the less anthropomorphic god Parjanya.

A personification of the rain-cloud is Parjanya, son of Dyaus. He is not a prominent deity, being invoked in only three hymns of the Rigveda, which, however, describe his activity in the rainstorm very vividly. He quickens the earth with rain, causing abundant vegetation to spring up. He also bestows fertility on the animal world. He thus comes to be spoken of as 'our divine father.'

The waters, Āpaḥ, are praised as divine powers in four hymns of the Rigveda. They are celestial, abiding in the home of the gods. The aerial waters are the mothers of one of the forms of Agni, Apām napāt, son of waters. But, as flowing in channels and having the sea for their goal, the waters are also terrestrial (cf. 3). They are young wives, mothers, goddesses who bestow boons and come to the sacrifice. They not only bear away defilement, but cleanse from moral guilt, the sins of violence, cursing, and lying. They also grant remedies, healing, long life, and immortality.

3. Terrestrial deities.—Rivers are not infrequently personified and invoked in the Rigveda. Thus the Sindhu (Indus) is celebrated as a goddess in one hymn, and the Vipāś (Bias) and Śutudrī (Sutlej), sister streams of the Panjāb, in another. The most important and oftenest lauded is, however, the Sarasvatī. Though the personification goes much further here than in the case of other streams, the connexion of the goddess with the river is never lost sight of in the Rigveda. In the Brāhmaṇas, Sarasvatī has become identified with the goddess of speech, and in Hindu mythology she appears further modified as the goddess of eloquence and wisdom, invoked as a Muse, and regarded as the wife of Brahmā.

Earth, or Pṛthivī, the broad, nearly always associated with Dyaus, is often spoken of as a mother. The personification is rudimentary, the attributes of the goddess being chiefly those of the physical earth.

By far the most important of the terrestrial deities is Agni, god of fire. Next to Indra, he is the most frequently invoked of the Vedic gods, being celebrated in about one-fifth of the hymns of the Rigveda. It is only natural that the personification of the sacrificial fire, the centre of the Vedic ritual, should engross the thoughts of the poets to such an extent. *Agni-s* (Lat. *igni-s*) being also the ordinary name for fire, the anthropomorphism has not proceeded far. The bodily parts of the god have an unmistakable connexion with the various aspects of the sacrificial fire. Thus Agni is called 'butter-backed,' 'butter-faced,' and 'butter-haired,' with reference to the oblation of *ghī* (*ghṛta*) cast on the flames. His teeth, jaws, and tongues are associated with the action of burning. Agni is borne on a brilliant car, drawn by two or more steeds, which he yokes to bring the gods, for he is the charioteer of the sacrifice.

Beyond his sacrificial activities, little is said about the deeds of Agni. It is otherwise mainly his various births, forms, and abodes that occupy the thoughts of the Vedic poets. Agni is usually called the son of Dyaus and Pṛthivī, sometimes also the offspring of Tvaṣṭṛ and the waters. But owing to the daily production of Agni from the two firesticks, they, too, are his parents. He is then a newborn infant, also called 'son of strength' because of the powerful friction required to kindle the flame. He wakes at dawn, for the fire is lit every morning. He is thus the youngest of the gods; but he is also old, having conducted the first sacrifice.

As not only terrestrial, but sprung from the aerial waters and having been brought from heaven, Agni is often spoken of as having a triple character. This threefold Agni is the earliest Indian trinity, probably the prototype not only of the later Rigvedic triad of Sun, Wind, Fire, connected with the three divisions of the universe, but also of the triad Sun, Indra, Fire, which, though not Rigvedic, is still ancient. There may be a historical connexion between this triad and the conception of the later Hindu trinity of Brahmā-Viṣṇu-Śiva. This triad of fires may, further, have suggested, and would explain, the division of a single sacrificial fire into the three which form an essential feature in the cult of the Brāhmaṇas.

As kindled in innumerable dwellings, Agni is also said to have many births. He assumes various divine forms and has many names; in him are comprehended all the gods, whom he surrounds as a felly the spokes. Though scattered in many places, he is one and the same king. It was probably from such speculations on the nature of Agni that an advance was made to the conception of a unity pervading the many manifestations of the divine which has been noted above (p. 603a).

As the deity most intimately associated with the everyday life of man, Agni is spoken of as an immortal who has taken up his abode among mortals in human dwellings, and is constantly called a 'guest' and 'lord of the house.' Being the conductor of the sacrifice as well as the summoner of the gods, he is very frequently described as a 'messenger,' who moves between heaven and earth. Agni is, however, most characteristically called a 'priest,' usually by the generic terms *ṛtvij* and *vipra*; or specifically 'domestic priest' (*purohita*), oftenest of all 'invoker' or 'chief priest' (*hotṛ*). He is, in fact, the great priest among the Vedic gods, as Indra is the great warrior. Agni is a mighty benefactor of his worshippers, whose enemies he consumes. The benefits which he confers are chiefly domestic welfare and general prosperity, while those which Indra grants are mostly the rewards of victory.

Agni is frequently spoken of in the Rigveda as a 'goblin-slayer,' a trait surviving from what is perhaps the oldest phase of the cult of fire as warding off the attack of evil spirits.

Since the Soma sacrifice forms, by the side of fire-worship, the other main feature in the ritual of the Rigveda, the personification of the juice of

the Soma plant is naturally one of its most prominent deities. Judged by the number of hymns addressed to him, Soma is third in importance among the Vedic gods, coming next to Agni from this point of view. Since the plant and the juice are constantly before the eyes of the priests as they sing the praises of the god, the personification is vague. The imagination of the poets dwells chiefly on the processes of pressing and straining, which it overlays with chaotic imagery and mystical fancies of almost infinite variety.

As the most important of herbs, Soma is spoken of as 'lord of plants' or as their king, being also designated 'lord of the forest.' There are many references to Soma growing on the mountains. Heaven, however, is regarded as its true and original home; and the myth of its having been brought down to earth by an eagle (*śyena*) is often alluded to.

The mental stimulation produced by drinking Soma is expressed by one of the poets of the Rigveda with the words: 'We have drunk Soma, we have become immortal, we have entered into light, we have known the gods.' Its exhilarating power is, however, dwelt upon chiefly in connexion with Indra, whom it inspires in his mighty conflicts with the aerial demons. Soma thus came to be regarded as a divine drink, which bestowed immortality on the gods, being called *amṛta* (allied to Greek *ἀμβροσία*), the 'immortal' draught. Hence the god Soma places his worshipper in the imperishable world of eternal light and glory, making him immortal where Yama dwells. Healing power is similarly attributed to Soma. The juice is medicine for the ailing man, and the god heals the sick, making the blind to see and the lame to walk.

In some of the latest hymns of the Rigveda, Soma begins to be somewhat obscurely identified with the moon. In the Atharvaveda and the Yajurveda this identification is explicit in several passages. It is already a commonplace in the Brāhmaṇas, which explain the waning of the moon as due to the gods and fathers consuming the ambrosia of which it consists. One of the Upaniṣads, moreover, states that the moon is king Soma, the food of the gods, and is drunk up by them. In post-Vedic literature, finally, Soma is a regular name of the moon. This somewhat remarkable coalescence of Soma with the moon must have started from the exaggerated terms in which the poets of the Rigveda describe the celestial nature and brilliance of Soma. It was doubtless furthered by the imagery in which the poets of the Rigveda indulged. Thus Soma is spoken of as swelling in the waters (with which it was mixed), and Soma in the bowls is once even compared to the moon in the waters. Soma is often called *Indu*, or 'drop.' This word shared the fate of Soma, also becoming a regular name of the moon in the post-Vedic period.

Soma must already have been an important feature in both the mythology and the cult of the Indo-Iranian period; for the Avestan Haoma shows many points of agreement, in both directions, with the Soma of the Rigveda.

4. Abstract deities.—One result of the advance of thought, during the period of the Rigveda, from the concrete towards the abstract was the creation of abstract deities. Of the two classes which may be distinguished, the earlier and more numerous one seems to have started from epithets which were applicable to one or more older deities, but which came to acquire an independent value, as the want of a god exercising the particular activity in question began to be felt. When the type was once established, the creation of direct abstractions of this kind became possible. We have here names denoting either an agent (formed with the suffix *-tṛ* or *-tar*, the Lat. and Gr. *-tor*, *-ter*), such as Dhātṛ, 'creator,' or an attribute, such as Prajāpati, 'lord of creatures.' The *agent gods* are nearly all of rare occurrence, appearing for the most part in the latest book of the Rigveda. Thus Dhātṛ, an epithet of Indra and Viśvakarman, appears also as an independent deity who creates heaven and earth, sun and moon. In the post-Vedic period Dhātṛ has become one of the regular names of the creator and preserver of the world. Of rarer occurrence are Vidhātṛ, the 'disposer,' Dhartṛ, the 'supporter,' Trātṛ, the 'protector,' and Netṛ, the 'leader.' The only agent god mentioned with any frequency in the Rigveda is Tvaṣṭṛ, the 'fashioner' or 'artificer,' though no hymn is addressed to him. He is the most skilful of workmen, having among other things fashioned the bolt of Indra, and a new drinking-cup for the gods. He shapes the form of beings and presides over generation. He is a guardian of Soma, which is called the 'mead of Tvaṣṭṛ,' and Indra drinks it in his house. He is the father of Saraṇyū, wife of Vivasvat and mother of the primeval twins Yama and Yamī. The origin of this deity is obscure. He may in the beginning have represented the creative activity of the sun; having then, because of his name, become the centre of attraction for myths illustrative of creative skill, he finally came to fill the place of a divine artificer in the Vedic pantheon. Oldenberg thinks that Tvaṣṭṛ, the 'artificer,' was originally a direct abstraction of artistic skill. He regards the solar deity Savitṛ, the 'stimulator,' whose name is similarly formed, as from the outset an abstraction of this type.

There are a few other abstract deities whose names were originally epithets of older gods. They are of rare and late occurrence in the Rigveda, their appellations being mostly compound in form and representing the supreme god who was being evolved at the end of the Rigvedic period. The historically most important among these is Prajāpati, 'lord of creatures.' Originally an epithet of such gods as Savitṛ and Soma, the name is mentioned in a late verse of the last book of the Rigveda as that of a distinct deity in the character of a creator. Prajāpati is often in the Atharvaveda and the White Yajurveda, and regularly in the Brāhmaṇas, recognized as the chief and father of the gods. In the Sūtras he is identified with Brahmā, his successor in the post-Vedic age. Similarly, the epithet Viśvakarman, 'all-creating,' appears as the name of an independent deity, to whom two hymns of the last book of the Rigveda are addressed. In the Brāhmaṇas, Viśvakarman is expressly identified with the creator Prajāpati, while in post-Vedic mythology he appears, doubtless owing to the name, as the artificer of the gods (like Tvaṣṭṛ in the Rigveda). Hiraṇya-garbha, the 'golden germ,' once occurs in the Rigveda as the supreme god, described as the 'one lord of all that exists.' In the Yajurveda he is expressly identified with Prajāpati, and in the later literature his name appears chiefly as a designation of Brahmā. In one curious instance it is possible to watch the genesis of an abstract deity of this type. The refrain of a late hymn of the Rigveda refers to the unknown creator with the interrogative pronoun *ka*: 'What god should we with sacrifices worship?' This led to the word Ka being used, in the later Vedic literature, as an independent name of the supreme god. In the Atharvaveda Rohita, 'the red one' (whose female form is Rohiṇī), has become a distinct deity in the capacity of a creator, the name having originally been an epithet of the sun. The only abstract deity of this type occurring in the oldest as well as the

latest parts of the Rigveda is Bṛhaspati, 'lord of the spell,' of whom Brahmaṇaspati is a frequent doublet. He has been regarded by Roth and other Vedic scholars as a direct personification of devotion (*brahma*). To the present writer it seems more likely that he is only an indirect deification of the sacrificial aspect of Agni, with whom he is often identified. As the companion and ally of Indra, Bṛhaspati has been drawn into the myth of the release of the cows, which he is frequently described as delivering from the demon Vala. His most prominent characteristic is, however, his priesthood. As the divine *brahmā* priest, he seems to have been the prototype of the god Brahmā, chief of the later Hindu trinity. The name Bṛhaspati itself survived in post-Vedic mythology as the designation of a sage, teacher of the gods and regent of the planet Jupiter.

The second and smaller class of abstract deities comprises personifications of abstract nouns. There are seven or eight of these occurring in the last book of the Rigveda. Two hymns are addressed to *Manyu*, 'wrath,' and one to *Śraddhā*, 'faith.' *Anumati*, 'favour' (of the gods), *Aramati*, 'devotion,' *Sūnṛtā*, 'bounty,' *Asunīti*, 'spirit-life,' and *Nirṛti*, 'decease,' occur in only a few isolated passages. These abstractions become commoner in the later Vedas. Thus *Kāma*, 'desire,' first appears in the Atharvaveda, where the arrows with which he pierces hearts are already referred to; he becomes in post-Vedic mythology the well-known flower-arrowed god of love. In the same Veda *Kāla*, 'time,' and *Skambha*, 'support,' are cosmogonic powers, while *Prāṇa*, 'breath,' and some other analogous abstractions are identified with Prajāpati. *Śrī*, as a personification of beauty or fortune, does not begin to appear till the Brāhmaṇa period.

A purely abstract deity, often incidentally celebrated throughout the Rigveda, is Aditi, 'liberation,' 'freedom' (literally 'un-binding': *a-diti*), whose main characteristic is the power of delivering from the bonds of physical suffering and moral guilt. She, however, occupies a unique position among the abstract deities owing to the peculiar way in which the personification seems to have come about. She is the mother of the small group of deities called Ādityas, often styled 'sons of Aditi.' This expression at first most probably meant nothing more than 'sons of liberation,' according to an idiom common in the Rigveda and elsewhere. The word was then personified, with the curious result that the mother is mythologically younger than some at least of her sons, who (*e.g.* Mitra) date from the Indo-Iranian period. The goddess Diti, mentioned only three times in the Rigveda, probably came into being as an antithesis to Aditi, with whom she is twice mentioned there and several times in the later Vedas. The Atharvaveda speaks of her sons, the Daityas, who in post-Vedic mythology are demons, enemies of the gods.

5. GODDESSES, in general, play an insignificant part in the Vedas, taking no share in the government of the world. The only one of importance is Uṣas (p. 604[a]). Next comes Sarasvatī, who, however, ranks with only the least prominent of the male deities. Very few others are celebrated in even as much as one entire hymn. Such are *Pṛthivī*, Earth (p. 605[a]); *Rātrī*, Night, the sister of Dawn, conceived not as dark, but bright with stars; *Araṇyānī*, goddess of the forest; and *Vāc*, goddess of speech. Others are only sporadically mentioned. Such are *Puraṃdhi* and *Dhiṣaṇā*, goddesses of plenty. Less often referred to are *Rākā* and *Sinīvālī*, spoken of as bountiful goddesses; in later Vedic texts they appear as the presiding deities of full and new moon respectively. *Kuhū* is also mentioned in these texts as a personification of the new moon. *Iḷā* is a sacrificial goddess, the personification of the oblation of milk and butter. With her is also mentioned *Mahī* or *Bhāratī*, another sacrificial deity. The wives of the great gods are still more insignificant, being mere names formed from those of their consorts, altogether lacking in individuality. Thus *Agnāyī*, *Indrāṇī*, *Varuṇānī* are the names of the spouses of Agni, Indra, and Varuṇa respectively. *Rudrāṇī*, as the wife of Rudra, first appears in the Sūtras. The 'wives of the gods' (*devānām patnīs*), occasionally mentioned as a group in the Rigveda, have a special place assigned to them, apart from the gods, in the cult of the Brāhmaṇas.

6. DUAL DIVINITIES. — A peculiar feature of Vedic religion is the invocation of pairs of deities whose names are combined as dual compounds. About a dozen such pairs are celebrated in entire hymns, and about half a dozen more in detached verses of the Rigveda. By far the largest number of hymns is addressed to the couple Mitra-Varuṇa, though the names most frequently compounded in the dual are Heaven and Earth (*dyāvāpṛthivī*). Most likely the latter pair, having been associated as universal parents from the Indo-European period onwards, furnished the analogy for this dual type. They are also often called the Two Worlds (*rodasī*) in the Rigveda.

7. GROUPS OF DEITIES.—Among the creations of Vedic mythology we also find a few more or less definite groups of deities, generally associated with some particular god. The Maruts who, as we have seen (p. 605[a]), attend on Indra, form the most numerous group. Under the name of Rudras, they are also occasionally associated with their father Rudra. The smaller group of the Ādityas, of whom Varuṇa is the chief, are constantly mentioned in company with their mother Aditi. Their number in the Rigveda is stated to be seven or, with the addition of *Mārtāṇḍa*, eight; while in the Brāhmaṇas and later it is regularly twelve. One passage of the Rigveda enumerates six of them: Mitra, Aryaman, Bhaga, Varuṇa, Dakṣa, Aṃśa; Sūrya was probably regarded as the seventh. A much less important group, without individual names or definite number in the Vedas, is that of the Vasus, whose leader is, in the Rigveda, generally Indra, but in later Vedic texts generally Agni. In the Brāhmaṇas their number is stated to be eight. There are, finally, the Viśvedevās, or all-gods, who are invoked in many hymns. It is an artificial sacrificial group, intended to include the whole pantheon, and thus to ensure the omission of no deity when all were meant to be invoked. But in spite of its name, this comprehensive group was, strange to say, sometimes conceived as a narrower one, associated with others like the Vasus and Ādityas.

B. *LESSER DIVINITIES.*

1. ELVES, GENII. — Besides the higher gods already described, a number of lesser divine powers are known to the Rigveda. The most prominent of these are the Ṛbhus, a deft-handed trio who by their marvellous skill acquired the rank of deities. Among their five main feats of dexterity, the greatest consisted in transforming the bowl of Tvaṣṭṛ into four shining cups. The bowl and the cups have been variously interpreted as the moon with its four phases or the year with its seasons. The Ṛbhus further exhibited their skill in renewing the youth of their parents, by whom Heaven and Earth seem to have been meant. The myth of the Ṛbhus having rested for twelve days in the house of the sun is probably an allusion to the intercalation of twelve days at the winter solstice, so as to bring the lunar year of 354 days into harmony with the solar year of nearly 366 days.

Occasional mention is made in the Rigveda of an **Apsaras** ('moving in the waters'), a celestial water-nymph, the spouse of a corresponding genius named **Gandharva**. Occasionally more Apsarases than one are spoken of. In the Atharvaveda and later, the Apsarases form a class, regularly associated with the Gandharvas; and though they are still connected with the waters and clouds, their sphere is here, as well as in the Yajurveda, extended to the earth, where they haunt the different varieties of fig-trees called Nyagrodha, Aśvattha, Udumbara, and Plakṣa, in which the music of their cymbals and lutes is heard. In the Brāhmaṇas they appear as nymphs of great beauty, devoted to song, dance, and play. Several individual names of Apsarases are mentioned in the later Vedas, but the only one occurring in the Rigveda is that of *Urvaśī*. In an obscure hymn (x. 95) she engages in a dialogue with her earthly spouse *Purūravas*, whom she has forsaken. The myth of their alliance is told more fully in one of the Brāhmaṇas. *Gandharva* is, in the Rigveda, a single being (like the Gandarewa of the Avesta), who dwells in the aerial sphere, guards the celestial Soma, and is (as in the Avesta) connected with the waters. In the later Vedas the Gandharvas form a class associated with the Apsarases in a stereotyped manner, and are brought into relation with marriage and with wedding ceremonies. In the post-Vedic period the Gandharvas have become celestial singers.

2. TUTELARY DEITIES.—There are a few divinities of the tutelary order, guardians watching over the welfare of house or field. One of these is *Vāstospati*, 'lord of the dwelling,' rarely mentioned in the Rigveda, where he is invoked to grant a favourable entry, to remove disease, and to bestow protection and prosperity. The Sūtras prescribe that Vāstospati should be propitiated when a new house is to be occupied. *Kṣetrasya pati*, 'lord of the field,' is besought in the Rigveda to grant cattle and horses and to confer prosperity. The Sūtras state that he is to be worshipped when a field is ploughed. *Sītā*, the 'furrow,' is once invoked in the Rigveda to dispense crops and rich blessings. In a Sūtra she appears as the wife of Indra. Here, too, *Urvarā*, the 'arable field,' with her garland of threshing-floors, is supplicated to bestow welfare.

C. *HEROES.*

The heroes of the Rigveda are all ancient seers or priests. (1) The most important of them is **Manu** or **Manus** (which also means 'man'), the ancestor of the human race, styled 'our father' by the poets, who also speak of the sacrificers of their own day as 'the people of Manu.' Regarded as the son of Vivasvat, he bears the patronymic Vaivasvata from the Atharvaveda onwards. He is thus a doublet of Yama as progenitor of mankind. He is represented as the institutor of sacrifice. Soma is said to have been brought to him by the bird, and Indra is described as drinking the Soma of Manu to fortify him for the conflict with Vṛtra. In the Śatapatha Brāhmaṇa, Manu plays the part of Noah, being saved in a ship from a deluge, which has swept away all other creatures, by a fish (in post-Vedic mythology an *avatār* of Viṣṇu). Manu then became the ancestor of the human race through his daughter Iḷā, who was produced from his offerings. (2) **Atharvan** is frequently mentioned in the Rigveda as an ancient fire-priest, who practised devotion along with Father Manu. In the Atharvaveda he appears as a companion of the gods, being related to them and dwelling in heaven. The name is also found in the plural as that of group of fathers. In the Atharvaveda, the Atharvans are described as destroying goblins with a magical herb. (3) **Dadhyañc**, son of Atharvan, is a sacrificer who kindled Agni in the days of old. A myth told about him is that the Aśvins gave him a horse's head, with which he proclaimed to them where the mead of Tvaṣṭṛ was to be found. Indra is also connected with this myth; for he is said to have discovered the horse's head, and with the bones of Dadhyañc to have slain ninety-nine Vṛtras. (4) **Atri** is one of the ancient seers most frequently mentioned in the Rigveda. The myth of his deliverance from a fiery chasm by the Aśvins is often referred to. He is also said to have found the sun when hidden by the demon Svarbhānu and to have placed it in the sky. The Atris are a family of seers to whom the authorship of the fifth book of the Rigveda is attributed. (5) **Kaṇva** is another ancient seer and sacrificer often spoken of in the Rigveda. He is said to have been befriended by Agni, Indra, and the Maruts; and to have been specially aided by the Aśvins, who restored his eyesight. Most of the hymns of the eighth book of the Rigveda are attributed to his descendants the Kaṇvas. (6) **Kutsa** is one of the very few Vedic heroes who exhibit warlike traits. He is chiefly connected with the Indra myth. Riding on the same car as Indra and acting as his charioteer, he is even invoked with Indra in the dual. He is especially associated with Indra in slaying the demon Suṣṇa. When Kutsa was pressed by his foes, Indra tore off the wheel of the sun to aid him. Nevertheless Indra sometimes appears as hostile to Kutsa, delivering him into the hands of an enemy. Several hymns of the first and ninth books of the Rigveda are assigned by tradition to the seer Kutsa. (7) Much less frequently mentioned in the Rigveda is the seer **Kāvya Uśanā**, whose characteristic feature is wisdom. He, too, is associated with Indra. He is said to have fashioned for Indra the bolt for slaying Vṛtra; and once joins him and Kutsa in slaying the demon Suṣṇa. (8) Some names, moreover, appear predominantly or exclusively in the plural as representing families or groups of ancient seers, who, if in some cases historical in origin, have become invested with mythological traits. A frequently mentioned group of this kind are the **Aṅgirases**, who are closely associated with Indra in the myth of the capture of the cows. They are described as seers who are the sons of the gods, and who by sacrifice obtained immortality as well as the friendship of Indra. They receive offerings of Soma, and are invoked like gods. When used in the singular, *aṅgiras* is nearly always an epithet of Agni, who is called the first seer Aṅgiras or the chief Aṅgiras. The word *aṅgiras* appears to be etymologically identical with the Greek ἄγγελος, 'messenger.' This points to the Aṅgirases originally having been regarded as messengers between heaven and earth, attendant on Agni. But if they were mythical in origin, they came to be regarded as an actual priestly family, the composition of the ninth book of the Rigveda being attributed to them. This is also indicated by the compound term Atharva-aṅgirasaḥ, 'the Atharvans and Aṅgirases,' a designation of the Atharvaveda which occurs in that Veda itself as well as later. (9) Another group of ancient priests are the **Bhṛgus**, chiefly connected with the myth of the communication of fire to men. The Indian Prometheus, Mātariśvan, brought the hidden Agni from heaven to the Bhṛgus, who established and diffused the sacrificial fire on earth. In two or three passages of the Rigveda they are referred to as if an actual tribe of bygone days. In the later Vedic literature, Bhṛgu is the eponymous hero of a tribe, and regarded as a son of Varuṇa. (10) A definite numerical group of

ancient priests, but rarely referred to in the Rigveda, are the 'Seven Seers' (*sapta ṛṣayaḥ*). They are associated with the gods and called divine. Their number may have been suggested by the seven technical priests, of whom they would then represent the prototypes. In the Śatapatha Brāhmaṇa they are regarded as the seven stars in the constellation of the Great Bear, and are stated to have themselves been originally bears. This identification was doubtless brought about by the sameness of number in the two groups, aided by the similarity of sound between *ṛṣi*, 'seer,' and *ṛkṣa*, which in the Rigveda means both 'star' and 'bear.' (11) The above groups are all spoken of as 'fathers,' and nearly all of them, besides a few others, are mentioned as races of ancestors to whom worship is paid. Those thus characterized in the Rigveda are the Navagvas, Vairūpas, Aṅgirases, Atharvans, Bhṛgus, Vasiṣṭhas. The last four, whether mythical in origin or not, appear in the historical aspect of families to which the composition of the Atharvaveda and two books of the Rigveda was attributed.

D. *ANIMALS.*

Animals play a considerable part in the mythological and religious ideas of the Veda. (1) Among them the horse is prominent as drawing the cars of the gods. There are also mentioned in the Rigveda at least four individual steeds, probably all representing the sun, which are regarded as deities and objects of worship. The most notable of these is *Dadhikrā* or *Dadhikrāvan*, to whom four hymns are addressed. He is described as a swift and victorious steed, regularly invoked with Uṣas, occasionally with Agni, the Aśvins, Sūrya, and others. The divine horse *Tārkṣya*, addressed in one short hymn of the Rigveda, is a god-impelled mighty steed, a vanquisher of chariots, speeding to battle. In one or two later Vedic texts Tārkṣya is referred to as a bird; and in the epic and later literature he is identical with the swift bird Garuḍa, the vehicle of Viṣṇu. A third steed, several times mentioned, is *Paidva*, spoken of as white, a dragon-slayer, a conqueror invincible in battles, worthy to be invoked like the god Bhaga by men. Lastly, there is *Etaśa*, the swift steed who draws the bright form of the sun, but also contends in a race with Sūrya. (2) The cow, however, is the animal which occupies the most important position in Vedic mythology and religion. Cows, representing beams of light, draw the car of Dawn. Rain-clouds, especially in the Indra myth, are personified as cows; Pṛśni, the mother of the Maruts, being an individualization. The bountiful clouds are doubtless the prototypes of the many-coloured cows, mentioned in the Atharvaveda, which yield all desires in the heaven of the Blest, and which are the forerunners of the Cow of Plenty (*Kāmaduh*) of post-Vedic poetry. The animal herself is already regarded as sacred in the Rigveda; for one of the poets impresses on his hearers that she should not be killed, and she is frequently designated by the term *aghnyā*, 'not to be slain.' She is even addressed as a goddess; and the divinities Iḷā, Aditi, and Pṛthivī are sometimes conceived in the form of a cow. In the Atharvaveda the worship of the cow as a sacred animal is fully recognized. That the tendency to deification had already begun before the Aryans entered India is proved by the evidence of the Avesta, which shows that the sanctity of the cow is at least as old as the Indo-Iranian period. (3) In the Rigveda the goat is the animal that draws the car of Pūṣan. This is also the form of the divine being Aja Ekapād, 'the one-footed goat.' In the later Vedic literature we occasionally find the goat connected or identified with Agni. (4) The ass appears in Vedic mythology only as drawing the car of the Aśvins. (5) The dog is met with in the form of the two brindled hounds of Yama, chief of the dead. (6) The boar has, in the Yajurveda, a cosmogonic character, as the form assumed by the creator Prajāpati when he raised the earth out of the waters. From this conception the boar incarnation of Viṣṇu was developed in Hindu mythology. (7) The tortoise has, in the later Vedas, acquired a semi-divine position; for in the White Yajurveda he is spoken of as 'lord of waters,' and in the Atharvaveda he appears under the name of Kaśyapa, beside or as identical with Prajāpati, receiving the epithet *Svayambhū*, 'self-existent.' In the Śatapatha Brāhmaṇa, Prajāpati is said, when producing all creatures, to have changed himself into a tortoise. This transformation became, in Hindu mythology, the tortoise incarnation of Viṣṇu. (8) A monkey named Vṛṣākapi appears in an obscure myth told in a late hymn of the Rigveda as a favourite of Indra. (9) Another late hymn contains a panegyric of frogs as bestowing cows and long life. (10) The bird frequently figures in Vedic mythology, as the eagle (*śyena*) that brings the Soma to Indra. *Noxious animals* in Vedic mythology generally appear as demons or exhibit demoniac traits. (11) The serpent is here the most prominent. This is the form which the powerful demon Vṛtra, the foe of Indra, is thought to possess; for he is frequently designated as *ahi*, 'the snake.' The serpent, however, also shows a beneficent aspect in the divine being Ahi Budhnya, 'the dragon of the deep,' who is supposed to dwell in the fathomless depths of the aerial ocean. In the later Vedas, the serpents (*sarpāḥ*) are mentioned, along with the Gandharvas and others, as a class of semi-divine beings that dwell on earth, in air, and in heaven; and in the Sūtras, offerings to them are prescribed. In the Sūtras, we for the first time come across the Nāgas, human beings in appearance, but serpents in reality. In the Hindu period, serpent-worship is found all over India. Since there is no trace of it in the Rigveda, while it prevails widely among the non-Aryan tribes, the conclusion seems justified that, when the Aryans overspread India, the land of serpents, they found the cult diffused among the aborigines and borrowed it from them.

E. *DEIFIED INANIMATE OBJECTS.*

Besides the great phenomena of nature, various features of the earth's surface, as well as artificial objects, are treated as deities in the Vedas. This is a fetishistic worship of inanimate things chiefly regarded as useful to man.

1. *Mountains* are frequently addressed as divinities in the Rigveda, but only along with other natural objects, such as rivers and plants, or in association with gods. *Parvata*, 'mountain,' is even invoked with Indra in the form of a dual compound. Besides rivers and waters, already mentioned as terrestrial goddesses, *plants* (*oṣadhi*) are regarded as divine powers. One entire hymn of the Rigveda is devoted to their praise, chiefly with reference to their healing powers; the Atharvaveda refers to a medicinal plant as 'a goddess born on the goddess earth'; and the Black Yajurveda prescribes an animal sacrifice to plants for the obtaining of offspring. Large trees, called 'lords of the forest' (*vanaspati*), are also sometimes addressed as deities, mainly in association with waters and mountains.

2. Various *sacrificial implements* are deified. The most important is the *sacrificial post*. It is praised and invoked in a whole hymn of the Rigveda, in which posts set up by priests are described as gods. The *sacrificial litter* (*barhis*) is also dei-

fied, and the '*divine doors*,' by which the sacrificial enclosure is entered, are goddesses. The *pressing stones* (*grāvan*) are addressed as deities in three hymns of the Rigveda; spoken of here as immortal, unaging, more mighty than heaven, they are invoked to drive away demons and destruction. The *mortar and pestle* used in pounding the Soma plant are invoked in the Rigveda. In the Atharvaveda divine power of the highest order is ascribed to *ucchiṣṭa*, the 'remnant' of the sacrifice, as well as to various sacrificial ladles. The agricultural implements named *śuna* and *sīrā*, probably the ploughshare and the plough, are invoked in a few verses of the Rigveda, and, in the ritual, receive the offering of a cake.

3. *Weapons*, finally, are sometimes deified; armour, bow, quiver, arrows, and drum being invoked in one of the hymns of the Rigveda. The drum alone is also celebrated in an entire hymn of the Atharvaveda.

4. *Idols* seem not to have been known in the age of the Vedas; at all events they first begin to be referred to in the later additions to the Brāhmaṇas and in the Sūtras. One verse of the Rigveda, however, seems to allude to some image of Indra.

5. *Material objects* treated as symbols of deities are occasionally mentioned in the ritual literature. Thus the wheel (*cakra*) represents the sun in various ceremonies; and it appears in Hindu mythology as one of the weapons of the solar deity Viṣṇu. A piece of gold, sometimes in the form of a disk, also indicates the sun on certain ritual occasions. A symbol must have been used by the phallus worshippers (*śiśnádevāḥ*), who are mentioned with repugnance in the Rigveda. In the post-Vedic period the phallus or *liṅga* became typical of Śiva's generative power, and its worship is widely diffused in India at the present day.

5. Demons.

a. The demons which are often mentioned in the Vedas are of two kinds. The higher and more powerful class, the aerial foes of the gods, are generally called **Asuras** in the Atharvaveda and later. This word, however, rarely means 'demon' in the Rigveda, where it usually preserves the older sense of 'being of mysterious power,' and denotes a god (*ahura* in the Avesta). The earlier notion of the conflict between a single god and a single demon, as exemplified by Indra and Vṛtra in the Rigveda, gradually made way for that of the hostility of gods and demons as two opposing hosts. This is the regular view of the Brāhmaṇas. Here the Asuras, no less than the gods, are regarded as the offspring of Prajāpati; here, too, the Asuras often vanquish the gods at the outset, being finally worsted only by artifice.

In the Rigveda the terms *dāsa* and *dasyu*, properly the name of the dark aborigines overcome by the conquering Aryans, are frequently used also to designate aerial demons, adversaries of the gods. A group of demons are the **Paṇis** ('niggards'), primarily the foes of Indra, who with the aid of Saramā tracks and releases the cows hidden by them.

Of individual demons, by far the most frequently mentioned is **Vṛtra**, the 'encompasser,' the formidable opponent of Indra. His mother being called **Dānu**, he is also sometimes alluded to by the metronymic term *Dānava* (which later becomes the name of a class of demons). Another powerful demon is **Vala**, the personified cave of the cows, which he guards, and which are set free by Indra and his allies, notably the Aṅgirases. Other demon adversaries of Indra are **Arbuda**, described as a wily beast, whose cows Indra drove out; **Viśvarūpa**, son of Tvaṣṭṛ, a three-headed demon slain by both Trita and Indra, who seize his cows; and **Svarbhānu**, who eclipses the sun (his successor in Hindu mythology being Rāhu). There are several other individual demons, generally described as Dāsas, and slain by Indra in favour of protégés: such are Suṣṇa, Śambara, Pipru, Namuci, Dhuni, and Cumuri, besides some half dozen others who were originally, in all likelihood, terrestrial foes.

b. The second or lower class of demons are terrestrial goblins, enemies of men, as Asuras are of gods. By far the most common generic name for them is **Rakṣas**. They are nearly always mentioned in connexion with some god who destroys them. The much less common term *yātu* or *yātudhāna* (primarily 'sorcerer') alternates with *rakṣas*, and perhaps denotes a species. Terrestrial demons appear in the shape of various animals or birds, having also the power to assume human forms in order to deceive. With human shape they often combine some monstrous deformity; they are even described as blue, yellow, or green in colour; they are male and female, have families, and are mortal. Greedy for flesh and blood, they attack men by entering into them, thus causing disease and madness. As they prowl about at night, and the sacrifice is the main object of their malignity, Agni is naturally the god oftenest opposed to them, and most frequently invoked to burn, ward off, or destroy them. An important group of goblins, scarcely alluded to in the Rigveda but often mentioned in the later Vedas, are the **Piśācas**, eaters of raw flesh or of corpses. Besides some other groups of goblins of lesser importance, there were included in Vedic belief many other hostile agencies, such as those of disease, which it was one of the main tasks of magic to counteract. Only a few among the groups of terrestrial spirits were thought to be, after the manner of elves, helpful to men, as in harvest work, or in battle by terrifying the foe.

6. Religious Practice.

a. The cult of the Vedic Indian has three aspects. It endeavours, in the first place, to win the favour of the gods, who are almost without exception benevolent. It further aims at warding off the hostility of the demons, who are malevolent, here having recourse to practices which for the most part are not of a religious, but of a magical character. Lastly, its attitude towards ancestors is a combination of its treatment of gods and of demons; for, while ancestors receive worship as divine beings, means are taken to prevent them from unduly prolonging their uncanny presence among the living.

b. The worship of the gods has two sides, finding expression either by word or by act. Praise of their greatness and power, or prayer for welfare and forgiveness of sin is addressed to them on the one hand; sacrifice consisting of food and drink is offered on the other. Prayer and praise, which include frequent invitations to the sacrifice, are largely metrical in form, entirely so in the Rigveda. Prayer in the Vedas is almost entirely of the ritual type, intended to accompany a ceremony, or at least to form part of a liturgy. In the creative age of the Rigveda new prayers were produced for ritual purposes; but in the age of the later Vedas, with the development of a system which foresaw almost every desire and prescribed the offering to ensure its fulfilment, prayer was nothing more than the mechanical application of ready-made formulas. It is doubtful whether, even in the earliest period, much room was left, owing to the highly ritual type of the worship, for independent prayer. The latter could hardly in any case have gone beyond the expression of a concrete desire addressed to a particular

deity; it could certainly not have had the character of a communion of the worshipper with divine powers. Prayer was, however, by no means necessarily accompanied by a ceremonial act. Thus the hymns of the Rigveda addressed to Uṣas were recited without any attendant offerings; the same was the case, according to the ritual texts, with the prayers to Agni, Uṣas, and the Aśvins in the morning litany of the Soma sacrifice, as well as with the daily invocations muttered at the morning and evening twilight devotions.

As the hymns of the Rigveda, in addressing prayers to a god, aim at securing his goodwill, they are, in the first place and to a large extent, panegyrics which praise the greatness and power, the mysterious nature, and the exploits of the deity in question. The petition for the gifts hoped for, when the favour of the god has thus been won, is then briefly added. The benefits desired are almost entirely of a material, not of a moral, kind. They are mainly expressed by such general terms as treasures and blessings, protection and victory; when stated in detail they consist in long life and vigorous offspring, cattle and horses, cars and gold; or the punishment of enemies, niggards, and Brāhman-haters by their goods being taken away and bestowed on the pious. Rarely does the worshipper pray that his thoughts may be righteous, that he may refrain from doing what displeases the gods, that he may be reconciled to an offended deity, or delivered from the bonds of guilt; and his supplications lack the note of passionate appeal, deep aspiration, mental struggle, or humble submission to the divine will. As regards its efficacy, prayer was held to be scarcely less potent than sacrifice in gladdening and stimulating the gods. But a hymn had to be composed with faultless art, 'as a skilful workman constructs a car'; it had to be freed from imperfections 'as grain is winnowed with the flail.' Then it invigorated the god like draughts of Soma, stimulating him to new deeds; then it increased the mighty strength of Indra so that he slew the dragon. When prayer is thus thought, even in the Rigveda, to exercise the direct influence of a spell, magic is already beginning to encroach on the domain of religion. A similar tendency is observable in regard to the sacrifice which accompanied the prayers to the gods.

c. The general character of the Vedic sacrifice is essentially supplicatory, as it aims only at the obtaining of future benefits to be bestowed by the gods, and is not concerned with the past. What seem to be expiatory sacrifices are in reality of this order also, for they are accompanied by supplications that the guilt incurred should not be punished. Such expiatory sacrifices are of two kinds. They are either intended to mollify the wrath of a god aroused by the transgression of his divine will, being generally offered to Varuṇa, the guardian of moral order and punisher of sin; or they aim at removing guilt as a kind of impalpable substance much as if it were a disease, producing this result either by the aid of a god, especially Agni, or by means of fire, water, medicinal plants and spells, which are supposed to burn, wash, purge, or drive it away without the invocation of divine powers. This latter type belongs mainly to the sphere of the Atharvaveda, where magic supplants religious practice. Even a sacrifice made in fulfilment of a vow, after a god has granted a boon, is in reality only a supplicatory offering postponed, as when in the Atharvaveda Agni is promised an offering in the name of a lunatic, if the latter recovers his reason; or when, in the Brāhmaṇa story of Śunaḥśepa, the childless king vows, if a son is born to him, to sacrifice that son to Varuṇa. Thank-offerings in any true sense are unknown to the Vedic cult, the very verb 'to thank' not being found in the vocabulary of the language. An approach to the notion of a thank-offering is only to be found in a Sūtra passage, in which certain sacrifices are prescribed on a man regaining his health.

The conception of the effect of sacrifice which prevails in the Rigveda is that the offering wins the favour of a god and induces him to fulfil the accompanying prayer. The Soma offering satisfies, gladdens, strengthens the god, who loves the sacrificer and hates the niggard. The reward that follows is a voluntary act of the god, resulting from the benevolent attitude induced by the offering. It is not regarded as the repayment of a debt, though the sacrificer feels that the god cannot well help requiting him. While conscious of being in the presence of a mighty being, the sacrificer does not look on himself as infinitely far removed from the god, who is his old friend, and whose right hand he grasps. Even in the Rigveda, however, traces are already to be found of the notion that the sacrifice exercises compulsion not only over gods, but also over natural phenomena without requiring the co-operation of the gods. Here again we have the intrusion of magic into the domain of religion. In the ritual of the Brāhmaṇas we find that the latter has already been largely supplanted by the former.

d. The Vedic ceremonial was essentially based on the use of a sacrificial fire, 'the mouth of the gods,' into which the offerings were cast, and by which they were conveyed to the gods. Exceptionally only, fire was not the instrument of sacrifice. Thus the oblations to aquatic deities were cast into water, those to the dead were placed in small pits at the funeral sacrifice, while offerings to Rudra and demons were thrown into the air, hung on trees, buried, or disposed of in other ways. In the ritual there was beside the sacrificial fire a litter of grass (*barhis*), the soft seat on which the gods sat down to enjoy the offering. On this litter, according to the ritual texts, the oblations were deposited for a time, before being committed to the flames which conveyed them to heaven. Thus the gods were conceived as partaking of the sacrifice both on the litter and in their celestial abode. Agni is even invoked, in one and the same passage of the Rigveda, to bring the gods to the sacrifice and to take it to them in heaven (vii. 11. 5). This contradiction is doubtless to be explained by the survival of the litter in the ceremonial, from the time when offerings were presented on it alone. The burning of the litter at the end of the rite may perhaps originally have formed the transition to offering sacrifices in fire.

In the Vedic ceremonial, even of the earliest period, we have to distinguish between the simpler ritual of the single domestic fire and the more complicated and technical ritual conducted with the three fires, which are independent of the former, though they may originally have arisen by its division. The single domestic fire was maintained by every head of a family, who performed the rites connected with it himself. The three fires were set up only by men of position and wealth, becoming a centre round which the sacrificial activity of many Brāhmans and priests revolved. Certain regular rites, such as the daily morning and evening sacrifice or the new and full moon ceremonies, were performed in essentially the same manner with the three fires as with the one, the ritual of the latter, however, being simpler. But the domestic rites were conducted with the one only, while the Soma sacrifice could be carried on with the three only. The chief of

the three fires, called Gārhapatya (doubtless representing the old domestic fire of the hearth), was the only one always maintained, the other two being taken from it for every sacrifice requiring their employment. It was used for the practical purposes of heating the vessels and preparing the offerings. The second, the Āhavanīya, situated to the east, was that in which the gods received their offerings. The third or Dakṣiṇa fire, placed in the south, the quarter specially connected with the souls of the dead and evil spirits, was used for offerings relating to those two classes of uncanny beings. About this fire and the pits dug around it, the ritual of the sacrifices to the manes chiefly moved.

When a fire was established for purposes of the cult, it was either produced by means of the fire-sticks (called *araṇīs*, and consisting of a lower slab of soft and a drill of hard wood) or fetched from certain places, as the house of a rich owner of herds or of a great sacrificer. At the four-monthly sacrifices offered at the beginning of the seasons and at the Soma sacrifice, a new fire was rubbed and united with the old Āhavanīya, doubtless with the intention of giving it new vigour.

e. With regard to the material of the sacrifice, the Vedic Indian, as a general principle, offered to the gods what was his own favourite food. It comprised the chief produce of the dairy and of agriculture: milk, in its various forms, and butter, together with the two principal kinds of grain, barley and rice (the latter, perhaps, not being used in the earliest period), cooked or baked in different ways. Among these, the products of the cow were unmistakably believed to have a more sacred and mystical import. In the cult of the dead, libations of water were characteristic. As beef and goats' flesh, less frequently mutton, were the principal kinds of meat eaten, cattle, goats, and sheep were the usual victims in the animal sacrifice, the he-goat, it would seem, being regularly offered on all lesser occasions. On the other hand, animals the flesh of which was either not eaten at all or only exceptionally eaten, such as the pig, dog, deer, as well as fish and birds, were not sacrificed to the gods. It is true that, in the rare and costly horse-sacrifice, an animal was offered the flesh of which was never a regular article of diet. This is, however, to be accounted for by the intrusion of magic into the domain of sacrifice; for the intention underlying the ceremony was to transfer the swift power (*vāja*) of the horse to the royal sacrificer. This sacrifice was, indeed, akin to a peculiar tendency in the sacrificial ceremonial, to offer to a god what corresponded to his special individuality. Thus to the goddesses Night and Morning was offered the milk of a black cow having a white calf. In the animal sacrifice, a victim was often chosen which agreed with the deity not only in sex, but in colour and other qualities. The starting-point of this practice was probably the notion that the eater acquires the qualities of the animal he eats, and that his strength is increased most by eating the flesh of the animal most like himself. Thus the mighty Indra, who is constantly called a bull in the Rigveda, commonly receives the sacrifice of a bull, as also of a buffalo, to which he is often compared. The sun-god Sūrya has a white he-goat offered to him.

The victim was killed by strangulation, and without bloodshed. With an evident desire of avoiding blood-guiltiness, it was addressed with such verses as 'Thou dost not die; no harm is done thee; thou goest to the gods by pleasant paths.' The ceremonial dealing with the disposal of the carcass was divided into two distinct sacrificial acts. In the first place, after an incision had been made, the caul (omentum) was extracted, being thereupon cooked and solemnly offered to the gods. This rite was concluded by the distribution of presents to priests and by purifications. The second act of the ceremonial consisted in cutting up the carcass into parts, certain sections of which were offered to the gods, while others were eaten by the priests. What remained was distributed among sacrificers, priests, and Brāhmans. A magical rather than a religious notion underlies the practice of men eating the remnants of the sacrifice of which the god has first partaken; for those remnants must have been regarded as of the nature of a medicine, which transfers to man the divine blessing connected with the sacrifice, or the particular power implied in the individual offering. The separate sacrifice of the caul was perhaps a relic of a time when that was the only portion of the victim which, owing to its agreeable odour, was presented as a burnt-offering to the gods. The blood of the victim was, in the Vedic ritual, not eaten, but was poured out as an offering to the Rakṣases or lower demons, who were regarded as fond of blood, and who similarly received the offal of the grain used in making baked offerings. Analogously, offerings made to beings thought to have an uncanny nature, such as Rudra or the souls of the dead, were not partaken of by the sacrificer. Thus a bull offered to Rudra might not be eaten or even brought into the village; and funeral cakes presented to the manes might only be smelt.

In connexion with the animal sacrifice, the interesting question as to whether the human sacrifice was known in the ritual of the Vedas suggests itself. The only certain trace of such a sacrifice is to be found in the important ceremony of building the brick fire-altar (called *agni-cayana*). Here it is prescribed that five victims—man, horse, ox, ram, he-goat—are to be sacrificed to different gods, and their five heads walled up in the lowest layer of the edifice. The object of this ceremony, which was a magical rite rather than an actual sacrifice, was to give stability to the altar. It is mentioned in the Śatapatha Brāhmaṇa as the custom of a not very remote past, for which other rites had been substituted. The human sacrifice (*puruṣa-medha*), which the ritual books describe in detail, was probably only an innovation invented to imitate the horse-sacrifice. But of any actual human sacrifice there is no certain trace in Vedic India. Neither the evidence of ancient stories, like that of Śunaḥśepa, nor the evidence of various Buddhist legends, is by any means conclusive.

Not only were food and drink presented to the gods to satisfy their hunger and thirst, but an intoxicant, of which the sacrificer also partook, was offered to them. This was the juice of the Soma plant, which was pressed, mixed with milk or other ingredients, and presented to the gods. Soma was certainly not the popular drink of the Vedic Indian, whose favourite intoxicant was called *surā*. How, then, is it to be accounted for that, in this case, he did not offer to the gods what he liked best himself? The explanation is that, having during the Indo-Iranian period been adopted in the cult instead of the earlier mead of the Indo-European age, it retained, by the force of tradition, its old-established position even in the Vedic cult.

Occasionally we find that objects which do not constitute food are sacrificed. Thus a man who desires the possession of deadly weapons sacrifices iron nails. Here again we see the intrusion of witchcraft; the sacrifice becoming a means of obtaining something analogous to the objects offered.

f. Priests.—Vedic India was already far removed from that primitive condition of things in which every man was his own priest, and did not require

the services of persons possessing technical knowledge as intermediaries between him and the divine powers. On the contrary, it is certain that, even in the period of the Rigveda, there already existed a priestly class qualified by special knowledge and magical qualities to act for others in the difficult and dangerous intercourse of man with gods and spirits. There were, indeed, already a number of sacerdotal families, like the Vasiṣṭhas and Viśvāmitras, in which the art of praying and sacrificing correctly was practised as a hereditary calling, all of them employing the same cult, notably that of the Soma sacrifice, practically in the same way. There were no public priests; for there was no public worship of a national, tribal, or even congregational character. Vedic worship was of an essentially private type, sacrifice being performed on behalf of its individual institutor (*yajamāna*) by the priests who acted for him and whose prayers belonged to him. This, coupled with the fact that idols were not used, accounts for the absence of temples in Vedic India.

Two sacerdotal types have to be distinguished in the Vedic cult: the domestic priest (*purohita*), whose function it was to superintend the worship of his employer; and the officiating priest (*ṛtvij*), who had to play a certain prescribed part in an individual sacrifice.

The Purohita was generally in the service of kings only, though Brāhmans occasionally appeared in an analogous capacity in the houses of men of high position. That the employment of a Purohita in a royal household was considered essential is indicated by a Brāhmaṇa passage which states that the gods would not eat the food of a king who had no Purohita. The domestic priest was appointed by the king, and held his office for life, being often succeeded by his son. In the ceremony accompanying the appointment, the same verse was employed as when the bridegroom takes the hand of the bride in the wedding rite. The Purohita was, in fact, the king's right hand man, giving the directions for all the royal ceremonies and sacrifices. Even in the Rigveda the whole prosperity of the country is said to depend on the Purohita, 'the guardian of the realm,' and the Purohita Devāpi at the sacrifice employs a spell to procure rain on behalf of his royal master, while in the Atharvaveda another Purohita uses spells to secure victory in battle.

Of the sacrificial priests there were several, with definite functions and technical names, the chief being the Hotṛ or 'invoker,' the Udgātṛ or 'chanter,' the Adhvaryu or officiating 'sacrificer,' and the Brāhman or superintending priest; in the period of the Rigveda the Hotṛ was the most important, later the Brāhman became so. The Purohita was probably not any one of these, though he might be employed to perform the functions of one of them; in the earlier period he sometimes appears acting as Hotṛ, in the later as Brāhman. Thus in the Rigveda the Purohita Devāpi is chosen as a Hotṛ, and Agni is called both a Purohita and a Hotṛ.

The Rigveda contains a list of seven kinds of sacrificial priests, and this was probably the regular number, not only then but in the Indo-Iranian period. Seven priests still appear in various parts of the sacrificial ceremonial in later times, though, with the development of the ritual, additional ones were otherwise employed. The Avesta, which has eight sacrificial priests, probably added one to the original number. It is, in any case, a striking fact that the Zaotar, the leading priest who recites the Gāthās in the Iranian Haoma sacrifice, corresponds, in both name and function, to the Hotṛ who recites the verses of the Rigveda in the Vedic Soma sacrifice. The most important of these seven Vedic priests were the Hotṛ and the Adhvaryu. It was the duty of the former to recite the hymn which, in the chief libations of the Soma sacrifice, celebrated a particular god and invited him to drink Soma. When the hymns of the Rigveda were composed, their seers (*ṛṣis*) themselves doubtless played the part of the Hotṛ at the sacrifice; and that the latter was, in the earlier period, regarded as the leading priest is clear from his furnishing the type for Agni, the priest god. The Adhvaryu performed the practical part of the ceremonial, tending the fire and the litter, arranging and cleaning the utensils, pressing and offering the Soma. The remaining five acted as assistants to one or other of the two chief priests. The Agnīdh, or 'fire-kindler,' helped the Adhvaryu in tending the sacrificial fire. The Upavaktṛ or 'exhorter' (known also as Praśāstṛ, 'director,' and Maitrāvaruṇa, 'priest of Mitra and Varuṇa'), whose duty it was to give various orders to other priests, plays the part, in the animal sacrifice, of the only assistant, and in the Soma sacrifice, of one among the several assistants of the Hotṛ. The three other priests of the ancient list belong to the Soma ritual exclusively: the Potṛ, or 'purifier,' and the Neṣṭṛ, or 'leader,' became quite unimportant in the later Vedas, while the main function of the Brahman was to recite hymns addressed to Indra, in the same way as the Hotṛ, whose assistant he was. In the later ritual this priest came to be called Brāhmaṇācchaṃsin, while the old name, Brahman, acquired the technical sense of the priest who superintended the whole sacrifice, and whose duty it was to know the three Vedas.

g. Sacrifices. — The Vedic cult consisted of regularly recurrent or of occasional sacrifices. Our knowledge of the former is derived from the ritual literature, for there are only few and obscure traces of them in the hymns of the Rigveda, which is almost exclusively concerned with the Soma sacrifice. It is, however, probable that they were performed, at least in their main features, during the earliest Vedic period. These regular sacrifices are of three kinds, as connected with the course of the day, the month, and the year, being performed, respectively, twice a day, twice a month, and three times a year. Each of the first two kinds could be conducted, though without any difference in ceremonial form, either with the single domestic fire or with the three sacrificial fires. On the other hand, the annual sacrifices, which were celebrated at the commencement of the three seasons, required the greater ritual of the three fires. It was a general characteristic of all periodic sacrifices that they were never addressed to one single god.

The daily rites took place morning and evening. They consisted, on the one hand, of fire-offerings to the gods, and, on the other, of gifts of food presented to all beings. The latter comprised offerings placed on the threshold and elsewhere for the deities and spirits in and around the house; a libation to the souls of the dead in the southern quarter; food scattered for dogs and birds; and meat and drink given to needy human beings.

The monthly sacrifices, which were celebrated at new and full moon, consisted of cooked oblations or of cakes offered to the gods. Among the numerous deities receiving them, the most prominent was Indra.

The seasonal sacrifices were offered every four months, at the beginning of spring, of the rains, and of the cool weather. Throughout these the Maruts are the most prominent deities. In the ceremonial which inaugurates the rainy season, Karīra fruits are offered with a view to procuring rain and consequent plenty. Then also two figures of dough covered with wool, and intended to represent a ram and a ewe, are sacrificed in order to

promote the increase of flocks. In these two offerings the influence of magical notions is clearly observable. With the seasonal celebration of the rains was combined a great expiatory sacrifice with which Varuṇa was specially associated.

In the ceremonial of the third or autumn sacrifice was included an offering to Rudra Tryambaka, intended to avert his attacks from the flocks and to conciliate his healing power. At a place where four roads meet, the abode of uncanny beings, a flat cake was deposited on or buried in a molehill, to indicate that it was presented to the mole as the animal of Rudra, who would thus refrain from injuring other animals. With this ceremonial was combined a great sacrifice to the dead, a kind of All Souls' festival.

We now turn to the extraordinary sacrifices, which are not limited to any fixed period. One of these is the independent form of the animal sacrifice. According to the ritual texts, it should take place annually; but the statements as to the time of year it should be performed are fluctuating and indefinite. Another form of the animal sacrifice is included in the Soma sacrifice.

Of all forms of cult the Soma sacrifice appears as the most important in Vedic literature. It was, however, probably not so important in actual life, as few could have possessed means sufficient for its performance. As compared with the recurrent sacrifices, it rather bore the character of an extraordinary act of liberality practised by the rich towards gods and priests. Though the time for its performance was not definitely fixed, later texts recommend the spring as the most suitable period. Soma was not offered to different gods according to circumstances, like a cooked oblation or an animal victim. On the contrary, it was offered, within the stereotyped scheme of the three pressings of Soma made at morning, noon, and evening, in honour of a prescribed series of gods intended to include all deities except perhaps Rudra. In this ceremonial the important gods were all addressed by name, the lesser ones being included in the comprehensive term Viśve devāḥ, or 'all-gods.' The Soma sacrifice, in fact, constituted a general carouse for gods as well as for priests. Indra was, however, the most important deity and the central figure of the whole ceremony; thus the Soma pressed at midday belonged to him alone in addition to his share of the morning and evening libation. The ceremonies of the Soma sacrifice were of a complex nature. Even the simplest and fundamental form of it, the Agniṣṭoma ('praise of Agni'), required the ministration of sixteen priests. This rite occupied only one day; other Soma sacrifices lasted for several days, up to twelve; while another class, called *sattras* or 'sessions,' sometimes extended to a year. These prolonged Soma sessions formed an unimportant exception to the rule that every sacrifice was performed for a single individual; for here a number of Brāhmans combined in such a way that each, while officiating as a priest in the usual manner, was accounted a sacrificer (*yajamāna*). The texts which deal with the Soma sacrifice furnish sufficient details for a complete picture of its ceremonies, which in the main were doubtless the same in the period of the Rigveda. Numbers of priests and lay spectators thronged the sacrificial ground, on which burned the three fires strewed around with sacrificial grass. Between the fires was the *vedi*, an oblong shallow excavation somewhat narrowed in the middle and covered with a litter of grass for the reception of the offerings to the gods. Scattered about were to be seen sheds, posts for tying up victims, the seats and fire-altars of the various priests, vessels containing water for various purposes, pressing implements, tubs, and bowls for Soma. Among them moved about the officiating priests and their assistants, in whose midst were to be seen the sacrificer (*yajamāna*) and his wife, emaciated by initiatory asceticism. The priests were engaged in preparing or offering the sacrificial cakes and the libations of milk; in sacrificing eleven he-goats to various gods; in pressing, purifying, mixing the Soma juice; in pouring it into or out of various vessels, presenting it to the gods, or drinking their share. All these operations were accompanied by the calls, recitations, chants of the priests as they carried out the details of the ritual, which were far too numerous to indicate here.

The Soma sacrifice was preceded by a protracted ceremony of initiation (*dīkṣā*), which was undergone by the sacrificer and his wife, and was followed by another of purification (*avabhṛtha*). Both of these ceremonies were probably known to the Rigveda. The Dīkṣā belongs to the ancient type of magical rites which were intended as a preparation for intercourse with gods and spirits by producing an ecstatic condition. It consisted in seclusion and various forms of asceticism (*tapas*) ending in physical exhaustion. Fasting was a chief element in the preparation for this as well as other rites. A preliminary bath was taken, as in the wedding ceremony, for the removal of injurious substances which would nullify the effects of the initiation. On the other hand, no bath might be taken during the course of the Soma sacrifice, for it would have been regarded as washing off the sanctity communicated by the Dīkṣā. As in the funeral and some other rites, the hair and beard were cut off and the nails pared, because they were considered impurities.

In the ceremony called *avabhṛtha* ('carrying down' to the water), with which the Soma sacrifice terminated, the black antelope skin and the sacred cord used by the sacrificer and his wife since the beginning of the Dīkṣā were thrown into the water along with the Soma shoots which had been pressed out and the sacrificial utensils which had been in contact with the Soma. Finally, the sacrificer and his wife, as well as the priests, descended into the water to wash off the supernatural powers which they had acquired, and on emerging put on fresh garments. The offerings and texts which accompanied the Avabhṛtha ceremony were chiefly addressed to Varuṇa, the god who delivers from guilt.

h. Rites of family life.—As the Vedic wedding ceremony had in its main features probably come down from the Indo-European period, it retained much that belongs to the domain of witchcraft rather than that of religion. Thus the act, on the part of the bridegroom, of taking the hand of the bride, was intended to place her in the power of her husband. The seven steps which the young couple took and the food which they ate together were meant to establish friendship and community. Future abundance and male offspring were aimed at when the bride, after being conducted to her husband's house, was placed on the hide of a red bull and took upon her lap the son of a woman who had borne only living male children. The worship of the gods, on the other hand, was somewhat in the background during this ceremony. It was chiefly concerned with Agni, the god most closely connected with domestic life. Thus the husband led his bride three times round the newly-kindled nuptial fire, which it was the duty of the couple to maintain henceforth throughout their lives as their domestic fire. The invocations addressed to the gods were mostly of the nature of benedictions. The long wedding hymn from the Rigveda was also recited. Various offerings, moreover, were made, especially one of parched grain strewn by the bride with hollowed hands

After sunset the husband led his bride out of the house, and, as he pointed to the pole-star and the star Arundhatī, the young couple exhorted each other to be constant and undivided for ever. The wedding was followed by three nights of conjugal abstinence, meant doubtless to exhaust the patience and divert the attacks of hostile demons.

Similarly, in the rites performed both before and after birth for the welfare of children, the magical aspect predominated over the sacrificial. Thus a powdered drug was dusted into the nostrils of a pregnant woman to ensure the sex of her offspring being male; and unripe fruits of the Udumbara tree were attached to her in order to communicate to her child the exuberant maturity which that fig attains.

On the tenth day after birth, when the period of impurity was over, the ceremony of giving the child his name was performed. In the third year the rite of tonsure, accompanied by an oblation, took place. The boy's hair was cut and arranged so as to be worn in accordance with the custom of the family. The hair which was cut off was buried. A similar ceremony was performed when the beard of the youth at the age of sixteen was shaved.

But by far the most important rite connected with boyhood was that of initiation or 'introduction' (*upanayana*) to a religious teacher, which took place at the respective ages of eight, eleven, and twelve in the case of boys of the first three castes. Standing at the sacred fire, the preceptor invested the boy, whose head had been shaved, with a girdle, which he wound round his waist three times from left to right, at the same time pronouncing certain formulas. He then grasped the boy's hand and, placing his own on the pupil's heart, recited a verse indicating that he had assumed power over the boy's will. On this occasion the youth also received a garment, a staff, and a sacred cord to be worn over one shoulder and under the other arm. During the whole course of his subsequent apprenticeship, the religious pupil (*brahmacārin*) was required to practise chastity, to refrain from certain kinds of food, to tend his preceptor's fire with fuel, and to beg food in the village. But his chief duty was to study the Veda and to learn the famous Sāvitrī stanza from the Rigveda as an introduction to that study. By the rite of initiation, which was regarded as a spiritual birth, the pupil had become one of the 'twice-born,' qualified to eat the remnants of sacrificial offerings. Though this ceremony is not even alluded to in the Rigveda, it must have been known at that time, for it can be traced back to a still earlier age. The evidence of the Avesta shows that among the ancient Persians a youth of fifteen was received into the community of Zoroaster with a sacred cord; and among primitive peoples similar rites have been found all over the earth to symbolize reception into the community of men as an entry into a new life. This ancient rite was in India transformed into a spiritual ceremony which gave admission to the community of those qualified for the study of sacred knowledge.

The period of apprenticeship was terminated by the ceremony called *samāvartana*, or 'return,' the main element of which was a bath intended to indicate symbolically that the quality of religious studentship (*brahmacarya*) was washed off.

The funeral rites, finally, belong to the sphere of the domestic ritual; it will, however, be more convenient to deal with them later as part of the ceremonial relating to death and the future life.

i. Rites relating to public life.—Even in ceremonies which assumed a public character because connected with the person of the king, the sacrifice was still instituted by him as an individual; and though prayers for the country and the people might be incidental to it, there existed no form of sacrifice which was offered in the name of the tribe or the nation. In the royal ceremonial, magical practices were, as we found to be the case in the domestic ritual, more prominent than sacrificial acts. The first of these celebrations calling for description are the consecration (*abhiṣeka*) of the king and the royal inauguration (*rājasūya*). Neither of these is mentioned in the Rigveda, and they were probably developed in the later Vedic period; but the magical elements which they contain are most likely very old. Both these celebrations included Soma rites. In the consecration ceremony the king was seated on a chair covered with a tiger skin and made of the wood of the Udumbara, the tree which to the Indian was typical of plenty. A cup, also made of Udumbara wood, was filled with a fluid compounded of butter, honey, rain-water, and other ingredients. With this fluid the king was anointed or rather besprinkled. In the Rājasūya a similar besprinkling took place; but it was followed by a series of further rites intended to secure success of all kinds. These included a symbolical raid on a herd of cows; the discharge of arrows at feeble relatives of the king, who were plundered; and a game of dice in which a cow was the stake, and which was won by the king.

Another ceremonial, regarded as still more dignified and efficacious, was the Vājapeya ('draught of vigour'), a kind of Soma sacrifice, which might be performed not only by kings, but even by men of royal descent or of the Brāhman caste. Its most characteristic feature was a chariot race, evidently a magical rite intended to secure for the sacrificer the swift power embodied in the horse. It also included a rite called the 'ascent of the post' (*yūpārohaṇa*). A wheel made of wheaten flour, and symbolical of the sun, was placed on the top of a sacrificial post. Mounting by means of a ladder, the sacrificer grasped the wheel as he uttered the formula, 'We have reached the sun, ye gods.' On descending to the ground he seated himself on a wooden throne and was besprinkled as in the inauguration ceremony. This part of the Vājapeya rite aimed at the attainment of exalted position.

The splendour of royal ceremonial, however, culminated in the horse-sacrifice (*aśva-medha*). It was not a thank-offering, as might at first sight be inferred from the words of the Brāhmaṇa description of each king who performed it, 'He victoriously traversed the earth and offered the horse-sacrifice.' It was in reality a supplicatory sacrifice offered, after military successes, for the fulfilment of the king's highest wishes in the future. According to the ritual texts, this sacrifice is addressed to the gods in the aggregate, but with special reference to Prajāpati (an evidently late trait); but there are indications that it may originally have been addressed to Indra the Vṛtra-slayer, an obvious god to associate with a rite which is a glorification of military heroism. The horse itself represents swift vigour, a quality which the king aims at obtaining and increasing in himself by means of this sacrifice. The ceremony was begun by bathing the horse, when a four-eyed dog (that is, one with two spots above its eyes) was killed with a club by a man of low origin. The horse, having been consecrated, was allowed to roam about free for a year, guarded by a retinue of armed youths. During the interval the sacrificial ground was the scene of various offerings and rites, while stories were recited, chants sung, and lutes played. High and low, young and old, took a share in the pomp of the ceremonial. At

length, when the year had come to an end, the horse was sacrificed during the course of a Soma offering of three days' duration. In the later Vedic ritual the horse is accompanied by a number of other victims; but in the Rigveda (two hymns of which are concerned with the horse-sacrifice) mention is made only of Pūṣan's he-goat, which announces the offering to the gods. Before the carcass was cut up, the chief consort of the king lay down beside the dead horse, while obscene conversations were carried on between the priests and the women of the royal household. Before the caul was offered, the priests propounded and solved riddles among themselves, as they had already done at a previous stage of the ceremonial. The whole rite concluded with a purifying bath at the end of the third day.

7. Death and Future Life.

A. *Beliefs.*—a. The soul, variously called *asu*, 'spirit,' *manas*, 'mind,' *ātman*, 'breath,' *prāna*, 'respiration,' was thought to be separable from the body during unconsciousness, and to continue its existence after the body had been destroyed by cremation or burial. But, though imperishable, it was not believed to prolong life as a mere spirit or shadow, but to retain its personal identity in a corporeal state; for the body, purified by the power of Agni and freed from all imperfections, shares in the existence of the other world. The doctrine of transmigration is not to be found in the Vedas; its beginnings are met with in the Brāhmaṇas, where the notion of repeated births and deaths in the next world appears; but it shows itself fully developed even in the oldest Upaniṣads, and must have been generally accepted by 600 B.C., since Buddha would not otherwise have received it into his system without question.

The spirit of the deceased proceeds upward through the air on the path trodden by the fathers (*pitara*) to the realm of eternal light. It is natural that Agni, who burns the corpse, should have been regarded as the conductor of the soul on its journey. Arrived in heaven, where he recovers his former body in a complete and glorified form, the departed meets the fathers who revel with Yama, and receives from the latter a resting-place. According to the Śatapatha Brāhmaṇa, the dead, on leaving this world, make their way between two fires, which burn the wicked but allow the good to pass. The latter proceed either by the path which leads to the fathers or by that which leads to the sun. The Upaniṣads also hold that there are two paths for the good: by the one, those who possess complete knowledge of the world-soul go to Brahmā; by the other, those whose knowledge is imperfect reach the world of heaven, whence, after the fruit of good works has been exhausted, they return to earth to be born again. On the other hand, those who are ignorant of the self go to the dark world of evil spirits, or are reborn on earth. To illustrate the mystery of the future life, the Kaṭha Upaniṣad tells the myth of Naciketas, who, on visiting the realm of death, is informed that those who have not enough merit for heaven and immortality fall again and again into the power of death and, entering upon the cycle of existence (*saṃsāra*), are born repeatedly with a body or as a stationary object; that he who controls himself reaches Viṣṇu's highest place; but that there is no hell for the unworthy.

b. Heaven.—The abode of the fathers and Yama is situated in the highest or third heaven, where is eternal light. It is also described as the highest point of the sun or the highest step of Viṣṇu. Here is a tree in the shade of which Yama drinks with the gods. In the Atharvaveda it is stated to be a fig-tree (*aśvattha*). Heaven is believed to be the reward of the righteous, of heroes who risk their lives in battle, of those who practise rigorous penance, and, above all, of those who bestow liberal sacrificial gifts. The Atharvaveda is full of references to the bliss in store for the latter.

The deceased, on entering heaven, see again father and mother, wives and children. Sickness is left behind; bodily imperfections or frailties are unknown; and old age cannot prevail. There are neither rich nor poor, neither oppressors nor oppressed. The life of the blest is passed among the gods, more especially in the presence of the two kings Yama and Varuṇa. Here the sound of the lute and of songs is heard; streams of Soma, *ghi*, milk, honey, and wine flow; and there is spirit-food and satiety. Bright, many-coloured cows, which yield all desires, are at hand. The life in heaven is thus one of indolent material bliss, devoted to sensual joys. In the Upaniṣads the life in the heaven of the gods, being followed by re-birth, is a lower and transient form of bliss; only those who know the truth reach the higher stage, the condition of changeless joy and unending peace which results from absorption in the world-soul.

c. The blest who dwell in the third heaven are called *pitṛs* or 'fathers.' By these are generally meant early ancestors who made the paths by which those who have recently died join them. Different races of them are distinguished (p. 608), the Aṅgirases being more especially associated with Yama. The fathers are also spoken of as lower, higher, and middle; as later and earlier; all being known to Agni, but a few only to their descendants. The fathers are fond of Soma, feasting with the gods and leading the same life as they do. Being immortal, they are even spoken of as gods. Great cosmical actions, like those of the gods, are sometimes attributed to them; thus they are said to have adorned the sky with stars, and to have placed darkness in the night and light in the day. As the burning of the corpse was in no sense a sacrifice, the corpse-devouring Agni was distinguished from the Agni who wafts the offering to the gods; and, similarly, the path of the fathers from that of the gods. The Śatapatha Brāhmaṇa goes further, discriminating between the heavenly world (*svarga loka*), that is, the world of the gods, and that of the fathers (*pitṛ-loka*). The fathers are prayed to like the gods, being entreated to hear and to protect their worshippers, and to refrain from punishing their descendants for any sin humanly committed against them. They are also besought to give riches, offspring, and long life to their sons; individual ancestors being sometimes invoked by name. Coming to the sacrifice on the same car as Indra and the other gods, they drink the pressed Soma as they sit on the litter of grass to the south (the quarter of the dead). They arrive in thousands and range themselves in order on the sacrificial ground. They receive oblations, which are, however, different from those offered to the gods.

d. The chief of the fathers is Yama, to whom three hymns of the Rigveda are addressed. He is only spoken of as a king who rules the dead, but it is implied that he is a god as well. He is, as is natural, specially associated with Agni, the conductor of the dead. Yama is the son of Vivasvat and of Saraṇyū, Tvaṣṭṛ's daughter. He was a mortal, who chose death and abandoned his body. Finding out the path for many, he passed to the other world, whither the ancient fathers have gone. Having been the first of mortals that died, he is called 'our father.' As a mythological creation, Yama goes back to the Indo-Iranian period, corresponding to Yima, son of Vivahvant,

in the Avesta. The most probable conclusion to be drawn from the available evidence seems to be that Yama represents the chief of the souls of the departed, as having been the first father of mankind and the first of those that died. This conclusion is supported by the fact that in the Avesta Yima is the ruler of an earthly paradise. It is, perhaps, also borne out by the appearance of Yama and his sister Yamī in the character of twins in a hymn of the Rigveda, where the very repudiation of their incest points to the existence of a belief in the descent of mankind from primeval twins. Some scholars have, however, identified Yama with various phenomena of nature, such as Agni, the sun, or the moon. In the Rigveda Yama's foot-fetter (*paḍbīśa*) is referred to as parallel to the bond of Varuṇa, and his messengers that seek the lives of men must have inspired feelings of dread. It is not till the Atharvaveda and the later mythology that Yama becomes more closely associated with the terrors of death, and assumes the character of a regular god of death; though even in the epic his domain is not limited to hell.

The owl and the pigeon occasionally appear as Yama's emissaries; but his regular messengers are two dogs, described as four-eyed, broad-nosed, brindled, brown, sons of Saramā. They guard the path to the other world or wander about among men, keeping watch on them; and they are besought to grant continued enjoyment of the light of the sun. Their functions seem to have been thought to consist partly in tracking out among men those who are to die, and partly in keeping guard on the path over those who are about to enter the realm of Yama. The conception of a watch-dog of the dead goes back to the Indo-Iranian period, as shown by the evidence of the Avesta, where a four-eyed hound is stated to keep guard at the head of the bridge which leads to the other world. If the epithet *śabalas* ('brindled') is identical with the Greek *κέρβερος*, the notion of a dog of death must go back even to the Indo-European age.

e. Hell.—As the virtuous, in the opinion of the Vedic seers, were rewarded in the future life, it is natural to suppose that they believed in some kind of abode for the wicked. The evidence of the Rigveda cannot, however, be said to go beyond showing that this was regarded as an underground darkness. But there can be no doubt that the belief in a regular hell exists in the Atharvaveda, which speaks of the house below, of black and lowest darkness, the abode of goblins and sorceresses, called *nāraka loka* as contrasted with *svarga loka*, the heavenly world of Yama. The torments suffered in this infernal region are also once described. It is not, however, till the period of the Brāhmaṇas that the notion of future punishment appears fully developed. Thus the Śatapatha Brāhmaṇa states that every one is born again after death and, being weighed in a balance, receives reward or punishment according to his deserts. Nothing is said in the Vedas of a final judgment or of a destruction and renovation of the world.

B. *THE CEREMONIAL.*—a. Funeral rites.—Cremation was the normal method of disposing of the dead in Vedic times. That burial was also practised to some extent is undoubted, though the ritual books have no rules regarding it, except in so far as the bones of the cremated are interred. The predilection of the Vedic theologians for the god of fire was most probably the reason for incineration having already become the almost universal practice among the Aryans in India. The beard and hair of the dead man were cut off and his nails trimmed; his body was anointed, decked with a garland, and dressed in a new garment, which he was intended to wear in the next world. The corpse was then carried or driven to the burning ground; a bundle of twigs was tied to it, in order to efface the footsteps and so prevent death from making its way back to the living. The dead man was then exhorted, with verses from a funeral hymn of the Rigveda, to go by the ancient paths, past the two dogs of Yama, to the fathers. The widow, who had mounted the pyre and lain down beside the corpse, was now called upon to rise and take the hand of her new spouse (her husband's brother). That the ceremonial excluded the burning of the widow is undoubted; but the ritual act which was required to recall her to life shows that her ascent of the pyre was symbolical of the actual immolation of bygone times. Indeed, it must be assumed that this ancient custom, though not sanctioned by the Vedic ritual, survived through the Vedic period in the families of military chiefs. Having by their example gradually spread to other classes, it became, in later times, a universal practice throughout India. If the deceased was a warrior, his bow was taken from his hand, an indication that at one time it was burned with him; if he was a sacrificer, his combustible utensils were placed with him on the pyre. Here we have a survival of the ancient custom of providing the dead with the chief articles of their property for use in the next life. At the same time as the corpse was burned, a cow and a he-goat were sacrificed. These animals, however, did not represent property, but were intended as a means of deflecting the consuming power of fire to them as substitutes for the corpse; and, by a fiction, Agni was supposed not to burn the dead man, but to send him 'done' to the fathers.

The mourners, on returning from the burning ground, bathed, changed their clothes, and refrained from looking round. On entering the house of the deceased, they touched purifying or auspicious objects such as water, fire, or cow-dung; and finally removed the sacrificial fire of the dead man by some aperture other than the door.

A death was followed by a period of impurity, varying from three days to ten, according to the degree of kinship. As the return of the soul was feared during this time, the surviving relatives took constant precautions to avoid infection. Thus only food which was bought or presented by others was eaten, evidently to guard against introducing anything tainted into the system.

Generally on the third day, what remained of the bones of the cremated man was collected, placed in an urn, and temporarily buried, to the accompaniment of the Rigvedic verse, 'Approach thy Mother Earth.' During this ceremony the deceased was no longer thought of as in the realm of Yama, but as actually present. This inconsistency is no doubt due to a primitive belief surviving beside the more recent conception of life in the heavenly world.

Last of all—according to the Brāhmaṇas, after the lapse of years—a burial mound was erected, the bones being exhumed for the purpose of removal to a suitable spot. During the following night music was performed, cymbals being beaten and the lute (*vīṇā*) played, the female mourners repeatedly going round the bones with their left hands towards them. On the following morning, the bones were taken to a place, out of sight of the village, where the ground was free from thorns but permeated with roots. A hole or furrow having been made, the bones were deposited and a mound of stone and earth was erected over them. Grain was scattered on the mound as food, while milk and water were poured into small pits dug around it, as drink for the deceased. When the mourners returned, various precautions were taken to pre-

vent death from following the living; thus a stone or a clod was deposited as a boundary. The Rigveda refers, in a funeral hymn, to the erection of a stone to divide the living from the dead.

Though the Vedic Indian retained many primitive beliefs in the ceremonial concerned with the future life, he had advanced far beyond the terrors which inspire the funeral rites of the savage. The verses which he employed in that ceremonial, while combined with much petty ritual and betraying much zealous care for his own well-being, at the same time reflect trust in the gods, as guardians of the dead, and filial piety towards ancestors. If we find here no traces of deep feeling and genuine sorrow, this is largely due to the fact that the impersonal formulas contained in the ritual text-books are the only available evidence for this period.

b. Spirits.—The most striking contradiction in the Vedic view of the future life was the belief, though the Rigveda describes the deceased as conveyed direct to the fathers by the funeral fire, that the dead man did not join the fathers at once, but continued to lead a separate existence near the living for a year. The soul in this intermediate stage was distinguished by the name of *preta*, 'departed spirit,' as opposed to the ancestral spirits fully recognized as *pitara*, 'fathers.' During this transitional state it did not receive the regular monthly oblation to the manes of the sacrificer, but was honoured individually with separate offerings. At the end of the period it was received into the community of the fathers with a special ceremony which, strange to say, has nothing to do with that accompanying the final burial of the bones. Vedic literature has nothing to say about ghosts in any other sense than that of Pretas. There is, however, a passage in the Yajurveda stating that one who sheds the blood of a Brāhman will be excluded from the world of the fathers; and the evidence of early Buddhist texts may perhaps justify the inference that, even in the Vedic period, there was a belief in ghosts as spirits in the exceptional state of suffering torments on earth in punishment of guilt.

c. Ancestor-worship.—It remains only to sketch briefly the cult of the Vedas in so far as it was concerned with the dead. The regular sacrifice to ancestors, offered to father, grandfather, and great-grandfather, was celebrated every month at new moon. It was called *śrāddha* or 'offering given with faith' (*śraddhā*). For the purposes of this rite, a space was marked off in the south-east, the region which was sacred to the manes, and which the performers faced during the whole ceremony. Then the sacrificial fire was fetched and the food for the dead, consisting mainly of rice, but also of other offerings, prepared. Three small pits, a span long and four fingers broad and deep, having been dug and bestrewn with Darbha grass, an odd number of Brāhmans were seated, entertained, and received gifts. Libations to Soma associated with the fathers, and to Agni, conductor of the sacrifices to the dead, were also offered. A firebrand having been placed beside the pits to drive away demons who might have intruded themselves among the fathers, the latter were summoned to the offering and invoked to bestow wealth on their descendants. Jars of water were then set down beside the pits; the sacrificer took one with his left hand and, pouring water into the pits, mentioned the name of the ancestor to whom the offering was made. Grasping the sacrificial ladle also with his left hand, he placed one-third of the food in the form of a cake in each pit, invoking the fathers to partake of the offering. In conclusion, pieces of cloth were presented to the ancestors as clothing. The whole ceremony was interspersed with verses addressed to the fathers.

Our knowledge of this ceremonial is entirely derived from the ritual works of the Vedic period. There is nothing about it in the Rigveda, as it is not accompanied by hymns to the mighty gods with whom that Veda is concerned. Nevertheless, there can be little doubt that, in its essential features, it already existed in the earliest Vedic age; for its general character is extremely primitive: there is no trace of the souls of the dead abiding in heaven; the gifts offered to them are not sent up by the sacrificial fire, but are placed in the earth; and the spirit waits in or on the earth to be fed and clothed. The only details which probably do not go back to the times of the Rigveda are the offerings to Soma and Agni, as well as the presence of Brāhmans.

A. A. MACDONELL.

VEGETARIANISM.—In this article an attempt is made to confine the discussion to those portions of the subject which ultimately have a practical bearing, even though the way may lie through the investigation of some rather complex ethical principles. The omission of all investigation into the history of vegetarianism is dictated not only by fidelity to this aim, but also by the consideration that in this particular subject no sound inferences as to modern problems can possibly be drawn from any records of the past. It is, *e.g.*, interesting to learn that the poet Ovid wrote in favour of a vegetable diet as being natural to primitive man. But what we want to know is how far his words were effective. They may have been, and yet no one has recorded the effect; or they may have been dictated at first by dismay at the sight of great excess in flesh food. They are anyhow by themselves no evidence of vegetarian practice; and, if they were, we should be unable to connect it securely with the gradual decline of Rome. In short, at all times the important question has been, not the practice of an exceptional minority, but that of the mass of the population—just the large complex fact which has never been recorded.

That omission leaves two principal aspects of the question to be considered: (*a*) the physiological argument, which is treated as of subordinate importance, owing to the evidence to be gathered from facts being still very incomplete; and (*b*) the ethical argument, including our duty to the lower animals, the bearing of the example of Christ, and the question how far a non-flesh diet is a help to the higher life.

1. The physiological argument.—In several treatises on vegetarianism much has been written on the physiological effects of a flesh or non-flesh diet, but very little of any value. The truth is that before any scientific conclusion can be arrived at—in other words, before any broad inference can be drawn from experiments—the question must be so far simplified that it becomes abstract: that is to say, experiments have to be conducted under conditions which do not obtain in ordinary life

It is impossible to make sure that any two sets of experiments deal with the same data; *e.g.*, no one could ascertain how great in any given case has been the influence of mind upon the bodily tissues. Wonderful records are given of endurance exhibited by vegetarians on a spare diet of fruit, and of prolonged effort not only of brain but of muscle. But it is quite uncertain whether the spirit of the individuals in question has not affected the result so as to make it useless as a guide in cases where such spirit is wanting. Again, the more the problem is considered, the more formidable grows the question of time. Supposing, *i.e.*, that a fair number of individual lives have been under observation and in all cases the health has been well maintained on a vegetarian diet, it is still open to a sceptic to insist that an examination of the next generation, or perhaps the next two or three, is required before the experiment can be deemed conclusive or scientific. If any one is convinced that the children of vegetarians are born infirm—in other words, that the human stock loses vigour if abstinence from meat becomes general—it is ridiculous to urge in answer that facts yield anything like a scientific disproof of the contention. No experiments which can pretend to be exhaustive have yet been made, and there is very little likelihood of any such being undertaken. Supposing—what is not easy to suppose—that some hundreds of adults allowed themselves to be subjects of experiment, there is no guarantee that similar results would be gained from people who were victims of compulsion or involuntary abstainers, or from enthusiastic votaries of a new cult, or from men and women of different antecedents and different occupations. Thus the condition of a convert to a particular diet at the age of 40 is not a sure indication of what would be the effect of a similar diet on another man of the same age, still less on another of 20, or on a child of 10 years old, or on a woman of any age.

Moreover, the question is obscured by the varieties of diet comprised under the title 'vegetarian.' Large numbers of people abstain from meat, but not from fish; others from brown meat, not from chicken; others eat meat once a week; others eat eggs, but no meat or fish, and so on. Then there is the complex question of starchy foods and sugar. A sound opinion seems to be that the mischief caused by too much starch is quite as serious as that due to the uric acid found in meat. Add to all these uncertainties the startling differences in different constitutions, anyhow for a time, and the incredible skill and delicacy required before any chemical analysis can certify food-values with any precision, and it is indisputably clear that the physiological question concerning diet is not at present advanced beyond the stage where rough probability is the only guide to conduct. In other words, we must be prepared to find that in the absence of sure knowledge there has been and is and will be a proportionate amount of dogmatism.

It is further noteworthy that, in this country at any rate, inquirers are debarred from what would seem a promising source of information, viz. the medical profession. For not only has there always been and is still a reluctance on the part of medical men as a profession to undermine the importance and prestige of science by preaching the sanative power of unassisted nature, but it appears that till quite recently the preparation for the practice of medicine has not included any study of dietetic questions or of food-values. Thus in a matter of great complexity, which for our enlightenment requires bold but very careful experiment and the most scrupulous observation of results, little or nothing has been done which could give promise of a scientific induction. We are thrown back on amateur and haphazard experiments, and it may be said that such innovations on convention and tradition as have been effected have been introduced by outsiders and rather obstructed than favoured by medical opinion. To this professional attitude parallels from other professions could be easily adduced. Hence, when it is claimed for vegetarianism that the case in its favour is rooted in science and can be proved by experiment, no cautious student of the subject will yield a ready assent. The truth is that the strongest arguments for it are based on other considerations which are not, strictly speaking, scientific. That is to say, many individuals are convinced that their health has been permanently benefited by forgoing the eating of meat—nor has any one the right, scientifically speaking, to doubt the truth of their conviction—but, if the number of such were ten times what it is, it would still be illogical to argue that the residue of mankind would benefit to an equal degree. Among the complexities of the subject is the difficulty of ascertaining how far the experiment in any case has been fairly tried, at what age, after what antecedents, and, perhaps most important of all, with what degree of faith. For, along with other uncertainties, many individuals have experienced a varying amount of discomfort in the early stages of the new régime. Of those a considerable proportion, totally unable to face this or any discomfort, abandon the attempt and give themselves out as evidences of vegetarian failure—a testimony wholly worthless in reality, but quite sufficient to deter most of us from such an innovation in our habits. Equally fallacious are the indications afforded by the physique of foreigners, especially Orientals, though the crudest generalizations, based, if on anything at all, on nothing better than travellers' unverified gossip, frequently pass current as substantial evidence. Such facts, indeed, as have been accurately observed and reported can obviously give ground for nothing better than conjecture.

2. **The ethical argument.**—The appeal to human compassion in the matter of the treatment of animals, though logically cogent, has been made with very little success even in this country, where the sentiment of kindness towards animals is strongly developed, as compared with that of other European peoples. If man could prove that flesh-foods were indispensable to his existence, of course there would be nothing more to be said. Nor would it be denied that, if such food maintained him in rude health more certainly than any other, he is right to eat it. But humane vegetarians assert that neither of these contentions can be verified, that, on the contrary, so large a proportion of mankind has subsisted in vigour on fruits and herbs for many generations together that the plea of necessity breaks down in presence of admitted facts. If this be so, no defence is possible of the practice of taking the lives of animals. Moreover, as long as man accustoms himself to kill them for food, knowing or suspecting that he could live quite well if he spared them, his whole attitude towards them is vitiated by selfishness. Very few individuals can concern themselves seriously or for long together about the welfare of animals while they are conscious that society as a whole condones the slaughter of them for no other reason than that flesh foods are preferable, or that a certain amount of inconvenience would be caused by a change of diet. Till the ethical question is fairly faced, the general conscience is violated by the daily commission on the largest scale of an act which we uneasily suspect to be a crime. Further, unless there had been a conspiracy to hide the facts, the hideousness of the slaughter-house

system would long ago have roused public sentiment to a pitch of fury; and even now, assuming what is very doubtful, that the butchering is as painless as possible, there remains against man's whole treatment of his helpless fellow-creatures the broad indictment that to rob millions of them of life unnecessarily is a kind of murder.

It is difficult to say what answers to the above arguments are made, as public opinion is too lax on the question and custom is too strong to have allowed the matter to be fairly discussed. The truth is, an enormous majority of people are too much under the yoke of custom to be awake to the moral appeal. Many would readily admit that they cannot meet it, nor are they at pains even to excuse themselves save on the plea of convenience. Meanwhile it would be difficult to measure the mischief caused to our social life by this particular form of heedlessness. Compared with foreigners, Britons are peculiarly sensitive to the claims of the animal kingdom. Such kindness as we show is based on religion, but is also the outcome of an inherited sentiment, powerful to-day, but, it must be admitted, of somewhat recent growth. If, then, both sentiment and religion are flouted by any particular custom, and little or no protest is raised against it, the very foundations of our moral principles are assailed by a deadly form of insincerity, all the more deadly for being largely unsuspected. Indeed, if these considerations are sound, we, as a society, are under the ban of Christ's denunciation of the Pharisees, who were guilty in proportion as they were blind.

But there must be plausible arguments for a practice so general as the slaying and eating of animals. Probably the most prevailing is the idea that it makes on the whole for health. The physiological aspect of the question must be dealt with separately. Here it is only necessary to observe that, granted the fact, there need be no dispute as to the principle asserted. It may be conceded that man is on so much higher a plane than animals that his welfare must take precedence of theirs in all cases where there is a direct conflict. But that there is such a conflict is exactly what the humanitarians deny. They maintain that the evidence of fruits, cereals, etc., being sufficient to support human life in full vigour is abundant; and their main argument is not that men should suffer in order to spare animals, but that, as long as there is reason to believe that animal flesh is no better (indeed is inferior) as food for man than fruits and vegetables, it cannot be right to kill animals and eat them.

To this it is replied that, if abstinence from meat became general, intolerable evils would result, such as the means of livelihood being taken from millions of workers, and the loss of skins which are needed for clothing and which are supplied at present from animals bred or preserved for food. There would be a prospect also of large industries being destroyed and thousands of workers being thrown out of employment.

One obvious answer to these misgivings is that they are based on the assumption that a vast revolution in diet could come about suddenly. There is of course no reason to assume anything of the kind, least of all in a country where conservative prejudice on this subject is adamantine. But that is not the kind of answer that touches the conscience. The truth is, the results of conduct in this case, as in many others, are far too uncertain to be worth arguing about. Nor would there be any need to forecast the future with the laborious precision which is often affected, if once it were made clear that obedience to divine law means obedience in spite of uncertainty as to results. The training of the Apostles was directed to this end throughout, that they should walk by faith and not by sight. But to limit obedience to occasions of utility is to destroy its faithfulness. Thus, if man recognizes the claims of animals to good treatment, it is futile to defend the slaughter of them because the results of the opposite line of conduct are not easy to foresee. This is the point at which religious considerations supplement ethical. If we believe that God has committed animals to us, we are bound to treat them kindly, even if the results were likely to be far more inconvenient than they possibly could be. Indeed, the experience of food shortage has taught us that all the difficulties supposed to be inherent in vegetarianism are faced without hesitation as soon as the situation is understood. In other words, professing followers of Christ ignore what is admittedly a divinely sanctioned claim, but recognize it as soon as ever 'provision for the flesh,' against which St. Paul (Ro 13^{14}) and our Lord (Mt 6^{25}) warn us, seems to be in question.

A more solid objection is advanced when it is urged that the Founder of our religion and the Pattern of our conduct did Himself habitually partake of animal food. How can humane-minded people take their stand on a divinely sanctioned law which the Son of God Himself disobeyed?

To face this objection fairly, it is necessary to point out that the oft-quoted parallel of Christ's silence concerning slavery is not at first sight applicable. Against slavery He did undoubtedly establish principles of charity between man and man which were certain, if followed, to overthrow the institution sooner or later. But it cannot be said that any teaching of His can be quoted which bears at all directly against the practice of slaying animals for food; and it is quite legitimate to argue that He had no such objection to the practice on humane grounds as He must have had against the practice of depriving a fellow-man of his liberty. Moreover, the question is not, 'Why did He refrain from denunciation?' so much as, 'Why did He participate in the practice?'

The explanation must take account of the main purpose which—as far as we can grasp it—the Saviour set before Himself in His work on earth. From no other point of view can the fragmentary character of Christ's ethical teaching be understood. But any adequate statement on such a theme would range far beyond the limits of this article. This much, however, may be said, that, in proportion as any interpretation of Christ's work falls short of the full doctrine of the NT as to His person, it will fail in explaining the gaps in the ethical teaching. In other words, if Jesus is regarded only as a divinely-gifted prophet, His life and teaching were not only abortive, but needlessly so. With slight precaution He could have escaped an early death and extended His teaching and the sublime example of His conduct for other fifty years. There is no way of meeting this criticism except by holding fast to the Christology of St. Paul and St. John. The task before the Lord was not to teach mankind, but to save them by His incarnation, death, resurrection, and the gift of the Holy Spirit from heaven. Now, while engaged on this task, He gave just enough time to evangelization to reveal what human life would be if men lived it in the full conviction and certainty of God's love and presence among them. The revelation was grievously misunderstood at the time and subsequently, owing to men's tendency to turn the gospel into a burden of moral law, more crushing than that of Moses because more spiritual and exacting. Therefore the teaching was in the main barren of precepts dealing with everyday conduct. The danger of literalism of interpretation was imminent, and we may con-

clude that, if Jesus had given us anything like a complete code of moral precepts, or even a full picture of a sinless life extended far into old age, our attention would have been diverted finally and completely from the difficult task of understanding His work of redemption to the far simpler but hopeless endeavour to live up to the level of His moral example—*i.e.*, to reject God's scheme of salvation owing to utter inability to rise up to its meaning. Hence the Saviour refrained from all attempt to guide His followers by rules, but gradually taught them—what they are still very slow to learn—that their lives were to be quickened by the Holy Spirit whose indwelling was to be to them their strength and inspiration for all time. In view of this prospect, we can understand why His ethical teaching was so suggestive but so paradoxical, so figurative, and incomplete. It was designed, not to save us from the trouble of thinking, but to turn our thoughts to the Comforter whom He promised to send.

But, in considering the moral example of Christ, we have to recognize the fact that He resolutely declined to gratify the expectation of the Jews that He should set before men a pattern of conduct to be imitated unintelligently. Not only the Pharisees but all mankind are ready to go through almost any unpleasantness if thereby they can escape the pain of recasting their ideas. From the beginning of His ministry, however, Christ set Himself sternly against this temper. His first word spoken in public (Mt 4^{17}) was an echo of the Baptist's injunction: 'Change your minds: for the Kingdom of the Heavens is come nigh.' Clearly the Lord intended that deep principles should be learned by men, and that, as they were learned, human conduct should change. Supposing, then, that He had set Himself in opposition, not specifically to a principle of conduct, but to a social custom the meaning of which was widely misunderstood, that would have been an attempt, foredoomed to failure, to improve human life without human co-operation; for it is certain that moral improvement cannot be achieved if we do not know what we are doing and why we are doing it.

Therefore Christ taught principles based upon the fact of God's Fatherhood, one of them being that the human body was to be honoured. This was taught not by a formulated rule, but by the fact of the Incarnation as soon as it was accepted. Hence, in the course of the history of Christianity, social customs have to be considered and modified in accordance with the underlying principle of reverence being due to our bodies made in the image of God. Thus the question of the kind of food that we eat arises naturally as the Incarnation is gradually being better understood.

Further, Christ's life on earth was an exhibition of divine power triumphing in and through the uttermost of created weakness. By His endurance of that weakness He manifested His personal strength, inherent and inalienable, as the Son of God.[1] Now that strength was the strength of a Redeemer, a Transformer, an Uplifter. Christ found mankind sunk in evil prejudices and evil customs. He took upon Himself our poisoned nature, as it was, that He might cleanse and reinvigorate it; what He did not do was to better the conditions so as to make His task easier. He took on Himself all the disabilities which resulted from human blundering, to show how, not so much in spite of them but by means of them, He could triumph over Satan. Hence the freedom from temporary restrictions and the universality of His teaching.

It is therefore strictly relevant to the main question to ask what kind of food best helps us in our endeavour to show reverence to our bodies, while at the same time we assert our mastery over them. There is no dispute as to the latter duty, but there is much haziness of mind in regard to the former, due to ignorance which can be dispelled only by experience of the effects of a reformed diet. Vegetarians learn them with surprise, yet they all seem naturally to result from nothing more than the relieving of the body and the mind from constant injection of poison. One that is discovered, but remains for obvious reasons unpublished, is that a 'simple' diet, consisting principally of fruit, lettuces, and 'unstarchy' foods, secures *cleanliness for the inside of our bodies*, in contrast to the noisome defilement which in flesh-eating societies has come to be taken as a matter of course. Here there is no room for dispute. If a certain diet promotes cleanliness while another causes dirt, that is enough reason by itself for preferring the former. It is then a question of fact which can only be tested by experience. Again, vegetarianism favours moderation in diet; and if —as seems to be the case, and has indeed been certified by the restriction of diet in time of war—most people clog their energies by needlessly taxing their digestions, it remains that a diet free from poison is to be preferred. True, elaborate cooking encourages excess, whatever the diet be; but, as the poison of meat is a stimulant which is followed as usual by a reaction, and as the reaction is a certain languor which feels like hunger but has nothing to do with it in reality, there is a peculiar danger in a diet of flesh which vegetarians for the most part escape. It will be noticed that it is here assumed that excessive eating is common. We need not give all the evidence for this assumption. Perhaps the most distinct indications were given during the ration-time in 1917 and 1918 that the prevalent fashion of excess had been mainly among men who could afford superfluous food, between the ages of 40 and 60, when advancing years dictate the wisdom of a gradually diminishing diet, but when also it is quite easy to maintain by skilful cooking the craving of a palate-appetite almost at the level that it kept at 30 years of age. Our social customs, our prejudices, and our cooking all make real moderation in eating difficult; and among the influences that favour excess, meat-eating followed by a nerve-reaction that is mistaken for hunger must be numbered.

In this connexion, however, the most serious indictment against flesh-eating has still to be mentioned. Meat is a stimulant, and its heating properties act upon the system by increasing the power of the animal in man. By meat-eating, in other words, the temptation to sensuality of all kinds is strengthened.

No sooner is this affirmation made than it is traversed as follows: either (*a*) it is flatly denied, and instances of vegetarian or quasi-vegetarian yet sensual peoples are adduced; or (*b*) it is contended that, if any immunity from animalism is secured, it is at the cost of diminished bodily vigour.

(*a*) No arguments are more fallacious than those which rest on a false induction. The whole question is far too complex to allow of certainty. We can guide our conduct by probability only, and probability admits of degrees. If we confine our attention to ourselves—the British people—the evidence, as already remarked, yields no scientifically certain results. It is nevertheless very weighty and cogent as a guide to conduct. We know something about the temperament of our own people, practically nothing about foreigners' temperament, such as that of the Hindus or the Japanese. That is to say, while it is very difficult

[1] R. M. Benson, *The War-Songs of the Prince of Peace*, London, 1901, i. 117.

to exclude other influences, such as heredity, religion, and social habits, even when we are considering ourselves alone, it is wholly impossible in the case of foreigners. In other words, evidence as to the physiological and spiritual effect of a certain diet in England is of some value for English people, but of less value for foreign white people, and practically of no value whatever for people so different from us as the yellow or the black races. The evidence, then, which it is worth while considering is that which is drawn from British people; and, further, it may be drawn from the experience of those who have made the experiment, while very little weight can be attached to the affirmations of those who have not. For, while a large majority of young men, all flesh-eaters, are troubled with strong sensual desires to which a huge proportion give way, the constant asseverations of those, the minority, who have made the change, to the effect that continence has forthwith become easier for them, remain uncontradicted in reality, no matter how often they are ridiculed.

Moreover, the benefit, it cannot be too often insisted on, is not only relief from certain troublesome physical sensations but a marked purification of thought and desire. 'Mali mores sunt mali amores,' said St. Augustine, and no cause of life-wreckage has been more fatally operative than the attempt to check bad actions without eradicating the desire. If, then, converts to vegetarianism who have tried both forms of diet are the only witnesses in possession of first-hand evidence, and if their testimony is practically unanimous and wholly unshakable in confidence as to the reform of their diet being to them an immense assistance to the higher life, we are bound to conclude that, in a difficult and complex question, we have here in good sooth a solid foundation on which to build, a real light in the darkness, a veritably guiding principle. Especially is this the case when we remember that the matter is far too personal to admit of publication. A little *a posteriori* evidence given confidentially outweighs all noisy *a priori* contradictions.

Nothing, however, is easier than that a principle admitted in theory should be denied in practice. If people meant what they say when they deplore the ravages of venereal disease, they would eagerly grasp at anything that held out any hope whatever of mitigating the power of the temptation, no matter if their personal convenience suffered thereby, or even if they themselves were called on to undergo real prolonged discomfort. No such excuse, however, is available. The only real obstacles to change are the most stubborn: hatred of change, positive dread of a new idea, both confirmed by deep and wide-spread misunderstanding.

(*b*) The objection that a non-flesh diet lowers the bodily vigour must be met with a flat contradiction, as very nearly all the evidence points to the contrary, except in abnormal cases. It is true that for a time a *sudden* change from a full meat diet to a régime of vegetables strictly so called may mean under-nourishment, if the foods are not carefully chosen. Or a still more disastrous blunder is made in substituting a huge amount of innutritious vegetables for beef and mutton—a sure way of inducing corpulence and lowering vitality. The right method is to make the change gradually and discover by experiment and counsel both the amount and quality of the nourishment required. Other benefits found in many cases to result from a non-flesh diet, especially if it avoids the danger of excess of starch and is diminished with advancing years, are as follows: (1) equability of spirits and immunity from depression, especially on waking in the morning—many would admit that this evil is due to heavy feeding over night, but it is not generally known that it is chiefly due to the meat poison; (2) immunity from rheumatism, lumbago, and gout; (3) reduced requirements of sleep; (4) comparative indifference to cold; (5) cure or mitigation of sea-sickness, mountain-sickness, headache, languor, etc. It is asserted by vegetarians that all of these may be expected after an interval of time varying in different cases, from the change of diet, and that so-called failures are either abnormal cases or due to want of perseverance.

Other objections are advanced not because of their cogency but as excuses for maintaining the *status quo*. It is urged that a vast industry would be destroyed and many thousands of caterers deprived of their livelihood. The whole force of this argument rests on the absurd assumption that all classes of the community would make the change suddenly. What is far more relevant is the prospect of a great stimulus to the wholesome cottage industry of fruit-growing, allotments, and agriculture generally. But it should be borne in mind that, granted the cogency of the ethical arguments, Christians ought not to be in a hesitation as to the results. Faith in God means that, in the long run anyhow, suffering is diminished by right action and never increased.

Summary.—For the sake of establishing principles which might serve to guide conduct, the history of vegetarianism is of little use. Nor can it be contended that the physiological effects can be stated with anything like scientific cogency. Numberless individual testimonies in its favour could be quoted against a comparatively small number adverse. But the induction is too narrow to allow of any conclusions being drawn which can be reckoned more than very probable. Once, however, so much as probability is conceded, the ethical argument becomes irresistible. Two considerations alone would establish this assertion: (1) the slaughter of animals being unjustifiable unless its necessity can be proved; (2) the practical certainty that flesh foods are stimulative to the animal passions, especially of the adolescent male, unless the consumption of them is restricted to a level hardly possible of attainment. Other benefits of a fruitarian and light farinaceous diet concern such exceedingly important departments of life as interior cleanliness and, of course, health of body, and therewith the paying of due reverence to it; equability of spirits, and increased capacity for sustained hard work, both bodily and mental. Where a fair trial of the reformed diet has been given, it must be conceded that in these respects the individual testimonies in its favour are very numerous and convincing. Against all this, however, are custom, prejudice, misunderstanding, ignorance, and social inconvenience, much exaggerated but sufficient to demand thought and care. These forces, though for the most part inert, will probably check any considerable advance in the direction of change for many years to come.

LITERATURE.—The literature is extensive; the following is a selection: Anna B. Kingsford, *The Perfect Way in Diet*[2], London, 1885; A. F. Hills, *Essays on Vegetarianism*, do. 1893; Howard Williams, *Ethics of Diet*[2], do. 1896; Eustace H. Miles, *Failures of Vegetarianism*, do. 1902; A. R. Kenney-Herbert, *Vegetarian and Simple Diet*, do. 1904; H. S. Salt, *The Logic of Vegetarianism*, do. 1906; Eustace H. Miles and Mariella John, *Builders of the Body, or Lessons on Food Values*, do. 1907; J. L. Buttner, *A Fleshless Diet: Vegetarianism as a National Dietary*, New York, 1910; Eustace H. Miles, *The Food Reformer's Companion*, London, 1910; H. Carrington, *The Natural Food of Man*, do. 1912; G. Krueger, *Man's Best Food*, Eng. tr., do. 1914; *The Law of God*, by a Vegetarian, do. 1915; M. A. White, *Why I do not eat Meat*, Zarephath, N.J., 1915; E. VIKRAMA ERA.—The era known by the name of Vikrama, or more fully Vikramāditya, or, according to the Jains, Vikramārka, is that commonly used by Hindus over all N. India, except in Bengal, where reckoning by the Śaka era (*q.v.*) is preferred. It is commonly called *Saṁvat*, an abbreviation of *Saṁvatsara*, 'year,' but that word is sometimes used in connexion with dates expressed in other eras. The Vikrama era is also current in Telingāna, or the Telugu country, and in Gujarāt. Most authors place its initial point in 57 B.C., but, according to Fleet, 58 B.C. is correct. The year is luni-solar, consisting of twelve lunar months, harmonized with the apparent motion of the sun by an elaborate system of intercalation and omission, which may be studied in the technical chronological works by Jacobi, Sewell, and other scholars who are cited in some of the publications mentioned at the end of this article. In N. India the Vikrama year begins in the month Chaitra or Chait (March–April), but in Gujarāt it begins seven months later in Kārtika or Kārtik (Oct.–Nov.). We also hear of localities where the year began either in Āṣāḍha or Āṣārh (June–July), or in Mārgasiras, or Māgh (Jan.–Feb.). Another variation arises from the practice of sometimes reckoning the month to end with the full moon (*pūrṇimānta*), and sometimes taking it to end with the new moon (*amānta*). The year, in any case, never coincides exactly with a year A.D., so that no summary formula of conversion will give more than approximate results. Commonly the subtraction of 57 from a V.E. date gives the year A.D.; *e.g.*, 1857 V.E. is equivalent to the period from 27th March, 1800, to 15th March, 1801 A.D., according to Cunningham's tables for a year beginning with the month Chait. Another complication is caused by the use in Rājputāna of a variety of the era called A-nanda, 'without *nanda*,' the term *nanda* being taken as equivalent to 90. An A-nanda year V.E. is converted roughly into a year A.D. by adding (90–57) 33. Thus 1857 V.E. A-nanda would be approximately 1890 A.D. instead of 1800, as according to the ordinary (*sa-nanda*, or 'with *nanda*') reckoning. The bardic poet Chand, who habitually uses the A-nanda form, was unjustly accused of erroneous dating until his practice was understood.

A Hindu date may be expressed in an 'expired' year, as, when we say a man is 70 years of age, we mean that he has completed 70 years; or it may be expressed in a 'current' year, as when we say that an article was written in 1918, meaning the unfinished year at the time of writing. The causes mentioned above, besides others, make the exact conversion of V.E. into A.D. dates a difficult business. Tables must be consulted, but they do not always agree, and detailed calculation of the equivalent of a date requires an expert.

The name Vikrama or Vikramāditya appears not to have been applied to the era until quite a late date, in the 10th or 11th century A.D. In Gupta times (5th and 6th cent.) the era was known as that reckoned according to the practice of the Mālava tribe (*gaṇa*), who inhabited Mālwā, then including S. Rājputāna. Probably the era originated in that area, perhaps at Ujjain, the ancient capital, from which the Hindus reckoned longitude. At that period the years were sometimes called *kṛta* (lit. 'made'), apparently with reference to a Vedic 4-year cycle of which the first year was termed *kṛta*.[1] No record is known of any *rājā* Vikrama or Vikramāditya at Ujjain or elsewhere in 58 or 57 B.C., from whose accession the epoch of the era might be reckoned, as tradition affirms that it actually was reckoned. But it is possible that such a *rājā* may have existed, and the presumption is that the name Vikrama as applied to the era should be that of the king who established it. It is also possible that one of the later kings bearing the common title of Vikrama or Vikramāditya may have become associated with the era by erroneous tradition. The strongest candidate for the honour of being considered the original of the *rājā* Bikram (Vikrama) of popular legend is Chandragupta II. (*q.v.*), Vikramāditya (*c.* A.D. 375–413). Hoernle suggests Yaśodharman (*c.* A.D. 520), who may possibly have borne the same title. Both kings ruled over Mālwā. The origin of the era remains unknown, nor is there any clear evidence to show how, when, or why the name was changed from 'the era according to the practice of the Mālavas or the Mālava tribe' to 'the era of [King] Vikrama.' The subject has been much debated by archæologists without positive result.

LITERATURE.—The following list gives the more important references, but the subject has been discussed or mentioned in many other books and articles. J. Prinsep, 'Useful Tables, in *Essays on Indian Antiquities*, ed. E. Thomas, London, 1858, vol. ii.; A. Cunningham, *Book of Indian Eras*, Calcutta, 1883; F. Kielhorn, in *IA* xix. [1890], and xx. [1891], esp. pp. 397–414; D. R. Bhandarkar, *ib.* xlii. [1913] 163, *ASWI Progress Report for 1915–16*, p. 56, and 'Vikrama Era,' in *Bhandarkar Commemoration Volume*, Poona, 1917; K. B. Pathak, 'New Light on Gupta Era and Mihirakula,' *ib.*; Sten Konow, 'Indoskythische Beiträge,' *Sitzungsber. der königl. Preuss. Akad. der Wissenschaften*, 1916; J. F. Fleet, *JRAS*, 1913, pp. 994–1000, and other artt. in *JRAS*, 1907, etc.; A. F. R. Hoernle, *JRAS*, 1909, p. 100; H. P. Śāstrī, *Epigraphia Indica*, xii. [1913–14] 119. The A-nanda variety is explained fully by Syam Sundar Das, in *Ann. Rep. on the Search for Hindi MSS for 1900*, Allahabad, 1903, pp. 5–10; and summarily by Hoernle, *JRAS*, 1906, p. 500.

VIRGIN BIRTH.—1. Ethnic.—(1) A wonder birth or a supernatural birth is one of the commonest ideas in folk-tale and myth. In not all of these, however, is there what can strictly be called virgin birth. The latter certainly does not occur where ancient myths of the birth of heroes, great men, or kings are concerned. In spite of direct evidence of true human descent, myth told how a god was their real father. Plato and Augustus were said to be sons of Apollo, the kings of Egypt sons of a god and a human mother. In these myths also the mother is already wedded, and the divine parent is father in a purely physical sense and has a material form, in that form taking the place of the husband. In many folk-tales and sagas where the conception of the child is supernatural, and due to contact with or to swallowing some substance, or to the breath or glance of a man or divine being falling on the woman, or to many other causes, the woman is already married, and the birth is not, strictly speaking, a virgin birth. In this aspect these stories are parallel to ritual customs in which married women desirous of having children make use of certain substances, certain means, certain rites, to aid or perhaps to cause conception.

[1] *Epigraphia Indica*, xii. 319.

There are, however, a number of stories, both from the lower and from the higher culture, in which a virgin bears a child because she has swallowed a pebble, a blade of grass, or some other substance.

Poshaiyánne, a hero of the Sia of New Mexico, was born of a virgin who had eaten two nuts. Fo-hi, who founded the Chinese Empire, was the son of a virgin who ate a flower which had clung to her garment when bathing.

Sometimes pregnancy is caused by mere contact with an object, by bathing, or by the sun's rays. But, while such stories regarding virgins or at least unmarried girls (and this distinction is an important one, considering the commonness of pre-nuptial unions) are fairly numerous in the lower culture, it is certainly an exaggeration to say that 'the Virgin-Mother myth is universal in Paganism.'[1]

E. S. Hartland, in his work, *Primitive Paternity*, maintains that these stories, the corresponding rites to cause pregnancy, and many other factors have resulted from a former universal ignorance of the physical causes of conception, still alleged to exist among Australian tribes. While his arguments are weighty, it still remains doubtful whether this ignorance ever actually was so wide-spread. The universal existence of the couvade would seem to imply knowledge of fatherhood. Whether in supernatural or in virgin birth the child born is often the metamorphosed form of some substance swallowed by the woman, and that again is a man or hero who has taken the form of that substance, in order to be reborn. Yehl, the culture-hero of British Columbian tribes, frequently transformed himself into a small object which was swallowed by a woman, and he was then reborn. With the Arunta of Australia a spirit of a totemic ancestor enters a woman and is reborn from her. Conception, with the Arunta, is not supposed to result at all from intercourse, though that may prepare the way for it.[2] Perhaps, therefore, we may say (1) that it has been widely believed that sexual intercourse is a condition, rather than a cause, of birth or of conception;[3] or (2) that conception might be due to more than one cause. In any case, in the stories which tell of a supernatural birth the stress is more often upon the metamorphosis of the substance swallowed than upon the miraculous birth.

On the other hand, the theories of the Freudian school with regard to the relation of myths and folk-tales to dreams in which there is 'wish-fulfilment,' and in which the unconscious supplies a symbolism and various sets of transpositions, afford an explanation of such legends of supernatural and virgin birth without reference to this hypothetical ignorance of the cause of conception.[4] In support of this the mythical act of conception actually occurs in a dream in some of the stories in question—*e.g.*, that of Buddha's mother and the white elephant and that of the mother of St. Molasius.[5]

(2) Although virgin birth has been asserted of Zoroaster, this is hardly supported by the accounts in the sacred books. A substance called 'the Heavenly Glory,' created by Ahura Mazda, mingled with all the stages of birth in Zoroaster's ancestral line. The sacred books tell how his father ate a plant containing the *fravashi* of Zoroaster, and how both his parents ate food containing his substance. But this leads up to his actual physical generation. So, also, when myth tells how the future saviour Saoshyas would be born of a girl, this is because some of the *semen* of Zoroaster, preserved through long ages, will enter her womb.[6]

(3) The myths of Buddha's birth came into being long after his historic existence, while, in being based on transmigration, they expressly contradict his own teaching. Buddha, existing in heaven, decides to be born again on earth for the enlightenment of men. For this purpose he chooses his father and mother, and this puts his virgin birth (also commonly asserted of him) out of court. His mother dreamt that, in the shape of a white elephant, he entered her womb. Next day this dream was interpreted by several Brāhmans, who told Suddhana that he would have a son, the Buddha. The ordinary physical generation is implied, but to this is added the supernatural element of Buddha's pre-existence, as in the Arunta theory of birth. Later stories, however, alter the dream into an actual occurrence. It is nonsense to speak of his mother as 'Maya the virgin.'

2. **The Virgin Birth of Christ.**—The narrative of the Virgin Birth of Christ is found in Mt $1^{18ff.}$ and Lk $1^{26ff.}$, *i.e.* in the only Gospels which profess to record the event of the Birth. The alleged silence of the rest of the NT is no necessary proof of its non-acceptance—*e.g.*, by St. John or St. Paul. It was universally accepted without contradiction in the early Church, except among the Ebionites, even some Gnostic groups approving of it. Ignatius, soon after the death of St. John, witnesses to it most emphatically, and 'everything that we know of the dogmatics of the early part of the second century agrees with the belief that at that period the Virginity of Mary was a part of the formulated Christian belief.'[1] The first denials of it came mainly from Deistical writers in the 18th cent., and later objections come generally, though not wholly, from those who reject the 'supernatural' aspect of Christ's personality. The accounts in Matthew and Luke appear to be independent of each other, while they yet correspond as to the main fact. Matthew's narrative is written as if from Joseph's point of view, Luke's from that of Mary, and these, as the original repositories of the knowledge of the fact, have been regarded as the respective sources from whom the narratives were drawn. The story itself is apparently older than either of the accounts of it. The silence of Mark need not be viewed seriously, as it is no part of his purpose to relate the story of the Nativity, while he uses the significant phrase 'Son of God' (1^{1}).[2] This applies equally to John, though his language regarding the Incarnation has been thought to presuppose the Virgin Birth—*e.g.*, 'the Word became flesh' (1^{14})—while his reference to believers being born 'not of blood . . . but of God' $(v.^{13})$ may presuppose the divine element in Christ's conception as the symbol of Christian regeneration. There is nothing to show that St. John repudiated the story.

The reading in some Patristic quotations which makes the passage itself refer to Christ, 'who was born . . .', has been accepted as the true one by some critics, but need not be pressed.

St. Paul's silence is regarded as weighty, yet he does not repudiate it, and, while its use might have added weight to his arguments for Christ's divinity and pre-existence, he does not formally refer to it, just as he makes scanty reference to any fact of Christ's earthly life, outside the Crucifixion and the Resurrection. Perhaps he wrote before it was generally known; certainly before it was known from the Gospels. Orr has argued with truth that St. Paul regarded Christ's entrance into the world as 'no ordinary act,' and his references to it have always 'some significant peculiarity of expression'—*e.g.*, Ro $1^{3f.}$ $5^{12ff.}$ 8^{3} ('God sending his Son'), Ph 2^{7} ('becoming [RVm] in the likeness of men'), Gal 4^{4} (*γενόμενον ἐκ γυναικός* instead of the more usual *γεννετός* elsewhere used by him).[3] St. Paul's doctrines of Christ as the Second Man from heaven and of His freedom from the taint of Adam's sin almost imply belief in the Virgin Birth.

Orr also suggests a significant parallelism between the phraseology of Ro $1^{3f.}$ and Lk 1^{35}.

The passages of Matthew and Luke are found in all the MSS and Versions, and cannot be regarded as interpolations. They do not differ in style from

the rest of the Gospels,[1] and probably always formed an integral part of these. It has been suggested, however, that, if Lk $1^{34f.}$ be excised, as a later insertion, the narrative reads smoothly, and the Virgin Birth drops out.[2] In view of the facts, and also with regard to other changes which require then to be made (in 1^{27} 2^{5}; cf. also 1^{37}, which implies that the announcement is of something wonderful), this purely subjective criticism seems arbitrary. Generally the arguments based on the *form* of the phraseology in Lk 1^{26-35} are grotesque;[3] and no critic has yet shown, by himself writing a Virgin Birth narrative, what precisely was most fitting for Mary and the angel respectively to have said.

It has been argued that Mary and Joseph showed no consciousness of Christ's supernatural personality, as they should have done, granting the Virgin Birth. That consciousness, however, is found in Jn ($2^{1f.}$), who does not mention the Birth. On the other hand, the verses Lk $2^{33.\ 48f.}$ are alleged to contradict any such consciousness. But do they? What more natural than that One who to all outward appearance was an ordinary infant and youth should momentarily be so regarded in spite of any profounder consciousness? The argument takes no account of human nature.

In Lk 2^{33} the 'marvelling' may be a mere continuance of the wonder already excited. Note also the suggestion of Mary's consciousness of who her Son was in $2^{19.\ 51}$. There is no evidence that she was one of the 'kinsmen' in Mk 3^{21} who thought Him 'beside Himself.'

The references to Joseph as father of Jesus in Mt 13^{55}, Lk 4^{22}, Jn 1^{45} 6^{42} represent current opinion (the Jews, Philip before becoming a disciple) which is merely reported, not endorsed. Legally Joseph was His father, and even Mary could so speak of him (Lk 2^{48}), as Luke ($2^{27.\ 41.\ 43}$) speaks of His 'parents.' How else could they speak colloquially of one who stood *in loco parentis*? On the other hand, that Joseph was not actually His father may have been known, and this popular knowledge in the form of an aspersion on Mary's character[4] (cf. Jn 8^{41}) may be the source of the slanders in Celsus and Rabbinic works. In the earliest Gospel Jesus is 'the carpenter, the Son of Mary' in popular view (Mk 6^{3}), and this was evidently a contemptuous reference, not as in the parallel passage in Mt 13^{55}, 'the carpenter's son' (cf. Lk 4^{22}, 'the son of Joseph'). The references to Rahab, Tamar, and Bathsheba in the genealogy of Matthew may have an apologetic aspect. Such women 'played an honoured rôle in the history of the Davidic lineage. Mary's character, he proceeds to argue, was not irregular. How much less, therefore (the inference is), are Jewish objections to her and to Jesus justified!'[5]

The genealogies are alleged to contradict the Virgin Birth as showing the Davidic descent of Jesus through Joseph. The two genealogies are independent and have been adopted by the evangelists from existing documents. Do they represent more than a legal connexion? The writers who tell of the Virgin Birth see no contradiction in giving this descent, and in any case modify the genealogy by the phrases used in Mt 1^{16}, Lk 3^{23}. Not impossibly Mary was also of Davidic descent and related to Joseph.[6]

Those who regard the Virgin Birth as mythical trace it to (*a*) Jewish, (*b*) pagan sources. (*a*) The Jewish source is found in Is 7^{14}. No Jew, however, ever applied this to the birth of the Messiah, though it was in accord with Matthew's method to use it as pointing to an event otherwise known to him. Other critics have conclusively proved that the myth of virgin birth was unknown to Jewish thought. (*b*) Many have therefore sought its origin in pagan mythology, some going so far as to assume an Oriental myth, for the existence of which there is no evidence whatever. The other mythical sources are those discussed in § 1, and it must be obvious that they have nothing whatever in common with the stories of Matthew and Luke: in these there is no idea of physical procreation as there is in Greek myths, and all such myths were regarded with abhorrence in Christian circles. Any comparison of Matthew and Luke with such pagan myths (notwithstanding that these show the human feeling that extraordinary personages should have an extraordinary origin) will prove that we are moving in a different atmosphere—in the one reticence, in the other lack of it and a piling up of mystery. Matthew and Luke give no explanation of the mystery. They feel that here is a fitting introduction to a life such as the world had never seen before, and to the events of that life they immediately pass on. With sublime simplicity they use no words but those of the angelic messenger (Mt 1^{20}, Lk 1^{35}). Divine power, the power of a spiritual God, causes the Incarnation through the Virgin Birth. The reticence is marked in comparison with the exuberant language of the Apocryphal Gospels, and, if the Virgin Birth narratives are mythical, no myth was ever expressed in such bald and restrained language. The comparison with pagan myths has been influenced by knowledge of the lack of reticence in later Christian art and theology, into which pagan elements have crept. What we find there is, however, quite foreign to the Gospels.

3. **Doctrinal significance of the Virgin Birth.**—Only the briefest statement is possible here. It has been held that belief in the divinity of Christ, in the Incarnation, is possible without a belief in the Virgin Birth. While this is not to be denied, the fact undoubtedly remains that those who reject the latter are generally those who in greater or less degree reject the former. It is impossible for any one to say, granting the Incarnation, that virgin birth may not have been necessary to it. An absolutely unique personality such as Christ's demands some new beginning, just as it was consummated on earth by the Resurrection. An Incarnation inaugurating a new humanity, itself to be creative in the lives of men, implies some new kind of birth, and the Virgin Birth is not out of harmony with this new step in development. The pre-existent Logos taking human flesh is a new event in history: the Virgin Birth adequately supplies the means to this, and no other method is even suggested in the NT. Such an Incarnation is itself so wonderful that the additional event of virgin birth hardly makes any further demand on faith.

While virgin birth is not the ground of Christ's sinlessness through the absence of human paternity —the handicap of a predisposition to sin being presumably as transmissible by motherhood alone —yet it is apparently connected with it through 'the power of the Holy Ghost,' in both Matthew and Luke. The miraculous conception is in direct relation to the subsequent personality and function —'It is he that shall save his people from their sins' (Mt 1^{21}); 'that which is to be born shall be called holy' (Lk 1^{35}). The assumption is that the unique birth coupled with the dynamic and ethical power of the Spirit excluded the natural disposition to sin. The sinlessness of Christ was that of a

new Personality, human and divine, and it was fitting that such a Personality should be embodied in One whose earthly existence was uniquely conditioned. Whatever the link between sinlessness and virgin birth may be, 'a sinless man is as much a miracle in the moral world as a virgin birth is a miracle in the physical world.'[1]

VIVISECTION.—Etymologically the term 'vivisection' denotes the cutting of living animals under any conditions and for any purpose. But it has come to be associated with experiments made on the vertebrates below man for the advancement of medical science, whether with or without pain. To define vivisection, therefore, as 'the infliction of real and serious suffering on a vertebrate living animal for scientific purpose'[2] is misleading.

1. The justification of experiments on animals.—Experiments accompanied by pain were undoubtedly performed on animals before 1876 in this country, and in other countries more generally and perhaps less reservedly. Their ostensible object was to promote man's knowledge of physiology and pathology. A committee of the Royal Medical and Chirurgical Society, *e.g.*, made experiments before that date on a number of animals to discover some better means for the resuscitation of persons apparently drowned, in order to give assistance to the Royal Humane Society. In the course of these experiments animals were half-drowned and kept in water three, four, or five minutes.[3] As a matter of fact, from the time of Galen of Pergamos (born A.D. 131) painful experiments on animals were practised, and from them unquestionably knowledge of anatomy as well as of physiology and pathology was gained. Thus Harvey was enabled to establish the circulation of the blood; Hunter its collateral circulation; Claude Bernard discovered glycogen in the liver; Sir Charles Bell laid bare the intricacies of the nervous system, and the names of Pasteur and Koch will always be associated with the most far-reaching of all pathological discoveries—those connected with micrococci. That pain accompanied the experiments by which these and other steps in medical science were reached, that prolonged pain was frequently inflicted, that medical students were taught by experiments made before them by their professors, and that they not infrequently experimented on their own account—all these facts are generally admitted. And the admission justifies the determined attempts to put an end to experiments on animals made in the past by 'the Victoria Street Society for the Protection of Animals from Vivisection' and other anti-vivisection societies. It is, however, only fair to add that during the thirty years immediately preceding 1876 the 'torture' of animals under vivisection had been materially lessened by the discovery and use of anæsthetics.

But, apart from the cruelty which was practised, a principle of importance was involved, viz. whether medical science was to depend for its progress on the casual observations of the doctor or was to be promoted by experiment also. In the former case progress would be minimized owing to want of control over the phenomena; in the latter case the time, method, and subject-matter would be determined by the investigator. No responsible person contests the fact that science advances mainly by selective experiments, or that all knowledge shows sooner or later the way to practical utility. There is no sense in reviling winter sowing because in April there are no crops. Experiments on animals have enabled us to fight the causes of disease, instead of dealing with the symptoms. If, in the process of acquiring knowledge by experiment, pain is inflicted in some degree, this must be counter-balanced, in forming our judgment, by the greater pain we thereby learn to prevent. Unfortunately this fact has been overlooked as a rule in the controversy about vivisection, and so the remark of Lord Justice Fletcher Moulton before the Royal Commission of 1906 was to the point:

'If you want to do good in a particular way, and want to know how you can do it effectively, give your heart a rest, and your brain a chance.'[1]

2. Findings of the Royal Commission.—The year 1876 marks a turning-point in the history of vivisection. Since that year protests against the 'torture' of animals have become, in this country at least, an anachronism. A Royal Commission, consisting of Viscount Cardwell, Baron Winmarleigh, W. E. Forster, Sir John B. Karslake, T. H. Huxley, J. E. Erichsen, and R. H. Hutton, was appointed on 22nd June 1875 to 'inquire into the practice of subjecting live animals to experiments for scientific purposes, and to consider and report what measures, if any, it may be desirable to take in respect of any such practice.' The Commission issued its report on 8th Jan. 1876.

Its conclusion was that it is 'impossible altogether to prevent the practice of making experiments upon living animals for the attainment of knowledge applicable to the mitigation of human suffering or the prolongation of human life; . . . that by the use of anæsthetics pain may in the great majority of cases be greatly mitigated; that the infliction upon animals of any unnecessary pain is justly abhorrent to the moral sense of Your Majesty's subjects generally.'

The Commission finally recommended that the practice of experiments on living animals should be regulated by law and placed under the control of the Home Secretary.

The first result of the findings of the Commission was the passing of the Cruelty to Animals Act, 1876 (39 and 40 Vict. c. 77). By it all experiments on animals by an unlicensed person were prohibited, and ordinarily experiments were confined to a registered place; all licences were to be vouched for by one or more of the presidents of six great scientific bodies and by a professor; the use of curari as an anæsthetic was disallowed; invertebrate animals were excluded from the operation of the Act; and a series of restrictions on

[1] *Evidence of Lord Justice Fletcher Moulton*, p. 70.

experiments were imposed, especially one which insisted that 'the animal must during the whole of the experiment be under the influence of some anæsthetic of sufficient power to prevent the animal feeling pain,' this being modified by a subsequent section which allowed one series of experiments without anæsthetics on a prescribed certificate and for given reasons. One important fact had not come to light at the passing of this Act. Bacteriology as a science was but beginning its career. Hence all the evidence given before the Royal Commission dealt with current physiology, and when the Act was passed it was soon found that it made no provision for experiments by inoculation, which are now 95 per cent of the whole. Accordingly, these had to be allowed for, and they are brought under certificate A and certificate B.

3. Legal regulation of experiments.—Under the powers conferred by the Act of 1876 on the Home Secretary, certificates marked A, B, C, E, EE, or F are granted to licensed persons.[1] Certificate A allows experiments to be made without anæsthetics when anæsthesia would necessarily frustrate the object of the permitted experiment. As a matter of fact, no cutting operations are performed under this certificate; it sanctions inoculations, feeding, and similar procedures only, which involve no cutting; and the animal has to be killed under anæsthetics, if it be in pain, as soon as the result of the operation is ascertained. In view of the somewhat grotesque statements which are frequently made about the prevalence of cruelty under the existing law, it will be advantageous to state the nature of the 'pain condition' now prevailing. Additional safeguards against the infliction of pain have been provided, in accordance with the recommendation of the Commission of 1906, by strengthening the special condition (known as the 'pain condition') which is endorsed on the licence in respect of all certificates which either dispense with the use of anæsthetics or allow the animal to recover from the anæsthetic (provisos 2 and 3 of sec. 3). The 'pain condition' now runs as follows:

'If an animal, after and by reason of any of the said experiments under the said Certificate . . . is found to be suffering pain which is either severe or is likely to endure, and if the main result of the experiment has been attained, the animal shall forthwith be painlessly killed.

If an animal, after and by reason of any of the said experiments, is found to be suffering severe pain which is likely to endure, such animal shall forthwith be painlessly killed, whether the main result of the experiment has been attained or not.

If any animal appears to an Inspector to be suffering considerable pain, and if the Inspector directs such animal to be destroyed, it shall forthwith be painlessly killed.'

Certificate B allows an animal to be kept alive after the initial operation, where a more or less prolonged observation is necessary to the scientific success of the experiment. Certificate C allows experiments to be made in illustration of lectures, but under anæsthesia. Certificates E and EE permit experiments on dogs or cats, and certificate F on horses, asses, or mules.

The best proof that the administration of the Act has been satisfactory is afforded by the findings of the second Royal Commission on Vivisection appointed in 1906, which published its report in 1912. The report was signed by all the Commissioners; it recommended no change in the text of the Act of 1876, but suggested, without recommending, a special certificate for all experiments on dogs; it recommended certain increased restrictions and safeguards, which were adopted by the Home Office. It may be added that an unsuccessful attempt to pass a Dogs' Protection Bill was made in 1919 in the House of Commons.

4. Practical conclusion.—Few questions have roused more embittered feeling than that engendered by the belief that lower animals were being callously and uselessly 'tortured' by medical men and others. Men felt that the humaneness inculcated by centuries of Christian teaching was being wantonly abandoned, and the outcry was in proportion to the nearness to man of the animals which were used for experiment. Invertebrate animals were passed over as being negligible, and it was with man's nearest friends, the dog, the cat, and the horse, that sympathy was most loudly expressed. Frequently, however, an adequate sympathy for the sufferings of man himself was wanting to supplement that felt for these lower animals. No sufficient recognition was made of the fact that without experiments on animals doctors would frequently have no option save to experiment on their patients, for want of the knowledge which experiments on animals could alone secure. And, as it is, much of the success attending treatment for diseases connected with the blood, with the alimentary canal and the digestion of food, and with the central nervous system, springs from knowledge gained by experiments on animals. Especially is this the case with diseases due to infection by microbes. As the Royal Commission of 1876 pointed out,

'It was by observation that Dr. Jenner discovered the immunity from small-pox of those who had contracted cow-pox. But it was by experiments upon cows that the origin of the cow-pox, a disease stated to be derived from "grease" in the horse, was ascertained.'

Pasteur's discovery of the activity of micro-organisms in fermentation was the beginning of antiseptic and aseptic treatment of wounds, by which thousands of human lives have been saved and indescribable suffering removed, and with which the name of Lord Lister will be always connected by a grateful world. The treatment of tuberculosis and diphtheria and the protective treatment against tetanus and rabies are dependent on knowledge gained by experiments on animals. In the same way the nature of cholera, bubonic plague, typhoid fever, epidemic meningitis, Malta fever, and other curses of mankind is now understood, and the road to their annihilation opened. When we weigh the suffering caused to hundreds of thousands of human beings by these plagues against that far less pain caused by inoculation to a comparatively small number of mice, rats, guinea-pigs, and rabbits, we realize how irrational it is to agitate for the total prohibition of vivisection. The method of regulation, not suppression, adopted in this country does justice at once to the unquestioned claims of the lower animals to kindly treatment and to the duty of man to his fellows—the duty of using his reason in the age-long task of diminishing and finally extinguishing that particular form of evil which goes by the name of disease.

VOLITION.—See WILL.

VOLTAIRE.—François Marie Arouet, who is known to us as Voltaire, was born either at Chatenay or in Paris in November 1694. His father, François Arouet, had been treasurer to the Chambre des Comptes, and his mother, Marie

[1] Certificate D, which was based on section iii. subsection b, 4 of the Act allowing experiments 'for the purpose of testing a particular former discovery,' is no longer issued.

Catherine Daumart, was born, we are told, of a noble family of Poitou. Voltaire afterwards took his name from a small property in his mother's family, though it has been maintained that it was derived from an anagram on his signature Arouet L. J. ('le jeune'); but the fact that in the dedication to his *Œdipe* he signed 'Arouet de Voltaire' proves that he did not take the second name in order to cast the other into oblivion. Voltaire was thus born in a state of moderate affluence, and he was sent to the Jesuit College Louis-le-Grand, which bore the high reputation for learning possessed by schools of that order. Here he was not only distinguished intellectually but was pointed out by his tutor as the future 'coryphæus of deism in France.' On leaving college, he came into touch with the Abbé de Châteauneuf, who had been a friend of his mother, and who was his godfather; he brought him into relation with Ninon de l'Enclos. That remarkable woman, who had had the courage to reject Madame de Maintenon's offer of an invitation to the court on condition that she should become *dévote*, was now very old, but she maintained her freshness of spirit, and she soon discerned the remarkable character of the boy and left him a legacy for the purchase of books. Already he deplored in verse 'his Jansenist of a brother' and declaimed a poem, called the *Moïsade*, by J. B. Rousseau[1] (though the author attributed it to Voltaire), which portrays Moses as an impostor. Perhaps it was from Ninon that Voltaire first learned the lesson whose influence pervaded all his life, that the spirit of man is free, and that men are entitled to form their judgments for themselves. The society into which young Voltaire was launched was indeed a dissolute one. It represented a reaction against the hypocrisy and intolerance of the court of Louis XIV., and its wit was frivolous and its literary efforts trifling. The Abbé Chaulieu, a versifier of some merit, exercised much influence on Voltaire and typified the outlook of the society in which he moved.

Naturally M. Arouet, the father, was shocked at the company kept by his son, and by the fact that he began to write a tragedy instead of learning law. He finally dispatched him to the Marquis de Châteauneuf, brother to the Abbé, and French ambassador in Holland; but the young man became entangled in a love affair and the ambassador sent him home. The love, if such it was, was soon forgotten, but Voltaire, to the despair of his father, was determined to live in the world in which he had got a footing, mingling with the nobles and more bent on versifying than occupying an office-stool, in spite of the fact that he had matriculated as a lawyer. A friend of his father took pity on him and brought him to a château near Fontainebleau, where he became engrossed in the study of history—a study which resulted later on in the production of *La Henriade* and *Le Siècle de Louis XIV*. Louis XIV. died in 1715, and there followed an outburst of satires on the memory of the monarch who had enjoyed such adoration. One of these was termed *Les j'ai vu* and concluded, after describing the evils which in his short life the writer had seen, the crowded prisons, the unjust taxes, with 'And I am but twenty years old.' Though Voltaire was actually twenty-two, he was falsely accused of being the author, and in May 1717 he was cast into the Bastille, where he remained till April 1718, being allowed to return to Paris in the following October. This was not his first detention; he had been sent out of Paris as early as 1716, owing to verses that he had written regarding certain distinguished personages.

[1] Not to be confused with Jean Jacques Rousseau.

Confinement in the Bastille, which was perhaps not very severe, had little effect on Voltaire's spirits, for here he sketched out the poem of *La Ligue*, corrected his tragedy *Œdipe*, and even wrote gay verses on his misfortune. *Œdipe* was performed in 1718 with great success, and this was the first of his dramatic works, which were to follow one another in such marvellous succession. Before this he had written only fugitive pieces, including an ode which had vainly contested for a prize given by the French Academy. Afterwards he went on with his great work, the *Henriade*, and also wrote the tragedy of *Artémire* (1720), which was much more severely criticized than was the *Œdipe*. Everywhere the young poet was welcomed, though he appears to have again been banished for a season from Paris for his intercourse with the enemies of the regent, and more especially with Richelieu and de Gortz. With Madame de Rupelmonde he visited Holland and saw J. B. Rousseau at Brussels. Voltaire read his *Épître à Uranie*, and Rousseau recited his works to him, but the two men separated as irreconcilable enemies. Voltaire returned to France in 1722 and in 1724 produced *Mariamne*, which was on the same lines as *Artémire* under new names and plot; then came the famous *Henriade* under the name of *La Ligue*. Voltaire as author of this wonderful trilogy—*La Henriade*, *Œdipe*, and *Mariamne*—may be said to have made his mark in literature. The idea of being the eulogizer of King Henry IV. had inflamed his imagination since his twenty-first year, and he had begun to write in the Bastille. His idea was to dedicate the work to the king of France (Louis XV.), and the dedication was written, but there were difficulties in regard to censorship, and it did not appear. The book was issued in 1723 at Rouen after an abortive effort to get it published by subscription at The Hague. An English edition (1726) was dedicated to the queen of England, consort of George II. The poem is often compared with the *Æneid*, and it has a place in French literature which brings it into comparison with the classics of ancient days. The subject was a great one, and, while it adheres to historic facts, there is in the work a fine sense of morality, and above all that deep love of humanity and liberty which characterizes its author's best writings. Condorcet says that the *Henriade* was born in the century of reason, and the more progress made by reason among men, the greater will be its circle of admirers. Unfortunately for the truth of this dictum, life and dramatic power are also necessary to make a work such as this immortal, and these are lacking in the poem. Perhaps it was not possible for Voltaire to write a great epic: it required a depth of thought and concentration that was not his. Also the age was possibly too critical and superficial.

In 1722 Arouet the elder died, implacable to the last as regards his gifted son, who was now definitely known by his famous name of Voltaire. The latter was living a life of social pleasure, visiting country-houses,—those of Sully, Villars, etc. — composing verses *d'occasion*, arranging theatricals, and writing all the while with set and definite purpose. He loved the country, but dreaded the loss of precious time spent in country-house pleasures. Change of scene seemed necessary to him; he was ever passing from one place to another in a way that was astonishing in those days of comparatively fixed abode. It was a life of quick impressions, but not entirely one of self-indulgence, for Voltaire never forgot that his work claimed his first endeavours, and he never hesitated to speak his mind with perfect vigour. One would have imagined that that work would have given

him an established place in society and caused his person to be respected, but, if he himself might be tempted to think so, he got a rough awakening.

Voltaire was dining, as he often dined, with the Duke of Sully. There he met the Chevalier de Rohan, who took it amiss that Voltaire's sentiments did not agree with his own. 'Who is that young man,' he asked, 'who contradicts me in tones so loud?' 'My lord,' Voltaire replied, 'it is one who bears no great name but who wins respect for the name he bears.' A few days later the chevalier took revenge upon the young man by causing his lackeys to administer a caning to him at the duke's door. Sully refused to interfere, and, stung by rage, Voltaire obtained instruction in the use of the small sword and challenged de Rohan. The family of the latter prevented him from fighting, and Voltaire was thrown once more into the Bastille, where he was kept for sixteen days.

This was in April 1726, and on 2nd May he was allowed to leave for England, accompanied by an escort as far as Calais.

Voltaire's journey to England was not only a turning-point in his life, but a factor in the economic and intellectual history of France. One can imagine the spirit in which he went there, burning with indignation at the manner in which he had been treated by the laws or customs of his country. He passed into the country of Newton and Locke, of Shaftesbury and Bolingbroke, of Swift and Pope—a country which allowed men to speak without let or hindrance of what they had experienced or believed. Voltaire had become known as a writer of verse and tragedy; now he felt it to be his mission to become the liberator of his countrymen from bondage and false beliefs. 'Voltaire left France a poet, he returned to it a sage.'[1] Newton's careful examination of facts strongly appealed to the young man, and his mind was specially drawn towards the Newtonian theory of attraction as well as to Locke's appeal to experience as the basis of all knowledge. Metaphysics—even the metaphysics of Descartes—took on a new aspect to him. The *Lettres philosophiques, ou Lettres sur les Anglais* draw attention to the many matters in which the country in which he was living was in advance of that of his birth. He was but a refugee from the Bastille, and his country was still in a condition of feudalism with an aristocracy which was exempt from certain forms of taxation. In England, on the other hand, he saw intellectual eminence honoured and rewarded; even administrative posts were granted to distinguished men of letters, whilst the liberty of the press was absolute. We cannot wonder that the *Lettres* were publicly burned by decree of the French Parliament.

The tragedy of *Brutus* was the firstfruits of Voltaire's visit to England, expressing as it did the aspirations of an oppressed people. The next twenty years of Voltaire's life, between his leaving England and going to Berlin, were a prolific period. The dates of his most famous tragedies are as follows: *Brutus*, 1730, *Zaïre*, 1732, *Mort de César*, 1735, *Alzire*, 1736, *Mahomet*, 1741, *Mérope*, 1743, *Sémiramis*, 1748, *Tancrède*, 1760. The *Mort de César* was a brave venture, for not only did it deal with ground well trodden by a greater dramatist than Voltaire himself, but it was a play without love scenes or women, and in three acts only, and thereby a complete innovation. Its republicanism, too, was sufficient to cause its publication to be at first prohibited in those days of tyranny. Its author came into further contact with the authorities over an attack he made on the excommunication of a celebrated actress, who on her death was refused burial rites. But, though Voltaire was ever ready to take up real causes of oppression, he was far too susceptible to any vulgar calumny, and his time and talents were used in petty quarrels unworthy of a man of intellect and position. His struggle was by his writings to win for himself a place in public esteem which would secure for him the goodwill of the populace. *Ériphyle* was not a success, but *Zaïre* had the tender note that appealed to the sentiments of the human heart. *Adélaïde du Guesclin*, though on similar lines, did not take the public fancy. It was followed by the *Temple du Goût*, a criticism of past and living writers. The *Lettres philosophiques* had been burned in 1734. There appeared in them certain notes, now well known, in criticism of Pascal, which were specially resented, and the causes mentioned before made it thoroughly detested. The *Épître à Uranie* its author felt himself constrained to disavow and ascribe to Chaulieu, now dead—an action impossible to justify. In 1729 Voltaire began that poem which has made his name famous or infamous, and which was his amusement for many years of his life. *La Pucelle d'Orléans* is an indefensible attack on the memory of a great deliverer of the writer's country, and it cannot be justified from either a historical or a moral point of view. It was constantly being quoted to eager listeners, and the publication of it was a constant peril hanging over its writer's head. Voltaire all this time was in constant trouble with his many critics, one of the chief of whom in 1735 was Défontaine, who attacked him in *La Voltairomanie*. This was a reply to Voltaire's *Le Préservatif*. There was much personal abuse on Défontaine's part, in which Voltaire's private life and relationship to Madame du Châtelet were involved.

This was a time of persecution and humiliation for Voltaire, but it was also a time of happiness and prosperity, for the fortune which his enormous output, in addition to his speculations, brought him left him a liberty which he never before possessed. He wanted riches and independence, and he got them. Then between 1733 and 1749 he formed that connexion with Madame du Châtelet which proved such a strong influence on his life. It was a strange friendship—one of comradeship rather than passion. The 'divine Emily' was a student of a very serious type, and she made the kind of surroundings which Voltaire required for his very serious work, in the famous château of Cirey in the independent duchy of Lorraine. Here these two wonderful people—for Madame du Châtelet was a brilliant and accomplished woman—studied Newton, quarrelled sometimes, made friends again, worked literally day and night together, and even competed together for a prize offered by the Academy (on so uninspiring a topic as the propagation of fire), though taking, characteristically enough, opposite views on the subject. Voltaire wrote on the philosophy of Newton, and Madame du Châtelet co-operated with him. Voltaire was deeply interested in scientific questions, but he had no real aptitude for science; his mind was not that way inclined, and an enemy went so far as to say that he was the man who could 'best write down what other people have thought.'[1] Voltaire was therefore well advised to devote himself to poetry and philosophy rather than become a second-rate savant.[2] He followed this advice, and at Cirey produced *Alzire*, *Zulime*, *Mahomet*, and his *Discours en vers sur l'Homme*, whilst he also wrote the *Histoire de Charles XII.* and prepared the *Siècle de Louis XIV.*, and collected the materials for his *Essai sur l'hist. générale et sur les mœurs et l'esprit des nations*. All the while he was not stationary at the château, but moved about from place to place—Amsterdam, Brussels, Berlin, etc.—always glad to return to his settled home again. Paris was free to him after 1735. His

own sovereign, Louis XV., would have none of him, and Frederick, now king of Prussia (1740), took advantage of Voltaire's fear of how his writings might cause him trouble, and tried to secure his presence by an offer of protection. A constant correspondence took place between the two, as well as a *soi-disant* diplomatic visit on Voltaire's part to the king.

Voltaire's historical writings occupied him greatly at this period of his life. He is not remembered as, properly speaking, a historian, but his historical works are all written in reference to the times in which he himself lived, and hence their interest for us to this day. They are full of intelligence and good sense, with moralizings which are to the point and are yet combined with an irony which is characteristic of the author. His *Siècle de Louis XIV.* is specially interesting, inasmuch as he was able to make use of his own private information and of memoirs hitherto unpublished, like those of Saint-Simon. He gives a very full account of the government, commerce, and industry of the time. In fact, he had in view not only to write a history of the period with which he dealt, but also to relate the history of the human mind in that wonderful epoch of history. He worked with great diligence, passing the whole day at his desk, and, despite frequent ill-health, never seemed to tire.

Madame de Pompadour was Voltaire's first friend at court, and through her he was asked to celebrate the marriage of the dauphin in a court piece called the *Princesse de Navarre*. In view of this work, which he regarded very lightly, he was made in 1745 historiographer of France—a position once jointly held by Racine and Boileau—and given thereby a certain protection as well as a salary of 2000 livres. But above all he desired to obtain admission to the Academy, and before this was possible he wrote to Latour, head of his former school, professing his devotion not only to religion but also to the Jesuits. He achieved his end in 1746. But he did not long hold a place in royal favour, for libels poured upon him, worse even than before. Crébillon was given the pre-eminence as an author by Madame de Pompadour and others, and everything was done that could be done to humiliate and discourage him.

In 1749 Madame du Châtelet, the friend of sixteen years, died. Her companionship had meant much to Voltaire, and his life with her had been on the whole useful and not without dignity. Frederick of Prussia, who had for long corresponded with Voltaire and had formerly urged his migration to Prussia, came to the throne in 1740, and renewed his blandishments. The result was that in July 1750 Voltaire arrived at Potsdam. He was received with the greatest respect by his remarkable host and endowed with a pension; but the step was one which he had every cause to regret. By his action he even gave offence in his own country and to Louis XV., his king, little appreciated as he had been by him before. He thought he would find liberty and peace in his new abode, but he found on the intellectual side obscurantism only. The Academy of Sciences, founded by Sophie-Charlotte under the direction of Leibniz, had fallen on evil days. The king was mainly concerned about drill and orthodox theology, and Berlin was far behind Paris in civilization, being in many ways but a mediæval town. The association of these two, the greatest figures in Europe, will always be a matter of the profoundest interest to mankind. But actually the combination was disastrous. Frederick was Voltairean, it is true, but his interests were centred in the establishment of the Prussian ascendancy and the transformation of the face of Europe. Voltaire's task was a no less momentous one, for his aim and object were to change the intellectual outlook of the Continent and destroy the old spiritual ascendancy. But the two men moved in different planes—nothing could have made them agree—and during the two and a half years spent by Voltaire as Frederick's guest there were constant and undignified quarrels and stupid practical jokes of a spiteful sort. It was all unworthy, and we cannot wonder that the visit came to an untimely end. Voltaire was no easy guest, always looking out for insults, which were not hard to find. There is a famous and cruel saying which La Métrie quoted as having been applied to Voltaire by the king: 'I require him a year longer . . . one sucks the orange and casts away the skin.'[1] Voltaire was grasping, while Frederick was parsimonious; he quarrelled with Lessing and got into not too creditable financial transactions. But, despite all this, and the fact that he was asked to criticize and amend the king's verses, Voltaire made progress with the *Siècle de Louis XIV.*, and the famous *Dictionnaire philosophique*. There was doubtless a certain fellow-feeling between the two men, who were at one in their hatred of superstition and prejudice; but there was a strong disagreement too, and Maupertuis was the means of bringing this disagreement to a head. Maupertuis was an ancient rival of Voltaire, and a quarrel arose between the two. The one issued *Lettres*, the other the *Diatribe du Docteur Akakia*. The king was at first amused, but the *Diatribe* was proscribed and ordered to be burned. Voltaire had, however, according to his wont, sent copies away, which were printed, and the king was annoyed by this and placed him under arrest. After a sort of reconciliation Voltaire finally left Potsdam in 1753 and went to Leipzig, there to stay with the Duchess of Saxe-Gotha, for whom he commenced the *Annales de l'Empire*, a popular history of Germany, which he himself did not rate highly. Subsequently he journeyed to Frankfort, where he and his niece, Madame Denis, were arrested and kept for three weeks under guard. Frederick tried to put the blame on another, but the matter caused much resentment, and Voltaire told his friends that the king had 'a hundred times kissed the very hand which he had just caused to be enchained.'[2]

On leaving Frankfort Voltaire went to Colmar in Alsace, where he completed his *Annales* and spent nearly two years, and where he thought of settling. But France seemed impossible, as persecutions threatened; he happened on one occasion to go to Geneva to consult Tronchin, and its beauty, language, and liberty captivated him; consequently he settled in a country-house outside the town, named Les Délices. Even that resting-place did not seem perfectly secure, and, in order to have retreats from the persecution of the Catholics on the one hand and the extreme Reformed party on the other, he bought houses in the different territories and in turn inhabited Tournay, Ferney in France, and Les Délices close to Geneva. It was at the last place that he and Madame Denis, his widowed niece, made their home and set up a considerable establishment.

The year 1754 was, so to speak, a dividing time in Voltaire's life. After a stormy period of combat and fear he passed from dependence to independence and comparative freedom. He was wealthy —not from the proceeds of his works, but from speculations—and was able to set up a theatre and keep open house, whilst he could print as he wished in Geneva. He was no longer dependent on the great as formerly, but received them into his house on equal terms. It promised to be a

[2] Condorcet, p. 206.

peaceful life, but he meant to devote himself to political work, to obtaining a change in the constitution of European states such as would bring them more into line with that of England. He wished above all to procure economy of public money, to put an end to persecution and intolerance, and he carried on a vast correspondence with these ends in view. He was ambitious, desired to produce and to teach. He might indeed be compared to a great European instructor—one whose work was to enlighten nations which were not too favourably disposed to receive the instruction offered them. He was not an idealist perhaps, but he had the good of his fellow-countrymen at heart, and there was no better place from which to preach his gospel of the deliverance of mankind from the thraldom of the oppressor than the republics of Berne and Geneva.

His literary work went on apace. The first play to appear was *L'Orphelin de la Chine*, composed when he was in Alsace and performed in 1755. His peace was, however, disturbed by the piratical publication of *La Pucelle*, which forced him to finish and issue it himself. By its means there was plenty of reason given to the enemy to blaspheme, although it may be possible to argue that it aims at the destruction of hypocrisy and superstition. It is impossible, if so, not to wish that a better and less gross manner of bringing about that result had been adopted and that more respect had been shown for a famous woman and patriot. He also wrote at this time the poem entitled *La Loi naturelle* and the *Désastre de Lisbonne*. The first was burned by the parliament at Paris because of its attack on intolerance and the fear of where such opinion would lead. The second was in antagonism to the orthodox view of the origin of evil, and was condemned in consequence. In 1759 he published *Candide*, undoubtedly one of the best of all his works of the romantic and philosophic type. It is an ironical satire on the optimism of Leibniz, and is extremely amusing as well as full of a commonsense type of wisdom, so that it can be read in the present day with as much pleasure as when it was first published. At the end of it there is the famous injunction to himself and his readers to 'cultivate one's own garden.' Voltaire also made a free translation of Ecclesiastes and part of the Song of Solomon. In 1757 the first edition of his collected works appeared. This was published under his own supervision, and to this edition there was added the *Essai sur l'hist. générale et sur les mœurs et l'esprit des nations*, a work undertaken in order to influence Madame du Châtelet in favour of the study of history. This work involved an immense amount of research and labour that must have been irksome to a man of quick wit like Voltaire, who was neither an earnest student nor a metaphysician. But his historical writing was never dull. He grouped his facts and interpreted these in a wide way, giving them life and significance. His reflexions may not be very profound, but they are full of common sense and just. He obtained the best material available and put it to the best use in his power. On the whole he was scrupulous and critical in respect of the value of his evidence. Satire and wit were always at his command.

In 1765 Voltaire sold Les Délices and settled at Ferney, where he occupied the position of a country-gentleman, and where he was visited by most of the celebrated men of the day in Europe. He corresponded voluminously and even came into touch with his former friend King Frederick. Diderot and d'Alembert launched their great project of the *Encyclopédie* while Voltaire was still at Berlin, and with their object, the free and open statement of the facts of science and philosophy, he was in the most intense sympathy. Hence from Ferney he wrote a number of articles for the work. That work had to be printed in secrecy, and, when it once became known, it was speedily proscribed. The writers were known as the *philosophes* and *encyclopédistes*, and among them the chief was often named 'the patriarch of Ferney.' The latter was as usual ready to make reply to the ignorant attacks made on the writers who numbered among them those most distinguished in the literary world; and a series of lampoons was the result. One of these is known by the name of *L'Écossaise*, a comedy in which a calumniating journalist is introduced.

At the age of sixty-six Voltaire wrote *Tancrède*, dedicated to Madame de Pompadour. This work was admired by Gibbon[1] and translated by Goethe, and it has always been considered one of the author's best dramas. But he was not only concerned with literature, for the human side of him was ever conspicuous.

His admiration for the great Corneille was profound, and his notes on some of Corneille's works are classic. Though he might criticize where he thought criticism due, none recognized more fully the greatness of this man of whom France was so justly proud. His grand-niece was, he heard, in distress, and at once Voltaire said that it 'was the duty of a soldier to succour the niece of his general.'[2] Consequently he brought her to Ferney and provided for her education, and with wonderful tact and good feeling he caused her to believe that she owed her support to the proceeds of her uncle's writings.

Another case, much more remarkable, is that of Calas. This old man, a Protestant, had been broken on the wheel because his son was found dead and he was accused of poisoning him, although there was not the slightest evidence of the fact. The accusation rested on the statement, quite unwarranted, that Calas feared his son's turning Catholic and therefore brought about his death; in consequence the son was regarded as a martyr. The father died, but Voltaire took enormous trouble to have the sentence annulled and to prevent the other members of the family from being convicted as accomplices; and, in the end, after years of work, he was successful. During the three years which were taken up with this matter Voltaire stated that 'not a smile passed over my face but that I reproached myself for it as though I had committed a crime.'[3] No wonder that when he came to Paris in triumph before his death he was acclaimed as the saviour of Calas.

Sirven's case was somewhat similar, but he had time to save himself and take refuge with the protector of the oppressed and persecuted, and he was consequently secure.

But it must not be assumed that it was only those of another faith than that in which he had been brought up whom Voltaire succoured. He was ready to help any one oppressed in whatever way, and whatever his professed religion. The Jesuits even, his old instructors, whose order was destroyed—'the friends of letters and enemies of reason,' as Condorcet calls them—enlisted his sympathy, and one of them, persecuted by the Jansenists, became his almoner at Ferney. Possibly he was not without his use when Voltaire's own enemies blasphemed. But free-thought was speeding apace, and persecution did little, if anything, to stem the tide. Jean Jacques Rousseau was writing, and his writings were being circulated abroad. Political feeling was strong against a privileged and effete aristocracy. And yet the most astonishing events occurred, like the case of a young soldier named La Barre, about seventeen years old, who was accused of defacing a crucifix placed on the bridge of Abbeville. The lad was executed with horrible barbarity, and this aroused a blaze of indignation in Voltaire's bosom, although he had some cause to fear for himself, seeing that the *Dictionnaire philosophique* was in a manner involved (it was burned with La Barre's body). No wonder that he exclaimed, 'I am tired of hearing that twelve men were able to establish Christianity; I should like to prove that one is capable of destroying it.' We cannot forget Voltaire's efforts on behalf of our own Admiral Byng, who retired before the French at Minorca and was

[1] *Decline and Fall*, ch. lii., note 98.

[3] Condorcet, p. 240.

shot in 1757. 'In this country,' says Voltaire of England in *Candide*, 'it is well to put an admiral to death now and then to encourage the others.'[1]

This side of Voltaire's character—his righteous indignation with injustice and indefatigable efforts after restitution when injustice had been inflicted—is the side which attracts us most. He, perhaps the greatest personality in Europe (for Frederick was his only rival till the star of Goethe rose), endowed with a power of sarcasm and of invective of the most incisive kind, had the power to act, and it is entirely to his honour that in those difficult times he did act without fear and without delay. His humour was the bitter humour of the man who felt that things were too desperately bad to be taken entirely seriously, but this sardonic merriment did not prevent his practical action. His correspondence, which forms in some ways the most interesting part of his voluminous writings, is full of expressions of his inmost feelings regarding the events that were occurring daily around him. The iron burned deep into his soul, and he was given the power to foresee what was wholly realized only later on and then was dealt with by the terrors of revolutionaries.

There is another side to Voltaire's character which is more difficult to fathom. When he built his new manor house, he also built a small church with the inscription on it 'Deo erexit Voltaire.' And his correspondence shows him to be apparently anxious to prove himself to be all things to all men. He was likewise always ready to shelter himself through anonymity, and even to ascribe his works to another, though the other was dead and unable to defend himself. No doubt the times were bad and men's lives had to be preserved; but, whatever the customs of the day, this action was far from heroic. Then there is the famous communion made on 1st April 1769, followed by a public protestation of respect for the Church. His impish delight in forcing the priest to administer the communion to him, though forbidden by his bishop, and his 'forgiveness' of the bishop, is not an edifying spectacle, any more than the fact that Voltaire had himself made temporal father of the order of Capuchins for the district of Gex—an act done probably to annoy the bishop of Annecy. Even his sympathizers were scandalized by these actions, and in regard to them and many others no real justification seems possible. Voltaire was a deist, but that he regarded orthodox Christianity in any other way than as a scoffer is unthinkable, and this is the rôle he played throughout. He scoffed at the ordinary optimistic point of view, whether it was that of the philosopher or that of the ordinary believer. He was always ready to criticize and show the errors incipient in any positive creed or system of philosophy, but he never reached a constructive system either of spiritual belief or of social theory. Indeed he did not appear to have constructive power any more than great originality, but his interest in theological matters is apparent from his constant references to them. His religion, though it partook of negation, was not of the wholly negative character of that of some of his contemporaries, nor did it partake of the nature of the beliefs of Rousseau. Voltaire denied what he believed to be false, and that included practically all that he had received as religious tradition from the past. But it left a sort of possibility for the future which seemed to satisfy many of his successors, bald and empty and unfruitful as it might seem to be. 'I shall always be convinced that a watch proves a watchmaker and that the universe proves a God.'[2] And Voltaire's attacks on religion were not philosophic. His was a mind of extreme lucidity, which took hold of detailed facts that he held to be false and on which he poured derision as well as argument. He tried to cover the teaching of the Church on miracles, *e.g.*, with ridicule. With Rousseau Voltaire had little in common. Rousseau's sentimentalism made but little appeal to the older man's reasoning mind. Rousseau had repelled Voltaire's offers of assistance and shelter, and that was one cause of their estrangement, but their writings were antipathetic to one another, and Rousseau's effusions seemed to Voltaire false and his conduct hypocritical.

Voltaire's long life at Ferney—it lasted almost twenty years—has made a deep impression on mankind. Here he was growing into an old man on whom the eyes of Europe were constantly set either in deep dislike and fear or in admiration. He was in continual controversy, whether with the republic of Geneva or with the clerics. His hospitality to every kind of man, whether from Russia, England, or Germany, was constant and ungrudging. His niece, Madame Denis, who was unattractive and not agreeable in temper, kept house for him on a lavish scale, and he became a sort of 'hotel-keeper for Europe.' The winters were cold, but the life suited one who was glad to evade the distractions and intrigues of Paris, and doubtless for a man who was constantly subject to illness it tended to the prolongation of life. He wrote perpetually, corresponding with every civilized court and with distinguished persons of every country. Not only did the great men of the earth write to the patriarch but also every one, young or old, who wished for advice on literary or speculative questions. Many thousands of Voltaire's letters are now in existence, and they are full of wit, if not always pleasant reading.

Paris, much as he hated its atmosphere and resented its treatment of him in the past, had the same attraction for Voltaire as it has for all its children, and in 1778 he set out for the metropolis. His departure was bemoaned by his tenants and the peasantry of the Pays de Gex, a district which by his wise management he had caused to prosper exceedingly. Voltaire, as we know, managed his own monetary matters to great advantage, and he also had the business faculty which is necessary to make a countryside prosperous. At the same time he took an acute interest in politics abroad, more especially in the war between Russia and Turkey and the partitioning of Poland. By this time Louis XV. had died (1774), and Turgot was in power, greatly to Voltaire's satisfaction. He hoped everything from the advent of this great minister, who worked hard to bring about the reforms in economics that Voltaire so keenly desired; and his fall in 1776 brought him near to despair. But he had conceived a desire to see his tragedy *Irène*, now completed, produced, and above all to revisit the city from which he had been absent for thirty years. Nothing could be more flattering than his reception. Admiring crowds pressed around him, and jealousy was silent before the great old man whose personality had so impressed itself on the nation. People threw themselves at his feet and kissed his garments, for he was greeted as the true vindicator of the cause of humanity against oppression, more even than as a great and famous writer. 'They will kill me with joy,' he said, and indeed this proved but too true. *Irène* was performed amidst tears of enthusiasm; the author's bust was crowned in the theatre, and it was difficult for him to pass through the surging masses of people. 'Long live Voltaire! Long live the *Henriade*, *Mahomet*, and *La Pucelle*!' they cried. The Academy, after all its coldness to him

[1] Condorcet, p. 245.
[2] *Corr.*, 1744, letter to M. M. Kahle.

in early days, lavished honours upon him. Franklin was in Paris, and Voltaire insisted on speaking to him in his own tongue and blessing his grandson in the simple words 'God and liberty.' And the great man was not idle. He was revising his *Essai sur les mœurs*, and he had a scheme for a new dictionary to be issued by the Academy, and he even himself undertook the first letter in it. But all this was too much for a man of 84. Sleep went from him, he took more opium than was good for him, and finally died on 30th May 1778. The Abbé Gaultier confessed him some time before his death, and it was declared by him that he died in the Catholic religion in which he was born. 'I am about to appear before God, the Creator of the universe,' he wrote. 'If you have anything to say to me, it will be my duty and privilege to receive you.'[1] When he was in the act of death, the curé of Saint-Sulpice tried to get him to give a more detailed statement of his beliefs, and, as he was frustrated in this, made difficulties about his burial. Finally, however, Voltaire was buried at the Monastery of Scellières in Champagne, where his nephew was abbé, in time to avoid the interdict of the bishop. There was also objection made to the usual service for one of the members of the Academy; the king of Prussia, however, held a service at Berlin in his memory and himself wrote his *éloge*. In 1791 the body was removed to the Panthéon, but later it was disturbed and taken away, like so many others.

Voltaire's personal appearance is perhaps better known than that of any literary man of his time. He was extremely thin, almost like a skeleton in old age, with bright piercing eyes and a 'mocking smile,' and he wore a wig. He had a great attraction for women and a certain devotion to them, but this was for the most part of a platonic kind, and in any case he did not, like so many of his contemporaries, allow himself to be carried off his feet by it. His life was never indecent, judged by the standards of his time, whatever his expressions may seem to us to be. His powers of work were prodigious, and, though not physically strong, he often worked for eighteen or twenty hours on end. He was interested in medicine and has the credit of recommending inoculation for smallpox when it was hardly thought of. His conclusion as to health matters is given in a letter to M. Bagieu, a well-known surgeon: 'I have come to the conclusion that every man must be his own doctor . . . above all he must know how to suffer, grow old, and die.'[2] Sometimes he is seen bargaining and quarrelling about sums of no importance, and then inordinately munificent on another occasion. From such contradictoriness of nature he may be painted black or white, as the sympathies or prejudices of the observer dictate. To many of his own and later generations he was the most sinister figure of his age, and his writings (excepting some of his historical works) the most harmful in the 18th century. Others regard him as the deliverer of the oppressed and the champion of liberty. He wrote with the utmost ease and lucidity. He was a prince among journalists, and his output was enormous, as the 80 volumes of his writings testify. What he wrote was written as from himself and not as the views of those who had written before, though he had a wonderful power of absorbing the work of others. Goethe, after enumerating all the gifts which great writers should have, denies him only two—depth and finish ('Tiefe und Vollendung').[3] He was no philosopher, but a child of the 'Illumination'; *i.e.*, he belonged to the school of those who saw facts so clearly that there seemed no possibility of error in them. It was the time of cataloguing and arranging, the heyday of encyclopædic knowledge. Yet all Voltaire's work was impressed with his own individuality. He seemed to have the power of seeing the truth that others were groping after, and, when he came upon a false belief, he ran atilt against it without hesitation. He could not be called a sceptic, for he had his own beliefs clearly defined and certain: his was no doubting spirit. 'My reason tells me that God exists; but it also tells me that I cannot know what He is.'[1] There were occasions on which he lied, but the lies were lies begotten of the circumstances of life which he was ready to justify. His vanity was apparent to all, but that again was the conscious vanity of the man who felt himself to be above his fellows. He was money-loving, but he loved money because it redeemed him from a position of subservience and gave him the power he required. He had another side which proved him ready to be generous and hospitable in the extreme, so that he cannot be truly called avaricious or miserly. He was by nature a politician, and, as entrance to the politics of his country was denied to him, he showed what could be done on a small scale in his own domains and passionately supported reforms, fiscal and political, in his country. He did not live to see that his teaching bore fruit in a manner none could foretell, though many must have anticipated it when they saw how vain the efforts after orderly reform had proved. Such men as Voltaire were never used, and never had a chance of being used, for the amelioration of the conditions of their country. Such as he, who had an intense love of humanity, and on whom the misery of the common people under their unjust taxation rested like a constant cloud, were set aside. His reception in Paris as a human benefactor might have enlightened the rulers of the time.

Voltaire loved the stage from his boyhood onwards, and among his works there are 50 or 60 *Théâtre* pieces of various merit. The interest in his tragedies is often said to be too purely intellectual; *i.e.*, love plays little part in them. This is characteristic of the writer on whom in manhood affection never seemed to take any passionate hold. His poetry is fluent, and the usual criticism is that its fluency is excessive. Hence the *Henriade*, great as is its theme (and the theme is one that specially appealed to Voltaire), is not the really great poem that he intended it to be. He wrote many comedies, but no one could say that real humour, such as we find in Sterne, was present in Voltaire's writings. Of wit he had an ever-ready store, and his subjects knew too well of his powers in caricature. But Voltaire had not the terrible bitterness of Swift. His romances and tales appeal to the largest section of readers, if we except his historical works. They are delightful to read to this day. *Candide* gives us an admirable specimen of his style. *Zadig* and others attack the orthodox view of Biblical events, though not the larger idea of Providence. The most numerous of his writings, however, if we except his *Correspondance*, are his historical works, of which the best known are *Charles XII.*, *Louis XIV.*, *Louis XV.*, and the *Histoire de l'Empire de Russie sous Pierre le Grand*. The first is celebrated for the attractive way in which it is written, the ease of its style, and clearness of its narrative. With his *Essai sur les mœurs* he breaks with the old forms, so unsatisfying, as he explains, to an intelligent reader like Madame du Châtelet, and he gives us a sense of proportion which was absent from the writings of those who had made sacred

let him sell his garment, and buy one' (Lk 22^{36}). Many of the apostle's instructions in his epistles were local and temporary, and the fact that he still considered this instruction valid for the Church in Corinth does not prove its validity for all time. To say that such an instruction debars the Church in every age from taking any help except from its own members is surely an irrelevance.

Jn 18^{36} and 2 Co 10^4 enunciate the same principle that the Church as such will not resort to the weapons of force, but the inference that she will never in any circumstances accept help from a civil power as such is not a self-evident corollary from it. Gal 6^6 is an exhortation to liberality on the part of the individual Christian. To say that the Church as such is thereby forbidden to accept a contribution from the State is a *non sequitur*.

Isolated passages from the OT or the NT for or against disestablishment and disendowment are so differently interpreted and applied by different writers, and these interpretations are so coloured and biased by the writer's position, that definite conclusions cannot be rested upon them.

3. Voluntaryism in history.—The first quarter of the 4th cent. was signalized by three remarkable edicts: (1) an edict of Galerius signed also by Licinius and Constantine, a *venia indulgentia*, by which the last great persecution was brought to an end; (2) the edict of Milan (A.D. 313), a declaration of universal religious toleration; (3) proclamation by Constantine 'to the Peoples of the East' (A.D. 323), in which toleration is based on the principle of justice.

The logical issue of the edicts of Constantine was voluntaryism, but the practical issue of his action and influence was State-Churchism. His personal benefactions were very large, and the gifts of an imperial autocrat can hardly be distinguished from those of the State. The whole weight and wealth of the Byzantine Empire under Constantine and his sons in the middle of the 4th cent. were put in the scales on the side of Christianity, and it was established and endowed as the religion and the worship of the empire.

Space limits us to two or three great names in the voluntary succession.

(1) *Dante Alighieri.*—

> 'Ah, Constantine! to how much ill gave birth,
> Not thy conversion, but that plenteous dower,
> Which the first wealthy Father gain'd from thee.'[1]

(2) *John Milton.*—

'It concerns every man's conscience to what religion he contributes. The civil magistrate is entrusted with civil rights only, not with conscience. . . . That which each man gives to the minister, he gives either as to God or as to his own teacher. If as to God, no civil power can justly consecrate to religious uses any part either of civil revenue which is the people's and must save them from other taxes, or of any man's property, but God by special command as He did by Moses, or the owner himself by voluntary intention and the persuasion of his giving it to God. If he gives it as to his teacher, what justice or equity compels him to pay for that which religion leaves freely to his choice whether he will learn or no, whether of this teacher or another and especially to pay for what he never learned or approves not, whereby, besides the wound of his conscience, he becomes less able to recompense his true teacher . . . most of all are they to be reviled and shamed who cry out with the distinct voice of notorious hirelings that if ye settle not our maintenance by law, farewell the Gospel, than which nothing can be uttered more false nor ignominious, and I may say more blasphemous against our Saviour who hath promised without this condition both the Holy Spirit and His presence with the Church to the world's end.'[2]

No clearer or weightier exposition of the principle of voluntaryism and the sense of justice to which it appeals has anywhere been given.

(3) *John Locke.*—Locke's *First Letter on Toleration* is a powerful exposition of the motto from which it begins: 'Absolute liberty, just and true liberty, equal and impartial liberty is the thing that we stand in need of'—an exposition that would have been weightier still, had it been carried to its logical issue from the magistrate to the Government by which the magistrate is appointed.

(4) *A. R. Vinet.*—

'How will it be possible to persuade the state that it has no right to superintend services for which it pays . . . whoever pays is master: whoever accepts payment, accepts servitude.'[1]

(5) *Henry Alford.*—Coming, as it does, from one of the most scholarly and most spiritually-minded men in the Church of England, the thoroughgoing voluntaryism of Alford is remarkable.

'The next term is, the severance of the Church from the State. Whether years, or decades of years be taken for the accomplishment of this:—however it may be deprecated, and however opposed;—accomplished it will certainly be . . . God's arm is thrusting it on, and man's power cannot keep it back.'[2]

Voluntaryism as a principle was not professed by the founders of the Secession and Relief Churches in Scotland or by the Free Church of Scotland at the Disruption. In Scottish Church history it is a practical corollary rather than an *a priori* principle. The claim of spiritual independence, and the growing certainty that it could not be realized in a State Establishment; the conviction that State support for one branch of the Church was unjust and forced the conscience of those who did not belong to it or believe in it; the conviction, also, on the part of many that State alliance and support were contrary to the teaching of Scripture, led the former United Presbyterian Church almost unanimously, and a large majority of the former Free Church of Scotland, to adopt voluntaryism as the polity of the Church. The leaders in that movement were the Principals of four colleges—John Cairns, Robert Rainy, Thomas M. Lindsay, and George C. Hutton of Paisley.

The Church of Ireland was disestablished in 1869, the Welsh Church in 1909, the bill becoming operative in 1911, the Church in France in 1905. No Church is established in Canada, Australia, New Zealand, or South Africa; there is none in the United States. The only English-speaking nations in which establishment still exists are England and Scotland.

4. Questions.—(1) Is voluntaryism compatible with the conservation of endowment? James Barr, in his recently published *Scottish Church Question*, the most effective and comprehensive contribution to the subject yet produced, holds that it is not.

'What we on our part insist on is that none of the endowment shall go to ecclesiastical uses.'[3] 'It is a needless precaution so far as the main bodies of non-Presbyterian Protestant Dissenters in Scotland are concerned, for to their honour, they would not accept State endowments.'[4]

Some, however, have claimed for themselves the designation of 'pure voluntaries' who deprecated the alienation of the endowments. Speaking in the Assembly of the Free Church of Scotland in 1882, W. Robertson Smith said:

'I will stand here as a Free Churchman, but perfectly free to say as I do now, that while I am a loyal Free Churchman, recognizing the value of the act of 1843, I also stand here as a voluntary—a pure voluntary';

but Robertson Smith made it clear that he did not take exception to accepting relief from the State.

Objection to endowment rests on three grounds: (*a*) it is anti-Scriptural—to which it is replied that that is a matter of interpretation and of circumstances; (*b*) it is contrary to sound political economy that a State should give monetary help without determining and enforcing the conditions on which it is administered—to which it is replied that, if the State is satisfied with the wisdom and conscience of those to whom the money is given in trust, its duty to itself and to its citizens has been fulfilled; (*c*) it is incompatible with the principle of spiritual independence; it is not possible that a Church should be State-endowed and spiritually free. A distinction, however, may be drawn, and

[2] *Essays and Addresses by Henry Alford, D.D., Dean of Canterbury*, p. 166.
[3] P. 58. [4] P. 159.

has been drawn, between an endowment and a donation.

'It is perhaps conceivable that the State should make *a donation* to the Church without imposing conditions, but that it should make permanent provision for the ministers of religion and impose no conditions is not for a moment to be thought of.'[1]

Furthermore, when it is remembered that many believe that morally as well as legally the endowments are the property of the Church, that the State has never really owned them, but only administered them, that the alienation and secularization of these endowments would be morally unjust and religiously harmful; when further it is remembered that centuries of undisturbed possession establish a prescriptive right in law as well as in equity, it seems clear that one may claim to be a voluntary and yet hold also that the endowments of the Church should not be secularized.

(2) Voluntaryism appeals so often to conscience that one is constrained to ask, Is it possible to be a State-Churchman and yet to be sincerely conscientious? Does voluntaryism claim a monopoly of conscience? Was Ebenezer Erskine not true to his conscience when in 1735 he wrote:

'Whenever it shall appear that the established Judicatories are heartily adopting the cause of Christ, purging and planting His house according to His will and the solemn covenant lying upon the land and giving justice to His oppressed members throughout Scotland, I hope not only to return to communion but to enter the gates of our Zion with praise'?[2]

Thomas Chalmers was loyal to his convictions and conscience when, in his opening address to the first Free Church Assembly, he declared, 'We are not voluntaries,' and when in 1827 and 1838 he bent the weight of his massive intellect and pure heart to the vindication of Church establishment as being right and expedient. The voluntary is conscientious according to his light; so also is the State-Churchman. To say otherwise would be a 'railing accusation' on one side or the other.

But, if both are equally convinced and equally conscientious, it follows that the conscience of a sincere State-Churchman is forced and wronged by disestablishment in the same measure as the conscience of a sincere voluntary is forced and offended by an existing establishment. The argument leads to a moral dilemma. Neither side could press its conviction if the conscience of another were thereby offended.

Solvitur ambulando. The question is one for men as citizens of the State more than as members of the Church; some convinced voluntaries have held that it should not be touched by the Church *qua* Church. In a democratic Government like our own the will of the State is the will of the majority of its people. If that majority believe that the best and wisest way in which national religion can be expressed is by a national Church, their right to establish such a Church cannot be impugned. If, on the other hand, the majority believe that a national Church is a public inequity and a wrong to religion, their right to disestablish and to disendow cannot be questioned.

The voluntary ideal is a Free Church in a Free State. The trend of public opinion everywhere is towards it; its realization is inevitable. The principle has been recognized and embodied in Queen Victoria's Proclamation to the native religions when she assumed empire in India.

'Firmly relying ourselves on the truth of Christianity, and acknowledging with gratitude the solace of religion, we disclaim alike the right and the desire to impose our convictions on any of our subjects. We declare it to be our royal will and pleasure that none be in any wise favoured, none molested or disquieted by reason of their religious faith or observance but that all shall alike enjoy the equal and impartial protection of the law; and we do strictly charge and enjoin all those who may be in authority under us that they abstain from all interference with the religious belief or worship of any of our subjects on pain of our highest displeasure.'

The justice of that Proclamation to many minds is self-evident; but what is just in India is just all the world over, and the day will come when justice shall be done.

By what path will it come? It may come by way of the State or by way of the Church. State-compelled voluntaryism sounds like a contradiction in terms. Voluntaryism for the individual is real only when it is spontaneous. Compulsory voluntaryism may force the conscience of the State-Churchman as really as State-Churchism forces the conscience of the voluntary. Let voluntaryism get its majority and power, and, on the ground of abstract justice, it is entirely justified in enforcing its convictions on the nation. The true voluntary will, however, hesitate to do it. He will rather suffer wrong than inflict it on the conscience of another.

Voluntaryism may come by way of the Church. Conviction in favour of it is growing rapidly not only in Free Churches but in those allied with States. The proposed union of the two great Presbyterian Churches in Scotland and the tentative approaches towards union on the part of the Church of England and Nonconformists are full of hope and promise. The voluntary conviction in each of these unions would leaven the whole lump, and voluntaryism would come by a great free-will surrender and sacrifice in which these Churches would denude themselves of every State-conferred privilege, prerogative, preferment, and prestige and take their place on the platform of toleration and equality with all the Churches of the land.

WILLIAM ROSS.

VONDEL.—1. Early life and writings.—Joost van den Vondel (1587–1679), the greatest of Dutch poets and one of the greatest religious poets of the Counter-Reformation, belonged by descent to the South Netherlands, his parents being natives of Antwerp, pious 'Doopsgezinde,' or Baptists, who were driven by religious persecution to settle at Cologne, where the poet was born in 1587. The lovely opening stanzas of his *Oluftack aen Gustaef Adolf*, written when that town was threatened by the Swedish army, recall his earliest experiences. While he was still a child, his parents migrated, first to Utrecht and later to Amsterdam, where his father soon acquired a considerable business in the hosiery trade. Vondel's younger brother was thus enabled to obtain a good classical and legal education, but the poet entered his father's business and was a self-educated man. As an exile from the south, he became early a member

[1] Andrew Henderson, *Synod Hall Lectures*, Edinburgh, 1883, p. 63.
[2] A. R. MacEwen, *The Erskines*, p. 85 f.

of the Chamber of Rhetoric, 't Wit Lavendel (White Lavender), to which most of the Brabanters in Amsterdam belonged; and his earliest plays and poems are written in the style of the *Rederijkers* and of the Bible plays which, under the influence of the Renaissance and the Reformation, had taken the place of the mediæval moralities. The poems show also, like some of Milton's first verses, traces of an admiring study of the French Protestant poet Du Bartas. His wife took over the management of the hosiery business, and Vondel set himself to the task of repairing the defects of his literary education. He took up the study of Latin, French, Italian, and ultimately Greek. Seneca and later Sophocles became his models in tragedy. Besides metrical versions of Sophocles' *Electra* and *Œdipus Rex*, he made complete translations, at one time or another, in prose or verse of Virgil's *Eclogues*, *Georgics*, and *Æneid*, of Ovid's *Metamorphoses*, and of Horace's *Odes* and *Epodes*. But classical influence in Vondel never repressed the spontaneously lyrical inspiration of his poetry or modified the passionately Christian temper of his mind. From first to last the poetry of Vondel has two great sources of inspiration—God and his native country; and, whatever form his poetry may take, its masterquality is always lyrical—ardour and sweetness, fertility and subtlety of thought, a music of verse which is at every turn the full and resonant counterpart of the changing moods of his exalted mind. He wrote few or no love poems. Only once or twice in his long life does the current of his private feelings of joy and sorrow rise to the surface in a lyric of joy or sorrow. His personal interests were merged in his passion for great causes, patriotic and religious.

The first conflict which evoked the full strength of Vondel's religious feeling and poetic genius was the critical struggle between the Remonstrant Arminians, supported by the magistrates and cultured circles, and the Calvinist Contra-Remonstrants with the common people behind them, which ended with the Synod of Dort and the execution of Oldenbarneveldt. Vondel's soul was moved to its depths, and about 1618 he attacked Prince Maurice and the preachers under the thin veil of a classical tragedy on the subject of Palamedes. He had to go into hiding and was fined for his boldness. Vondel found a more effective outlet for his feelings in a series of satires, begun about this time and continued at intervals throughout his life. The best of these, the fiery *Geuse Vesper of Sieckentroost*,

> 'Had hij Hollandt dan gedragen
> Onder zijn harte,'

and the *Rommelpot van Hanekot*, where the mutual amenities of the Calvinist clergy are portrayed under the figure of a roost full of gobbling, scratching, fighting cocks, are popular songs handled by a poet of genius. The *Decretum Horribile* is an impassioned denunciation in Alexandrines of the doctrine which consigned infants to eternal perdition. *Roskam* and *Harpoen*, in the same verse, are more quiet and argumentative expostulations against endless theological hatred and strife. The *Uitvaert van Apollo* and *Speelstrijdt van Apollo en Pan*, written when his *Lucifer* was driven from the stage, read like folk-songs into which a great poet has blown a music as winged and sweet as the *Hymn of Pan* by Shelley. None of Vondel's poems have preserved their popularity so entirely as the satires.

It would be out of place to give here any full account of the secular poems which flowed from Vondel's pen hereafter till the end of his long life. A large number of them are political and occasional pieces, descriptive and lyrical in character, written to celebrate the sea-power of Holland, the birth of a prince to the House of Orange, the victories of Frederick Henry by land or of van Tromp and de Ruijter by sea, the building of a new Stadthuis at Amsterdam, the visits of royal persons, the marriages and deaths of his friends. He was the laureate of Amsterdam when that city was the heart of the Netherlands, and the Netherlands almost the heart of Europe, responsive to every movement from Sweden to Spain, from England and France to Turkey, and looking out over the seas to the East and West Indies. Here we must confine ourselves to the history of his religious development and some of the chief poems in which his devout and ardent feeling found expression, dramatic, didactic, and lyrical.

2. **Attractions of Roman Catholicism.**—The steps which led Vondel into the Church of Rome have nowhere been clearly indicated by himself, but they are not difficult to trace. As a 'Doopsgezind' he had been brought up to reject the doctrine of predestination as formulated by the Calvinists.[1] That movement had its ultimate source in the desire to find in the Reformation not so much a new creed as a new life, a closer personal and spiritual communion with God; and for Vondel himself it is clear that Christianity was primarily a movement of the heart, a passionate love of God, a faith in God's love to man as revealed in Christ. To him Calvin's doctrine seemed an outrage on that faith and love. The bitter fanaticism of the Contra-Remonstrant preachers appeared equally hostile to the spirit of Christian love. Moreover, as a poet and lover of the culture of the Renaissance, he ranged himself with the poets, dramatists, and men of learning, like Grotius, the object of his warmest admiration, who found their chief friends and patrons in the magistrates and middle class who were also the supporters of the Arminian movement. In short his religious and artistic sympathies alike drew him to the side of the Remonstrants. But he had no sympathy with the somewhat Epicurean and sceptical spirit of some of the humanists, as Hooft, who took the same side. Religion was for him the first of interests. Further, within his own Baptist communion were differences that disturbed him and doctrines enunciated to which he could not subscribe. In the *Antidotum tegen het Vergift der Geestdrijvers* (1626) he ranges himself against the supporters of the doctrine that the private spirit is a source of inspiration and instruction equal or superior to the written Word. He does not go further in this poem. He does not ask whether the interpretation of Scripture may be left to the individual enlightened by the Spirit. But events showed that this was the question on which his mind was busy, that he was in search of an authority able to allay such storms of conflicting dogma as had swept over the Netherlands and brought to the scaffold one of the saviours of his country. The trend of Vondel's mind was diametrically opposed to that of Milton, who was a republican in politics, and became always more hostile to the recognition of any organized Church, any authoritative interpreter of Scripture, any mediator between the Scriptures and the individual conscience and reason.[2] An uncompromising adherent of authority in the State, Vondel could not rest till he found a centre of authority in religion.

It was not till the autumn of 1641 that he took the final step, but in the interval he was busy with Church history and legend. In the *Olyftack aen Gustaef Adolf* (1632), an appeal for the safety of Cologne, he recalls, like Milton, how

[1] See art. ANABAPTISM, II. 1 (2).
[2] See art. MILTON, vol. viii. p. 644ᵃ.

'The great Emathian conqueror bid spare
The house of Pindarus,'

but elaborates more fully the legend that Alexander the Great spared Jerusalem at the intercession of the high-priest. Like Milton also, Vondel was planning in these years a heroic poem, and the subject he selected was the conversion and victories of Constantine. He had reached the battle of Aquileia when his wife died, and the poem was never completed nor any part of it published. He turned to tragedy, and prepared for the new Amsterdam theatre a classical tragedy on the legendary history of Amsterdam, *Gijsbrecht van Aemstel*, supplying the details of his plot from the description of the destruction of Troy in the second and third books of the *Æneid*. The best things in the play are the beautiful choruses on married love and on the Massacre of the Innocents; but the sympathetic treatment of Roman Catholic rites and beliefs throughout the play warned his countrymen of the coming change which was consummated in the autumn of 1641. With the *Gijsbrecht*, too, Vondel began a long series of dramas on Biblical subjects or saints' legends, but including two patriotic plays — *De Batavische Gebroeders* and the beautiful pastoral *De Leeuwendaalers*. Vondel did what Milton in the same years would probably have done had he not turned from poetry to political and religious controversy. But Vondel had ready to his hand, what Milton would not have found in England,—a theatre to perform his religious plays.

The relations of the Protestant Reformation and the drama were complex, and differed in different countries.[1] In general Protestantism was antagonistic to the stage generally, on much the same grounds as the early Church, and especially to the realistic presentation of the great mysteries of the Christian faith in the miracle- and mystery-plays. But, on the other hand, the moralities lent themselves to polemical ends, Protestant as well as Roman Catholic; and the educational interest of the time found a useful instrument in dramas composed in Latin — *e.g.*, the *Jephthes* and *Baptistes* of Buchanan and the flourishing drama, Terentian and Senecan, on Scriptural subjects, of Germany, Switzerland, and the Low Countries. From both of these sources were descended the naive Biblical plays of the Chambers of Rhetoric, the kind of play with which Vondel had begun. But the Eglantine, the most famous of the Amsterdam Chambers, and its successor the Academy, founded by Coster, a minor dramatist, preferred secular plays, native farces, romantic plays of the English type, but without their poetry, and classical plays. The new Theatre which finally took the place of Coster's Academy was opened with Vondel's *Gijsbrecht*, and it was here that all his subsequent plays were presented with elaborate and gorgeous staging and scenery. These plays differ from his earliest experiments simply in their more classical form, as that was understood, their closer resemblance to the Latin plays of Grotius.

3. **Vondel and Milton.**—Vondel's genius was not dramatic, and his ardent piety still further limited his dramatic treatment of its themes. He was incapable of letting his artistic genius so far get the upper hand of his didactic purpose as to create a great figure like Milton's Satan. His favourite hero is the pious and submissive saint whose first virtue is unquestioning obedience to the will of God as revealed by God's priest. The result is sometimes even painful, as in *De Gebroeders*, a play on the subject of the expiatory murder of Saul's sons, in which David's piety is shown by his becoming accessory to a crime at the bidding of a pious and politic high-priest. Vondel's temper is more attractively expressed in plays whose hero is some young saint of pure and ardent piety, like Joseph in the two plays with which he followed up his translation of Grotius's drama on the subject of Joseph's temptation, *Joseph in Dothan* and *Joseph in Egypten*, or again in the beautiful character of Jephtha's daughter in *Jephtha*. The most famous of all his plays, the *Lucifer*, will not bear comparison dramatically with the great opening books of *Paradise Lost*. Vondel gives as the motive for the rebellion of Lucifer the announcement that Christ will take on Him the nature of man and thereby raise humanity to a higher level than the angels, following the tradition that the Incarnation was independent of the Fall. With his eye upon the Rebellion in England, to which he was passionately hostile, he presented the revolt more in the form of a mutiny among the angels, in which Lucifer allows himself to be pushed to the front, concealing his deeper ambitions under a veil of zeal for the rights and privileges of his order—a Cromwell, in short, as royalist sentiment interpreted Cromwell's policy and career. For Milton also disobedience to the absolute and unconditioning will of God is Satan's crime, but there was in Milton the temper that rebels, and he was on Cromwell's side, and the apologist of regicide. His feelings and imagination got the better of his theology and gave us the great dramatic and human figure of Satan as he is presented to us in the opening books. Vondel's strength did not show itself in dramatic creation, nor, any more than Milton's, in philosophical or mystical interpretation of the inexplicable episode; but in descriptive and lyrical poetry—the opening picture of Eden, the final conflict of angels in the air, a great naval battle as between angelic van Tromps and diabolic Blakes, and the choral odes—*e.g.*, that on God which closes the first act:

'Wie is het die zoo hoogh gezeten,
Zoo diep in 't grondelooze licht.'

All Vondel's plays show the same weakness in the portrayal of heroic and dramatic characters, the same descriptive and lyrical qualities. Such a pious and complete acceptance of the Christian view of life as Vondel's leaves little room for tragedy such as that of the Greeks or Shakespeare; for it eliminates those conceptions of fate and chance and the enigma of human life of which such tragedy is an expression.

4. **Teaching of the plays.**—The teaching of the plays is in general simply Christian and Biblical; only latently is it specifically Roman Catholic, as in *Jephtha*, where Vondel makes Jephtha's sin his stubborn reliance on his own conscience rather than on the authority of the priest whom he consults. Vondel's more purely Roman Catholic sentiments found expression in lyrico-didactic poems such as the *Brieven der Heilige Maeghden* (1642), saints' letters modelled on the *Heroides* of Ovid; the *Altaer-geheimenissen* (1645), an impassioned didactic on the sacrament of the Mass, the Scriptural and ecclesiastical authority for the Roman Catholic view of the mystery, the worship of the Host, and the rites with which that worship is invested: *De Heerlijckheit der Kercke* (1663) on the glory of the Church; and the *Bespiegeling van Godt en Godtsdienst* (1662) on the attributes of God.

More interesting than these to the reader of to-day, especially the non-Catholic reader, are those poems in which Vondel pours forth, with no didactic purpose, his personal feelings in strains which reveal what a fullness of happiness the devotional richness of the Roman Catholic Church brought to him as to the English poet Crashaw. *De Koningklycke Harp*, a brimming river of song

[1] See art. DRAMA (Introductory), § 5.

in praise of David's Psalms, the *Opdraeght aen De Heilighe Maeght*, prefixed to the *Brieven* mentioned above, a white flame of adoration, are good examples; but perhaps most touching of all are the shorter, simpler lyrics evoked by the death of his wife, his little son 'Constantijntje 't zalig kijntje,' his daughter, and his granddaughter. The *Uitvaert van myn Dochterken*, written in 1633, is an unrelieved cry of sorrow, simple but perfect in form. The corresponding *Uitvaert van Maria van den Vondel* (1668) is a hymn of resignation to God's will that hardly breathes regret.

'When this our earthly life hath ended
Begins an endless life above,
A life of God and angels tended,
His gift to those that earn His love.

. . . . . .

What from that Unity is severed
Must here in weary exile roam,
On earth no resting-place discover,
In Heaven her fatherland and home.

. . . . . .

Her dying breath went out to God
Whither all hearts must turn at last,
The goal, the rest, the perfect portion;
And in that prayer all sorrow passed.'

The resignation which such poems breathe was displayed by Vondel in the heroic close of his life when the aged poet sacrificed his whole fortune to redeem the debts of a worthless son and spent ten years of his life in the service of his native city as an official in the public pawnshop—a very Dutch pound for Pegasus. He died in 1679 at the age of ninety-two.

5. Place as a religious poet.—The personal note of the last poems cited is even historically the most important; for the significance of such poets as Crashaw and Vondel, emphasized by the supreme place which the latter holds among the poets of a country which had been in the vanguard of the Reformation, is that it reveals the importance of the Counter-Reformation, where it was that the Protestant movement had miscarried, had ended, not as its leaders anticipated, in a victory of Christ's Church over Antichrist, but in a definite rending of the seamless garment, a division leaving truth and untruth, good and evil, on either side. In its eager quest of a purer and more Scriptural creed and simpler worship, its impatient desire to root out the tares of 'human' traditions and ceremonies, Protestantism had outrun the human heart, had ignored the depth and power of the instincts of which those beliefs and rites were the expression. The idea of a united Christian Church speaking with authority; the significance of the sacraments, above all of the Eucharist—the 'This is my body,' 'This is my blood'; the devotion to the person of Christ and its overflow in the cult of the Virgin and saints—there were in Protestant countries and churches of all denominations hearts to which these things had only to be presented to make immediate and irresistible appeal. Some of the most interesting movements in Protestantism since the 17th cent. have represented the effort of individuals to recover these sources of devotion without sacrificing Protestant loyalty to Scriptural and historical truth; and there have been corresponding movements in the Roman Catholic Church to secure a higher level of Scriptural and historical truth without any sacrifice of traditional devotion. Vondel is not a poet of the calibre of Dante or Milton; there is nothing striking and original in the content of his thought; but a poetry so resonant and harmonious, uttering with perfect sincerity the passionate ardours and exultations of a great Christian soul—a Roman Catholic poet in a Protestant country—can never be without significance for the student of religious thought and feeling in Western Europe since the Reformation.

For the student of the drama too there is an interest, corresponding to that of the religious drama of Calderon, in this last survival in a Protestant country of the drama of the Middle Ages.

'The Spanish drama,' says a recent writer, 'like the Greek but unlike the English, had not cut itself adrift from its religious origins, and so remained a far more truly national institution than the English drama ever became after the Reformation.'[1]

Vondel's drama is throughout religious and patriotic. If it is not completely national, it is because the religious spirit which it expresses is not that of the great body of the Dutch people and because it does not do full justice, as Shakespeare's did, to the secular interests of the nation as these had taken shape and colour under the quickening influence of the Renaissance.

LITERATURE.—The most complete bibliography, up to date, is J. H. W. Unger, *Catalogue of Writings, etc., by J. van den Vondel*, Amsterdam, 1907, *Bibliographie van Vondels Werken*, do. 1888. See also G. Kalff, *Geschiedenis der Nederlandsche Letterkunde*, Groningen, 1906–12, iv. 333–336. The best ed. of Vondel's works is that of J. van Lennep, in 25 vols., Leyden, 1888–94; Geeraardt Brandt, *Leven van Vondel*, Amsterdam, 1682, ed. Eelco Verwijs, 1866, is the classical biography. A complete list of Vondel's dramas, not including translations, in order of production is: *Het Pascha* (1612), *Palamedes* (1625), *Hierusalem verwoest* (1629), *Gijsbrecht van Aemstel* (1637), *Maeghden* (1639), *De Gebroeders* (1639), *Joseph in Dothan* (1640), *Joseph in Egypten* (1640), *Pieter en Pauwels* (1641), *Maria Stuart* (1646), *De Leeuwendaalers* (1647), *Lucifer* (1654), *Salmoneus* (1657), *Jephtha* (1659), *Koning David in ballingschap* (1660), *Koning David Herstelt* (1660), *Samson* (1660), *Adonias* (1661), *De Batavische Gebroeders* (1663), *Faëton* (1663), *Adam in ballingschap* (1664), *Zunchin* (1667), *Noah* (1667). *Joannes de Boetgezant* (1662) is a short didactic epic suggested in part by G. B. Marino's *La Strage degli Innocenti*. For the religious drama of the Reformation see art. DRAMA (Introductory), § 5; C. H. Herford, *Literary Relations of England and Germany in the 16th Century*, Cambridge, 1886; and W. Creizenach, *Gesch. des neueren Dramas*, Halle, 1893–1909, vol. ii. bk. i. and elsewhere. Note also G. Edmunson, *Milton and Vondel*, London, 1885; H. J. C. Grierson, *The First Half of the Seventeenth Century* (in 'Periods of European Literature' ser.), Edinburgh, 1906, p. 193; and Kalff, *op. cit.*; *Vondel's Lucifer*, tr. L. C. Van Noppen, New York, 1898.

H. J. C. GRIERSON.

VOODOO.—Voodoo is devil-worship and fetishism brought from the Gold Coast of Africa by negro captives to the United States and West Indies. Its chief sacrifice is a girl child, referred to by the initiates as 'the goat without horns.' When a child is not available, a white kid takes its place. Excepting at the great semi-annual festival when the 'goat' is drugged, killed, and eaten, black dogs, cocks, and hens are cruelly sacrificed by being slashed so that their bowels fall out. There is a regular priesthood to intimidate and rob the devotees. These sometimes have the name *papaloi* and *mamaloi*, more frequently *pappy* and *mammy*, used as a prefix to their given names. The head of the circle or association of priests and priestesses has the title of 'king'; *e.g.*, King Alexander was long the head of the cult in the south-western states. The entrance into the priesthood is won by many and difficult tests. The aspirant (man or woman) must endure hunger, thirst, extreme heat and cold; must go sleepless, unless commanded to have the dream-tormented sleep induced by drugs; must eat offal and drink the ooze of garbage. While enduring this, he must keep a calm mind and strong will, and memorize the power of various poisons, from rattlesnake venom, stramonium, and water-hemlock to putrid liver and earth from under carrion. Also he must acquaint himself with the properties of healing herbs, such as red clover for cancer, dock for liver trouble, boneset for fever, etc. He must learn to make luck-balls, tricken-bags, hands-of-love, fingers-of-death, and other fetishes, and lay up in his memory the incantations which he must mumble as he works and the number of times he must repeat them, for numbers are very important

[1] John Eglinton, *Anglo-Irish Essays*, 1917, p. 59.

in his magic.[1] He must, above all else, concentrate his will, so that, by the time he is considered a finished product of his school, he is a hypnotist of power. When he has satisfied his teachers as to his acquirements, he is set to lead a season's dances, these being fire-, snake-, and moon-dances. The fire-dance is the most important, and is called 'the dance of the Old Master' (meaning the devil). It is given at mid-summer and mid-winter in a lonely field or ravine, around a great fire of wood and tar. At a little distance is a sort of altar at which the 'goat without horns' is sacrificed. It has already been stupefied with some sort of narcotic. Each dancer gets a quivering fragment, and then hops and whirls and howls more frantically than ever. It is only justice to say that the priests swear that no child has been killed for a dance for fifty years. The moon-dances are the same unregulated caperings, indulged in when the moon is full. The performers start in a circle, clasping hands. At a signal from the leader, all start running round a big stone which is set in their midst, and, soon breaking away from one another, begin to caper and howl and yelp compliments to the moon, such as 'Pretty moon! Old Master's moon! Ho-ho! I love you, pretty moon.' The snake-dances are given by the owners of snakes at any time. The reptiles are brought out in their baskets and set down uncovered in the midst of a dancing circle. They are expected to be torpid, but occasionally one tries to escape and, being trodden on, bites a naked foot, but no serious consequences follow if the dancer is not too maddened to apply an embrocation of snakeweed (*liatris scariosa*), which is kept in readiness.

It is not really necessary for a voodoo to have great knowledge of poisons, for such is the power of suggestion on the ignorant and superstitious that, if a negro imagines that he has been 'hoodooed,' 'witched,' or 'cunjered,' he pines away and dies, unless some one can be found whom he considers a voodoo of greater powers, to minister to his mind diseased and root out death-compelling terrors by the tricks and baubles of his nefarious profession. Few white people realize the menace of voodoo due to its absolute power over a certain class of minds. MARY A. OWEN.

VOTIVE OFFERINGS (Greek).—**1. Definition and terms.**—The votive offering may be defined as a permanent memorial dedicated of free will to a supernatural being. It thus differs from the sacrifice (*q.v.*), which is not permanent, and from the tax, which is not given of free will. Tithes and firstfruits are properly not included, since they are neither; yet they must be considered, since a votive offering may be given in consequence of them.

The custom may safely be assumed for the whole history of worship on Greek soil. In the most ancient sanctuaries, such as those of Crete, Argos, Olympia, Sparta, Ephesus, these offerings are found in every stratum down to the earliest. At least small vessels that once held some kind of perishable offering are found in large numbers everywhere, and these also in the beehive tombs extend the practice to ancestor-worship. Such vessels, however, may be there by accident, simply because the sacrifice could not be presented without them; and the argument must be based on more significant things—human-like figures or animals which meet us in the sanctuaries just named. These are of course not the only offerings that may be assumed for the early age; other kinds that are found later may well have been found there, but, when the material was less lasting or more precious than clay, they had less chance of escaping destruction or theft. The custom seems, however, to have been extended and systematized in the time between Homer and Hesiod. In Homer the formula varies: we have no special word for act or thing (*ἄγαλμα, ἀνάψαι, κρεμάσαι*, and *θεῖναι, δῶρα* and *διδόναι* being used of other things as well); but in Hesiod we first meet with the technical *ἀναθεῖναι*, and inscriptions of about the same age have *ἔθηκεν, ἀνέθηκεν, ἔστησεν*, and *ἵσατο*. Shortly after this the terms used for the votive offering become generally fixed: *ἀνατίθημι* and, as its passive, *ἀνάκειμαι*, with the noun *ἀνάθημα* (*ἀνάθεμα, ἄνθεμα, ἄγημα*), being used to distinguish such things from gifts to human beings (*δῶρον, διδόναι*). These terms remained until in the 4th cent. and later they lose their force. These changes probably correspond to psychological changes,[1] the offering being considered at first as a gift to the god, then as a gift from the giver, and finally the religious feeling being swallowed up in self-glorification. The shifting centre of gravity changes the character of the gift, and at last robs it of its value.

2. Occasion.—The offerings might be given on any occasion, customary or special, public and private; but, whether state or person was the giver, the principle remained the same. Our classification therefore is only made for convenience.

(*a*) *Customary.* — There are many records of customary offerings at the recurrent feasts. Such are the dedication of a *πέπλος* to Athene every four years at the Great Panathenæa, and a *πέπλος* to Hera at Olympia every four years, and a *χιτών* to Apollo at Amyclæ;[2] Alcman's *Partheneion* seems to describe a similar gift to Artemis Orthia at Sparta.[3] We know that many other ancient images were clothed,[4] and it is not unreasonable to suppose that these customs did not stand alone. The periodical washing and dressing of images is common in the East, and its ancient character is obvious. Hecuba indeed gives a fine robe to Athene,[5] but the records of the public and customary dedications do not go beyond the 6th century. A *θεωρία* sent to an oracle carried with it votive offerings as well as sacrifice. Hyperides describes how one of them dressed and decorated the statue of Dione at Dodona,[6] and an oracle from the same place demanded sacrifice with the gift of a bronze table for the gift that the Athenian people had sent.[7] Other records show a silver *φιάλη* as the customary gift of a *θεωρία*; we find them year after year at Branchidæ, where fourteen cities dedicate in one year,[8] and at Delos.[9] So the Athenian colonies sometimes sent gifts to the great feasts of Athens.[10] It is reasonable to assume that the practice was customary at public feasts.

The private worshipper who took part in a festival was certainly expected to offer something. There are occasional allusions to this;[11] but it may be safely inferred from the preservation of thousands of little saucers of the same shape and make, and of anthropomorphic figures of certain types. These are found in most ancient shrines in regular series from the earliest strata; and, whatever they meant, we may assume them to have been sold by the priest to visitors for the purpose of dedication. The worshipper may very likely have taken the

[1] Ten is so unlucky that it must never be said, four is the luckiest, and four times four times four is the devil's own number.

opportunity then to present some special petition; so that it is impossible to be certain of the occasion for any one.

But there are a large number of objects, common in the Archaic period and later, that can best be explained as memorials of the act of worship. Such are the well-known statue of Rhombus at Athens, bearing a calf over his shoulders, just as the modern Greek does still on Good Friday.[1] There are several similar figures known; and large numbers of little clay figures carry some offering, often representing a lamb or pig, cock, dove, or other bird, fruit, flower, or garland, which have been found in Athens, Calaurea, Corcyra, Crete, Cyprus, Dodona, Ephesus, Naucratis, Sparta, Tegea, Thebes. Others, again, are grouped in a ring-dance, and there are single figures who bear pipes or harp or play upon some musical instrument, who carry in the hand a bowl or jug or lustral spray or a jar of water on the head, who clap the hands or uplift them in the attitude of worship. A peculiar variety are the figures of Artemis found in Corcyra; the goddess stands facing, and a votary is seen in the act of dancing before her.[2] Others are depicted in ritual costume, and may be priests or priestesses. The most remarkable of these are those discovered in Crete and Ephesus. In a shrine at Cnossos were found figures elaborately painted, representing a female in ceremonial dress, holding and girt with snakes; similar figures, less elaborate, at Palaikastro and Gourmies;[3] at Ephesus, perhaps priestesses, and probably the eunuch priest.[4] Relief-carving reached its perfection in the 5th cent.; and then and later the sacrifice, the libation, and the feast are commemorated in reliefs. The worshipper may dedicate the clothes actually worn in doing the rite; even models of them have been found made in porcelain.[5]

(*b*) *Occasional.*—Here fall the great majority. State or person may return thanks thus for victory in war or deliverance from peril; and the person often marks by an offering the date of some event such as marriage and retirement from active life. Any supposed wrath of a deity may be met with a propitiatory offering, and the sin of the human being thus expiated.

3. Motive.—The motive may be thanksgiving, prayer, or propitiation, chiefly the two former. Help or deliverance from peril and success in some undertaking are the commonest occasions of the act. With a prayer the votive offering was sometimes given in anticipation, to keep the god in mind of the prayer; if we may draw a deduction from the customs of modern Greece, this would be common in cases of sickness. The crew of Odysseus, intending to steal the oxen of the sun, vow to build him a temple if they return to Ithaca;[6] and Crœsus appeased with rich gifts the oracles of Apollo and Amphiaraus, which had guessed his riddle and were angry with him for his unbelief.[7] For unbelief a worshipper at Epidaurus was ordered to offer a silver pig,[8] and other indications exist that small offerings were made for a breach of etiquette.[9] Fixed fines or confiscations differ from these in being compulsory. For bloodguilt propitiation was not uncommon. Temples are recorded as being built for this cause;[10] and after the murder of Pausanias the Delphic oracle commanded that his statue be dedicated in the Brazen House, whence he was dragged forth to die.[1] The nine archons at Athens swore to dedicate a golden statue (*ἀνδριάς*) if they should break the laws.[2] One inscription mentions as the motive of dedication 'fear of the wrath of the twin Tindarids.'[3]

4. Classification.—A certain number of the worshipper's gifts are of direct use in the god's service. Such are temples or shrines and the articles used in them. Temples dedicated on a special occasion are recorded in legend and in history. Danaus erects a temple to Apollo in Argos, in memory of an omen which encouraged him in seizing the kingdom;[4] Heracles and Theseus do the like. The temple of Apollo at Bassæ commemorates the deliverance of a city from pestilence, and that of Hera in Sparta deliverance from flood.[5] The murder of a tyrant was expiated by the temple of Artemis at Tegea.[6] A colonnade is built in some religious precinct with the spoils of war, as that of the Athenians at Delphi;[7] so with certain of the Treasuries at Delphi.[8] Parts of a temple might be specified, as the pillars of that in Ephesus dedicated by Crœsus;[9] this becomes very common in late times, when it often means no more than that some official paid for repairs or even arranged for them. Altars are a common dedication, especially late, some being apparently memorials of a ritual act.[10] Garments for the idol have already been mentioned. Many articles of intrinsic value, such as ornaments or coins, may have been given as valuables; but these are generally appropriate to the occasion, as we shall see.

Another class consists of what may properly be called *ἀγάλματα, οἷς ἀγάλλεται ὁ θεός*. The *ἀκροθίνια*, or choice pieces, are given from spoils of war—as the throne of Xerxes, the manger of Mardonios,[11] statues from the temples of a conquered foe.[12] So also any rarity—the stone swallowed by Cronus, the sceptre of Hephaistos, Dædalus's wings, mammoth bones.[13]

But in the great majority of things dedicated, even if they have material value, the ideal value predominates: they are in fact appropriate to the occasion. We may classify these: (*a*) image of the deity, (*b*) the act or process blessed by the deity, (*c*) the winnings, (*d*) the tool or means.

(*a*) *Image of the deity.*—In all the great shrines large numbers of clay figures are found that must represent the deity. These are sometimes not differentiated: the same seated type does duty for Athene in Athens or Demeter in Tegea. Others have attributes, as Artemis with a fawn or other animal, Athene armed cap-à-pie, Zeus with the thunderbolt. Probably the small figures reproduced the general aspect of the cult-image; anyhow it is impossible to say that the attributes suited the occasion. The naked male figures found in Bœotia, in the shrine of Apollo Ptoan, and many other places, were probably meant for the god;[14] and so also the *κόραι* of Athens and Delos were probably meant for the goddess.[15] Some in each class are dedicated as a tithe or firstfruit;[16] and the armed bronze Athene dedicated by a baker-woman[17] shows that there need be no connexion of the type and the occasion.

Perhaps the figure of the nursing mother may be a goddess in her beneficent aspect; but these seem more likely to represent the devotee. Later, the god's benevolent activity is represented in a series of reliefs, which show Asklepios and his attendants curing the sick.[1] With less confidence, the same may be held for a few other classes of reliefs. These begin late in the 5th century.

(*b*) *Act or process blessed by the god.*—The earlier examples are simpler in conception. We would include here the warrior armed, a type that goes back to the 7th cent. at least, sailors rowing their galley, the victor in his car with Victory driving, the jockey on his courser, the athlete[2] with his proper attributes or in proper pose, the hunter with his game, the dairy-farmer milking his cow, perhaps the peasant in hat and cloak.[3] Here also we would place the common statuettes of the nursing mother and the various scenes of childbirth, which are becoming more common with the progress of excavation.[4] These must sometimes represent the devotee, and it is reasonable to assume that they always do, in the absence of direct proof that they represent the deity. A more summary representation is a bronze stoneram from the Athenian acropolis, inscribed so as to leave no doubt as to its meaning: *τὴν ὄκελαν (=ὄχελαν) με τἀθεναίαι ἀνέθηκεν.*[5] This may give the key to interpret other figures of rams, bulls, and horses, which are found everywhere.[6] A complete scene of animal life is not uncommon: brood-mare suckling a foal, stag attacked by hounds, or the hound alone, hawk gripping hare.[7] There are vast numbers of other animals, which more probably belong to the next class. In many cases the figure may be a simple reminder of a tale to which the key is lost, like the figure of an ass that prevented a surprise by his bray,[8] or that of a frog which directed a traveller to a spring.[9] An early series of painted tablets found at Corinth depicts every stage of the staple industry of the place, pottery-making, together with hunting and farming and vine-dressing; later, athletic contests were often commemorated by a relief.[10]

We may perhaps add the rather rare instance of a workman dedicating his first or chief piece of work, or a model of it. The most definite instance of the 'masterpiece' is Lycinus's pot, inscribed, *Λυκῖνος ἀνέθηκεν τῇι Ἀθηναίαι τὸ πρῶτον ἠργάσατο.* Mandrocles, who could not place his bridge over the Hellespont in the temple of Hera, placed a picture of it instead.[11] A summary memorial of healing was often a model of the part affected. These have now been discovered in very ancient deposits of Crete and Ephesus; hitherto they have been very common from the 4th cent. B.C. to our own day, and hardly known before.[12] In Ephesus was also a real human tooth, bound with gold wire (for hanging?).[1] Things outworn may be regarded as similar memorials of the act blessed. There is little record of this in early days: the earliest is an epigram of Simonides,[2] but there is enough to show that the thing might be. Later, its sentiment won favour for it, and it became common. So the lame man dedicates his crutch or the sick man his bandage; children dedicate their toys at puberty; and clothes worn in time of peril are dedicated by the survivors.

(*c*) *The winnings.*—The oldest and most important group of these are the spoils of war, which are found everywhere, dedicated to practically all gods, from the earliest times to far into the Christian era. The trophy itself is a war-dedication; and the warrior made his gift to the god whom he believed to have helped him, *i.e.* usually to the patron of his own city or tribe. It is rather mean to dedicate a small model of spoils, but it seems to have been done. In Olympia, Delos, Lusi, and Crete have been found useless or miniature models of shields, helmets, loinguards, cuirasses, and knives, besides others, such as axes, which may be memorials of war.[3] So with the athletic prize: from Hesiod's tripod in the 8th cent.[4] to the prize tripods at Athens and the Triopia, *stlengis*, vase, or crown here or there, and the iron sickle at Sparta,[5] there is plenty of evidence of the custom. Models in gold of corn-sheaves, silphium, olives, or vine doubtless display thanks for a good harvest; and perhaps some of the numerous animal models, which include every domestic kind and most game, are due to the hunter's gratitude.[6]

(*d*) *The tool or means.*—Sometimes the soldier dedicated the arms or weapons used in battle; sometimes the athlete dedicated his chariot or his quoit or leaping-weight. Later, we have models of sickles, wine-presses, and the like recorded in literature. There is not much evidence of this, but there is enough to show that the thing was done.[7]

It should be noted that, wherever the worshipper's figure appears, he is depicted as engaged in some significant act. His portrait, as such, is never dedicated by himself. The human being never appears except when something of the ideal is implied. There are some apparent exceptions; but in Greece they are only apparent, and, if not apparent, they are not Greek. Later, beginning in the 4th cent., all this changed; and the honorific statue came in just when the votive offering became a means of self-glorification. The old spirit hardly survived except in cases of dedications for relief from sickness and peril.

VOWS (Buddhist).—**1. Vows at ordination.**—The primitive and most fundamental form of taking vows in Buddhism consisted in expressing one's confession of faith on the occasion of ordination (*upasampadā*). The words uttered at ordination before the master of the ceremony were the regular formula (*kamma-vāchā*) of taking refuge in the Buddha, in the Dharma, and in the Sangha, repeated three times as a rule.[1] This profession of faith was associated with other professions—of personal purity, of the determination to practise all the precepts and rules of conduct ordained by the Buddha—for the newly ordained was, after the regular profession, instructed in the rules of discipline, and therein was implied the vow to observe the rules. The procedure and methods of the ceremony differed among the schools of Buddhism, and various doctrines developed as to the efficacy of the ceremony, its influence upon the life of the ordained, its relationship with the other branches of Buddhist training, etc.[2] The more important aspect in the development of the practice and doctrine was the Mahāyāna conception of vow-taking, *i.e.* its significance in the ethics of the *bodhisattva*.

2. The vow of a bodhisattva.—As is seen in the art. PRAYER (Buddhist), prayer in Buddhism amounted to taking the vow to perfect oneself on the way to *bodhi* and thereby to save others. It takes, as a rule, the form of vows (*praṇidhāna* or *praṇidhi*) taken by a *bodhisattva* (or any other Buddhist) before a master Buddha, who gives assurance (*vyākaraṇa*) that the vow-taker shall finally attain full Buddhahood; the task of the vow-taker is then to dedicate all his good qualities and meritorious deeds for the realization of his high purpose. The specific methods and points in the acts of dedication (*pariṇāmanā*) are copied from the special vows attributed to the Buddhas and *bodhisattvas* of the past, recorded in various texts. As a specimen we cite here a passage from the 'Lotus' (*Saddharma-puṇḍarīka*) where Buddha Śākyamuni tells his all-saving power:

'There shall never be any being,
Who, having heard the truth of Buddha, shall not attain Buddhahood;
For the vow taken by all the Buddhas is this:—
"Let me lead them to Bodhi, by accomplishing (my works)."
Throughout future days Buddhas will expound
Many billions of the threads of truth;
They shall reveal this unique road (*eka-yāna*)
And preach thereby the truth for the Tathāgataship.'[3]

The 'unique road' is explained as working out in life the stability of truth, the continuity of existence. Being is one throughout all existences, and therefore the ardent intention expressed in a *bodhisattva's* vow and his work of salvation can induce other beings to the same zeal and life, while the assurance given by his predecessor not only encourages him in the work of salvation but has a mysterious, or metaphysical, efficacy to help him in the progress of *bodhi*.[4]

3. The communion of the vow-takers.—The vows are destined to be fulfilled not only by means of earnest intention and ardent work on the part of the vow-taker but also in virtue of the assuring help rendered him by the master Buddha and of the mutual reaction between all the vow-takers. This is due to the metaphysical continuity of existences and to the consequent reciprocation among the vow-takers, *i.e.* *bodhisattvas*, of the works of dedication done in fulfilment of their vows. The realm of existence is likened, in a metaphor often used, to a net in which every knot is studded with a brilliant diamond and all those diamonds mutually reflect their lustre and figures. Every one in the realm does perpetually affect, more or less, all others by his or her ideas and deeds, good or bad, noble or mean. The intention and resolution (*chittotpāda*) are the preliminary to the vow, and the consequence is the dedicatory work; but these three phases are one in their essential nature, not only on the part of an individual vow-taker but in the communion of all the vow-takers, of the past, present, and future, because these phases and the individuals are but manifestations of the *bodhi-chitta*,[1] one and the same throughout all the realms of existence.[2]

Seen from this point of view, all the branches of Buddhist training are but accessories to, or methods of carrying out, the vows solemnly pledged. This is why in various texts a special emphasis is put on the practice of taking vows.

The Penitence of Manjuśri, e.g., enumerates the six methods of practising faith, which are: (1) penitence, (2) invocation (of all the Buddhas), (3) entreatment (to reveal truths), (4) adoration, (5) dedication, and (6) taking vow.[3] Similarly the *bodhisattva* Samantabhadra vows to accomplish the following work: (1) reverence towards all the Buddhas, (2) adoration of the Buddhas, (3) the practice of offering and giving, (4) confession, penitence, and absolution, (5) emulation of meritorious deeds, (6) entreating the Buddhas to turn the wheel of truth, (7) entreating them to live among human beings for ever, (8) perpetually observing Buddhist discipline, (9) constantly adapting oneself to fellow-beings, and (10) the practice of universal dedication.[4]

4. Further examples.—The Buddhist ideal was to emulate the *bodhisattvas* of the past, and we have many records of vows taken by historical or imaginary personages. These were an expression of emulation as well as a source of inspiration, because in Mahāyāna Buddhism every one is a potential *bodhisattva*, and it is within the reach of a common mortal to emulate a *bodhisattva* and to pledge himself to similar tasks. We may cite here the vows taken, in the presence of the Buddha Śākyamuni and his great disciples, by Queen Śrīmālā, of Benares, the alleged daughter of King Prasenājit, of Kośalā. The vows consist of ten preliminaries and three great vows, wherein she says:

'I shall never cherish any thought of breaking the precepts which I have now accepted. From to-day up to the attainment of Buddhahood I shall never cherish any idea of pride toward the elders . . . I shall never arouse any angry thought toward any fellow-being . . . I shall never envy any others in their bodily excellence or beauty . . . I shall never arouse arrogant thought concerning all things, whether subjective or objective . . . I shall never accumulate wealth for my own sake but give out all that I shall receive for helping poor and suffering people

[4] In the *Bhadra-chari*, or *Samantabhadra-chari-praṇidhāna-gāthā*; see K. Watanabe, *Die Bhadracari*, Leipzig, 1912, text and translation.

. . . I shall practise the four embracing methods (*saṅgraha*) not only for myself but for the sake of all beings, and thus, being free from attachment, never being weary (of my work), and being without any entanglement in the mind, shall embrace all fellow-beings into the same communion . . . Whenever I shall meet any unfortunate people, orphans, deserted, imprisoned, or suffering from various mishaps and tribulations, I shall never leave them unhelped nor stop until they will be saved and freed from sufferings, through righteous means . . . Whenever I shall see any people offending rules of decency or committing crimes, I shall never pass by them without trying to correct them but try to persuade or coerce them, according to the degree and nature of the offences. For persuasion and coercion are the methods of perpetuating righteousness; and when righteousness is perpetuated, the beings in the heavenly resorts grow in their number while those in the woeful resorts diminish, and thus the wheel of truth will perpetually be turned, to the benefit of all beings. . . . I shall never cease to embrace the perfect truths, since thus, and thus alone, we can remain mindful of the Buddha, the Communion and the Pāramitās.

Now, let me take the vow to save innumerable fellow-beings and to attain the perfectly right view of truth throughout all my coming lives. Let me take the vow to preach the truth to all without ceasing, on my having realized the perfect truth. Let me take the vow, for the sake of embracing the perfect truth, to dedicate my body, my life and my wealth for guarding the truth.'

Here ends the vow of the queen, and the book adds a comment:

'When Bhagavā listened to and accepted these vows taken by the Queen, all the innumerable vows taken by the *bodhisattvas* were caused by him to be embraced into and consummated in the three, just as all material existences are embraced in space.'[1]

We have here an instance of the vow intended for normal training in Buddhist morality.

In contrast to the peaceful intention of the queen's vow, we have another type of the vow to persevere in persecution and missionary activities. We are told in the 'Lotus' how the Buddha Śākyamuni, before entering the Great Decease, prepared his disciples, both human and superhuman, for the hard tasks to be achieved and the difficulties to be encountered by them after the Master's death. Then the *bodhisattvas* pledge themselves in the presence of the Buddha to remain faithful to his admonition and warning, even after he passes away, and to fight opponents and persecutors, even in remote countries. The ardent zeal and passionate tone of this vow sometimes aroused the fighting spirit in combative Buddhists and gave them a consoling assurance of the righteousness of their cause.[2] Apart from the question of the period and circumstances of the composition of the book, we have here a counterpart to the missionary charge and an extension of the story of Punna, the first missionary to the barbarous Sunās.[3]

5. The 'prime vow' of a Buddha as a redeeming power.—Just as the vow taken by a *bodhisattva* served as an inspiration and incentive to Buddhist morality, the vow accomplished by a Buddha furnished the occasion for adoration and devotion to the achiever of the wonderful vow. A *bodhisattva* is a being on the way to *bodhi*, while a Buddha is one who has reached the end of the way, where he has established a paradise to receive those who believe in his power. His vow is fulfilled, as shown in the glories of his paradise, and is called the 'prime' vow (*pūrva-praṇidhāna*), while its actual efficacy manifests itself in the saving power, more or less vicarious, of the Buddha. We see here a special stream of Buddhist faith developed out of the metaphysical conception of the power of vow-taking—a stream which was further divided into various branches according to the respective nature of the vows taken by several Buddhas.

Of the vows attributed to Buddhas who on that account became objects of specific worship we take two most important cases—that of the Buddha Bhaiṣajya-guru (the Medicine-Master), the lord of the eastern paradise Viśuddhi-vaidūrya, and that of the Buddha Amitābha (the Infinite Light), the lord of the western paradise Sukhāvatī, the Land of Bliss. Apart from the questions pertaining to the mythical origin of these Buddhas and their paradises, we note here an interesting contrast between their respective vows and between the streams of religious faith based on their worship. The lord of the eastern paradise pledges himself, among other things, to save the sick and other sufferers and to give them immediate comfort, while the lord of the Land of Bliss promises to take to his paradise all those who cherish a pious faith in his saving power. Thus the Medicine-Master was a supernatural medicine-man, and his worship became a religion of healing, while the Buddha of Infinite Light was almost a vicarious saviour, and the faith in his redemptive power developed into a pietism, a Christianity within Buddhism, so to speak.

Let us now see the vows taken by Bhaiṣajya-guru. The story is that, while he was still a *bodhisattva*, he pledged himself to the following twelve vows:

'(1) Let me, on attaining Buddahood, realize all the supernatural glories of a Buddha's body which illumines all the realms of existence, and induce all beings to the same glories.

(2) Let me realize all the luminous splendours and thus illumine all those who are shrouded in darkness.'

[(3)–(5) amount to vowing that all beings be induced to Buddhist perfection.]

'(6) Let me release all the crippled, mutilated, blind, deaf, lepers, sick of every description, from their sufferings and have them furnished with wholesome limbs or body.'

[(7) Saving of helpless and unfortunate.]

'(8) Let me save women suffering from the diseases peculiar to their sex and let them be transformed to men.'

[(9) Saving of those entangled in illusions.]

'(10) Let me release all those who would be imprisoned, punished, tortured or sentenced to death, if they should implore in my name.

(11) Let me release all those who, being starved, commit offences for getting food, by giving them, first, delicate food and then giving them a saturation in the taste of truths.

(12) Let me save all those who, being destitute of clothings, would be attacked by cold or heat, insects and worms, by giving them all kinds of fine clothings, decorations, perfumes.'[1]

Here we see a Buddhist counterpart of the Vedic Sūrya or Aśvins, and it is no wonder that Bhaiṣajya-guru was worshipped for the sake of immediate helpfulness.

In the myth of the western paradise the Buddha Amitābha was once a monk Dharmākara, who vowed to furnish a paradise for the pious souls and accomplished the task by a long and severe self-training and by supplying to his believers his name as the sole means of calling forth his saving power. The vow is taken before the Buddha Lokeśvararāja as the testimony, and consists of three parts. The first part is chiefly in praise of the Master Buddha and is an expression of the vow-taker's determination to imitate and emulate him.[2] The second part consists of the forty-six[3] specific terms of Dharmākara's intention and purpose in furnishing a paradise in the west and inducing all beings, without distinction of good and bad, of wise and fool, to share the glorious and blissful life in the paradise.[4] The last part is the consummation of the second and takes the form of a passionate committal to carry out the plan, and even of a compelling call to the universe to respond to his ardent intentions and to give an assurance of the final attainment.

Here we see the Buddhist conception and practice of taking a solemn vow developed to a faith in the saving and redeeming power of the vow.

Finally let us add a remark on a modification, or degeneration, of the vow to curse or magic formula — the case with the Tantric form of Buddhism. Here we see a circuit of the idea of *praṇidhāna*, starting from entreatment and petition and resulting in the use of the vow and prayer

VOWS (Chinese).—1. Vows in ancient China.—The earliest historical records of China, as of other countries, are mainly concerned with the activities of rulers and with internal and external warfare. It is not surprising, therefore, that the first vows or oaths mentioned in Chinese annals[1] were taken by the princes and great officers of the various feudal states of the empire, and that the occasion of such vows or oaths was usually the conclusion of a treaty of peace or alliance, or a similar event of public importance.

The customary term for the ceremonial taking of a vow or entering into a covenant was *méng-shih*. The two characters comprising this ancient term are still in common use, though usually found in different combinations. They are explained thus: *Shih* is equivalent to *yüeh-hsin* and *méng* to *li-shêng*. *Yüeh* signifies a bond or covenant, and is still used to denote an international treaty. *Hsin* means 'good faith' or 'sincerity.' The signification of *li-shêng* is less transparent. There is no difficulty about *shêng*, which means 'a sacrificial animal.' The character *li* is an unusual substitute for *lin*, which means 'to approach,' 'to draw near to,' and is a euphemism for 'to slaughter.' Hence the combination *li-shêng* signifies 'to slaughter a sacrificial animal.' Thus the term *méng-shih* is a concise expression meaning 'a covenant entered into with sincere heart and confirmed by the slaughter of a sacrificial animal.'

The sacrificial animals chiefly used in ancient China on the occasions of a solemn oath-taking were oxen and pigs (by princes and great fiefs), dogs (by ministers and officials), and fowls (by the common people). The method of procedure was as follows.

A pit was prepared in the ground (called *k'an*), at the edge of which the animal was slaughtered. The victim's left ear was held by the master of ceremonies or by the person undertaking the vow; and immediately after the slaughter the ear was cut off and deposited in a dish called *chu-p'an*. Then blood was taken from the victim and poured into a goblet called *yü-tui*.[2] When this part of the ceremony had been carried out, the vow or oath was written in the blood collected in the *yü-tui*, and the oath-taker also used the blood to smear his own mouth.[3] The tablet on which the words were inscribed (called *tsai shu*) was placed on the carcass of the victim, which was then buried in the prepared pit.[4] The covering of the victim with soil was an essential part of the ceremony, as it was equivalent to calling upon the earth to be witness of the vow.

There was an officer known as *Ssŭ-mêng* ('Director of Covenants') whose special duty it was to superintend ceremonies of this kind. His functions were to some extent of a priestly character. He also made copies of the inscribed tablets, and either deposited them among the official archives or (in the case of covenants between private persons) became himself their custodian.[5] It was also this officer who administered the oath to persons who had revolted against the Government and had subsequently returned to their allegiance. Other officers who had certain duties to perform in connexion with these ceremonies were the Grand Minister of Justice (*Ta-Ssŭ-K'ou*) and the Guardian of the Imperial Ancestral Temple and Treasury (*T'ien-fu*), who were responsible for the safe-custody of certified copies of covenants made between the emperor and the great vassal princes.[6]

[1] See art. ORDEAL (Chinese).

[2] See *Le Tcheou-Li*, tr. E. Biot, Paris, 1851, ii. 247. *P'an* and *tui* are terms used for two kinds of sacrificial vessel. That they were supposed to be, and perhaps were, decorated or inlaid with pearl and jade respectively is indicated by the words *chu* and *yü*—the Chinese names for those substances.

[3] The technical term for smearing the mouth was *shа*. See *The Chinese Classics*, tr. J. Legge, Hongkong, 1861–72, ii.[2] 487.

[4] See Biot, ii. 359. [5] *Ib.* ii. 359–361. [6] *Ib.* ii. 314.

Numerous instances of vows and oaths taken by the princes of the Chinese states in the early historical period may be found in the famous narrative of Tso (*Tso Chuan*).[1] A good example of these early covenants is the following, which belongs to the eleventh year of Duke Hsiang (562 B.C.).

'All we who covenant together agree not to hoard up the produce of good years, not to shut one another out from advantages that we possess, not to protect traitors, not to shelter criminals. We agree to aid one another in disasters and calamities, to have compassion on one another in seasons of misfortune and disorder, to cherish the same likings and dislikings, to support and encourage the royal House. Should any prince break these engagements, may He who watches over men's sincerity and He who watches over covenants, [the Spirits of] the famous hills and [of] the famous streams, the kings and dukes our predecessors, the whole host of Spirits, and all who are sacrificed to, the ancestors of our 12 (13?) States with their 7 surnames:—may all these intelligent Spirits destroy him, so that he shall lose his people, his appointment pass from him, his family perish, and his State be utterly overthrown!'[2]

Some of the old commentators and moralists began at a very early period to complain that the frequency of sworn covenants and formal vows was detrimental to sound morals, because, when solemn engagements were lightly made, they were apt to be lightly violated. Cases were known, in Chou-dynasty China, of covenants that were broken 'before the blood smeared on the mouth was dry.' It was held that in the golden age of the 'holy kings' vows and covenants were unknown (*ku chê pu mêng yeh*), and that the simple spoken word required no vow or oath to make it binding. It was pointed out that the making of many solemn protestations fostered distrust between state and state and also between rulers and ruled. In the 'Classic of Poetry' (*Shih Ching*) we read of a king who added to the disorders of his kingdom by entering into frequent covenants with the vassal princes; for he showed thereby that he had no confidence in them and lived in fear of rebellion.[3] Commentators also observe that no formal covenants were known before the Yin dynasty (1766–1122 B.C.) and that this was precisely the time when the State began to be disturbed by rebellious movements. Oaths and vows were introduced only 'when loyalty and sincerity had worn thin and men's hearts were perplexed with doubts.'

It will have been noticed that these State covenants were really the ancient Chinese equivalents of modern treaties; and the vows or oaths that accompanied such engagements practically corresponded to the modern seals and signatures of plenipotentiaries. The violation of a covenant was therefore nothing more or less than what we should call the wilful breaking of a treaty.

2. Vows of friendship.—Chinese social life has for ages been characterized by five 'relationships,' each of which implies certain rights, privileges, and duties. These are the relationships between 'sovereign and minister' (this will probably be reinterpreted to mean 'citizen and State' if the Republican form of government proves permanent), 'husband and wife,' 'father and son,' 'elder brother and younger brother,' 'friend and friend.' Friendship thus often assumes the importance of a recognized social institution, with its appropriate rules, customs, and traditions. When two or more Chinese decide to become 'friends' in what may be called the institutional sense of the term, they become bound to one another by solemn vows which are sometimes accompanied by a ceremonial mingling of blood. This is supposed to create a bond identical for all practical purposes with that of blood-kinship. The following example of a vow

[1] Tr. J. Legge, *The Chinese Classics*, v.

[2] *Ib.* p. 453. It may be noted that there were instances of treaties with smearing of lips as late as the wars between the Chinese and the Tatars (*c.* 1131).

[3] See Legge, iv. 340 *f.*

of friendship is taken from the official annals of the Sung dynasty.

'We . . . will cling together like serpents and dragons inextricably coiled. When one of us attains riches and honour he will share his prosperity with the others. May he who breaks this vow receive divine chastisement.'

After uttering these words, the parties would prick their arms and let the blood flow into a goblet. Of the mingled blood each took a sip, thus becoming the 'blood-brother' of the other.[1] If 'sworn brothers' wish to terminate the relationship, they must do so in a formal manner. This is sometimes known as 'withdrawing the incense-stick' (*pa hsiang-t'ou-tzŭ*).[2]

A few foreigners have become the 'brothers' of Chinese officials and others, though probably in these cases the ceremony is abbreviated and simplified. H. A. Giles describes how, in 1868, he became the 'younger brother' of the influential court eunuch, An Tê-hai.[3] A similar relationship has also been entered into between various Chinese emperors and some of their chosen subjects; *e.g.*, Shêng Tsu (10th cent. A.D.) and Hsing Tsung (11th cent. A.D.) of the Liao dynasty both became 'bound brothers' (*chieh wei hsiung-ti*) of certain trusted friends. In modern times the Chinese Government (especially under the Manchu dynasty) has shown itself extremely hostile to this custom, and indeed made it a punishable offence.

Soon after the accession of the Manchus it was decreed that for persons of different surnames to salute each other as brothers (*chieh pai hsiung-ti*) was an offence punishable by a hundred blows. In 1661 the death-penalty was decreed against 'sworn brothers' who took part in the ceremonies of blood-smearing and the ritual burning of paper slips on which vows were written. A slightly less rigorous law was enacted in the seventeenth year of K'ang-hsi (1668), but membership of sworn brotherhoods was still an offence punishable by flogging and, in aggravated cases, by death. The death-penalty was reduced to 'a hundred blows' if there was no blood-drinking or smearing and no burning of vows. In 1671 a further law enacted that persons guilty of joining sworn brotherhoods were liable to three years' banishment to the frontiers; but in 1673 a new law made a clear distinction between harmless brotherhoods and those which were regarded as criminal. The blood-smearing and drinking, and the formal consignment of the written vows to the keeping of the gods by means of fire, constituted the decisive evidence of guilt in its most serious form.

Formal vows of friendship between women are not unknown. They salute each other as 'dry sisters' (*kan chieh*). One method of entering into this relationship is for each of the two women to hold the end of a straw over the village well and to call upon a divinity known as 'the Peach-Flower Maiden' to witness the compact.

3. Vows of secret brotherhoods and societies. —The reasons for the severity with which 'sworn brotherhoods' have been treated by the Chinese Government are not far to seek. Secret fraternities, all the members of which are bound by inviolable vows to be loyal to one another as against the whole world, are very apt to become a danger to almost any form of government, especially if that government is controlled by an alien dynasty that has supplanted a native one. In ancient times, nevertheless, it was considered a right and proper thing that men should take vows of co-operation and mutual aid. The *Chou Li* declares that 'by entering into mutual engagements accompanied by vows the people are taught to extend brotherly love to one another and to put away apathy.'[4] A commentator on this rather enigmatic statement is worth quoting.[5]

'There are different ways,' he says, 'in which people show their apathy and laziness. They do not hurry to give help to those who are in danger or suffering hardship, thus they are lacking in charity and sympathy. It is therefore a good thing that people should be stimulated by means of solemn vows to aid one another in distress, to support one another in sickness, to extend a friendly hand to those who need it, to help one another in times of anxiety or peril, and to be faithful to one's word as long as life lasts, setting aside all petty personal considerations[1] that might cause delay or give an excuse for laziness.'

This remarkable description of the social value of vows seems strangely modern; it might almost serve as a statement of the ethical basis of the Boy Scout movement. Chinese history affords innumerable instances of vows of this kind entered into and most faithfully carried out by bands of associates or members of social groups. Where the ethical ideal falls short is in the fact that the obligation to succour the distressed is not usually regarded as of general application, but concerns only fellow-members of the oath-bound fraternity. Yet this depends, of course, on the specific purposes for which the fraternity has been constituted; and sometimes they far transcend the individual or collective interests of the members, even if they do not go so far as to include all mankind within their purview.

The most famous and memorable Chinese example of a vow entered into for purposes that went far beyond the private interests of those concerned was 'the Vow of the Peach-garden,' whereby the three heroes Liu Lei, Kuan Yü, and Chang Fei (2nd and 3rd centuries A.D.) bound themselves to fight for the preservation of the reigning dynasty against the attacks of the Yellow-Turban rebels.[2] We are told that the ceremony (which took place in Chang Fei's peach-garden) consisted in the sacrifice of a black ox and a white horse and in the taking of a vow to the following effect:

'We swear to regard one another henceforth as brothers, to unite our abilities and our hearts, to bring succour to the miserable, to raise up the fallen. We will serve our country and give peace to the people. Though we were born on different dates we wish to die together on the same day. Our hearts are open to the inspection of the divine powers of Heaven and Earth. If any one of us proves false to his duty and forgetful of his obligations, may God and man unite to destroy him.'

This celebrated 'Vow of the Peach-garden' has been imitated countless times, especially by members of societies formed for purposes of mutual protection. Such societies, indeed, are still formed from time to time; several new ones sprang into existence among the tens of thousands of Chinese labourers who worked behind the fighting lines in France during the Great War.[3]

It is interesting to note that the Peach-garden Vow was 'often referred to by the Triad Society,' and that its members were 'exhorted to emulate the faithfulness to each other and loyalty to their cause of the heroes who took it.'[4] The vows of the Triad Society were thirty-six in number.[5] It is characteristic of China that the first of them is a vow of filial piety. After repeating the vows, each candidate is required to take a lighted incense-stick and dip it in a bowl of water. As the light is extinguished, he says, 'If I prove false to my vows, may my life go out like the fire of this stick of incense.' The master of ceremonies ('incense-master') then takes up a porcelain basin and dashes it on the ground, saying, 'May such be the fate of all traitors.' He proceeds to take up the paper on which the vows are written, and sets fire to it. By this means it is supposed that the vows pass from the material into the spiritual world and are received by the divine powers, who will register them in the archives of heaven and inflict punishment on traitors. The next part of the ceremony consists in cutting off the head of a cock, as an indication of the grim fate that will befall any one who betrays the cause. The incense-master then drops some of the dead cock's blood into the water in which the incense-sticks were extinguished; and each of the candidates pricks one of his fingers and lets the blood drop into the same vessel or (sometimes) into another bowl containing wine. The ashes of the burnt papers on which the vows were written are put into the bowl containing the mingled blood of

the candidates, and the bowl is then handed round and sipped by each in turn. This concludes the ceremonies of initiation, after which the new members of the society are hailed by the old ones as 'brothers.'[1]

Sisterhoods are less common than brotherhoods, but by no means unknown. Detailed information regarding them is lacking, but mention must be made of the Golden Orchid Society (*Chin-Lan Hui*), which is described by H. A. Giles as 'a secret association of unmarried girls who bind themselves not to cohabit with their husbands after marriage (which they are unable to avoid) but to leave them and return to their old homes or go elsewhere.'[2] It has been said that members of this society would commit suicide rather than break their vow.[3]

4. Religious vows.—(*a*) *Buddhism.*—In China as in other Buddhist lands there are vows for both monks and laymen, those of the former being naturally much stricter and more comprehensive than those to which laymen subscribe. Sometimes, however, lay Buddhists of both sexes voluntarily bind themselves by one or more of the obligations which are ordinarily binding only on the monkhood. There is a society of lay vegetarians which is said to have been founded in the T'ang dynasty by the fifth and sixth 'patriarchs' of the Ch'an school of Buddhism. Members of this society are known as *chai kung* ('fasters'), a term which is also applied to those who take vows of temporary vegetarianism during their pilgrimage to a sacred mountain.

The fact that practically the whole of Chinese Buddhism[4] belongs to the Great Vehicle (Mahāyāna) explains the existence of religious vows of which little or no trace can be found in primitive Buddhism. The great models of all such vows are those which are supposed to have been taken by the *bodhisattvas*. These vows are numerous—in the *Wu-liang-shou-sūtra* they are forty-eight in number[5]—but they are practically all summed up in the formula, 'So long as there remains a single being who has not attained Buddhahood, I vow that I will not become Buddha.' The 'vows' of the *bodhisattvas* (*praṇidhāna*) may be described as expressions of will which, through the intensity of the selfless emotion that inspires them, are instrumental in bringing about a realization of the desired conditions.[6] The Mahāyāna, as J. J. M. de Groot has shown, 'admits the creative power of thought,'[7] and indeed this is insisted upon so frequently that it may be regarded as one of the fundamental principles of Buddhist psychology. This fact is apt to be ignored by those who dwell upon the 'vain repetitions' said to be characteristic of Buddhism in practice, and who do not understand that the repetitions are believed to reinforce the creative power of thought to which the spoken words give expression.

We have already seen that forty-eight *bodhisattva*-vows are preserved in a famous *sūtra*; but according to another classification only four are essential. These 'four great vows' (*ssŭ hung shih-yüan*) are as follows: (1) the vow to save the world, *i.e.* not to rest until all beings in the universe have been brought to salvation; (2) the vow to destroy in oneself all evil and the passions that produce evil; (3) the vow to study and practise the *dharma*, *i.e.* the law of Buddha, with a view to the attainment of wisdom and virtue; (4) the vow to attain the perfection of Buddhahood. These vows are related to the *San Kuei*—the 'Three Refuges' (the Buddha, the Law, and the Church)—common to both Vehicles. The second and third (the destruction of evil and the cultivation of virtue) have reference to the Buddha and the Law, and to self-development (*tzŭ li*); the first (the helping of others and bringing them to salvation) has reference to the Church or community, which, in the Mahāyāna, includes all beings in the universe (*li t'a*).[1] The full accomplishment of the three first vows will lead automatically to the accomplishment of the fourth—the attainment of universal Buddhahood.

There are several other classifications of *bodhisattva*-vows, but we need not give a detailed analysis. It will be sufficient to refer to the ten vows set forth in the *sūtra* known as the *Ta-Pei-Hsin T'o-lo-ni Ching* (the Dharani 'Sūtra of the all-Pitiful Heart').[2] In this *sūtra* Kwan-yin (Avalokiteśvara) is represented as being the inventor or teacher of these vows; hence the recital of each is followed by an invocation of the name of this *bodhisattva*. The vows are (1) to become acquainted with the true faith; (2) to attain spiritual vision; (3) to lead others to salvation; (4) to be charitable; (5) to embark on the ship of *prajña*, 'wisdom'; (6) to cross the ocean of bitterness (life and death); (7) to be steadfast; (8) to attain *nirvāṇa*; (9) to join the company of the saints; (10) to become one with the Dharmakaya (the mystical body of the eternal and universal Buddha).

The vows taken by Buddhist monks on their reception into the order, or on subsequent occasions, may be conveniently studied in the *Brahmajāla-sūtra*, called in Chinese the *Fan-wang-ching*.[3] The 35th and 36th sections of this popular *sūtra* deal with the vows which should be taken and constantly retaken by 'every son of Buddha' (*ko Fo tzŭ*). They bind him to regard his parents and religious teachers with respect and devotion, to associate only with virtuous companions, to study the scriptures and perform good works, and to obey the commandments of Buddha in all things. He must be ready to sacrifice life itself rather than allow himself to act or think in such a way as to hinder the realization of these ideals.[4] Similar vows should be taken by those who seek to attain mystical illumination by practising the rules of *dhyāna*.

In the *Tso-Ch'an-I*, written by the monk Tsê-Ch'an for the guidance of such aspirants, it is stated that the novice should begin by cultivating an attitude of love towards all beings, and should then make a 'great vow' (*fa hung shih-yüan*) to devote himself earnestly to the spiritual welfare of others and not to seek salvation or enlightenment for himself alone (*pu wei chi shên tu ch'iu chieh-t'o*).[5]

It will be seen from the foregoing that the Buddhist vow is practically a self-dedication to an ideal of conduct of which the central feature (in the Mahāyāna) is the service of others. But, apart from what may be described as the 'official'

[1] The terms *tzŭ-li* and *li-t'a* constitute a concise statement, from the Mahāyānist standpoint, of the essential difference between the Small and the Great Vehicles. *Tzŭ-li* (to benefit oneself) is regarded as the ideal of the Small Vehicle, and *li-t'a* (the helping of others) is regarded as the characteristic ideal of the Great Vehicle. The combination of the two (*erh li yüan man*) is aimed at by Mahāyānists.

[5] As far as the present writer is aware, there is no European translation of this work.

vows, there are others which have sole reference to the spiritual needs or personal aspirations of the individual who utters them.

One of the most remarkable and comprehensive is the vow which is said to have been taken by a monk of the Sung dynasty named Jui Chien, who dwelt as a hermit on the sacred mountain of Wu-t'ai. It was to the following effect: (1) that he would never allow his eyes to look upon forbidden sights; (2) that he would never allow his ears to listen to forbidden sounds; (3) that he would never allow his mouth to utter forbidden words; (4) that he would never allow his mind to be occupied by forbidden thoughts.

Of the numerous vows made for particular objects or in view of particular circumstances it is unnecessary to give a detailed account. Sometimes a Buddhist will make a vow to recite a certain number of *sūtras* or portions of *sūtras*, in which case beads are often used to count off each completed recital.[1] Sometimes he will register a vow to go on a pilgrimage, or to supply oil for keeping a lamp burning in some shrine for a term of years, or to burn a certain number of sticks of incense before the image of a *bodhisattva*.[2] Some, again, will undertake to print and circulate copies of a favourite *sūtra*.

One such person, *e.g.*, vowed that he would cause 1000 copies of the Diamond *Sūtra* to be printed and given away if his mother were cured of sickness. The emperor Yung-chêng (1723–35) vowed that he would feed a stated number of monks in return for seasonable weather.

Sometimes the vow is accompanied by some act of austerity or even self-mutilation, though the latter is contrary to Buddhist law.

A monk of the 12th cent. named Tsun-Shih, who belonged to the famous monastery of Kuo-ch'ing at the foot of the T'ien-t'ai mountain in Cheh-kiang, made a vow to devote himself to the propagation of the teachings of the T'ien-t'ai school, and in proof of his sincerity burned off one of his own fingers before an image of the *bodhisattva* P'u-hsien. A similar act, showing regrettable fanaticism but great fortitude and powers of endurance, was performed by a monk who died less than ten years ago. Having made a vow of self-dedication to religion, he burned off two of his fingers. Throughout the rest of his life he was known as Pa-chih-t'ou-t'o, 'the eight-fingered ascetic.' He rose to be abbot of one of the most prosperous monasteries now existing in China (the T'ien-t'ung Ssŭ, near Ningpo) and to be head of the newly-founded Association of Chinese Buddhists.

Various opprobrious epithets are bestowed on members of the monkhood who have broken their vows (especially the vows of chastity and vegetarianism) or have been expelled from their monasteries for misbehaviour. Among these are such terms as 'slanderer of the Three Holy Ones,' 'shameless one,' 'obstruction on the holy pathway,' 'bald-headed huntsman,' 'cassock-wearing robber.'

All the Buddhist or quasi-Buddhist sects which have played so prominent a part in the political as well as the religious life of China in the past have their characteristic rituals and vow-formulas.[3] But in many cases these societies have very little to do with religion and merely make use of religious formulas in order to inspire their members with a due sense of the binding nature of their vows. This is so in the case of the Tsai-Li Society, one of the most flourishing organizations of the kind in N. China. It professes to be associated with the cult of the *bodhisattva* Kwan-yin, but its activities are of a social and ethical rather than a religious nature, and in any case its slight religious basis is almost as much Taoist as Buddhist. It is said to have sprung from the dreaded White Lotus Society, and, though it has apparently long ceased to meddle in politics, it was dreaded by the authorities up to the time of the Boxer movement, if not later.[4] It flourishes in the leased territory of Wei-hai-wei, but has never given any trouble to the British authorities there. Its members take vows to abstain from strong drink, opium, and tobacco. When a member is known to have broken his vows, he is expelled from the society and is said to be *pu tsai*, a phrase meaning 'not present'—a common Chinese euphemism for 'dead.' The phrase implies that the disgraced member is 'dead' to the society. There is a play on the word *tsai*, which also forms part of the society's name.

[1] See De Groot, *Sectarianism and Religious Persecution in China*, Amsterdam, 1903, i. 225 f.

[2] For a short account of some of these vows see H. Doré, *Recherches sur les superstitions en Chine*, pt. i. vol. ii. no. 4, p. 342 f.

[3] Much useful information is contained in De Groot's *Sectarianism and Religious Persecution in China*, already cited; but allowance must be made for the author's strong prejudices, and especially for his antipathy to Confucianism.

[4] See Stanton, p. 6.

(*b*) *Taoism.*—(1) The vows of Taoists are similar to those of Buddhists. In this, as in many other respects, modern debased Taoism has merely adapted the usages of Buddhism. The *bodhisattvas* who are supposed to hear and register the vows made by pious Buddhists are of course replaced by Taoist divinities. The three goddesses (*Niang-niang*) whose worship flourishes on the sacred mountain of T'ai-shan in Shantung, on Miao-fêng-shan near Peking, and many other places, are among the divinities most often resorted to for the purpose. Several of the mountains consecrated to Taoist worship (such as T'ai-shan and Hua-shan) have been the scenes of pitiful tragedies enacted by those who have vowed to sacrifice their lives in return for favourable responses to prayers made on behalf of parents or others. These and other mountains possess 'suicide cliffs' (*shê-shên yai*), over which religious fanatics have hurled themselves to death in fulfilment of rashly-made vows; and, though this practice has always been discountenanced and even forbidden by the officials, it is not even yet quite extinct.[1] From such acts of fanaticism it may be gathered that a Chinese rarely fails to keep a vow that he has once made, provided that it is physically possible for him to fulfil it. The Chinese are, and always have been, too fond of making vows. They certainly do not act in accordance with the good advice of Ecclesiastes, 'Be not rash with thy mouth'; but it must be admitted that they would readily endorse the other principle laid down by the same Hebrew writer—'When thou vowest a vow unto God, defer not to pay it. . . . Better is it that thou shouldest not vow, than that thou shouldest vow and not pay.'[2]

LITERATURE.—This has been indicated in the footnotes.

R. F. JOHNSTON.

VOWS (Christian).—**I. New Testament.**—(*a*) *The word.*—The discussion starts naturally with a consideration of the data afforded by the earliest Christian books, the writings of NT, but these are scanty and to some extent irrelevant. The word 'vow' (εὐχή) occurs twice (Ac 18^{18} 21^{23}), but in both cases the atmosphere is Jewish rather than Christian. In the first instance Paul (or Aquila) has his hair cut at Cenchreæ, 'for he had a vow.' Whether the making or the redemption of the vow is meant is not clear; if the latter, it was probably in connexion with some escape from danger. The second passage is similarly connected with the hair-offering. To avert the reproach of anti-Judaism, Paul, at the request of the Jerusalem elders, associates himself with four men about to be 'purified' on the termination of a vow, and bears the expense of their hair-cutting and probably of their sacrifices—a custom not uncommon among rich Jews on behalf of their poorer brethren. On the Nazirite vow (Nu 6), of which these incidents, and the account given by Hegesippus[3] of James the Just, are illustrative, and the significance of the hair as the seat of the devotee's life, see artt. NAZIRITES, VOWS (Hebrew), and W. R. Smith, *The Religion of the Semites*[2], London, 1894, p. 483.

Two other NT passages may be glanced at. One is the vow made by forty Jews to fast until they had killed Paul (Ac $23^{12f.}$), but this is at least as much an oath as a vow. The other is the 'Korban' passage (Mk 7^{9-13} = Mt 15^{3-6}) in the teaching of Jesus, a reference to cases in which the keeping of a vow conflicted with duty to parents. The case of Ananias (Ac 5) has no pertinence, though Roman theologians find a precedent for vows in the community of goods supposed to have existed in the early Jerusalem Church.

[1] See art. SUICIDE (Chinese).

[2] Ec $5^{2.4.5}$.

[3] Eus. *HE* ii. 23.

(*b*) *The thing.*—When, however, we consider the basal ideas of vows as solemn promises and engagements offered to a personal God, the NT has something vital to say. The service and gift here are nothing less than the whole personality and its powers (*e.g.*, Ro $6^{11\text{-}13}$ 12^{1}, Gal 2^{20}, 2 Co 5^{16}), dating from the hour of baptism and the entry on a consciously Christian life. The undertakings therein involved may be called a vow, though nothing is promised which is not obligatory. It is the natural response of the soul to the appeal of redemption, the expressed impulse of the new life. This impulse is partly a desire to show gratitude and devotion, partly a desire for increasing perfection by growing intimacy with the Saviour, and further involves a claim to continued and new blessings. Thus the vow has its approach to a covenant.

In the narrower sense a vow is the promise of something not generally regarded as already obligatory, not strictly owed to God. The starting-point here is to be found in passages of NT where, though the word is not used, the idea (of asceticism) is present — *e.g.*, in the references to fasting, poverty, and virginity. The most probable interpretation of the curious counsels given by Paul in 1 Co 7 is that he is dealing with cases of spiritual marriage in which man and woman united in taking a vow of continence. Parallel to this is the reference in Ignatius:

'If any one is able to abide in chastity to the honour of the flesh of the Lord, let him so abide without boasting. If he boast, he is lost, and if it be known beyond the bishop, he is polluted.'[1]

What one notices in this reference to a vow of celibacy or of continence is its privacy as opposed to the publicity which was of the essence of the Jewish vow. The Christian is not to parade his vow, but to realize that his chief danger is pride and vainglory.

2. The early Church and vows of virginity.—On early Christian asceticism, especially as regards celibacy, see artt. ASCETICISM (Christian) and CELIBACY (Christian). There are abundant evidences within NT that by the end of the 1st cent. virginity was often looked upon as superior to marriage and indicative of a higher spiritual life, and this opinion gained ground extensively and rapidly in the sub-apostolic and ancient Catholic ages, especially as regards the clergy. The latter half of the 3rd cent. was a period of increasing stringency, for, while Cyprian[2] had advised that young women who felt they could not maintain their virginal vows should marry, the 19th canon of Ancyra (A.D. 314) says that such vows are perpetually binding and that to break them is as bad as committing bigamy. By the 4th cent. the unmarried state had come to occupy the place that martyrdom had held during the persecutions, and is a favourite theme with such Fathers as Athanasius and the Cappadocians. Chrysostom rhapsodizes over the lustrous sanctity of virginity, though he has to bewail the reverse side of the picture, 'the broken vow, the frequent fall.' Fulgentius († 533) in his *de Fide* lays it down that vows of chastity are perpetually binding on both men and women. Those who vowed themselves to virginity had their names formally recorded, and the vow was made an impressive ceremony.[3] The 15th canon of the 2nd Council of Toledo (A.D. 567) is evidence that the secular arm was invoked to aid the ecclesiastical, by imposing divorce on a monk who had married; but in general the episcopal court was able to deal with such matters itself, and the bishop could modify the penalty according to circumstances.[4] For a statement of what was expected from virgins we may refer to Jerome's treatise on the subject and his letters to Eustochium (xxii.) and Demetrias (cxxx.). The thirty years' interval between these epistles may account for the milder and less fanatical tone of the second.

The subsequent history of vows of celibacy belongs mainly to the story of monasticism (*q.v.*). Poverty, chastity, and obedience are the triple cord of the monastic life. They had been required from its early days, and the great Benedict of Nursia, while making obedience still more absolute, added what was known as the 'vow of steadfastness.'

'Henceforth the door of the monastery opened only inwards. Formerly, if the monk forsook his cell and married he was liable to penance, but his marriage was not annulled. Now such marriages were declared, *ipso facto*, void, and the offender was compelled to return. The vow, written out, was laid upon the altar, those who could not write signing it with their mark.'[1]

The Trappist (Reformed Cistercian) 'vow' of silence seems rather an injunction and comes under the vow of obedience.

3. Patristic evidence. — A few examples of general references to vows in the Fathers may be given. Eusebius[2] says that it was customary for vows to be taken at the tombs of martyrs, and Hilary[3] says that they are effective and helped by the Holy Spirit only when taken in a church with due ceremonial. In his day the usual personal vows were those of abstinence, chastity, and fasting.

The opinion of Augustine is interesting:

'If in Scripture a vow is usually termed εὐχή, being called a prayer, we must understand particularly that kind of prayer which we offer when making a vow, *i.e.* πρὸς εὐχήν. But everything we offer to God is vowed, and above all the offering of the holy altar, in which is implied the greatest of all our vows that by which we vow to be in Christ, as members of His body.'[4]

Commenting on Ps 76, he encourages the taking of vows as an inspiration to otherwise unaided strength. Among the customary vows in his time were those between man and wife either to be faithful to each other or to abstain from intercourse with each other, and those on the part of the rich either to show hospitality to all 'religious' persons or to give their goods to the poor and embrace the 'religious' life.

Ambrose contributes something. In *de Off. Minist.* III. xii. he lays down the general proposition that we must make no promise that is wrong, and, if we have made an unjust oath, we may not keep it. He illustrates his contention from the familiar cases of Herod and Jephthah. In his funeral oration over his brother Satyrus he says:

'We now recognize that thy departure hence was obtained by thy vows to the holy martyr Lawrence.'[5]

There are other references to vows to martyrs,[6] but they seem to be of the nature of prayers for martyral intercession. In the Satyrus oration, § 35, he says:

'Not that I was ignorant of his condition, but a certain kind of prayers and vows had so clouded the sense of common frailty, that I knew not how to think anything concerning him except entire prosperity.'

Ambrose is also responsible for the clear distinction between *præcepta* and *consilia*, on which see below.

4. The mediæval doctrine; consilia evangelica.—In the theology of the mediæval and modern Roman Church the subject of vows occupies a large place. It is bound up with the concept of works of supererogation.[7] The doctrine of good works

[7] See art. MERIT.

rests in the first place on the Augustinian doctrine of grace together with the idea of the universal working of God. Strictly speaking, a meritorious work is inconceivable, but, on the other hand, free man is bound to acquire merit before God and through it to make satisfaction for his sin — a notion compounded of Jewish legalism and Stoic moralism and found as early as Tertullian. The Stoics also supplied a distinction between *medium* and *perfectum*, and the Jews emphasized special and unusual virtues—*e.g.*, To 12^{8}. Certain NT passages (Mt 19^{16-22}, 1 Co 7^{25-40}) were regarded as similarly indicating a graded valuation of works. In time the doctrine of *consilia evangelica* ('evangelical counsels') was developed. The term is used in contrast with *præcepta* ('commands'), and the distinction, though traceable in Hermas,[1] Tertullian,[2] and Cyprian,[3] is first expressly formulated by Ambrose.[4] We find it in Augustine, though two tendencies are visible. For, while the external and literal observance of the counsels (*e.g.*, poverty, virginity) is commended as a higher standard of morality procuring greater merit, he sees the danger of measuring the ultra-moral by this standard, since all conduct is judged in the light of inward moral intention.

For many centuries, in the heyday of monasticism, the first consideration outweighed the second, but in Thomas Aquinas[5] the other tendency again appears. Commandments are given 'about those things which are necessary to attain the end of eternal felicity,' but the counsels 'about those things by which one may obtain this end better and sooner.' In general the counsels deal with poverty, chastity, and obedience, but there was an enumeration of twelve culled from the Sermon on the Mount, including, *e.g.*, the injunctions 'Love your enemies' and 'Resist not evil.' Aquinas[6] puts it that perfection consists *essentialiter* in the command of love, but *instrumentaliter* depends on the counsels. Generally speaking, the disregard or non-observance of the counsels is not sinful, though their observance entails greater perfection and greater reward. They are 'auxiliary norms toward the discernment of those obligatory commands which govern a Christian in his particular circumstances.'

5. Roman Catholic doctrine.—Roman theology classifies vows as personal (applying mainly to oneself) and real (applying to external objects and circumstances); also as perpetual or for a definite time; also as solemn (publicly pronounced before the Church like the monastic vows or the subdiaconate implicit vow of celibacy) or simple. The doctrine of works of supererogation drew vows of all kinds, even simple and private vows, within ecclesiastical jurisdiction. Dispensations can usually be granted by the bishop, but in five cases by the pope alone. Vows that prejudice the rights of a third person and vows made by minors without parental consent are inadmissible.

6. Protestant and evangelical views.—Half a century before Luther, Johann Pupper von Goch in the *de Libertate Christiana* and *Dialogus* maintained that God has given but one law and set before all Christian people one kind of perfection. Luther declared for the all-embracing nature of the baptismal vow and combated Aquinas's idea that the higher degrees of love are not commanded. He condemned all breaches of the law alike and would not allow 'inferior' perfection, though this sin God forgives on condition of faith with daily repentance. Monastic vows he declared not only invalid but sinful and idolatrous, and the *Augsburg Confession* and *Apology* and the *Schmalkald Articles* follow his lead. They also oppose the Roman doctrine of evangelical counsels as setting up works of supererogation, admitting private revenge, and casting doubt on the civil commonwealth.

With regard to special vows (promises made to God from motives of gratitude or devotion or as a means of deepening the spiritual life) he was tolerant, though not putting any stress on them. Calvin, however, while giving pride of place to the baptismal vow and championing Christian freedom against the Roman doctrine, was more convinced of the utility of particular vows by which a Christian might in some signal way express his gratitude, or strengthen his will-power. In this connexion it is worth recording the testimony of the *Westminster Confession of Faith*, ch. xxi. 5, where it is said that religious oaths and vows, solemn fastings, and thanksgivings upon special occasions are an addendum to the 'ordinary religious worship of God.' Ch. xxii. 'Of Lawful Oaths and Vows,' includes the following paragraphs:

'v. A vow is of the like nature with a promissory oath, and ought to be made with the like religious care, and to be performed with the like faithfulness.

vi. It is not to be made to any creature, but to God alone: and that it may be accepted, it is to be made voluntarily, out of faith, and conscience of duty, in way of thankfulness for mercy received, or for the obtaining of what we want; whereby we more strictly bind ourselves to necessary duties, or to other things, so far and so long as they may fitly conduce thereunto.

vii. No man may vow to do any thing forbidden in the word of God, or what would hinder any duty therein commanded, or which is not in his power, and for the performance whereof he hath no promise of ability from God. In which respects, popish monastical vows of perpetual single life, professed poverty, and regular obedience, are so far from being degrees of higher perfection, that they are superstitious and sinful snares, in which no Christian may entangle himself.'

The 'proof texts' adduced are as follows: (v.) Is 19^{21}, Ec 5^{4-6}, Ps 61^{8} $66^{13f.}$; (vi.) Ps 76^{11}, Jer $44^{25f.}$, Dt 23^{21-23}, Ps 50^{14}, Gn 28^{20-22}, 1 S 1^{11}, Ps $66^{13f.}$, Ps 132^{2-5}; (vii.) Ac 23^{12-14}, Mk 6^{26}, Nu $30^{5.\ 8.\ 12f.}$, Mt $19^{11f.}$, 1 Co $7^{2.\ 9}$, Eph 4^{28}, 1 P 4^{2}, 1 Co 7^{23}.

Modern Biblical criticism had not yet been born. Similarly in the *Larger Catechism* vowing unto God is included among the 'duties required in the Second Commandment,'[1] and sinful vows among the 'sins forbidden in the Third Commandment.'[2]

7. Conclusion.—There are certain ethical duties which the community, whether ecclesiastical, civil, or social, imposes upon the individual and which he accepts (marriage vows at least in part may be reckoned in here), and there are others of a more particular kind which the individual imposes on himself either to develop his spiritual life or to express his gratitude to God for some special mercy. It is quite legitimate to argue that these are implicit in the general vow taken at baptism or on conscious entrance into the Christian circle. It is also evident that all action is conditioned by circumstance, and circumstance may vary so that what seems to-day a clear and positive duty may to-morrow occupy quite a subordinate place. It is possible for a formally expressed vow to become a burden on the conscience, and it then exposes the soul to extra peril. In any case special and formal vows are best left to extraordinary circumstances, and normally it is well simply to lay one's impulses earnestly before God with a prayer for the grace of perseverance and constancy. A closing word may be said about the 'counsels.' Alongside the 'commandments,' whether 'of God' or 'of the Lord,' there are not only the 'commandments' of Paul, which hardly concern us here (1 Co 16^{1} 7^{17}), but also his 'judgments' (1 Co 7^{3-6}, 2 Co $8^{10.\ 8}$), counsels whose acceptance presupposes a divine *charisma* (1 Co 7^{7}). Making all allowance for time and place, the apostle's counsels still have pertinence, and 1 Co 7, like Mt $19^{11f.}$, furnishes a basis for distinguishing between an 'advisory

VOWS (Greek and Roman).—1. Greek.—We understand by a vow a conditional promise made by the worshipper to the divine power. The condition is the rendering of aid; and the vow, thus strictly regarded, is the proposal of a bargain that the recipient of the favour required shall make suitable recompense. Viewed in relation to prayer (*q.v.*),[1] the vow is intended to add cogency to the request and to help towards its fulfilment. The fulfilment of a contingent vow is often pledged by the security of an oath, as when the nine archons at Athens on entering office swore at the altar in the market-place that they would dedicate a golden statue, if they transgressed the laws during their term.[2] But, of course, a promise may be ratified by an oath which lacks the essential conditions of a vow, as when Odysseus undertook to bring Philoctetes to Troy, offering in the event of failure to yield his life to any one who might choose to take it.[3] Further, to the Greek conception a vow could not be merely negative; a definite offering must be promised as a return for the favour to be granted.[4] If therefore the Nazirite vow taken by St. Paul (Ac 18[18]) involved merely an act of abstinence or consecration promised by way of thanksgiving for escape from danger,[5] it would not be a vow in the full sense of the term as explained above. It frequently happens that, although we have reason to suppose that a vow has been made, evidence is lacking of the conditions imposed. Thus in the version of Iphigenia's sacrifice referred to by Euripides[6] and Cicero[7] we are simply told that Agamemnon vowed to Artemis the fairest thing born in his kingdom within a particular year. Among the very numerous examples of 'votive' offerings recorded in literature and inscriptions there are comparatively few where it can be determined with certainty whether the consecration was made by way of thanksgiving or in fulfilment of a vow.[8] The illustrations which we propose to give have been taken from sources where the evidence is unambiguous. It should be added that several inscriptions which have been preserved and were attached to votive offerings bear as a label the statement that the dedication is in consequence of a vow.[9]

(*a*) *Public vows.*—It may be stated generally that vows were made in times of fear and danger. Women especially, Plato[10] tells us, and men too when they are sick or in trouble, if alarmed by dreams or apparitions, are apt to consecrate the occasion by vowing sacrifices and promising the building of temples. Times of war, especially when the existence of the State was imperilled by hostile attack, often gave occasion for vows to be made in public on behalf of all.

Hector bade his mother Hecuba promise the sacrifice to Athene of twelve heifers, if she would have pity upon the city of Troy and its inhabitants.[11] In historical times the most famous of such public acts of intercession was the vow of the Athenians made before the battle of Marathon offering to sacrifice to Artemis a number of she-goats equal to that of the enemy who might be killed in the impending fight. But so many corpses of the enemy were found that it was impossible to procure the victims; and consequently it was resolved to compromise the liability and to sacrifice 500 every year. The custom was still maintained in the life-time of Xenophon.[1] This famous vow is parodied in Aristophanes,[2] where the sacrifice of 1000 goats is offered to Artemis so soon as the price of anchovies is down. Before Salamis a vow was taken by the Greeks to destroy the Medizing states and to consecrate their goods.[3] The oath said to have been taken before Platæa to found in that town a festival *Eleutheria* to be celebrated perpetually[4] is considered to be apocryphal. Herodotus, discussing the motive which impelled Cyrus to place Crœsus and fourteen Lydian youths on a pyre for sacrifice, recognizes the prevalence of human sacrifice among Oriental nations by suggesting that Cyrus may have so acted in fulfilment of a vow.[5] Heracles, before the capture of Œchalia, vowed the dedication to Zeus of altars and tributes of fruit-lands.[6]

Before entering upon a campaign, it was customary to offer to the gods a share in the spoils as a reward for their assistance.[7] Similar obligations were undertaken in the crises of civil war or when national interests were seriously endangered.

Cypselus offered, if he succeeded in his attempt to become master of Corinth, to dedicate all the property of the citizens to Zeus, and evaded the extremity of the hardship imposed upon them by exacting a tithe of their goods for ten successive years.[8] On the other hand, Moxus the Lydian, after he had freed his countrymen from the tyranny of Meles, ordered them to fulfil his vow by handing over a tithe of their possessions to the gods.[9] In the hope of freeing themselves from the horrible tribute of human lives exacted by Minos the Cretan king, the Athenians are said to have promised Apollo that they would every year dispatch a sacred embassy to Delos.[10]

(*b*) *Private vows.*—We may now pass to vows made by individuals in order to save lives dear to them on occasions of peril.

Peleus vowed that, if Achilles came back safe from Troy, he would dedicate a lock of his son's hair, together with rich sacrifices, to the river-god Spercheios.[11] Similarly Berenice vowed a lock of her hair to the gods on the occasion of her husband, Ptolemy Euergetes, starting on an expedition to ravage the Assyrian borders.[12] So long as the owner is exposed to a special peril, the hair remains uncut, but, when he has safely passed through the crisis or has reached a certain age unharmed,[13] a lock is rendered in thanksgiving to the protecting power. Hector, about to meet Ajax in single combat, promises that in the event of his success he will dedicate the spoils in the temple of Apollo.[14] Telemachus urges his mother Penelope to vow the sacrifice of hecatombs to the gods, if Zeus should grant retribution for the wrongs they have suffered.[15]

The successful completion of a sea-voyage was frequently celebrated by offerings to the gods.[16]

Eurylochus, on behalf of the companions of Odysseus, when they prepared to kill the oxen of the sun-god, offered to build a splendid temple in his honour, if he would grant them a safe return to Ithaca.[17] Diogenes, in peril on the Carpathian sea, vows to dedicate his cloak to the Bœotian Cabirus, if he escapes safe to land.[18] An epigram of Callimachus parodied these vows by describing the dedication to the Samothracian Cabiri of a salt-cellar which by providing its owner with frugal meals had enabled him to escape from the storms of debts.[19]

In the same way the traveller by land who has safely completed his journey dedicates his felt hat to Artemis in the due accomplishment of his vows.[20] We have a copious record of dedications by those who successfully competed in the ordeal of the great Games.[21] Many of these must have been made in consequence of previous vows such as that of Xenophon of Corinth, who, as a competitor for the Olympic crown in 464 B.C., vowed that, if successful, he would consecrate 100 ἱερόδουλοι for the service of the temple of Aphrodite in that city.[22]

Many examples of vows are connected with the ordinary incidents of family life. A mother makes and pays vows for the safety of her child.[23] The

[1] εὐχή is used for 'vow' and 'prayer' alike; cf. the combination of *vota* and *preces*, which frequently occurs in Latin (*e.g.*, Stat. *Theb.* xi. 616, where of course *vota* has the wider sense).

dedication consequent upon the parent's vow is frequently in the form of a portrait-statue of the child,[1] which is offered to Æsculapius or Apollo on condition of the cure of sickness.[2] Or it may be the patient himself who makes the vow, as is indicated in parody by the tricky vow of a devotee of Bacchus to abstain from strong drink for 'a hundred suns' in the event of recovery from fever.[3] The Greek Anthology furnishes several examples of vows made to Ilithyia or Æsculapius if they will grant a safe release from the pains and dangers of child-birth.[4] The appropriate offerings in such cases were articles of dress or jewelry.[5] Sometimes the condition of the vow is the granting of a good harvest;[6] more often it is relief from the stress of poverty.[7] There is even on record the promise of a sacrifice, if the god will make a curse effective upon an enemy.[8]

(*c*) *Penalty for infraction.*—The infraction of a vow was visited with a suitable penalty;[9] and this might be directed against the community of which the transgressor was a member, as we have seen that, according to one form of the story, the Greeks were punished with adverse winds at Aulis for the default of their leader Agamemnon. It rarely happened that the favour of the gods was so confidently anticipated that offerings were made to them in advance; Polynices, who dedicated statues to Aphrodite and Ares before starting from Argos on his expedition against Thebes,[10] was not an encouraging example. But no doubt confidence was more frequent in the daily requirements of domestic need.[11]

2. Roman. — Whereas with the Greeks vows tended more and more to become a matter of individual concern, as being employed chiefly in the critical moments of domestic life, and the records of vows offered publicly on behalf of the whole community are comparatively scanty, at Rome the conditions were entirely different. It is true that we have sufficient evidence that here also individuals menaced with danger applied for the assistance of the gods with promises of offerings or sacrifice. The illustrations to be found in Vergil should not be set down to the influence of his Greek models.

Æneas, shipwrecked on a foreign coast, promises sacrificial victims as a reward to the disguised Venus, whom he recognizes as a goddess.[12] Ascanius calls upon Jupiter to direct his arrow, vowing gifts and the sacrifice of a bullock in the event of success.[13] Cloanthus promises a sacrifice to the sea-gods on condition of victory in the boat-race.[14]

Copious evidence will be found in inscriptions of the frequent occurrence of vows in the private life of the Romans. As an example we may mention the inscription from Sora[15] in which the two brothers Vertulei dedicate a tithe to Hercules in payment of their father's vows. From the time of Augustus onwards the formula *VSLM* ('votum solvit lubens merito') is regularly employed.[16] A collection of these private votive inscriptions has been made by A. de Marchi, *Il culto privato dei Romani*, i. 271 ff.

Nevertheless, the characteristic formalism of the Roman religion is chiefly apparent in the administration of the public vows. A regular contract is drawn up between the State and the deity concerned, and its conditions are publicly announced (*nuncupatio*); the form of words necessary in accordance with sacred law is prescribed by the priest (*concipere vota*); a solemn engagement (*suscipere vota*) is entered into by the official who represents the State; in his public capacity he becomes liable to carry out the vow (*votum solvere, reddere*); and, if he fails, the breach in the sacred compact must be duly punished. The State representative is thus, during the period between the undertaking of the vow and its fulfilment, in the position of an accused person awaiting his trial (*voti reus*);[1] and, so soon as the condition was fulfilled, he was cast in the terms of his bond (*voti damnatus*).[2] Sometimes an estimate was made of the cost involved, and the sum required was entered in the public records. The cost of the celebration of *ludi magni* on a solemn occasion during the Second Punic War was assessed at the figure of 333333⅓ sesterces—a number evidently chosen for its magical potency.[3]

One of the usual occasions for the making of vows was at the opening of a war.

Thus Acilius Glabrio, at the commencement of the war against Antiochus, vowed a celebration of *ludi magni* for ten days with gifts laid on all the *pulvinaria*, if the war should be satisfactorily brought to an end.[4] Augustus, at the beginning of the campaign which was closed by the battle of Philippi, vowed a temple to Mars Ultor, which he dedicated forty years later.[5] App. Claudius, in the thick of a battle with the Samnites, exclaimed: 'Bellona, if thou givest victory to-day, I vow thee a temple.'[6] Marius before the battle of Vercellæ was said to have vowed a hecatomb as the price of victory.[7] Marcellus, having vowed a temple to Honos and Virtus, was met, when he proceeded to its execution, with a technical objection by the pontiffs that a single *cella* could not be dedicated to two deities.[8]

An outbreak of pestilence was another occasion on which extraordinary vows were usually made. On the occurrence of such a visitation, among the vows to be fulfilled on the cessation of the plague we find the dedication of a temple to Apollo,[9] the oblation of gifts and sacrifices to Apollo, Æsculapius, and Salus,[10] and the institution of public holidays (*feriæ*) and ceremonial processions (*supplicationes*).[11] These and similar rewards suitable to the particular occasion or to the functions of the god whose favour is to be enlisted meet us continually in the pages of Livy.

Thus the Pythian Apollo was offered a tithe of the booty for assistance rendered in the capture of Veii.[12] The most remarkable example of votive dedications was the consecration of a *ver sacrum*, *i.e.* the sacrifice of all living animals to be born within the limits of a particular spring. There is only one instance on record in historical times, that is to say, at the beginning of the Second Punic War in 217 B.C.[13] The vow was actually performed twenty-one years later.[14]

Sometimes the condition imposed upon the divine agent was the continuance of the commonwealth in its then present condition for a period of five[15] or ten years.[16] The specification of a definite time-limit forms a link between the extraordinary vows and those which were repeated regularly after the lapse of a certain period. Thus, every year on 1st January the consuls, suitably attended, climbed the Capitoline hill, made a solemn sacrifice of white oxen in fulfilment of the vow made the previous year, and entered into a new obligation for the year to come in order to secure the safety of the State.[17] From the year 30 B.C. onwards a special vow was made for the safety of the *princeps* and his house;[18] and at a later date the rite was fixed to be performed annually on 3rd January.[19] Similarly, when sacrifice was made at the opening of a new *lustrum*, a vow was made of a new offering to become due after the expiration of the quinquennial period.[20] In imperial times a custom grew up of making vows for periods of five, ten, fifteen, or twenty years.[21] This may have been

partly due to their substitution for the old *lustra*, and partly to the periods of five and ten years for which Augustus assumed the imperial power, starting from the year 27 B.C.[1] The establishment of the empire not unnaturally gave rise to a multiplication of the vows offered on extraordinary occasions by courtiers anxious to testify their devotion to the reigning Cæsar and his household. Tacitus records vows made for the safe return of Tiberius from a campaign,[2] for the safety of the dying Claudius,[3] and for the safe delivery of Poppæa.[4]

We have seen that the choice of the god whose aid is invoked—*e.g.*, Æsculapius or Bellona—is determined by the occasion of the desired intervention. In the fierce struggle of a decisive battle, as a final effort to leave no possible means of victory untried, it was sometimes determined to appeal to the enemies' gods and to offer them an inducement to transfer their protection. The classical instance is the offer of the dictator A. Postumius at the battle of Lake Regillus to dedicate a temple to Castor, the patron deity of Tusculum.[5] A special application of this practice was the solemn rite of *evocatio*,[6] according to which, before the final assault was delivered against a beleaguered city, its gods were summoned to abandon it and to accept a new resting-place at Rome. In this way Juno was invited to leave her home at Veii and follow the fortunes of the conquerors.[7] An interesting account of the whole matter is given by Macrobius,[8] who remarks that the Romans endeavoured carefully to conceal the name of their protecting god, in order that others might not employ against them the device which they used against Corinth and Carthage as well as against Veii and other Italian towns. He records the *formulæ* which were employed at the siege of Carthage and points out that the *evocatio* of the gods must be carefully distinguished from the simultaneous *devotio* of the hostile garrison and citizens who were handed over to the dominion of the deities of the under world Dispater, Veiovis, Manes, and Tellus. To these powers a sacrifice of three black sheep was offered at the same time. The *devotio* of the enemy appears here as the consequence of the *evocatio*;[9] but the term was specifically employed when during the progress of a battle the Roman commander made a vow to the infernal powers that he was prepared to sacrifice either his own life or that of a Roman citizen serving under him on condition that in return for this surrender the annihilation of the enemy's forces was assured.[10] The peculiarity which distinguished the *devotio* from the offering of vows in general was that the forfeit was rendered in advance to the divine promiser in the assurance that the required service would be forthcoming. Our knowledge of the custom rests almost entirely upon Livy's account of the self-sacrifice of P. Decius Mus in the battle with the Latins in the neighbourhood of Vesuvius in 340 B.C.,[11] and of his son at Sentinum in 295 B.C. during the course of the war against the Etruscans and their allies.[12] Even if these events are not to be regarded as historically true,[13] the particulars of the ritual and formularies adopted are sufficient to prove the antiquity of the custom. If the person whose life was pledged fell in battle forthwith, the sacrifice was considered acceptable and the result assured.[1] If the Roman general who made the vow did not meet with his death, he became *impius*, and was excluded from participation in public and private *sacra*;[2] but, if the vow was made for the self-immolation of a legionary soldier, and the sacrifice of his life was omitted or rejected, he could obtain expiation by the burying in the ground of a *signum* at least seven feet high and the offering of a piacular sacrifice, and the place where expiation was made became *locus religiosus*.[3] The development of *devotio* in later times as an act of self-sacrifice for the emperor[4] does not concern the present subject.

A. C. PEARSON.

VOWS (Hebrew).—By a vow a person brings himself under a sacred obligation to God (or to some particular god) to do something or to refrain from something. The thing he vows to do is something which goes beyond the normal demands of his religion, and the thing he vows to refrain from is something permissible in normal circumstances—*e.g.*, the enjoyment of food, the fruit of the grape, sexual intercourse. The motive of the vow is usually desire to secure divine help, and its form is usually expressed conditionally: if God does something for the man, the man will do something for God, something with which He is believed to be well pleased.

In the OT a vow is unconditionally valid only when it is made by a person whose will is not subject to the challenge of another—*i.e.* by the head of a house (the father or husband), a widow, or a divorced woman (Nu 30). A wife (Nu 30[6-8]) or an unmarried daughter (30[3-5]) could of course make a vow; but the husband in the one case, and the father in the other, had the right of veto. If, however, this right of the husband was not immediately exercised, the vow of the wife was held to be valid: it could not properly be cancelled by a subsequent disavowal on the man's part; if he did so cancel it, the guilt of non-fulfilment attached to him, not to the woman. The 'strange' woman of Pr 7, who is married, is represented as making vows and inviting a paramour to the sacrificial feast (7[14]) which is a frequent accompaniment of the vow (cf. 1 S 1[21], Ps 66[13-15]). There are no extant regulations in the OT governing the vows of an unmarried son.

Vows must have been practised from immemorial antiquity; they are as old as the feeling for God and the experience of distress. They are attested for every period from the patriarchal to NT times (Ac 21[23ff.] 23[12. 21]), and they seem to have played a more prominent part in religious practice as time wore on. Early historians record vows, but there is no early legislation on the subject. This first appears in a simple form in Deut. (7th cent. B.C.); but in the later (post-Exilic) literature vows are the subject of minute legislation—a fact which indicates extensive indulgence in the practice. This is confirmed by numerous references in later books—Prophets and Psalms (Is 19[21], Jon 1[16] 2[9], Job 22[27], Ps 22[25] 50[14] 56[12] 65[1] 76[11]).

Illustrations of vows from the period of the judges and the early monarchy are as follows: (i.) Jephthah vows that, if Jahweh give him victory over the Ammonites, he will sacrifice to Him the first human being (this is the implication) that comes out of his house to meet him (Jg 11[30f.]); (ii.) Hannah

1 Dio Cass. liii. 13. 2 *Ann.* iii. 47. 3 *Ib.* xii. 68.
4 *Ib.* xv. 23. 5 Liv. ii. 20.
6 For possible traces of the following of this custom by the Greeks see the present writer's *Fragments of Sophocles*, London, 1917, ii. 105 (frag. 452).
7 Liv. v. 21. 8 iii. 9.
9 Wissowa regards this as a case of *consecratio* rather than *devotio* (Pauly-Wissowa, iv. 901).
10 Liv. viii. 10. 11. 11 *Ib.* viii. 6–10.
12 *Ib.* x. 28.
13 T. Mommsen, *History of Rome*, Eng. tr., London, 1877, i. 366. The report of the *devotio* of a third Decius at the battle of Ausculum (Cic. *de Fin.* ii. 61) in 279 B.C. is certainly apocryphal (Pauly-Wissowa, iv. 2285).

1 Liv. x. 28. 13. 2 *Ib.* viii. 10. 13. 3 *Ib.* viii. 10. 12.
4 τὸν τῶν Ἰβήρων τρόπον (Dio Cass. liii. 20).

vows that, if Jahweh give her a son, she will dedicate him to the life-long service of Jahweh, and no razor shall come upon his head (1 S 1^{11}); (iii.) Absalom, while in exile in Aram, vowed that, if Jahweh brought him back in safety to Jerusalem, he would serve Him (*i.e.* worship Him—with sacrifice) at Hebron (2 S 15^{8}). To these may be added—though not in the same sense historical—Jacob's vow to make the pillar at Bethel a sanctuary and to pay God tithes, if He furnished him with food and clothing and brought him safely back to the land he was leaving (Gn 28^{20-22}). As an illustration of vows of abstinence may be taken the curse which Saul invoked, in the course of a battle with the Philistines, upon any one (and, by implication, upon himself) who would eat any food before the evening (1 S $14^{24ff.}$), and the vow attributed to David—whether historical or not—that he would not enter his house, ascend his bed, or give sleep to his eyes, till he had found a place for Jahweh (Ps 132^{2-5}). The nazirites, according to the later law, abstained, while the vow was upon them, from wine, from contact with the dead, and from cutting the hair (Nu 6^{1-8}); the Rechabites not only abstained from wine, but refused to practise agriculture or to live in houses (Jer $35^{6f.}$). The abstinence, however, which accompanies such vows is to be interpreted not as arbitrary privation, but as a tabu 'incident to the state of consecration, the same taboos, in fact, which are imposed, without a vow, on everyone who is engaged in worship or priestly service in the sanctuary, or even everyone who is present in the holy place.'[1] Uriah's refusal to enter his house or deal with his wife (2 S 11^{11}) is explained by his being a warrior on campaign, and war is a sacred activity.

Most of the vows from the early period reveal the prominence with which at that time national interests bulked in the mind of the individual, whose chief duty and privilege was to promote the religious, military, or political welfare of his people, and thus to promote the interests of the national God, which were bound up with those of His people. Jephthah and Saul, *e.g.*, desire victory over the enemy of their nation and the nation's God; David is represented as passionately concerned with the suitable worship of that God. Even in that early period, however, the individual had a life and interests of his own: Jacob and Absalom long for a safe return, and Hannah for a son. As, through the collapse of the State, the individual came into ever-increasing prominence as a religious unit, vows affecting purely individual interests became increasingly common, and even the vicissitudes of ordinary life must have offered many occasions for them. The Psalms preserve some of the songs sung by grateful worshippers at the payment of their vows, *i.e.* when they brought their 'sacrifices of thanksgiving' (*e.g.*, Ps's 22^{22-31} 66^{13-20} 116). In particular, the various stanzas of Ps 107, with its repeated appeal to the worshippers to give thanks to Jahweh (vv.[1. 8. 15. 21. 31]), give us a glimpse of the sort of occasions on which anxious hearts made vows and grateful hearts paid them: in each stanza deliverance from some distress is contemplated—from the perils of a journey across the wilderness or on the sea, from sickness, prison, etc. Ps 116^{13} preserves for us the interesting custom (cf. Mt 26^{27}) of raising in the hand the 'cup of salvation' when invoking the divine name in connexion with the payment of vows. The Psalms abound in expressions of overflowing gratitude which are manifestly the sincere utterance of much happy experience of divine deliverance, and profound joy in the privilege of performing the vows (which would frequently take the form of sacrifice) made in the hour of distress.

The readiness to vow, however, had its dangers. Instinct and legislation alike (Lv 22^{17-23}) prescribed that nothing short of the best was good enough for Jahweh—a male without blemish, if the offering was an animal; but vows made in haste were often repented at leisure, and offerings of inferior worth (*e.g.*, a blind, lame, or sick animal) were made—a practice which evokes the fierce indignation of Malachi ($1^{8.\ 14}$). There is no obligation to make a vow (Dt 23^{22}); but, once made, there is a solemn obligation to keep it in the form in which it was made (Dt $23^{21.\ 23}$, Nu 30^{2}). It must cost the offerer something, whether in money, effort, or privation; and deliberately to evade or reduce the cost to which one has voluntarily and without compulsion committed oneself is to be guilty of a breach of faith which invites the divine vengeance. But many were willing to run the risk, as we may infer from Pr 20^{25}, Ec 5^{4-6}: the latter passage (v.[6]) shows that men sought to evade their obligation with the plea that their vow was the result of an inadvertence. The inconsiderate levity with which vows were made and the specious religious pretexts on the basis of which men withdrew from moral obligations (cf. Mk 7^{11}) go to show the danger to which in certain circles religion was exposed of losing its ethical content. The excuse of inadvertence stigmatized in Ec 5^{6} is not contemplated by the Law, which peremptorily demands that a vow must be kept; probably therefore such cases were subsumed—at least in the mind of the worshipper—under the general provision for cases where an oath was subsequently found to involve consequences which the speaker had not contemplated when he made it; relief from a rash oath could be secured after confession and the presentation of a trespass-offering (Lv 5^{4-6}). The OT characteristically considers the vow rather as an external act than in its inner quality and implications: it does not, *e.g.*, discuss cases in which the fulfilment of a vow might be found to collide with some higher (*e.g.*, ethical) obligation. That was the problem by which Jephthah was confronted, but to him it was hardly a problem at all; his belief, on the one hand, in the sacredness and irrevocableness of the vow and, on the other, in the rightness—at least on unique occasions—of human sacrifice contributed to make his decision inevitable, with however sore a heart he reached it.

The thing vowed was very frequently an animal, but it might also be money, a house, land, or a person. When an animal was offered, the sacrifice was accompanied by an oblation, as in the case of the other sacrifices (Nu $15^{3ff.}$). Money given to sacred prostitutes could not be accepted at the sanctuary in payment of a vow (Dt 23^{18})—it was 'tainted' money. As the thing vowed must be something extra to normal demands, nothing could be vowed—such as firstlings—on which Jahweh already had a claim (Lv 27^{26}). If an animal technically unclean and therefore unfit for sacrifice had been vowed, it was sold at a price put upon it by the priest, and the money was given to the sanctuary. If the man who vowed the animal wished to retain it, he could do so by paying the estimated price with an addition of 20 per cent (Lv 27^{11-13}). The same procedure was followed in the case of a house that had been vowed ($27^{14ff.}$), and, with certain modifications, in the case of land (27^{16-25}). The value of the land was determined by the distance of the next year of jubilee: for the complete period the basis of valuation was 50 shekels for an acreage seeded with a *homer* of barley, the value being reduced (apparently at the rate of a shekel a year) as the year of jubilee approached. If the land belonged by inheritance to the man who vowed it, he could secure the reversion of it in that year to himself by paying 20 per cent in addition to the price as ascertained on the above basis; if he failed to do this, it went to the priests. If, however, the land had not been originally his own but purchased, it reverted in the year of jubilee to the original owner.

In the older period human beings could be dedicated to the god by a vow in one of several ways—by actual sacrifice (Jg $11^{30ff.}$), by service at a sanctuary (I S 1^{11}), or by the nazirite life (Jg 13^{5}). Since, however, in the post-Exilic period human sacrifice had passed away and the service of the sanctuary was exclusively in the hands of the Levites (Nu $3^{5ff.}$), only the nazirite vow—and

[1] W. R. Smith, *Rel. Sem.* p. 432.

that in a modified form (temporary, not now life-long)—remained (6[26f.]). But, though the custom of vowing human beings was no longer possible, the shadow of it remained in the practice of substituting for the person a sum of money determined by the age and sex of the person, 50 shekels being payable for a man and 30 for a woman between the ages of twenty and sixty, when the powers were presumably at their highest, and smaller sums for those under twenty and over sixty (Lv 27[1-7]). These estimates doubtless often represented a substantial demand on the financial resources of the worshipper; the priests would have many motives of both a higher and a lower kind for insisting that he must not escape with an offering which had cost him little or nothing (cf. the noble words of David in 2 S 24[24]). They stood to gain heavily by the practice of vows, as what was vowed to God was as good as made over to them (Lv 27[21]). But the OT shows here its customary regard for the poor by providing that in their case these demands should be relaxed: they are only to pay according to their ability, as estimated by the priest (Lv 27[8]).

Persons devoted by the ban could not be redeemed; they must be put to death (Lv 27[29]). This law had doubtless chiefly in view the destruction of Canaanite idolaters: it could have been enforced, or applicable, only in early times (Jos 6[21]; cf. 1 S 15[3]); for the later age it would suggest little more than the obligation of uncompromising hostility to idolatry.

An examination of the vows recorded and of the laws regulating vows throws some light on the character both of the worshipper and of his God. The vow was born in a sense of need or an experience of distress (Ps 66[14]). The things that men desired were deliverance, prosperity, health, children, victory; and the God to whom the vows were offered was believed to be pleased with sacrifice (even—in the early period—with human sacrifice). The circle of ideas with which vows were associated is priestly rather than prophetic, and there is an externalism and a quasi-commercial conception of the relation between God and man which is alien to the higher prophetic spirit. But, though vows in the later period were sometimes lightly made and dexterously evaded, the manifest emotion with which many a singer in the Psalter records his gratitude to God as he pays his vows shows that they must often have represented a warm and genuine religious experience. They are an implicit confession of the speaker's recognized insufficiency, and their fulfilment is the expression of his gratitude for the experienced help of Jahweh (cf. Jer 33[11]). It is no accident, however, that vows play practically no rôle at all in the NT, where the demand is for a consecration not occasional but continuous, and for a consecration not of gifts but of the entire personality.

JOHN E. McFADYEN.

VOWS (Hindu).—Vows are a highly important element in the Hindu religion. Thus, according to a Sanskrit lawbook, a Brāhman ascetic must keep the five vows (*vrata*) of abstention from injuring living beings, of truthfulness, of abstention from theft, of continence, and of liberality, besides five minor vows, such as abstention from anger, purity, etc. (Baudhāyana, ii. 18. 1, 3). Brāhmanical students were subject to restrictive rules of the same kind during their residence with a teacher, and they had to undertake, moreover, special vows when learning particular portions of the Veda, such as the *Sāvitrīvrata*, in connexion with the study of the sacred prayer called *Sāvitrī*. The five great *vratas* of the Jainas, 'I renounce all killing of living beings, lying, stealing, sexual pleasures, all attachments whether great or small,' are evidently formed upon the Brāhmanical model. Nor are the five commandments (*pañcasīla*) of the Buddhist canonical books essentially different from the five Brāhman vows, especially as they are supplemented like the latter by five other vows which are binding on the Buddhist monk only. On his entrance into the Order, the would-be Buddhist had to raise his joined hands and to declare: 'I take refuge in the Buddha, in the Law, in the Congregation.' Many different Brāhmanical *vratas*, in the sense of self-imposed devout or ceremonial observances of any sort, are described in the Purāṇas, and have passed from them into the mediæval and modern Sanskrit Digests of Religious Usages, such as Hemādri's *Caturvargacintāmaṇi* (written *c.* 1300 A.D., printed in the *Bibliotheca Indica*), which devotes more than 2300 pages to the subject of *vratas*, most of them to be performed and repeated on certain stated days of the year. Thus the *puṣpadvitīyāvratam* (i. 382), to be performed on the second (*dvītīyā*) of the bright half of every month for a whole year, beginning with the month of Kārttika, consists of eating nothing but flowers or blossoms (*puṣpa*) during all those days, and presenting the Brāhmans at the close of the *vrata* with flowers made of gold and with a cow. As a recompense for performing this *vrata* a man obtains heavenly enjoyments and a metallic car. For seven consecutive re-births he will be imbued with a knowledge of the Vedas and of the Vedāṅgas, and will live in happiness for a long time, surrounded by his sons and grandsons. In the case of the 'bull-vow' (*vṛṣabhavratam*), which is undertaken on the eighth of the bright half, one bestows a bull clad in a white robe and decked with ornaments, the spiritual reward consisting in a long residence in the heaven of Śiva, followed by re-birth in the station of a king. One performing the 'river-vow' (*nadīvratam*) should, within certain intervals, worship seven different sacred streams, each for one day, offering milk in water, giving water-pots filled with milk to the Brāhmans, subsisting on nothing but milk himself, bathing far from the village, and taking food at night only. At the end of the year he should give a *pala* of silver to the Brāhmans. By so doing he will enjoy a long and prosperous life, and will in a future birth be free from disease, eminent, virtuous, and rich, enjoying the position of a king, or of a distinguished Brāhman (ii. 462). By the side of these comparatively simple rites, we find others with a more complicated ceremonial; but the ingredients of fasting, gifts to Brāhmans, offerings to deities, etc., recur in nearly all these endless *vratas*, which give a nice round of religious observances, entailing spiritual blessings and natural comforts for the whole of the Hindu year. The *Vratarāja*, which is considered the leading Sanskrit treatise on *vratas* in W. India at the present day, contains a description of no fewer than 205 *vratas*. The performance of *vratas* is nowadays specially common among women, and this may be an ancient custom, considering that in Kālidāsa's drama Urvaśī, the queen, when desirous of effecting a reconciliation with her husband, sends for the king, inviting him to undertake a certain *vrata* in common with her; and that the Sanskrit lawbooks exhort wives to perform their *vratas* together with their husbands. Speaking of modern *vratas*, R. C. Bose observes: 'When the boy is sent to the *Pātsālā* (school), the girl at the age of five has to begin her course of *vratas*.' The first *vrata* is the river Pūjā, instituted after the example of the goddess Durgā, who performed this ceremonial that she might obtain a good husband, Śiva being considered a model husband. On the last day of

the Bengali year, two little earthen images of the goddess Durgā are made by the girl and worshipped by her. The next two *vratas* are those of Hari or Krṣna, and of the ten images. Then comes the *Sajāti vrata*, in performing which the girl repeats a volley of abuses against her *satīn*, or rival wife in the possible future, in order to avert the dreaded evils of polygamy. Of *vratas* to be practised by a married woman, the *Sāvitrīvrata* is made specially prominent by Bose. This *vrata* derives its name from the ancient legend of the faithful Sāvitrī, who through her devotion revived her deceased husband. It is annually celebrated in the Bengali month of Jyaiṣtha both by women whose husbands are alive and by widows who are desirous of averting the evils of widowhood in a future birth. In the former case the husband is worshipped by his wife with sandal and flowers, and she cooks a good dinner for him. The prayers are read by the priest, who gets his usual fee and all the offerings. This *vrata* should be performed regularly for fourteen years, at the end of which the expense is tenfold more, in clothes, bedding, brass utensils, and an entertainment to Brāhmans and friends, than in the previous years. The *Sāvitrīvrata* has also been described by Ward, who mentions, besides, the *Adūrasiṁhāsanavrata*, at which 30 different wives of Brāhmans are entertained, one on each day, during the month of Vaiśākha; and the *Pañcamivrata*, a *vrata* on a large scale extending over a period of six years, and including many partial or total fasts, and various gifts to Brāhmans on the part of the woman who is to perform this *vrata*, and various acts of worship on the part of the officiating Brāhmans, the whole ceremony closing with a grand dinner to Brāhmans and others. Ward calls the *vratas* a very lucrative source of profit to the Brāhmans. He defines them as unconditioned vows to perform religious ceremonies, distinguishing them from conditional vows consisting of a promise to present offerings on condition that the god bestow such or such a benefit. Vows of this kind are, *e.g.*, when a man promises to sacrifice a goat, or to present two loads of sweetmeats, or cloth, ornaments, money, a house, etc., if the god grant his request to have sickness removed, or to become the servant of some European, or for riches, a house, a wife, and son. Bose observes that vows made in times of sickness are fulfilled.

J. JOLLY.

VOWS (Jewish).—As the OT amply indicates, vows were a familiar feature in the religious life of Israel in former days (see art. VOWS [Hebrew]).

In the Apocrypha the references to the subject are few.

'Let nothing hinder thee,' says Ben Sira, 'to pay thy vow in due time; and wait not until death to be justified [*i.e.* 'to pay thy debt']. Before thou makest a vow, prepare thyself, and be not as a man that tempteth the Lord.'[1]

Philo[2] has some interesting observations on vows.

The word of the good man, he says, should be his oath, firm and unchangeable, founded steadfastly on truth. Therefore vows and oaths should be superfluous.[3] If a man swear at all, he should swear not by the Divine Name, but by the sacred name of his parents or by some of the great objects of nature, which are ancient and, in accordance with the will of their Creator, never grow old.[4] Once made, a vow should be sacred, particularly if it were made 'with sober reason and deliberate purpose.' (Philo would thus seem to open the door to an annulment of vows made rashly and without due consideration of what they involved.) Some men, Philo continues, make vows 'out of wicked hatred of their species, swearing, for example, that they will not admit this or that man to sit at the same table with them, or to come under the same roof.'[1] And he adds impressively: 'Sometimes, even after the death of their enemy, they keep up their enmity. I would recommend such men to seek to propitiate the mercy of God that so they may find some cure for the diseases of their souls.' He then proceeds to explain the Mosaic laws concerning vows in his characteristic allegorical fashion.

All the invective of the religious teachers failed to kill the practice of vow-making. The Talmudic Rabbis were forced, accordingly, to legislate for the popular inclination to it in their turn, and, since that inclination survived long after the Talmudic age, the codifiers had to adapt the Talmudic enactments to the needs of their day, and even to amplify them. Two whole tractates of the Talmud—*Nedarim* ('The Laws on Vows') and *Nazir* ('The Laws on the Nazirite')—are devoted to this subject. The laws on vows are embodied in Joseph Qaro's *Shūlḥān 'Ārūkh* (16th cent.), the latest of the great codes, and a separate section, consisting of 33 chapters, each containing many paragraphs, is devoted to them. To give even a summary of this extensive and intricate legislation is obviously impossible here. Its magnitude and complexity are themselves an indication of the large place which vows occupied in Jewish life in former times, and of the importance attached to the subject by the Rabbinical mind. The contents of the first chapter of the treatise on vows in the *Shūlḥān 'Ārūkh* are, however, interesting as an illustration of the spirit in which the Talmudic and the later teachers approached the subject. The title of the chapter is: 'Which Vows are Praiseworthy and which Improper?' For, besides a desire to preserve the inviolability of the vow, the great anxiety of the Talmudic doctors and of their successors was the prevention of useless vows which failed to minister either to religion or to morality. Among such vows were those made hurriedly or frivolously. There were also vows imposing upon the persons taking them a needless austerity and self-mortification.

Thus, when a beautiful youth under a vow of Naziriteship presents himself to Simon the Just (3rd cent. B.C.), the sage asks him reprovingly, 'How couldst thou have consented to destroy thy fair locks?'[2]

The chapter in Qaro's work to which reference has just been made[3] opens with the following monition, borrowed, like most of the prescriptions of the codes, from the Talmud:

'Be not habituated to make vows;[4] he that makes a vow is called wicked.[5] This of ordinary vows; but, as to vows made for holy ends, it is a positive duty to fulfil them. Even vows for charitable purposes are not desirable; if one have the money, let him give it straightway without a vow, and if not, let him defer his vow until he have it [which obviously means that, in either case, a vow is undesirable]. It is "permissible" to make a vow in time of trouble. He that saith "I will study this or that chapter of the Torah, and, fearing lest he may be slothful, binds himself to study it by a vow, his vow is permissible, as is that of one who, fearing for his strength of purpose, fortifies by a vow his determination to fulfil a certain precept of the Law."[6] He that takes a vow in order to strengthen his good resolves, and to improve his way of life, is a man of energy, and worthy of praise. For example, if he be a glutton, and abstains by vow from meat for one year or two, or if he be a drunkard and denies himself wine for a time or for life, or if, proud of his comeliness, he becomes a Nazirite [as a penance]—all such acts are a service of God, and to them the Talmudic Sages refer when they say that "Vows are a protecting hedge to renunciation."[7] And the concluding utterance is instructive: 'But, in spite of their being a service of God, it is well that a man should not make many vows of self-denial; rather let him abstain without a vow.'

The saying is typical of the Jewish spirit, which looks askance at vows, often made to be broken, and at asceticism, which makes for inefficiency in the great work of life. For, according to the

Jewish idea, the true servant of God, nay, the true man, is he who takes his full share of the activities of the world and harbours no scorn for its legitimate pleasures. Voluntary renunciation springing from an ennobling sense of freedom, not servitude to a despotic asceticism, is the Jewish ideal. The one is the mark of the strong; the other is the self-condemnation of the weak. For the rest, the following enactments may be cited:

All vows, to be valid, must be uttered aloud.[1] Boys of twelve and girls of eleven, provided they understand the meaning of their act, are capable of making vows;[2] on the other hand, in accordance with the Pentateuchal precept, a father may annul the vows of his daughter, and a husband those of his wife, if they involve hardship to the daughter or the wife.[3] A man, moreover, may impose some restriction upon himself by vow; he cannot so restrict others.[4] Moreover, vows the fulfilment of which is made impossible by *force majeure* are, *ipso facto*, null.[5] The formal annulment of vows can be effected only by an expert Rabbi or by three laymen specially indicated for the duty by repute and experience.[6]

It will have been seen that, like the Biblical teachers, the Rabbis were opposed to vows on principle. Simon the Just only once approved of the taking of a vow—when the youth, in the story above cited, explained that he had become a Nazirite as a penance for having fallen in love with his own beauty. 'Would that there were many such Nazirites in Israel!' he exclaimed. But his objection, generally speaking, held, and it was shared by later eminent teachers like Hillel and the first Gamaliel.[7] He that made a vow built an idolatrous altar, and he that fulfilled a vow offered sacrifice on it.[8] Jephthah is cited as the type of such transgressors; his vow was a worship of Baal.[9] The Nazirite is commanded in the Pentateuch (Nu 6^{11}) to bring a sin-offering. 'In what has he sinned?' the Talmud asks. 'In having abstained from wine,' is the answer.[10] On the other hand, a vow, duly made, must be scrupulously fulfilled; Heaven itself testifies against the man who breaks his word.[11] Further, the Supreme is pictured as thus exhorting Israel, 'Take heed that ye break not your vows, for he that does so will come to break his oaths, and that would be to deny Me, and so to commit mortal sin.'[12] 'He shall not break his word' (Nu 30^2)—the Scriptural utterance is the basis and starting-point of much of the Talmudic legislation concerning vows, and so sensitive was the Rabbinical mind to the sacredness of the vow, and to the danger of its being infringed by the common folk, that one Rabbi—Jehudah Gaon, of Sura (*c.* 750)—forbade even the study of tractate *Nedarim*.

Despite these facts the Rabbis have been accused of too readily 'opening the door,' to use their own phrase, to evasions or, more correctly, to annulment of vows. The prescriptions in *Mishnāh Nedarim*, ix., have been specially cited in support of this charge. But it is only necessary to read these enactments intelligently and fairly in order to vindicate their underlying motive. Far from being animated by a loose regard for morality, they have an ethical intent, that of saving persons who have made virtually impracticable vows from the guilt of breaking them, and of preventing the hardship and injustice which their fulfilment will entail upon others. Men would make vows in a fit of ill-humour, or in a morose and anti-social temper, from which it was only kind to them, and just to the members of their family or to their neighbours, to release them.[13] But even such undertakings were not lightly cancelled. They had to be annulled formally by recognized and competent authority. On the other hand, a vow made by order of the court could, under no circumstances, be set aside by any authority whatsoever.[1] A further charge of a different character has been brought, doubtless with reason, against ancient Jewish practice in regard to vows. In the Gospels the Pharisees are condemned for making vows under circumstances which involved a positive violation of the express commands of the Mosaic Law (Mt 15^4, Mk 7^{10}). That, in the Middle Ages, divergent practices, varying with the authorities immediately concerned, prevailed with regard to granting absolution from vows is unquestionable. Some Rabbis were more lenient in the matter than others. But this difference of practice was due to the varying importance attached to the two opposing considerations which have already been mentioned. One Rabbi would lay the greater stress upon the desirability of preventing the violation of vows, and so be inclined to grant dispensation from them; another would think more especially of the sanctity of the vow itself, however lightly made, and however trivial its character, and so refuse dispensation. A familiar instance is that of a man who vowed to give up gambling. The temptation to break such a vow was particularly strong. Should this consideration justify its annulment? Or should the man be held to his vow notwithstanding? So great was the dread of breaking the plighted word that we find a Jew of the 16th cent. swearing that he would never swear![2]

Here reference may appropriately be made to the formula for the annulment of vows which ushers in the service in orthodox synagogues on the Eve of the Day of Atonement. Deriving its name *Kol Nidrē* ('All Vows') from its initial words, it runs as follows:[3]

'All vows, bonds, oaths, etc., wherewith we have vowed . . . and bound ourselves, from this Day of Atonement unto the next . . . lo, we repent us in them. They shall be annulled, made void and of none effect. . . . Our vows shall not be vows; our bonds shall not be bonds; and our oaths shall not be oaths.'

And, since the congregation may have sinned by violating its vows in the past, the declaration is immediately followed by the verse (Nu 15^{26}):

'And all the congregation of the children of Israel shall be forgiven, . . . for in respect of all the people it was done unwittingly.'

This declaration has provided anti-Jewish writers with much welcome ammunition. Here, they have contended, is a proof that the word of a Jew cannot be trusted, seeing that he absolves himself from his vows and promises beforehand, in his very synagogue, and on the most solemn day in the year. The accusation is the fruit either of ignorance or malevolence or of both combined. The best answer to it is supplied by the unequivocal doctrine of the Rabbinical teachers in all ages, who warned their people that their very 'Yea' and 'Nay' must be truthful,[4] and that it is even more sinful to deceive a Gentile than a Jew.[5] The history of the declaration completes the defence. Owing its origin, at some unknown period not later than the early Gaonic age, to the dread of violating vows, it was nevertheless viewed with stern disapproval by the greatest authorities.

'I hear,' said one of them (R. Natronai [8th cent.]), 'that a formula called *Kol Nidrê* is used in certain congregations, but we have never received it from our fathers.'

'A stupid custom'—so others styled it, and the majority of their fellow-Gaonim shared their opposition.[1] Their condemnation would probably have been sterner still if they had known the declaration in its later form. In their time it had a retrospective effect only, and was, therefore, comparatively harmless. Nor, according to one weighty opinion, was it intended to apply to personal and private vows, but only to those made by the leaders of a congregation, in their official capacity, for congregational purposes, either without due forethought or under duress.[2] It certainly applied, at most, to such personal vows as affected only the individual making them; it could not possibly cover vows involving the rights of others, for absolution from them under such conditions was impossible under the Talmudic law.[3] But unfortunately a Rabbi (Meir ben Samuel [11th cent.]) took it into his head to change the wording of the declaration so as to give it a prospective meaning. The original phrase 'from the past Day of Atonement to this Day of Atonement' was altered into 'from this Day of Atonement to the next,' which is the existing version in some Prayer Books; and thus a weapon was placed in the hands of the enemy, which he was not slow to use. It need hardly be said that the Rabbi who made this ill-conceived alteration was actuated by innocent motives. Dispensation from vows already taken was, he held, impossible save at the hands of competent authority, which might not be available; better, then, he argued, to annul vows in advance. Thus, in both of its forms, the declaration owes its place in the Day of Atonement Prayer Book to that fear of the violation of vows to which repeated reference has been made, and to a natural desire to safeguard those who made them from the penalty for such violation. Certainly, ignorant persons may have been misled by the formula into making vows thoughtlessly; but they did so in spite of its real object, not in virtue of it, and their mistake was severely castigated by authority. Such persons were declared to be incapable of giving evidence in a court of justice.[4] But the ignorant malpractices and the unhappy misunderstandings that have resulted from the introduction of the formula sufficiently condemn it; and there are ancient congregations in which, owing possibly to these considerations, it has never been adopted. If it survives anywhere to-day, despite its crude and misleading phraseology, it is partly because of the force of old associations, especially powerful on an occasion so solemn as the Day of Atonement, and partly because of the moving and cherished melody to which it is sung. In modern Reform congregations it was expunged from the Prayer Book nearly a century ago. All that was of value in it—the tune—was retained; the declaration itself went the way of all unmeaning survivals.

Finally it may be pointed out that vows of a monastic character were almost unknown among the Jews, for the good and sufficient reason that the monastic idea made little or no way among them. The Essenes furnish the outstanding exception. After novitiate those desirous of being admitted into that order took a solemn vow—Josephus styles it 'tremendous oaths'—binding them to piety towards God, justice and forbearance towards men, obedience to authority, fidelity to truth, and secrecy as to the doctrines of the society. They seem also to have imposed chastity upon themselves; but since, as K. Kohler has pointed out, they joined the order, as a rule, after the prime of life, they must not be deemed, because of their submission to this restriction, to have necessarily set at naught the characteristically Jewish duty of procreation. They lived the ascetic life of the Nazirite; but whether they took the Nazirite vow is uncertain.[1] The Essenes, however, stand practically alone in Jewish history. From time to time religious associations came into existence, the rules of which bound the members (*ḥaberim*) to holy living—to devotional exercises, to scrupulous rectitude in the daily life, and to works of benevolence. But these societies were, at the very most, brotherhoods rather than orders. In some cases the offspring of the mystical temper, and intended to minister to the mystical life, they were, however, far from monastic. There was nothing of the cloister in them. The associates lived in their own homes and, in a greater or less degree, busied themselves in worldly affairs. The bond that united them was purely voluntary, and any member could free himself from it at will. In such cases a vow of initiation was out of the question.

MORRIS JOSEPH.

VOWS (Teutonic).—Vows were solemn promises which were made before some deity or superior power, and by which the person making the vow undertook within a given time or in the future to perform a particular act, to obtain a purpose, to bestow a gift, or to devote himself to some person or thing—as, *e.g.*, in a sworn brotherhood. Such vows were rather common among the Teutons both in the North and in Germany, and they were considered absolutely sacred and inviolable. A person not redeeming his vow or his promise was considered an out-caste, and no regard was paid to him. Among the ancient Teutons all offerings and sacrifices were carried out with great attention and seriousness. They were generally closed with much hilarity and drinking, and then all kinds of promises were made for the future while the goblets were drunk, each of them devoted to some special divinity or to the memory of some great name. The Braga-goblet was the most imposing of all. Of such an occasion we have a description in the *Heimskringla*:

'First Odin's goblet was emptied for victory and power to his king; thereafter, Njord's and Freya's goblets for peace and a good season. Then it was the custom of many to empty the Braga-goblet; and then the guests emptied a goblet to the memory of departed friends, called the remembrance-goblet.'[2]

This goblet was not drunk to Bragi himself, but was emptied before him to the honour of some great person or name, or before some great undertaking. At the larger festivals, such as the Jol (or Midwinter) festival, the vow was made while touching the golden-bristled boar of Frey, which was prepared for the common meal, so that the vow should be made sacred by all that is honourable and great.

Vows were made at funerals of earls, kings, and other great persons, as may be seen from the

[1] Weiss, *Dor Dor*, 4. 17. 16; see art. 'Kol Nidre' in *JE* and Hamburger. It must, however, be pointed out that, influenced by the Talmudic permission (cf. *Nedarim*, 23*b*), it was the custom of some pious Jews privately to annul their vows at the advent of every New Year festival.

Ynglinga Saga, ch. 36, where we read that King Ingjald at the funeral festival of his father rose when the Braga-goblet was filled in order to offer his vow, promising that he would extend his kingdom one half in each quarter of the world or die.[1] At funeral occasions all sorts of promises were made which could in any manner be connected with the wish of the deceased.

A typical funeral vow or a series of such vows may be quoted from *King Olaf Trygvason's Saga* :

'King Svein made a magnificent feast, to which he invited all the chiefs in his dominions; for he would give the succession-feast, or the heirship-ale, after his father Harald. A short time before, Strut-Harald in Scania, and Vesete in Bornholm, father to Bue the Thick and to Sigurd, had died and King Svein sent word to the Jomsborg vikings that Earl Sigvalde and Bue, and their brothers, should come to him, and drink the funeral-ale for their fathers in the same feast which the king was giving. The Jomsborg vikings came to the festival with their bravest men, forty ships of them from Vendland, and twenty ships from Scania. Great was the multitude of people assembled. The first day of the feast, before King Svein went up into his father's high seat, he drank the bowl to his father's memory, and made the solemn vow, that before three winters were past he would go over with his army to England, and either kill King Adalred (Ethelred), or chase him out of the country. This heirship-bowl all who were at the feast drank. Thereafter for the chiefs of the Jomsborg vikings was filled and drunk the largest horn to be found, and of the strongest drink. When that bowl was emptied, all men drank Christ's health; and again the fullest measure and the strongest drink were handed to the Jomsborg vikings. The third bowl was to the memory of Saint Michael, which was drunk by all. Thereafter Earl Sigvalde emptied a remembrance-bowl to his father's honour, and made the solemn vow that before three winters came to an end, he would go to Norway, and either kill Earl Hakon, or chase him out of the country. Thereupon Thorkel the Tall, his brother, made a solemn vow to follow his brother Sigvalde to Norway, and not flinch from the battle so long as Sigvalde would fight there. Then Bue the Thick vowed to follow them to Norway, and not flinch so long as the Jomsborg vikings fought. At last Vagn Aakeson vowed that he would go with them to Norway, and not return until he had slain Thorkeld Leire, and gone to bed to his daughter Ingebord without her friends' consent. Many other chiefs made solemn vows about different things. Thus was the heirship-ale drunk that day, but the next morning, when the Jomsborg vikings had slept off their drink, they thought they had spoken more than enough. They held a meeting to consult how they should proceed with their undertaking, and they determined to fit out as speedily as possible for the expedition; and without delay ships and men-at-arms were prepared, and the news spread quickly.'[2]

Any vow or promise was made sacred by placing one's foot upon a stump or a stone and saying, 'Here I stand and promise that I shall accomplish this matter,' which was then mentioned and the conditions of the vow given.[1] Those promises were no doubt, offered to make certain undertakings more sure—*e.g.*, to win such-and-such a woman, whom the maker of the vow wanted to secure for himself or for somebody else, to avenge a crime or an injury, to obtain an honour or any such thing which required honest personal effort—and they were often made in the interest of higher duties so as to render the act itself morally binding.

Sworn brotherhoods were mostly entered into by young men who had been brought up together or who had formed close friendships because of peculiar experiences. The ceremony was as follows.

The sod of a selected piece of ground was loosened and cut in three oblong slices, which were raised and held up by the spears of the covenanters, so as to form an arch under which they let drops of their blood from self-inflicted wounds freely flow in the fresh and open soil, vowing to be faithful to one another in life and death. Such men would afterwards be inseparable and never failed one another. The one would always avenge the injury done to the other, which meant in case of death that he had to take the life of the slayer, even though that one be a relative or a highly exalted person. In later times of ancient Teuton history sworn brotherhoods were the most sacred of all covenants, no one ever thinking of breaking a vow thus made or even considering such a thing possible.[2]

It is apparent that vows as sacred obligations entered into public life in various manners, and also that mutual behaviour thereby became more pregnant and dependable. Even to this day it is very common in countries of the North to demand, or at least to request, that certain promises be made sure by the oath, neither before the court nor in the way prescribed for judicial proceedings, but as a vow made to a friend or to the second party of the contract; for, where such a vow has been taken, one feels assured that the promise will hold.

WAGES.—See ECONOMICS, EMPLOYMENT.

WAHHĀBĪS.—Named after 'Abd al-Wahhāb, this Muhammadan community has its headquarters in the part of Arabia called Nejd, but is also represented in Mesopotamia, India, and Africa.

1. Tenets.—The aim of the founders of the community appears to have been ostensibly to restore Islām to its original purity, as taught by Muhammad and practised by his converts. Hence, when their system was examined by Sunni experts in Cairo, it was found not to differ from the ordinary orthodoxy. Their pretext for branding all other Muslims as idolaters lay in the practice of visiting the tombs of saints and appealing to them in emergencies, which the Wahhābīs identified with the practice of the pre-Islāmic pagans that is repeatedly condemned in the Qur'ān. Hence they destroyed such tombs, when they got the opportunity, not even sparing that of Muhammad in Medīnah. One of their enemies summarizes the points wherein they differ from the orthodox under ten heads.

(1) They regard the Deity as having bodily form, with face, hands, etc.

(2) Reasoning has no place in religious questions, which must be settled solely by tradition.

(3) The source of law called 'Consensus' is rejected.

(4) The source called 'Analogy' is rejected.

(5) The opinions of the compilers of codes have no authority, and those who follow them are unbelievers.

(6) All Muslims who do not join their community are unbelievers.

(7) Neither the Prophet nor any saint may be employed as intercessor with the Deity.

(8) Visits to the tombs of saints, etc., are forbidden.

(9) Oaths by any one but God are forbidden.

(10) Vows to any one but God are forbidden, as is also the practice of sacrificing at the tombs of saints and prophets.

It is doubtful whether no. (5) is correct, as the Wahhābīs are said to be followers of the system of Aḥmad Ibn Ḥanbal († A.H. 241), the adherents of which were notorious in 'Abbasid days for their interference with pilgrimages to the tombs of

saints; in A.H. 323 the khalīfah Radi issued a rescript against them.[1] European travellers lay stress on their tabu of tobacco and all drugs that benumb or stupefy, and their objection to the use of silk in any part of the attire, and of ornaments of gold, silver, or gems. Practices of which their history gives evidence are the massacre of the women and children as well as the men of their Muslim enemies, and the mild treatment of the tolerated communities; these were characteristic of the early Khārijīs, whose revolts were brought about by deviations from the rigidity of Islām. If it be true, as has been asserted, that they suppose the Qur'ān to have been mutilated by the third khalīfah, they retain therein the notion which brought about the earliest Khārijī movements. Their iconoclasm bears some resemblance to the practice of the Khārijīs called Qarmatians, with whom they are not otherwise connected.[2]

2. History.—The history of the Wahhābīs appears to have been written exclusively by European travellers; there is therefore some uncertainty about the origins of the system. As early as 1764 it attracted the notice of Carsten Niebuhr, who brought the first mention of it to Europe. There are contradictory statements about both the birthplace and the tribe of that Muḥammad Ibn 'Abd al-Wahhāb from whose patronymic the sect derives its name. Born in Central Arabia about 1730, he is said to have travelled as a student and merchant, and to have attached himself to one Muḥammad b. Sa'ud, chief of Ḍira'iyyah (about 46·20 E. long. 25 N. lat.), who married his daughter and became his first disciple. To what extent these persons contemplated from the first the establishment of an independent state cannot now be ascertained; Palgrave,[3] whose account of this matter is more than ordinarily romantic, makes Ibn 'Abd al-Wahhāb allure Ibn Sa'ud with a definite promise of the sort. It is clear that the two made their resolve to restore Islām to its original purity a ground for attacking their neighbours, at first, it is said, with a force of seven men mounted on camels; but a little initial success carries such adventurers a long way where, as in Central Arabia at the time, there is no organized government. Muḥammad b. Sa'ud had before his death extended his authority over 'Arid, Qasim, Ḥasa, Dowāsir, and Sulayyil, and become master of all the provinces situated between the Ḥijāz and the Persian Gulf, with the exception of Qatif.

Under the successor of Muḥammad b. Sa'ud, his son 'Abd al-'Azīz, the Wahhābīs came into collision with the outposts of the Ottoman Government, and attacked and plundered Imam Ḥusain, where they massacred the inhabitants. This was in 1801, and in the following year the Wahhābī chief, who had for some time been struggling with the then sharīf of Meccah, Ghalib, was able to wrest from him the important town of Ṭa'if. Owing to the supineness of the Ottoman Government and the incompetence of the pashas who attempted to oppose the Wahhābīs, the latter progressed with great rapidity; in 1803 Sa'ud, son of 'Abd al-'Azīz, took Meccah, where, however, Ghalib, having adopted Wahhābī tenets, was allowed to resume his government; and in 1804 Medīnah was also taken after its port, Yanbo, had fallen. The tomb of Muhammad was robbed of all its ornaments and treasures. By this time Sa'ud was chief of the community, his father 'Abd al-'Azīz having been assassinated in 1803. Raids were made by Wahhābī officers in the direction of the Yemen, which, however, was not permanently occupied. Though the new rulers of the Ḥijāz did not actually abolish the pilgrimage, fear of them kept away the pilgrim caravans from Persia, Syria, and Egypt.

Muḥammad Ali, on whom the government of Egypt had been conferred by the Porte in 1804, with an express injunction to reconquer the sanctuaries, took no serious step in that direction till 1809, not even prohibiting the export of food from Egypt to Arabia, though that measure would have rendered the position of the Wahhābīs in those cities difficult. After two years of preparation the pasha of Egypt sent his son Tuzun, a man famous for his personal courage, at the head of an expedition, which seized Yanbo in Oct. 1811. In the following year he succeeded in reconquering Medīnah; and in Jan. 1813 Meccah and Ṭa'if also were recovered. In this year Muḥammad Ali himself took the command in Arabia, and fought with varying results against Sa'ud till the death of the latter in the following year; he was succeeded by his son 'Abdallah, with whom peace was made by Muḥammad Ali in 1815, after each party had won some considerable victories. Muḥammad Ali returned to Egypt; but the terms of peace could not be carried out, and in the following year the pasha's son (or stepson), Ibrahim Pasha, was sent out to reduce what remained of Wahhābī power; in 1818 he took Ḍira'iyyah, the Wahhābī capital, and obtained possession of 'Abdallah's person; the latter was taken to Cairo and sent thence to Constantinople, where he was executed.

A Turkish governor was left in the Nejd by Ibrahim Pasha when he returned to Egypt; a son of 'Abdallah, named Turki, who had escaped when the capital was taken, succeeded in re-assembling the Wahhābī forces and expelling the governor. A new capital, Riyad, was chosen by Turki for the renovated state; and under this chief, who reigned till 1830, several of the provinces which the Wahhābīs had formerly held were recovered. He was assassinated in that year by a cousin, but was succeeded by his son Faiṣal, who was greatly helped in securing his accession by one 'Abdallah Ibn Rashid, whom he rewarded with the hereditary possession of the province Shamr. Faiṣal, however, was attacked by an officer sent against him by Muḥammad Ali, captured and sent off to Egypt, where he remained a prisoner till he was released by 'Abbas, son of Muḥammad Ali. Returning to Arabia, he easily obtained recognition in Nejd, and his dynasty is still established in Riyad, the dynastic name being Ibn Sa'ud. The province of Shamr became detached during Faiṣal's reign, and the dynastic name of the ruler is Ibn Rashid. His capital, Ḥaiel, has been visited by several European travellers, who have maintained a continuous history of these states.

From 1842 to 1872 the Wahhābī empire in Arabia was split up into the following communities: (1) dynasty of Ibn Sa'ud holding Riyad and Ḥasa, (2) the emirate of Ḥaiel, (3) the city 'Unaizah with the tribe of the name and dependencies, (4) the city Buraidah, (5) the town Shakra, (6) the state and city Ḥariq-Hutah, (7) the tribe Ḥarb, (8) the tribe 'Utaibah, (9) the Mutair. From 1843 to 1870 the second of these was governed by two capable rulers, Ṭilal and Mat'ab; in 1872 the emirate was seized by one Muḥammad, who, after putting to death possible rivals in his own family, endeavoured to bring the remaining communities under his rule. Ultimately in the spring of 1891 most of the above-named communities formed a league against the emīr of Ḥaiel, under the leadership of Zamil, ruler of 'Unaizah. On the side of Ibn Rashid there were, in addition to his own forces, the Ḥarb and the Mesopotamian Shamr. Ibn Rashid succeeded in inflicting on the league a crushing defeat, and became master of all their towns, including Riyad,

[1] Miskawaihi, *Experiences of the Nations*, tr. D. S. Margoliouth (in the press [1920]), i. 384.

[2] Cf. artt. Khawārij, Carmatians.

[3] *Personal Narrative of a Year's Journey through Central and Eastern Arabia*, i. 376.

where he installed one of the Ibn Sa'ud family as ruler, remembering that the founder of his own dynasty had been a creature of Ibn Sa'ud. Since this date the ruler of Riyad has emancipated himself from Ibn Rashid's control, and in the intrigues which preceded the Great War of 1914–18 the latter favoured Germany, whereas the former favoured Britain.

3. Wahhābism in India.—Wahhābism was introduced into India by one Sayyid Aḥmad, who was born in 1786–87 in Rai Bareli, and started a revivalist movement among the Muslims of India, with headquarters at Patna, before he made the pilgrimage to Meccah which was the occasion of his conversion to the Wahhābī system. Returning to India in 1824, he gained a following in Peshawar, and in 1826 started military operations against the Sikhs, in which he had considerable success; national dissensions, however, broke out among his followers, and in 1831 he met his death at the hands of the Sikhs. The movement was continued by some of his disciples, who obtained dominion over a large extent of territory along the left bank of the Indus, which, however, they lost in 1847, when the Wahhābī troops surrendered to a British force. Patna continued to harbour a number of Wahhābīs, who are said to have taken part in the Indian Mutiny. For about twenty years after the mutiny had been quelled attempts were made by Wahhābī preachers to stir up risings against the British in different parts of the Peninsula and to found Wahhābī states.

The Indian Wahhābism is said to differ from that of Arabia in its identification of one or other of the founders of the system with the Mahdi of the Sunnis, whereas in Arabia this term was not used.

4. Literature.—It does not appear that the founders of the system in Arabia did more than issue letters and manifestos; and at this day there is no printing-press in Riyad or (probably) in Ḥaiel. Such literature as the system has produced is mainly Indian, and in Persian or Urdu; but there is some anti-Wahhābī literature in Arabic, emanating from Mesopotamia—*e.g.*, *al-Fajr al-Sadiq fi'l-radd 'ala munkiri'-twassul wal-karamat wal-khawariq* by Jamil Efendi Sidqi Zahawi (Cairo, A.H. 1323).

5. Life and conduct.—The Wahhābīs appear from the commencement of the system till our time to have maintained the institutions of orthodox Islām with far greater rigidity than other Muslim communities. Like the early Muslim leaders, the first generations of Wahhābīs propagated their views mainly with the sword; with the introduction of Arabia into the Pax Britannica more peaceful methods are coming into vogue, and the following description by a recent visitor to Riyad gives an idea of both the practices and the aims of the Arabian Wahhābīs at the present day:

'In this city men live for the next world. Hundreds are studying in the Mosques to go out as teachers among the Bedouin tribes. It is the center of a system of religious education that takes in every village of Central Arabia, and imparts the rudiments of an education to much the larger part of the male population of the various towns. Great efforts are being made now to educate the Bedouins. Men pray five times a day in Riyadh. In the winter the roll is called at early morning prayers, and also at the service in the late evening. Absentees are beaten with twenty strokes on the following day. In the summer duties in the date gardens and elsewhere are considered a valid excuse for praying at home. Only a few years ago a man absented himself some days from all prayers and was publicly executed for so doing. It is safe to say that there is one city on earth where men are more interested in the next world than they are in this one. Late dinners are unknown. The evening meal is eaten an hour before sundown so that there may be time for religious readings and exhortations before going to bed. That is the regular program in the house of the great chief himself.'[1]

WAKANDA.—See MANITU, ORENDA, MANA, PLAINS INDIANS.

WAKASHAN.—The Wakashan linguistic family consists of two main branches: the Kwakiutl, extending from the Tsimshian country southward to the northern end of Vancouver Island, and the Nutka of the west coast of Vancouver Island and the extreme north-western corner of the State of Washington. The northernmost Kwakiutl, usually known as Heiltsuk, were divided into clans governed by mother-right, but the Kwakiutl divisions, while not true gentes, inclined to be patriarchal, although crests descended to a man's daughter's son rather than to his own son, thus showing a confused or mixed system of descent. The Nutka tribes were divided into a number of septs of varying rank, which were not, however, exogamic. If a man married outside of his sept, his children belonged to that which stood higher socially, but, if he married inside, the descent was patrilineal.

I. *KWAKIUTL.*—**1. Supernatural beings.**—The principal Kwakiutl deity was the sun, called Atā ('the one above'), Kanskīyi ('our brother'), Kansnōla ('our elder brother'), Amiaeket ('the one to whom we must be grateful'), Gyīkamae ('chief'), and Kautsōump ('our father'). The last of these names is said not to have been used until after the advent of Europeans, but this is not quite certain. He was frequently addressed in prayer in such words as 'O chief, take pity upon us'; and in bad weather the steersman of a canoe would say to him 'Take care of us, chief.' His son Kanikilak ('with outspread wings') largely takes the place of the northern transformer, Raven. He descended from heaven and wandered over the face of the whole earth, giving man his arts, customs, and institutions. He also was addressed in prayer. Raven, however, appears as well, and the stories told of him resemble those related by the Haida, Tlingit, and Tsimshian (*qq.v.*). Besides being partially displaced by the sun's son, he shared his functions of trickster with Mink, who was often even more prominent.

A host of lesser spirits were believed in, but they were not especially different from those found elsewhere in America, except the spirits concerned with the great winter ceremonials. Twins were believed to be transformed salmon and were supposed to have power over the winds and weather. When a salmon was killed, its soul was believed to return to the salmon country.

2. The dead.—After death a man's soul, which was thought to have its seat in the head, became a ghost, or *lâlenok*, the sight of which was deadly. These *lâlenok* either lived in a place under ground called Bebēnakaua ('the greatest depth') or roamed through the woods. They might not enter a house, but hovered round the villages, causing bad weather. The name Bebēnakaua is said not to have been used before the advent of the Whites, but the idea for which it stands was certainly aboriginal. Ultimately the *lâlenok* was reborn in the first child of a relative. Probably Bebēnakaua was not the only region of the dead, for one story speaks of a man whose soul went to live with the sun before it was reborn.

3. Shamanism.—The common name for a shaman among the Kwakiutl was *naualak*, but, when

curing diseases, he was called *heilikya* or *pakala*. Disease was supposed to be caused either by some foreign object in the affected part, such as a stick, piece of skin, bone, or quartz, or by the absence of the soul from the body. In the former case the shaman moistened the place where the disease had its seat from a small dish of water, went through the usual incantations to the accompaniment of his rattle, and finally sucked out the disease and showed it to the bystanders. Sometimes he used whistles and blew the disease from the hollow of his hand into the air. When the soul had left the patient's body—a fact which the shaman discovered by feeling the patient's head and the root of his nose—the shaman caught it and replaced it in the head, its proper seat. Sometimes it was seen in his hand in the shape of a bird or mannikin. The shaman was also able to cause disease by throwing something into his victim's body. The secrets of the shaman proper or medicine-man were derived from Haialikyawe, the ancestor of the gens of that name. One of the secret societies, however, the Mamaka, conferred power to catch the invisible disease-spirit—which was supposed to be constantly flying through the air in the form of a worm—and throw it back upon one's enemies.

4. Witchcraft.—True witchcraft was of two kinds. In one the person was made sick by having a portion of his clothing buried with a corpse. The second, called *eka*, was more complicated:

A portion of a person's body, or clothing that had received perspiration from him, was obtained and roasted before the fire along with fragments of a corpse; then they were ground up together, sealed in a piece of skin or cloth, and placed in the hollow of a human bone. This in turn was placed inside a human skull and the whole deposited in a small box, which was afterwards buried in the ground so as to be barely covered with earth. Almost on the top of this a fire was built so as to warm the whole, and, while it burned, the wizard beat his head against a tree, naming and denouncing his enemy. This was done secretly and at night or in the early morning, and was repeated at frequent intervals until the enemy died. Such a spell might be removed, however, by finding and unearthing the box—carefully, lest a sudden jar prove fatal to the sick man—and then unwrapping the contents, covering them with feathers, and throwing them into the sea. It might also be removed by some one going over the bewitching ceremonies again, the second ceremony serving to undo the first.

5. Eclipses.—When an eclipse of the sun or moon took place, it was supposed that those bodies were being swallowed, and to liberate them the Kwakiutl burned blankets, boxes, and food. They also made noises to frighten away the enemy and sang 'Haukuă!' ('Throw it up!').

II. *NUTKA.*—The Nutka are treated in art. VANCOUVER ISLAND INDIANS.

III. *MAKAH.*—The Makah Indians around Cape Flattery in the State of Washington are merely a colony of Nutka from Vancouver Island, but their beliefs show certain points of divergence.

1. Supernatural beings and cosmology.—Like the other Nutka, they worshipped a supreme being, whose name was spoken only to those who had been initiated into the sacred rites and ceremonies. One name for this being was Chabatta Hatartstl, or Hatartstl Chabatta ('the great chief who resides above'). He was said to be called upon by individuals only when they were alone, and probably received very little actual attention, the worship of the people being paid as usual to a multitude of inferior deities residing in animals, plants, and other natural objects. Swan[1] cites only one case where to his personal knowledge the supreme deity was directly addressed, but he was told that a person who wished to talk to him retired into the mountains when the moon was full, washed in a pond, and rubbed his limbs with cedar boughs, which are liked by the deity on account of their fragrance. In the same way a man acquired his individual guardian-spirit. The sun (Kléseakarktl) was considered the representative of the supreme being, and it was the object to which the young were told to direct their prayers when they were awakened and made to bathe before daylight. They then called upon him to let them live. The north, south, south-east, east, west, and north-west winds were each supposed to be produced by the blowing of a certain spirit. Stars were believed to be the souls of individuals or of animals formerly existing on earth, and lunar eclipses were ascribed to a *tooshkow*, or 'cultus' cod, endeavouring to eat up the moon, which was believed to be composed of a jelly-like substance. The *aurora borealis* was caused by a small race of Indians in the far north who lived on ice-floes and were cooking seal and walrus meat. Comets and meteors were supposed to be spirits of departed chiefs, and the rainbow a malignant spirit connected with the thunder-bird and having powerful claws with which it seized any one coming near.

[1] 'The Indians of Cape Flattery,' in *Smithsonian Contributions to Knowledge*, xvi 61f.

2. Shamanism.—Male shamans formerly went through a certain ceremony called *kahaip* in order to acquire supernatural powers. Sickness was believed to be occasioned by a demon, which entered the victim's mouth when drinking at a brook or pierced his skin when bathing in sea-water. It assumed the form of a little white worm, which the shaman knew how to extract. During the operation he washed his hands frequently and warmed them at the fire; finally he caught the demon, squeezed it, blew through his hands towards the roof of the house, and assured the patient that it was gone. An injured bone was renewed by binding over it the bone of a dead person. There were also female shamans or, rather, doctors, who knew the uses of herbs and acted as midwives. Still other individuals were supposed to have power over the winds and weather.

3. The dead.—After death the souls were supposed to reside in the earth, where they existed, deprived of their bones, and received flesh and skin only as fast as it decayed from their material bodies. The usual tales are told of persons who had been to this region and had returned. Little opportunity for such a return was given, however, since to look upon the face of a corpse was considered unlucky, and the Makah consequently bound the body at once tightly in a blanket and laid it away in the grave-box.

LITERATURE.—The Kwakiutl are treated in F. Boas, report v. 'On the North-Western Tribes of Canada,' in *Report of the British Association for the Advancement of Science*, 1889, p. 801 ff., report vi. *ib.* 1890, p. 562 ff., and their secret societies in Boas, 'The Social Organization and the Secret Societies of the Kwakiutl Indians,' in *Report of the United States National Museum* for 1895, Washington, 1897 (this also touches upon secret societies among other tribes in the same region). The Nutka are treated in report vi. 'On the N.W. Tribes of Canada, and their Washington colony, the Makah, by J. G. Swan, 'The Indians of Cape Flattery,' in *Smithsonian Contributions to Knowledge*, xvi. [Washington, 1870]. Much valuable material may be had from J. R. Jewitt, *A Narr. of the Adventures and Sufferings of John R. Jewitt*, Middletown, Conn., 1815, and from G. M. Sproat, *Scenes and Studies of Savage Life*, London, 1868.

WAKE.—See DEATH AND DISPOSAL OF THE DEAD.

WALDENSES.—The Waldenses are a Protestant Church, bearing among its own people the name of Vaudois, derived from the geographical situation of its origin and headquarters among the southern valleys of the Cottian Alps, through which run the tributaries of the Pellice and the Po, and which are approached from Turin across the plain of Piedmont. Thus situated as a community of hardy mountaineers far away from the town life of Italy, and with interior valleys still more remote into which to retreat in times of

danger, this Church was able to develop and maintain its own individuality and to withstand the attacks of opponents in a way that has almost suggested the miraculous. We need to realize the physical geography of the area in which it grew up in order to understand its rare characteristics and account for its sturdy independence and heroic achievements. Legend has been busy weaving fanciful impossibilities into the fabric of its story. But a sufficient substratum of solid fact remains to account for the importance that has been attached to so small a group of people who have produced no thinkers, writers, or scholars sufficiently eminent to give them world-wide fame. It is the romance of their story that first calls attention to them. Then the frightful persecutions from which they suffered, appealing to the sympathy of the great Protestant Powers, connected them with the larger politics of Europe, especially when Cromwell interposed to champion their cause and Milton immortalized their sufferings in a great sonnet. Over and above these facts critical questions concerning their origin have attracted the attention of scholars and aroused the energies of controversialists, with the consequence that a literature has grown up round the Waldensian name quite out of proportion to the small number of simple folk to whom it has been attached.

I. *ORIGIN.*—The question of the origin of the Waldenses has been complicated by controversial considerations. While Roman Catholic writers have settled the matter by regarding these people as simply the followers of Peter Waldo of Lyons, they themselves repudiate this view and push back their beginnings to the age of primitive Christianity. Thus they deny that they first appeared as a sect of heretics breaking off from the historic Church, and claim to have preserved the purity of the faith through the ages, while all the rest of the Church was degenerating and accumulating the corruptions against which they protested from the first.

1. Claim to apostolic origin.—This claim is first met with in a Dominican monk at Passau in the year 1316,[1] who states that the Waldenses declare that they are the most ancient of all the sects, some even saying that this sect 'duravit a tempore patrum.' It was but a step from this position to add that the Waldensian Church was founded by St. Paul when on his way to Spain. A little later a woman under examination for heresy is said to have made a similar statement. It is not met with again earlier than a letter of Barbe[2] Morel written in 1530 and addressed to Œcolampadius.[3] But it was adopted by Robert Olivétan and published in the preface to his translation of the Bible in 1535, and from that time onwards it was universally adopted by the Protestants, who thus came to honour the Waldenses as the one Christian Church that had preserved the primitive faith of NT times. Its adoption by Beza, its appearance in the Confession of 1541, the assertion of it by Leger in the preface of his history, the encouragement it obtained from Samuel Morland, the British envoy in Savoy, all helped to confirm its popular acceptance. It even came to be regarded as the primary source of Calvinism, an ingenious way of accounting for its otherwise suspicious resemblance to that type of Reformation theology. But now it has been pointed out that no trace of this notion can be found in any of the early Waldensian writings. The inquisitor Moneta of Cremona, discussing the source of Waldo's heresy, makes no mention of the theory of apostolic origin. Nor is there any evidence of the existence of the Waldensian Church as a separate community maintaining primitive NT ideas for more than a thousand years from apostolic days till it emerged in the times of mediæval persecution. Its total seclusion as well as the maintenance of its purity uncorrupted throughout all these centuries would demand a double miracle, for which no evidence is forthcoming. Then this very purity of doctrine in conformity with the NT is exactly what the Protestants claimed to have recovered at the time of the Reformation. In so far as that claim cannot be entirely justified, since Protestantism is not merely a return to the apostolic type of Christianity, but, with all its effort to conform to the NT standard, still a historical development true to the spirit of its age, the same must be said of the Waldensian type of Christianity. Therefore, if we admitted the theory of apostolic origin, we should have the further marvel of a line of development in the solitude of the Alpine valleys leading to much the same results as were obtained by the Reformation theologians in their fresh studies of the NT, unless we were to conclude that Protestantism as a whole was an outgrowth of Waldensian teaching; and we are sufficiently well acquainted with its genesis in the minds of the German and Swiss reformers to know that this was not the case.

2. The time of Sylvester.—A second theory of the ancient origin of the Waldensian Church is that it arose at Rome in the time of the episcopate of Sylvester, when that bishop, after baptizing Constantine, put the Church under the power of the emperor; whereupon a colleague of the bishop protested, broke off communion with Rome, and retreated into the Vaudois valleys. Thus the Waldensian movement is represented as being a reaction against the corruption of the Church in the 4th century. This theory has been combined with the claims to apostolic origin, with the suggestion that the secluded Church, already some centuries old, now received an accession of refugees who found a welcome home in its primitive simplicity. It is given by the inquisitor Moneta,[1] as held by 'the Poor Men of Lyons.' But the want of evidence during the intermediate period, which is fatal to the claim to an apostolic origin, is also applicable to this theory, though the intermediate centuries are not quite so many. Moreover, Sylvester did not baptize Constantine. Nor had the Church preserved the primitive simplicity advocated by the Waldenses uncorrupted until the age of Sylvester, as the upholders of this theory have maintained. Thus its basal assumption is discredited by history.

3. The time of Claude of Turin.—Claude, bishop of Turin in the 8th cent., under Charlemagne and Louis the Pious, revived the Augustinian doctrine of predestination, but ignored the High Church side of Augustine's teaching, according to which the Church was the appointed medium of communication between God and man, resisting the papal claims, and denying that St. Peter had received power to bind and loose. He had crosses as well as images removed from his churches, in all these matters anticipating the Reformation. Accordingly Leger, Muston, and other Waldenses, understanding the churches of the Vaudois valleys to have been included in Claude's diocese, maintained that, if their separation from the Roman Catholic Church could not be traced back to primitive times, their distinctive movement should be attributed to the influence of this French bishop, who has been described as a Calvinist before the Reformation. That Claude may have had some

[1] *Contra Valdenses*, in *Maxima Bibliotheca veterum Patrum*, Lyons, 1677–1707, xxv. 262 ff.

[2] The title 'barbe' (Romance for 'uncle') was employed by the Waldenses for their clergy, perhaps as distinguished from the Roman Catholic title 'father' for a priest, and at the same time as suggestive of an affectionate relationship; also as a cryptic term, a 'commonplace' in times of persecution.

[1] Comba, p. 90.

influence among the mountaineers in leading them towards the freer, simpler type of religion, and so preparing for their subsequent breach with Rome, is likely enough. But there is no evidence that he was in any sense the founder of the Waldensian Church as a separate community or the originator of Protestantism in it. There is no indication of the existence of such a church for centuries later than the time of Claude. Besides, it is very improbable that this bishop should have succeeded in originating a vigorous, independent organization in a remote corner of his diocese while he did nothing of the kind at Turin or in the more civilized towns nearer his metropolis. Champions of the antiquity of the Waldensian Church as a distinct community in separation from Rome claim a mass of Romance literature in the libraries of Geneva, Zürich, Grenoble, Paris, Cambridge, and Dublin in support of this contention, maintaining that it is (1) representative of the views of that Church, and (2) of great antiquity. But a critical examination has made it clear (1) that much of this literature is of Roman Catholic origin and not marked by characteristics peculiar to the Waldenses, and that some of it is Hussite, and (2) that none of it gives evidence of coming from an earlier date than the 14th century.

One of these documents, entitled *Nobla Laiczon* ('Noble Reading'), is a poem setting forth Christian doctrine of the Waldensian type which Perrin, Leger, Muston, Monastier, and other writers declare contains a statement that 1100 years have passed since the origin of the New Testament. But in a copy of this work discovered in the Morland MSS it was seen that the tail of an Arabic 4 has left some traces, so that the original reading would have been 'mil e 4 cent anz.' Another MS in this collection has 'mil e CCCC anz.' Further, a MS of the NT at Zürich, which had been assigned to the 12th cent., is found to be dependent on Erasmus' Greek Testament. Lastly there is the 'Waldensian Confession of Faith,' for which a pre-Reformation origin had been claimed, as composed in the year 1120; but now it has been discovered that this date is not written by the original hand, and also that the MS 'copies almost word for word the utterances of the Reformer Bucer as given in Morel's report of his negotiations with that divine and Œcolampadius.'[1]

The statement of Muston[2] that in the year 1096 Urban II. described the Vaudois as 'infected with heresy' is founded on a mistake, since no such reference to these people is to be found among his bulls.[3]

4. Albigenses.—The Albigenses, or Catharists, were near neighbours, occupying the northern and French side of the mountains, the southern and Italian valleys of which were inhabited by the Waldenses. But there does not seem to have been much intercommunication across the great Alpine barrier. The national and racial distinction between the two populations would tend to keep them apart. Moreover, there is not the slightest trace of Catharist doctrines in the Waldensian Church. That this Church should not have received any infection of the Manichæan teaching, with which the Albigenses are said to have been imbued by an emigration from Eastern Europe, and yet have received their comparatively innocent Protestant principles from this tainted source, is not at all probable. On the other hand, we have little or no first-hand information about the tenets of the Albigenses, the reports of which come to us through the suspicious channel of their enemies' accounts of confessions under torture. We may well admit that a common spirit of resistance to the dominance of Rome, and similar efforts at realizing a more spiritual type of worship than was generally seen in mediæval Catholicism, may have led to mutual encouragement in these respects. What must be affirmed, however, is that certainly the Waldensian is not a direct offshoot of the Albigensian movement.

[2] *L'Israël des Alpes*, Paris, 1851, vol. i. p. xxxii, n. 2.

[3] Comba, p. 154.

The supposed connexion between the Waldenses and the Albigenses was championed in England by several writers, of whom the most notable was G. S. Faber, *An Enquiry into the History and the Theology of the ancient Vallenses and Albigenses* (1838). But in the same year the idea was completely demolished by S. R. Maitland in *Facts and Documents illustrative of the History, Doctrine, and Rites of the ancient Albigenses and Waldenses* (1838). Lastly, Charles Schmidt of Strassburg made an exhaustive examination of the question, giving the legend, as Comba says, its *coup de grâce*.[1] See, further, art. ALBIGENSES.

5. Various later influences. — It may well be that various influences tended to cut off the Vaudois from continuous close Roman influence. Their isolated geographical situation would minimize intercommunication, and at the same time their life as mountaineers would foster a spirit of independence and its simplicity keep them from the materializing influence of a sumptuous ritual. Then the Gothic and Lombard invasions would associate ecclesiastical with political aloofness. For a time these people came under the wave of Arian dominance. We cannot regard the Waldensian faith as in any sense a product of Arianism, and yet the local separation produced by the heresy would tend to engender a habit of independence. Arnold of Brescia, a disciple of Abelard, executed at Rome in 1155, was a strenuous opponent of the temporal claims of the papacy. He contended that sacraments administered by priests who were not living an apostolic life were invalid. Lucius III.'s bull of excommunication (1184) shows that he left followers behind him whose influence may well have lingered in Northern history till it was merged in that of the definitely anti-papal Waldenses. But Leger, in setting his name at the head of the list of barbes, was confusing it with that of another Arnold. Then, on both sides of the Alps, those parts of France and Italy respectively which were nearest to the Waldensian valleys witnessed during the Middle Ages repeated protests against the abuse of images and materialistic forms of worship. With greater probability Peter of Bruys (1104–25) is claimed by Comba, Gay, and others as one of the precursors and originating influences of the Waldenses.

Unfortunately our knowledge of Peter's tenets is almost confined to the statements of Peter the Venerable, abbot of Cluny.[2] It would appear that he ascribed the highest authority to the Gospels, especially the teachings of Jesus contained in them, finding a second and lower authority in the Epistles. It is not clear how he regarded the Old Testament. He taught believers' baptism and repudiated the efficacy of infant baptism, rejected the doctrine of transubstantiation and the Mass—perhaps even going so far as to give up the observance of the Lord's Supper as a rite of the Church—repudiated the custom of prayers for the dead, denied the sanctity of church buildings, and carried out an iconoclastic crusade against the use of crosses. Döllinger's association of the Petrobrusians with the Cathari has been shown to be erroneous.[3] Peter was twenty years combating what he regarded as the superstitions of the Church, especially the 'Roman idolatry.' Beginning in the obscure village of Bruys high up among the Alps, his influence spread through Narbonne, Guyenne, and Gascony, and was for a time centred at Toulouse, where he enjoyed great and growing popularity. Nevertheless, at the instigation of the monks of St. Gilles, he was seized by a mob and publicly burnt, without any legal trial, and also without any interference from the authorities. Peter of Bruys was followed as a reformer by Henry of Cluny, who was condemned at the Council of Pisa (1134), but escaped, and was again imprisoned in 1150 at Toulouse, where he died. His supposed connexion with the famous abbey of Cluny is a mistake; so is the claim that he was an Italian; he seems to have been a Swiss born at Lausanne. Henry followed Peter in protesting against corruptions in the Church, especially the degeneration of the clergy, whom he persuaded to marry their concubines. Unfortunately, as in the case of his predecessor, our knowledge of this reformer is chiefly dependent on information supplied by his enemies, according to which the result of his energetic activity was that the altars were abandoned and the sacraments of the Church despised.[4] Farther than this we cannot go. We have no record of Henry's

specific doctrinal teaching and cannot say that he shared Peter of Bruys' primitive Protestantism. Apparently his protests were on moral rather than on theological grounds. Meanwhile there was a spirit of revolt in the air and a growing desire for a more spiritual religion than was commonly met with. On the other hand, the Council of Tours (1163) excommunicated both the Petrobrusians and the Henricians. The Humiliati have been claimed as precursors of the Waldenses; but they were simply workmen's gilds in Lombardy, many of whose members joined the new religious movements, but who were not themselves formative influences in them.

6. Waldo and the Poor Men of Lyons.—The Christian name Peter commonly attached to the reformer appears to be due to later tradition and usage. His name is given in French as Valdes, in Latin as Valdesius, Valdenius, Gualdensis, in Italian as Waldo. Again we have to turn to the prejudiced account of enemies for most of our information about this reformer. It is from an anonymous writer at Laon, however, that we obtain the story of his conversion.

He had been enriched by the practice of usury when in 1173, after being deeply impressed by the legend of St. Alexius, describing how the saint had given all his property to the poor and gone on a pilgrimage to the Holy Land, he was directed by a theologian to the words of Christ in Mt 19[21]. Thereupon, making over his landed possessions to his wife, and distributing the rest of his property among the poor, he first of all gave himself to the study of the Gospels, the Psalms, and other parts of Scripture as well as some patristic writings, which he got two friendly priests to translate for him into the Romance dialect.

After taking a formal vow of poverty and going through the streets begging his way and preaching his message of self-abnegation, he gathered about him a group of followers, who in turn went about with the same message and became known as the Poor Men of Lyons. They travelled in strict observance of Christ's directions to the Seventy (Lk 10[1-4]), going two and two, without staff or scrip, their feet only in wooden sabots, preaching repentance and exhorting people to return to the purity and simplicity of the primitive Christians. Forbidden to preach by the archbishop, they replied with the apostolic defence in Ac 5[29], and later (1179) appealed to the Third Lateran Council, under Alexander III., for recognition, only to have their request scornfully denied —although the pope himself had received Waldo kindly and he is said to have been secretly ordained by one of the cardinals. Daring to persist in their preaching, they were put under the ban at the Council of Verona (1184), presided over by Pope Lucius III. They had no wish to break off from the Church, nor did they imagine that they were opposing its doctrine, ritual, or government. They claimed to be loyal sons of the Church, called to lead their erring brethren back to the ways of their ancestors, and this entirely as a practical reformation of life and conduct. Nevertheless their refusal either to recant or to be silent and their condemnation by the ecclesiastical authorities forced them into a position tantamount to open rebellion. Then this condemnation, followed by an edict of Barbarossa, drove the Poor Men of Lyons out of the city and scattered them abroad, only however to spread the seed of their message the more effectually through Southern Europe. Thus they found their way into Provence, Dauphiné, the valleys of Piedmont, Lombardy, Lorraine, Flanders, Picardy, Germany, Spain, and even as far as England. Since Waldo and his followers had not been condemned for any doctrinal heresy, but only for a breach of discipline in preaching without ecclesiastical authority, strictly speaking they should have been prosecuted as schismatics rather than as heretics. Nevertheless the determined opposition with which they were met implies that their free handling of Scripture gave offence to the theologians, and in point of fact, like the followers of Peter and Henry, they were denounced as heretics. They had their own ministers (called *ministri*), chosen annually for the administration of the communion, which was only once a year. Waldo remained at the head of the community (*societas*) till his death, selected and ordained the ministers, and admitted the new members, though he did not claim to be a bishop. The conditions of membership, called 'conversion,' were renunciation of private property and an ascetic life, separation of husbands from wives, and three days' fast in the week. It is said that they repudiated indulgences, purgatory, and masses for the dead, and denied the efficacy of the sacraments administered by unworthy priests. If so, they certainly would be deemed heretics. But the question of the full contents of their preaching is obscure. A literal application of the teachings of Christ contained in the Gospels was its chief theme, as it had been that of their founder, and, they being for the most part simple folk, without any theological training, it would be pedantic to try to fix any definite theology upon them. We do not know much about the later days of Waldo; he died in Bohemia in the year 1217.

7. The fusion. — An inquiry into the origin of the Waldensian Church brings us to the result that it grew out of a fusion of the work of Waldo and the Poor Men of Lyons with the movements originated by Arnold of Brescia, Peter of Bruys, and Henry 'of Cluny.' It came to contain elements in the teaching of these four leaders, and it rounded into a definite form and ripened into a distinctly organized Church with its own specific teaching in parts where their fourfold influence had been felt, and this not till the latest and most vigorous of these movements, that of Waldo, came into contact with the earlier types. Thus, while the old Waldensian claim to primitive and even apostolic antiquity is abandoned, and it cannot be maintained that Waldo found a Church of evangelical teaching in the Vaudois valleys ready to welcome him and learnt more from it than he imparted to it, neither is it right to say that the Waldenses are simply the followers of Waldo of Lyons. It does not appear that he simply founded the community *de novo*, or that its evangelical and Protestant character is entirely due to his influence. The ideas were in the air, the spirit was alive and awake, when Waldo and his Poor Men came with apostolic fervour to embrace them and blend them with their own version of the teaching of Jesus. There were Arnoldists, Petrobrusians, and Henricians before Waldo, existing as scattered religionists. But it was his movement that gathered in the harvest of their lives and brought about the formation of a Waldensian Church.

II. *MEDIÆVAL PERIOD.* — Disputations in 1175–76 between the barbes Olivier and Sicard and their bishop Montpeyroux having alarmed the neighbouring clergy, two or three years later the pope, Alexander III., sent the cardinal of St. Chrysogone, Henry of Cîteaux, and Reginald, bishop of Bath, then on his way to the Lateran Council, accompanied by the monk Walter Mapes and the priest Raymond of Daventry, to Toulouse to inquire into the matter. Two barbes came there with safe conducts, Bernard of Raymond and Raymond of Baimiac, to be examined by John of Bellesmains, bishop of Poitiers, and then to Narbonne to be examined by Bernard of Fontcaude, under the presidentship of the English priest Raymond of Daventry. It is this Raymond who first uses the name 'Waldenses' (*Vallenses*)—as far as it can be traced back—in his sentence of condemnation, which must be dated 1179 at latest, because, as already said, Raymond was then on his way to the Lateran Council as an attendant of the bishop of Bath. The next year Bernard of Fontcaude wrote a book entitled *Adversus Vallenses*

et Arianos.[1] It seems that these discussions arose out of the union of the Petrobrusians and Henricians with the Poor Men of Lyons in Provence. About the same time Waldo's followers united with the Arnauldists in Lombardy. Thus the Waldenses of France and Italy were united, and their union was cemented by persecution. A sentence of excommunication by the Council of Verona cleared the remaining followers of Waldo out of Lyons and drove them to Provence, Dauphiné, the valleys of Piedmont, Lombardy, and some even to Germany. So numerous had they become in Provence that Innocent III. sent his best legates to suppress them in the years 1198, 1201, and 1203, on the third occasion including in his embassy a Spanish bishop and the great St. Dominic, who conducted a succession of disputations with little result till 1207, when the legate Peter of Châteauneuf was killed. Two years later the pope had recourse to a crusade. In 1210 the emperor Otho ordered the archbishop of Turin to drive the Waldenses out of his diocese, and in 1220 the Statutes of Pignerol forbade the inhabitants to harbour them. Some fled to Picardy, and Philip Augustus drove them on to Flanders. Some came to Mayence and Bingen, where 50 were burnt in 1232. They were seen early in Spain, condemned by Church councils, and harried by three of the kings. In 1237 Pope Gregory IX. sent a bull to the archbishop of Tarragona which resulted in fifteen of the heretics being burnt, King Ferdinand himself casting wood on the fire. In course of time these Spanish Waldenses were exterminated. In this century Waldensian churches in Germany sent candidates for the ministry to study at a Waldensian college in Milan. Martyrs to their faith suffered death in Germany during the two following centuries. Bohemia, where Waldo died, became an important field of Waldensian activity. Forty years after the founder's death the inquisitor of Passau named 42 places as nests of the heresy. The king Otakar started persecution, which became most severe in 1335 under Pope Benedict XII. The rise of the Hussite movement led to a fusion of some of the two groups of reformers under the name of Taborites, the most famous of whom was the barbe Frederic Reiser, who spent 25 years in visitations among the Waldenses in Bohemia and Austria and was burnt at Strassburg in 1458. Austria had been reached as early as the 13th cent., and in 1315 the inquisitor of Krems denounced 36 localities as infected with the heresy and secured the burning of 130 martyrs, the most illustrious of whom was the bishop Neumeister, who was burnt at Vienna; he is said to have declared that there were more than 80,000 Waldenses in the duchy of Austria! The end of this century witnessed a terrible persecution in Styria. Meanwhile the movement was spreading in Italy under an organized itinerant mission, the missionaries travelling as pedlars and preaching over many districts. They prospered especially at Milan, where they had a college under John of Ronco, who was appointed to the headship for life, in spite of Waldo's disapproval, which resulted in a division into two groups, the French group and the Italian and German group. The Lombards appointed their own chief pastor (*præpositus*), and he, as well as their ministers (*ministri*), held office for life, while Waldo and the French Waldenses on his authority elected annual leaders to administer the Lord's Supper and serve as pastors. Another and more vital division between the two parties arose out of the teaching of the Italian Waldenses that the sacraments could not be efficacious if administered by priests of unworthy character, while the French Waldenses did not accept this view. Holding the Roman Catholic priests to be morally wrong in many of their practices, because unscriptural, the Italians repudiated all their sacraments. At the same time this branch of the Waldenses insisted most strongly on close adhesion to NT teaching and practice generally and on rejection of everything in the Church which lacked that authority. Thus they were the more thoroughgoing anti-Romanists. In May 1217 six members of the two parties met at Bergamo to draw up terms of agreement, but failed (1) on the question of the salvation of Waldo, which the Lombards made conditional only on his repentance of his wrong-doing in condemning their views, while the French regarded it as absolute; (2) on the question of the validity of sacraments administered by unworthy ministers, denied by the Italians, allowed by the French. Nevertheless fraternal intercourse came to be established in course of time between these two branches of Waldenses. In the 15th cent. there was a very influential number of the Waldenses in central Italy. The Inquisition records reveal the existence of groups throughout the whole of this region. In Calabria the Waldenses from Piedmont, who had been sent for to cultivate a great estate, proved themselves most effective missionaries, winning over most of the population of the district. These converts obtained exceptional privileges of religious liberty and flourished for 250 years, after which they were almost exterminated by a wholesale persecution.

While the French Waldenses seem to have developed the episcopal form of government with the three orders—bishops, priests, and deacons—in spite of Waldo's greater simplicity of ministerial functions, the Italians worked out more of a presbyterian type of church, each church being under a pastor with whom was associated in government a consistory of laymen, and a synod met once a year composed of an equal number of ministerial and lay members.

The valleys on the Italian side of the Cottian Alps now became the centre and chief home of these Waldenses, so that in course of time their very name (in French 'Vaudois') was regarded as geographical, and it was asserted that Waldo took his surname from that of the inhabitants of this district after joining their religious movement, whereas later researches have shown that there is no justification for this view, and it must be admitted that the name of the Church is derived from that of the founder of the society of the Poor Men of Lyons. In the 15th cent. these valleys came under the rule of the duke of Savoy. Then followed a time of severe persecution. In 1434 its violence drove numbers to emigrate. The inquisitor Acquapendente visited the valley of Luserna in 1475, and, disapproving of the religious views and practices of its inhabitants, roused their overlords to compel submission to his orders, with the result that a few years later there was a rebellion which led in 1484 to the interference of Duke Charles I., who was able to bring about a peaceful arrangement between the two parties. The first serious attack with armed forces took place under Philip II., who became regent of the duchy of Savoy in 1490, and duke in 1496. It was in 1494, during his regency, that Philip launched an expedition against the Waldenses of the Luserna valley, only to meet with so disastrous a defeat that he at once made peace with them, guaranteeing them liberty for 40 years. It is not easy to be clear as to the theological views of the Waldenses during this period. The notion that, when the Reformation broke out, the Protestants were surprised to find their ideas anticipated by the inhabitants of the Alpine valleys, who had pre

[1] See Gay, *Hist. des Vaudois*, p. 16, n. 1.

served them from primitive times, proves to be a delusion. When we do meet with a Waldensian statement of belief, this is subsequent to the Reformation and characterized by doctrines and phrases distinctive of Swiss and German theologians of that movement. The earlier Protestantism was partly negative, in the rejection of Roman Catholic teachings and practices which could not be justified by the NT, and, in so far as it was positive, a return to the simplicity and spirituality of worship believed to have been characteristic of the primitive Church. Waldo and his immediate followers relied mainly on the Gospels. The ordinance of poverty thought to be required by the teachings of Christ was not universally adopted, nor did it long continue in operation. On the other hand, the Pauline theology, so emphatically and elaborately taught both by Luther and by Calvin, does not appear to have been brought forward by these earlier Protestants. There was no tendency among them to elaborate a system of theology. The barbes were drawn for the most part from the peasantry, and the college at Milan in which they were trained had to begin with the most elementary instruction in reading and writing. The great requisite was ability to read the Gospels and familiarity with their contents. Here we have the religious teaching of the mediæval Waldenses.

III. *REFORMATION PERIOD.*—**1. First contact with the Protestants.**—When the Reformation broke out the only organized opponents of the papacy on the Continent were the Waldenses and the later Hussites, who were called the Bohemian Brethren, but whom the Protestants as well as Roman Catholics designated Waldenses. In 1522 these Bohemians sent two of their ministers on a visit to Martin Luther with a message of congratulation and encouragement, and ten years later they sent a confession of faith, entitled *Apologia veræ doctrinæ eorum qui vulgo appellantur Valdenses*, with a eulogistic preface. Subsequently communications were maintained by the missions of successive deputations. In 1540 the Bohemian Brethren sent a deputation to confer with Calvin in Strassburg. Driven out of their own country in 1548, they took refuge in Poland, where they united with the Protestant churches which they found there. Calvin then wrote to the Reformed churches of Poland, 'I hope for every kind of good from your union with the Waldenses (avec les Vaudois).'[1] Meanwhile the churches of the Alpine valleys took steps to come into contact with the new reforming movement, and in 1526 the synod of Laus (Pragela), in which 140 barbes took part, having received confusing reports, sent the barbes Martin Gonin and Guido of Calabria both to Switzerland and to Germany to make inquiries and bring back some of the Protestant writings.

Their report and the literature which they circulated among the churches helped to draw them into contact with the Reformers. Four years later the synod which met at Marindol decided to consult the principal Swiss Reformers on several points of doctrine, organization, and discipline, for which purpose they sent two barbes, George Morel and Peter Masson, who visited and conferred with Farel and Haller, and at Basel received a fine response to their questions from Œcolampadius, who then sent them on to Strassburg, where they were well received by Bucer, who gave them an equally full and explicit reply. Morel published the Waldensian questions and the Reformers' replies in a work now at Dublin.[2] The same year the two delegates returned by way of France, when Masson was put to death at Dijon; but Morel was able to bring back their report to the Waldensian churches. This was discussed at a synod in Piedmont, held apparently in 1531. The discussion resulted in a division of opinion, and the formation of two parties, known respectively as 'Conservators' and 'Innovators,' the former holding on to their old position, the latter accepting the new Protestant teaching. This indisputable fact affords clear evidence that the pre-Reformation Waldenses were not simply hidden Protestants, cherishing the doctrine subsequently held by the Swiss and German Reformers. On the other hand, like the Hussites, with whom they practically coalesced in Hungary, and the descendants of the Lollards still in hiding from persecution in England, they were ready to fraternize with the new opponents of the papacy, though some did not adopt all their views. Liberation from the yoke of Rome, the abandonment of mediæval ritual which was regarded as idolatrous, spirituality of worship, and the popular use of the Scriptures in the vernacular as the authoritative standard of faith and discipline were Waldensian characteristics, which found welcome support from the powerful new Protestantism that was making so great a stir in the world.

2. Association with the Swiss Reformation.—The differences of opinion among the Waldenses of the valleys and their division into two parties on the question of accepting the Protestant views which their delegates reported to them led to the desire for fuller knowledge and conference with leading Reformers. With this end in view a general synod was convoked in 1532 under the chestnuts of Chamforans at Angrogna, in which the Reformers Farel, Saunier, and Olivétan met a large assembly containing laymen as well as barbes. Three recommendations, which rose out of the previous consultations with Œcolampadius and Farel, were then read: viz. (1) the adoption of public worship by the Waldensian churches instead of secret meetings, (2) an absolute condemnation of the custom of some of the Waldenses in attending Roman Catholic services, (3) an acceptance of the Reformers' views on predestination, good works, oaths, the denial of obligatory confession, Sunday fasts, marriage of the clergy, and the two sacraments. Farel's enthusiastic eloquence carried the great majority of the assembly with him in a vote for adopting these propositions, though some of the barbes protested against them on two grounds, (1) as unnecessary, (2) as casting a reflexion on those who had hitherto led the churches happily. Olivétan remained for three years travelling among the valleys and setting up schools. Meanwhile—the next year after the synod of Chamforans—two barbes who had been conferring with their brethren in Bohemia returned with a long letter conjuring the Waldenses of the valleys to weigh well the question of adhesion to the proposals of the foreign teachers. Accordingly a synod was at once called at Prali to reconsider the question; but it adhered to the previous decision, with only a handful of dissentients. The chief differences between the Waldenses and the Swiss Protestants had been based on the question of the degree in which everything must be determined by the authority of Scripture. Both parties held, as against the Catholic position, that this was the one supreme authority; but, while the Swiss theologians would allow of nothing which was not expressly taught in the Bible, the Waldenses had held that only those tenets and practices of Catholicism which were expressly contrary to Scripture need be condemned. But now the closer adhesion to the Swiss Reformed Church tended to assimilation of views and practices and subsequently to the adoption of Calvinism.

3. Olivétan's Bible.—One important and lasting outcome of the friendly intercourse between the Waldenses and the Swiss Reformers was the production of the first Protestant French translation of the Bible. Waldo had translated some portions into the Romance vernacular dialect; but most of his publications had been destroyed by the Roman Catholic authorities. In the conference at Chamforans, Farel and Saunier urged the Waldensian barbes to bring out a new translation of the whole Bible in the French language. This work the barbes persuaded Olivétan to undertake. Olivétan was a cousin of Calvin; he had been educated at the university of Paris and at Orleans; on accepting Protestantism he had escaped to Strassburg, and later he had come to Geneva. He accepted the task, and completed it in 1535. Considered better in the OT portion than in the NT, Olivétan's version is the basis of the later French versions, or rather revisions.

4. The new order.—In course of time the Waldenses on the French side of the Alps, who for the most part consisted of Conservators, were fused into French Protestantism. Then persecu-

[2] J. H. Todd, *Books of the Vaudois preserved in Trinity College, Dublin.*

tion in Bohemia and also in Southern Italy nearly exterminated the churches of this communion in those parts, leaving Piedmont and the Italian valleys of the Cottian Alps, the Vaudois country, as its only important habitat, though this very persecution scattered many of its victims among the Swiss and German Protestant states. It took some 20 or 30 years to supply adequately trained ministers and organize the worship, discipline, and teaching of the Waldensian Church in the valleys on the lines agreed upon in the conference with the Swiss Reformers. The linguistic difficulty was one cause of delay. The Swiss theologians could preach only in French, the Italian ministers, educated in the college at Milan, only in Italian. Neither knew the Romance dialect which was used in the villages of the valleys. Instead of taking the course usually adopted by missionaries and themselves learning the provincial dialect, the French- and Italian-speaking teachers induced the peasants to learn the languages of these teachers, so that they could be used in the church services. Until this curious change had been effectively completed, the movement could not make much progress. Meanwhile Piedmont came under the power of France. This was in 1536 — under Francis I.; and the French domination lasted till 1559. The first governor appointed by the French king (1537) was William of Fürstenberg, a resolute Protestant, who proved friendly to the Waldenses, and, on being sent into Germany, left his secretary Farel, a brother of the Reformer, in charge of the valley of Luserna. This man set to work vigorously furthering the Reformation and abolishing the Mass which the Catholics were still celebrating at Angrogna — an act of violence which provoked reprisals on the part of René of Montejean, the governor of Turin, who sent soldiers into the valley, sacked its villages, and imprisoned the barbes. The governor, returning to the province in 1539, released them, and Francis then left the Waldenses of Piedmont in peace for seven years, while he was persecuting those on the French side of the Alps. Henry II., succeeding to the throne of France in 1547, was also severe on the northern Waldenses; but Caraciolo, his governor of Piedmont, was friendly to them, and persecution did not break out in this district till 1550, when the inquisitor Giacomelli sent for the syndic of Angrogna and imprisoned him at Turin. War put a stop to further proceedings. In 1555 a number of fully trained ministers came from Switzerland to take charge of the congregations in the valleys, together with some Swiss pastors who travelled about inducting them and regulating the new order of worship in the French language, also a colporteur who distributed the service books among the villages. Many 'temples' were built, and by 1556 the new form of worship was being conducted in all the parishes. Thereupon two commissioners were dispatched from Turin with directions to stop these services. The villagers disobeyed the edict, and an arrest of the pastors was ordered. But proceedings were stopped owing to the influence of Swiss and German authorities with the French Government. Thus another respite was secured, during which the Waldensian Church was being fully organized and equipped with capable ministers. This is a significant fact, in view of the terrible times that were to follow. The discipline and leadership now secured proved to be invaluable in arming the Waldenses to make one of the most magnificent stands for religious liberty ever recorded in the annals of history.

IV. *PERIOD OF GREAT PERSECUTIONS (1540–1690).* — **1. Persecution of early Protestants.** — Although the Waldenses had been liable to persecution as heretics from the first and had suffered from some severe outbreaks previous to the Reformation, there were times of lenient treatment—a fact which, if not logical, was indicative of the absence of rigorous lines of demarcation. But now their open co-operation with the Swiss and German Protestants allowed of no ambiguity as to their quarrel with Rome, and consequently stern measures of oppression were taken against them. The political arrangement formally adopted in Germany as a refuge from civil war and practically operative in other countries left the religion of each state to be that of its prince or other ruling authority. In democratic and republican Switzerland this worked smoothly, since it meant the dominance of the faith of the majority. But it was otherwise with a country such as France under an autocratic ruler, and accordingly in 1534 there was a wholesale destruction of the Waldensian churches of Provence. Piedmont was subject to the rule of the duke of Savoy, and therefore it depended on the will of that prince, or sometimes rather on that of his overlord, whether the practices of the Waldensian Church in that province should be sanctioned or measures taken to suppress them. Another feature of the consequent contest is the fact that it was by no means one-sided. Those sturdy mountaineers were not meek martyrs led as lambs to the slaughter. They carried the war into the enemy's camp, and the first outbreak of persecution directed against them was an act of reprisal for the suppression of the Mass at Angrogna. Then the Waldenses became in a literal sense a Church militant, taking to the field in arms and fighting valiantly for their liberty of worship, with hardy heroism and at times with brilliant success. The outstanding personality of this period is Scipione Lentolo, born at Naples, but said to have come from a Roman patrician family, who became a priest, a doctor of theology, and preacher at Venice and Ferrara, at the latter of which places he was converted to Protestantism. Accused of heresy for his preaching at Lucca, he was imprisoned and sent to Rome. Escaping first to Sicily and then to Geneva, he there came in contact with Calvin, who appointed him pastor of St. Jean in the Waldensian country. Not confining his activity to this parish, he visited other valleys, and even went down to the plain of Piedmont on an evangelizing tour. When persecution broke out, he got refuge for fugitives in the valleys and encouraged the people everywhere to stand true to their faith. Lentolo is the author of the earliest history of the Waldenses and the chief authority for that of the persecution of his own times. This history was virtually unknown till in 1897 Comba called attention to a copy of it in the Berne Library; eight years later it was reprinted and published, and thus a flood of light was thrown on the persecution with which the author was so closely connected. Expelled from the valleys in 1566, he ministered in the Engadine and carried on literary work till his death in 1599.

The principal persecution with which Lentolo was brought into contact led to 'the war of della Trinità.' Philibert, the duke of Savoy at this time, though personally averse to the molestation of his mountaineer subjects, was compelled by the papal nuncio, backed up by France and Spain, to issue an edict requiring them to attend the Mass and forbidding their holding Waldensian services. On their disobeying this order, he sent an army under the command of della Trinità to enforce it. This commander, arriving in November 1560, met with such strenuous opposition that he consented to allow a deputation of barbes to go to the duke and present their plea for religious liberty, while he went into winter quarters at La Tour. The

deputation was treacherously treated at Turin, in order to compel them to abjure their faith. Accordingly, on their return in the spring, the indignant mountaineers rose in a mass and repulsed every attack of della Trinità at Luserna, at Angrogna, at Prali, with the result that Philibert was glad to come to terms with the heretics, leaving them at peace to carry on their Protestant services (5th June 1561). At the same time a persecution to the extent of extermination was carried out by Spanish troops at the instigation of the grand inquisitor, Michele Ghislieri (later Pope Pius V.), in Calabria, where, in spite of wholesale slaughter in the 13th cent., some representatives of the early Waldenses had persisted in maintaining the faith of their fathers, and had now welcomed the new Protestant movement. Two thousand were put to death and 1600 imprisoned. In Piedmont, after this, attempts were made successively by missions of Jesuits and by Capuchin friars, sometimes with the aid of soldiers, to bring the mountain villagers back into the fold of the Church; there followed several local persecutions, exactions of fines for supposed offences, and violent seizures of churches and even a sanguinary war in the year 1624, in which both sides suffered severely. The most important Waldensian leader of this time was Peter Gilles, an inspiring preacher and vigorous polemical writer, who died in 1644.

2. The great persecution under Louis XIV.—The determined loyalty of the Waldenses to their faith, combined with their amazing military prowess and the reluctance of the duke of Savoy to harass his mountaineer subjects—a policy rarely undertaken excepting under pressure from France—had secured them treaties of peace with liberty of worship. For a quarter of a century they were very little molested. In 1650 Charles Emmanuel II., the young duke of Savoy (only 15 years old), came to the throne. Behind him was the real power, his mother the duchess, daughter of Henry IV. and Mary de Medici, granddaughter of the notorious Catherine de Medici, the author of the Massacre of St. Bartholomew. Thereupon a 'Council of the Propagation of the Faith,' consisting of the chief councillors of State and Church dignitaries, was established in Turin. Five years later there was issued the 'Decree of Gastado,' ordering all Waldensian families in the plain back into the mountains and the sale of their lands within 20 days, unless they would renounce their Protestantism. This was in the depth of winter, and much suffering was involved, which they endured courageously. A little later (17th April 1655) the marquis of Pianezza was dispatched with an army of 15,000 men to La Torre—the key of the valleys—although at this very time there were deputies in Turin attempting to negotiate terms of settlement. The Waldenses first retreated to the mountains. But, on their assailants offering to treat with them, they opened the passes, and some of them fraternized with the soldiers, eating at the same tables. This was the prelude to wholesale massacre throughout the valleys of Luserna and Angrogna. Jean Leger, the author of the monumental history of the Waldenses, is the leading barbe of this period and the inspirer of his people. He enumerates 1712 martyrs. A great number who had hidden in a cave at Castelluzzo, the castle-like mountain above La Torre which dominates the entrance to the valleys, were dragged out and flung down the precipice. These were the

> 'slaughtered saints, whose bones
> Lie scattered on the Alpine mountains cold . . .
> Slain by the bloody Piemontese, that rolled
> Mother with infant down the rocks'

of Milton's famous sonnet. This was before the revocation of the Edict of Nantes, and it sent a shock of horror through Europe. Cromwell proclaimed a fast and got Milton to draw up a letter to the king of France and the Protestant princes. He also sent Sir Samuel Morland to the duke of Savoy to convey his vigorous protest by word of mouth. Morland visited the valleys and brought back information together with some Waldensian books which are now deposited at Cambridge. His published results of investigations on the spot are one of our historical sources for this period.

The interference of so powerful a ruler as Cromwell had an immediate effect. Mazarin directed the duke to put an end to the persecution and grant an amnesty to the Protestants. This was settled on 18th August in the 'Patentes de grâce' of Pignerol. But it did not result in a real or lasting peace inasmuch as the Piedmontese did not respect its terms, and accordingly in 1663 they rose in rebellion. Contrary to the treaty stipulations, the duke's authorities began to restore the fort at La Torre, ordered all foreign pastors out of the province, commanded the principal heads of families to answer charges of disloyalty, and, on their failing to appear, condemned them to death in their absence, and compelled Leger to escape out of the country by ordering his execution. The governor of the fortress of La Torre, Count Burborlorneo di Bagnolo, repeatedly sent troops into the valley of Luserna, and their devastations drove the inhabitants into the mountains. Janavel and a body of outlaws, called banditti by the Piedmontese, took up the cause of the persecuted villagers and repeatedly attacked the duke's soldiers. On 6th August the duke issued an edict condemning all the Waldenses to death as rebels. The war continued till the end of the year, by which time Janavel had 2000 followers, who occupied a number of advantageous positions. Meanwhile the persecuted people sent messengers to Switzerland and Holland begging for help, and their great leader Leger made good use of his enforced absence from home in travelling about to urge the plea. The duke got little satisfaction from the war. At Angrogna, after his soldiers had been ravaging the neighbouring villages, he lost 600 men and the two captains Sanfront and della Trinità. This had been a dishonourable expedition, because at the very time he was pledged to a truce while conducting negotiations with some Waldensian deputies, aided by an embassy of Swiss mediators at Turin. The public conferences with these emissaries from Switzerland were followed by a month of private discussion, till at length, on 14th Feb. 1664, the ducal government issued the 'Patente of Turin.' This covenant granted an amnesty to all the Waldenses except their victorious leader Janavel, who was ordered out of the country, and liberty of worship in their own way without molestation, except at St. Jean (Leger's parish), where the Protestant worship was prohibited. It is much to the credit of Janavel that this hero of the war consented to his own exile without protest for the sake of a peaceful settlement of his people. Twenty years of liberty now followed.

3. The exile.—In the year after the revocation of the Edict of Nantes (*i.e.* 1686) Louis XIV. sent a demand to his cousin Victor Amadeus II., the duke of Savoy, that he would treat his Protestant subjects as the French king was treating the Huguenots. He found some ground for this interference with a foreign government in the fact that fugitives from his terrible persecution were taking refuge in the Waldensian valleys. The result was that the duke ordered the Waldenses to discontinue their religious meetings on pain of death and the confiscation of their

property; their churches were to be razed to the ground; their pastors and schoolmasters to leave within fifteen days under pain of death and confiscation, and to renounce all claim on a pension; and all their children to be educated as Roman Catholics. The Waldenses, assembling at Angrogna, dispatched two envoys to Turin to plead for their pledged rights; but they were refused an audience. On hearing of the terrible plight of their co-religionists, the Swiss Protestants held a conference at Baden, which decided to send envoys to Turin on behalf of the Waldenses. Accordingly the brothers De Muralt, selected for this mission, went to that city and obtained an audience with the duke on 13th March. The result was a proposal of Victor that his Protestant subjects should be allowed to emigrate to Switzerland. It was with the utmost difficulty that the De Muralts persuaded the mountaineers to accept this suggestion of voluntary exile (in an assembly at Serre, 4th April). On 9th April the duke signed a decree permitting the emigration. In spite of this fact, some of the Waldenses who had agreed to accept it were arrested and imprisoned. Not believing that the decree was being adhered to, the people prepared to resist the authorities to the last. Then, with the aid of soldiers sent by Louis XIV. as well as his own men, Victor sent expeditions up the Luserna and Perosa valleys. By the end of the year 9000 had been killed and 12,000 carried off as prisoners, many of them to perish in the dungeons of Piedmont. 'The valleys are deserted,' wrote Catinat, the leader of the invading troops, at the completion of his work. Among those who escaped to Switzerland was Henri Arnaud, who was to be the leader of the return from exile and whose narrative is our principal authority for this period. Victor declared all the property of the Waldenses confiscated, and he reckoned the heretics to be extirpated. But there were 200 fugitives lurking in the mountain caves, who afterwards descended at times to the terror of the immigrants from the plain who had taken possession of their homes. The duke sent messengers bidding them escape to Switzerland, but after sending these to consult Janavel and Arnaud they declared that they would resist till death. Victor had no mind to keep up the war with these brave mountaineers, and he agreed to let them go to Switzerland with their arms and baggage, to allow their imprisoned relatives to accompany them, and on their arrival there to permit all the imprisoned Waldenses, for whose liberation they had been holding out, when offered an earlier opportunity of escape, to follow them. The persistent guerilla warfare of this handful had secured the release of all the surviving Waldenses. Early in 1687 the prisons were opened, and the prisoners, now reduced to 3000, set off on their terrible journey across the Alps for Geneva, by the Mont Cenis route, a journey which occupied on an average twelve days, during which many perished in the snow. But, in spite of the protest of the Swiss against the flagrant breach of treaty, children under twelve years of age were detained to be educated as Roman Catholics. The fugitives came in driblets, and the last detachment did not arrive till the end of August. Their reception at Geneva was very hospitable, and by degrees they were settled in various Swiss towns and generously supported by Holland, England, and Germany. But they were anxious to return to their valleys, and the duke of Savoy was so much annoyed at one or two futile attempts that he induced the Swiss authorities to have them removed farther away, and arrangements were made by which they were received in Brandenburg, Prussia, Württemberg, and the Palatinate.

4. **The return.**—In spite of their scattered condition in the centre and north of Europe, the Waldenses were able to creep back and gather in Noyon on the Lake of Geneva to the number of nearly 1000 fighting men with their wives and families; and on the evening of 16th Aug. 1689, eluding the vigilance of the Swiss authorities, they embarked in boats hired for the purpose and crossed to Savoy, led by Turel de Die, in the unexplained absence of their appointed captain Bourgeois, and accompanied by Arnaud and two other pastors, one of whom, however, Cyrus Chyon, was arrested at the moment of departure. Six days' travel by mountain paths brought them to Mont Cenis, and four more over and down to the valley of the Jaillon. There—to quote Arnaud's figures—they were met by 2500 French soldiers under the command of the Marquis of Larry, whom they defeated with the loss of 600 men, while the Waldenses only lost 15 killed and had 12 wounded in the battle, after as many as 116 lives had been sacrificed to the hardships of the journey. They entrenched themselves at La Balsiglia at the back of the valley of San Martino for the winter. Arnaud was now both their pastor and their commander in the field. Mountain warfare was carried on throughout the spring of 1690, and the returned exiles gradually succeeded in regaining possession of their valleys. Then a combination of England, Holland, Germany, and Spain so crippled the power of France that the duke of Savoy was glad to make overtures to the Waldenses. But no satisfactory arrangement was reached as yet. Meanwhile fresh detachments were still returning from the more remote parts of their exile, and by the end of 1690 Arnaud had succeeded in settling them in their valleys. They had to wait four years for a definite edict regularizing their position and with it recognizing their religious liberty. This was issued by Victor on 23rd May 1694. The pope, Innocent XII., denounced the edict, whereupon the senate in Turin repudiated the papal decree and forbade publication of it in the duchy under penalty of death. Though now enjoying freedom in their valleys, the returned exiles would have been in sore straits if it had not been for the relief which was sent to them from Holland and England. William and Mary, and later on Queen Anne, interested themselves warmly in their heroic fellow-Protestants, as Cromwell had done in a previous generation.

V. *LATER HISTORY.* — 1. **Policy of Victor Amadeus (1694–1730).**—Although the Waldenses now had their homes and religious liberty guaranteed by a decree of the duke, they were still often tyrannically dealt with. Victor had broken with Louis XIV. and become allied with William III. of England by the treaty of the Hague. The Waldenses had then contributed soldiers to a joint military expedition, one result of which was that Val Perosa was taken over from France and incorporated in the duchy. During the war the Waldenses had enjoyed religious liberty and had been able to hold their synods without any hindrance from the Government; in 1697 they petitioned the duke to allow their co-religionists of Val Perosa to be incorporated in their Church. This was refused, and these people had to leave the country in order to obtain freedom for their religion, going to Germany, where they founded a colony at Gochsheim. The next year the duke ordered all French Protestants in his dominions to leave the country within two months under penalty of death. The consequence was the exile of 2883 persons, including seven pastors. Changeable as a weather-cock, on the outbreak of the war of the Spanish succession, Victor wrote personal letters to the Waldensian

pastors urging them to encourage recruiting in his service and even appealed to the Camisards and other French Protestants, whom he had banished five years before, to return and join his army. When the war was over, those French Protestants who had responded to his invitation were again expelled, and in 1707 he even sent back the Swiss parsons whom he had welcomed only eight years earlier. In 1708 Victor took possession of the valley of Pragela, whereupon its Protestant inhabitants were delighted to have the duke's permission for a visitation of Waldensian pastors; but he soon changed his policy and ordered these people to observe the Roman Catholic festivals. His policy all along was opportunist, with a strong leaning to the Roman Catholic side when he was free from the necessity of conciliating his Protestant subjects. There was no depending on his word. When the people of Pragela protested against his later treatment of them, the leading Waldenses in the valley were arrested and imprisoned; in 1716 the Protestant schools were closed; in 1720 the Reformed worship was absolutely forbidden in the valley. From time to time there was imprisonment of recalcitrants till the climax was reached in 1730, when, in spite of the intercession of Frederic William I. of Prussia, all the Waldenses in the valley were ordered to abjure their faith or leave the country. They elected the second course, and by the end of the year 800 exiles had gone over into Switzerland.

2. The 18th century.—During the remainder of the century, until Piedmont felt the effect of the French Revolution, the Waldenses had no eventful experiences. Though guaranteed rights of religious liberty, they suffered from time to time from exactions and restrictions by the Government, which showed that they were only allowed to exist on sufferance; and, when they complained against local acts of injustice, their complaints met with little consideration. Thus in 1733 a decree was issued forbidding them to leave their valleys; in 1740 a hospice was founded at Pignerol for the education of Waldensian children; in 1748 a bishop was appointed there to work for their conversion to Rome, and the *Opera dei prestiti* which exists in the present day was then founded, in order to assist Roman Catholics to buy land from the Waldenses; in 1756 they were forbidden to hold meetings outside the temples; kidnapping of children was a common and growing practice. Gay reprints an elaborate document entitled *Compendio degli edditti concernenti i Valdesi*, containing a host of vexations, enactions, and restrictions which emanated from the senate.[1] Meanwhile, in common with Protestantism throughout the rest of Europe, the religion of the Waldenses now suffered from decline of spiritual vigour. The Arian movement in England affected some of the pastors, and after that the Continental 'rationalism.' During this period they received pecuniary help from Holland and from England under encouragement from George II. and George III.

3. Period of the Revolution.—The Revolution brought an interval of complete religious liberty to the Waldenses owing to the French Republic being established in Piedmont in 1798. On 19th December all civil government authority over the Church was abolished; on 31st December liberty and equality were proclaimed for all kinds of religion, and early in the new year absolute liberty of the press and the abolition of the Inquisition. The Waldenses were unavoidably mixed up with the war of the Revolution when the absence of Napoleon in Egypt enabled the Russians and Austrians to invade Piedmont. After at first siding with the French, to whom they owed their liberty, the Protestant mountaineers, driven into a corner, gave the allies a pledge of neutrality. In spite of this agreement, the Austrians availed themselves of the military opportunity to involve the Waldenses in trouble on charges of plotting and collusion with the French and on other accusations. These vexatious proceedings, however, do not justify Gay in describing the action of the Austrians as 'a crusade' against them.[1] During the three and a half years when Lombardy and Piedmont were governed as a republic the chief grievance of the Waldenses was their pastors' loss of pecuniary aid from England owing to their association with the French. But, on receiving a petition from 'the Table'—their central governing body—for assistance, the executive commission issued a decree reducing the Roman Catholic parishes from 28 to 13 and granting the revenues of the suppressed parishes to the Waldensian pastors, and by this means half their salaries were secured. Thus the Church now obtained support from State funds. The valleys had taken over the administration of national property. But, after the establishment of the French Empire, Napoleon issued a decree sequestrating this property and so depriving the pastors of the contributions which they had received from them during four years (25th March 1805). The following May, however, when the emperor was at Turin, he granted 'the Table' an audience, when he treated its members very graciously and invited them to present to him a statement of their wishes. Accordingly an open-air meeting was held at St. Jean, which drew up a petition on three points: (1) the grievance of the sequestration of the State funds out of which the pastors' salaries had been made up after the loss of aid from abroad; (2) a request for the application of the Organic law of the Reformed Churches of France to the valleys; (3) a plan or organization for grouping the parishes in five consistorials.[2] In reply Napoleon agreed to restore the sequestrated funds and to allow three consistorials in the valleys. The cringing flattery with which the emperor was approached in this matter, and the painful anxiety shown about the recovery of money grants, do not reflect much credit on the representatives of the heroic Church of Leger and Arnauld and its stand for religious liberty. A further mark of Government favour is seen in the grant of land for the erection of the temple at St. Jean, the Waldensian cathedral, which was dedicated with great *éclat* on 1st Nov. 1806.

4. 19th cent. vicissitudes.—During the first half of the 19th cent. the Waldensian Church passed through great vicissitudes of fortune. For 34 years, from the fall of Napoleon in 1814 till the Revolution of 1848, it was oppressed under the rule of the king of Sardinia, who actively espoused the papal cause. On Victor Emmanuel I. coming to the throne, the Waldenses of Piedmont sent to Turin a deputation, which had an audience with the king, but obtained no response at the time. Meanwhile the Jesuits had been put in charge of education. The State funds which Napoleon had allowed the pastors to resume were again withdrawn; the only mitigation of the hardship against which the Table protested was a partial remission of dues from the valleys. Charles Felix (1821–31) was much more severe. When the Table asked for an audience at his accession, he insolently answered that all they needed was to become Catholics. It was only after repeated appeals that they were allowed to hold a synod. When the Waldenses reopened their college at La Torre, they were peremptorily ordered to close it again. Charles Albert (1831–48) was also severely re-

[1] *Hist. des Vaudois*, pp. 152–155.

[1] P. 164. [2] Gay, p. 171.

pressive with the Waldenses till near the end of his reign. Charvay, whom the king appointed bishop of Pignerol in 1835, announced that all the old laws against them should be enforced. When the English ambassador interceded on their behalf, the king ordered them not to appeal to foreigners and forbade the coming of alien visitors among them. All along they were excluded from the universities, the learned professions, and commissions in the army. But at length, even before the Revolution of 1848, the current of European opinion was running so strongly in favour of religious liberty that Charles Albert abandoned his harsh treatment of the Waldenses. On 5th January of that year he granted an audience to the Table, which gratefully acknowledged the legislative reforms and removal of hard enactments he was granting to all his subjects, but which at the same time appealed for relief from the laws especially adverse to their Church. They were well received, and on 17th February the king issued an edict of emancipation, granting the Waldenses the full civil and religious rites enjoyed by other subjects, including access to the public schools and universities, and allowing them to give their Protestant religious teaching in their own schools. The good news was welcomed in the valleys with illuminations and bonfires. A Waldensian congregation was now formed at Turin, and it became a home for refugee Protestants from all parts of Italy. In 1854 there was a division owing to the objection of these refugees to come under the government of the Table and its old rigorous rules. The use of the French language in the services was another ground of complaint. The division spread to other congregations, in which we may regard the malcontents as liberalizers and progressives, and also as protestant Italian patriots in their desire for the use of the Italian language just when a new spirit of a united Italian patriotism was sweeping the country. The result was a split, and the formation of the 'Free Church' (Chiesa Libera) of which Luigi Desanctis, a learned and eloquent priest and theologian of the Inquisition at Malta, who had become a convert to Protestantism, was leader. After serving as pastor of this church for ten years he left it, owing to its adoption of J. N. Darby's views—the Plymouth Brethren position, which allows of no stated ministry—rejoined the Waldenses, and became their professor of theology at Florence and the editor of their journal, *Eco della Verita*, till his death in 1869. The chief leader of the Free Church, after Desanctis had left it, was Alessandro Gavazzi, an ex-Barnabite father from Naples, who subsequently became an eloquent hero of Italian emancipation, accompanying Garibaldi as his chaplain and also enthusiastically supporting Victor Emmanuel as 'the only saviour of Italy as Jesus Christ is the only Saviour of sinners.' In 1870 a general assembly of the Free Church was held at Milan, when a simple Biblical confession of faith was drawn up, and the next year another assembly at Florence adopted rules of a constitution recognizing the pastoral office—as against the Plymouth Brethren idea—arranging for annual assemblies, and appointing an evangelization committee. It now took the title 'Unione della chiesa libera in Italia.' Some of the congregations, still adhering to Darby's views, broke off from this body and formed themselves into a community, which they ventured to designate simply 'Chiesa Christiana.' On 1st May 1884, with the exception of these people, the various evangelical congregations in Italy inaugurated an annual evangelical conference with a view to Church unification. Owing to the Baptists and the Methodists not altogether agreeing with the position taken up by the Waldenses and the Free Church, the two latter bodies took their own course for coming together on condition that the Free Church adopted the confession and Church order of the Waldenses.

5. Present condition.—The following facts concerning the present condition of the Waldensian Church have been supplied by the Moderator, Signor Ernesto Giampiccoli.

This Church holds its old position in the Alpine valleys, and since 1848 (the year of liberation) it has spread throughout the Peninsula and the Islands. There are now more than 200 towns and villages outside the original valleys where congregations, large or small, have been formed. The full membership of the whole Church amounts to about 25,000; but there is a much larger number of adherents. For their training the ministers spend three years in the theological college at Florence (which is soon to be transferred to Rome) and at least one more year in a foreign university. They are ordained at the annual Synod in Torre Pellice. The Waldensian Church is in the Alliance of Reformed Churches of the Presbyterian order. Besides its mission work in Italy, it has missionaries working in Africa in connexion with the Missions évangéliques de Paris, and also in connexion with the Swedish missions. It maintains four high schools for boys and girls—the only Protestant high schools recognized by the Government — also hospitals, orphanages, and other benevolent institutions. The Waldensian Church is absolutely independent of the State, and it enjoys complete liberty in all branches of its activity. The worship is in the main the same as in the kindred Evangelical Churches of France and Switzerland, the liturgies being almost identical; but there is a tendency to introduce congregational responses in the morning service. Neither the narrower type of Calvinism nor advanced liberalism is to be found in the present teaching of the Church, which is what is commonly known as 'Evangelical.' This Church is still progressing, though slowly. It always has been and still is hampered with financial difficulties, although it receives assistance from abroad and the contributions of its own members are increasing.

LITERATURE.—Among original sources the principal are A. Muston, *Israël des Alpes*, Paris, 1851; J. H. Todd, *The Books of the Vaudois preserved in Trinity College, Dublin*, London, 1865; J. P. Perrin, *Hist. des chrestiens Albigeois*, Geneva, 1618, *Hist. des Vaudois*, do. 1619; J. Leger, *Hist. générale des églises évangéliques de Piémont, ou Vaudoises*, Leyden, 1669; S. Morland, *The Hist. of the Evangelical Churches of the Valleys of Piedmont*, London, 1658; H. Arnaud, *Hist. de la glorieuse rentrée des Vaudois dans leur vallées*, Paris, 1710, Eng. tr., London, 1827. Among later works are W. S. Gilly, *Waldensian Researches during a Second Visit to the Vaudois of Piemont*, London, 1831; A. Blair, *A Hist. of the Waldenses*, 2 vols., Edinburgh, 1833; W. Beattie, *The Waldenses*, London, 1838; A. Monastier, *Hist. de l'église vaudois . . . jusqu'à nos jours*, 2 vols., Paris, 1847, Eng. tr., London, 1848; J. A. Wylie, *Hist. of the Waldenses*, London, 1880 (a good popular account). But all these books belong to the precritical period. The critical history begins with Döllinger and Comba: J. J. I. von Döllinger, *Beiträge zur Sektengeschichte des Mittelalters*, ii., Munich, 1890; Émile Comba, *Hist. des Vaudois*, new ed., Paris, 1898; T. Gay, *Hist. des Vaudois, refaite d'après les plus récentes recherches*, do. 1912; T. de Cauzons, *Les Vaudois et l'Inquisition*, do. 1908.

WALTER F. ADENEY.

WANG YANG-MING. — Wang Yang-ming (A.D. 1472–1529), known also as Wang Shou-jen, Wang-shen, Wang Peh-an, and Wang Wen-ch'eng, was a Chinese statesman, strategist, reformer, and scholar of note during the Ming dynasty, specifically during the reigns of Hung Chih, Cheng Te, and Chia Ching. Like many other Orientals who had posthumous honours conferred upon them, Wang has had hero-stories associated with his career. In early youth he began to exhibit unusual ability as a student. At twelve he is

reported to have made inquiry of his teacher concerning the most important thing in life. When the latter said, 'Study to become a Chinshih' (an academic degree of about the same rank as the Ph.D.), Wang replied, 'Study to become a sage: that is the first and greatest occupation.' At twenty-one he was decorated with the degree of Chüjen; at twenty-eight he was made Chinshih; and a little later he received the highest academic honour the Government could bestow, the degree of Hanlin.

Having unjustly incurred the hostility of the eunuch Liu Tsing when he was thirty-five, he was sent as a disgraced official into the Government dispatch service in the province of Kweichow. His biographer describes Lungch'ang, where he was stationed, as a resort of venomous snakes and poisonous worms, inhabited by babbling barbarians with whom he could not converse. It was a critical situation: in suspense over his own fate, realizing that at any moment a decree from the capital might order his death, he found his followers one by one falling ill. Nothing daunted, he chopped wood, carried water, and made soft-boiled rice for them, cheering them with songs and stories of home. In view of his own precarious position, he had a sarcophagus made for himself. In the midst of these adversities the chief subject of his meditation was the conduct of a sage under similar circumstances. One night at midnight the great enlightenment came, and suddenly he realized what the sage meant by 'investigating things for the sake of extending knowledge to the utmost.' Overjoyed, he unconsciously called out, and, arising from his couch, paced the floor. 'I was wrong,' he said, 'in looking for fundamental principles in things and affairs. My nature is sufficient to solve all the problems of existence.' From that time on he was a faithful defender of idealism in opposition to the realism of the philosopher Chu, whose commentaries, then as now, were esteemed the final authority.[1]

At the age of thirty-nine Wang was restored to honour and promoted to the magistracy in Lulinghsien in Shansi. As time passed he held numerous positions of trust and honour in the Government. He was President of the Court of Ceremonies, Military Governor of Kiangsi, first assistant to the President of the Censorate, President of the Board of War at Nanking, Viceroy of Kwangtung, Kwangsi, Kiangsi, Hunan, and Hupeh, and was made Earl of Hsinchien with the title of 'Master of the Banqueting Office and Pillar of the Government.'

His greatest military campaign was undoubtedly conducted while he was Military Governor of Kiangsi, against the rebellious Prince Ch'en Hao (Prince Ning), who, it was feared, might utilize the down-river current and invade the capital. Wang first sent up several memorials advising the emperor of the rebellion; then by a series of subterfuges he misled the rebellious prince, finally engaging him in battle near Poyang Lake at Huangchiatu and Patzunao, and taking him prisoner of war. His success aroused the jealousy of several officials, to which we may ascribe the fact that his philosophic point of view was attacked and branded as heterodox.

It was not, however, as strategist and statesman that Wang made his largest contribution to human welfare, but rather as a great moral reformer, who may justly be ranked with Socrates in his appreciation of moral values and his emphasis upon fullness of life and moral integrity as of far more worth than fame or gain. He found himself intellectually fettered by a conventional interpretation of classic literature which was just as firmly fixed and as rigidly observed as the most hallowed religious traditions of any other Oriental civilization. He insisted upon a rationalization of the interpretation of the Four Books and the Five Classics that would give room for progressive adjustment. The highest values of life, he held, are realized only through development; apart from development life must prove a miserable failure. That he lacked the modern scientific approach to the problem does not detract from the fact that he had a glimpse of the developmental character of human institutions, and that this standpoint will invariably result in moral progress, if it is thoroughly assimilated.

When, at the time of his enlightenment, he gave utterance to the dictum, 'My nature is sufficient,' he laid the foundation upon which the entire structure of his philosophy and ethics rests: man's mind holds the key to all the problems of the universe. Nature—or experience, as we would call it—is the stuff out of which the universe is made. If nature at large is the macrocosm, then human nature is the microcosm; and for Wang human nature was the human mind.

Pointing to the flowers and trees on a cliff, a friend one day said to him: 'You hold that there is nothing under heaven outside the mind. What relation exists between my mind and these flowers and trees on the high mountain?' Wang replied: 'When you cease regarding these flowers, they become quiet with your mind, and when you see them, their colours at once become clear. From this you may know that these flowers are not external to your mind.'

This is undisguised idealism in which the microcosm creates as truly as the macrocosm. In the great all-pervading unity of nature the most differentiated and highly specialized portion is the human mind. It manifests the only creative ability within the reach of man's knowledge. Wang asserted again and again that the mind is natural law, and as such is the embodiment of the principles of Heaven.

The ground-pattern of his philosophy may be summarized as follows.

(1) Every individual may understand the fundamental principles of life and of things, including moral laws, by learning to understand his own mind, and by developing his own nature. This means that it is not necessary to use the criteria of the past as present-day standards. Each individual has the solution of the problems of the universe within himself.

(2) On the practical side, every one is under obligation to keep knowledge and action, theory and practice together; for the former is so intimately related to the latter that its very existence is involved. There can be no real knowledge without action. The individual has the spring of accurate knowledge within his own nature, and should constantly carry into practice the things that his intuitive knowledge of good gives him opportunity to do.

(3) Heaven, earth, man, all things, are an all-pervading unity. The universe is the macrocosm, and each human mind is a microcosm. This naturally leads to the conceptions liberty and equality of opportunity, and serves well as the fundamental principle of social activity and reform.

Wang's philosophy is to-day held in high esteem by Japanese students and is being extensively read by the Chinese. His system is a direct product of the Oriental mind; as a rationalizing and socializing force it strikes a sympathetic chord in China and Japan.

During the last days of his life the charge of heterodoxy was frequently brought against him. At his death no hereditary honours were conferred upon him, but instead an order from the emperor prohibited the dissemination of the 'false doctrine.' However, in the first year of the emperor Lung Ch'in he was by imperial order made Marquis of Hsinchien and given the posthumous title of Wench'eng ('Perfect Learning'). In the twelfth year of the emperor Wan Li an imperial order was issued to sacrifice to Wang in the Confucian temple, after sacrificing to Confucius. In the city of Yüyao, Chekiang, Wang's ancestral home, an image of the great teacher has been erected in a small temple on a hill.

FREDERICK G. HENKE.

WAR.—Human warfare is not merely the climax and the symbol of the strife which pervades the realm of nature: it is itself an institution which has been involved in the struggle for existence, and which has had to adapt itself to a changing environment. The institution is rooted in a deep instinct and an inveterate habit of the race; but it has also come into conflict with powerful forces, emanating from the intellectual, the moral, and the religious life of mankind, which have been bold enough to summon it to judgment, have had considerable success in regulating its violence, and have proposed and attempted various methods for its abolition. The present article will trace the impression made upon war by morality and religion, examine the spiritual issues to which it gives rise, and discuss the desirability and the possibility of the cessation of armed conflict among the nations.

I. *NAME AND DEFINITION.*—The term 'war' is popularly applied to any conflict between nations, communities, or other large social groups in which violence is used for the settlement of a quarrel. Cicero defines it as 'genus decertandi per vim' in distinction from the method of argumentation (*disceptatio*).[1] In ethical discussion it has been defined as 'conflictus multorum contra multos extraneos': it is not a state of general antagonism, but a conflict in which matters are forced to an issue; it is the affair of many or of masses, and the name may not lightly be used to dignify sedition.[2] In legal definitions the term has been limited to conflicts in which the belligerents are states, or at least combinations which can reasonably claim a higher status than bands of rioters or brigands.

'War is a contest carried on by public force between states, or between states and communities having with regard to the contest the rights of states.'[3]

The aspects of war on which the genius of language fixed in its coinage of words may still to some extent be recognized.

(*a*) *Approach and assault.*—Πόλεμος, from root *pel*, akin to πέλας, πλησίον (perh. *pello*), seems to express the idea of going at, or 'going for.'[4] πλήσσω, *plango*, may be from the same root. 'Battle,' O.Fr. *bataille*, L.L. *battualia*, from root *bhā*, 'to smite,' with Celtic cognates, recalls the blows and the clash of arms.[5]

(*b*) *A contest between two adversaries.*—*Bellum* is commonly explained from the alternative form *duellium* as the quarrel which it takes two to make—'quod duabus partibus de victoria contendentibus dimicatur.'[6]

(*c*) *An intense effort.*—*Krieg*, O.H.G. *Kreg, Kric, Kriec*, laid stress on the excited and strenuous exertion, and later on the gain which resulted.[7] O.H.G. *Wic*, with derivatives, seems to have had the same primary and secondary meanings.

(*d*) *Confusion and tumult.*—The word 'war,' late A.S. *werre*, O.H.G. *Werra*, L.L. *werra*, Fr. *guerre*, if connected (as commonly) with *wirr, verwirren*, may have sprung from the observation that 'every battle of the warrior is with confused noise' (Is 9^5 AV), or that war upsets the general order of things. The root may, however, be *ver*, preserved in *Wehr, wehren*, weir, beware, guard (cf. *vereor*), when the term would be an illustration of the habitual apologetic tendency to attribute to all wars the character of self-defence.

(*e*) *Organized movement.*—Heb. מִלְחָמָה, from root לחם, 'to set in order,' draws attention to the ordered action of the battle array.

(*f*) *The fateful plight.*—A.S. *or-lege*, O.H.G. *Or-loge*, Dan. *or-log*, may reflect the fatalistic mood which is fostered in war, or the common experience that nowhere else is man so surely in the hand of God and so little certain that he can himself control the issue. This interpretation has been supported by connecting the verbal group with the Norns, the Moirai or Parcæ of the North.[1]

II. *THE PREVALENCE OF WAR.*—War has been one of the most constant and distinctive features of human history, and it may even be thought to be a sinister peculiarity of the human species that hordes should pursue hordes of the same kind with a persistent purpose of rapine and destruction.

The pre-historic age, which extends over tens of thousands of years down to about 5000 B.C., enjoys a fairly pacific reputation. If it was usually raining, as Ratzel puts it, the age was at least free from the thunderstorm and the devastating floods of war.[2] Man being the *animal inerme*, furnished by nature with no more formidable weapons than fists and teeth, he was too much preoccupied by his designs on the beasts, and by theirs against himself, to meddle much with his own species except when rival claims emerged over a hunting-ground, or at a later stage over pastures and wells (Gn $13^{7f.}$ $26^{19f.}$).

'Pastoral man,' it is observed, 'hardly needs tools, or weapons either, for it is to the common interest of pastorals to range apart, and on the steppe there is room enough for all.'[3] 'It is doubtful,' it is added, 'if serious war was known in Europe until the Bronze Age was established.'[4]

Historic times have their landmarks in the rise, the conquests, and the fall of great military states. In the period of Oriental antiquity martial races moulded the history of China and India. Further west, and in the central current of history, arose the powers of Egypt and Mesopotamia, which during thousands of years engaged in an ever-renewed struggle for supremacy, while in the intervals Mesopotamia was the scene of a fierce and prolonged conflict, waged with alternating success, between the rival peoples of Babylonia and Assyria. From these centres of empire there also proceeded frequent campaigns against sedentary or migratory peoples which raised a threatening front in Western Asia, or which tempted warlike kings by prospects of sovereignty and spoils. In the end Assyria was overthrown by Babylonia, Babylonia by the Persians, and a Persian empire entered on its course with a similar programme of conquest and tribute that brought it into collision with Greece.

In the age of classical antiquity, when the scene shifted to the Mediterranean, and the Greeks and Romans assumed the chief rôle, war continued, notwithstanding the growing culture, to be regarded as the most honourable and almost the most urgent of human pursuits. Men had now iron weapons in their hands, and the Aryans had arrived on the central European stage to show how effectively they could be used. The Greeks made their advent as barbarian conquerors from the north, who served themselves heirs to an older civilization that had developed its powers and accumulated its treasures in the Levant. Thereafter they went on fighting with little intermission—against the Trojans, as they said, for Helen of the glorious tresses and for honour, but doubtless also with an eye to dominion and the wealth of Anatolia, against the Persians in maintenance of their racial independence, against one another from cupidity, ambition, or jealousy; while even in their exhaustion they could claim for Greek arms a considerable share in the conquests of Alexander the Great, and in the creation of his grandiose but short-lived empire. In the meantime the Romans, dug from the same pit, and similarly equipped, gradually made themselves masters of Italy, settled the long-drawn and hard-

fought issue between the Semites and the Aryans through their victory over Carthage in the Punic Wars; and by the beginning of our era, notwithstanding the distractions of civil broils, they had subjugated and embraced within their empire a great part of the known territories of the three continents. Under the Roman emperors it seemed for two or three centuries as if the curse of war had wrought its own cure, and the world had been saved by the sword from the sword, but the hope was short-lived, and the Pax Romana proved to be only a lull that heralded more furious storms.

The period of antiquity came to a catastrophic end, and the Middle Ages were ushered in by the Teutonic migrations, which reduced the Roman empire to ruins, and gave new masters, with a fresh deposit of population, to its richest and fairest provinces. The outcome was that for the next ten centuries Europe was afflicted by wars of every known kind—between imperial dynasties like the Carolingian and peoples which repudiated their sway; between the new-born nations as in the Hundred Years' War of England and France; between rival claimants to a throne, as in the English Wars of the Roses; between the central authority as represented by a king and feudal aristocracies which magnified regional and particular interests; between the governing classes and oppressed populations which sought redress or revenge in social war. Religion supplied additional motives and occasions. In the early Middle Ages the armies of Islām penetrated into the heart of Europe, and at a later date Christendom retaliated in prolonged and sanguinary Crusades for the recovery of the Holy Sepulchre.

The modern age, dating from the beginning of the 16th cent., has perhaps had more intervals of repose, but it has found evil compensation in the magnitude of the struggles and the destructiveness of the operations. Instinct and tradition disposed the European rulers to seek an extension of their dominions whenever opportunity arose, while the discovery of the new world offered to the possessors of sea-power the prospect of unlimited aggrandisement and wealth. The possibilities of effective warfare were also enormously increased, in the centuries that followed the invention of gunpowder, by the enlistment of science in the improvement of the instruments of destruction. During the last four hundred years the outstanding fact in the political history of Europe was that one great power after another—Austria, Spain, France, Germany—sought to become the master of the Continent, while at each stage the nations which felt themselves threatened formed combinations which should be strong enough to frustrate, and which also deemed it prudent to anticipate, the development of ambitious and aggressive schemes. The programme of Britain was to rule the seas, and to avert a European hegemony. The result was that almost every generation witnessed a European war of the first magnitude—among them the Thirty Years' War, the War of the Spanish Succession, the War of the Austrian Succession, the Napoleonic Wars, and finally the World War of 1914–18, which has cost Europe the lives of 10,000,000 picked men, decimated wide areas of Europe by famine and disease, swallowed up one-third of the accumulated wealth, and shaken to its foundations the moral order no less than the economic fabric of society. The peace of the modern world has also been disturbed by the ferment due to the assertion of the ideals of democracy and nationality in opposition to the arrangements of an existing order. The democratic cause has its military monuments in the English Civil War of the 17th cent., and in campaigns of the French Revolution, but for the most part it has pursued its triumphant progress without the necessity of sanguinary, or at least of prolonged, fighting. The spirit of nationality, which developed in the 19th cent. with extraordinary fervour, promoted war in several ways. On the one hand, it claimed independent sovereignty for populations which could establish a claim to nationhood on physical or historical grounds, and thus came into collision with existing imperial structures, giving rise to wars of emancipation such as those which liberated the Greeks and the Balkan peoples from the rule of the Turks, and the convulsions which have dissolved the heterogeneous Austrian empire. On the other hand, the national spirit fosters the ideal of the consolidation of separated kinsfolk in a single state, and this aspiration dictated the mid-century policy of Prussia which achieved the desired unification of the German people through the Austro-Prussian campaign of 1866 and the Franco-German War of 1870. Imperial ambitions also proved to be a natural sequel to the fulfilment of national aspirations. Within the great realms trouble has arisen, apart from any racial antithesis, in connexion with the respective rights of a central authority and of the subordinate members: in the 18th cent. the American colonies, in assertion of colonial rights against imperial claims, fought the American War of Independence; in the 19th cent. the Southern States of the Union affirmed the indestructible rights of particular states in opposition to the prerogatives of an indestructible Federation, and the matter was brought to an arbitrament in the American Civil War. Finally, the modern world has had grave warning that, if the religious war is obsolete, religious enthusiasm has been replaced by a more violent fanaticism rooted in political and social ideals, as was evidenced in some of the phases of the French Revolution and most recently in the spirit and the efforts of Soviet Russia.

III. *THE CAUSES OF WAR.*—War is traceable to elemental desires and passions of human nature. According to Hobbes, its threefold root is the desire of gain, the fear of injury, and the love of glory.

'In the nature of man, we find three principal causes of quarrel. First, competition; secondly, diffidence; thirdly, glory.

The first, maketh men invade for gain; the second, for safety; and the third, for reputation. The first use violence, to make themselves masters of other men's persons, wives, children, and cattle; the second, to defend them; the third, . . . for any sign of undervalue, either direct in their persons, or by reflection in their kindred, their friends, their nation, their profession, or their name.'[1]

This analysis is useful, but it unduly simplifies the psychological problem.

(1) The desire for gain, in the narrower sense intended by Hobbes, has doubtless supplied the principal impulse to warlike aggression. Territory, with the attendant booty of various kinds, has been the usual stake in war, coveted alike by peoples and by dynasties. At the same time cupidity in the matter of territory has often been associated with other motives involving lesser degrees of culpability, and even trenching on the realm of the virtues. Account has justly to be taken of the frequent play of fairly reputable reasons—as the pressure of famine or scarcity, resulting from drought or the increase of population, the defence and development of trading interests as vital to the subsistence of a commercial nation, the migratory impulse, the spirit of adventure, and also the consciousness of a mission to develop waste or neglected regions of the globe, and to conquer and take charge of people for their own good.

(2) The fear of injury, as well as the resentment due to actual injury, has unfailingly prompted to defensive war when resistance was possible, and

1. *Works*, London, 1839, iii. 'Leviathan,' p. 112.

often when it might well be deemed hopeless. The interests which nations have usually been prepared to defend at all costs are, in addition to their territory, their jurisdiction and their honour. It has also been commonly accepted that a palpable and growing threat to these interests justifies a nation in seizing a propitious opportunity for an anticipatory or preventive war.

(3) The desire of glory has in the main been a dominant motive of the great conquerors and of their armies, but it has also taken possession of peoples. Apart from such ambition, indignation at a national insult has proved to be capable of evoking the utmost effort and self-sacrifice.

(4) The desire of power is an additional motive which cannot be entirely resolved into cupidity. It is true that power may be sought as the means of appropriating territory and increasing the wealth of a people, but nations as well as individuals find satisfaction in the exercise of power as an end in itself. This desire manifests itself positively in the attempt of a nation or class to acquire dominion over others. The love of power for its own sake has been an important factor in the movements which established the great empires of history, and it has been not less conspicuous in struggles for the supremacy among allied states—as illustrated in the ancient rivalry of Athens and Sparta, and in the modern contest of the German principalities which issued in the hegemony of Prussia. It has also supplied much of its energy to civil strife, and on occasion has kindled the flames of civil war. The desire of power comes into collision with the spirit of liberty. The demand for liberation is the natural response to the policy of domination, being rooted in the same appreciation of power; and, as the assertion and extension of the power of one nation or class presupposes the abridgment of the power of another, a system of imperial rule or of autocratic government involves the permanent possibility of wars directed to the achievement of national independence or of political revolution.

(5) The passions of hatred and revenge have also furnished a relatively independent motive. A nation can take up an attitude that is on a still lower plane than brutal selfishness; it can become inspired by a hatred of the diabolic kind which makes it disregard even the counsels of self-interest for the satisfaction of inflicting deadly injury on a loathed enemy. The spirit of hatred has sometimes been engendered by centuries of conflict or oppression, sometimes it has had its spring in deep-seated differences of racial character and culture.

(6) Finally, a religious zeal which can no more be resolved into self-interest than hatred has been the cause, and not merely the pretext, of many wars. Zeal for the glory of God at least co-operated with lust of booty to inspire the onslaughts of Islām, and it blended with the spirit of adventure in the Christian Crusades.

IV. *THE REACTION AGAINST WAR.*—The most general explanation of war is that men and nations have a legitimate desire for the goods of wealth, honour, and power, and that they are tempted to grasp them by force instead of earning wealth by labour, and honour and power by service. Human nature, however, embodies other principles to which this peculiar method of acquisition, with its inevitably cruel accompaniments, has constituted a challenge, and which have reacted against it in varying degrees of criticism and opposition. The complex constitution of man exhibits along with his ingrained selfishness a vigorous sense of justice and a lively capacity of sympathy; and at least one of the belligerents must usually have been conscious of a gross violation of his sense of justice, while the butchery and the atrocities attending the stricken field and the sack of a city, when reviewed in cold blood, must often have excited the commiseration even of the conquerors. The general conscience, accordingly, from an early date, pressed for a certain ethical regulation of the occasions and of the practices of war. The great religions strongly supported the ethical plea. At the animistic stage, it is true, religion was practically indifferent to moral considerations, but the faiths which captured the mind of Asia and Europe were agreed in representing it as normally a part of religion to do justly and to love mercy even in the waging of war. Philosophy, with its distinctive appeal to rational considerations, has also contributed to foster and diffuse critical and reforming opinion through its disciplines of Moral Philosophy and Jurisprudence. The theoretical work was followed up in the 19th cent. by international conventions and conferences which established a fairly authoritative code of International Law.

The moral reaction against war has culminated from time to time in the assertion that war is essentially immoral, and in the repudiation of any traffic with it, in any cause whatsoever, as an unworthy compromise. It will be convenient to deal first with this radical position, which is supported by a considerable show of moral authority, before proceeding to trace the influence of religion and morality in the discrimination of just and unjust wars and in the humanization of the conduct of war.

V. *THE LAWFULNESS OF WAR.*—There have doubtless been men in all ages who have objected to war, and refused to have any hand in fighting. They could be determined to this attitude either by sheer cowardice, or by counsels of prudence natural to a difficult or desperate situation, or again by the conviction that the shedding of human blood was a criminal outrage, and in any case a futile way of attempting to oppose and prevent wrong-doing. At the risk of their principle being mistaken for cowardice, voices have been raised on the heights of moral idealism in absolute condemnation of war and all its works.

i. THE RELIGIOUS JUDGMENT.—1. **The older religions.**—While the Vedas are sufficiently warlike, and Brāhmanism gives a consecration to the military caste, the mild spirit of Hindu religion tended to view war under the repugnant aspect of murder.

'Alas! we are engaged in committing a heinous sin, seeing that we are making efforts for killing our own kinsmen out of greed of the pleasures of sovereignty. If the sons of Dhritarāshtra, weapon in hand, should kill me in battle, me weaponless and not defending (myself), that would be better for me.'[1]

The influence of Buddhism was cast on the same side.

'If you desire to honour Buddha,' said a Brāhman who successfully mediated between two belligerents, 'follow the example of his patience and long-suffering.' 'Conquer your foe by force, you increase his enmity; conquer by love, and you will reap no after-sorrow.'[2]

The teaching of the OT prophets contains a decided pacifist strain. They condemned wars of aggression as magnified schemes of murder and plunder, and they were disposed to think defensive wars useless or unnecessary—useless, since a wicked nation would not escape punishment; unnecessary, since a righteous or repentant nation might safely dispense with armaments, and look for protection to the omnipotent Ruler of history (Is $31^{1.\ 5.\ 8}$). It may, however, be questioned whether the prophetic attitude meant more than that non-resistance was the duty of Israel in the special circumstances of the situation and time (Jer $28^{12ff.}$). The great prophets lived at a period when it was a manifest inference from the providential order of the world

[1] *Bhagavad-Gītā*, *SBE* viii. [1882] 42.
[2] *Life of Buddha*, *SBE* xix. [1883] 328 f.

that a pacific and submissive policy was the duty of their little border-state, and they might well have judged differently of the duty of a nation to which had been providentially entrusted a larger and more promising political mission than was open to Israel under the conditions of the 8th and 7th centuries before the Christian era.

2. The bearings of the Christian ethic.—The teaching of our Lord and of His apostles includes precepts which on a first impression appear to rule out all traffic with war as inconsistent with the moral ideal. Not only is there a law of love, which condemns the passions that incite to aggression, but there is a law of meekness, expressed in non-resistance, which suffers the aggressor to work his evil will.

'Ye have heard that it was said, An eye for an eye, and a tooth for a tooth: but I say unto you, Resist not him that is evil: but whosoever smiteth thee on thy right cheek, turn to him the other also. And if any man would go to law with thee, and take away thy coat, let him have thy cloke also' (Mt $5^{38\text{-}40}$ RV). 'Ye have heard that it was said, Thou shalt love thy neighbour, and hate thine enemy. But I say unto you, Love your enemies, bless them that curse you, do good to them that hate you, and pray for them which despitefully use you and persecute you' (v.$^{43\text{ff.}}$).

'Avenge not yourselves, beloved, but give place unto wrath: for it is written, Vengeance belongeth unto me, I will recompense, saith the Lord' (Ro 12^{19}).

The precepts were enforced by the example of Jesus, who 'left an example that ye should follow his steps,' and who, 'when he was reviled, reviled not again; when he suffered, he threatened not; but committed himself to him that judgeth righteously' (1 P $2^{21.\ 23}$).

As to the bearing of this teaching on the lawfulness of war, there have been two schools of Christian opinion.

(*a*) *The literalist interpretation.*—The view was widely prevalent in the early Church that war is an organized iniquity with which the Church and the followers of Christ can have nothing to do. This sentiment was expressed, though with varying degrees of lucidity and emphasis, by Justin Martyr, Tatian, Irenæus, Tertullian, Origen, Athanasius, Cyprian, and Lactantius.[1] The allusions to the subject are often casual, and the pacifist testimony sometimes does no more than affirm the undeniable position that the Church differed from the kingdoms of this world in that it cherished no schemes of conquest, equipped no military forces, and did not dream of propagating the faith, or even of resisting persecution, by armed rebellion. But the position was also definitely taken up that war as such was an institution of the realm of darkness, and some were quite emphatic that a professed Christian should not be mixed up with the foul and devilish thing.

'It is not lawful,' says Lactantius, 'for a just man to engage in warfare, since his warfare is justice itself.'[2]

The prohibition of military service was partly due to the consideration that the soldier was required to compromise his faith by participation in the pagan rites associated with Roman warfare, and to jeopardize his character by association with brutal and licentious comrades, but objection was also taken on principle to the military profession, and was supported by arguments such as these—that the military oath was inconsistent with the pledge of loyalty to Christ, that Christ had warned His disciples against taking the sword (Mt 26^{52}), that, if the lesser strife of litigation be forbidden, much more is the greater (1 Co 6^{7}), that, if it be unlawful to fight on our own behalf, it is also unlawful to fight in the quarrels of others,[3] and especially that in war men fight to kill, and that intentional killing is murder.[4] The last consideration so impressed the general ecclesiastical mind that certain canons of the period excluded a soldier from the Lord's Table till penance had been done for the blood that had been shed.[1]

The literalist view, which had its exponents throughout the Middle Ages and at the Reformation, was made a cardinal tenet of 'the people called in scorn Quakers.'

'Whoever can reconcile this, Resist not evil,' says R. Barclay, 'with, Resist evil by force; again, Give also thy other cheek, with, strike again; also, Love thine enemies, with spoil them, make a prey of them, pursue them with fire and sword; or, Pray for those that persecute you, with, persecute them by fines, imprisonment and death itself; whoever can find a means to reconcile these things, may be supposed also to have found a way to reconcile God with the Devil, Christ with Antichrist, Light with Darkness, and good with evil.'[2]

The doctrine has recently been popularized by Tolstoi, who developed it in the thoroughgoing fashion which would also sweep away the whole of the machinery by which civilized states repress and punish crime. The justification offered for war, he says, is that it seeks to repair or avert injury, while the command of Christ is that we offer no resistance to injury. The practice of war is no less inconsistent with the injunction to love our enemies. It may be objected that Jesus does not prohibit war in set terms. But 'a father who exhorts his son to live honestly, never to wrong any person, and to give all that he has to others, would not forbid his son to kill people on the highway.'[3]

(*b*) *The reasoned judgment of the Church.*—The mind of the primitive Church, so far as reflected in the NT, does not join in the unqualified condemnation of war. The Church of the apostolic age found solace in apocalyptic dreams which presupposed that the final redemption of humanity would follow upon appalling conflicts between the powers of heaven and hell, of which the Christian saints, who would be collected in a camp, would at least be sympathetic spectators (Rev 20^{9}). In any case the Epistle to the Hebrews pronounces a glowing panegyric on warrior saints of the Old Dispensation ($11^{32\text{ff.}}$), while the book of Acts welcomes Cornelius the centurion to the Christian society ($10^{1\text{ff.}}$). During the succeeding four centuries, as has been exhaustively shown by Moffatt in the article cited, the Church as a whole declined to be committed to the extreme position. From Tertullian himself we learn that there were numerous Christians in the Roman army by their own choice, and that the Church did not condemn them. Clement of Alexandria taught that the position of a soldier was governed by the Pauline principle that a man should 'abide in that calling wherein he was called.'[4] Diocletian found so many Christians in the army that he deemed it a danger to the State, and Constantine was impressed by their importance as a military asset no less than as a political influence. When Christianity became the religion of the empire, the general tendency, exemplified by Eusebius, was to support the civil power by the benediction of military service. The Council of Arles in one of its canons appears to have visited ecclesiastical censure on those who abandoned the army even in time of peace from conscientious scruples.[5] Some even thought that the sword might be drawn in a holy war for the extirpation of idolatry.[6] Ambrose eulogized the warlike courage which prefers death to bondage and disgrace, and claimed the OT

warriors as spiritual ancestors. He even adopted the classical maxim that one who does not defend a friend from injury is as much at fault as he who commits the injury.[1] Augustine was forced to face the question by the havoc of the Teutonic migrations and the peril of the empire, and his active mind fully explored the subject and laid down the lines on which in the main the thought of the Churches has subsequently moved.

That war is sometimes lawful on Christian principles is maintained by Augustine on these and other grounds: (*a*) that it has been and may be waged by appointment of God;[2] (*b*) that the case of a wanton and rapacious attack by one nation on another falls under the same category as the crimes of murder and burglary, and should presumably be similarly dealt with;[3] (*c*) that John the Baptist did not require the soldiers to abandon the service, but only exhorted them to do violence to no man and be content with their wages.[4] The implications of the Sermon on the Mount are most fully discussed in the Epistle to Marcellinus, which was called forth by the pagan objection that the precepts of non-resistance were inconsistent with public policy, and would prove ruinous to the State.[5] The precept to turn the other cheek to the smiter, Augustine says, cannot be taken literally. What it requires is an inward disposition of patient good-will towards the aggressor, and it does not prescribe any uniform manifestation of the disposition in act, as appears from the fact that Jesus Himself at least protested against violence (Jn 18^{23}; cf. Ac 23^{3}). We ought always to cherish the spirit of clemency, and be willing to render good for evil, but 'many things have to be done in which we have to pay regard not to our own kindly inclinations but to the real interests of others, and their interests may require that they should be treated, much as they may dislike it, with a certain benignant asperity': 'Cui licentia iniquitatis eripitur, feliciter vincitur, quoniam nihil infelicius est felicitate peccantium, qua poenalis nutritur immunitas, et mala voluntas velut hostis interior roboratur.'[6] At the same time war is merely a means to the end of peace.[7] It is better and more glorious to achieve peace by peaceable means than by war.[8]

Thomas Aquinas replies as follows to objections founded on the teaching of Jesus.

(*a*) 'Jesus said that he who takes the sword shall perish by the sword.' But 'to take' means 'to use without warrant,' and the words only prohibit unauthorized or private persons from drawing the sword. (*b*) 'War is inconsistent with the command that we "resist not evil" (Matt. 5: 38) and "avenge not ourselves."' But these injunctions are fulfilled by the cultivation of a placable spirit, and cannot require us to do mischief by allowing wickedness to go unpunished. (*c*) 'If the peacemakers are blessed, war-makers are accursed.' But war may be the best or the only means of attaining the end of peace.[9]

Luther held that the gospel presupposes natural rights and duties, and vigorously defended the Christian soldier.[10] Calvin argued that war is a branch of the work of retributive justice which has been entrusted by God to the civil magistrate, and that it has the same moral justification as the police measures which protect the citizens against the criminal population.

Whether it be a king who does it on a big scale, or a scoundrel who does it on a small scale, he is equally to be regarded and punished as a robber. It is no breach of the command, 'Thou shalt not kill': the slaying of the authors of the unjust war is an execution, the judge is God, and the fighting men who defend the right are merely God's instruments. If it be objected that the NT does not expressly permit Christians to fight, it is to be observed that the NT does not undertake to legislate about civil polity, and that it presupposes the OT, in which the greatest men of God, like Moses and David, were mighty men of valour in the service of God.[11]

The topic received prominence in the leading Protestant Confessions, which found it desirable to allay any misgivings that might be felt by princes as to the political implications of evangelical religion. The modern Protestant literature of Christian Ethics[12] is in general agreement with the Roman Catholic moralists.[13]

The ultra-pacifist interpretation of Christian duty, while plausible, really rests on a superficial view of the ethical system of Christianity. It ignores an observation which is now a commonplace of the science of Comparative Religion, viz. that, in distinction from the nomistic religions which attempt to lay down hard-and-fast precepts prescribing the action to be taken or avoided in particular situations, the ethical scheme of Christianity consists essentially of a stock of principles, accompanied by some illustrations of how they are to be applied in practice. Had Christianity been a nomistic religion, it would have distinctly enacted that 'war is always sin,' or would have enumerated all the cases in which it is lawful; being a religion of the spirit, it bequeathed to the Christian Church, and to all others that claim the Christian name, the task of forming a Christian judgment upon a diversity of concrete questions and situations as they may arise. Again, the original Christian ethic, so far as elucidated in detail, was chiefly illustrated from the individual sphere. While the OT is mainly concerned with the nation, the NT is mainly concerned with God and the soul; and the consequence is that little was done to illustrate the application of Christian principles in the political departments of thought and action, which for the most part lay outside the purview of the primitive Church.

There are, now, besides non-resistance, two other principles, deeply embedded in the teaching of Jesus, which demand to be carefully weighed before a judgment is formed as to the lawfulness of war in the abstract or the sufficiency of a particular occasion of war. The doctrine of retributive justice, to begin with—that wickedness ought to be and will be punished—filled at least as large a space as the doctrine of non-resistance in the circle of Christ's thought. He pronounced upon Jerusalem an inevitable doom because of its obdurate blindness and disobedience (Mt $23^{37ff.}$), and He drew the picture of a last judgment in which the wicked and impenitent would be punished according to their works (Mt $25^{31ff.}$). The idea of penal retribution, moreover, is the central and inspiring thought of the apocalyptic sections of the NT, represented by eschatological discourses of Jesus (Mt 24), the Pauline Apocalypse (2 Th 2), and the book of Revelation. And, if it be a law of the universe that wickedness ought to be restrained and punished, if God Himself, while ready to forgive on condition of repentance and submission, and ever taking the initiative towards reconciliation, fights against the obdurate rebels of His dominions with all the resources of His providential order, not to speak of the menaces of apocalyptic prediction, it may well be thought incredible that Christianity has made it criminal for a nation to be a fellow-worker with God in restraining the powers of wickedness and in seeing justice done upon the earth. The ultra-pacifist school thinks fit to impose upon the nations a code of morality and a plan of procedure which, if absolutely binding, would entail grave censure on God Himself and give ground for an indictment of the methods of His government of the universe.

Further, in forming a Christian judgment as to the lawfulness of war, respect must be chiefly paid to the master-principle of the Christian ethic, which is love of man as man. It is of course evident that, if Christian charity were universal, there would be no more war, and also that, if war took place, a belligerent animated by Christian love at its highest reach would differ in vital respects from any pattern shown in history. But the essential feature of love is that it seeks the welfare of its objects, not necessarily that it seeks it by the measures suggested by easy good nature

—as is sufficiently familiar in the discipline of the family and in the social provisions of the penitentiary and the gaol. The law of love, now, has three main applications for a nation—in reference to the race as a whole, in reference to a particular enemy, and in reference to its own population; and in the face of unjust aggression the law of love may actually urge a demand for forcible resistance on a threefold ground. The interests of the race may require it: a nation is no benefactor of mankind if it does nothing to support, and even contributes to undermine, the general arrangement that the world is a realm of moral order. That the nation which checks and chastises another in a criminal enterprise is in a real sense its benefactor is supported by the contention of Plato in the *Gorgias* that it is a greater evil to commit injustice with impunity than to be punished for it, inasmuch as the wicked who go scot-free are deprived of the valuable remedial discipline of merited chastisement. Again, the Christian law of love lays special stress on what may be called duties of guardianship, which were exemplified in the attitude of Jesus towards the house of Israel, towards Jerusalem, towards little children, and towards those who were called 'his own.' And in considering the duty of a state in regard to war, it has to be remembered that, while in one point of view it is a collective personality which has to think and act as one, in another point of view it consists of those who rule and of those whose interests are committed to the trust of the rulers. It is therefore absurd to maintain that it can be a postulate of Christian morality that the rulers of a nation are under obligation, not merely to sacrifice themselves, but to take the responsibility of sacrificing others who instinctively look to them for protection, and of abandoning old men, women, and children to privations, sufferings, and moral perils. The Christian spirit was surely better interpreted in the mediæval code of chivalry.

The literalist view also overlooks a serious difficulty as to the possibility of rendering an act of national self-sacrifice of unquestionable sacrificial value. The suggestion is that, even as Christ suffered Himself to be led as a lamb to the slaughter, so a Christian people might dutifully, and with similar profit, suffer a national crucifixion; but it is forgotten that for a sacrifice there is needed a stainless as well as a willing victim, and no nation that is or has been has remotely possessed the spotless perfection, not to speak of the willing mind, which would qualify it for a literal imitation of Christ in this regard, or give promise that if attempted it would produce effects in any degree comparable with the effects of the sacrifice once offered on Calvary.

Christian thinkers have, then, to take their orders from the whole Christ and not a fragmentary Christ—from the Christ who is the expression of the complete moral purpose of God, the revelation of justice and love as well as meekness. And from this standpoint it may be maintained with a good conscience that Christianity makes room for warfare in co-operation with God in a world which teems with violence and injustice, breaks His laws, and challenges His righteous authority. But, while the principles of meekness and clemency have no title to be the sole determinant of the international relations of a Christian state, they ought to make their influence effectively felt as maxims of co-ordinate dignity and authority: they ought to have such recognition that every concession short of the impossible should be made to avert war, hatred and revenge should be ruled out from deliberation as the most dangerous and short-sighted of counsellors, magnanimity should prevail in the day of victory, and after the struggle everything should be attempted to obliterate the evil memories and to promote sincere and lasting reconciliation.

The question as to whether a Christian may lawfully bear arms is governed by the decision as to whether a nation may lawfully engage in war. Clearly it cannot be wrong to give personal assistance towards the execution of a necessary and righteous task. The debt which a man owes to the State is even greater than that which he owes to his parents, and the desertion of parents in sickness or old age is not more discreditable than the refusal by a citizen of such service as it is in his power to render to his fatherland in its time of distress or peril. It is less easy to define his duty in the case of a war which he thinks unjust, and in which he is compelled to fight; and all that can be said is that, except in a case of manifestly flagrant injustice, the average person has reason to credit the chosen rulers of a civilized state with possessing more knowledge and wisdom than himself, and at least as great a sense of responsibility. Those who refuse to fight from a genuine conviction that it is unlawful to shed blood are wisely treated with consideration in the modern world, inasmuch as conscience, even when uninstructed, is an asset which a nation cannot disparage and flout without grave injury to its higher life.

Recent events have revived interest in the relation of ministers of religion to military service. The claim to immunity was very generally made for heathen priesthoods, and allowed by the secular power.[1] The question did not arise in the circumstances of the Christian Church in the early centuries.[2] The popes and bishops of the mediæval Church were often involved in war, and could even foment it in support of their worldly interests, but the official teaching was that it was unlawful for all clerics who belonged to the *ordines majores* to take a direct part in the shedding of blood. The conclusion of Thomas Aquinas is to this effect:

'Cum bellica exercitia hominem maxime a divinorum contemplatione avertant, et ad humani sanguinis effusionem tendant, minime clericis ac spiritualibus personis bellare licet, nisi in necessitatis articulo.'[3]

Military service, it is added, is inconsistent with the clerical office on two grounds—it is inconsistent with the cultivation of a spiritual temper and the discharge of pastoral duties, and in particular those who are ordained to minister at the altar should rather be eager themselves to suffer as martyrs than think it seemly to spill the blood of others.[4] The Lutheran Church has followed this tradition,[5] and the Anglican Church re-affirmed its adherence to it during the recent war by forbidding the clergy to offer themselves for combatant service. The Reformed Churches, narrowly so called, while agreeing that in ordinary circumstances ministers have an all-important spiritual function to perform in war and should abide in their calling, have taken a broader view of what is covered by the accepted condition 'in articulo necessitatis,' and have occasionally left it to ministers, as was lately done by the Church of Scotland, to judge for themselves as to whether the necessity was such as to require them to offer their services as fighting men to the State. On the question of principle it may be observed that it is difficult to maintain the view that the clergy as representatives of Jesus Christ ought to refrain

1 'Druides . . . militiae vacationem, omniumque rerum habent immunitatem' (Cæsar, *de Bell. Gall.* vi. 14).

2 'Nec ad arma jam spectat usus noster' (Ambrose, *de Offic. Ministrorum*, i. 35).

3 II. ii. qu. xl. art. 2.

4 Cf. Elbel, ii. 54: 'an liceat etiam clericis pugnare.'

5 H. Martensen, *Christian Ethics*, Eng. tr., Edinburgh, 1892, div. ii. p. 236.

from all violence and the shedding of blood, and at the same time to resist the Quaker contention that the same prohibition extends to persons of every class who profess and call themselves Christians. Further, while it is generally admitted that the clergy may and ought to encourage the soldiery to fight in a just cause, in the ordinary judgment of mankind a person who thinks it wrong or degrading to do a thing himself ought not to aid and abet others in doing it. The argument based on 2 Ti 2[4] can be used with equal force in support of the view that the clergy should not be distracted from their spiritual work by the cares of married life or by the discharge of the duties of any civic office. It may be added that the traditional attitude of the Church seems to have been largely determined by the interest felt in magnifying the distinction of priesthood and laity, and by the reflex influence of the mediæval sacramental doctrine.

ii. THE PHILOSOPHICAL VINDICATION. — The verdict of ethical philosophy, ancient and modern, has been that under certain conditions war is justifiable, and non-resistance blameworthy and even immoral. The Greek view was summarily expressed by the inclusion of courage among the four cardinal virtues. Justice, according to Cicero, involves for nations as for individuals the duty of preventing injury and of exacting punishment and reparation. The modern schools have their varying conceptions of the ground of obligation and of the nature and basis of natural rights,[1] but there has been practical unanimity as to the moral justification of self-defence when one nation is assailed by the ambition and cupidity of another. From the intuitionist point of view there is an eternal and immutable moral law attested by conscience, which includes the requirement that nations shall render to all their due, and, in the absence of other machinery for making the law effective, it is held to be the duty of the particular nation to do what lies in its power to enforce and safeguard this obligation. From the utilitarian standpoint repressive and punitive action is held to be called for in view of the disastrous effects which unrestrained injustice would produce for particular nations and the general life of the race. The doctrine of non-resistance, Herbert Spencer argues, is anti-social, as it involves the non-assertion, not only of one's own rights, but of those of others, while it holds out no prospect of leading to the desirable end of international peace.[2]

The findings of the jurists, while reflecting the varieties of ethical theory, are at one in giving an affirmative answer to the question, 'an bellare unquam justum sit.' Grotius argues that recourse to war is permitted and approved by the law of nature, by the consent of the many and of the wise, and by the law of nations, as well as by the divine law which was promulgated and attested in the Scriptures. The law of nature has two branches—the course dictated by natural instincts, and the principles approved by reason. This law intimates its permission of war through the universal instinct of self-preservation, accompanied as it is by nature's disclosure of purpose in the provision of means of defence to all creatures, and also by the voice of reason which makes it clear that the well-being of society is incompatible with the unchecked reign of violence.[3]

By the law of nature, says E. de Vattel, the nations are under an obligation to do justice and also have the right to be treated with justice; and 'it would be in vain that nature gave us the right of not suffering injustice, and required others to be just towards us, if we could not legitimately use compulsion when they refuse to acquit themselves of this duty.'[1]

Some recent treatises find it sufficient for their purpose that the practice of war is a human custom, and they prefer to leave to philosophy the treatment of the question of the ultimate justification.

VI. *THE DISTINCTION OF JUST AND UNJUST WARS.*—The primitive view was that fighting was as natural and proper as any other means of acquiring wealth and servants, and the only matter needing careful consideration was the prospect and the cost of success in a particular venture. From a comparatively early period, however, the moral consciousness drew a distinction between just and unjust wars, and procured for the distinction such recognition that almost every belligerent has been anxiously concerned to make out that he had the sanctions of morality and religion on his side.

1. **The distinction in the non-Christian religions.**—The distinction of just and unjust wars was impressed on the princes of China and India by the higher religions of the East. Greek religion did something to develop a conscience in regard to occasions of war, at least as carried on among the Hellenic tribes. The Romans understood that it was the will of the gods, not merely that wars should begin and end with solemn ceremonies, but that they should be waged only with a view to redress or security, and they were taught that their piety in these respects had been rewarded by the series of victories which safeguarded and extended their empire.

The general view represented in the OT was that wars of aggression, such as were waged by the insatiable and arrogant Asiatic empires, were wicked and criminal, and that wars waged for the defence or liberation of a people, like those organized by the Judges and the good kings, were in accordance with justice and the known will of God. The criminality of the heathen wars of conquest was not held to be inconsistent with the observation that they were sometimes used for the merited chastisement of other peoples: the guilt was the aggressor's, God's were the wisdom and the power that made the wrath of man to praise Him, and that in the end over-ruled the evil for good. The prohibition of the war of conquest was, however, subject to exceptions—even from the point of view of the prophetic idealism. It was an axiom of the historical writers, even of those of the prophetic school, that the conquest of Canaan by their fathers had been abundantly justified, partly on the ground of an ancient promise and of the provisional occupation by the patriarchs, partly because the conquest and even the extermination of the Canaanites had been richly deserved by their impiety, their corruption, and their cruelties (Jg 1^5, 1 S 15^2; cf. Jos 10^{40}). For the expedition of Cyrus against Babylon a similar moral and religious sanction was asserted (Is 45^1). The contribution of Islām was to elevate into a rule the commission given in the OT in the war against the Canaanites, and to glorify as most just and necessary the war of conquest which is waged for the conversion or the punishment of unbelievers. 'They who believe fight for the religion of God.' 'Give to those who misbelieve glad tidings of grievous woe.'[2] The Qur'ān is full of exhortations to fight against misbelievers and hypocrites,[3] with promises of Paradise to those who should fall in the holy warfare.[4]

2. **The standard of the classical moralists.**—The argument of Plato in the *Laws* is to the effect that rulers should organize their realms with a view to virtue and peaceful prosperity as the chief

end, and that military provisions should be relegated to a quite secondary place. At the same time he accepted the view that Greeks and barbarians were natural enemies, and that the code of justice was barely relevant to their relations. For Aristotle it was the self-evident duty of a state to defend itself, and to enrich itself by war as a legitimate way of acquiring property; and he also justified the war of conquest against outside nations on the ground that there are peoples which are destined by nature to servitude, and which are properly coerced if they do not voluntarily accept their destiny.[1] The discussion of the subject by Cicero is important as a summary of the ethical reflexions of classical antiquity which was also to serve as a useful legacy to the later guides of the Christian Church.

He condemns the common view that the use of peace was to prepare for war: peace is to be kept in view as the end, and war regarded as a means which is sometimes unhappily necessary to secure a satisfactory peace.[2] It is the irrational and brutal way of ending disputes. Unjust wars are those which are prompted by covetousness of the possessions of others. Just wars are of different types, according as they are required for the safety of the State, when measures are taken to ward off injury, and to secure reparation and punishment, or are prompted by the honourable motive of succouring those who have a claim to assistance on the ground of natural ties or of treaty-obligations. To fulfil the requirements of justice it was further necessary that the demand for satisfaction, and an eventual declaration of war, should be made in due religious forms.[3]

These principles, it may be added, made it possible to offer a tolerable moral apologia for the proceedings of the Roman empire: when a war could not be plausibly represented as defensive, it could at least be conceived as partaking to some extent of the character of a war of honour on behalf of allies, or of a war of chivalry on behalf of an oppressed and wronged population.

3. The judgment of the Church.—The need of an official Christian criterion emerged with the union of Church and Empire, and guidance was given by Augustine with considerable obligation to Cicero.

He had no difficulty in deciding that there are unjust and just wars—the unjust represented by the contemporary barbarian onslaughts on the Empire, the just by the efforts of the Empire to defend itself and the cause of civilization. 'Inferre autem bella finitimis, et inde in caetera procedere, ac populos sibi non molestos sola regni cupiditate conterere et subdere, quid aliud quam grande latrocinium nominandum est?'[4] Such wars have their spring in the worst of passions—'nocendi cupiditas, ulciscendi crudelitas, impacatus atque implacabilis animus, feritas rebellandi, libido dominandi, et si qua similia.'[5] Just wars are those which are waged to inflict punishment, or to secure reparation for injury, or (as in OT) by express commandment of God.[6] So terrible, however, are the calamities of war—veritable games in honour of the devils[7]—that it should only be entered on under stress of the direst necessity.[8] He also laid it down that war may only be lawfully undertaken by a prince and carried on by a regular soldiery.[9] The caveat is put in that victory in war is not necessarily to be ascribed to the deserts of a belligerent.[10]

Thomas Aquinas laid down three criteria of a just war: it must be waged by a prince invested with legitimate authority, against an enemy who has deserved punishment, and with the intention that good shall be promoted and evil removed.[11]

Following on the Decrees of Gratian the subject was elaborately treated by Suarez, Ayala, Gentilis, and other Canonists. They were agreed in vindicating defensive and punitive warfare, but developed some differences of opinion in regard to the ethics of conquest, the powers of the pope in sanctioning wars and annexations, and the lawfulness of war against infidels and heretics.[1]

Protestantism generally reproduced the Augustinian criterion of just and unjust wars. The representatives of the Lutheran and Anglican schools were peculiarly emphatic in branding rebellion as one of the most criminal types of unjust war. According to Luther, the worst tyranny ought to be submissively and patiently endured, inasmuch as every nation richly deserves chastisement, and on the other hand tyrants will be adequately punished in the future state of retribution.[2] With still greater solemnity, even ferocity of language, is the iniquity of rebellion established in the Anglican *Homily against Disobedience and Wilful Rebellion*. The reasons given include the following in addition to the two mentioned above:

Rebellion had its prototype in the apostasy of Lucifer; monarchy is of divine right, being a copy of the divine rule; rebels will be punished with eternal damnation; history abundantly proves that it is as foolish and futile as it is wicked; subjects are no fit judges of the goodness or badness of a prince; rebellion is not a single sin, but 'the puddle and sink of all sins against God and man.'

The unjust war, according to Calvin, is one inspired by cupidity, and the just war is one in which a prince, as vice-regent of God, undertakes to coerce another nation which has embarked on a murderous and marauding enterprise.[3] He urged the usual arguments against rebellion, but with a significant addition:

'When misgovernment becomes intolerable,' he says, 'deliverance may be expected from God, whose way it is either to raise up avengers from among his servants, or to use for his purpose agents who may be pursuing different purposes of their own.'

On this principle it could be contended by the Puritans that rebellion against Charles I. became lawful when God raised up a deliverer in the person of Oliver Cromwell. The Scottish Church emphasized another qualifying doctrine, that obedience to kings ceases to be a duty when they make demands inconsistent with the laws of God, and in the National Covenant the subscribers accordingly bound themselves to maintain their sacred cause with 'their best counsel, bodies, means, and whole power against all sorts of persons whatsoever.'

The modern literature of Christian ethics has in the main reproduced the ideas of Augustine, Luther, and Calvin. One of the most interesting discussions is contributed by Rothe, who justifies aggressive war against a nation whose lusts may have made it a chronic disturber of the peace, and also defends the war of conquest, at least in extraordinary times, as legitimate in order to the replacement of a lower by a higher civilization, or for the correction and improvement of a nation which has become effete and degenerate.[4]

4. Jurisprudence and philosophy.—The classic treatises on international law deal elaborately with justificatory causes and unjust occasions of war. To Hugo Grotius more than any other it was due that political realism was called to account in the name of justice and humanity, though in some matters he applied the ethical principles with a measure of timidity.

Grotius recognizes three forms of just war—in the maintenance by a nation of its own interests, in interposition on behalf of others, and in duty towards God. A nation is entitled and even bound to maintain its own interests by the defence of the life, honour, and property of the citizens, by the exaction of reparation for injuries and insistence on the fulfilment of obligations, and by the punishment of the aggressors.[5] War may be lawfully undertaken by a nation on behalf, not only of its own subjects, but also of its allies, its friends, and of fellow-men as such.[6] The impious creed which denies the two

fundamental articles that there is a Deity, and that He cares for human affairs, is a doctrine so dangerous to the world as well as dishonouring to God that it may well be forcibly repressed in the name of human society.[1] War may not be entered on through blind fear of another nation, or a supposed utility that is not supported by absolute necessity. It is a monstrous doctrine that war is justifiable against a neighbour on the mere ground that his power is increasing and may continue to grow.[2] Other insufficient pretexts are the refusal of women in marriage, the desire of better lands, the purpose of imposing a more beneficent government, and imperial and ecclesiastical projects.[3] Again, while atheism may justly be suppressed, war is not justified against nations on the mere ground that they refuse to embrace the Christian religion, unless the unbelievers cruelly persecute Christians on account of their faith.[4] Rebellion is generally to be condemned although it may be justified by necessity—as when a prince invades the privileges of a free people, or abdicates, or betrays the cause of his subjects, or generally acts as their enemy.[5] On the other hand, the fact that a population does not enjoy liberty is not sufficient ground for rebellion. If they have come into servitude in a legitimate way, they should be content with their condition.[6]

The subject is also minutely treated by Vattel, and on similar lines—the shade of difference being that he allows more justification for the anticipatory war, and that he feels less hesitancy in apologizing for rebellion in justification of natural rights.[7]

The Scottish School of Jurisprudence is so far identified with the view that 'aggression is a natural right, the extent of which is measured by the power which God has bestowed on the aggressor,' and that 'the right of aggression justifies an application of force.'[8]

The criterion of justice has likewise been applied to wars in the schools of Moral Philosophy. Kant emphatically affirmed the lawfulness of defensive wars, and specified as criminal types the war for dominion (*bellum subjugatorium*) and the war of extermination (*bellum internecinum*). He refused to concede the moral title of one state to attack another on the mere ground of its iniquities (*bellum punitivum*).[9] Hegel affirms the paramount duty of a nation to preserve and develop its individuality, and holds that this may give a title to a great nation, as the best representative of the world-spirit for the time being, to embark upon wars of conquest. As against such an elect member of the human family, other peoples can assert no natural rights.[10] W. R. Sorley has criticized the 'defensive selfish' theory no less than the 'offensive selfish' theory as unethical, and makes the criterion to be whether a war contributes to the establishment of a higher civilization.[11]

The distinctive features of the public opinion of the 19th cent. were that the religious war is an anachronism, that a war of conquest against civilized nations is criminal, that oppressed nationalities have a sacred right of rebellion, and that there is a moral privilege, if not a duty, of chivalrous interposition on behalf of the wronged. On the other hand, the jurists were increasingly disposed to disclaim the office of directors of conscience to the nations in the matter.

'It is not possible,' says Hall, 'to frame general rules which shall be of any practical value, and the attempts in this direction which jurists are in the habit of making result in mere abstract statements of principles or perhaps of truisms, which it is unnecessary to reproduce.'[12]

What is the value of this chapter of the history of thought? It must be admitted that a review of the subject is calculated to raise misgivings as to the judicial capacity of the human mind, if not even to foster moral scepticism. The general result was that, while it was agreed both by the many and by the wise that morality should regulate the occasions of war, there was serious difference of opinion as to the prohibitions actually involved in the moral law, the parties who had to judge of its application to particular situations were so biassed by their interests and passions as to be incapable of equitable judgment, and the enforcement of ethical demands practically depended on whether it happened to coincide with the advantage of a state or states to lend its support to a righteous cause. The lesson to be drawn is that, if the demands of morality are to be properly expounded and enforced in this sphere, the task must be proceeded with under different conditions, and the problem must be formulated in a different way. If the chaotic situation of the past were replaced by a society of nations, the problem of just and unjust wars would be simplified, inasmuch as the typical form of unlawful war would be an act of rebellion against the general body in which a particular state broke the law that prohibits aggressive military action, and defied the authority supporting the law. Under these conditions the great question for ethical reflexion would be, not what wars were just or the reverse, but what were the rights which particular nations were entitled to assert or to have safeguarded. This subject is no doubt a difficult one; and it is probable that much would have to be adjudicated upon from the point of view of equity rather than in accordance with the provisions of a cast-iron statutory code. There would, however, be a good guarantee for just judgment in the fact that the elaboration of the code of rights would be undertaken by representatives of the general mind of the race, for whom the criterion would be the greatest good of the whole, and that in the application and enforcement of the recognized law the parties directly interested would play a subordinate part.

VII. *HUMANIZATION OF THE CONDUCT OF WAR.*—The ancient tradition was 'Væ Victis!' The penalty of defeat was the extremity of ruin and humiliation. The invaded country was ruthlessly devastated, the captured city was commonly sacked and destroyed, neither age nor sex could count on immunity, and a whole population might be put to the sword. If the practice was commonly less thorough than the theory, this was probably due not so much to clemency as to the reflexion that a ruined and depopulated country could pay no tribute, and that the services or the ransom of slaves gave more permanent satisfaction than the slaughter of captives. Such was the general spirit of warfare at the advent of certain of the great religions, and they vindicated their claim to the title of ethical by embodying provisions which represented a real advance on the primitive ferocity of mankind.

1. **The curb of the religions.**—The *Laws of Manu*, while showing no scruples about aggressive and acquisitive war, make a strong plea for humane fighting.

'What the King has not (yet) gained, let him seek (to gain) by (his) army.'[1] 'Let him plan his undertakings (patiently meditating) like a heron; like a lion, let him put forth his strength; like a wolf, let him snatch (his prey); like a hare, let him double in retreat.'[2] At the same time he is to conduct war mercifully and even chivalrously. 'When he fights with his foes in battle, let him not strike with weapons concealed (in wood), nor with (such as are) barbed, poisoned, or the points of which are blazing with fire.' 'Let him not strike one who (in flight) has climbed on an eminence, nor a eunuch, nor one who joins the palms of his hands (in supplication), nor one who (flees) with flying hair, . . . nor one who is naked, . . . nor one who looks on without taking part in the fight, nor one who is fighting with another (foe). Nor one whose weapons are broken, nor one afflicted (with sorrow), nor one who has been grievously wounded, nor one who is in fear, nor one who has turned to flight, (but in all these cases let him) remember the duty (of honourable warriors).'[3]

The ethical inspiration of the religion of Israel left its mark on the regulations for the conduct of war. Israel was familiar with the ferocity of Oriental warfare, to which a religious consecration

As against such an elect member of the human family, other peoples can assert no natural rights.[10] W. R. Sorley has criticized the 'defensive selfish' theory no less than the 'offensive selfish' theory as unethical, and makes the criterion to be whether a war contributes to the establishment of a higher civilization.[11]

The distinctive features of the public opinion of the 19th cent. were that the religious war is an anachronism, that a war of conquest against civilized nations is criminal, that oppressed nationalities have a sacred right of rebellion, and that there is a moral privilege, if not a duty, of chivalrous interposition on behalf of the wronged. On the other hand, the jurists were increasingly disposed to disclaim the office of directors of conscience to the nations in the matter.

'It is not possible,' says Hall, 'to frame general rules which shall be of any practical value, and the attempts in this direction which jurists are in the habit of making result in mere abstract statements of principles or perhaps of truisms, which it is unnecessary to reproduce.'[12]

What is the value of this chapter of the history of thought? It must be admitted that a review of the subject is calculated to raise misgivings as to the judicial capacity of the human mind, if not even to foster moral scepticism. The general result was that, while it was agreed both by the many and by the wise that morality should regulate the occasions of war, there was serious difference of opinion as to the prohibitions actually involved in the moral law, the parties who had to judge of its application to particular situations were so biassed by their interests and passions as to be incapable of equitable judgment, and the enforcement of ethical demands practically depended on whether it happened to coincide with the advantage of a state or states to lend its support to a righteous cause. The lesson to be drawn is that, if the demands of morality are to be properly expounded and enforced in this sphere, the task must be proceeded with under different conditions, and the problem must be formulated in a different way. If the chaotic situation of the past were replaced by a society of nations, the problem of just and unjust wars would be simplified, inasmuch as the typical form of unlawful war would be an act of rebellion against the general body in which a particular state broke the law that prohibits aggressive military action, and defied the authority supporting the law. Under these conditions the great question for ethical reflexion would be, not what wars were just or the reverse, but what were the rights which particular nations were entitled to assert or to have safeguarded. This subject is no doubt a difficult one; and it is probable that much would have to be adjudicated upon from the point of view of equity rather than in accordance with the provisions of a cast-iron statutory code. There would, however, be a good guarantee for just judgment in the fact that the elaboration of the code of rights would be undertaken by representatives of the general mind of the race, for whom the criterion would be the greatest good of the whole, and that in the application and enforcement of the recognized law the parties directly interested would play a subordinate part.

VII. *HUMANIZATION OF THE CONDUCT OF WAR.*—The ancient tradition was 'Væ Victis!' The penalty of defeat was the extremity of ruin and humiliation. The invaded country was ruthlessly devastated, the captured city was commonly sacked and destroyed, neither age nor sex could count on immunity, and a whole population might be put to the sword. If the practice was commonly less thorough than the theory, this was probably due not so much to clemency as to the reflexion that a ruined and depopulated country could pay no tribute, and that the services or the ransom of slaves gave more permanent satisfaction than the slaughter of captives. Such was the general spirit of warfare at the advent of certain of the great religions, and they vindicated their claim to the title of ethical by embodying provisions which represented a real advance on the primitive ferocity of mankind.

1. **The curb of the religions.**—The *Laws of Manu*, while showing no scruples about aggressive and acquisitive war, make a strong plea for humane fighting.

'What the King has not (yet) gained, let him seek (to gain) by (his) army.'[1] 'Let him plan his undertakings (patiently meditating) like a heron; like a lion, let him put forth his strength; like a wolf, let him snatch (his prey); like a hare, let him double in retreat.'[2] At the same time he is to conduct war mercifully and even chivalrously. 'When he fights with his foes in battle, let him not strike with weapons concealed (in wood), nor with (such as are) barbed, poisoned, or the points of which are blazing with fire.' 'Let him not strike one who (in flight) has climbed on an eminence, nor a eunuch, nor one who joins the palms of his hands (in supplication), nor one who (flees) with flying hair, . . . nor one who is naked, . . . nor one who looks on without taking part in the fight, nor one who is fighting with another (foe). Nor one whose weapons are broken, nor one afflicted (with sorrow), nor one who has been grievously wounded, nor one who is in fear, nor one who has turned to flight, (but in all these cases let him) remember the duty (of honourable warriors).'[3]

The ethical inspiration of the religion of Israel left its mark on the regulations for the conduct of war. Israel was familiar with the ferocity of Oriental warfare, to which a religious consecration

was sometimes given by the application of the doctrine of the *herem*, or ban (Nu 21^{24}, Jos $6^{17f.}$ etc.). It could imitate its neighbours in the ruthless devastation of territory (2 K 3^{19-25}), the massacre of conquered communities (1 K 11^{16}), the mutilation of captives (Jg 1^{6}), and the murder of pregnant women (2 K 15^{16}). It would appear, however, that Israel had a general reputation for clemency (1 K 20^{31}), and that the treatment meted out to their enemies was 'not to be compared to the Assyrian devilries.'[1] The subject of atrocities bulks largely in the prophetic invective.

Amos thunders against the nations for the cruelty and perfidy that marked their methods of warfare, and judgment is denounced against Damascus because it has threshed Gilead with threshing-instruments of iron; against Gaza because it has sold Israelites into captivity; against Tyre because it has violated a treaty; against Edom because of its pitiless vendetta against Israel; against Ammon because it ripped up the woman with child that it might enlarge its border; against Moab because it burned the bones of the king of Edom with lime (chs. 1–2).

The Deuteronomic legislation did something in this field to sustain its general character for humanity. It provides that the inhabitants of a city which capitulates are to be treated with clemency, and that, if it be carried by assault, the non-fighting population is only to forfeit its liberty ($20^{11f.}$ 21^{10}). It was also forbidden to cut down fruit trees during the siege of a city 'since the tree of the field is man's life' ($20^{19f.}$).

Among the great religions Islām alone upheld the ruthless traditions of Oriental warfare. As it was a religious duty to fight for the faith, so the worst excesses of war were given the character of a righteous judgment on the infidel, and the forfeits demanded of the vanquished by the law of the savage were passed on to the faithful as their natural rights.

'O thou prophet, fight thou strenuously against the misbelievers and hypocrites, and be stern towards them, for their resort is Hell, and an evil journey shall it be.'[2] 'The reward of those who make war against God and His Apostle and strive after violence in the earth, is only that they shall be slaughtered or crucified, or their hands cut off and their feet on alternate sides, or that they shall be banished from the land.'[3]

It should be added that some Muhammadan peoples have their share of human kindness, and that they have also found it necessary to compromise with their exterminating doctrine as a condition of being allowed to retain political power and even to occupy the planet.

2. The Græco-Roman period and its spirit.—During the classical period the traditional usages of war were somewhat softened. Although vengeance was pitilessly wreaked on an enemy who had inspired deadly fear or hatred, and although the principle still held that a victorious soldiery was entitled to the compensations of pillage and outrage, there was a milder strain in the Aryan constitution, which re-asserted itself in cold blood. While the Greeks did not evolve a code of international law, there was a minimum of common morality which a common religion enjoined on all Greeks alike. The chief elements of the code were the rights of the alien (*ξενός*), the sacred immunity of the herald, pious treatment of the slain (whose corpses might not be mutilated and should not be left unburied), and merciful treatment of prisoners. Unconditional surrender, if voluntary, carried with it a right to mercy; conditional surrender, if confirmed by an oath, was to be respected; and a captive had a title to be liberated (though it was doubtful if the captor was compelled to accept it) on payment of a fixed sum. These rules were believed to be sanctioned by divine authority, and the Amphictyonic Councils, which represented unions of tribes and cities, also lent their influence to mitigate the rancour of war.[1]

Roman warfare retained enough of the old ruthlessness and savagery, as appears from the detailed records of massacre and pillage in the campaigns of conquest. The claims of mercy, however, are stated by Cicero in terms which probably do not greatly overstate the working theory of the later period.

A distinction is drawn between wars in which a state fights for its existence and those in which it contends for power and glory, and he observes that, while the former inevitably take on a merciless and murderous character, the latter may be and often are fought out with comparative clemency. The treatment of an enemy depended on what manner of enemy he was. Those who were of evil character—arrogant, cruel, and perfidious—were properly scourged without mercy, while it was a dictate of nobility as well as of prudence to deal magnanimously with those who were decisively beaten, and who were no longer a source of danger. He lays stress on the duty of acting honourably towards the enemy, and enlarges on the magnanimity of Pyrrhus, who declined to hold his prisoners to ransom, on the ground that, if fortune had granted them their lives, the conqueror might well grant them liberty.[2]

3. The mediæval period.—In the fighting of the early Middle Ages there was some relapse into primitive ferocity due to the fact that the conflict was between civilization and barbarism, and the stakes were the material foundations of existence. Writing in the very throes of the world-struggle, Augustine recalls that the tradition even of heathen Rome recommended clemency and magnanimity, and urges that war be conducted in accordance with the merciful precepts of the gospel.[3] When the outline of a cosmos re-emerged, Christianity was already generally professed, and it contributed, in conjunction with the nobler elements of the European character, to the formation of a chivalrous ideal, which in some particulars toned down the hideousness of war. The Church, as the moral guide of the nations, took the matter into consideration, and in its canon law framed rules which were leavened by the Christian spirit.

4. The modern advance.—In modern times regulations for the conduct of war have been humanized to an extent that has been a welcome offset to the multiplication and intensification of the horrors due to modern inventions. The forces making for this improvement were the Christian leaven working in European society and the developing moral reflexion of the civilized world, and those happily met in the personality and equipment of Hugo Grotius, theologian, moralist, and lawyer, and became widely operative through the influence of the treatise *de Jure Belli ac Pacis*.

After expounding the general theory and practice of the conduct of war, he proposes in the name of humanity a list of amendments and mitigations (*temperamenta*) in regard to the treatment of the persons and the property of the enemy.[4] The general principle insisted on is that the right to slay, enslave, confiscate, etc., is not absolute, but is limited by consideration of what is necessary to break an enemy's resistance or to obtain reparation for injury inflicted.

During the 18th and 19th centuries there was a marked development of the cosmopolitan and humanitarian spirit, accompanied by much ethical reflexion in the departments of International Law, Moral Philosophy, and Christian Ethics. The common-sense benevolence of the 18th cent., as voiced by Benjamin Franklin, saw no reason why the law of nations, which had already discarded something of the old savagery, should not go on improving; and Franklin proposed that, when nations were at war, immunity should be granted to cultivators of the earth, fishermen, merchants and traders in unarmed ships, artists, and mechanics working in open towns, also that rapine and privateering should be abolished and that hospitals

should be respected. In the treatises on International Law, which was sedulously cultivated during the period, the humane trend was strongly accentuated, and the doctrine was even ardently developed by some continental writers that war ought to remain a conflict of states as such, in which the non-combatant citizens might rank as neutrals. While the Roman Catholic Church brought its canon law up to date, Protestant theology was prolific in systems of Christian Ethics, which at least made it clear that the spirit of Christian morality required radical reform of the usages of war. Definite and valuable practical results were achieved by the Geneva Convention of 1864 which dealt with the treatment of the wounded, the sick, and prisoners.[1] The Hague Tribunal covered practically the whole ground, except that it was only permitted to glance at the topics of arbitration and disarmament.[2] The chief provisions illustrating the ethical progress were as follows.

(A) *Methods and weapons of war.*—(*a*) In re-affirming the principle that the right to injure the enemy is not unlimited, the Hague tribunal prohibited poisoning, treacherous wounding and killing, declarations that no quarter will be given, and the improper use of flags of truce. (*b*) It prohibited attacks on and bombardment of defenceless towns, and unnecessary destruction of edifices devoted to religion, art, science, and charity. (*c*) It prohibited the sack of captured cities. (*d*) It laid down that prisoners are entitled to be provided for and relieved. (*e*) The treatment of the sick and wounded was put on a much better footing. It was provided that ambulances and military hospitals are to be respected; that persons employed in this work are to be protected and returned to their posts, that wounded and sick soldiers are to be cared for and treated, to whatever nation they belong.

(B) *Treatment of the enemy's country when occupied and of property therein.*—The rights of private property were asserted—both as against pillage by individuals and as against confiscation by the enemy state. Wanton destruction of property was forbidden. Requisitions in kind or in services were only to be demanded from communes or inhabitants for the necessities of the armies of occupation. The inhabitants could not be compelled to take part in military operations against their own country.

The two other main subjects dealt with are commerce with the enemy during hostilities, and the law of reprisals.

During the recent war there were doubtless grievous violations of these humane regulations—notably in the use of poisonous gases, the wanton destruction of property, and the occasional refusal of quarter—but that the modern world had reached a higher level of morality than antiquity was still in evidence in the fact that, in the most gigantic and desperate struggle in history, law and order were to a large extent maintained in occupied territories, prisoners were not as of old callously butchered or reserved for the slave mart or the gladiatorial spectacle, and the sick and wounded found themselves under the shelter of the Cross and tended by the ministrations of the Good Samaritan.

VIII. *THE DESIRABILITY OF ENDING WAR.*—The general judgment of mankind upon war is that it is a scourge of the nations which, along with famine and pestilence, makes up the dread trinity of human woes. This estimate rests on considerations which have certainly not lost in force in modern times.

(1) War is organized destruction of the harvest of civilization and of those who produce it. It impoverishes a country in two ways—by diverting labour from productive to unproductive tasks, and by annihilating wealth which had previously been accumulated by peaceful industry. It also sets at naught the civilized doctrine of the sanctity of human life, and replaces the beneficent efforts of science to save and husband life by measures which directly or indirectly sweep away whole masses of population. The ever-increasing efficiency of the instruments and methods of destruction has still more decidedly given to modern warfare an aspect of folly and clothed it with a suicidal character. The conquerors, hardly less than the vanquished, have emerged from the World War bleeding, dazed, exhausted, and doomed to shoulder almost intolerable burdens.

(2) The tragedy of the waste of life is aggravated by the circumstance that the victims are the *élite* of the nations. War, as Æschylus says, is a gold-merchant, with whom his customers do most unprofitable business.

> 'From each home once there went
> A man forth: him it sent
> Each knows; but what are these return?
> A little dust, an urn.'[1]

A Greek epitaph puts the point pithily: *Ἄρης οὐκ ἀγαθῶν φείδεται ἀλλὰ κακῶν.*[2] While the machinery of nature works for the survival of the fittest, the winnowing of war results in the elimination of the fittest, and the more so in latter-day warfare, which gives little advantage to the strong, the skilful, and the wise, in the carnage of the frontal attack and of the fire-swept zone.[3]

(3) In fighting man reverts to the sub-human plane. The badge of humanity is the possession of reason, which at least suggests that man ought to try to settle his disputes by rational methods.[4]

(4) War makes an appalling addition to the miseries of the human lot. A whole world of cruel suffering is compressed by Sallust into his list of the horrors of ancient war:

'Rapi virgines, pueros; divelli liberos a parentum complexu; matres familiarum pati quae victoribus collibuissent, fana atque domos exspoliari; caedem, incendia fieri, postremo armis, cadaveribus, cruore, atque luctu omnia compleri.'[5]

With more detail and colour but hardly more impressiveness, a great preacher depicts the horrors of the battle-field, the agonies of the occupied country, the ravages of want and sickness, the desolated lives, and the broken hearts.[6] It is a service rendered by realistic fiction that it has shown how dearly purchased even by the fighting man is 'the one crowded hour of glorious life' which itself under modern conditions may be like nothing so much as the death of a poisoned rat in a hole.[7]

(5) War, when looked at as a whole, is a gigantic moral evil. The aggression which sets in motion and sustains the strife has its dynamic in lusts and passions that defy and reverse the recognized maxims of morality. Even a just war sets the heart of a nation aflame with hatred, malice, and revenge. War turns the moral world upside down and sanctions a temporary suspension of respect for life and property and truth. It is therefore probably inevitable that it should be waged with some grim accompaniment of unlicensed outrage and of unchained vice. Experience also shows that the moral chaos of war makes its influence felt later on in a certain hardening of a people's heart, and a perversion of their moral sentiments, and also in a ground-swell of unrest, licentiousness, and crime which continues to surge after the actual tempest has subsided.

To this indictment there has been opposed a eulogy of war, which has some basis in facts, but fails to establish that the blessings traced to the experiences could not otherwise be obtained, much less that it is desirable to perpetuate war

as the condition of like benefits accruing in the future.

(1) The progress of human civilization, it is said, has been due to nations which came to the front in war, were organized and steeled by war, and won through war their power and title to guide or serve the world. 'If progress stops war on one side, it makes it on another, and war is its instrument.'[1] Few indeed would so far venture to criticize the course of history as to deplore that, *e.g.*, Rome made herself mistress of the world, or that the Anglo-Saxons conquered and settled Britain, and that their descendants took forcible possession of the greater part of North America, as well as of Australia and New Zealand. Such events have a certain ethical justification, since self-realization is a right if not a duty of nations, while under former conditions a people was practically thrown back on war as the one form of enterprise by which to supply its vital wants and in which to find scope for great native powers. At the same time it may not be forgotten that the after-world owes the most valuable elements in its spiritual heritage to the culture of the Greeks and the religion of the Jews, both of which peoples went down in the military struggle, and it is not unreasonable to expect that in the future great races will find it possible to come to their own in the leadership and service of the world without the necessity of proving their superiority and claiming their opportunities by the exercise of brute force.

(2) War is necessary, it is said, to preserve the vitality of a state and avert degeneracy. 'No Body can be healthfull,' says Bacon, 'without *Exercise*, neither Natural Body, nor Politique: And certainly, to a Kingdome or Estate, a Just and Honourable Warre is the true *Exercise*.'[2] One might reply that it gets sufficient exercise, if it has a mind to work, in subduing the earth and developing industry and commerce, and that in any case there are more healthful forms of exercise than gashing the body and spilling its life-blood. Probably what Bacon meant was to give discreet utterance to the maxim of statecraft that a foreign war is the best recipe for grave domestic dissensions, but to this assertion the reply is that sedition is more sanely and humanely treated by measures of political and social reform. That nations become effeminate and degenerate in peace, and because of peace, has been often asserted, and no doubt it has sometimes happened that a nation, on being guaranteed peaceful security, has become idle and vicious. But the charge often amounts to no more than that a people, as the result of a long period of peace, has become unskilled in the use of the soldier's tools, and the experience of the recent war showed that peoples which according to theory should have become weak and spiritless had preserved unimpaired throughout a commercial era the strongest ancestral qualities of their stock.

(3) War, it is said, has not its equal as a school of the virtues. The modern militarists are able to collect opinions in support of this tenet from eminent moralists of all ages. And undoubtedly there are qualities, distinctive of the soldier as such, which contrast impressively with the unbridled egotism that runs rampant in times of peace and prosperity—as courage, obedience, self-discipline, endurance, comradeship, self-sacrifice. It is, however, incredible from the point of view of the moral order that the only way in which individuals can be given the opportunity to reach the heights of virtue is that nations should continue to plan and perpetrate crimes against one another. Fortunately the facts do not warrant the inference of the moral indispensableness of war. For one thing the virtues in question to a great extent are merely brought to light, not engendered, by the experiences of war. In so far as they are created and developed by war, the same end could be achieved by other means, since the world contains enough of peril, adventure, and opportunities of sacrifice to provide material for a training of youth that would yield similar ethical results, while it might guard more effectively against such concessions as are made in the school of warfare to the evil forces which are summarily comprehended under the names of the Devil and the flesh.[3] German Social Democracy has undertaken to provide a disciplinary equivalent in the economic field for the advantages of military training.

(4) War, it is said, has supplied much of the inspiration and impetus which have promoted the higher developments of the life of the race. The great achievements of the nations in war have usually been followed by a golden age of spiritual achievement—in literature, in philosophic thought, and in art.[4] Even great religions in their origins, and subsequent religious revivals, have been closely connected with the throes of the nations incident to the deadly struggles of war. It appears that the tension and excitement of war stimulate the human spirit to put forth its utmost powers, quicken its interest in the capital problems of existence, and also deepen its insight and increase its receptiveness. But it is also a tenable view that the spiritual achievements of the race would have been greater, not less, had not war made its appalling drafts from generation to generation on the best energies and material of the race, and that the gains credited to war are really due to the alchemy of the over-ruling Providence which is able to do something to turn a curse into a blessing. That religion on the whole has profited by war is more than doubtful: the religious revival is a lesser fact in the midst of most wars than the bewilderment or eclipse of faith, the unsettlement of moral maxims, and the diffusion of a pessimistic philosophy.

IX. *THE POSSIBILITY OF THE CESSATION OF WAR.*—The belief that war will eventually cease has been entertained on various grounds.

(*a*) It is held that God's purpose with the world is to establish in it a Kingdom which will be a realm of peace, as well as of righteousness and love, and that the omnipotent and all-wise God may be depended on to carry His purpose into execution. This confidence was the ground of the OT prediction that in the Messianic age 'they shall beat their swords into plowshares, and their spears into pruninghooks; nation shall not lift up the sword against nation, neither shall they learn war any more' (Is 2[4]). The prediction has naturally been accepted by the Church as a promise of God vouched for by inspired prophets, but apart from the authority of the prophets it is inevitable that those who share their faith in the divine government of the world should share their conviction that universal peace is an end worthy of God which He will eventually attain in spite of human perversity and opposition.

(*b*) The hope of permanent peace has been based on a belief in the essential goodness of human nature, which it is supposed has sufficient idealism to respond in the long run to the message of justice and the appeal of brotherhood. Short of this it is held that as the human race grows more humane and refined, it will turn in disgust from the wild and brutal work of war. The hope is based on thus much of fact, that human nature has deep unrecognized and unrealized possibilities of an ethical kind, but the optimism resting on this foundation is happily reinforced by other considerations.

(*c*) The self-interest of the nations as a whole requires them to take measures for the abolition of war. The great difficulty, says Rousseau, is not even so much the wickedness as the stupidity of the rulers of states, who would be pacifists if they understood their own interests.

> 'They do not need to be good, generous, disinterested, public-spirited, humane. They may be unjust, greedy, putting their own interest above everything else; we only ask that they shall not be fools, and to this they will come.'[1]

The same view is taken by Kant, who says that even a race of devils, provided only they were intelligent, would be forced to find a solution other than war for their disputes. 'Nature guarantees the final establishment of peace through the mechanism of human inclinations.'[2] The view that the nations will eventually be driven by considerations of interest to protect themselves against war has been urged with renewed force in recent times on the ground that the civilized nations are now so intimately interdependent through trade and finance that in fighting one another they infallibly injure themselves, that as a fact the victors suffer hardly less than the vanquished,[3] and that the destructiveness, not to speak of the cost, of modern armaments is so terrible that persistence in war will imperil the very existence of civilization.[4] These arguments have been powerfully reinforced by the latest chapter of history.

(*d*) The eventual cessation of war, further, has been expected as the culmination of the process which has already annulled the right of the individual to take into his own hands the redress of his private wrongs. The civilized states have all succeeded in instituting machinery which checks and punishes individual wrong-doers who

[1] *Œuvres*, Paris, 1839, iv. 280.

[4] I. S. Bloch, *Is War now Impossible?*, Eng. tr., London, 1899.

may be minded to rob or murder, and it seems to be essentially the same problem with which the race has to deal in repressing crimes attempted by particular nations against other members of the human family. The same necessity, as Kant points out, 'which forced men to take steps to insure the security of individuals within the particular state will compel the nations to take similar measures for their protection against violence and robbery.'[1] In opposition to this view it has been maintained that the nations have not the same reasons for instituting a system for the maintenance of international law and order that a nation has for repressing crime within its own borders. It is not so necessary, it is said, to regulate the reciprocal relations of states as the reciprocal relations of fellow-citizens, since the former are not so inextricably bound up together as the latter, and, further, a state has no right to limit its independence to the same extent to which the individual consents when he submits to the laws of his country.[2] But those objections have been weakened since the 18th cent.—the first by the ever-increasing economic solidarity of the nations, the second by the demonstration afforded by the British Empire and the United States of the possibility of reconciling the rights of a central authority with the enjoyment of a satisfactory regional autonomy.

(*e*) An optimistic attitude is justified in view of the progress that has been made towards the pacific organization of areas and populations within which war formerly raged as part of the order of things. There has been a steady expansion of the areas within which war is regarded as illicit and even impossible. The history of Britain illustrates the evolutionary process. Time was when there were seven kingdoms in England, and at least three in Scotland, which were chronically at war among themselves; later, war between England and Scotland had the aspect of a natural necessity, while the situation was further complicated by a chronic feud between Scottish Highlands and Lowlands, and by struggles between king and barons. But the stage was eventually reached at which the interests of each part of the country and all sections of the population were entrusted to the wisdom and equity of the representatives of the whole body, and the notion of a war between north and south, or other sections of the population, would be scouted as insane and unthinkable. Similarly the territorial conflicts of former days are no longer possible between the Departments of modern France or the provinces of unified Italy. It is reasonable to believe that at no distant date the problem which was solved by particular nations will be solved by Europe as a whole, and that to future generations European war, if not impossible, will be stamped with the criminal character of civil or fratricidal war.

Some of the counter-arguments are weighty, but not unanswerable.

(1) It is said that, as war has prevailed from the beginning, so it will prevail to the end. But it has been the destiny of man to grapple with the most dire and formidable evils, and the marvellous progress he has made in knowledge, power, and skill seems to presage that he will master all ills in his domain save the menace of death.

'Æons rolled behind him with thunder of far retreat,
And still as he went he conquered and laid his foes at his feet.'[3]

(2) The law of the world, we are reminded, has been progress through struggle, and the nations may not expect to escape from it. But it is not necessary that the struggle should continue to be carried on by the method of violence, and it is quite conceivable—and indeed in accordance with analogies—that it should come to be confined to rational forms of emulation and competition.

(3) Human nature, it is also said, contains within itself the permanent possibility, nay, the guarantee of war—in its ingrained selfishness, its cupidity, its ambition, and its passions of hatred and revenge. But, even if we grant a root of wickedness in human nature, it is also true that it contains traits of divine nobility, which might be mobilized with success in support of altruistic and chivalrous ideals. Moreover, as already pointed out, nations may be expected to find out, as individuals have done, that fighting is at least bad and may even be ruinous policy.

(4) Religion has contributed the arguments that the permanence of war may be expected from the justice, and even from the goodness, of God. The argument from the divine justice is that God has ever punished guilty nations, and that, racial sin being inveterate, He will needs continue to employ the scourge of war as the necessary and appropriate method of the expression of His holy wrath. It is true that national sins entail punishment, and that wars have often been used as the means of chastisement, but God has ample resources of other kinds in the providential order by which to reveal His anger against national corruptions. It has also been argued that God's goodness moves Him to send wars upon the earth to prevent mankind from fixing their affections on earthly things. 'There is hardly to be found a child of fortune,' says Campanella, 'who would desire to exchange his terrestrial paradise for a celestial one; and so God applies a salutary remedy by sending upon us wars and persecutions.'[1] Similarly Hegel observes that hussars and sabres discourse much more impressively than preachers on the edifying text of the instability and vanity of earthly things.[2] But surely there is enough of irremediable misery in human life to undertake the work of weaning our affections from this world. Another branch of the religious argument founds on NT predictions of the persistence of wars and rumours of wars. These, however, belong to the apocalyptic stratum, which is concerned with events expected at the end of the world, and have nothing to do with the period during which the human race is appointed to work out its destiny under the conditions of a natural development.

The immediate outlook.—While there is reason to hope for the eventual abolition of war, it is not to be forgotten that each successive generation is disposed to military adventure by its fresh energies and its youthful inexperience. Although no generation wants two great wars, every generation seems pleased to have one. Moreover, our world is full of tension which involves the possibility of manifold future conflicts. There are many antitheses which, in addition to the legacies of hatred from the past, disturb the present and menace the future. The antitheses are (*a*) between the unreconciled forces of autocracy and democracy, (*b*) between nationalities and empires, (*c*) between nationality and nationality, (*d*) between parties representing individualistic and communistic theories of social organization, while in the distance there even loom possible conflicts (*e*) between continent and continent and (*f*) between the dominant white race and the coloured races which it has taken under its tutelage. It was therefore vitally urgent that the world should take advantage of the present revulsion of feeling to place things on a better footing, and to secure that war shall be rendered, if not impossible, at least more difficult and odious, and more dangerous to those who play with the fire.

X. *METHODS OF SECURING PERPETUAL PEACE.*—There are three ways in which war might cease: (1) there might be no more aggression; (2) there might be no more resistance; (3) there might be a political organization whose function was to preserve peace. The first and second methods have been the dreams of prophets and idealists. The third has entered in different ways into history and practical politics.

(1) Clearly there would be no more war if all nations refrained from anything of the nature of aggression. This implies, however, a moral transformation of the race such as may not be looked for in the present dispensation, and the hope of such radical conversion has chiefly been cherished as a sequel to the Second Coming and a visible reign of Christ on earth.

(2) The end, also, would obviously be attained if those whose interests were assailed consistently agreed to offer no opposition, but to show forgive-

[2] *Loc. cit.*

ness and goodwill. It is possible that, if this could be tried, it would have the effect of shaming hatred and aggression out of the world.[1] But it seems even more probable that, if a nation could confidently depend on immunity in wrongdoing, this would give a fresh impetus to criminal impulses. In any case the method is not practicable, as there is nothing about which human nature feels more strongly than injustice, and nothing in which men in the mass are less disposed tamely to acquiesce.

(3) Political organization might attain the end by one nation conquering the rest and compelling them to keep the peace, by nations forming themselves into two or more groups to hold one another in check, or by all the nations, or the great majority, forming a society of nations for the maintenance of peace on the basis of a recognized code of law. The last arrangement, finally, might develop into a world republic with particular countries as its provinces.

(*a*) *The imperialistic method.*—While the empires in one point of view have been centres of aggressive warfare, in another point of view they have made for peace within the area embraced in their dominion, and have compensated for loss of liberty by according protection and ensuring tranquillity. The great conquerors have usually quieted any compunctions of conscience by the reflexion that the end of their fighting would be peace, and that peace would be the more widely extended and the better assured the greater and more thorough their conquests. Rome gave a practical demonstration that the power strong enough to master the nations of the civilized world was able to solve the problem of preserving a general peace. The Middle Ages inherited the Roman tradition, and inclined to believe that the ideal was the unification of the world under emperor and pope as representatives of the divine sovereignty.

'Dante imagined a single authority, unselfish, inflexible, irresistible, which could make all smaller tyrannies to cease, and enable every man to live in peace and liberty, so that he lived in justice. He could conceive of its accomplishment only in one form, as grand as it was impossible—a universal monarchy.'[2]

The Holy Roman Empire was seldom, if ever, the effective master of Europe; during modern times there has been no acknowledged master; and the struggle for the hegemony among the European nations which has formed so large a part of modern history was doubtless prompted, not only by ambition and cupidity, but by the desire to give to Europe the ruler that it needed to bring its miseries, including the bloodshed, to an end. Napoleon has left it on record that he sought to conquer Europe, not only for glory, but to bless it with lasting peace. The Holy Alliance, formed after 1815, undertook to keep the peace, but unfortunately attached even more importance to its futile policy of stemming the rising tide of democracy. It was at least a tenable theory, favoured by some German historians, that, if Germany made itself master of Europe by the might of its sword, it would serve itself heir to the pacific mission of Rome. But this programme came into collision with deep-seated prepossessions—the prediction of Rousseau was twice fulfilled that no nation is strong enough to contend with the rest of Europe, and the course of events has happily shut up the world to attempting a co-operative solution.

(*b*) *Defensive alliances.*—For the last 400 years Europe has witnessed combinations of nearly equal strength which made it hazardous to itself for any single state, however powerful, to develop aggressive designs. The system of the balance of power was no doubt better than none in a world that was unceasingly threatened by dreams of ambition and cupidity, but it had too little of an ethical basis—naked interest being palpably dominant on both sides—and as it was deemed proper to guard against the growing strength of a possible enemy as well as to repel actual injury, the general result was, not to avert war, but to make war almost the chronic experience of Europe, and, when it occurred, to extend the area of the convulsion and to increase the horrors of the struggle.

(*c*) *The League of Nations.*—The third method is that the nations, and at least as a beginning the civilized nations, should form themselves into a confederation for maintaining peace on the basis of an accepted code of rights and obligations. Such an organization was adumbrated in Greek and Germanic confederations, but the idea is modern of working out a scheme to embrace the whole of Europe and the rest of the civilized world, accompanied by a recognition of moral relations with the other divisions of mankind.

The idea of a European League of Nations was conceived by Henri IV. of France, who imagined that the great powers might be persuaded by the offer of certain adjustments and compensations to renounce their special aspirations, and to bind themselves to resist any attempts to disturb the agreed settlement.[1] To the Abbé of St. Pierre belongs the honour of having opened the modern discussion in his *Projet de la paix universelle.* As fundamental articles of the League he proposed the following:

(1) 'There shall exist henceforth between the European sovereigns signing the five articles a perpetual alliance.'

(2) 'Each of the Allies shall contribute, in proportion to his actual revenues, and the charges of his state, to the expenses of the Grand Alliance.'

(3) 'The Grand Allies, for the termination of their present and future differences, have renounced and renounce for ever, for themselves and their successors, the method of arms and are agreed always to adopt henceforth the method of conciliation, through the mediation of the rest of the Allies at the meeting-place of the General Assembly, and in case of mediation being unsuccessful they agree to submit to the judgment of the Plenipotentiaries of the other Allies, a majority of votes to determine the matter provisionally, three-fourths finally after the lapse of five years.'

(4) 'If any one of the Grand Allies refuse to execute the findings and the regulations of the Grand Alliance, negotiate contrary treaties, or make warlike preparations, the Grand Alliance shall arm, and take offensive action against the power in question, until it shall have complied with the said findings and regulations, or given security for the reparation of the injuries caused by its hostile measures, and made good the military expenses as estimated by Commissioners of the Grand Alliance.'

(5) 'The Allies agree that the Plenipotentiaries, by a majority of votes, shall definitely regulate in their permanent Assembly all the articles which shall be judged necessary and important, in order to procure for the Grand Alliance more stability, security and other advantages, but the fundamental articles shall be unalterable save by unanimous consent of the Allies.'[2]

As regards the basis of the Concordat, it was proposed that the *status quo* should be accepted and maintained.

'To facilitate the formation of this Alliance, it is agreed to adopt as fundamental actual possession and the execution of the latest treaties, and to guarantee to each Sovereign jointly, and to his house, all the territory and the rights which he actually possesses.'[3]

The main features of the project were reproduced in an influential essay by Rousseau, who laid stress on the following points as essential—that such a League must include all considerable states, that it must have a judicial tribunal and an executive, and that it must have at its disposal sufficient force to prevent secession. In his final

[1] 'Hatred does not cease by hatred at any time; hatred ceases by love, this is an old rule' (*Dhammapada, SBE* x. 5). 'Odium reciproco odio augetur et amore contra deleri potest' (Spinoza, *Ethica*, iii. 43).

judgment on the scheme Rousseau declared it to be hopeless to expect to convince autocratic sovereigns and self-seeking ministers that they would find it to their interests to fall in with the project. The presupposition of its success was to get rid of autocracy, and this operation might prove too painful and costly.

'A Federative League,' he concludes, 'can only be established by revolution, and who then would venture to say that its coming is more to be desired or feared?'[1]

The subject was advanced by Kant, who, while owing much to St. Pierre and Rousseau, went somewhat deeper into the conditions of lasting peace.

'The greatest problem set to the human race,' he says, 'is the formation of a political organisation under which justice will be dispensed to all, and a branch of this is the subordination to law of the external relations of the particular states.'[2] The goal of the development on the international side is a *Völkerbund*, in which every state, even the smallest, may expect the maintenance of its security and its rights, not from the exercise of its own power or from its own decisions, but from the collective power of the League, and from judicial decisions of its collective will.[3] He lays down the following among other conditions of enduring peace:

(1) A treaty of peace should not contain matter provocative of future wars. (2) No existing state should be annexed by another through inheritance, barter, sale, or gift. (3) Standing armies should be abolished. (4) National debt should not be accumulated in support of foreign policy. (5) No state should interfere in another's domestic concerns.

Kant also expresses the opinion that perpetual peace has the best chance of being achieved under republican institutions, although he is careful to point out that a republic may exist in substance without democratic forms.[4]

No recent writer has done so much to commend the scheme as Léon Bourgeois, who played a leading part in the judicial discussions of the Hague Conferences.[5] His definition of the essence of the scheme is that the nations should agree upon a code of national rights and bind themselves as a whole to enforce it. This would correspond to the conditions under which internal order is maintained by civilized states. The other presupposition of the preservation of peace is effective machinery for enforcing decisions.

(1) 'There can be no veritable peace save under the reign of justice. To have material peace it is necessary to have first realised moral peace, and there can be no moral peace if the rights of any are felt to be, or really are menaced. Rights must be determined before they can be guaranteed.'

(2) 'The organisation of a jurisdiction which guarantees these rights is the essential condition of the establishment and the maintenance of peace.'[6]

The project was translated into a political institution by the Treaty of Versailles, which, incorporating the Covenant of the League of Nations, came into force on its ratification by Germany and Austria, and by three of the principal Allied and Associated Powers.[7]

General Scope.—(*a*) *Ends.*—Promotion of international co-operation and achievement of international peace and security. (*b*) *Means.*—Acceptance by contracting parties of obligations not to resort to war, prescription of open, just, and honourable relations between nations for the establishment of understandings of international law as rules of conduct, maintenance of justice and respect for treaty obligations (Preface).

A. *Membership.* — (1) *Original members*—those named as signatories and those named who shall sign within two months. (2) *Later adherents*—any named self-governing state or colony on the strength of a two-thirds vote of the Assembly, and on acceptance of the obligations of the League and special regulations of the Assembly (art. i.).

B. *Organization.* — *Assembly and Council* (art. ii.). 1. *Assembly.* — *Membership* — representatives of the members of the League. *Time and place of meetings*—stated and occasional. *Competent business*—any matter within its sphere of action and affecting the peace of the world. *Voting strength*—each member to have one vote, and not more than three representatives (art. iii.).

2. *Council.*—*Membership* — representatives of the principal allied and associated Powers, and of four other members to be selected by the Assembly—in the first instance Belgium, Brazil, Greece, and Spain. Representatives of other members may have a permanent seat, and selective representation may also be increased. *Time and place of meetings*—stated and occasional. *Competent business*, as before. Occasional representation of members of the League when their interests are affected. *Voting power*—one member one representative only and one vote (art. iv.).

Decisions of Assembly and Council, unless otherwise provided for, to be unanimous. First meeting to be summoned by President of the United States (art. v.). A permanent Secretariat at the seat of the League. Expenses to be shared by the members and officials (art. vi.). *Seat of the League*—Geneva in the first instance. No sex disqualification for offices (art. vii.).

C. *Reduction of armaments.*—General aim — reduction of national armaments to the lowest point consistent with national safety and the enforcement of international obligations. Plans for reduction to be submitted by the Council to the Powers, and adhered to after acceptance. Private manufacture of munitions to be discouraged and in any case reported on (art. viii.).

D. A Watching Commission to report on diligence in the execution of provisions of artt. i.–viii. (art. ix.).

E. *Basis of action.* — Guarantee of existing rights against external force. 'The Members of the League undertake to respect and preserve against external aggression the territorial integrity and existing political independence of all Members of the League' (art. x.).[1] The Council to advise upon the means of fulfilling this obligation (art. xi.).

F. *Peaceful settlement of disputes.*—Disputes likely to lead to a rupture to be submitted either to arbitration or to inquiry by the Council (art. xii.).

(1) *Arbitration.*—(*a*) Suitable matters—interpretation of a treaty, alleged facts constituting breach of an international obligation, extent and nature of reparation for injury, (*b*) court to be specially agreed on, (*c*) undertaking to abide by award, (*d*) Council to propose steps for carrying out award (art. xiii.). Court of International Justice a permanent institution. Its functions—to arbitrate as requested, and to advise the Council (art. xiv.).

(2) *Inquiry.*—(*a*) Failing agreement to arbitrate, members agree to submit dangerous disputes to the Council for investigation. (*b*) One party may effect the submission to the Council. (*c*) The Council will endeavour to effect a settlement. (*d*) If the Council does not succeed, it will publish a report of its findings (whether unanimous or by a majority); if the award is unanimous, the members agree not to go to war with the power complying with the recommendations; if there is no unanimity, members are free to take such action as they deem necessary to maintain right and justice. No report shall be made on a matter which by international law falls within the domestic jurisdiction of a party (art. xv.).

G. *Sanctions.*—Penalties for a resort to war in breach of artt. xii., xiii., xv. (*a*) Economic boycott. (*b*) Employment of armed force contributed by the governments on the recommendation of the Council. (*c*) Material support, financial, economic, and military. (*d*) Expulsion by the covenant-keeping powers of a covenant-breaking member (art. xvi.).

H. *Disputes between Powers outside the League.* — Such Powers are invited to act as if subject to the obligations of members, and to be dealt with accordingly. If both parties refuse, the Council to make such recommendations as will prevent hostilities (art. xvii.).

I. *Open diplomacy.*—All future treaties and international agreements to be registered and published (art. xviii.).

J. *Advisory and precautionary function of Council.*—Advises members to reconsider inapplicable treaties and to consider threatening international conditions (art. xix.).

K. *Inconsistent obligations and understandings.*—Abrogation and release therefrom to be sought (art. xx.).

L. *Treaties* of arbitration and regional understandings directed to peace *unaffected* — especially Monroe Doctrine (art. xxi.).

M. *The mandate.*—(*a*) Application—to territories released by the war and to backward or immature races. (*b*) Mandatories—advanced nations who can best undertake the responsibility, and are willing to accept it. (*c*) Types of mandate—to give administrative advice and assistance (*e.g.*, to former portions of the Turkish empire); to administer territory, subject to consideration for order and morals, and the grant to other nations of equal opportunities of trade and commerce (*e.g.*, in S. Africa), to administer territory as an integral portion of an empire (S.W. Africa, Oceania). The mandatories to make an annual report to the Council (art. xxii.).

N. *Wider aims of the League.*—Improvement in the conditions of labour, just treatment of natives, control of slavery and the opium and liquor traffic, and of trade in arms, secure freedom of communication, the prevention and control of disease (art. xxiii.).

International Bureau and matters of kindred concern to be placed under the direction of the League (art. xxiv.).

[1] But cf. xi. and xix. on possible development.

[7] *The Covenant of the League of Nations with a Commentary thereon presented to Parliament*, June 1919.

Humanitarian agencies to be encouraged and promoted (art. xxv.).

O. *Amendments to the Covenant*—to take effect when ratified, a member dissenting having the remedy of withdrawing from the League (art. xxv.).

The Covenant of the League of Nations is founded on a skilful compromise between the dictates of ethico-political theory and considerations of political expediency. Of the two elements of the combination, the lower was necessary if it was to come into existence, and the development of the higher may safely be left to the future as its custodian and trustee.

The Covenant embodies provisions and regulations which involve a notable advance in the moralization of international relations. That the leading nations should form themselves into a confederation whose object is the preservation of the peace of the world on the basis of justice and right; that they should pledge themselves to refer their differences to arbitration, or at least take advice about them, and renounce the resort to arms until the resources of reason and conciliation have been exhausted; that they should agree in principle to the limitation of their armaments, and be willing to discuss with one another concrete proposals for a reduction; that they should consent to keep one another informed as to treaties and military preparations; and finally that they should arrange to call to account and punish any disturber of the peace—these provisions mark an enormous improvement upon the principles of foreign policy which have made and coloured tragic centuries of European history and which issued in the catastrophe of the World War. On the other hand, the Covenant, recognizing that a new system must gradually evolve out of the pre-existent order, adapts itself as far as possible to the conditions of the world in the first quarter of the 20th century. The states retain unchallenged possession of their sovereign rights. It is not suggested that they should resolve themselves into the constituent provinces of a world-republic.[1] Deference is shown to the natural sensibilities of sovereign states by making the functions of Council and Assembly advisory, except in cases where the action of a particular state involves a violation of the terms of the League, or involves a menace to the peace of the world. Again, it is arranged that the great Powers shall wield authority and influence in the affairs of the League in a degree that reflects their economic and military strength, since the Council consists in the main of the representatives of a group of first-class states, instead of being made to rest on the popular Assembly. The constitution in short is not democratic, but aristocratic or oligarchical. Further, possession of territory and rights as from the date of the European settlement is recognized as constituting a foundation of right which is on the whole defensible from the point of view of justice as well as of national aspirations; and an undertaking is given that possession will be defended by the League at least against the aggression of external powers. This undertaking is, however, qualified by the provision that developments threatening the peace of the world—which might well arise from internal disorder, or the uprising of a subject population against an existing fabric of empire—would be held to be a matter on which the League would properly make more or less forcible representations to the state immediately concerned. Finally, the foreign dominions embraced in empires are regarded as lawful possessions, and the title is even strengthened on the ethical side by the doctrine of the mandate which exhibits imperial rule under the ideal aspect of friendly protection, civilizing tutelage, and moral guardianship.

The tasks assigned to the League of Nations will be of no ordinary difficulty. It will have to play the part of an impartial arbiter among the nations, and the representatives of the various powers in Council and Assembly will be predisposed to work primarily for the interests of their respective countries. It will have to give decisions in accordance with justice, and it is not easy to define justice, and to work out its implications in a world occupied by peoples which differ so widely, not merely in numbers and power, but in their capacities, their deserts, and their ability to be of service to the rest of mankind. It will require sanctions —in the last resort it must be able to compel respect for its authority and to coerce covenant-breaking nations by force of arms, and, while nations will readily go to war in defence of patriotic interests, it will be less easy to procure popular support for mere police measures which are dictated by far-seeing and disinterested international policy. These difficulties, however, are not altogether novel; they have already been experienced in other spheres of political action and development, and, as the League of Nations is an institution which the world requires, there is good reason to hope that the intelligence, the public spirit, and the resolution of mankind will prove able to cope with the essential problems of the situation.

The League of Nations, founded to protect the peace of the world, will itself no doubt breed new occasions of strife. It represents the first stage of a political development; and the analogous history of other forms of political organization suggests the probability of manifold conflicts on questions of its constitution and its powers. It starts, as has been observed, with the concession of oligarchical privileges to a minority, and the commonalty of the nations—now represented, as it were, by an Assembly and tribunes—may be expected to agitate for a more democratic constitution which would give equal voting rights to each state, and arrange that the Council should grow out of and depend upon the collective will of the whole body. The League, again, will naturally develop an increasing sense of its own importance, and will be ambitious to claim for itself the larger powers which are felt to befit a central authority, while the particular states will be jealously on their guard against action which savours of encroachment upon their independence and sovereignty. It may be added that the law which forms the basis of the judgments of the League will also afford occasion for controversy, as the League starts with a somewhat meagre outfit of moral precepts in its doctrines of non-aggression and self-determination, and it will be found necessary to do further thinking in regard to the chief good of the human race and the equitable application of an accepted moral ideal to particular peoples and to concrete historical situations. But if experience leads us to anticipate such struggles, the analogies of political history, and not least of the history of Britain and of the United States, justify the hope that working solutions will be found which will be a practical satisfaction of what is legitimate in the conflicting claims of the whole and the parts. It may somewhat confidently be predicted that the constitution will become increasingly democratic, and also that the League, while treating as sacred the domestic autonomy of the peoples, will acquire a steadily-extending authority and influence over the relations of particular states to one another and to the whole.

The endeavour to end war is only the negative side of the task of the League of Nations. The

[1] On the different ideal of the Federal World State and reasons for thinking it Utopian see L. Oppenheim, *The League of Nations and its Problems*, London, 1919, p. 18 f.

positive side is to persuade the nations to do more to bear one another's burdens, and to enrich one another's lives by reciprocal service.

'Of the constructive work we have an augury in the earnest thought which has already been given to the conditions of labour in the covenanting countries, and to the principles which have been laid down for the amelioration of the common lot. It will, moreover, obviously be the duty of the League to encourage, by every means in its power, the chief form, and one of the most beneficent forms of national co-operation, viz. the freest and fullest interchange in honest commerce of the products of the fields and the workshops of every continent and clime. Imagination may even take a wider flight, and picture a time when nation will seek to serve nation by imparting what the other may lack out of the manifold riches of a higher civilization.'[1]

In its spiritual aspect this idea is not novel: it is an ancient possession of the Christian Church, underlying its enterprise of Foreign Missions, but little has been done to act on the idea in other fields. There is room for philanthropic schemes through which each civilized people as such will make an adequate contribution towards the provision of the rudiments of rational knowledge, and especially of modern medical skill, for the benefit of the savage and semi-civilized races of mankind. A great philanthropic opportunity was lost in the two years following the war, when the peoples of Great Britain and America might have agreed to ration themselves so that they might be in a position to release the necessaries of life and some comforts for the starving populations of Europe. The response to the call of the Russian famine is, however, of good omen for the future. One very practical service would be to arrange that all manufacturing nations got an adequate supply of raw materials. It may be added that the success of the League in developing the positive and constructive activities will be an important factor in determining the success of its efforts to avert armed conflicts. It is a law of human nature that an evil habit is best overcome through the expulsive power of a new affection, and, if the nations are to cease to have the desire to devour and plunder one another, it is imperative that, through reciprocal offices of service, they should learn to think of one another with kindly and grateful feelings, and respect one another as fellow-workers in the common cause of humanity.

WAR, WAR-GODS.

Celtic (G. DOTTIN), p. 691.
Chinese (R. F. JOHNSTON), p. 692.
Greek and Roman (E. A. GARDNER), p. 694.
Semitic (S. A. B. MERCER), p. 698.

WAR-GODS (Celtic).—At the time of the migrations of the Celts a war-god, whom the Greeks identified with Ares and the Romans with Mars, seems to have been the chief god worshipped by the Celtic tribes.[2] Gods guide their migration and bring the army to a stop on the territory destined for it;[3] to the gods they dedicate all or part of the booty in victory;[4] to them they sacrifice victims before the combat[5] and prisoners after victory;[6] in their honour they raise the war-cry.[7]

[7] Livy, v. 38.

The war-god to whom the Celts dedicated Roman arms in 223 B.C. is called Vulcan by Florus;[1] the one to whom the Gauls sacrificed men is called Saturn by Varro.[2] The ancient Celts probably had a goddess of war; this goddess has been identified by the Greeks with Athene,[3] and by the Romans with Minerva.[4] It was in the temple of this goddess that the Insubres kept their ensigns of war.[5]

Cæsar gives us no more definite information; he mentions Mars third among the five chief gods of Gaul, and adds that Mars directs wars, and, after the issue is decided, the spoils are usually dedicated

to him; when the Gauls have carried off the victory, they sacrifice all the living beings that they have taken and gather the booty to one place; in many of the tribes heaps of war booty may be seen in the sacred places.[1] We must come to the Gallo-Roman inscriptions of Gaul, Great Britain, and Central Europe—with the Celtic epithets which there accompany the name of the god Mars—to get an idea of the variety of the war-deities of the Celts. Whereas 18 epithets of Mercury have been found, 15 of Apollo, 7 of Juppiter, and 3 of Minerva, we can count 50 of Mars; and these epithets of Mars are particularly numerous in Great Britain. Some of them have a local meaning, in which cases it is not certain that we have to do with a Celtic god; we may be in presence of local cults of the Roman god Mars. But of the 40 epithets that remain after the local epithets have been deducted 8 are used alone as well as along with the name of Mars—*e.g.*, Toutatis, which is probably a variant of the name Teutates,[2] which scholiasts of Lucan elsewhere identify with Mars, and the god Esus, also mentioned by Lucan. They are probably, therefore, the very names of the indigenous gods assimilated to Mars. As regards the others, it is probable that at least a number of them also indicate Gaulish deities. And it is impossible to ascertain whether some epithets of Minerva do not denote war-goddesses. Further, Mars Loucetius is associated in two inscriptions with Nemetona, who is undoubtedly a war-goddess, and Mars Cicolluis is associated with Litavis, whose bellicose character is undoubted, since in an inscription she is replaced by Bellona as the consort of Mars. Dio Cassius[3] mentions among the Britons of the time of Boudicca the worship of a goddess of victory, Andata or Andrasta, to whom human sacrifices are offered, and whose name presents a close resemblance to that of Andarta, a goddess of the Vocontii, on whose territory have been discovered the majority of the altars of Victory that belong to Southern Gaul.

The information that has come down to us from antiquity is so imperfect that we can merely state that the ancient Celts had numerous gods and goddesses of war, and it indicates several details of their worship. But we have no figured representations of war-deities among the numerous Gallo-Roman bas-reliefs, unless we regard as such the wheel-bearing horseman who tramples under his horse's feet the monster dragon. The characteristic symbols of the Gaulish gods—the wheel, the hammer, and the cup—can hardly be interpreted as warlike. As for the attempts to explain by means of Celtic languages the names and epithets of the Gaulish gods assimilated to Mars, they supply only vague characteristics—Albiorix, 'the king of the world,' Belatucadros, 'comely in slaughter,' Caturix, 'the king of combat,' Leucetius or Loucetius, 'the brilliant.' We have no reason to believe that the Mars of Gaul had, like the Mercurys, many famous temples in Gaul. Doubtless the Roman pacification allowed as few as possible of their cults to subsist. Nevertheless we find in an inscription of the Rhine valley mention of a temple of Mars Camulus.[4]

From the text of the Irish epic, which has preserved some details of ancient Celtic mythology, we may glean some notions of war-gods and goddesses, and etymology helps us to recover others. In Cormac's *Glossary* Nét is described as 'a battle-god of the heathen Gael.' The king of the Tuatha Dé Danann, Nuada, has been identified with the Deus M[ars] Nodons known from inscriptions from Great Britain. Neman, the name of Nét's wife, has been connected with Nemetona, the Gallo-Roman goddess, consort of Mars; and the name of Nét has been compared to the first part of the name Nantosuelta, associated in a Gallo-Roman inscription with the god Sucellus, 'the good striker.' In the mythological cycle and in the Cúchulainn cycle three fairy warriors appear—a kind of valkyries with the power of changing into animals—the first Morrígan, wife or granddaughter of Nét, or wife of Dagda, the second Macha, granddaughter of Nét, the third Badb, wife or granddaughter of Nét, all three daughters of Ernmas, one of the Tuatha Dé Danann. The name Badb, which in Irish means a scald-crow, and which has a variant Bodb, has been compared to the second part of the name of a Gallo-Roman goddess [C]athu-bodvæ, in Irish Badb-catha, 'battle-crow.'[1]

It is much more difficult to discover traces of the ancient Celtic gods in the tradition and literature of Wales than in the Irish literature of the Middle Ages. Nevertheless scholars are probably right in identifying Nudd, the father of Gwyn, in whom was 'the force of the demons of Annwfn,' with the god Nodons of Romanized Great Britain.

This, then, as far as the evidence of the ancients and the epics of the Celts of the British Isles enable us to reconstruct it, is the fragmentary pantheon of the war-gods of one of the most warlike races of ancient Europe.

DOTTIN.

WAR-GODS (Chinese).—China has no god of war, if by that term we imply a belief in the existence of a divine being similar in functions, characteristics, or divine attributes to Ares or Mars. This, however, is not inconsistent with the fact that war, in China as elsewhere, has usually kept itself in close touch with religion. We read in Tso's famous Commentary on the *Ch'un-Ch'iu* of Confucius that 'the great affairs of a State are sacrifice and war';[2] and the latter unaccompanied by the former was a thing unheard of. A Chinese writer has recently remarked that from the earliest historic times up to the date of the Boxers (and he need not have drawn the line there) his countrymen have never ceased to regard supernatural or spiritual agencies as constituting an essential portion of the national military equipment.[3]

It is not surprising, then, that among the most ancient ceremonial rites mentioned in Chinese classical literature are those which were carried out during warfare by rulers of states and leaders of armies with the direct object of invoking the aid of the unseen powers and impressing the troops with the belief that those powers would protect and help them in the hour of battle. The two most solemn ceremonies in ancient China connected with war were known as the *lei* and the *ma* sacrifices.

Very few details regarding them have come down to us, and we cannot always be sure that the records we possess are altogether worthy of trust. It is clear, however, that the *lei* was a sacrifice to God (T'ien or Shang-Ti) and that it was offered on many solemn state occasions. The ceremony could be performed only by the sovereign himself, because it was the 'Son of Heaven' alone who had the prerogative of offering

sacrifices to Heaven.[1] It was not exclusively associated with war, but it was always offered when an army was about to be set in motion and seems to have been regarded as pre-eminently a military sacrifice.[2]

The *ma* was offered on the field of battle or at the army's halting-places. There is great uncertainty with regard to this sacrifice; the most probable view is that it was offered to T'ien or Shang-Ti, but that certain minor divinities were also invoked or associated with that high deity—namely, the local tutelary powers who might be expected to object to the intrusion of armed forces into their private spheres of activity or who might feel outraged by the shedding of blood on soil that was under their special protection.

It is highly improbable that the early Chinese ever regarded warfare abstractly, as a quasi-institution, or that they ever felt the need of nominating a deity to preside over it as 'god of war.'

1. Kuan Yü or Kuan Ti, 'god of war.'—Although it is not correct to say that the Chinese pantheon contains a Mars, there are several famous warriors who, having shown themselves to be stout fighters and unselfish patriots during their earthly lives, have been deemed worthy of having their names and 'spirit-tablets' enshrined in a kind of national Valhalla or 'Temple of Military Heroes,' just as the names and tablets of great sages and philosophers and other public benefactors have been enshrined in the 'Hall of Worthies' or the 'Temple of Confucius.' It is the most celebrated of these national heroes who has been so often described as 'god of war' and as 'the Chinese Mars';[3] and, although neither term is strictly applicable, and the latter is certainly inadmissible, the former may be retained if only because it has passed into common usage among Western writers on China and because there is no very suitable term in our language by which it could be replaced. We should be careful to remember, however, that the Chinese have never lost sight of the fact that their god of war was once a man like themselves and lived at an epoch which Chinese annalists do not consider very remote. Even now his manhood is by no means altogether merged in his divinity; and, though he is regarded as a worker of miracles and has certainly been the object of much superstitious devotion, this seems hardly sufficient to justify us in regarding him as more than a very potent saint.

Though dead heroes have always been honoured in China, and the custom of 'canonizing' those who deserved well of their country either in peace or in war is a very ancient one,[4] it was not till China had fallen into a state of military decadence that a distinct cult of great soldiers began to take a conspicuous place in the religious life of the Chinese people. Kuan Yü had been dead about eight hundred years when the Sung emperors set him up as the central figure in a national cult that has lasted to this day.

Kuan Yü, a native of the village of Ch'ang-p'ing in Hsieh-chou (Shansi province), was born A.D. 162 and died in 219. He lived during the time of disunion and strife that is commonly known as the period of the Three Kingdoms, and he is regarded as the most romantic figure in one of the most romantic epochs of Chinese history. Of abnormal size and strength, he distinguished himself above all his contemporaries by his prowess and courage and by his chivalrous sense of honour. The influence of the drama, coupled with that of a great novel known as the *San Kuo*—both full of fantastic details which can have had little or no foundation in fact—have raised him to a pitch of popularity which is really independent of his position in the official roll of divinities or saints and would hardly be affected by the total withdrawal of official recognition. His surname is unknown; for Kuan was merely adopted by him in order to conceal his identity during his flight from his native place after he had entered upon his career of glory by slaying a tyrannical magistrate. Later he accidentally made the acquaintance of two other celebrated characters of the period—Liu Pei and Chang Fei. The three became devoted and lifelong friends and entered into a relationship of sworn-brotherhood by taking the famous 'oath of the peach-orchard.'[1] The leader of the three was Liu Pei, who was or declared himself to be a descendant of the founder of the Han dynasty and eventually carved his way to the throne of one of the Three Kingdoms—that of Shu—largely through the devotion and generalship of Kuan Yü. After a brilliant career which was not too uniformly successful to be monotonous, he was captured by the forces of Sun Ch'üan and executed.[2] Ten years or (according to another authority) forty-one years after his death he was given the posthumous title of *Chuang Mu Hou*, 'Marquis of Martial Dignity,' and various other titles were added throughout the centuries.

There is some doubt as to the exact date upon which Kuan Yü first acquired the high-sounding title of *Ti*—a term which is usually translated 'god,' but for which the word 'emperor' is, in this and many similar cases, a more fitting equivalent. The generally accepted date is 1594, when the emperor Wan-Li bestowed the title of *Hsieh-T'ien Hu-Kuo Chung-I Ta Ti*, 'In-harmony-with-Heaven Protector-of-the-State Loyal-and-Righteous Great Emperor.' For some reason not much notice seems to have been taken at first of this addition to Kuan Yü's honours, for he continued to be designated by his old title of 'Marquis.' This was brought to the notice of the emperor Hsi Tsung (T'ien-ch'i), who in 1624 issued an edict declaring that the commands of his late majesty Shên Tsung (Wan-Li) were to be carried out, and confirming the titles, including that of *Ti*, conferred upon Kuan Yü by that monarch. From that time to the present the 'god of war' has been generally known as Kuan Ti.

2. Yo Fei, hero of the Sung dynasty.—The figure of Kuan Ti looms far larger than life-size through a mist of romance created by the popular drama and by the great novel of *The Three Kingdoms*. Were it not for this fact, his place in the affections of the Chinese people might long ago have been disputed by another great national hero—Yo Fei. This high-souled patriot lived nearly a thousand years after Kuan Ti; there has been much less time, therefore, for the growth of legends. As a historical figure, however, it may be questioned whether Yo Fei should be regarded as in any way inferior to Kuan Ti either as soldier or as patriot.

Yo Fei was a native of the province of Honan. As a boy he was studious, but the natural bent of his mind soon showed itself in the fact that his favourite books were those which discussed warfare and military tactics, such as the *Ping Fa* of Sun Tzŭ, described by its recent English translator as 'the oldest military treatise in the world.'[3] As he grew up, Yo Fei became a noted archer, and soon distinguished himself in martial exploits against the Golden Tatars, who were at that time engaged in gradually driving the Sung dynasty from the plains of Northern China. Had Yo Fei been adequately supported by the Court and Government, it is possible that the invaders would have been expelled from China. Unfortunately he incurred the active hostility of the powerful Ch'in Kuei, the emperor Kao Tsung's trusted minister.[4] It was this minister who was mainly responsible for the cession of Northern China to the Tatars. At any rate he appears to have entered into a treasonable agreement with Wu Shu, a Tatar prince, to bring about a peace advantageous to the invaders. Yo Fei earnestly desired to continue the struggle, and stoutly opposed the purchase of peace by a disgraceful cession of territory. When compelled to retire and leave the enemy in possession of territory that he felt quite competent to defend, he made bitter complaints that the fruits of his ten years of strenuous labour had been destroyed in a single day. As a vigorous opponent of the peace policy, Yo Fei was regarded by Ch'in Kuei as a dangerous enemy. He caused charges of treachery to be trumped up against him and in 1141 succeeded in having him arrested. Shortly afterwards Ch'in Kuei personally issued a secret order for his summary execution, which was duly carried into effect; and it was falsely reported to the throne that Yo Fei had died a natural death in prison. As time went on, the true history of the events that led to Yo Fei's betrayal and death gradually came to be known among the people, and, though Ch'in Kuei lived fourteen years longer, loaded with honours and high in the good graces of his sovereign, he has earned an immortality of infamy in his country's annals. On the other hand, the name of the warrior whom he defamed and slew has gathered fame and honour with the passing of the centuries, and his temple, which is situated near the margin of the beautiful Western Lake, outside the walls of Hangchow, is

a place of pilgrimage for all Chinese who love their country and wish to show their reverence for the memory of a national hero.

The gradual elevation of Yo Fei to a place among China's patron-saints and divinities began in the reign of Hsiao Tsung (1163-1189), who succeeded the weak and vacillating Kao Tsung on the throne of the Sung empire. That ruler restored the honours and titles of which Yo Fei had been deprived after his impeachment. He also ordered a re-burial of his body, and gave a large sum of money to defray the cost of an official funeral. It was further decreed that a temple should be built and dedicated to the hero, and funds were provided for the performance of periodical sacrificial rites.

3. The cult of military heroes or 'war-gods' under the Republic.—As Kuan Ti was specially venerated by the late Manchu dynasty, it would not have been surprising if the victorious revolutionaries had decided to treat that divinity with cold disdain and to abolish the official rites connected with his cult. The establishment of a nominal Republic has not had this result; but Kuan Ti's position is not precisely what it was before 1911. In the third year of the Republic (1914) it was decreed by the President (Yüan Shih-k'ai) that the 'Military Temple' was to be devoted to the cult not of Kuan Ti alone but of Kuan Ti and Yo Fei and twenty-four other celebrated military leaders and patriots. Kuan Ti and Yo Fei were to share the highest honours equally, and the twenty-four others were to be regarded as their spiritual 'associates.' Nothing was done to interfere with the existing Kuan Ti temples or their rituals; but a new temple was dedicated to Kuan Ti and Yo Fei and their associates. The temple chosen for the purpose comprises a large group of buildings immediately to the north of the palace of Prince Ch'un, ex-prince regent and father of the young emperor Hsüan T'ung. It was erected by the imperial government about a quarter of a century ago and was intended for use as an ancestral temple for Prince Ch'un, but had never actually been used as such when the dynasty was deposed. When it was taken over by the Republican Government, it was speedily converted into what might be described as the 'mother-church' of the reorganized cult of military heroes. The main buildings of this temple are covered with beautiful coloured tiles and stand in spacious courtyards. The principal hall or chapel is called the *Wu Ch'êng Tien*, 'Hall of Military Perfection,' in contradistinction to the *Ta Ch'êng Tien*, or 'Hall of Great Perfection,' the principal sanctuary in the Temple of Confucius. The interior, with its magnificent timber pillars and its richly-decorated roof, is impressive in the stately simplicity of its arrangements. There are no images. The canonized heroes are represented by their 'spirit-tablets' only—*i.e.* plain oblong pieces of wood, each bearing the name of the person whom it represents. In the place of honour at the north side of the hall, facing the entrance, stand two tablets side by side, somewhat larger than the others. These are the tablets of Kuan Ti and Yo Fei. It is to be noted that Kuan Ti's tablet does not bear all his titles or the highest of them. He is merely *Kuan Chuang Mu Hou*, 'Kuan the Marquis of Martial Dignity,' the earliest of his posthumous titles. The designation on Yo Fei's tablet also consists of four characters—*Yo Chung Wu Wang*, 'Yo the Prince of Loyalty and Martial Prowess.' On the east and west sides of the hall stand the tablets of the twenty-four 'associates,' twelve on each side, all well-known historical characters.

The reorganization of the cult of heroes was based on sound considerations of practical statecraft and national expediency. The main objects were to encourage patriotic ideals among the people, to raise the public estimation of the profession of arms, and to inspire the soldiers themselves with military zeal and professional pride. On the occasions of the periodical ceremonies appointed to be carried out in honour of the twenty-six heroes army commanders are enjoined to bring their troops to the local 'Military Temple,' so that they may be spectators of the rites and have an opportunity of showing their reverence for the memory of the great soldiers of past days. The troops are also expected to take oaths of allegiance and good conduct. The first ceremony at Peking took place in January 1915. General Yin Ch'ang, as deputy for Yüan Shih-k'ai, led his officers and soldiers to the newly-established temple, and there they took the military oaths, which may be summarized as follows: (1) to be loyal; (2) to be obedient; (3) to protect the people of China from enemies; (4) to be ready to die for their country; (5) to be diligent and zealous in their duties, to respect their superiors and comrades, and to be true and upright in speech and action; (6) to abstain from taking part in political movements and from joining political societies or parties.

The ceremony is as simple as it is impressive, and, though Christian missionaries have asserted that it fosters superstition and 'shows in a painful manner the backward strides that are being taken by the Government,'[1] such complaints show a curious lack of sympathy and understanding. The religious significance of the cult is, indeed, very slight. The soldiers are not called upon to subscribe to any dogmas or beliefs regarding the powers or functions supposed to belong to the objects of the cult, nor do they prostrate themselves before any idol. They are merely expected to bow the head as they file past a row of wooden tablets bearing the honoured names of those who fought and in many cases died for their country.[2] Surely no more fitting place could be chosen for administering the military oaths of loyalty, obedience, and self-sacrifice than a building which has been dedicated to the memory of the heroes who are believed to have been the highest Chinese embodiments of those ideals.

LITERATURE.—This has been indicated in the footnotes. A large proportion of the material has, however, been taken from untranslated Chinese sources.

R. F. JOHNSTON.

WAR, WAR-GODS (Greek and Roman).—**1. Greek.**—The importance of war in early communities must always have been such as to bring it into close relation with the worship of the gods. In fact we usually find that it is one of the chief functions of any god to help and protect his people in war; and that they regard it as a matter of the highest importance to secure his approval for any such enterprise. In civilized warfare the conventions and rules generally observed, such as the sanctity of heralds and other envoys, or the inviolability of a truce, were also under the protection of the gods. But the ritual of declaration and conclusion of war was not so highly developed among the Greeks as among the Romans.

A curious instance is recorded by the scholiast on Eur. *Phœn.* 1377, who states that before trumpets were invented torches were used as a signal at the beginning of a battle; these were borne by two priests of Ares, one from each army, who were alone inviolable.

Here we seem to see some approach to an international sanction under divine authority; another custom is the truce always allowed by the victors

[1] This sentence occurs in an account of the ceremony as held in a provincial city. See *North China Daily News* (Shanghai), 7th Oct. 1915.

[2] A short account of the proceedings at Peking appeared in the *North China Daily News*, 26th Jan. 1915. Similar ceremonies have been regularly carried out ever since, both in Peking and in the Provinces. The spring ceremony in 1920 took place on 31st March, and in Peking the President (Hsü Shih-ch'ang) was represented by the general who had attended the proceedings on behalf of Yüan Shih-k'ai.

to the defeated army for collecting and burying the dead.

A typical example of a truce between combatant armies occurs in the *Iliad*, where a solemn sacrifice is made, and over it a curse is invoked from the gods on whoever may break the oath; but the gods are those who preside over the oath rather than over war.

In these cases both parties alike appeal to the same gods; in them we see merely a particular application of the principle that the gods, and Zeus as the chief god, enforce honour and mutual faith in all relations between strangers.

Examples like these are not, however, concerned with gods of war as such. The function of a war-god was above all to give victory to his own people, and to preside over such preparations as were likely to lead to it. These functions are sometimes attributed to a special deity, but more often to the chief god, or to the god who takes any town or people under his particular protection. Conversely, it might be an effective measure to withdraw from the enemy the protection of their own special divinity.

A good example is the secret expedition made by Odysseus and Diomed to carry off the Palladium, or sacred image of the war-goddess of Troy, because its presence prevented the capture of the town. A clear and instructive example of the gods to whom victory is ascribed occurs in an inscription found at Delphi, in which the Selinuntians say 'they are victors by the aid of the following gods—Zeus and Phobos (Fear) and Herakles and Apollo and Poseidon and the Tyndarids (Dioscuri) and Athene and Malophoros (Demeter) and Pasikrateia (Persephone) and the other gods—but above all of Zeus.'[1]

Here are to be noted the reiterated insistence on the predominance of Zeus in this capacity, and the placing next to him on the list of Phobos—here probably to be regarded, like other epithets of gods in the list, as a name for Ares himself rather than as a satellite of his. Some of the other divinities in the list are elsewhere regarded as especially givers of victory to their devotees; but the whole is probably to be regarded rather as an enumeration of the chief deities of the State cultus.

In the Homeric poems we constantly find the gods not only as givers of victory and as strong partisans of one side or the other, but also as actually mingling in the fray among mortal combatants. This, however, though it applies to all the other gods, is not true of Zeus, who decides the issue by his will and imposes it by his emissaries. So in all great national crises or deliverances due to a successful war the victory is ascribed to Zeus, especially under his title of Eleutherios ('the Liberator'). Thus at Platæa, in commemoration of the decisive victory over the Persians, games called Eleutheria were celebrated at the altar of Zeus Eleutherios, and a race between men in armour was the chief event. An emblem of this power of Zeus is the ægis (*q.v.*), which he lends to Apollo[2] to turn the battle against the Greeks, and which is constantly worn by Athene. It has the power of causing terror and flight among those against whom it is shaken, and is used only by these three deities. All three have a specifically warlike side. Apollo was honoured in the festival of the Boedromia at Athens and of the Karneia at Sparta, both of a warlike character; he was especially the leader and giver of victory to the Dorians. After the Persian wars all the Greeks who had participated in the struggle set up a common thank-offering to him at Delphi. The same victory was attributed by the Athenians to their patron goddess, and commemorated in offerings or statues on the Acropolis; and the Platæans who shared in the battle of Marathon set up, from their share of the spoils, a temple and statue at Platæa to Athene Areia as goddess of war. Another epithet of Athene which was probably of a warlike character was Nike, goddess of victory. Athene Nike had an altar and shrine on the bastion south of the entrance to the Akropolis and guarding its approach; on this bastion was erected, in the time of Perikles, the little temple which commemorated in its reliefs the victories of the Greeks over the Persians. The goddess is sometimes called 'Wingless Victory' by a misconception; as a form of Athene she was distinct from the winged figure of Victory so common in Greek art of all periods. This latter Nike is a mere impersonation of victory, whether in the games or in war. She has no separate cultus before the time of Alexander, and no place in mythology. She is placed on the hand of Zeus or of Athene in their great statues, and so is regarded as their satellite. Winged victories are often to be seen crowning victors—but usually athletic, not martial ones—making sacrifices, and decking trophies. Famous statues of Nike are set up to commemorate victories in war—the best known are that by Pæonius dedicated to Zeus by the Messenians at Olympia, and that from Samothrace, now in the Louvre, placed on a ship to record a naval victory of Demetrios Poliorketes. It has been rightly observed that she is in each case represented as the messenger rather than the giver of victory. Trophies, set up on the field of battle, were regarded as dedications—presumably to the god to whom the victory was ascribed. They were protected thus by a religious sanction, for they appear usually to have been respected even when set up in enemy territory.

The deities so far mentioned preside over war only as one side of their activities, and as a necessary part of their protection and help to their chosen people. In **Ares**, on the other hand, we recognize a specialized god of war. It has indeed been suggested that his functions were once of a wider character, perhaps among the Thracians or some other foreign people; but there is little trace of any such character in Greek mythology or ritual.[1] Some confusion has arisen in this matter from the misleading identification of Ares with the Roman Mars. Ares fares but poorly at the hands of the poets from Homer down. In the *Iliad* he is wounded by a mortal and overthrown by Athene; Sophocles actually calls him 'the god unhonoured among gods,'[2] and the aid of other deities is implored against him; and this not as the war-god of an adversary, but as representing the horror and evils of war and pestilence. He is thus essentially the destructive god, delighting in slaughter; yet his worship, so far as we can judge, does not appear to have any connexion with the ritual and belief associated with terrible 'chthonic' powers or the possible spiritual influence which could arise from such belief. On the other hand, the name of Ares often occurs in conventional expressions and epithets applied to warriors implying military prowess; but in such cases it seems to be used as an impersonation of war rather than with any mythological reference. So too in expressions like 'Ares destroyed him' in an epitaph or, in a hymn to Apollo, 'He stayed the Ares of the Gauls,' it even seems as if the name of Ares was used by preference for the power of the enemy. One of the earliest and best attested shrines of Ares in Greece, that on the Areopagus at Athens, was said to have been founded by the Amazons, terrible women warriors of foreign origin who were defeated by Theseus. Whatever the origin of Ares, he seems in all these cases to represent the brutal and barbarous or 'barbarian' side of war, which is overcome by the Greeks with the help of their gods of civilized warfare. Such an impression is confirmed by the legend that tells how Herakles,

[1] *Cf.* art. THRACE.

[2] *Œd. Tyr.* 215.

the typical Greek hero, by the aid of Athene, slew Kyknos, the son of Ares, in spite of Ares' attempt to support him. Ares indeed takes his place among the gods in their usual assemblies, and in such common exploits as the battle against the Giants; but even here he does not perform a leading rôle.

Ares is associated with a goddess Enyo (cf. his epithet or by-name Enyalios), who, however, has little mythological personality. His association with Aphrodite (which was given a scandalous turn by the poets from Homer down) is probably due to his having in some places a warrior-goddess as consort, who was identified, *e.g.*, with the armed Aphrodite worshipped at Corinth—very probably a survival from primitive worship. Phobos, or 'Fear,' is either his satellite or another name for himself, rather in the sense of Terror, but is a mere impersonation, though sometimes represented on shields and similar objects—possibly originally with the magic intention of inspiring terror in the enemy. There are also dæmons of battle or strife who delight in slaughter, Eris (Strife) and the like; and Keres, dæmons of death, who drag away the corpses of warriors; but these belong to poetical imagination, at least in their artistic form. A curious myth about Ares is that he was bound in a pot for twelve months by the Aloadæ.[1] Similar stories of the binding and hiding of a malevolent spirit are known to folk-lore; a similar notion is found in the binding of Satan for a thousand years (Rev 20[2]).

To sum up, the gods who presided over war in Greece fall into two classes: those who gave 'the civilized art of war' and 'the tempered civic courage exalted by Aristotle and other Greek moralists,' and Ares, who inspired 'the brute battle-rage,' with which 'the Greeks had little sympathy.'[2] With the advance of ethical feeling in religion, the latter became the representative of the spirit of destruction and of barbarian rather than Hellenic warfare, though his cult still survived in many cities.

2. Roman.—In the religious usages of war, and in the beliefs as to war-gods and the practice of their ritual, Rome differs from Greece in two respects: (1) Mars, the specialized war-god, was also in many ways the chief national god, and so differs widely from Ares, with whom the Romans identified him; and (2) the ritual and observances of war were far more elaborate and more definitely prescribed, and were to a great extent under the charge of special priestly officials.

In addition to Mars, Janus, Jupiter, and Quirinus are concerned with war, though not as their special function. Janus, as the spirit of doorways, is usually first among gods to be invoked, in connexion with every going out and coming in. His temple in Rome appears to have consisted of two doorways, with a kind of court between them. Here an image of Janus, with a head facing each way, was set up as guardian of the threshold. But this statue probably belongs to a later stratum of belief and ritual; originally the doors themselves were the symbol or even the habitation of the god. This temple was open in time of war and closed in time of peace—a custom which has puzzled mythological speculators alike in ancient and in modern times. Virgil[3] seems to regard war as being shut up within the doors and released when they are opened; Horace[4] speaks of the bars that shut in Janus, the guardian of peace. Virgil at least records the custom, common to other Latin towns as well as Rome, that the king or the consul should formally open the doors as a declaration of war. An explanation that has appeared probable to modern mythologists, as to Ovid,[1] is that the door was left open during an expedition so that there might be no obstacle to the return of those who had gone forth. The gates are said to have been closed during the reign of Augustus for the first time but one since the reign of Numa.

The worship of Jupiter was also in many ways associated with war. The most conspicuous example is in the case of the *spolia opima*, which consisted of the spoils of an enemy leader slain in single combat by the leader of a Roman army. These are said to have been first dedicated by Romulus in a temple to Jupiter Feretrius which he established for the purpose. In this temple was kept the sacred stone, Jupiter Lapis, which was taken with them by the *fetiales* when they went out to ratify a treaty, and by which they swore on other solemn occasions. The god was probably in primitive times thought of as immanent in this stone and in the oak-tree on which Romulus hung the spoils. The rites of war connected with this primitive temple were later eclipsed by those of the great temple of Jupiter Capitolinus. This temple is especially associated with the celebration of the triumph which was the highest honour that could be given to a victorious general. The most remarkable feature of the triumph was that the general was actually invested with the insignia of the god, borrowed from the temple for the purpose, and had his face painted with vermilion, in imitation of the image of the god. He proceeded from the Campus Martius through the Forum to the temple of Jupiter Capitolinus, and there deposited the laurels from his *fasces* and the laurel branch which he carried on the knees of the god, thus assigning to him the glory.

The worship of Jupiter Latiaris on the Alban Mount belonged to the Latins generally rather than to Rome in particular; but it was adopted into the Roman State cultus. The celebration of the Feriæ Latinæ in his honour was the first duty of the consuls on their assuming office; and military disasters were attributed to its omission. A triumph was celebrated on certain occasions on the Alban Mount in honour of Jupiter Latiaris, especially by generals who had not obtained the Senate's sanction for a triumph in Rome. Other epithets of Jupiter which are obviously of a military character are Victor and Stator. There appear to have been three temples of Jupiter Victor in Rome, dedicated on various occasions; that of Jupiter Stator on the Palatine, on the spot where the flight of the Romans before the Sabines was stayed, was attributed to Romulus; it was renewed in consequence of a vow in battle against the Samnites. Jupiter was also worshipped in various forms as protector and giver of victory to the emperors on their military expeditions; and in the later imperial age the *imperator* is often portrayed with the attributes of Jupiter—an extension of the practice followed earlier in the case of a triumphing general.

The most important priestly college connected with the military side of the worship of Jupiter was that of the *fetiales*, who were concerned with questions of international faith and the sanctity of solemn pledges made in the name of the god. Their special functions were the demands for reparation in cases of international offences, the declaration of war, and the conclusion of peace and of treaties. They had the inviolable character of sacred envoys, and carried with them on their expeditions the sacred stone and the sceptre from the temple of Jupiter Feretrius, and the sacred vervain gathered on the Arx (*sagmina*). Their spokesman was the *pater patratus*. In demands for reparation (*clarigatio*) three intervals of ten days were allowed. If by the thirty-third day satisfaction was not given, war was declared. This was done by the *pater patratus* hurling a spear over the enemy's frontier. When this in later times became impracticable owing to the distance of some military expeditions, a parcel of land near the temple of Bellona in Rome was ficti-

[1] *Il.* v. 385 ff. [2] *CGS* v. 407.

[1] *Fasti*, i. 279 f.

tiously converted into enemy soil, its boundary being marked by the *columna bellica*; and the spear was cast into this instead. A war declared by these formalities was called a *iustum piumque bellum*, not in any moral sense, but simply in that all the ritual had been correctly followed out so as to secure divine sanction. At the conclusion of a treaty or truce at the end of a war the consul could only make a *sponsio*, or agreement, which did not become binding upon the people until it was ratified by the *fetiales* with a special form of sacrifice. In all these observances Jupiter is appealed to rather as the guardian of international faith and honour than specifically as a war-god; but they are closely associated with war as supplying the religious sanction without which success could not be expected. The *fetiales* naturally acquired some knowledge of international law, and were sometimes appealed to on a question of procedure.

It has been much disputed among mythologists whether **Mars** should be regarded as specifically a war-god; the opinion appears now to prevail that, although this side of his functions was prominent in early times and predominant in later, it was not the most primitive or the most important. Mars appears to have been a god of the land, not only in Rome, but also in many other Italian states. It is noteworthy that he had no temple within the *pomœrium* at Rome. This is explained by some authorities as indicating a notion that his presence was undesirable or a desire that civil strife should not exist within the city; but it is more probably connected by others with the notion that he was god, not of the town, but of the country both cultivated and wild, especially the latter. For this reason he was able to protect his worshippers when they ventured out on warlike expeditions. Similarly the spring and autumn ceremonies in his honour, such as the dances of the Salii with the sacred shields (*ancilia*), are by some associated with the beginning and end of the campaigning season, and so with the activity of the war-god. But it has been pointed out that similar dances occur among many peoples in connexion with the cult of the powers of vegetation or the processes of agriculture at the most critical seasons of the year, and were intended to arouse the sleeping forces of such powers, or to avert or exorcize malignant influences. This may well have been the original meaning of these dances in honour of Mars, though they doubtless acquired a warlike meaning in quite early times. Though Mars had no temple within the city of Rome, sacred objects connected with his worship were preserved in some of the most ancient shrines in the city. The spears of Mars (*hastæ Martis*) were kept in the *sacrarium* in the Regia, at the foot of the Palatine, and were shaken by a consul before entering on a campaign with the words: 'Mars, vigila'; these were evidently regarded as the symbol of the god, who was in early times probably thought to be immanent in them; their spontaneous shaking was regarded as a portent. In the Hall of the Salii on the Palatine were kept the sacred shields. These were of a very ancient pattern similar to those used in the Mycenæan age in Greece. One of them was believed to have fallen from heaven in the time of Numa; and the safety of the city was thought to be dependent on its preservation, as in the case of the Palladium at Troy. Numa had eleven other shields made to match it; and these were annually carried round various altars in the city by the Salii in the month of March; they were ceremonially purified and put away by the Salii in October. The Salii on their way executed a kind of war-dance and beat the shields with sticks. Another ceremony in honour of Mars which was given in later times a warlike significance was that of the October horse; the winning horse in a race was sacrificed, and his head fixed up on the Regia, though here too later investigators see a rite originally agricultural in intention. The sacrifice took place at the altar of Mars in the Campus Martius.

The identification or contamination of Mars with the Greek Ares, and the universal tendency of poetical mythology, led to Mars being more and more regarded as the god of war, the protector of Roman armies and of soldiers in general; and he has come to be thought of only in this aspect in mediæval and modern times. His association with the first month of the year in the old Roman calendar is probably due to agricultural rather than to military influences. A remarkable custom in connexion with Mars was the *ver sacrum*, which was decreed to him in times of pestilence or disaster. In accordance with this all animals and human beings born within the succeeding spring were to be sacrificed or devoted to the service of the god. In the case of human beings this devotion took the form of being sent forth beyond the boundaries of the State. Hence arose colonies of a military character, with Mars as their leader and founder. The foundation of many Italian cities was attributed to Mars; but legends like that of Romulus, who was said to have been borne to the god by Rhea Silvia, show an anthropomorphism alien to primitive Italian religion, and are probably of Greek origin.

Another Roman or rather Italian war-god is **Quirinus**, who was later identified with Romulus. He seems to belong to the Sabine settlement on the Quirinal Hill, though he came to be adopted as one of the chief divinities of Rome, and even to represent the peaceful or citizen side of the god, as Mars Gradivus represents the warlike side; but he is expressly identified with Enyalios or Ares. It is significant that the three classes of *spolia opima* were offered, the first to Jupiter Feretrius, the second to Mars, and the third to Quirinus.

Other minor divinities connected with war have little mythological significance. **Bellona** had a temple in the Campus Martius, which was dedicated after a vow made in battle in 296 B.C.; close to it was the *columna bellica* mentioned in connexion with the *fetiales*. She seems, however, to have been little more than a personification, and her cult is of no great importance. She was later identified with an Asiatic warrior-goddess, or with the old Sabine Nerio. Nerio is by some writers regarded as the consort of Mars, but Nerio Martis is more probably to be explained as the strength or courage of Mars—an aspect, so to speak, of the god's manifestation. In later times Victoria, Virtus, and other impersonations were frequent, especially in art.

It is obvious that, in important undertakings such as military expeditions, sacrifice and divination would play a prominent part, especially among a people who, like the Romans, showed extreme anxiety to keep in right relations with divine powers. These, however, need not be more than mentioned here, since they are fully treated under their proper headings. A remarkable instance of *devotio* is that in which, at a critical moment of the battle, a general 'devotes' himself and the enemy's forces.

A well-known example is the case of P. Decius Mus in 340 B.C. Here the devotion was said to be due to a dream; but the rites and formula provided by the *pontifex maximus* seem to show that the act had official precedents. The case of Codrus at Athens is similar. Decius Mus was instructed to address in his *devotio* 'Janus, Jupiter, Mars, Quirinus, Bellona, the Lares, the gods Novensiles and Indigetes, the gods of his own people and the enemy, and the Manes.'

The formula is instructive, as giving in accepted order the divinities to whom the result of war is ascribed; it confirms what we learn from other sources as to the order assigned to war-gods in Roman religion. It is noteworthy also that the national gods both of Rome and of the enemy are invoked. The custom of *evocatio* is thus recalled, by which, as after the capture of Veii and of Carthage, the national gods of the enemy were

invited to desert his city and transfer themselves to Rome.

In all these matters, as in all other Roman religion, we find an elaborate and highly developed ritual, with every possible safeguard against unintentional oversights. The personal character of the gods concerned comes to be realized only gradually and in later times under Greek influence, but is so strongly developed in later literature that it is by no means easy to recover the primitive meaning of the various rites and of the divine powers who were invoked.

The ensigns (*signa*) of Roman troops and the eagles (*aquilæ*) of the legions 'were objects of religious worship to the Roman soldier.'

'The "birthday of the eagle" was celebrated as that of the legion; the "genius of the signa" is mentioned in inscriptions. We read in Livy of an oath "by the signa and the eagles," and in Tacitus of a commander who saved himself from the fury of a mutinous legion by "embracing the signa and the eagle and putting himself under the protection of their sanctity."'[1]

In camp they were placed in a kind of small chapel. At Rome they were kept in the *ærarium*; hence it would seem that their sanctity was due rather to military feeling than to any official recognition or early sanction.

E. A. GARDNER.

WAR, WAR-GODS (Semitic).—The earliest extant Semitic inscriptions, whether on stone, baked clay, papyrus, or parchment, whether Babylonian, Egyptian, or Hebrew, tell of wars between tribes and nations. From the time of Mesilim, before 3000 B.C., through that of Eannatum, the military genius of Lagash, of Lugal-zaggisi of Erech, the conqueror of the whole of Mesopotamia, of Sargon I., of Gudea, or of Ḫammurabi, to that of Ašurbanipal or of Nabonidus, wars and rumours of wars never ceased; from the time of the earliest Egyptian inscriptions to that of the latest the kings and rulers of Egypt are pictured smiting their foes; and from the time of the Exodus to the final fall of Jerusalem the Hebrews as a nation were warriors, and long before they became a nation—if tradition be trusted—they were subject to the same condition. The Babylonians, Assyrians, and Hebrews were warlike peoples, especially the Assyrians. But, although Egypt had her great military pharaohs at all periods of her history, such as Sesostris III., Thutmose III., Amenhotep II., Seti I., and Rameses II., she was not a great military nation.

I. *BABYLONIAN.*—1. War.—The quarrels and feuds between rulers of early Babylonian city-states were the beginnings of strife which later developed into the elaborate warfare of the Assyrians. The king or head of the city, originally the patriarch of the clan, was the centre of all public life. As priest he was the *šangu*, as representative of the god he was the *patesi*, and as war lord he was the *šarru*. Wars were begun by him and were carried on under his direction. But all wars were really the affair of the gods.[2]

Warlike operations were usually of a military nature. But as early as the time of Samsu-iluna wars were carried on at the head of the Persian Gulf partly on land and partly by the use of boats. The Assyrians, indeed, although not seamen themselves, built a navy with the aid of Phœnician boat-builders, and Sennacherib employed Phœnician sailors in the pursuit of Merodach-baladan across the Persian Gulf. But the Neo-Babylonians not only had developed a great merchant fleet, but also had become a considerable naval power.

From the earliest times in Babylonia the support of warfare was considered a public obligation, and those who were unfit for actual fighting were expected to furnish money to pay for a fighting unit. The army was recruited by conscription, each district being responsible for its quota. This militia, called the *ṣābē* or *ummanâte*, were subject to immediate call by the king. The levy (*dikutu*) was under the direction of a special officer, called the *nâgiru*, who saw to it that no liable person escaped, and, if a man so far forgot himself as to harbour a defaulter from the levy, he was put to death.[1] All estates had to furnish troops at the command of the king, who could even impress the produce of the land and could also commandeer labourers for civilian purposes. By the time of the 1st Babylonian dynasty there is evidence of a regular standing army of professional soldiers, recruited partly from natives, but mostly from Amorites and from the inhabitants of other conquered territories. The body-guard of the king consisted of most trustworthy native soldiers. In the absence of the king the troops were led by the *tartannu*, or commander-in-chief, who often conducted the military campaigns. The armies of the Assyrians were well officered. These officers formed a semi-caste of a military character, were paid with land, a house, and a garden, were assigned sheep and cattle, and received in addition a regular salary. But they were always at the service of the king, conducting especially the works of mobilization. In case of capture every effort was made to procure their ransom. Soldiers were well paid, were rewarded with land and a cow, and good discipline was observed among them. They were divided into cavalry and foot-soldiers, and a careful register of them was kept. The whole army was divided into companies of thousands, hundreds, fifties, and sometimes tens. In Assyria the army was still more highly developed until the time of Ašurnaṣirpal, who had created a fighting machine such as the ancient world had never seen before. The military unit in Assyrian times was the bowman, who was accompanied by his pikeman and shield-bearer. According as Assyria became more and more a conqueror of foreign peoples, she condemned forced labour at home, as in the case of Sargon II., exempted certain cities from the obligation of the levy, as in the case of Ašurbanipal, and depended upon her vast numbers of mercenaries, hired from conquered countries. The Neo-Babylonian army was modelled on that of Assyria, making extensive use of hired troops.

The Stela of Vultures, which depicts the successful war of Eannatum of Lagash, in the name of his god Ningirsu, against Umma, gives an excellent idea of some of the materials of war in that early period. In one battle, in which 6600 (or perhaps 3600) men were slain, the troops were drawn up in a solid phalanx with long spears, protected by huge shields. The lance-bearers carried an axe, and were protected by shields which were borne by the soldiers in the front rank. Each shield protected two soldiers. The shields were probably of leather with bosses of metal, as were also the conical helmets, which extended down the neck, and were furnished with ear-pieces. A chariot is represented on the stela, but it was undoubtedly drawn by asses, for the use of the horse was not known till the Kassite period. Military standards were common in early Babylonian times. The royal weapons consisted of a long lance or spear, wielded in the left hand, and a curved mace or throwing-stick. Naram-Sin is represented armed with battle-axe, bow, and helmet. In his chariot the king carried a flat-headed axe and a number of light darts, some fitted with double points. It was Dungi of Ur who adopted the bow as a national weapon.

[1] H. Stuart Jones, *Companion to Roman History*, p. 215.
[2] See below, 2.

[1] *Code of Ḫammurabi* (hereafter cited as *CH*), ed. R. F Harper, Chicago, 1894, § 16.

After the introduction of the horse by the Kassites[1] cavalry took the place of chariots. Chariots were still used, but only on comparatively level terrain, and even then they were more ornamental than useful. The cavalry at first used only the bow and arrow, but later the spear was used and the horseman was furnished with a complete coat-of-mail. In Assyrian times infantry was divided into light- and heavy-armed troops. The light-armed troops wore little clothing—usually only a kilt and a fillet round the head—and were armed with spears. The heavy-armed wore sandals, a coat-of-mail over the tunic, a long fringed robe (over which was a cuirass), and a peaked helmet; they carried a short sword, and were furnished with a long rectangular shield of wicker-work covered with leather. Infantry were usually divided into archers and spearmen. Sennacherib abolished the long robe of the heavy-armed infantry and substituted leather greaves and boots. He also established a corps of slingers clad in helmet and breastplate, leather drawers, and short boots; and also a company of engineers or pioneers, furnished with double-headed axes, conical helmets, greaves, and boots. The Assyrians fought with metal weapons. Their spear-heads and arrows were usually of bronze, more rarely of iron; their coat-of-mail consisted of bronze scales sewn to a leather shirt; and many shields were of metal, though others were of wicker-work covered with metal. The army was supplied with abundant wagons for transportation of baggage, food, furniture, tents, ladders, and battering-rams; and much skill was expended upon the building of canals and fortifications.

Wars were waged very often for the sake of booty and spoils, and the usual demand made by the victor of the vanquished was payment of tribute. The favourite method of attack was by surprise, but, when that was impossible, a frontal assault was made. Many inducements were offered the foe to surrender, none being more common than the proclamation of the prowess of the reigning king; but very often a third party intervened to bring about peace and conclude a treaty, as in the case of Mesilim of Kish, who was instrumental in settling a dispute between the kings of Umma and Lagash. Peace was declared and a treaty made.

2. War-gods.—The early Babylonians, like other primitive folk, peopled their world with gods. Every mysterious phenomenon—sun, moon, vegetation, storms, water, and all the forces with which men were brought into frequent contact—was the abode of gods or demons, and usually the latter were shunned and the former propitiated. Around the abode of the gods men gathered and formed a settlement, which was often called after the god, just as Shuruppak was named from the god Shuruppak. Such a deity was always a war-god, for his people depended upon him for defence. War was not incompatible with the character of a god, for did not Ea and Apsu, Enlil and Tiamat, Marduk and Tiamat, engage in deadly warfare? So, when one city made war upon another, it was because their gods were at feud, and because their gods had ordered the strife.

The war between Umma and Lagash, as told on the Stela of the Vultures, was waged by the command of the god of Umma upon the territory of Ningirsu, god of Lagash, and Ningirsu, backed up by Enlil, joined battle. It was Zamama, god of Kish, who achieved victory over the land of Khamazi, just as it was Aśur, the great Assyrian war-god, who won military fame for Assyria.

And, when peace was declared and treaties were made, it was the gods who did it, for Mesilim records the treaty of peace which the gods of Umma and Lagash themselves had drawn up. The city-gods were thus the real kings and rulers, and so the very title *patesi*, borne by early rulers of Babylonian states, designated them as representatives of their state-god, for it was a religious title. This explains how it happened that certain Babylonian kings, desiring to enhance their own power, assumed the title of *ilu*, 'god'; and, when a *patesi* felt himself powerful enough to risk the displeasure of his own god, he would appeal to the god of a city other than his own, when the petition was for something which the foreign god alone could procure.[2]

[1] The earliest mention of a horse in Babylonia is found on a tablet of the Ist Babylonian dynasty (*OLZ* x. [1907] 638 *f.*).

[2] *E.g.*, Ur-Nina appealed to Enki (Ea) for a favourable oracle, when planning to build the temple of E-ninnu.

Whenever, as often happened, two or more settlements amalgamated into one city or state, the various gods sometimes amalgamated, transferring the attributes of all the gods to the strongest god, with whom all the others were identified. But sometimes the various gods remained independent, the most warlike retaining the title of war-god. Hence, while every city- or state-god was originally a war-god, yet when, by amalgamation, a state acquired a pantheon, only one of the members of that pantheon, as a rule, retained the title of war-god. Then all wars were carried on in the name of that particular god. And so it was that, while the Babylonians of the period of Ḥammurabi recognized many gods, Marduk was the war-god[1] *par excellence*, although Nabu was also recognized as a war-god. The following are the Babylonian and Assyrian deities who retained more or less of their warlike characteristics.

Enlil, son of Anu and chief god of Nippur, whose temple was the mighty E-kur, was primarily a storm-god, and he had his origin and home in a mountain. Although he is most commonly known as a storm- and vegetation-god, he was also, as patron deity of the mighty city of Nippur and head of an early Babylonian pantheon, 'king of the gods,' 'father of the gods,' and husband of the great goddess Ninlil. But he never lost that attribute which was ascribed to all early Babylonian gods, viz. 'warrior.' He was the 'mighty warrior,' and, as such, retained his place as supreme war-god when Nippur, his own city, became mighty. Among all the other cities that came under the sway of Nippur no one possessed a war-god as powerful as Enlil, and so Enlil, the son of Anu, and consequently solar deity, became the official war-god of Nippur. No one could hope to fight victoriously against Enlil;[2] hence his fame as a great warrior-god.[3] As all gods were represented by symbols, as seen on the numerous *kuddurus*, or boundary-stones, so Enlil was symbolized by his weapon, an 'ensnaring net which encircles the hostile land,'[4] and is pictured carrying away his enemies who are entangled in his net.

Ištar, or, according to the Sumerians, Ninni or Innina, was daughter of Enzu, and 'mistress of the lands.' She was also 'mistress of heaven and earth,' and had her home in Uruk. The word 'Ištar' is Semitic, and perhaps indicates that she was a vegetation-goddess, if *iš* be from *giš*, 'tree,' 'wood.' She was considered a solar deity at a very early period, and is referred to as the 'light of heaven and earth.' But with the passage of time she assumed other attributes. She was the mother-goddess *par excellence* and the goddess of love; she was identified with Venus as the 'queen of heaven'; she was the patroness of law and order; she was the raging storm that devastates heaven and earth; and she and Tammuz were associated in a way suggesting the female and male principles of life. But more than all else she was 'mistress of battles'[5] and 'mistress of war and battle.'[6] She is the *muttabbilat kakkē*, 'the bearer of arms,' the 'goddess of battle and warfare, who goes by the side of the king, favourite one, the terrible one of his enemies.'[7] Her warlike

[1] After Ḥammurabi's conquest of Rim-Sin, and his control of Nippur, Enlil, the chief Sumerian deity, lord of many city-states, surrendered his chief attributes to Marduk.

character is excellently brought out in Ašurbanipal's dream.[1] As a war-goddess she is frequently (and as early as 3000 B.C.) depicted on seals, where she is usually represented with clubs, scimitars, bows, and other weapons, leading captives to the king.[2] In the Gilgamesh epic Ištar is a war-goddess, and in the time of Ḫammurabi, and more especially in Assyrian times, she was 'mistress of war and of battle.' As Assyrian war-goddess she became the consort of Ašur and was the special war-protector of Assyrian kings. Ašurbanipal's description of the warlike Ištar is famous,[3] and, when he founded his capital at Nineveh, he established there the cult of Ištar of battles. In fact, the goddess became so popular in warlike Assyria that she was identified with three great shrines, Nineveh, Arbela, and Kidmuru, and became sometimes three separate goddesses, although usually only two, because of the comparative unimportance of Kidmuru. There was an Ištar of the north as well as of the south—a differentiation which resulted in the belief in a male and female Ištar.[4] As a male Ištar was the morning star, and as a female she was the evening star. To the very end of the Neo-Babylonian dynasty she was the war-goddess, who carried quiver and bow and flew to battle like a swallow.[5] Her symbol as war-goddess was the lion and the five- or eight-pointed star Sirius, but sometimes she was symbolized by a bow.[6]

Ištar, as goddess of war, was identified with several other goddesses of war, especially Išḫara,[7] who was 'lady of conquest'[8] and 'lady of victory over the lands';[9] **Innini**, who, originally a goddess of light and the star Venus, because of warlike qualities ascribed to the stars, was regarded by the Sumerians as a conquering deity,[10] the 'lady of battle,'[11] and was represented in a standing position leading a captive by a string inserted in his nose,[12] her symbol being the bow;[13] **Anunit**, who was worshipped as a goddess of battle at Agade and Sippar, of whom Nabonidus said that he built a temple

'to Anunit the lady of battle, she that bears bow and quiver, who executes perfectly the command of Enlil her father, who exterminates the foe, who annihilates the evil, who walks before the gods, who at sunrise and sunset renders favourable my omens.'[14]

She is also identified with **Antu**, a heavenly deity, whom Ḫammurabi calls the Aštar of Agade,[15] and with **Aja**, a goddess of light and of war; with the warlike **Ninni**, to whom Eannatum on the Stela of Vultures ascribes his victory; and with **Nana**.

Marduk, 'the first-born son of Ea,' was originally a solar deity, but his warlike character became prominent in the time of the Ḫammurabi dynasty, when his city, Babylon, became great. When the creation legends were recast, during this same dynasty, Ḫammurabi's war-god (often addressed as such in hymns[1]), Marduk, was the warrior-hero who slew Tiamāt, the spirit of chaos. He became so great that a (shortlived) custom arose of identifying all gods with him.[2] His greatness outlived the Assyrian empire, when he was called Bel-Marduk, having absorbed the characteristics of the old god Bel, second person of the triad, Anu, Bel, and Ea, and lived on till the end of the Neo-Babylonian period. He is often pictured as a warrior with scimitar,[3] and his symbol was the flaming sun.

Nergal, son of Enlil, was originally god of the midday or scorching sun, and was often identified with Šamaš. He then was associated with disease and death, and from that he developed into a war-god. As such he was called *Marduk ša ḳabli*,[4] 'Marduk of war,' 'the lord of spears and bows,'[5] *ur-sag karradu*, 'the warrior,' the great sword-god,[6] and, as destruction that accompanies war, he was identified with the planet Mars. He first became known as a war-god during the Ḫammurabi dynasty, and continued so throughout the Assyrian and Neo-Babylonian periods.

Ninib,[7] son of Enlil and god of Nippur, was originally a solar deity, and, as first-born of Ea, was a vegetation- and water-god. As early as the Ḫammurabi dynasty he was called *Marduk ša âlli*, 'Marduk of strength,'[8] and in Samsuiluna's reign he was called 'the great warrior.'[9] He is addressed as 'mighty god, warrior, ruler of the Anunnaki, controller of the Igigi.'[10] In a text translated and discussed by Pinches in *PSBA* xxviii. [1906] 203–218, 270–283, Ninib is fully described as a war-god of the mountains. He is called 'the lord, the destroyer of the mountains, who hath no rival,' 'the warrior who is like a steer'; and he is said to collect his army in order to spoil the land of the enemy. In Assyrian and Neo-Babylonian times, especially the former, Ninib continued to be 'the destroyer of the king's enemies' and 'the mighty one of the gods.' He was symbolized as a wild bull, as a double-headed raven, and later as an eagle.

Nin-dar-a, husband of Išḫara, was called 'the warlike king,'[11] and **Nin-dub** was compared to a warrior.[12] **Ningirsu**, chief god of Lagash and son of Enlil, is called the 'warrior of Enlil,'[13] and is identified in this rôle with Ninib. On the Stela of the Vultures he is shown clubbing the enemies of Lagash, whom he has bound in a net; and he is symbolized by the divine storm-bird. **Nin-giš-zida**, son of Ninazu, prototype of Ninib and protective god of Gudea, was perhaps also a war-god, although no reference to him as such has been found. **Nin-šakh**, prototype of Ninib, and **Nin-si-a**, called also Nin-du-a, are also thought to have been war-deities. **Ramman**, whose ideogram is IM, and who is identified with Adad, Mer, and Iškur, was known as early as the time of Ḫammurabi as a 'warrior,'[14] although he is the storm-god *par excellence*. From the time of Ḫammurabi, however, he was recognized as a war-god, except

in Assyria, where he played just one rôle, that of god of storms. In Babylonia he was associated—*e.g.*, by Nebuchadrezzar I.—with Ištar, as war-deity, and was pictured with a club.[1] Šamaš (Sumerian Babbar), although the sun-god *par excellence*, was known as 'the conqueror of foreign lands,'[2] and as such was a war-god, whose weapon was 'the great net.'[3] Sukamuna was a Kassite god of war, whose symbol was the midday sun, and, therefore, a destructive power like Nergal. Tur-lil-en, a Neo-Babylonian deity, was described as 'breaking the weapons of the enemies.' Zamama, patron deity of Kish, was early associated with Ištar as a war-god,[4] and was called *Marduk ša taḫazi*, 'Marduk of battle,'[5] as well as 'the king of battle.'[6]

Aśur, the great god, Assyria's war-god *par excellence*, was originally a solar deity, his symbol representing a sun-disk with protruding rays. Then he developed into a god of fertility—a corn- and water-god—and finally became a war-god. According as Assyria became more and more militaristic, so Aśur's attribute as war-god became more and more all-absorbing, until he became the dominating character in Assyrian religion. His divine city depended upon the location of the royal residence, and from there all warfare was carried on in his name. His popularity was due to Assyria's military prowess. He is always associated with mighty weapons (*kakka danna*), and is he 'who protects the troops.' The disk as his symbol was surmounted by the figure of a warrior.[7]

II. *EGYPTIAN.*—1. War.—While some classical writers say that Egypt was divided among the king, priests, and warriors, others assert that from the beginning Egypt was a peaceful country. At any rate it can truly be said that the Egyptians never admired a military career, nor were the conditions under which they lived favourable to the development of a military nature; *e.g.*, Egypt was shut in geographically from the rest of the world; there were no great peoples in her neighbourhood to contend with, and no fertile lands within her reach to covet. Nevertheless, from the very first Egypt was called upon to wage war. Her literature attests this, and her earliest nome standards are, in all probability, military in character. Pre-dynastic and proto-dynastic monuments, such as the Palette of Nar-Mer, preserve evidence of warlike conflict, and Uni, a nobleman of the VIth dynasty, tells of important wars (although they are the only known important ones of the Old Kingdom) carried on against the Bedawīn in the time of Pepi I.[8] There were other military expeditions during this early period, and by the time of Sesostris III. of the XIIth dynasty rather formidable armies were mustered. Yet, when compared with the wars of later periods or with those of Assyria, these military expeditions of the Old and Middle Kingdoms must be pronounced mere razzias—raids for loot, slaves, cattle, gold, etc.

Nor was the period of disintegration which followed the XIIth dynasty conducive to the growth of militarism. But the conquest of Egypt by the Hyksos (*q.v.*) breathed a new spirit into the land. The foreigners must be ejected, and Egypt proved herself, under Ahmose I., equal to the occasion. Thenceforth she began her career of conquest under the empire-builders, Thutmose III., Seti I., Rameses II., and Rameses III. She became a great military power, and took up the offensive against her erstwhile Asiatic masters. Rameses II. even developed a military caste, and for a while the military profession ranked high. Her military character, however, was not enduring; the Egyptians lacked that gallantry and chivalry which are essential to a truly military character. There is evidence that the Egyptians were as destructive to the living and as savage to the dead—whose corpses they often mutilated—as other peoples, although Diodorus[1] seeks to excuse their conduct.

Nor were the Egyptians a naval people, although they possessed considerable fleets of merchant ships, which navigated the Mediterranean, the Red Sea, and the Nile. But the same great national crisis which developed a strong army and a shortlived liking for conquest developed also a navy. When Ahmose I. attacked the Hyksos, he did so by sea as well as by land. Of course there were warships before his time. Uni escorted his flotilla of merchantmen from Elephantinē down the Nile to Memphis; Kheti II. of the IXth dynasty had ships; and Sesostris III. re-made a canal in the First Cataract through which his warships could pass. By the time of the XVIIIth dynasty a real navy had developed, and was employed in connexion with the campaigns in Syria. Although Rameses II. had a considerable fleet, the first king to recognize the true importance of the navy was Rameses III., who established a fleet in the Mediterranean and another in the Red Sea. The naval battles of this king are splendidly pictured at Medinet Habu. With the exception of the battle with the Hyksos,[2] the battles of Rameses III. are the only real naval conflicts known to Egyptian history. The navy, like the army, soon deteriorated, and never more played any important part in Egypt, not even in the time of Cleopatra, who is credited by Orosius[3] with a fleet of 170 large ships.

Egyptian religion never condemned war. The most ancient of Egyptian wars were among the gods themselves or between gods and men; and so Egyptian kings in making war claimed divine example. The Egyptians named all wars revolt, because they were presumed to be against the Egyptian gods. The duty of the king was to avenge the gods of impiety, the word for 'impiety' (*aaditiw*) being the same as for 'enemy.'[4] In short, all war was moral, ideal, supernatural, and sanctioned by divine precedent.

In earliest Egypt there were soldiers who were selected from all parts of the political district, and, as early as Pepi I., conquered territories were compelled to contribute men in case of war. But there did not exist an army in the modern sense of the term. In the Middle Kingdom there were professional soldiers who were called 'followers of his majesty.' They were divided into companies of 100 men, and they garrisoned the palace and the strongholds of the royal house from Nubia to the Asiatic frontier. They were the nucleus of a standing army. In case of actual war the great nobles, or nomarchs, sent their quota of men, whom they had carefully trained, armed with bows and arrows. Then there were contingents supplied by the estates of the great temples, besides mercenaries of friendly chiefs. These armies were often called upon to do guard duty, as in the case of the army of Sesostris I., which was employed in the defence of labourers. With the rise of the Empire, and as a result of the Hyksos overlordship, a regular army was gradually developed. It had

two grand divisions, composed of experienced troops who had learned tactics in Syria. These two grand armies were divided into divisions, each division named after a god—*e.g.*, Amen, Rā, Ptah, etc. Military schools were established and barracks abounded. In fact, military training began in childhood, when gymnastics, archery, and the use of the battle-axe and javelin were taught. The trained and disciplined troops of Egypt were often the subject of artists and sculptors, and the drilling of recruits, racing, jumping, war-dances, and sieges were often depicted.[1] Rameses II. held regular councils of war,[2] and Diodorus[3] preserves a tradition that the military formed one of the three classes into which Egyptian society was divided. In spite of all, however, Egypt never possessed an army equal in discipline and equipment to those of Assyria.

During the height of Egypt's military power the soldier was well treated. He was allowed, free of all charge, eight acres of land, he was free from forced labour when on active service, he could not be cast into prison for debt, and he was expected to provide himself with the necessary arms and everything requisite for a campaign. If he were brave, distinctions and other signs of honour were showered upon him. As early as the VIth dynasty mercenaries were employed, and these were allowed to retain their own arms and customs. The peoples most commonly engaged to fight the wars of Egypt were the 'Nine-bow Barbarians' from Nubia, the 'Shardana' from Europe, the Libyans, and the Syrians. The last-named were so frequently employed that the term *ḥarw-srj*, 'young Syrian,' became a common word for soldier. Most of the army of Rameses III. were mercenaries, and after his reign these men were so much accustomed to the country that they in turn as foreigners conquered and dominated Egypt—such were the Libyans, the Sudanese, the Persians, the Greeks, and the Romans.

In early Egypt some soldiers carried a large bow, had one or two ostrich feathers on their head, and a narrow band around the upper part of their body; others carried a large shield and a spear, or a small shield, over which skin was stretched, and a battle-axe; still others carried no shield but had a large axe, a lance, and a sling. During the Empire regiments of light infantry carried a javelin, a lance, and a dagger, or a short straight sword; the heavy infantry bore spears and a curved sword. The cavalry were armed with the battle-axe, and most of them carried shields made of bull's hide, while bronze helmets were worn, although a more common head-dress was a thick quilted cap, the colour of which varied with the regiment, some with fringes, others with tassels. The archers were the most important soldiers in the army. They were divided into companies of foot- and chariot-archers. They wore quilted helmets with coloured tassels. The arrows were about 34 inches long, and were of wood or reed tipped with metal. They sometimes carried an axe or boomerang.[4] Cavalry was not known till the Hyksos period, for it was these Semites who introduced the horse into Egypt. Thenceforth chariots drawn by horses and cavalry became very popular. Sheshonk I. is reported to have had 60,000 horsemen in his army which marched into Palestine.

The weapons of the earliest Egyptians were very simple. At first they consisted of large stout sticks. But later the offensive weapons were bow, spear, javelin, sling, sword, dagger, knife, falchion, axe, and club; defensive arms were metal helmet or quilted head-piece, coat of armour, and shield.

The Egyptians fought best behind walls, and many forts were therefore built in Egypt, especially at the Second Cataract and on the north-eastern boundary of Egypt. Towns were fortified, such as Pelusium, Syene, Elephantinē, Semneh in Nubia; and Thutmose I. fortified the island of Tombos at the Third Cataract. In the great campaigns of the Empire materials of all kinds for siege, such as scaling ladders and battering-rams, for transportation, such as wagons and baggage-trucks, and for convenience, such as chairs, tables, and elaborate tents, were provided. Each company had its own standard, which was held in admiration; and each regiment was furnished with musical instruments, usually trumpets and drums.

The only Egyptian campaign conducted on any definite plan was that of Rameses II. against the Hittites. But there is evidence of the use of a great deal of strategy in the manœuvres of the soldiers of Thutmose III., and especially in the way in which Joppa was taken by Thutiyi. Armies were drawn up in well-arranged battle-array, with due regard to the wings, centre, and flanks. The many Egyptian inscriptions afford an excellent idea of the way in which Egyptian battles were fought, such as those at Megiddo, Kadesh, and the early wars in the time of Pepi I. A favourite company-formation with the Egyptian was the phalanx, with the heavy infantry in the centre and light infantry and archers disposed round them. Light-armed regiments were also left free for skirmishing and for flanking movements, such as those which were so well carried out at Kadesh by Rameses II. The Egyptian phalanx became so famous that Crœsus used it most effectively against Cyrus.

War at all times and especially under the Theban monarchs was a means of procuring slaves and booty. The demand for tribute does not appear before the Asiatic conquests, although ransom seems to appear as early as the civil wars which preceded the XIIth dynasty. In order to prove to the king the completeness of victory, warriors were in the habit of cutting off the hands and sometimes the heads[1] of the vanquished and placing them in heaps before him. But the Egyptian was always glad when peace came and a treaty was drawn up. The most famous treaty in Egyptian history, and the most detailed known to the ancient world, was that drawn up between Rameses II. and Hattusil II. the Hittite king.[2]

2. War-gods. — Originally every social group had its god, and every god was, in a sense, a war-god. When smaller groups amalgamated into larger cities and nomes, the gods of the constituent groups amalgamated into the god of the most powerful unit in the group, just as Sekhet and Hathor were absorbed into Amon of Thebes, and to him were ascribed the characteristics of the absorbed gods. If the age was warlike, one of the attributes of such a deity would be that of war-god. Whenever the age and location were not warlike, the war attribute of the deity receded into the background. Thus it is that previous to the Hyksos period there are no prominent Egyptian war-gods. As a matter of fact, the Egyptians never of themselves developed great war-gods; those deities in their pantheon who retain their warlike attributes are Asiatic, and were introduced during the Empire. Yet the idea of war-deities was well known in Egypt from earliest times. Did not Horus battle with Set, and did not every king, as son of Horus, have to fight the god's enemies? The fierceness of the wars with the Hyksos was due to the fact that Egypt's gods were at war with the hated gods of the Asiatics.

The following deities, almost all of whom are foreign, are the war-deities known to Egyptian literature. **Āāsīth** is usually represented as a woman armed with shield and club, riding a horse into the battle-field. She is a war-goddess of Semitic origin in whom W. Max Müller sees the counterpart of Esau. A stela set up by Seti I. at Redesiyeh, on the road to the gold-mines of Mt. Zābārā, connects her with the desert. **Amon-Rā**, one of the primeval deities of Egypt, whose chief seat of worship was at Thebes, became very prominent as a war-god in the XVIIIth dynasty as a result of the victories of that period. **An-hôret**, or Anhur, local god of Abydos, was god of the dead, but was also represented as a man standing with a spear in his raised hand. He was a warrior-

god, and as such became identified in the Greek period with Ares. 'Anat, 'queen of heaven, mistress of the gods,' was an Asiatic goddess of war. She was the same as the Sumerian An, with Semitic feminine termination, Antu. She is represented as sitting with a spear in one hand and swinging a battle-axe. She is probably the same as the goddess referred to by Ḥammurabi.[1] Ānthyt was a Syro-Phœnician war-goddess, represented with shield and spear in the right hand and club in the left. Her cult was associated with N. and S. Syria, where cities were named after her—*e.g.*, Bath-Ānth. Antæus, probably another name of the same goddess, is known only in late sources. She was worshipped at Antaiopolis, and was represented as a warrior or hunter with a high feather on her head and clad in Roman armour. Āsthyrthet of Apollinopolis was introduced into Egypt in the XVIIIth dynasty. She is the same as Astarte, a Syrian war-goddess, and was depicted as a lion-headed human figure, driving a chariot drawn by four horses over her prostrate foe. 'Asît may be another form of Āsthyrthet. Bār, or Pa-Bār, was a Syro-Phœnician war-god, the Baal of the OT. He was introduced into Egypt in the XVIIIth dynasty. Originally he was the personification of the burning and destroying heat of the sun and of the blazing desert wind. He was worshipped in the neighbourhood of Tanis, and was a favourite of Rameses II., who compared himself with Bār. Bast, 'lady of the East,' as well as Sekhet, was a personification of heat and light, and was renowned as a destroyer of the enemies of the sun-god and of the deceased. Bes, of 'the land of Punt,' was a god of complex character, but as a god of war and slaughter he carried two knives in his hands. As a warrior he was represented wearing a short military tunic, and holding in his left hand a shield, and a short sword in his right hand. As a war-god he appears in the XVIIIth dynasty. Ḥeru-Behuṭet is a form of Horus, under which he waged war with Set or Typhon. His symbol is the Sphinx at Gizeh. Another form of Horus is Ḥeru-Sept, the smiter of the Menti, and god of battle; and still another form of Horus, who 'loved an hour of fighting more than a day of rejoicing,' is Ḥeru-Themā, the piercer, and, as such, a god of war. Mafiet is a war-goddess, whose symbol is the sign 'to follow,' *sems*. Menthu was an ancient Egyptian war-god, whose seat was at Thebes. He is represented in human form with a bull's tail and head of a hawk. His head is surmounted by a sun-disk between double plumes. Sometimes he is depicted as a hawk-headed sphinx. He is represented with bow and arrows, a club, and a knife. He is seen on the prow of the sun-boat and slays the demon with his lance. He was an old local god, a personification of the destructive heat of the sun, but in later times he became Mentu-Rā. He was Rameses II.'s patron war-god. Neith was worshipped in the Delta in pre-dynastic times. While she was, at an early period, a personification of a form of the great inert primeval watery mass, she was later represented with bow and arrows, and as such was considered a war-goddess as well as a goddess of the chase. Nephebet and her twin-sister Uatchet were destroyers of the enemies of the gods. Reshpu, or Resheph, had his centre of worship at Ḥet-Reshep in the Delta, but was an imported Syrian deity. In Egyptian texts he is called 'lord of the two-fold strength among the company of the gods.' He is represented as a warrior with spear and shield in the left hand, and club in the right hand. As his Semitic name shows, he was a personification of the burning and destruction of fire and lightning. Sekhmet, or Sekhet, 'the powerful,' is represented wearing a solar disk on her head, symbolizing the warlike attributes of the sun. She was called 'the fiery one emitting flames against the enemies' of the god, and her duty was to scorch and consume the enemies of her father. Up-Uaut, 'the opener of the way,' was originally a war-god, who opened the way for troops through the enemies' land. He is sometimes represented in the prow of the boat of Rā.

III. *HEBREW.*—1. War.—Although the ideal of the great prophets of the 8th and 7th centuries was peace, war was approved by the prophets of early Israel. The Hebrew people were not unwarlike, and with them, as with other Oriental peoples, war was sanctioned by the deity. From the earliest to the latest times in the history of Israel Jahweh fought for His people, and they followed Him to battle. Before battle oracles were consulted to learn Jahweh's will;[1] prophets of Jahweh were appealed to for guidance;[2] and prayer was offered up to Him before the attack.[3] Jahweh Himself called His consecrated one to battle;[4] priests of Jahweh sounded the alarm with trumpets;[5] and campaigns were begun with sacrificial rites.[6] In fact, warfare was a holy calling, with which tabu was associated,[7] for to 'prepare' or to 'sanctify' war was to carry out initiatory religious rites.[8] The camp was a holy place because Jahweh was there,[9] and there were the sacred ephod[10] and the ark of Jahweh.[11]

The Hebrews did not possess an army worthy of the name till the time of the monarchy. Gideon's band numbered 300, and the Danites had a force of 600. At this early period warfare consisted of raids and forays. All males were collected by the recognized leader,[12] to whom friendly tribes allied themselves.[13] But, besides a bodyguard,[14] Saul had a standing army of 3000 men.[15] Israel's army was divided into thousands, hundreds, fifties, and tens.[16] As early as the time of David steps were taken to recruit a regular army, and it was placed under the command of Joab as commander-in-chief. Besides that, David himself had his own bodyguard of from 400 to 600 men. Mobilization was announced by sound of the trumpet throughout the land.[17] An interesting picture of mobilization in Israel can be seen in Is 22^{6-8} and in Ezk $21^{33ff.}$. It is described as the drawing of the sword from the sheath. Sometimes a formal declaration of war was made, as in the case of Amaziah of Judah against Jehoash of Israel,[18] but more often spies were sent out,[19] and hostilities began in spring.[20] In later times regular mercenaries were employed,[21] and under Herod soldiers were trained in Roman fashion.

Hebrew armies up to Solomon's time consisted only of infantry, light and heavy. Heavy arms consisted of a round helmet of bronze, a coat of mail, bronze greaves, a sword of iron, a spear, and a lance. Light arms comprised bow and arrows and a small shield. Solomon introduced cavalry and chariots, and had 12,000 cavalry, 1400 chariots, and 40,000 chariot horses. The troops had ensigns, banners, and standards, and were furnished with tents or booths, but each soldier was obliged to provide his own food, though sometimes regular provision was made for him.[22] Guards were placed round the

[1] *CH* iv. 48. To the same cycle of divine beings belong Ištar of Nineveh and Astarte, mistress of horses, who was confused with the warlike Sekhmet, all of whom were known and recognized as war-goddesses in Egypt.

camps,[1] which were changed three times during the night.[2] The Hebrews inherited the fortresses of the Canaanites, but Solomon built his own, such as that at Hazor, Megiddo, etc. They usually stood on hills. Special battering-rams and catapults were constructed for siege work.[3]

Hebrew forces were drawn up either in line or in three divisions, a centre and two wings. There was also a rearguard for protection during the march and to take care of stragglers.[4] Sometimes, instead of a general conflict between two opposing forces, a decision was left to two opposing groups of equal but limited number,[5] or even to two opposing individuals.[6] There was a battle-cry to inspire courage,[7] and the order to retreat was given by sound of the trumpet.

Strategy was not unknown to the Hebrews: Joshua made a night attack after a rapid night march to relieve Gibeon ;[8] circumvention was practised by David ;[9] Joshua surprised the Canaanites at the waters of Merom ;[10] David executed a flank movement against the Philistines ;[11] the men of Israel made a successful feint against the Benjamites at Gibeah ;[12] and Joshua captured Ai by ambush.[13]

The victor was hailed with song,[14] and victory was celebrated with public thanksgiving ;[15] but prisoners were sold as slaves[16] and often treated in a savage manner.[17] The spoil was divided equally between those in battle and those in camp ;[18] a portion was reserved for the Levites and as a tribute to Jahweh ;[19] part was reserved for the king ;[20] and sometimes armour was dedicated as a trophy.[21]

The ideal in prophetic Israel was peace[22] brought about by Jahweh.[23] The end of hostilities was signified by the blowing of the war-horn,[24] and ambassadors negotiated terms.[25] Treaties were drawn up and signed,[26] and defensive and offensive alliances were made.[27]

2. War-god. — Pre-historic Hebrews were undoubtedly polytheists, or at any rate henotheists ; they recognized the existence of other gods and worshipped them ; but, so far as we know, they never developed a pantheon such as we see in Babylonia and Egypt. In historic times the Hebrew people tended more and more towards monotheism, and, although they recognized the existence of other gods even as late as the 7th cent. B.C., yet they never recognized any other deity than Jahweh as their national god. So to Jahweh were ascribed all the characteristics which belonged to a pantheon. The derivation of His name is uncertain, but as good a guess as any is that it is derived from the verb *hawa*, 'to fall,' and, in the causative, 'to prostrate.' Whether this be so or not, there is abundant evidence to prove the warlike character of Jahweh. He it was, as a warrior, who brought His people out of Egypt, and who drove out the nations before Israel ; He revealed Himself to Joshua as the captain of His hosts ; His angels led the hosts of Joshua and Barak, and gave David victories over Aram and the peoples round about. It is true that He was considered a mountain-god, being associated with Sinai-Horeb, and, as such, a storm-god, controlling and regulating the weather ; He was *baal* of the land, and therefore a vegetation-god ; He was perhaps a lion-god,[1] and an ox-god ;[2] and He was god of heaven and of earth ; but He was pre-eminently 'a man of war,'[3] whose peoples' victories were His 'righteous acts,'[4] whose exploits were recorded in the 'Book of the Wars of Jahweh,'[5] and whose favourite servant was the warrior David, a man after Jahweh's own heart ;[6] Israel's battle-cry was 'the sword of Jahweh and of Gideon' ;[7] and Meroz was cursed because it did not come to battle, 'to the help of Jahweh.'[8]

The title 'Jahweh Ṣebāōth,' whatever its original meaning, designates Jahweh as god of battles.[9] The term *Ṣebāōth* may have referred sometimes to the hosts of heaven. But warlike qualities were ascribed to the stars not only by the Hebrews,[10] but also by the Babylonians. It may have referred sometimes to Israel as a people.[11] But it certainly had reference to the title of Jahweh as leader of the armies of His people Israel.[12] The term as used in the OT regularly denotes armies of men, and it formed the title of Jahweh as war-god. A similar title is found applied to the Babylonian Tišpak, who is called *Marduk ša ummani*, 'Marduk of hosts,' and Tišpak was a war-god.

Jahweh's emblem, as war-god, was an ark. Eleven of the occurrences of Jahweh Ṣebāōth in the books of Samuel are connected with the ark. It was the symbol of the presence of Jahweh,[13] and was perhaps a throne upon which Jahweh sat,[14] when He was carried into war, just as the Babylonians carried their gods on thrones in processions. In fact, the ark was so closely associated with Jahweh, as war-god, that it was identified with Him,[15] and was greeted as if it were Jahweh Himself.[16]

LITERATURE.—With the exception of **T. G. Pinches**, 'The Babylonian Gods of War and their Legends,' *PSBA* xxviii. [1906] 203–218, 270–283, a discussion of Ninib, there is no separate article, monograph, or book on this subject. Besides **E. A. W. Budge**, *The Gods of the Egyptians*, 2 vols., London and Chicago, 1904, and literature referred to in this article, the author has made full use of the original inscriptions. In the case of the Hebrews, the standard Dictionaries of the Bible have been consulted, besides **Nowack** and **Benzinger**.

WATER, WATER-GODS (Primitive and Savage).—Since water is a first need of man in a primitive state of culture, it is little wonder that it is regarded as possessed of *mana* (*q.v.*), and that, in consequence, it figures prominently in magico-religious cult.

1. Water in seasonal rites.—J. G. Frazer is undoubtedly correct when he says :

'At a remote period similar modes of thought, based on similar needs, led men independently in many distant lands,

from the North Sea to the Euphrates, to celebrate the summer solstice with rites which, while they differed in some things, yet agreed closely in others; that in historical times a wave of Oriental influence, starting perhaps from Babylonia, carried the Tammuz or Adonis form of the (midsummer) festival westward till it met with native forms of a similar festival; and that under pressure of the Roman civilization these different yet kindred festivals fused with each other and crystallized into a variety of shapes, which subsisted more or less separately side by side, till the Church, unable to suppress them altogether, stripped them so far as it could of their grosser features, and dexterously changing the names allowed them to pass muster as Christian.'[1]

In Mesopotamia the year is divided into two seasons—the rainy and the dry. The welfare of the country depends upon the abundant rains which continue uninterruptedly for several months. In the earliest period to which the history of the Euphrates valley can be traced, a system of canals existed, serving the purpose both of irrigation and of avoiding disastrous floods. It is not surprising, therefore, that the early Babylonians regarded water as possessed of *mana*, and in later times that it became for them the abode of spirits and gods. Similarly, commerce, following in the wake of agriculture, would lend an additional importance to water as a means of transportation, which again would find expression in a cult of water-spirits. As notions of departmental deities arose, these spirits would assume the rôle of gods ruling over the various functions formerly controlled by lesser spirits.[2]

Now, we know that Tammuz was an ancient personification of the sun of the springtime, his name consisting of a Sumerian phrase *Dumu-Zi*, 'true (or faithful) son of the deep,'[3] and that he was the first lover of Ishtar, the great mother-goddess. He became her consort, was slain by the goddess, and descended into the under world, whither Ishtar went in quest of him. The promise made to her by Gilgamesh to present him with a chariot of lapis-lazuli, and to shelter him in a palace of plenty, unmistakably points to the triumph of the sun when vegetation is at its height. Tammuz and Ishtar, like Gilgamesh and Ishtar, thus represent the combination of the two principles which bring about life, and upon their separation follow death and decay. It appears from the fragmentary documentary evidence that the early Babylonians supposed that every year the goddess went to 'the land of No-return,' and that during her absence man and beast alike could not discharge their sexual functions, so intimately was Ishtar associated with fertility. If Tammuz was a personification of the springtime sun, and if his return from the under world bore a direct relationship to the revivification of nature, he must have been intimately connected with fertility. But the close relation that existed between vegetation and the water supply in the Euphrates valley would inevitably lead to his association with a water cult, and to his rites being performed about midsummer.[4]

At the festival of Tammuz in Babylon the image of the god was washed with pure water, just as in the summer festival the image of Adonis was thrown into the sea at Alexandria, and in Greece 'the gardens of Adonis' were similarly treated, to secure a due supply of fertilizing rain.[5] But originally it must have been the *mana* in the water, and not the deity, that was regarded as the means by which the desert in the springtime was suddenly made to blossom as the rose. It was not that primeval man was so overawed by the miracle of spring, the radiance of the flowers, and the singing of the birds; it was not that his heart went out in gratitude to the High God who was the giver of all good things. Rather it was his will to live that he uttered and represented in his elaborate spring and summer ceremonies—the promotion of life and fertility in plants, animals, and man. Since water is one of the essential factors in the preservation of life and the growth of the crops, it naturally plays a conspicuous part in rain-making ceremonies and other seasonal rites among primitive people.

2. Water as a rain-charm.—Water is widely used in ceremonies for bringing rain.

In Australia, among the Arunta, a group of people have water for their totem, and the men of the totem are assembled from time to time by their *alatunja*, or leader (a celebrated rain-maker residing in the Rain Country), to make rain.[1] In the rites that ensue water does not play a part, the ceremonies, according to Frazer, representing a rising storm.[2] Among the Kaitish tribe of Central Australia, on the other hand, rain is made by the head man of the water totem pouring water over stones out of which the rainbow was supposed to have arisen, and over himself,[3] just as in Russia a man called the 'rain-maker' sprinkled water from a vessel on all sides to produce rain.[4] The Torajas of Central Celebes pour water over the grave of a famous chief to procure rain. After that they hang a bamboo full of water over the grave, a small hole having been pierced in the lower end of the bamboo, so that the water drips from it continually. The bamboo is kept refilled with water until rain drenches the ground. Conversely, if dry weather is desired, the rain-doctor (*sando*) assiduously avoids touching water during the performance of his functions. He does not bathe or wash himself, he drinks nothing but palm-oil, and, when crossing a stream, he is careful not to step in the water. Should rain afterwards be wanted, he has only to pour water on his fire, and immediately the rain will descend in sheets.[5] In India the Brâhman rain-maker had to bring himself into union with water by touching it three times a day as well as on various special occasions, to make himself, as it were, an ally of the water-powers, and to guard himself against their hostility.[6] The Ba-thonga, a Bantu tribe in S. Africa, think that droughts are the result of the concealment of miscarriages by women. To procure rain they bury a pot in the ground and cause it to be filled with water by girls who have not attained the age of puberty, till it overflows into four channels which run in the direction of the cardinal points of the compass. The women then hold a rain-dance, and pour water on the graves of prematurely born infants and of twins to 'extinguish' (*timula*) them, thereby removing the cause of the drought.[7]

In S.E. Europe, at the present day, rain is made by pouring a pail of water over a boy or girl clothed from head to foot in grass, flowers, or corn.[8] H. S. Moore records a similar practice at Poona (India). When rain is needed, the boys dress up one of their number in nothing but leaves and call him 'king of the rain' (*mrŭj raja*). They then visit all the houses in the village, the householder sprinkles the rain-king with water, and makes offerings of food to the party.[9] In Rumania a clay figure is substituted for a living person in the rain-making rites. The image, which represents Drought, is placed in a coffin and carried by children in a funeral procession, with a burning candle before it. Finally, the coffin and candle are thrown into a stream or well.[10] In France images of saints until recently were dipped in water to procure rain, just as the Shans drench statues of Buddha with water when the rice is perishing from drought.[11] In Arcadia, in the classical period, the priest of Zeus dipped an oak branch into a certain spring on Mount Lycæus in times of drought, to cause the water to send up a misty cloud, from which rain would soon fall.[12] The Athenians sacrificed boiled, not roast, meat to the season because they imagined that the water in the pot would be transmitted to the gods, and return to them as rain.[13]

That the use of water as a rain-charm was directly connected with fertility is shown in the custom of clothing the person (or image), apparently the personification of vegetation, in leaves, corn, vines, etc., before water is poured on him. In support of this view may be quoted the European spring celebrations of St. George's Day.[14] It is

difficult to avoid the conclusion that originally these rites were performed to promote vegetation, and secure an abundant food supply, just as, until quite recently, water was thrown on the last corn cut at harvest in this country to procure rain for next year's crops.

3. **Water in purification ceremonies.**—Just as water naturally suggests to the primitive mind the process of fertilization, so it appears to the savage as the normal means of washing away material or spiritual pollution. As this subject has been treated separately,[1] we shall here confine our attention to the ceremonial use of water, the universal cleanser, in ritual purification.

After childbirth and menstruation, and in fact after sickness generally, the contagion is removed by a bath, while the contagion of death and the sins of the penitent are often got rid of in the same way. It is a common belief that the effect of contact with a sacred object must be removed by washing before a man may freely mix with his fellows.

Thus the high-priest was required by the Jewish Law to wash himself and put off the garments which he had worn in the holy place before coming forth from the sanctuary after offering his burnt offering (Lv $16^{23f.}$). Likewise Greek ritual decreed that, after offering an expiatory sacrifice, the offerer must wash his body and his clothes in a river or spring before he entered a city or his own house.[2] In like manner, among the Jews the contact with the book of the Law or a phylactery 'defiled the hands,' and called for an ablution.[3] Among the Matabele of S. Africa, before the people ate of the new fruits they went down to the river to wash,[4] and before changing from one food to another the Eskimos must wash themselves,[5] as a kind of 'rite de passage.'

(*a*) *Childbirth.*—Birth, the attainment of puberty, marriage, death are great personal events associated with the mysteries of life, and at these times the individual is especially exposed to mystic and dangerous sacred forces. A pregnant woman is, in consequence of her condition, a dangerous person and one to be avoided until all traces of her 'sacredness' have been removed. Similarly, a newly-born infant is in fullest contact with the sacred world, and, therefore, he is subject to attacks from malignant influences, from which he must be guarded by rites. Like his parents, he is unclean, and, in consequence, some form of regeneration is necessary to remove this original taint.

The mother and child among the Koragars of West India are ceremonially unclean for five days, when both are restored to purity by a tepid bath.[6] The Hottentots considered a mother and child unclean till they had been washed and their bodies smeared with other purifying agents. Lustrations with water are common in W. Africa. The Mantras of the Malay Peninsula require their women to bathe after childbirth, and among the indigenes of India the custom also prevails.[7] The Aztec midwife washed the infant with the prayer, 'May this water purify and whiten thy heart: may it wash away all that is evil.'[8] The lustration speedily took definite form in the Mediterranean religions, and passed from the idea of washing away of defilement and sin to that of spiritual new birth. In the Isis rites the baptism with water was thought to raise the mortal to the divinity, although it is not clear that there was any ceremonial purification of the new-born infant with water in Greece. It appears that the rite called ἀμφιδρόμια, in which the infant was carried round the domestic hearth, took the place of a baptism by water.[9]

(*b*) *Initiation and marriage.*—Water is sometimes substituted for other purificatory rites (such as tatuing, setting the novice on a smoking fire, scourging, etc.) in initiation ceremonies.[10]

(*c*) *The shedding of blood.*—To the primitive mind nothing is more uncanny than blood. Life and death are the great primeval mysteries, and all the substances that are associated with the inner principle of either partake of this sacredness. For the savage what is sacred is also dangerous and a source of contagious impurity. Therefore, when a man has shed blood, he is tabu until the 'miasma' has been removed by purification rites.

In New Guinea warriors are secluded for about a week after their return from battle, during which time they may not come in contact with their wives, and they may not touch food with their hands. On the fifth day of his seclusion a man who has taken life walks solemnly down to the nearest water, after having been smeared with the spleen and liver of a kangaroo, and, standing straddle-legs in it, washes himself.[1] Among the Basutos warriors go straight from battle to a stream, where they purify themselves and their implements of war by washing away the tabu in the water, and putting themselves out of reach of the revenge of the slain.[2] Similar rites are performed by the Akikuyu, in which the final ablutions consist in cleansing with water.[3] In the Pelew Islands the young warriors, on their return from their first fight, are shut up for three days, and then, after smearing their bodies with charmed leaves and betel, bathe together as near as possible to the spot where the killing took place.[4] When a Pima Indian killed an enemy, he was tabu for sixteen days, and retired to the groves along the river bottom, or wandered about the adjoining hills. During this period he was forbidden to touch his head or his face, and before he might go to his home he had to bathe in the river, no matter how cold the temperature.[5]

(*d*) *Death.*—Contact with death and the spirit-world is a strong source of impurity in primitive society and, therefore, is the cause of tabus and purification rites. Bathing and fumigation are the most usual methods of purification. See art. DEATH AND DISPOSAL OF THE DEAD (Introductory), vol. iv. p. 434, § XIV.

(*e*) *Disease.*—Water is frequently regarded by primitive people as having the power to wash away sickness, especially if the disease is in the nature of skin eruption. The miraculous cure of Naaman (2 K 5^{10}) reflects an ancient Semitic belief in the efficacy of water as a cure of leprosy. Of all inanimate things that which has the most marked supernatural virtues among the Semites is running (or, as the Hebrews said, 'living') water (cf. Nu $21^{17f.}$, Ezk $47^{2.\ 12}$). It is, therefore, not surprising that certain wells and rivers were credited with the power of healing.

In Babylonia a sick person was sprinkled with water while the priest pronounced certain sacred formulæ, having the power of 'cleansing' a patient from sickness. The water was specially sanctified for this purpose, and drawn from such sacred streams as the Tigris and Euphrates. One or more springs, and a *bît rimqi*, or 'bath-house,' were attached to every large temple, where purification rites were performed. Details of the rites varied in different cities, and there are indications that, even in later times, they were performed on the banks of running streams—perhaps a survival of the period when the incantation ritual did not form part of the official cult.[6] To this day a 'bath-house' is sometimes attached to synagogues, whither women resort monthly to cleanse themselves—a reminiscence, perhaps, of the old Semitic purification ritual, now restricted to women.[7]

The importance of water as a means of healing must have been greatly reinforced by the growth of Baal-worship, in which the deity as the giver of life was specially connected with life-giving waters. The indignation of Naaman when he was told to wash in Jordan, and his confidence that the rivers of Damascus were better than all the waters of Israel, probably arose from the idea that the Jordan was a sacred healing stream of the Hebrews, just as Abana and Pharpar were the sacred rivers of the Syrians, and not from any astonishment at being asked to perform a purification rite with which he must have been well acquainted. In the time of Antoninus Martyr[8] patients frequently bathed ceremonially by night

in the thermal waters of Gadara, and in the Middle Ages it was still believed that he who bathed in the springtime in the source of the Euphrates would be free from sickness for the whole year.[1]

In Europe water figures conspicuously in folk-lore as a means of preventing and curing disease.

Thus at Vitrolles in the south of France, during the Midsummer rites, the young people bathed in a pond in order that they might not suffer from fever during the year, and at Saintes-Maries they watered the horses to protect them from the itch.[2] Similarly, in Sweden, certain holy springs are supposed to be endowed with wonderful medicinal virtues on St. John's Eve, and many sick people resort to them for the healing of their infirmities.[3] At Stoole, near Downpatrick, in Ireland, on Midsummer Eve three wells, to which extraordinary virtues are attributed, are 'thronged by crowds of halt, maimed and blind, pressing to wash away their infirmities with water consecrated by their patron saint, and so powerful is its efficacy on their minds, that many of those who go to be healed, and who are not totally blind, or altogether crippled, really believe for a time that they are by means of its miraculous virtues perfectly restored.'[4] At Marsala in Sicily the sick resort to a spring in a subterranean grotto, called the Grotto of the Sibyl, to be cured of their diseases by bathing in the water,[5] just as on the same day the people of Copenhagen used to go on a pilgrimage to a neighbouring spring to heal and strengthen themselves in the water.[6] The famous grotto at Lourdes, which has been the reputed source of so many miracles since the alleged appearance of the Blessed Virgin to Bernadette Soubirous on 11th Feb. 1858, belongs, perhaps, to a different category, since the existence of the spring was unknown to the inhabitants prior to the apparitions.[7]

4. Water as a means of divination.—The use of water in divination has been common both in ancient and in modern times among people in a primitive state of culture.

Thus the Tahiti seek to discover the identity of a thief by digging a hole in the floor of the house in which the robbery occurred, and filling it with water; a priest then invokes the aid of his god to conduct the spirit of the thief to the water, so that his image may be reflected in it and perceived by the diviner.[8] In S.E. New Guinea a criminal's face is thought to be seen in a pool of water into which coco-nut oil has been squeezed.[9] The Malays discover a thief by two people holding a bowl of water between their fingers and presenting to it in writing the names of the suspected persons; at that of the guilty man it twists around and falls to the ground.[10] Among the Bahima of Central Africa a medicine-man puts herbs and coffee-berries into a pot of water and ascertains the wishes of the gods according to the direction in which the berries lie.[11] The Eskimos determine the fate of a man who has not returned from a voyage by causing a wizard to gaze into a tub of water.[12] In Greece the favourable or unfavourable disposition of the gods was declared by casting offerings into holy wells. If the gift was accepted, it sank; if it was unacceptable, it was cast forth.[13] At Delphi, to the east of Apollo's temple, there was a sacred spring which proceeded from a narrow gorge shut in by rocky walls, the waters of which were supposed to be oracular. The priestess of Apollo therefore drank of the sacred spring and chewed the sacred laurel before she prophesied.[14]

In Babylonia as early as the reign of Urukagina, king of Lagash (*c.* 2800 B.C.), there is evidence of divination by oil, and from the texts of a later period (*c.* 2000 B.C.) it appears that the method adopted consisted in pouring oil on the surface of water in a bowl, and determining future events by the behaviour of the bubbles when the water was struck.[15] In one of the texts the method is traced back to the legendary founder of the *bârû* priesthood.[16] Two of the texts, dating from the Hammurabi period, describe the signs to be observed in the mingling of oil and water, together with the interpretation thereof.[17] On the early monuments there is also an interesting allusion to the use of this method of divination by a ruler of the Cassite period (*c.* 1700 B.C.), before undertaking an expedition to a distant land to bring back the statues of Marduk and his consort, which had been carried off by an enemy.[1] In ancient Egypt divination did not play so conspicuous a part as in Babylonia and in the Hellenic world. The Egyptian texts do not mention hydromancy, although we know from the classics that Anubis was invoked by a vase full of liquid or a flame.[2] In the story of the homeward journey of Joseph's brethren (Gn 44[1-15]) from Egypt to Palestine mention is made of a divining cup (vv.[5. 15]), the purpose of which would seem to have been that of detecting a thief. 'Know ye not that such a man as I can indeed divine?' There is good reason to believe, however, that the episode connected with Joseph belongs to the Hyksos period,[3] and that the custom of divination by water was introduced into the valley of the Nile from the east by the invading 'shepherd kings.'

In modern times among the Slavs at Ceklinj, in Crnagora, maidens gaze into a well at daybreak on St. George's Day, till their eyes fill with tears and they think they see the image of their future husbands reflected in the water.[4] In the Highlands of Scotland apples and a sixpence were put in a tub of water at Hallowe'en for oracular purposes. The person who could extract either of these articles from the water with his mouth without using his teeth was regarded as likely to be very lucky. Similarly three plates were placed on the hearth, one filled with clean water, another with dirty water, and the third empty. A blindfold youth then knelt in front of the hearth and groped about till he put his finger in one of them. 'If he lighted on the plate with the clean water, he would wed a maid; if on the plate with the dirty water, he would marry a widow; and if on the empty plate, he would remain a bachelor. For a girl the answer of the oracle was analogous. . . . But to make sure, the operation had to be repeated thrice, the position of the plates being changed each time. If the enquirer put his or her finger into the same plate thrice or even twice, it was quite conclusive.'[5]

An oracle may very readily pass into an ordeal, where the person accused of a crime is tested by being subjected to a process which would normally prove fatal, or at least injurious to him. People accused of witchcraft and other offences are frequently tested by being compelled to drink water into which a poisonous substance has been placed. If the stomach rejects the draught, the accused is declared innocent and released; if, on the other hand, it is retained or evacuated by purging, he is pronounced guilty.[6]

5. Water-spirits and water-gods.—To say with Tylor that a 'belief in the existence of spiritual beings' constitutes the 'minimum definition of religion' is to forget that the outlook of primitive man is towards the sacred and mysterious rather than in the direction of the spiritual. Psychologically the religious sense manifests itself on the emotional side before the mind is capable of forming definite notions like spirits or gods. Primitive man sees around him certain phenomena which puzzle him, and, long before he has evolved a 'belief in spiritual beings,' he has come to explain mysterious objects in terms of the supernatural. Now, water is most certainly calculated to arouse in the primeval consciousness the animatistic attitude of mind dictated by awe of the mysterious. Upon it man depends for his very existence, through its agency he sees the desert made to blossom as the rose, and in it he beholds the manifestation of life and movement, and even the power of death and destruction. He regards it therefore as possessed of *mana*, and, in consequence, sacred. But there is always a tendency to personify the sacred. The mysterious roll of thunder becomes associated with the voice of the tribal All-Father, and the magic downfall of rain is explained as the work of spirits or gods. So with water. Originally the Trojans regarded their sacred river, Skamandros, as containing *mana*, and by way of oblations cast live bulls and horses into its depths. In later times, when they had reached an animistic or theistic stage, Homer speaks of altars or shrines being erected on the river-bank, on which a bull was sacrificed, the belief being that the spirit in

the water, or the god of the stream, was capable of departing from his element to consume the essence of the offerings in the holy place on the shore.[1] We do not suggest, in quoting this example, that a stratigraphical evolution took place in early times. On the contrary, we regard the assumption of strata in the evolution of religion as the fundamental error in the universalistic form of the comparative method as adopted by Frazer.[2] The conception of the sacred river is undoubtedly psychologically a more rudimentary notion than the more complex animistic and theistic beliefs. But it can hardly be said that there was a pre-animistic era in the history of religion, when animism was not and nevertheless religion of a kind existed.[3] Some sort of animism may have been a primary condition of the most primitive religion of mankind, but it would seem that the vaguer and more comprehensive animatistic conception surrounded such objects as water from the beginning.

Among people in a more developed state of culture water-spirits and water-gods are of frequent occurrence. Stories of the Perseus and Andromeda type have been found from Japan and Annam to Scandinavia and Scotland, and, although the details vary with the locality, the central feature is always connected with the sacrifice of a human victim (generally a virgin) to a water-demon. It is, therefore, highly probable that these legends reflect a real custom of sacrificing girls to be the wives of water-spirits, since we know that girls are frequently married to river-gods, etc., in primitive society.[4] The custom may have arisen from the belief that water-spirits are the bestowers of life and fertility, whose kindly gifts of rain from above and springs from below produce pasture for the cattle and fruits for the service of man. In Syria the life-giving operation of Baal was connected with springs, streams, and underground water, and therefore the Baalim had their seats on the banks of rivers and by deep watercourses, in spots of natural fertility.[5] As authors of fertility in general, it is in accordance with the working of the primitive mind that these water-spirits should come to be regarded as the bestowers of offspring. Accordingly we find that barren women frequently betake themselves to a stream known to be inhabited by a water-spirit, and bathe in the waters.[6] Down to classical times girls bathed in the Skamandros before their marriage, praying as they did so, 'Skamander, take my virginity.'[7]

Sometimes, however, human beings are cast into water simply as a propitiatory sacrifice to appease the wrath of the indwelling spirit. The frequency with which maritime people are reminded of the dangers of the sea would naturally lead to a belief that water-spirits are dangerous and malignant beings capable of assuming monstrous forms.

Thus the Warramunga of Central Australia perform elaborate ceremonies to coerce a gigantic but purely mythical water-snake who is said to have destroyed a number of people.[8] The Tarahumares place their houses at a distance from the water, and never sleep near it when on a journey lest they should be molested by the indwelling spirit. Whenever they make weirs to catch fish, they are careful to offer fish to the water-serpent of the river.[9] To ensure a good catch of fish the fishermen of Efiat throw a human victim into the water at the mouth of the river,[1] and in the St. George's Day rites in England the Green George was thrown into the water to secure the favour of the water-spirits, as well as to make the meadows green in summer.[2] The idea of propitiating a malignant water-spirit is undoubtedly the underlying motive in the legend of Perseus and Andromeda, and in its mediæval counterpart of St. George and the Dragon.

WATER, WATER-GODS (Babylonian).—**1. Water.**—The Babylonians divided their universe into three parts—the heavens, the earth, and the sea—which they personified as the gods Anu, Enlil, and Ea respectively. Each element was considered divine. But more emphasis was placed upon the divinity of the sea, because the water of 'the great deep' was considered the element out of which all things were generated. This 'great deep,' or Apsu, encircled the earth, was the source of all irrigation, and was the home of Ea, the god of waters. The Euphrates and the Tigris as children of the great deep were 'the soul of the land' and 'the bestower of blessings' respectively. But there was a sense in which the waters were regarded as an agent of destruction, viz. in their appearance in the form of violent rains and floods. Under this aspect they were personified as Tiamāt, the Tēhōm of Gn 1, an aspect which is much emphasized in the Old Testament. There Tēhōm is opposed to Jahweh, and is the cause of much dread to the people.[3] In Babylonia, however, the beneficent aspect of water comes more to the front. It was not only one of the commonest of natural phenomena, appearing as rivers, streams, seas, lakes, ponds, brooks, springs, fountains, wells, mist, dew, rain, hail, snow, ice, vapour, fog, and clouds, but also indispensable to men, animals, and vegetables. Water was divine and holy, and as such was worshipped as a god. It played a very important part in omens and oracles and all kinds of magic. It could dispel demons, wash away disease, and purge from sin. It acted as a divine power in decisions by ordeal, and in it flowed the blood of the gods.

The Babylonians believed that all waters were peopled by living creatures, actual and mythical, some of which were beneficent and others harmful. The *anunnaki* (*a*, 'water,' and *nun*, 'strength') were probably beneficent water-spirits, and the seven[4] *utukku* were demons of the sea. Both spirits and demons were controlled by Ea, or by the ferryman who kept watch over the river of death, who was called Arad-Ea, 'servant of Ea.' Water, being thus associated with divine beings, was usually considered the source of life, and at Eridu there was a sacred spring which figured in early Babylonian mythology and incantation rituals.

Because of its sacred properties, water played the chief rôle in incantations. Ea, by virtue of his being a water-god, was the most prominent figure in the ritual of incantations, being called the great physician. But Marduk, in later times, usurped much of his power, and always acted as mediator between the patient and Ea. The Ea-ritual in incantations involved washing and sprinkling of the body of the patient with water from the Euphrates or Tigris or from some bubbling source coming directly out of the earth. Then an image was made of the demon or sorcerer who controlled the victim, and it was placed in a boat. The image was drowned in sacred water, and the patient was relieved.[5]

2. Water-gods.—Babylonia was always sorely dependent upon her streams and canals, and this partly accounts for her numerous water-gods. But

more important in the minds of the people were the waters of the Euphrates and the Tigris and the Persian Gulf. Being mysterious, often beneficent, frequently destructive, never subject to control, they were considered from the very earliest times as manifestations of divine beings. They were worshipped, propitiated, and supplicated. All things, good and bad, came from them, and from them was no escape.

The source of all water was thought to be situated at the head of the Persian Gulf, or to *be* the head of the Persian Gulf. At a very early period this was personified and called Ea,[1] 'the house of water.'[2] Ea's home was at Eridu on the shore of the Persian Gulf. He was called *šar apsi*, 'king of the abyss,' but more especially, perhaps, he was god of the sweet waters which were believed to be under the earth and to fill streams, canals, and rivers. Tiamāt personified the salt waters. Ea and his consort, Damkina, are often represented as dwelling in the great deep, and hence it is that he was often worshipped as Dagan, the fish-god. As a water-god, all fountains and streams were sacred to him. Water, being a sacred, healing, and fertilizing agency, became the symbol of life, and Ea was the great physician. Because of the universal utility of water, Ea was claimed by all Babylonia as its champion, and, according to the Legend of Creation, when the gods decided to destroy mankind, Ea interceded. He befriended the Babylonian Noah, Ut-napištim, advising him to build a vessel so as to be prepared for the approaching deluge. He thus became the wise one, who taught men all the arts, and who even created mankind. Ea's consort was sometimes called Dam-gal-nun-na, 'great wife of the deep,' her Sumerian name being Nin-ki, 'lady of the earth'; but she was also called 'queen of the deep.' The god himself sometimes appeared under the name Nin-a-gal, 'god of great strength.' Ea is represented on a seal cylinder as sitting on his throne, while Damkina is leading a worshipper into his presence. The great fish or capricorn under the seat is the symbol of the god.[3] Sometimes he is seen carrying a vase of water with flowing streams and fish, and standing on a capricorn.[4] He is very often represented in the form of a fish, or of a man covered by the skin of a fish. In Assyria Ea appears as 'king of the ocean,' 'opener of fountains,' 'creator,' and god of wisdom. He is described by Berosus, under the name Oannes, as 'a creature endowed with reason, with a body like that of a fish, with feet below like those of a man, with a fish's tail.' When Babylon became prominent in the time of Ḫammurabi, Marduk was classified as son of Ea, and collaborated with him in incantations, being associated, as Ea was, with waters of life.

Adad (Sumerian, ^{d}Im), or **Ramman**, was a god of rain and lord of subterranean waters. He was never associated with any particular city, nor was he a very early Sumerian deity. He came from the west-lands, where he was a solar deity. In Babylonia he was usually associated with the destructive aspect of rain when accompanied by thunder and lightning, although sometimes he was considered a vegetation-god. Ḫammurabi, in the epilogue to his Code, calls upon Adad to deprive his enemy 'of the rain from heaven and the water-floods from the springs.' Nebuchadrezzar I. calls him 'the lord of springs and rains,'[5] and Meli-Shipak beseeches him to bestow 'abundant streams.'[1] Adad was symbolized by a thunderbolt, was associated with the sky-god, Anu, at Ašur, and often appeared under the name Numušda. Although Enlil was known as a rain-god[2] and was supposed to have brought on the flood, he was not very prominent as a water-deity. In like manner Ašur, the great Assyrian war-god, was associated with water as a corn- and water-deity and as a god of fertility, but his rôle as such was not very important. Innini, primarily the heavenly queen, was a water-goddess. She is represented with serpents and blades of grass, which in Oriental art are associated with water and vegetation. She bore the title *azag-sug*, 'sacred libator,' and, like Ašnan, a grain-goddess, was described as goddess of the 'holy meal water.'[3] Ištar, the great mother-goddess and goddess of love, was also prominently associated with water. She referred to herself as 'daughter of the ocean stream';[4] she was connected with the cleansing power of water; she was patroness of streams and canals, without whom 'no stream is opened, no stream is closed, which brings life,' without whom 'no canal is opened, no canal is closed, which gives the wide-dwelling peoples to drink';[5] and she is addressed as 'thou that rulest over springs and mountains and seas.'[6] She is represented in art with a vase of water. Besides being identified with Kir-gi-lu, or Nin-kir-gi-lu, a rain-goddess,[7] she appears as Ninā, Ea's daughter, who was originally a water-deity, and quite distinct from Ištar. But from time to time the goddesses Ištar, Ninā, Innini, and Anunit were confused one with another. Ninā was the goddess who rode upon the sea in a boat, was at one time known as Geštinanna, 'queen of waters,' and was a fish-goddess. In fact, her name is written with the ideogram which means 'goddess of the fish-house.' In time she became sister of Ningirsu, lord of the freshets. She was also called Nin-en and Nin-en-na-ge, 'lady of incantation.'[8] Ninā was also identified with **Išḫara**, goddess of water-animals, whose symbol was the scorpion,[9] and who bore the title, *tiamāt* (dragon) of the primeval waters (*^{ua}iš-ḫa-ra tiamat*).[10] Išḫara appeared at an earlier period as Išḫana, 'heavenly goddess of the fish-house,' and daughter of Ea, and still earlier as Ešḫa. Ur-Bau built a temple to **KU-anna** in Girsu. He says that she deluges the land with water, and it would thus seem that she was a storm-goddess. **Marduk**, who became the mighty god of Babylon, absorbed the attributes of many inferior deities. He succeeded Ninā as god of incantation by water; he was made a water-god, being Ea's son; and his consort was **Zer-panitum**, 'the lady of the abyss.' He became all-powerful, and was called 'king of the abyss.' A hymn says of him: 'Command the sea and the sea obeyeth';[11] he was addressed as 'lord of the mountain stream and of water, opener of sources and cisterns, controller of streams';[12] and he is represented in company with a water-dragon, and standing above the watery deep. His cult has been traced to Eridu. **Nabu**, a patron deity of Borsippa and son of Marduk, was a

[1] His Sumerian name was En-ki, 'lord of the earth.'

counterpart of Ea. He was therefore a water-god and god of vegetation. He was also a god of wisdom, and as such was associated with the watery deep. In later times his character as a water-god was overshadowed by that of wisdom, and he became secretary of the gods and inspirer of mankind. His symbol was the stylus with which he recorded the decisions of fate. Nâru was a water-deity, but his or her character is otherwise unknown. Langdon says he was 'probably a male deity,'[1] although he also refers to her as a river-goddess.[2] Nidaba, a grain-goddess, was closely connected with the water-goddess Ninā-Išḫara, one of her titles being *nu-maš-še-gúnnu*, which Langdon connects with *numašše*, a title of Ninā. J. Krauss[3] likewise identifies Lugal-ki-sī-a, a consort of Ninā, with Lugul-ki-sa-a, a consort of Nidaba. Ninā refers to Nidaba as her sister,[4] and is called the 'holy reed-Nidaba';[5] and, on a seal dedicated to Naram-Sin, Nidaba is connected with the water-goddess Ninā.[6] Ninakha-kuddu, also known as Nin-karrak and Gula, was a goddess of purification, and was connected with Ea and Eridu. In incantation texts she is associated with Ea and is called 'the lady of incantation.' In like manner Ninhabursildu, goddess of pure fountain-water, was queen of incantations. She was symbolized by a jar of holy water (*egubbû*). The war-god Ninib preserved water attributes. As the first-born of Ea, he was known as 'lord of wells and of the sea' and 'opener of wells.' He was therefore also a vegetation-god. According to a hymn to Enmešarra,[7] Ningirsu, brother of Ninā, was connected with irrigation. It is there said, 'Great lord, without whom Ningirsu does not direct the water-course and canal.' He was also associated with Scorpio and the scorpion of Išḫara. The Sumerian name of Tammuz is Dumu-zi-abzu, 'the faithful child of the deep.'[8] Tammuz was called 'the real son of the deep,' and belonged to the family of Ea.[9] Of course he is well known as the Babylonian corn-spirit, who dies and comes to life again every year. He was one of Sumeria's oldest gods, and, when the Sumerians moved into the Tigris-Euphrates valley, Tammuz became a god of the fertilizing waters. He was then called *bêl girsū*, 'lord of the flood,'[10] and under this name or its equivalent, Nin-girsu, he became the local lord of Lagash. Belonging to the Eridu circle, he employed the holy water of the great basin, *pašiš apsî*, in incantations, and as the youthful god *par excellence* he represented the beneficent waters which flooded the valley of the Tigris and Euphrates in winter and which died away in summer. He bore the title dNiba-alam, 'image of Ea.' Many hymns were sung to Tammuz as vegetation-god, but in them there is frequent reference to his water attributes. The death of Tammuz was said to have been marked by the cessation of libating the waters of Eridu, but drowning in the waters was meant to induce Tammuz to send refreshing floods.[11]

WATER, WATER-GODS (Egyptian). — **1. Water.**—The Egyptians believed in a primeval watery mass, deep and boundless, out of which had come into existence the heavens, the earth, and everything that is in them. The germs of all life, human and divine, were in the watery mass, which was personified and received the name Nu. It was eternal, and part male and part female. The lowest circle of the watery mass was described as 'Osiris who encircles the under world'; but the whole watery realm was frequently identified or summarized as the ocean or the Nile. It was believed that the Nile sprang from the great watery abyss and divided into two rivers—the one the Nile of Egypt, and the other that of which it was said, 'Great and mighty is the river of the sky, flowing across the heavens and through the Duat, the world of night and thick darkness, and on that river floats the boat of Rā.' In other words, there were two rivers which sprang out of the watery abyss—an earthly and a heavenly. Water was sacred to the Egyptians and possessed all the qualities of a divine being. In all lakes, rivers, fountains, wells, and streams the divine essence was resident. For this reason all fish[1] were sacred, and were venerated from the earliest to the latest dynastic times. Those fish venerated at Latopolis and Oxyrhynchus were eaten sacramentally on the ninth day of the month Thoth. Some water-animals were even given names as deities—*e.g.*, the hippopotamus (Taurt) and the crocodile (Sebek). Fish were thus considered the abode of the gods.

Because of the divine character of water, it was considered fortunate to be drowned, a drowned person being sometimes regarded as a deity. Osiris was drowned,[2] just as Ino of Greece and Bhairwanand in India. The greatest service one could render a god was to be drowned, and thus be united with him. The word for 'drown,' *ḥsy*, originally meant 'praise.'[3] Gods and great men loved to be associated with sacred water; thus the 'mother of Mendes' is depicted carrying a fish upon her head, and Rameses II. was credited with powers as a rain-maker. To control divine water was greatly desired. Chapters lvii. and lviii. of the *Book of the Dead* are called 'The Chapter . . . of having the Mastery over the Water in the Underworld,' and the suppliant prays: 'Grant that I may have dominion over the water.' Water is not only a fertilizing and destroying force, to which offerings are made, but also a means of warding off demons. It played a great rôle in lustrations and incantations.

As a deity water was worshipped. The water worship of Canopus and its cult in Egypt are well known.[4] There were many instances of sacrifice to water, the victims being usually bulls, horses, or human beings. Even as men were sacrificed to the Tiber in Rome, and to the Ganges in India, so in Egypt human beings, especially girls, were sacrificed to the Nile. A favourite place for an altar, therefore, was on the banks of the Nile. But all streams and fountains, lakes and rivers, were the abode of spirits, which had to be propitiated.[5]

Even as Egypt was the gift of the Nile, so all life was sustained by the Nile, and the Nile was the water of life; and, as the inhabitants of Egypt depended upon the waters of the Nile for daily life, so the departed are represented as drinking the water of life from the celestial Nile. In this world sacred water was used for purification, and in pre-

paration for the next world it was used in an interesting ceremony called the 'Opening of the Mouth,' which consisted of sprinkling or pouring water over the statue of the departed to make it a pure abode for the *ka*. This ceremony not only purified and sanctified the person represented by the statue, but also removed from him all possibility of decay and death in the world to come.[1]

2. Water-gods.—At a time which antedates the earliest records Egyptians had deified the Nile and worshipped it under the name Ḥāpi.[2] In the Pyramid Texts his name occurs[3] as that of a well-established god. It was natural that such should be the case, for Egypt's welfare depended more upon the Nile than upon any other one thing. Because of the two great divisions of Egypt, Ḥāpi was worshipped with some distinctions in both north and south. In the north he was Ḥāp-Meḥt and in the south he was Ḥāp-Reset. But there were not two gods, for Ḥāpi is represented holding two plants, the papyrus and the lotus, or two vases from which the North and South Nile poured. He is usually depicted in the form of a man, with hanging breasts from which water streams, wearing the sign of water and holding lotus-flowers. Ḥāpi was at an early time identified with the primeval watery mass, personified as the god Nu, or, at least, he absorbed Nu's attributes. Because of the mystery to the Egyptians of the cause of the Nile's inundations, Ḥāpi's being was always shrouded in mystery.

> In a hymn to the Nile it is said of him that he 'cannot be figured in stone, he is not to be seen in the image on which are set the crown of the South and the North with their uraei, offerings cannot be made to him, he cannot be brought forth from his secret places, his dwelling-place is not to be found out, he is not to be found in the shrines which are inscribed with texts, there is no habitation which is sufficiently large for him to dwell in, and the heart [of man] is unable to depict him.'[4]

Because of his great reputation, he was called 'father of the gods,' 'creator of things which exist,' 'vivifier,' 'the lord of fishes,' was identified with Osiris, Amon, and Ptaḥ, and was considered greater than Rā. In later times a festival of the annual rise of the Nile was celebrated with great solemnity throughout Egypt—an event mentioned by Heliodorus.[5] Hekataeus[6] speaks of a sanctuary of the Nile, and the early Church Fathers bear witness to his worship.[7] During the Nile festivals[8] hymns were sung to Ḥāpi in which the worshippers said:

> 'Offerings are made, oxen are slain to thee, great festivals are kept for thee, fowls are sacrificed to thee, beasts of the field are caught for thee, pure flames are offered to thee.'

Even the Nile's inundations were personified and called **Bāḥ**, and the waters of the Nile were sometimes deified as **Ānḳet**, a goddess, usually represented in the form of a woman with a crown of feathers on her head, arranged in such a way as to suggest a savage origin. Originally she was a goddess of some island in the First Cataract, but she was later identified with Nephthys. She personified the waters of the Nile which embrace and fructify the fields. She is sometimes pictured in a boat, seated in a shrine, with a table of offerings before her. Set, the personification of the forces of water which were supposed to resist light and order, was symbolized by the serpent **Apep**, the great monster of the deep, whose four heads represent the four sources of the Nile. **Ageb** is mentioned in the Pyramid Texts as a god of the deep. **Hathor**, the cow-goddess and personification of the house in which Horus dwelt, was one of the oldest of Egypt's goddesses. She was the principal counterpart of Rā, and became the great mother-goddess. She was identified astronomically with the star Sept, and was thereby connected with the rise of the Nile preparatory to its inundation. Being the mother of all, she was easily identified with phases of the Nile. There were supposed to be seven Hathors, but this is not surprising, since her popularity as mother-goddess caused many secondary deities to be identified with her and gave rise to a Hathor cult in many localities. She is represented in many forms and attitudes, but none is more interesting than a picture in a Theban tomb which depicts her in a persea-tree giving drink to a soul in Amentet. **Hekes**, 'lord of the mouth of the rivers,' is a rarely met god with stellar characteristics.[1] **Isis**, or **Ast**, was in pre-dynastic times a water-spirit or river-goddess, probably Libyan in origin. From the earliest to the latest times she was Egypt's greatest goddess, the beneficent goddess and mother, the highest type of the faithful, a loving wife and mother, the mother of Horus, the giver of food and life to the dead, 'wife of the lord of the abyss,' 'wife of the lord of the inundation,' and 'creatrix of the Nile flood.' As the power of the Nile, she was called Sati and Seṗt, and, as the embracer of the land and producer of fertility by means of water, she was called Ānḳet. She was the female counterpart of the primeval abyss from which all life sprang, and she was so popular that at an early period she absorbed all characteristics of other goddesses. She was not only a water-deity, but also an earth-, corn-, and star-goddess. She is usually depicted as a woman with vulture head-dress and with a papyrus-sceptre in her hand. Sometimes she is crowned with a pair of horns, between which is a solar disk, surmounted by the sign for 'seat,' the symbol of her name. With the horns and disk are often two plumes; and sometimes she wears the double crown of Egypt, to the back of which is attached the feather *maāt*. Her symbol was the star Seṗt, which announced the inundation of the Nile. In the Roman period elaborate ceremonies, related by Apuleius and Pausanias, were conducted in connexion with the use of a vessel of Nile water in the Isis festival, which took place at the time of the Nile's inundation. **Khnemu**, the first member of the great triad, Khnemu, Satet, and Anḳet, at Ābu, or Elephantinē, was originally a river- or water-god, as were the other members of the triad. He was often identified with Nu and Ḥāpi. He was one of the oldest of Egypt's gods, being mentioned in the text of Uni. He was without doubt a pre-dynastic god, symbolized by the flat-horned ram from the East. At a very early period he became god of the Nile and of the annual Nile flood, and as such bore the name Ḳebḥ. He was called 'maker of heaven and earth, and Duat, the waters, and the mountains.' He says of himself, 'I am the primeval watery abyss, and I am the Nile who riseth at his will.' As a water-god, he became almost universal in Egypt, uniting in himself the attributes of Rā, Geb, and Osiris, and with his four rams' heads represented the four elements—earth, air, fire, and water—and perhaps also the four sources of the Nile. He is depicted in the form of a ram-headed man, and, as a water-god, he is seen with outstretched hands over which

flows water. He is sometimes represented with a jug above his horns. His worship was especially common in that part of Egypt extending from Philæ to Thebes. **Meḥt-wrt**, the emblem of the primeval female creative principle, and the name of the celestial cow, was originally a female personification of the watery matter which formed the substance out of which the world proceeded. She is a pre-dynastic goddess, and is mentioned in the texts of Uni. **Meret**, depicted with an aquatic plant on her head, and therefore a water-goddess, was associated with Mut. Her name occurs in a dual form, Merti, and as such represented the Southern and Northern Nile. **Mut**, the great mother-goddess, 'who giveth birth, but was herself not born of any,' was an ancient water-goddess. She was called 'the watery one,' 'the watery flood,' and as such was called the wife of the Nile. Her principal temple was in Asher, a quarter of Thebes, which probably derived its name from the sacred lake which existed there. **Neit**, one of the oldest of Egyptian goddesses, was the personification of a form of the great primeval watery mass. At a later period she was represented with bow and arrows as a goddess of war and of the chase. **Nu**, in pre-dynastic Egypt, was the personification of the watery mass of heaven, whose counterpart was Nut. He was called 'the great god whose dwelling is in the waters of the sky,' and was sometimes identified with Kheper, the self-created one. He was ordinarily represented as an obese man, like the Nile, with whom he was often identified. **Nut** was the personification of the female aspect of the great watery mass out of which all things came. She was the daughter of Shu and Tefnut, the wife of Geb, and mother of Osiris, Isis, Nephthys, and Set. She is usually represented as a woman with a vase of water on her head. She sometimes wears the horns and disk of Hathor, and holds a papyrus-sceptre and sign of life in her hand. She is also depicted as a woman standing in a sycamore-tree pouring out water from a vase. In the *Book of the Dead* a suppliant prays, 'Grant thou to me of the water and of the air which dwell in thee.' Her attributes were many, because, like all water-deities, she absorbed the characteristics of many minor deities, and was recognized and worshipped in many different places in Egypt. **Osiris** was the god of the dead *par excellence*. He may have originally been a human being who was deified. When such transformation was made cannot be decided. But from the earliest dynastic period till the latest he was worshipped. He became the most popular, best known, and most powerful Egyptian deity. But what interests us is that he was originally a water-spirit or god of some portion of the waters of the Nile, and with the passage of time he became a great water-god, representing in general the creative and nutritive powers of the Nile, and particularly the inundation.[1] As a Nile-god he naturally became a creative and generative power. And, just as the Nile sank and rose, so Osiris died and rose again, becoming thus the god of resurrection. Osiris was depicted in many forms, the most usual being that of a mummy with a beard and wearing the white crown and a *menat*. He was from time to time identified with most of the greatest gods until he attained a position which made him appear as the natural god of Egypt. As a water-deity he was identified with Ḥāpi, and later with Nu, representing water as a life-giving element. As there were thought to be four sources of the Nile, so Osiris had four birth-genii, for he was the Nile personified. Plutarch records the belief of the Egypt of his day when he says that Osiris was looked upon as not only the Nile but also the ocean. Osorkon II., as an embodiment of Osiris, was represented with streams of water pouring from his hands.[1] In the Nebseni papyrus of the *Book of the Dead* Osiris himself says, 'I flood the land with water and Great Black One is my name'; and in the papyrus of Nu he says, 'I am the god of inundation and Great Black One of the Lake is my name'; and in a hymn to Osiris it is said of him, 'Thou drawest thy waters from the abyss of heaven.' **Ptaḥ**, sometimes considered the oldest of gods, was a co-worker with Khnemu in creation. He was identified with many other gods as well as with Nu, the primeval abyss, and with Ḥāpi, and he was called 'lord of fish.' **Rem** was perhaps the personification of Rā's tears. He may have been the same as **Remi**,[2] who was probably a fish-god, and associated with Sebek, a personification of Nu. **Sati**, originally connected with the chase, was worshipped at the First Cataract, where she was associated with Khnemu. Her name probably refers to the falling waters of the Cataract. She thus became a goddess of inundation, who pours out and spreads over the land the life-giving waters of the Nile. She is usually represented in human form with a high conical crown. **Sebek**, as lord of the Fayyum and deified crocodile, was most probably a water-god. **Selhet** was a scorpion-deity, and one of the four goddesses who assisted Nu and protected the four sources of the Nile. **Teṭenen** was usually identified with Ptaḥ, and sometimes with Nu. **Tefnut** was a rain-goddess whose male counterpart was Shu. She was the personification of the moisture of the sky. They were both born of the great watery mass. The cult of Tefnut does not seem to have been associated with any special city.

LITERATURE.—On this subject there exist no separate articles, monographs, or books. Besides original texts, the literature used has been mentioned in the course of the article. Special mention should be made of E. A. W. Budge's great work, *The Gods of the Egyptians*, 2 vols., London and Chicago, 1904.

S. A. B. MERCER.

WATER, WATER-GODS (Greek and Roman).—**I. Greek.**—The account given in art. NATURE (Greek) includes much information on this subject which need not be repeated here, especially as to the cult of river-gods, nymphs, and similar divinities. There are, however, certain aspects of the subject which require some addition.

The worship of rivers or of water generally as the origin of life was one expression of a belief which is also found in early speculation and philosophy. Thus Homer[3] speaks of *Ὠκεανόν τε, θεῶν γένεσιν, καὶ μητέρα Τηθύν*, and says[4] that Ocean is the origin of all things. Hesiod fits Oceanus and Tethys into his *Theogony*[5] as children of Earth and Heaven. Ocean, according to the Homeric conception, was regarded as a river flowing round and bounding the earth; thus it was set around the rim of the shield of Achilles.[6] It is personified in art as an elderly man with flowing locks and beard, but has little importance in religious cult.

The gods of the sea may be divided into two classes: (1) the elemental beings who constantly occur in folk-lore and popular belief, and (2) the clearly defined and personal Olympian gods who rule over the sea. The former had as a rule little importance in the official worship, though we hear of a public cult of the Old Man of the Sea (*Ἅλιος Γέρων*) at Byzantium. Triton, Proteus, Glaucus, Nereus, and the Nereids have many of the qualities attributed to sea-divinities or dæmons

in the folk-lore of various nations, such as the gift of soothsaying or foretelling the future, and the power of transforming themselves into various shapes. Thus Proteus, when seized by Menelaus, changed into various beasts, and into water, and could change into fire; but, if bound, he could be compelled to impart his knowledge. Similarly Thetis, the Nereid, changed into various forms when seized by the mortal Peleus. In the systematized religion of Greece all these were regarded as subordinate to Poseidon as supreme god of the sea. In this capacity Poseidon was associated with Amphitrite, possibly an old goddess or impersonation of the sea, though in later mythology sometimes regarded as one of the Nereids. She is often represented in art as the consort of Poseidon, both in the assembly of the gods on Olympus and in her bridal procession, which is escorted by Tritons and Nereids on hippocamps and other sea-monsters; but she has no important place in official worship. Poseidon, on the other hand, is one of the chief gods of the State worship of many Greek cities, and was regarded as the ancestor of many leading families, especially among the Ionians and Minyans. The tale of his contest with Athene for the land of Attica is familiar, and was the subject of the western pediment of the Parthenon. The Isthmian games at Corinth were celebrated in his honour. As god of the sea, Poseidon can arouse and pacify storms, and so is appealed to by seafarers; but it is noteworthy that, in the greatest of sea-poems, the *Odyssey*, he appears as a malignant, rather than a beneficent, god. He has little or nothing to do with ships. The Argo was built under the direction of Athene, and mariners often attribute their safety to Aphrodite Euploia or to the Dioscuri rather than to him. Odysseus owed his safety to Ino Leucothea, who was often appealed to by sailors.

As sea-god Poseidon is the sender of earthquakes (Ἐννοσίγαιος). He split the mountains to make the ravine of Tempe, and hurled about or submerged islands. Salt springs inland are also attributed to him. By a symbolism which is common and easy to understand, waves are often compared to sea-horses; and either the origin of the horse or its training to human service is attributed to Poseidon Hippios. Horses were sacrificed to him, sometimes by being thrown into the sea. The bull also was especially sacred to him, and bull-taming exhibitions were held in his honour. In connexion with this we are reminded of the mixed human and bull form often taken by river-gods.

We might naturally expect Poseidon, as the chief sea-god, to give victory in sea-fights; and in fact Persian galleys were dedicated to him at the Isthmus and at Sunium after the great naval victory at Salamis. But other gods often received thank-offerings for such victories.

A characteristic of all water-divinities and dæmons, from Poseidon down, in later Greek art is an expression of restless and passionate yearning, which is attributed to them as impersonating the restlessness of their element and its desire to embrace and engulf the land and its creatures. Apart from representations of sea-gods, the sea itself is often represented in art by conventional wave-patterns and by dolphins, fishes, and other sea-creatures.

2. Roman.—Here also the art. NATURE (Roman) gives most of the information required. The Romans were not a seafaring people, and their god Neptunus was not originally a sea-god, though he came later to be identified with the Greek Poseidon; but he may have been a *numen* associated with water, though very little is known as to his primitive worship. He appears, however, to be a god of springs, and so associated in worship with the nymphs. The worship of the nymphs in connexion with springs was very widespread in Italy and throughout the Roman empire, though it is not easy to distinguish how much was merely borrowed from Greece. Their frequent representations in art, like those of river-gods, evidently follow Greek models. The Camenæ, associated with soothsaying and poetry, appear to have been spring-goddesses in origin; and the nymph Egeria, Numa's counsellor, also had a similar character. River-gods, nymphs (often holding shells), and similar representations of water-deities are very common in Græco-Roman art, but they do not, as a rule, bear any distinctively Italian character. A more original conception is that of the famous figure of Jupiter Pluvius, the rain-god, on the Antonine Column,[1] who is represented hovering over the armies with outspread wings, and pouring down rain in torrents from his beard and outstretched arms. Such a naturalistic personification is alien to Greek anthropomorphism, and much more akin to mediæval and modern symbolism.

LITERATURE.—In addition to works quoted in artt. NATURE (Greek) and (Roman), articles in Roscher on 'Okeanos,' 'Poseidon,' 'Neptunus,' etc.; O. Farnell, *Cults of the Greek States*, 5 vols., Oxford, 1896–1910, iv. 1–97.

E. A. GARDNER.

WATER (Hebrew and Jewish).—The importance attached to water in Jewish belief and practice is so great that it embraces almost every manifestation of life, and can best be studied in the following subdivisions: (1) cosmogony, in its widest sense, (2) lustration, (3) rain.

1. Cosmogony.—According to the record of the Bible, the primordial element of creation was water. Only by the separation between the waters above and the waters below could the earth appear, but the waters above the firmament were not entirely separated from those that were gathering below, first into a great sea and then into rivers and fountains of the deep. On the contrary, an intimate connexion between the two was continually kept up.[2] A connexion was believed to exist between the upper and lower waters in the form of pipes which led from the heavens above to the sea below, and through the medium of such pipes the waters that had come down from above, and which slowly gathered into the sea, were sucked up into the heavens, thence to descend again upon earth.[3]

The primeval sea surrounds the earth like a snake; so it is seen by Alexander the Great in his attempted ascent to heaven.[4] This view is found often repeated in Rabbinical writings. The sea stands under the rule of a special prince or spirit (Śar), who opposes Moses when he tries to cleave the waters of the Red Sea. He refuses to obey a being created on the sixth day, whilst the sea was created on the second.[5] He is conjured by the sages to cast up the strength of a man thrown into the sea by a witch.[6]

The sea is the counterpart of the earth, and it contains every creature that is found upon the earth, save the fox, which by a stratagem escapes the fate of being cast into the sea.[7] The waves of the sea can be appeased by magical formulas.[8] On the other hand, the waves and storm are messengers sent to carry out divine ordinances, and cast up on land a man from a foundered boat whom divine providence wishes to save. Thus Aqiba is saved.[9] But ever since the flood, which in a supreme

form carried out the divine decree of universal destruction, boundaries have been set to the sea which it cannot overthrow, especially the boundary of sand (Jer 5^{22}).[1] The waters of the deep are also part of the cosmogonous process. They are kept under ground; and, since they broke out in the time of the flood, they are now kept in check by the Eben Shetiyah, or 'the stone of foundation,' which, according to legend, is the centre of the earth and the corner-stone of the Temple in Jerusalem, or the stone upon which the Ark of the Covenant rested. When digging the foundations of the Temple, David came upon the floods of the deep; they started surging up, threatening to flood the world. David receded slowly step by step, and, whilst receding, he recited the seventeen Songs of Degrees (or Steps), until at last, writing the ineffable name of God upon a stone, he closed with it the mouth of the abyss, and, when the waters saw the divine name, they withdrew in terror, and thus the world was saved from a second flood.[2]

The waters under ground are flowing close to the fires of hell, hence the hot springs; and the waters of the flood which surged up from the deep were boiling and helped in the destruction of the wicked world, from which Og, king of Bashan, alone escaped through his gigantic stature. (He had boasted that he and the other giants could stop up with their heels the openings of the fountains.)

There are also miraculous wells and rivers. The well in the desert, created on the sixth day, accompanied the Israelites in their wanderings through the desert and ceased to flow with the death of Miriam.[3] There is then the famous Sabbath river Sambatyon (*q.v.*), which plays a great rôle in the history of the portents previous to the advent of the Messiah.

Just as Moses, Joshua, and Elijah divided the waters, so did also sages of a later period. Jesus walked upon the waters, and in another connexion we are told that the waters of the river flowed backwards when appealed to by a sage as a proof of the correctness of his interpretation of the Law.[4]

On the other hand, wells and rain-pipes were considered to be haunted by demons.

On one occasion a man who rested on one of the gutters was hurt by a demon because he trod upon his toe. Abbaye helped one demon to fight another who was trying to drive him from his own habitation. At the end of the fight some drops of blood of the slain demon were seen floating on the surface of the water in the well. On another occasion a many-headed monster came out from the well and was slain by Abbaye.

It was therefore forbidden to drink water from any vessel that was left open overnight, more especially over Wednesday or Saturday night,[5] for it might have become defiled or poisoned by a demon; and the only protection in such cases was to blow upon the water and to pour a few drops of it on the ground before drinking—a kind of libation. During the winter solstice (Tekufa) it is said that three drops of blood fall from heaven and contaminate all the water found in vessels in houses, and that water must be poured away.[6] This, by the way, is of a purely Egyptian origin, and belongs to the cycle of the Isis legends. The Angel of Death is said to dip the sword by which he has taken the life of man in the water found in the house. All the vessels must therefore be emptied. This, however, is a popular interpretation of the ancient law of purity, according to which death defiles all food and drink found under the same roof as a dead body.

2. Lustration.—Water is the great purifier and cleanser.[7] Practically and symbolically, just as water is identified with the spirit and the Law is described as the water of life, water cleanses man from all kinds of physical contaminations, mostly after contact either with dead bodies or with anything described by the Law as impure.[8] The degree of levitical purity claimed for service in the Temple was sometimes transferred to private life, and the sect of the Essenes obtained their name in all probability from their habit of constant lustration and purification, refraining as they did from mixing with the common people or touching any food or object not properly purified. The only means for such purification were bathing and ablution—complete immersion in a sufficient quantity of water, more especially running water, or the pouring of a quantity of water over the naked body. The spiritual significance attached to a ritual bath is of later origin; for bathing was never understood in Judaism to mean also washing of the soul. Physical contamination could be eliminated by immersion or by ablution, but the spiritual contamination remained the same; for, as one of the sages puts it, 'a man who sins and confesses his sin and yet continues to live in sin is like a man who takes the bath of purification and holds an unclean animal in his hand.'[1]

The question whether both immersion and ablution were required for purification from defilement seems to have been interpreted differently by Jews, Samaritans, and Karaites. The two last hold that ablution (pouring of the water over the body without immersion) is sufficient. How far this practice has prevailed in pre-Christian times is a question which lies outside the scope of this article and may have some importance for the history of baptism.[2] In later times the washing of hands alone was considered sufficient to eliminate the charge of defilement,[3] although, as no ashes of the red heifer are to be found—which were an indispensable adjunct to religious purification—all the people in modern times must be considered as living in a state of levitical impurity attenuated by this constant washing of hands and by occasional immersions in properly constructed baths. The priests, the descendants of the *kōhanîm*, even now have their hands washed by the Levites present in the synagogue before they ascend the rostrum to recite in a special cantilation the priestly benediction. Moreover, no dead person is shriven without being specially washed,[4] and the mourners when leaving the cemetery are also expected to wash their hands, for they have been in a place considered impure by the Law.

Water, again, was used for purification or as a token of innocence by the elders when a dead body was found and the murderer could not be traced; they went to the banks of a roaring stream and, washing their hands, declared publicly and solemnly their innocence of the murder (Dt $21^{6ff.}$). In the ceremony for testing the purity of a suspected wife she had to drink bitter waters (or rather 'waters of curse'), prepared by the priest.[5]

It is not unimportant to explain the words used in connexion with this kind of water. It is called 'holy water' (Nu 5^{17}), whilst in connexion with the purification of the leprous the priest used 'living water' or, according to the RV, 'running water' (Lv $14^{5.50}$), but the same word occurs in Genesis to denote the well digged by Isaac's servants where they found 'living water.' It is difficult to imagine how running water could be in a vessel. The operation in each case is of a symbolical and magical character, and the designation of the water as 'holy' can best be understood by comparing the use of water in other mystical processes. The vessel or the bowl must be filled with water which no one else has touched, and of which no one else has drunk. It is kept intact and sanctified for the purpose to which it is to be put. The moment it has been touched or some of it drunk, it becomes defiled or dead.

Bowls for water with magical inscriptions have

often been used for such purposes in the well-known Lekanomaty.[1]

3. Rain.—It was natural that in an agricultural land like Palestine rain should be considered a blessing and drought a curse. In Dt 11^{14} the early and the latter rains are promised as a blessing for obedience to God's commandments. Palestine does not depend, like Egypt, on the water supplied by the overflow from the river, but 'drinketh water of the rain of heaven' (Dt 11^{11}).[2] The sources of rain were believed to be treasuries in the heavens. The 'waters above' are mentioned in Gn 1^{7}, and at the flood the 'windows of heaven were opened' (7^{11}). They are described in greater detail in *Enoch*, xli. 4, and in the *Revelation of Moses*.[3] According to the legend, the key which locks and unlocks this treasury was one of the three keys which God kept, and He only once delivered it up to man when He handed it over to the prophet Elijah, upon whose 'word' alone depended the drought or rainfall (1 K 17^{1}). The rainfall was therefore regarded as a divine gift and a blessing which followed the fulfilment of the Law, and drought was caused by sin; a moral connexion was established between the phenomena of nature and man's moral actions. It was thus natural that the action of the pious and the sinner should have a direct bearing upon obtaining rain or causing the withholding of it, and, furthermore, that the intercession of the pious could under certain conditions counteract the consequences of evil deeds.

According to the teaching of the Rabbis, rain fell only for the sake of the righteous, and was withheld when the Israelites deserved punishment. Drought was the consequence of remissness in paying tithes and heave-offerings, or of slander, impudence, and neglect of study of the Law.[4] Collective action no less than individual intercession would also have the desired effect of breaking up the drought. Prayers for rain and symbolical ceremonies would then become efficacious. The prophet, through his action on Mt. Carmel, brings back rain (1 K $18^{42ff.}$). In later times the high-priest prayed especially for rain on the Day of Atonement, when he performed the service in the Temple. He not only prayed for rain in due season, but went out of his way to pray that God should not heed the prayers of the wayfarers who might be greatly inconvenienced through the rain.

There was a special festival held in the Temple, the Day of the Water-Libation, which was the occasion of rather boisterous rejoicings. The Mishnāh[5] and Talmud[6] contain a graphic description of it. It was called *Simhath beth hashoebah*, 'the rejoicing at the place of the drawing' (*i.e.* of the water), and was kept on the 21st day of Tishri, the 7th day of the Feast of Tabernacles, the day of the Great Hosha-a-na. No explanation has hitherto been given for the use of water as a libation on that day instead of the regular wine-libation. It is, no doubt, of a propitiatory and symbolical character. It is an offering of the element which the people prayed to be blessed with during the year at the threshold of which they were standing. There may have been another reason for the libation as well as for the season chosen. According to the Bible narrative (Gn 7^{11}), the flood began and terminated about this time (it began on the 17th and ended on the 27th of the second month). There is now a difference of about a month between the two dates. Probably the coincidence of time was considered sufficient to celebrate the anniversary of the flood by a water-libation, and by such an act to obviate the recurrence of a flood and to show gratitude for the promise that henceforth the rain would come only as a blessing. There may also have been a closer correspondence of the time in the intercalary year, if the intercalation was made at the close of the civil year, at the end of what is now reckoned as the sixth month, but is really the twelfth month. Thus the seventh would become the eighth (second) and on the 17th of the second (eighth) the sluices of the heavens were opened (Gn 7^{11}). With the destruction of the Temple a special prayer for rain had been added to the service of the eighth day of Tabernacles.[1] Though the ceremony ceased in the Temple, the remembrance has been kept in the service of the seventh day of the Great Hosha-a-na, which is modelled on the service arranged for the occasion of drought.[2] A special significance has been given in later times to the service of the seventh day, for people seem to have forgotten the real meaning and origin of these supplementary prayers and ceremonies. Moreover, since Temple times special prayers are recited in the additional (*mūsāf*) *'amīdhah* for the Day of Festive Assembly. Corresponding to the change of season, similar prayers for dew form an integral part of the liturgy for the first day of Passover.[3] The month of Tishri was also considered most propitious for prognosticating the weather.[4]

A most elaborate description has been preserved of the ceremonies instituted and the service arranged for the occasion of drought. It is, in fact, the most complete description found in the Talmud. The solemnity was increased by the strewing of ashes on the head, the blowing of trumpets, the insertion of supplicatory prayers, and the extension of a rigorous fast for young and old, strong and infirm, male and female. It was made the occasion of general mourning also by performing that service in the open market-place. The severity of the penance and the multiplication of prayers increased with the fear that the rain might fail. Such a service could not be performed anywhere except in the Holy Land.[5] Great men enjoyed the reputation of having obtained rain by their own merits.

Outside of Palestine no special service could be arranged on the lines of the Talmudic prescription. As far as possible, fasting and special prayers were used on the occasion of severe drought, but there is no fixed form. Each community may arrange it in its own way, and either use older compositions or compose its own prayers. They do not form part of the regular service, and are not included in the recognized standard forms of the Prayer-Book. Such prayers may be met with in collections of Occasional Prayers both in MS and in print.

The most important feature of that service has been introduced in a reduced form into that of the seventh day of Tabernacles, the exact day of the water-libation. It has been invested with the solemnity and character of a second Day of Atonement. In order to explain the supplicatory prayers and the other ceremonies which now form part of the additional service, it must also be remembered that the trumpets are blown exactly as prescribed in the Talmud for the day of solemn prayer for rain. The attributes of God are recited;

[5] This ceremony is described in the first chapter of the *Mishnāh Ta'anith* and the treatise of that name. It is still more fully described afterwards by Asheri (1250–1328) in his *Tur Orah Hayyim*. A fuller, though not complete, MS of this service, with the poems and supplicatory prayers, etc., has come from the Holy Land into the possession of the present writer. It must be anterior to the 16th century.

the procession of the palm-leaf and the willow takes place, just as in the time of the Temple; and prayers are offered up almost exclusively for rain in its due season. They are, in fact, the very prayers found in the Mishnāh and the treatise *Ta'anîth*, and also in the description of Asheri. Curiously enough, similar prayers have also been arranged for the cessation of rain. In fact, all the supplicatory services for grave occasions like plague, etc., follow the lines of this liturgy for rain.[1] In addition to these special services, a regular change takes place in the form of the daily prayer (*'amīdhah*), or eighteen benedictions, in the special blessing for rain and dew. It is connected with the change of the equinox. It begins approximately sixty days after the winter solstice. This is also a season which is not free from superstitious beliefs and practices.[2]

A Talmudic legend[3] tells of a certain Nicodemus (Nakdimon), son of Gorion, who had obtained from the Hegemon a number of pits filled with water, which he distributed among the poor at the time of a great drought. He promised to pay a heavy fine if before a certain date the rain did not fill the pits. In the afternoon of the appointed day the sun was still shining brightly, and no sign of rain was visible. Nicodemus went up to the Temple and prayed, and the sun, which was sinking, rose up again and thus prolonged the day, before the close of which a heavy downpour of rain freed Nicodemus from his obligation. Honi,[4] another pious man, drew a circle, and, standing within it, prayed to God, and the rain came down in heavy drops. In another legend it is through the merit of the wife that drought is broken, the clouds gathering first in the corner where she was praying.[5]

The drought, according to a legend, is also broken up by the cry of the raven. It is said that it was granted to him as his reward for showing Adam how to bury Abel, by digging a grave and burying a dead raven.[6]

A new element has been added to these prayers for rain, in the processions to the cemetery and in the prayers to the pious and illustrious dead for their intercession. No man is found in the later generations so worthy of appealing to God as were those of old times; they therefore pray that those who 'slumber in the dust' may intercede with God in favour of the suffering people. Such processions are headed, as a rule, by the Rabbi, who is accompanied by the elders and the children. Sometimes—but rarely—the scrolls of the Law are carried in the procession. Litanies are sung and recited, and prayers are said over the graves.[7] It is the Jewish counterpart to the Christian procession, notably of the Eastern Church, in times of severe drought, when the relics of a saint are carried on the shoulders of the clergy in a solemn procession through the town, headed by the bishop or the metropolitan of the place.[8]

A local legend in Salonica heard by the present writer tells that the Jews who fled from the Inquisition in Spain at the end of the 15th cent. were admitted into Turkey on condition that they would bring rain in time of drought. The people of that town, especially the children, used to gather under the window of the *Haham* asking for rain. It is told that on such an occasion the late *Haham* Kovo, going out in procession to the cemetery, warned his people to prepare themselves with coverings for the rain, and they returned under such a downpour that the streets were turned into rivers.

The rain thus plays a very important part in the Jewish service. The prayer which is recited daily, and the introduction of special prayers on important occasions into the liturgy, as well as other ceremonies and practices, testify to the belief that a divine gift such as rain can be obtained only through piety and uprightness and by means of supplication and self-chastisement.

WATER, WATER-GODS (Indian).—

The special conditions of the Indian climate, producing, as in the western desert, a scanty and irregular rainfall, in other places excessive downpour resulting in loss of life and property from inundations, and the constant risk of failure or irregularity of the monsoon, promote the popular animistic beliefs and that of special deities ruling the ocean, rivers, tanks, and wells.

'Water runs up this whole gamut or scale of religious expression. The honours paid to the running brook, a hot spring or to a river that alternately floods and falls—causing famine or abundance, bringing riches or ruin—are intended for the living water itself by a large class of votaries; and this notion of material identity seems preserved by the custom of bathing in sacred streams, of self-drowning, and of witch-dipping, which last custom resembles exactly that of England. Suicide and witch-dipping in rivers present both sides of the same conception, acceptance or rejection by the divine element. Further on, the water-power is no longer deified Nature, but controlled by a supernatural spirit we have the kelpie who inhabits rivers under the form of a buffalo, and personifies their effects. His name is *Mahisoba*; he has no image, but a buffalo's head is cut off and deposited on his altar. After this we ascend to mythologic fictions about the origin and descent of the greater rivers from the Hindu heaven, and to legends of streams turned, stopped, or otherwise engineered by interposition of the divine energy incarnate.'[1]

In Mirzapur a pool in which some buffaloes were once drowned is now inhabited by the buffalo demon, Bhainsāsura, who in company with the *nāgās*, or serpent deities, is so malignant that no one dares to fish there until he has propitiated these powers by an offering; another form of demon attacks fishermen, appearing in the shape of a turban which fixes itself to his hook and increases in length as he tries to drag it ashore.[2] Sometimes the demon, as in the case of the Zalgur of Kashmīr, takes the shape of a horse, the foam-crested waves breaking on the bank naturally assuming this shape in the popular fancy.[3] Such sea-horses in the Hindu legend are provided by Varuṇa, the sea-god.[4] The custom of taking oaths on water conceived as a spirit is common among the Karens and other primitive tribes.[5]

1. Water-gods in the Veda and later literature.—Much controversy has arisen on the question of the amount of knowledge of the sea possessed by the Indo-Aryans. On the one hand, writers like H. H. Wilson[6] assert that they were a maritime and mercantile people, familiar with the ocean and its phenomena; and references in the Veda are quoted of merchants making expeditions to some foreign continent or island. Other writers represent them as living far from the coast and unfamiliar with the sea. The evidence quoted by Bühler of voyages in the Indian Ocean seems inadequate, and the use of the word Samudra for the ocean implies a knowledge of the sea which needs not to be confined to the estuary of the Indus.

'This is to circumscribe too narrowly the Vedic knowledge of the ocean which was almost inevitable to people who knew the Indus.'[7]

In later times this knowledge gradually increased. There seems to be no proof of sea trade with Babylon in Vedic times; this probably developed about A.D. 700.[8]

'The extensive and long-continued emigration from India to the East—including Pegu, Siam and Cambodia on the main-

land, with Java, Sumatra, Bali and Borneo among the islands of the Malay Peninsula—and the consequent establishment of Indian institutions and art in the countries named, constitute one of the darkest mysteries of history.'[1]

The deification of the great rivers by the Vedic Indo-Aryans was highly developed.[2]

2. Varuṇa.—The imperfect knowledge of the ocean possessed by the Indo-Aryans explains why Varuṇa, whose name probably corresponds with the Greek Οὐρανός, 'though the identification presents some phonetic difficulties,'[3] does not clearly rank as a sea-god in the Veda.

'Though Varuṇa is not generally regarded in the Rig-veda as the god of the ocean, he is yet in the following passages (i. 161. 14, vii. 49. 2, viii. 64. 2) connected with the element of water, both in the atmosphere and on the earth, in such a way as may have led to the conception of his character and functions which is fully established in the later mythology.'[4] 'With the growth of the conception of Prajāpati as a supreme deity, the characteristics of Varuṇa as a sovereign god naturally faded away, and the domain of the waters, only a part of his original sphere, alone remained to him. Thus he ultimately became in post-Vedic mythology an Indian Neptune, god of the sea.'[5]

In more recent times Varuṇa has lost the dignified position which he once occupied,[6] but he still retains some of the functions of a sea- or water-deity. The most famous festival in E. Bengal is held in his honour at the full moon of the month Kārttik (Oct.–Nov.), when devout Hindus bathe at a famous bathing-place.[7] In other parts of Bengal no image of Varuṇa is made, nor is he honoured at any festival or temple; but he is worshipped as one of the guardian-deities of the earth, and by fishermen before they start their work, or in time of drought to secure the needed rain.[8] In Gujarāt he is believed to live in the waters, or, by another account, he has five abodes—the sea, the river, the pond, the spring, and the well.[9] In ancient times he received human sacrifices, as in the story of Śunaśepa, the prototype of the offering of infants to the water-goddess Gangā at the confluence of that river with the sea.[10] He is invoked in daily worship as 'king of waters, who curbs the wicked, who made a road in the heavens to receive the rays of the Sun. I therefore follow that route.'[11] Like many water-gods, he is commemorated as a fertility-deity at marriages.[12]

3. Kṛṣṇa and Śiva; the Apsaras.—The place of Varuṇa as a sea-god was at a later period to some extent assumed by Kṛṣṇa and Śiva.

'Kṛṣṇa, a god who is the hero of many solar myths, the slayer of the demons, who dives under the sea and slays Kaṃsa and Kesi and Madhu, this semi-agricultural, semi-solar or atmospheric god is evidently connected with the dark sun and the storms of the rainy season, and his shrine is at Dwārkā on the sea shore, where the sun dips into the boundless western ocean.'[13]

During the 5th and 6th centuries A.D., on the arrival of the white Hūṇas in Gujarāt and Kāthiāwār, the sea began to influence these new-comers, as is shown by the fame which gathered round the new or revived gods, Śiva in his form as Somanātha or Someśvara ('lord of the moon'), with his shrine at Somnāth (*q.v.*), and Kṛṣṇa, the Apollo or St. Nicholas of Dwārkā (*q.v.*), to whom sailors pray to save them from shipwreck. Śiva, an inland god, is worshipped at river junctions.[1] But the place of the primitive rain-gods has been gradually assumed by figures drawn from the local animism. In Madras in time of drought, instead of worshipping Varuṇa, men pray to the spirit Kodumpāvi ('the wicked one'), or to some other local spirit, to send the rain.[2] The Apsaras (Skr. *ap*, *āpas*, 'water,' *śṛi*, 'going,' in the sense of moving in the waters or between the waters of the clouds), a kind of nymphs who even in the *Rigveda* appear completely separated from any physical basis, in the *Atharvaveda* have their abode in the waters, and in post-Vedic literature frequent lakes and rivers, especially the Ganges, were in later times believed by the Rājputs to convey the souls of dead warriors from the battlefield to the mansion of the sun, and have now little influence over the waters or on the rain.[3]

4. Modern ocean-worship.—The sea, known to modern Hindus as Ratnagarbha ('filled with jewels'), is revered by the pious, and at the Amāvas, or new moon, a sea bath is considered cleansing, as on that day the waters of 999 rivers are supposed to be brought into the sea by the spring tides. Bathing is also efficacious during the whole of the Laund, or intercalary month, and in parts of Kāthiāwār on the bright second of every month people light a fire on the shore, throw butter into the fire, and on the day when the fleet puts to sea fishermen pour milk, sugar, and liquor into the water and throw in flowers and coco-nuts.[4] In W. India Coconut Day (*nāriyal* or *nāral purnimā*) is held at the full moon of the month Śrāvan (July–August) in the height of the annual monsoon, when flowers and coco-nuts are thrown into the water to secure the favour of the sea, or as a thank-offering, because by this time the most serious storms are supposed to have ceased; and even as far inland as Poona clerks go to the riverside and fling coco-nuts into the water, and, when they return, the women of the house wave lighted lamps round their heads to disperse evil influences.[5] The Vāda fishermen on the east coast worship the sea-goddess Orusandiammā, who roams over the sea at night with a male deity, her brother Rāmasondi, and is worshipped with special rites.[6] On the west coast Kolī fisherwomen wear glass bangles only on the left wrist, because on their wedding-day the right arm bangles are thrown into the sea to win its favour.[7] In the *Purāṇas* we find a belief, which still survives, that the seven continents of the world are surrounded by seven great seas: Lavaṇa, or salt water; Ikshu, sugar-cane juice; Sura, wine; Ghṛita, clarified butter; Dadhi, curds; Dugdha, milk; Jala, fresh water; and this idea also appears in Musalmān traditions.[8]

5. Muhammadan sea-saints.—The objection felt by Hindus to travelling by sea resulted in the Arabs and Persians monopolizing the trade of India. Hence Musalmān saints became the guardians of the sea. One of the most important of these sea- or river-saints is Khwāja Khiḍr.

'Abd al-Qādir al-Jīlānī (*q.v.*), who takes his name from Gīlān or Jīlān in W. Persia (A.D. 1078–1166), rules the Arabian Sea, as Māmā Salmā watches the Persian Gulf and Zulaimah the Red Sea.[1] Qādirwalī Sāhib on the Coromandel coast helps sailors, and he is said to have done many strange miracles.[2] Daryā Pīr, the 'sea-saint,' sometimes identified with Khwāja Khidr, is in Gujarāt patron of the Lavānā merchants and lives in the sea, and offerings are made to him by pouring a little water on the ground through a sieve dedicated to him.[3]

6. Water-sprites or spirits.—Besides the greater water-gods a host of spirits or sprites are worshipped. This cult is specially prominent in the Buddhist *Jātaka*. Some of them are malevolent; in a bas-relief at the *stūpa* of Bharhut a sea-monster devours a ship and its crew.[4] Others, again, are kindly and are worshipped in conjunction with the *nāgās*, or serpent-gods.[5] Among spirits of this class at the present day in the Konkan, Bombay, the *asarās*, or *asrās*, are ghosts of young women who, after giving birth to one or more children, committed suicide by drowning; they live in the water, attack any one who approaches them, and go about in groups of seven; their victims are young women, and, when a girl is attacked, an exorcist is summoned, who makes an offering of food, red powder, and green clothes to the sprites.[6] Another Konkan sprite of the same kind is Hadal, the ghost of a drowned woman, who wears yellow clothes, lets her hair flow loose, and is plump in front and a skeleton behind; when women are attacked by her, they let their hair flow loose, shake all over, and scream.[7] The *girhā* entices men into deep water.[8] In Gujarāt the *mātā*, or 'mother,' and the *śankhinī*, or 'ogress,' haunt springs and pools and drown or enter the persons of those who venture near their haunts; an exorcist effects a cure by giving a charmed thread to the patient.[9] In Mysore the *akkagārs*, or 'seven sisters,' attack women, and in such cases the village washerman performs a rite of propitiation by setting up seven stones near the water and making an offering.[10] In the Salem District, Madras, the *āāsakanigal* are female sprites who occupy tanks and cause the embankments to burst as they tread on them while they are quarrelling.[11] In N. India the *ghāthhāī*, or 'ferry brother,' must be propitiated in rites of black magic.[12] In the United Provinces within the bed of the Jumnā 'was the fearful pool of the serpent Kālīya ("the black one") boiling with the fires of poison, from the fumes of which large trees on the bank were blighted, and by whose waters, when raised by a gale into the air, birds were scorched'; the demon was conquered by Kṛṣṇa and driven into the ocean.[13] In the Panjāb District of Kulu the *jalparī*, or water-fairy, can be conciliated by offering a lamb and flowers on the bank of a watercourse; if she catches a man, she compels him to cohabit with her, and kills him if he refuses.[1] In the Panjāb plains the *yoginī*, or *joginī*, haunts waterfalls, while the *jaljoginī* occupies wells and streams and casts spells on women and children, causing sickness and even death.[2] In Assam the Garos believe that still pools in rivers are the abode of the *bugarik*, a lovely siren, whose hair floats on the current; she has the body and arms of a woman, but no legs; some say that she is well disposed, but others allege that she kills women to add their lives to her own, and will kill men if she can catch them.[3]

Among the Mikirs 'localities of an impressive kind, such as mountains, waterfalls, great boulders, have each their Arnam, who is concerned in the affairs of men, and has to be placated by sacrifices; all waterfalls, in particular, are haunted by them.'[4]

Sometimes these sprites demand human sacrifice, like that of the Pennār river, who, when the Mālas were escaping from their Musalmān enemies, demanded the sacrifice of a first-born child before she would allow them to cross.[5] The Kaivarta fishermen of Bengal at the rite for guarding their nets fling a live kid into the water.[6] The Gaddī shepherds of the Panjāb offer food, water, or a sheep made of flour to the Batal water-spirits.[7] The Khasis of Assam offer a goat to the river-goddess before a fisherman can cast his net; in old days she used to block the passage in the form of a crocodile until she was appeased.[8] In Burma a Kachin boy was accidentally drowned in a river, and for some years after the parents and other villagers used to come and hack the water with their knives.[9] The floods in the Pin river are so violent that it is said to eat people every three years.[10] Persons drowned being thus regarded as victims offered to the flood-spirit, the saving of a life from drowning is fraught with danger.[11] In Gujarāt and the Konkan the water-nymphs drown a person who tries to save a drowning man.[12]

The presence of such malignant water-spirits renders it dangerous to cross rivers, especially in the case of those who are unclean or under tabu.

The Nāyars and Vellālas of Madras impose stringent rules against crossing certain streams; for fear of arousing the wrath of the water-god, a Toda woman will not cross the sacred river of the tribe, the men will not use the water for any purpose; they will not touch it unless they are obliged to ford it, and then they make a bow when they reach the opposite bank.[13] The Nayādis, the lowest caste in Malabar, are not allowed to cross a bridge, and in the Central Provinces Pardhī women in their menses must not cross a river or sit on its bank, and the bar of pregnancy is also recognized.[14] At a wedding in the Magh tribe of Bengal the pair 'eat some curry and rice from the same dish, and what they leave is kept in a covered earthen vessel for seven days, during which time the married couple may not leave the village or cross running water'; at a wedding among the Kandhs there is a mock fight between the clans of bride and bridegroom, and, 'after the struggle is over, the priest attends the bride and bridegroom home, in order to avert by a charm the evil which would threaten their married life in case their path should cross a running brook.'[15]

The wide-spread belief that a ghost cannot cross running water prevails in India;[1] a thread is passed over a stream to help the soul to return to its home, a belief developing into the Bridge of Death and Charon, the ferryman.[2]

7. Wells, tanks, lakes.—All over the country sacred wells, tanks, and lakes, and their indwelling spirits are reverenced. Their sanctity arises in various ways: they have been made, discovered, or occupied by some god or saint; hot water flows in them, a special mark of divine power;[3] their waters periodically increase or decrease; they possess curative power (especially in cases of leprosy); bathing in them may cause a change of sex.[4] No well is considered lucky until its spirit is solemnly wedded to that of the garden which it is intended to water, the former being represented by the *sālagrāma*, or ammonite, sacred to Viṣṇu, and the latter by the holy *tulasī*, or basil plant (*ocymum sanctum*).[5] In the same way, every tank should have a wooden pole in its centre to which the water-spirit is married; until this is done, the water will increase and not allay thirst and may cause disease; the pole also protects the tank-spirit from the attacks of demons.[6] The prince of Jaisalmer goes annually in state to the lake Gharsīsar to perform the sacred act of cleansing it from the accumulated mud and sand; first he takes out a handful, and then rich and poor follow his example.[7]

LITERATURE.—This is quoted in the footnotes.

W. CROOKE.

WEALTH.—Wealth is variously defined according to the standpoint from which it is regarded. But, in whatever aspect it may be viewed, its significance lies in its relation to life as a whole, and it can only be adequately understood when treated as a part of the larger study of man. It cannot be dissociated from the social and moral development of the race. It obtains its ultimate meaning from its place in the scale of values which determine the worth of life. Ethical considerations must therefore be dominant throughout the entire treatment of the subject. 'It is man's "good," or rather his goodness, that endows wealth with all its value.'[8] While the various phases of the question shade into each other, for the purposes of this article it will be convenient to consider the theme under three aspects—economic, ethical, and Christian.

I. *ECONOMIC ASPECT.*—**1. Historical sketch of the rise and progress of the science of wealth.**—Man alone among the denizens of the earth is the conscious possessor of its resources. Though he has many primary instincts in common with the lower animals, he differs from the brute creation in that he has the faculty of unifying his desires, postponing the present to the future, and making the accumulations of past labour the basis of fresh endeavour. In the growth of his needs and the methods of satisfying them we can trace the economic development of the human race. Very early in history questions of the right of property arose. In the patriarchate period, as depicted in the OT, there is evidence of the existence of private possessions. In early Greek philosophy investigations into the nature and extent of economic law occur. By Plato and Aristotle the industrial aspect of social life is treated as a part of politics. The Roman jurists, while recognizing the sacredness of property, direct their attention chiefly to questions of its tenure and transmission. The asceticism of the early and mediæval Church cast suspicion upon all forms of wealth and tended to check individual enterprise and private possession. The Renaissance gradually broke down the feudal system; and, with the enfranchisement of spirit which the Reformation brought, trade and adventure awoke and the possibilities of the physical world came within the vision of man. The search for unity and law underlying economic facts was greatly stimulated by the researches of Bacon and Newton, while the investigations of Grotius and Leibniz on the Continent and of Hobbes, Locke, and Hume in England aroused the thinking world to the bearing of industrial questions upon the progress of mankind. With the exception of the writings of French physiocrats, of whom Quesnay was the leader,[1] there was no really scientific treatment of the nature and functions of wealth till the appearance of Adam Smith's treatise on *The Wealth of Nations* in 1776.

This book marks an epoch in industrial thought and enterprise. Political economy for the first time becomes a science. Following Smith's work there appeared in quick succession Malthus's *Essay on Population* (1778), Ricardo's *Principles of Political Economy and Taxation* (1817), and J. S. Mill's *Principles of Political Economy* (1848). Smith dealt with the causes of wealth, Malthus with the causes of poverty, while Ricardo and Mill treated mainly of the ways and means of distribution. *The Wealth of Nations* appeared at a propitious hour.

During the Middle Ages the successive phases of social disability which feudalism and serfdom had bequeathed tended to hinder the free life and development of man; and it was not till the individualistic gospel of Rousseau found a response among thinkers that a new sense of human right and freedom awoke. Adam Smith claimed to be the champion of popular liberties. He exposed several traditional fallacies in regard to property and its rights and uses. He showed that the progress of society depended upon individual initiative, division of labour, freedom of contract, and unrestricted interchange of goods. Money, he maintained, was not in itself wealth, but only a medium of exchanging commodities which constitute wealth; and the riches of a nation consisted not in the amount of gold hoarded in its coffers, but in the quantity, variety, and facility of its exports and imports. Unrestrained and widely distributed industry, he held, was the prime and dominant factor of a country's prosperity.

The historical treatment of economics generally adopted in recent years by French and German writers owes its inception largely to the historical insight and philosophical grasp of Adam Smith. But, though he was in advance of his times, many facts have emerged since his day which necessitate a reconstruction of economic science. The new historical instinct which was just awakening and has since been applied so effectively to many departments of inquiry; the general acceptance of the 'evolution theory,' with the light it has thrown upon the conflict and co-operation of man in the development of the race; the industrial reaction caused by the progress of science and the substitution of machinery for hand labour; the growth of democracy, with the spread of new ideas of liberty following in the wake of the French Revolution—these are among the factors which have greatly

modified economic study and made the problem of wealth a theme of vastly wider implication than its early investigators dreamt. Later writers, such as Spencer, Fawcett, Bagehot, Toynbee, and Marshall, have shown that political economy must be subservient to human progress in the highest sense and that the moral element cannot be eliminated.

2. Meaning of wealth.—We are now in a position to state generally what economists mean by wealth. The 'good' in the economic sense is every natural product which serves the satisfaction of man. By universal consent the word is applied to things which are material and exchangeable. Four attributes are usually comprehended in its definition: (1) materiality, (2) transferability, (3) limitation in quantity, (4) utility.[1] Of these the first is now regarded as doubtful, since wealth may embrace things not entirely material, such as some forms of service. The last is essential, but a larger meaning must be given to 'utility.' Shortly, wealth is said to consist of things that can be bought and sold, the amount they represent being measured by the quantity of money that they would fetch in the market. The definition, however, is defective on the side of both inclusion and exclusion. On the one hand, a large trade exists in supplying certain satisfactions of a sensual nature which cannot be regarded as economically good or useful; and traffic of this kind, though involving exchange of money, does not contribute in any sense to the weal of man. On the other hand, light, air, even water, unless involving conveyance, have apparently no exchange value; but indirectly they are considerable elements in the wealth of nations. Further, 'potentiality of being bought and sold' excludes many goods, such as health, integrity of character, parental affection, which, though not saleable, have undoubted value, since they render their possessors more fit for the battle of life and more capable members of the national organism.

In protesting against the crude conception that wealth consists in the amount of gold or silver a nation possesses, Adam Smith deliberately describes the wealth of a country as 'the annual produce of its land and labour,' or 'the necessaries and conveniences of life which it annually consumes.' The important point in this statement is that wealth is not land, cattle, machinery, etc., possessed at *a particular point of time*, but rather the annual produce or fruits derived from these *in active use*. The English statisticians of the 17th cent. regarded the wealth of the country with the eyes of a farmer, and, like the French physiocratic school, denied the quality of productivity to all labour not employed immediately on the land. Hence a second important point to be noted is that Adam Smith rightly included in 'productive labour' not only labour employed on the land, but all kinds of work which improved material objects. The French economist, J. B. Say, extended the idea of productive labour to cover 'non-material products.' And from his time the annual produce has been conceived as including 'services' as well as commodities. Economically, wealth may be summed up as the product of what in modern life is termed 'the economic or industrial system,' meaning by industry 'all those articles which go to make any sort of wealth including the services of the judge, the clergyman, the acrobat';[2] not material goods alone, but 'the work of government, the learned professions, the fine arts, all gainful recreations, must be brought under the "industrial system."'

3. The factors of wealth.—In the production of wealth economists enumerate three factors: land, labour, capital. Land and labour are obviously requisite at all times and places; and, though in primitive societies capital existed only in very rudimentary forms, it also becomes essential in any community which is organized on a large scale.

(*a*) *Land.*—The two primary sources of wealth are material for work and work for material—Nature and man. The starting-point is found in the original needs which stimulate men to engage in labour for their satisfaction. But labour of itself produces nothing. It can exercise itself only upon the given. In one sense Nature is the mother of all wealth. We are rich when she gives, poor when she withholds. Yet Nature yields nothing for nothing. Her gifts are available only as man brings the toil of hand and brain to bear upon them. As economists put it (though not quite accurately), it is the land—including not its surface fruits only, but all that is contained in the bowels of the earth, coal, iron ore, minerals of all kinds, and even the sea with its manifold treasures—that is the prime source or factor of potential wealth.

(*b*) *Labour.*—It is the function of labour not to create but to extract, transform, and shape to the uses of man the potencies and raw material of the earth. The supreme service which labour renders to society is defined by J. S. Mill as 'putting things in fit places.'

'Labour in the physical world,' he says, 'is always and solely employed in putting objects in motion; the properties of matter, the laws of nature, do the rest.'[1]

Though no wealth can be produced without labour, there are some kinds of labour which may be very useful though not actually productive of material wealth. Hence a distinction has been drawn between 'productive' and 'non-productive' labour. But this distinction can hardly be sustained. Can it be said, *e.g.*, that the work of a miner is productive, that of a teacher, a poet, or a statesman unproductive? Men who do not work with their hands may be really contributing to the material well-being of man. And what seems at first sight to be fruitless or even wasted activity may in the highest sense be conducive to life. Indeed there are some things which, though not computable in money, greatly tend to increase the productive power of even physical labour. Three elements at least may be mentioned: division of labour, combination in effort, invention and application of tools and machinery. 'All tools and engines of the earth,' says Emerson, 'are only extensions of man's limbs and senses.'[2] But machines can only second; they cannot supply his unaided faculties. To these means must be added what, after all, is of most importance—the moral and intellectual elements — the skill, intelligence, character, and fidelity of the worker himself. A man is more than a machine; and, without the personality behind, physical and mechanical appliances, however complete, would fail of their results. In the production of wealth the economist is apt to overlook spiritual values. Education, the discipline and training of the home, the school, the college, the hardships and hazards of life, and all the moulding and informing institutions of society may appear to have no immediate monetary worth, but they are inestimable forces in the making of the workman, rendering him to himself and the community a more fit and effective agent of productive service.

(*c*) *Capital.*—It is difficult to define this element or designate precisely its functions. The term has become the storm-centre of modern industrial con-

[1] See *Dict. of Political Economy*, s.v. 'Wealth.'
[2] J. A. Hobson, *Science of Wealth*, p. 13.

[1] *Principles of Political Economy*, bk. i. ch. i. § 2.
[2] R. W. Emerson, *Society and Solitude*, 'Works and Days,' p. 1.

flict. Capital has unfortunately been regarded by labour as the instrument by which owners of property and possessors of money can make their own terms and manipulate work in their own interests. Capitalism has undoubtedly been a stern taskmaster in the past. The owners of capital may be said to have been, and to be still, the controlling power of our industrial system. They have taken the place formerly held by the landed aristocracy as the pivot of the social and industrial order. As the holders of power they have offered a stubborn opposition to all encroachments upon their privileges; and during the last quarter of a century all advancement of wages and improvement of environment on behalf of labour have been secured only by the pressure of trade unionism and the employment of the strike weapon. Hence the interests of employers and workmen have come to be regarded as inimical; and embitterment and class hatred have ensued which have led to conflicts costly alike to masters and to men. An impartial judgment is bound to recognize faults on both sides. At bottom of the perversity there has prevailed a materialistic philosophy involving a false exaltation of money and a vulgar conception of life which, as a result of the spell of commercial prosperity at the close of last century, has pervaded all classes of society. It is the pride of riches, the indifference, the cruelty, and the vulgarity—in a word, the selfishness of wealth that has roused jealousy and suspicion and become a danger to the community. The working classes have been too apt pupils of their masters and have indulged in habits of laxity and improvidence which are a menace to the true weal of the nation. But, whatever may have been its abuses, and however it may have tended to exploit labour for its own ends, absorbing within itself the legitimate fruits of toil, capital is an indispensable element in the production of wealth and an instrument of incalculable service in the development of the resources of civilization. In the economic sense, capital is wealth appropriated to productive employment. It may be defined as the aggregation of the surplus which has been saved from immediate use and is available for the further development of industry. It is of two kinds, circulating and fixed. Circulating capital consists of the wages paid to the workmen and of the raw material which is being actually used in the process of work. Fixed capital consists of buildings, machinery, tools, railway plant, shipping, etc. Circulating capital is being constantly used up, while fixed capital is permanent, more or less. Capital generally is the result of the industry of past generations used to promote and facilitate the industry of the present and the future. In every form of capital we trace the labour, ingenuity, and foresight of men who have built up the trade of the present. For the development of capital it is necessary that production should exceed consumption, leaving a margin for future increase and development of trade. It cannot be denied that labour has contributed to the making of capital and ought to have a share in its possession and employment. It is the duty and task of the capitalist to organize, direct, and supervise the labour of the country, so that it shall adequately meet the needs of the community. These services have been rendered in the past principally by private individuals. It has been argued that they might be equally well, if not better, supplied by the State, in which all have a stake and in the prosperity of which all have a claim to participate. But, whatever may be said in favour of collectivism, it must be noted that, whether controlled by the nation and supervised by State officials or possessed by private individuals, capital in the form of liquid assets is absolutely necessary for the organization and development of commerce; and without it labour would be practically incapable of producing its maximum results or obtaining for itself an assured or adequate return for its efforts. It is evident that the interests of capital and labour are mutual, and the success of their common enterprise depends upon their harmonious co-agency. But, to attain this unity of aim, both labour and capital will have to revise their ideas. Instead of an unending strife, by which each tries to secure as much and give as little as possible, a wider outlook must be sought in which each party shall realize that industry is only a means to an end and that life has more to offer than the things which can be estimated in terms of money alone.

II. *ETHICAL ASPECT.* — From the foregoing sketch of the economic aspects of wealth it will be seen that all industrial questions lead up inevitably to ethical issues. Economic proposals for the readjustment of society assert a principle the neglect of which was the great failure of the 19th century and is still the source of much of our avoidable social unrest.

'That principle is simply that industrial prosperity is not to be measured solely in terms of material wealth; or, in other words, that industry must be regulated by reference to supra-economic ends. Its profit and loss account must show human as well as material values; and that industry is neither prosperous nor healthy which shows a great output of material goods at the cost of a great deterioration of health, the character and the human capacity of the worker.'[1]

1. **Relation of economics and ethics.**—If economic science is designed for the advancement of life itself (and this is its tacit claim), then human considerations cannot be ignored. Work must serve man, not man work. Our starting-point must be that life is the principal thing and that every human being has a right to live and work; and that in giving his services to the good of the community he ought to have some share in the common weal. Even if a living wage be conceded, a living wage must be interpreted not as that which gives a mere subsistence, but as that which affords to each the opportunity of human self-expression.

It has been truly said that 'life without the means of living, personal gifts or skill that have no outlet, liberty that is only an inner consciousness and has no sphere of exercise, are all alike meaningless.'[2]

Considerations like these have led many to be suspicious of the doctrines of political economy and especially doubtful whether the conception of wealth as usually assumed in scientific works can be accepted as ultimate. The common fallacy of confounding wealth and money is not yet obsolete. The idea that wealth consists solely in material things of utility dies hard and continues to exert considerable influence upon economic thought.

'Property is meaningless, not wealth at all, apart from its purpose, or apart from its possible or actual practical use. . . . We have fallen into the error of regarding material wealth as having intrinsic value, and we tend not uncommonly to devote our energies to gaining possession of it, irrespective, or with the slightest consideration, of what is to be done with it. . . . Wealth is not wealth, but only its unrealized possibility, apart from the spending of it.'[3]

Hoarded wealth is not really wealth; and even less is misused or wasted wealth. Even the phrase 'satisfaction of wants' is ambiguous. 'What we want' may mean either what a particular individual or class desires at the moment or what is an essential need of our whole nature as men. In other words, in order to decide what constitutes wealth in its largest sense, it is necessary to know what is the true good of man—an inquiry with which political economy must reckon if its results are to be of vital import for mankind. But, while the

[2] H. Jones, *Principles of Citizenship*, p. 165.
[3] *Ib.* p. 161.

economist defines his subject as one of 'the sciences of man,' the conception of the human value of wealth does not rule either his thought or our practice in dealing with it. But it is only from this point of view that the problems of capital and labour, profit and wages, free trade and protection, or the respective rights and limits of production by the State and the individual are to be considered. It is the personal element that brings the science of economics into closest touch with ethics. Both have to do with the 'good'; but the economic 'good' is mostly regarded as material, whereas the 'goods' with which ethics is concerned are those acts which are the conditions of the attainment of the highest end of life. While it is perfectly legitimate to consider what will increase or diminish the material side of human happiness, it must never be forgotten that neither an individual's nor a nation's life consists in the abundance of the things which it possesses. If we are rightly to estimate the worth of economic goods, we must consider them ultimately in their relation to the highest good—the good of life itself. Social reform has been not a little retarded by writers who so exalt material prosperity as to encourage the belief that the possession of riches is the secret of happiness and the only reasonable motive of human endeavour.

2. Doctrine of values.—The conception of values, which has become a dominant idea of modern thought, has been applied with considerable effect by some recent writers to economic subjects. A distinction is drawn between 'intrinsic' and 'instrumental' values. A thing has intrinsic value when it is an end in itself or is valued for its own sake apart from anything else to which it leads. A thing has instrumental value when it is merely a means to something else that follows from it as an effect, when it does not exist for itself but only for the sake of a further good. The value of any economic good is determined by its relation to other things which can be got in exchange for it. Thus, to use the technical phrase of economists, 'a thing's price is its value.' It is its 'value in exchange.' Its worth depends on what at the moment it can bring. It is relative, not absolute. It may be said that nearly everything in the world, the whole apparatus of living, has, in this sense, merely an instrumental or relative value. Things are nothing in themselves and would be useless in other conditions. Money, jewels, etc., would mean nothing on a desert island. But there are some things that must always retain their value in every world. If life has any meaning at all, there are objects, ideals, such as honour, purity, truth, belonging to life itself, and of the essence of man, which cannot be bought or sold, and are incomparable, unexchangeable, absolute. In the last resort it may be said that intrinsic value belongs to personalities rather than things—to things of the soul rather than things of the sense. All other values are relative and obtain such worth as they have from their power to minister to the highest enrichment of man.[1]

3. Real wealth.—Along this line of thought we are led to the absolute and all-inclusive conception of wealth as embracing everything that contributes to the fullness of life. 'There is no wealth but life,' says Ruskin, 'including all its powers of love, joy, and admiration.'[2] It is true that merely instrumental objects may be transmuted by their use into more than means and may partake of the character of the values to which they contribute. Objects of natural beauty, works of art, the affections and sympathies of life, intellectual knowledge and pursuits—everything, in short, that enlarges human vision and enriches heart and mind—are more than instruments: they are the constituents of real wealth. Things even that might be regarded as of themselves worthless, mean, or trivial may be elevated by becoming the vehicles of higher ends. The material world is the environment of the spiritual. Ideals require for their realization physical things. The soul must build its city of God of earthly materials, and the ordinary experiences and facts of life—man's common toil and trial, his instincts and passions—may be elevated and transfigured into assets of the spirit. Thus we see that money and all material possessions, like every other gift, may be consecrated to the highest service and be made a channel of enrichment and blessing to mankind.

The question of the place of luxury in life and the justification of expenditure upon things which go beyond the mere necessaries of existence naturally arises here. The manner of spending wealth from both an economic and an ethical point of view is not less important than the method of acquiring it. Yet it is hardly an injustice to say that the modern world is more given to the production of riches than the art of using them. But obviously the object for which an individual or a people uses its wealth is a decisive test of character and an index of worth. Before calling a man rich or poor, therefore, we must know to what uses he puts his possessions, whether they be broad or narrow. Are luxuries justifiable? Or must money be expended only on such objects as contribute to the bare support of life and the attainment of the simple decencies and moderate comforts of existence? Are we, as moral beings, to be ruled by the strictly ascetic view of life? Or can we vindicate a place for desires which, though not immediately useful or necessary, do in an indirect way help to enrich life and raise it to a higher level? It has been truly said that some objects, such as pictures, books, and even recreations, are so essential to the higher development of mankind that it may be fairly affirmed of them that 'the necessaries of life could be better spared than the superfluities.' Many objects which seem at first only to yield a momentary gratification are yet of considerable importance in so far as they 'serve to oil the wheels of existence and add a bloom to life.'[1]

If we take the word 'wealth' in its strictly etymological sense, as allied to 'weal' (as 'health' is related to 'heal' and means 'wholeness' or soundness of body), things which can be used as a means of contributing to a man's or nation's true well-being, to the fullest development and expression of the intellectual and spiritual life, are, in the last resort, the elements of wealth in its highest sense. That country is richest which nourishes the greatest number of efficient and happy human beings; that man is richest who uses his gifts to the utmost in perfecting the functions of his own life and in exerting his influence for the enrichment of the lives of others.[2]

III. *THE CHRISTIAN ASPECT.*—It does not lie within the scope of this article to discuss the remedies which have been proposed to overcome the most prominent evils accompanying a highly industrial state. In general the most radical of these proposals fall under the head of what may be described as a form of socialism (*q.v.*), or at least State control or collective ownership of all monopolies. It is urged by many, on the other hand, that the ultimate hope of a better order

[1] See W. R. Sorley, *Moral Values and the Idea of God* (*Gifford Lectures*), Cambridge, 1918, pp. 87 ff., 75 ff., 124 ff., 134 ff., 508 ff.
[2] *Unto this Last*, § 77.

[2] See Ruskin, *op. cit.*

rests not in change of outward condition, but in the regeneration of inward character. And an honest application of the teaching of Christ to the practical affairs of life is, it is held, the secret of social and industrial betterment. It seems fitting here to give a rapid review of Christ's teaching in reference to wealth.

Jesus has much to say concerning wealth. The subject bulks largely in His teaching and enters prominently into the frame-work of nearly all His parables.

1. The teaching of Jesus.—Though Jesus dwells frequently on the perils of wealth, He does not condemn the possession of property or denounce ownership in land, goods, or money. There is no depreciation of riches in themselves. He lays emphasis on their deceitfulness (Mt 13^{22}); He warns His disciples against covetousness (Lk 12^{13-15}); and especially does He point out the danger of accumulating earthly treasures (Mt 6^{19}) and the impossibility of serving God and mammon (6^{24}). He lays down the principle that 'a man's life consisteth not in the abundance of the things which he possesseth' (Lk 12^{15}). Yet these sayings and warnings, so far from implying disapproval, imply rather that property and trading are the indispensable bases upon which the outward fabric of the social order is built. He shows no trace of belief that temporal possessions are evils in themselves. His parables constantly assume the right, and indeed the responsibility, of the individual to hold and administer wealth (Mt 25^{14}, Lk 19^{12} 16^{1}). Many of His sayings would be devoid of meaning if His attitude to the industrial system of His day had been one of uncompromising hostility. He could not, *e.g.*, have justly advised the young ruler to sell what was not really his, or have suggested that he should induce another to accept for money what it was unlawful for him to retain. Many of His parables deal with the use of money, without indicating a single reproof on account of its possession (Mt 25^{14-30}, Lk 19^{13-27} 16^{1-13} 12^{16-21}). Christ does not demand withdrawal from the activities of the world. The asceticism of the early Church and the renunciation practised by those sects which make a profession of poverty find no countenance in the Gospels. Jesus and His disciples honour work and recognize trade. Christ acknowledges the rights of the wage-earner. Within the circle of His followers were men and women who were possessed of worldly substance (Mt 27^{57}, Lk 8^{3} 19^{8}). His disciples had a common purse, and one of their number acted as treasurer.

2. Wealth and the supreme end of life.—The one and only aim of our Lord was the establishment of the rule of God in the hearts of men.[1] The Kingdom of God is first; all else is secondary and subsidiary. This is the test of all earthly things. Possessions and occupations have validity only in relation to the supreme end of life. His calls to renunciation were made not because He deemed wealth to be inherently evil, but because in each case the required act of denial would remove the special hindrance to the realization of the spiritual life (Mt 19^{24}, Mk 4^{19}, Lk 6^{24}). In Mk 10^{21} it is to be noticed that it is a deficiency of character that necessitates the repudiation of earthly possessions. Christ thus raises the whole question of material wealth to a spiritual plane. What He really condemns in connexion with riches is the spirit which holds them falsely, by non-use, misuse, or abuse.

3. Wealth a trust and a test.—Finally, wealth is everywhere regarded in reference to man's relation to God. It has thus a twofold significance. It is a trust and a test. There is no such thing as absolute ownership. All things belong to God our Father. We are but the pensioners on His bounty and the trustees for what He lends to us. No one can say, 'I can do what I like with my own' (Mt 20^{15}, Lk 12^{19}). The Gospels indicate three ways in which the stewardship of wealth may be exercised.

(*a*) *Almsgiving* (Lk 18^{22}).—The beauty of charity may be marred by ostentation (Mt 6^{2-4}) or consciousness of merit. A man's gift of money has no value except as the expression of himself (Lk 11^{41} 21^{3}, Mk 12^{43}).

(*b*) *Fidelity to one's daily work.*—Those who receive Christ's severest condemnation are the persons who have been unfaithful in the task entrusted to them (Mk 12^{1-11}, Mt 25^{24}, Mk 13^{34}, Lk 19^{20-24}); while those most highly commended are such as conscientiously discharge their duties in the appointed spheres of life.

(*c*) *Ministry of joy and beauty.*—A third form of stewardship is indicated in the employment of gifts in ministering to the joy and beauty of life. The most impressive instance of this use of private means is exhibited in the story of the woman who anointed the head and feet of Jesus with precious ointment. In answer to the reproachful question, 'To what purpose is this waste?' Jesus defends the act and appreciates the beauty and symbolism which it embodied. Here is the charter of all undertakings which propose in the name of Christ to feed the mind, to stir the imagination, to make life less meagre and dull, and more rich, beautiful, and spiritual.[1] Expenditure of wealth on art and music, on the graces which enrich the emotional and intellectual life, is justified not only by its elevating and enlarging effect, but also by the explicit authority of Christ's example and teaching.

From the standpoint of Christian ethics possessions of all kinds are subject to the law of conscience. What makes them right or wrong is their influence on character, and thus they become a test of life. Every gift is bestowed for purposes of service. God has no room for parasites or idlers. Every one, be he rich or poor, is a trustee for the Creator. There is no such thing as mere money. It is always a symbol or a measure. Property is but the expression and instrument of personality. We have only what we use. Hoarded wealth is barren. And only as we give forth our life in service and sacrifice is it fruitful.

LITERATURE.—All the larger works on political economy deal with the subject on its economic side. Alfred Marshall, *Principles of Political Economy*[5], London, 1907, and the older works of Adam Smith and J. S. Mill ought to be consulted. Edwin Cannon, *Wealth: a Brief Explanation of the Causes of Economic Welfare*, London, 1914; J. A. Hobson, *The Science of Wealth* (Home University Library), do. 1911; D. H. Macgregor, *The Evolution of Industry*, do. 1911, and S. J. Chapman, *Elements of Political Economy* (in same series), do. 1912, deserve mention.

On the ethical and religious side see T. von Haering, *The Ethics of the Christian Life*, Eng. tr., London, 1900; F. G. Peabody, *Jesus Christ and the Social Question*, New York, 1901; Oliver Lodge, *Modern Problems*, London, 1912; J. MacCunn, *The Ethics of Citizenship*, Glasgow, 1894, and *The Making of Character*, Cambridge, 1900; Henry Jones, *The Principles of Citizenship*, London, 1919; J. Clark Murray, *A Handbook of Christian Ethics*, Edinburgh, 1908; J. A. B. D. ALEXANDER.

WELFARE.—(1) By the ethical term 'welfare' is meant the highest human good, the faring well or properly, the desirable human experience. In this formal use of the term nothing is implied as to the nature or constituents of this good. Aristotle notes this as the accepted usage in his day of the term *εὐδαιμονία*.[2]

(2) The term usually implies the highest human good conceived as consisting in certain objective conditions rather than in subjective feelings. In this sense it is opposed to pleasure as the supreme good. The term 'perfection' is nearly its equiva-

[1] See W. M. Clow, *Christ and the Social Order*, London, 1913, p. 81.

[2] *Nicom. Ethics*, i.

lent, but has usually a somewhat narrower significance, exclusion of pleasure, whereas welfare, though not in its essence pleasure, involves pleasure as its completion. As the supreme end perfection and happiness are usually conjoined, while welfare involves this conjunction.

Aristotle's usage is typical, but not without difficulties of interpretation. Human welfare is not pleasure, or practical activity, or the scientific life, but is the activity proper to man as man. This is reason, and human welfare consists in the excellence of rational activity. This rational activity is both theoretic and practical; in the former man is akin to the divine, but in the latter he is more specifically human. Outward goods, wealth, health, children, fame—these are good in so far as they are conditions of, or illustrations of, man's rational activity, but have no independent value. They exist for the sake of the rational life and not the life for them.[1] The position of pleasure relative to welfare is not wholly clear in the details of Aristotle's treatment, yet his fundamental principles seem certain. Pleasure is not the end of human action;[2] yet it is the universal concomitant of perfect activity and that which serves to mark and consummate this perfection.[3] If the two could be separated, the wise man would choose the activity without the pleasure rather than the pleasure without the activity,[4] but, as a matter of fact, this separation is not possible.[5] Yet, in all cases, it is the objective nature of the activity that determines the value of a pleasure, and not the amount of the pleasure itself. The emphasis in Aristotle's treatment is upon the idea of welfare as the right condition of the *whole* man. It consists in rational activity because this is not a specific and exclusive form of activity, but is one which includes and harmonizes all others. In reason all human activities find their interpretation and completion and hence their well-being.

So also Paulsen:

'The goal at which the will of every living creature aims [welfare] is the normal exercise of the vital functions which constitute its nature.' Man 'desires to live a human life and all that is implied in it; that is, a mental, historical life, in which there is room for the exercise of all human, mental powers and virtues.'[6]

WERWOLF.—See LYCANTHROPY.

WESLEY.—**1. Early life.**—John Wesley was born on 17th June (O.S.) 1703, at the rectory of Epworth, being the son of Samuel and Susannah Wesley. Both his grandfathers were among the ejected ministers of 1662, so there was a strong Puritan strain in him. His father, Samuel, was rector, poet, scholar: he spent ten years in preparing his work on the *Book of Job*. The mother, Susannah, trained her children in the great truths of the Christian faith. There is something singularly beautiful in the way in which this mother brought her many children into the audience chamber of God. On 28th Jan. 1714, John Wesley was nominated a pupil at Charterhouse, London. The treatment meted out to the boys of those days was Spartan, but Wesley always felt a true love for his school. As we read his *Journal*, and see him lovingly wander each year about the grounds, we note that Wesley never forgot his boyhood, and that age could not wither his affection for Charterhouse. On 24th June, 1720, he was elected to Christ Church, Oxford, and remained there until 1725, when he was ordained deacon by Bishop Potter. About this time the *Imitatio Christi* and *The Rules for Holy Living and Dying* became his frequent companions. The *Imitatio* taught him that 'true religion was seated in the heart, and that God's law extended to all our thoughts as well as words and actions.'[1] It is of the *Rules* that Wesley writes:

'In reading several parts of this book, I was exceedingly affected with that part in particular which relates to purity of intention. Instantly I resolved to dedicate all my life to God: all my thoughts, and words, and actions.'[2]

Wesley was now a determined seeker, there was a great hunger within him for something beyond the experience which he had—for thirteen years he sought peace by prayer, tears, and through difficult and tragic experience, and on 24th May, 1738, entered into a true evangelical experience of Divine love.

In March, 1726, he was elected Fellow of Lincoln College, Oxford. It is with this College, rather than Christ Church, that Wesley's name is so closely linked; for, though the great hall of Christ Church is adorned by the Romney painting of Wesley, Lincoln College has a greater treasure in the room in which the Holy Club met, and where the movement began which was to give new life to the Churches of this and other lands.

Much help came to Wesley by the reading of William Law's *Serious Call* and his *Christian Perfection*. Although some parts of Law's work offended him, he tells us: 'The light flowed in so mightily upon my soul, that everything appeared in a new view.'[3] Readers of the *Journal*, and especially of the diary, remember the strenuous efforts of Wesley to be accounted worthy; his early rising, his mastery over himself, his methodically planned day, with a task for every hour, his thoughtful care for his pupils, his ejaculations which sob forth even now after the lapse of so many years, his passionate and unceasing quest for a deeper experience—all these things are clearly recorded there. The Castle and the Bocardo at Oxford were both visited by him; for to the prisoners he must preach the message of Divine grace—even though he had not yet entered consciously into it. In August, 1727, Samuel Wesley being infirm, John Wesley went to his help, and remained in his parish for about two years. He then returned to Oxford. Later (1734) his father pleaded with great insistence that he should take his work and rectory. The reply of Wesley is elaborately wrought, and is a strong plea that his sphere is in Oxford, and not in Epworth. There is in it no splendid disregard of self such as we see in his later days; he seems more anxious to have circumstances conducive to his own soul's culture than to save the souls of others. On his return to Oxford he found that his brother Charles, who was then at Christ Church, had gathered round him a small group of men to read the New Testament. John Wesley joined this company, and soon became its leader. It is well to remember that the Holy Club showed a much greater diligence with regard to Holy Communion than the Church of those times, a tendency to guide their life by early Church practice, a passion for prisoners and outcasts, and a diligent and careful apportionment of time. As the members went with regularity to take the sacrament, they received much taunting from the undergraduates. It was at this time that they were called 'Sacramentarians,'

'Bible Moths,' and Methodists (a double reference—both to a medical sect and to their 'method' in all religious practices). John Wesley was now, it seems, rooted in Oxford. A band of keen undergraduates gathered round him; he believed that he had found his work. Owing to the insistence of his family, however, he applied for the living of Epworth, but without success. His dying father spoke prophetic words; to John he said: 'The inward witness, son—the inward witness, that is the proof, the strongest proof of Christianity'; to Charles he said: 'Be steady. The Christian faith will surely revive in this Kingdom; you shall see it, though I shall not.'

2. The Georgia ministry.—In 1735 Wesley was invited to go on a mission to the colony of Georgia. His father now being dead, he with some diffidence mentioned the fact of the offer to his mother, who said: 'If I had twenty sons, I should rejoice if they were all so employed, though I should never see them more.' John and Charles Wesley embarked at Gravesend on 14th Oct. 1735. He tells a friend the motives which sent him forth as a missionary.

'My chief motive is to save my own soul . . . I hope to learn the true sense of the Gospel of Christ by preaching it to the heathen.'[1]

In later years he was not so anxious about his own salvation, but rather about that of others.[2] On the voyage, as at Oxford, he showed meticulous strictness in the apportioning of time: he learned German and studied his Greek Testament, and held services even amidst the storms. He was greatly impressed by a party of Moravians on board, especially by their conduct in the tempest. Amidst the storm they were quite unalarmed and went on singing. Wesley asked one of them, 'Were you not afraid?' He replied, 'I thank God, no.' 'But were not your women and children?' 'No, our women and children are not afraid to die.' Wesley landed at Savannah on 6th Feb. 1736. He soon met Spangenberg, the Moravian, who asked him, 'Do you know Jesus Christ?' 'I know He is the Saviour of the world.' 'True, but do you know that He has saved you?' 'I hope He has died to save me.' Spangenberg then asked, 'Do you know yourself?' Wesley answered, 'I do,' but, in telling the story of this conversation, says, 'I fear they were vain words.' Wesley's main purpose in going to Georgia was to become a missionary to the Indians. This was frustrated by the governor of the colony, General Oglethorpe, who desired his presence in the European settlement. Denied his chief end in coming, he nevertheless found work for each moment in the day; he taught the children, visited the sick, reproved the sinner, and gathered a few folk together for mutual conversation. He encouraged, he rebuked, he prepared communicants, and repelled those whom he thought not worthy. He was a rigorous High Churchman, and a most earnest seeker of the Light. In summing up the matter in his *Journal* Wesley tells us that he 'was a child of wrath, an heir of hell,' but in later years, when he revised his writings, he says, 'I believe not. . . . I had even then the faith of a servant, though not of a son.'[3] Grave misunderstandings arose between Oglethorpe and the Wesleys; but they were later reconciled. Suspicions and misunderstandings grew like weeds in the garden of this colony. As we now know from the standard edition of the *Journal*, Wesley fell in love with Sophy Hopkey, the niece of the chief magistrate of Savannah, Mr. Causton. A change, however, came in her affection, and she swiftly married Mr. Williamson. Soon after Wesley repelled her from Holy Communion—no doubt because he thought that she was not in a fit state of heart to receive it; but on the surface it appeared like the act of a disappointed man. Her uncle brought a charge against John Wesley, who refused to acknowledge the power of a civil court in ecclesiastical affairs. Wesley, realizing that no further good would come from his ministry there, left the colony, and sailed for England on 22nd Dec. 1737.

3. His evangelical conversion.—Wesley's comment on his Georgia ministry was:

'I went to America to convert the Indians; but oh, who shall convert me? . . . I have a fair summer religion. I can talk well; nay, and believe myself, while no danger is near. But let death look me in the face, and my spirit is troubled. . . . Oh, who will deliver me from this fear of death?'[1]

Eager and hungry, on his return to England he met Peter Böhler, who told him, 'My brother, my brother, that philosophy of yours must be purged away.' 'Preach faith till you have it, and then because you have it you will preach faith.' He gathered with the members of the little society in Fetter Lane. On 24th May, 1738, there came to Wesley his *Magna Dies*—the day of his evangelical conversion. No one had ever sought the haven of peace with more passionate devotion—it was a day never to be forgotten. He describes every part of it:

'I think,' he says, 'it was about five this morning, that I opened my Testament on those words, "There are given unto us exceeding great and precious promises."' He writes that, just as he went out, he opened the New Testament again on those words, 'Thou art not far from the kingdom of God.' He tells of his afternoon visit to St. Paul's, and notes that the anthem was 'Out of the deep have I called unto Thee, O Lord.' We now come to the *locus classicus* of the life of Wesley. 'In the evening I went very unwillingly to a society in Aldersgate Street, where one was reading Luther's preface to the *Epistle to the Romans*. About a quarter before nine, while he was describing the change which God works in the heart through faith in Christ, I felt my heart strangely warmed. I felt I did trust in Christ, Christ alone for salvation; and an assurance was given me that He had taken away *my* sins, even *mine*, and saved *me* from the law of sin and death. I began to pray with all my might for those who had in a more especial manner despitefully used me and persecuted me. I then testified openly to all there what I now first felt in my heart.'[2]

Wesley had now received the gift of life; and what he did in Aldersgate Street—'I then testified openly to all there what I now first felt in my heart'—he continued to do until the end of his life. It was with him an appeal no longer to the practices and customs of the early Church, but to the experience of the Living Christ within his own heart. For fifty-two years he offered to all through Christ the grace of forgiving love. For the wonder of Wesley's life is not to be found in the fact that on a certain evening about a quarter before nine he felt his heart strangely warmed, but that the fires of that love never died down. His eye was indeed single, and thus his whole body was full of light.

4. The great offensive.—From 1738 to 1791 Wesley led the great offensive—he attacked sin in its strongholds, and everywhere proclaimed the free grace of Christ. He seized every opportunity: if he were in a coach, he spoke to his fellow-travellers; if he were staying at an inn, he told his fellow-guests of the love of Jesus; even when crossing to Ireland, when the ship was tossed by the storm, he held a service for the passengers. Driven out of the Churches, he, through necessity and quite against his taste, followed the example of Whitefield, and took his stand in the open air, and preached to the crowds at Kingswood, Bristol, and Moorfields. His greatest help came from his brother Charles, whose hymns were sung by the miners of Kingswood, the labourers of Lincoln-

[1] *Works*, xii. 38.
[2] Cf. 'The Twelve Rules of a Helper,' rule xi.: 'You have nothing to do but to save souls. Therefore spend and be spent in this work. And go always, not only to those who want you, but to those who want you most.'
[3] *Journal*, i. 421.

[1] *Journal*, i. 418. [2] *Ib.* i. 475.

shire and Cornwall and throughout the land. The Evangelical Revival spread by song as well as by sermon. There was much of the great military commander about Wesley; he chose three main strategic points—London, Bristol, and Newcastle-on-Tyne—and for the conquest of Ireland he made Dublin his base. When others were deaf to the calls of America he sent out a band of preachers to capture that continent for Christ. He moved constantly from place to place, riding on horseback until his later years, a sort of *avant-courier* of the Kingdom, the tireless rider, the invincible fighter, and the herald of the grace of God. J. Hampson, one of Wesley's preachers, who left with a grudge against him, published in 1791 a Life of Wesley. In its admissions it is of immense value, for he writes critically, and is a contemporary of the man of whom he writes. He thus sums up Wesley's life of toil:

'His public administrations were but a part of his labours, but from these we may form some conception of the rest. During fifty-two years he generally preached two sermons a day: very frequently four or five. Calculating, therefore, at twice a day, and allowing fifty sermons annually for extraordinary occasions, which is the lowest computation that can be made, the whole number in fifty-two years will be 40,462. To these may be added an infinite number of exhortations to societies. Of his travels, the lowest calculation we can make is 4000 miles annually, which, in fifty-two years, will give 208,000 miles. An almost incredible degree of labour: and which nothing but the best constitution, informed by the most active spirit, could have enabled him to support.'[1]

Augustine Birrell epitomizes his labours, and mingles with the telling of them his peculiar piquancy:

'John Wesley contested the whole kingdom in the cause of Christ during a campaign which lasted forty years. He did it for the most part on horseback. He paid more turnpikes than any man who ever bestrode a beast. Had he but preserved his scores at all the inns where he lodged, they would have made by themselves a history of prices. And throughout it all he never knew what depression of spirits meant, though he had much to try him—suits in Chancery and a jealous wife.'[2]

There is no other story of a life so crowded with toil, yet over which there broods so steadily the spirit of rest.[3] This man, like the Apostle Paul, could have drawn up his catalogue of sufferings; for he was stoned, enemies rose up against him on all sides, and besides there rested upon him the care of all his societies which were stationed from Land's End to Newcastle-on-Tyne, beyond the border, and across the Irish Sea. All this is written in Wesley's *Journal*.

'From which we can learn better than from anywhere else what manner of man he was, and the character of the times during which he lived and moved, and had his being.'[4]

This leads us to one of the most wonderful of his gifts. For fifty-two years he preached, visited his societies, entered prisons, galloped along the highways of England, the programme varying but little, and yet he never became stale; each day called him to a new adventure and was a fresh gift from God. His work never became to him a commonplace; he thrilled to it, he hailed it ever with a song. A comparison of the early years after his evangelical conversion and the later years of his life reveals that his enthusiasm never waned, but rather waxed stronger and stronger. Here is the record of 11th Sept. 1789.

'I went over to Kingswood. Sweet recess! where everything is now just as I wish. But—

"Man was not born in shades to lie!"

Let us work now; we shall rest by-and-by.'[5]

In March, 1790, he began a great preaching tour through England and Scotland, which lasted five months. Here is another entry—1st Jan. 1790:

'I am now an old man, decayed from head to foot. My eyes are dim; my right hand shakes much; my mouth is hot and dry every morning. I have a lingering fever almost every day. . . . However, blessed be God, I do not slack my labour. I can preach and write still.'[1]

He died on 2nd March, 1791.

5. **His controversies.**—As we have seen, Wesley owed a great deal to the Moravians. He was for a short time a great admirer of Zinzendorf. At first he hailed Herrnhut as a new city of God. But the breach between Wesley and the Moravians came soon after Wesley launched his great offensive. A section of them had a tendency towards a mistaken kind of pietism; they preached that there was no need for Bible or sacraments, that there was nothing to be done, and that the soul must wait in silence. These 'still-men,' as they were styled, roused his ire, and the break between the Methodist Societies and the Moravians was soon complete. The indictment of Wesley could only have referred to a small section, for in that Moravian band there were men and women of real saintliness. It was, however, an unfortunate happening, for it gave Wesley a somewhat violent antipathy to mysticism.

He speaks of 'the poison of mysticism,' and refers to 'Ralph Mather, a devoted young man, but almost driven out of his senses by Mystic Divinity. If he escapes out of this specious snare of the devil he will be an instrument of much good.'[2]

Wesley was right in speaking strongly against that which was mysticism falsely so called, but he was a mystic himself. The man who translated with such passion Tersteegen's hymn, 'Thou hidden love of God,' could not have been anything else. His controversy with William Law is surely due to a misunderstanding on the part of Wesley. Wesley wrote when he was perplexed, and his soul was strangely restless, and the honours are chiefly on the side of his teacher, Law. His greater and most fundamental controversy was with the Calvinists—and with logic and passionate love he claimed that Christ died for all. The battle was fought and won, but the victory came not through the strident notes of controversy, but rather through the rousing strains of song—

'For all, my Lord was crucified,
For all, for all my Saviour died.'[3]

One of the most beautiful things in the history of this controversy is the fact that such vital theological disagreements as there were between Wesley and Whitefield never broke their friendship, but seemed rather to deepen and strengthen it.

6. **Wesley and the Church of England.**—The Church of England never had a more loving son than John Wesley, and never one who strove more strenuously to be loyal to her. He was driven out of the Church, yet in 1789 he wrote:

'I declare once more that I live and die a member of the Church of England; and that none who regard my judgment or advice will separate from it.'[4]

But he did things which show that in another sense he did not belong to her. He believed in her, but he saw with his quick eye the needs of his age, and the organization of the Church of England was not flexible enough to meet the changing conditions of the time. He saw the great needs of America, and, realizing the urgency of its claims, in 1784 consecrated Coke as bishop and Whatcoat and Vasey as presbyters for that continent. In 1786 Wesley ordained preachers for Scotland. His loyalty was of that higher kind which would not allow rules to interfere with the advance to which he believed Christ was calling His people. This is seen early in the encounter with Joseph Butler, when bishop of Bristol. The great writer of *The Analogy* said that Wesley had no right to preach in that diocese. Wesley said, 'I can do

most good here, so here I stay.' That was his one test. He was at heart a Catholic and like the scribe who brought out of his treasure things new and old. We see this in his 'Christian Library,' in which he included writings from men of all Christian communities, the only requirement being that each reprint should give spiritual strength to its readers.

7. Wesley and humanism.—It was the boast of Wesley that he was 'homo unius libri,' and so he was, though few men of his age read more books. His final appeal was to the Scriptures illumined by the living spirit. The variety and amount of his reading leaves us breathless. It was Hampson who wrote: 'With a book in his hand, he frequently rode from fifty to sixty or seventy miles a day.'[1] His *Primitive Physic* shows his quaint and practical knowledge: and the quotation he places at the beginning, 'Homo sum: humani nihil a me alienum puto,' reveals his keen interest in human affairs. The *Journal* could have been written only by a man who had read enthusiastically the book of life. There may be little charm of style, but there is a conciseness, a forthrightness of writing, a perspicuity, that is hard to excel. He had not studied his Addison for nothing; the references in his early diary—'Read Addison'—are illuminating. He had much humour,[2] and we must not forget that Alexander Knox writes that his 'sportive sallies of innocent mirth delighted even the young and the thoughtless,' and Thomas Walsh writes of his 'witty proverbs.'[3] Hampson says: 'It was impossible to be long in his company without partaking his hilarity.'[4] This man, who could have chosen the company of the great, lived and loved to live with the unknown. There are many parallels between St. Francis and Wesley, and one is to be found in this, that both went to the people—what the Little Brothers were to Francis that wonderful band of men, the early Methodist preachers, were to Wesley. It is interesting to note that two men command the 18th cent., and one (Dr. Johnson) said of the other, 'He can talk well on any subject.' Johnson would fain have seen more of Wesley.

'John Wesley's conversation is good, but he is never at leisure. He is always obliged to go at a certain hour. This is very disagreeable to a man who loves to fold his legs, and have out his talk as I do.'[5]

Southey says:

'His manners were always irresistibly winning, and his cheerfulness was like perpetual sunshine.'[6]

It is true that his printed sermons do not best reveal his humanism; but they are treatises. A study of the *Journal* teaches us that the texts upon which he preached most were those which reveal his tenderness and his love of the doctrines of grace. The text 'When they had nothing to pay, he frankly forgave them both' is met again and again in the *Journal*, and is the *motif* of his ministry. Horace Walpole informs us of his vivid way of preaching.

'I have been at one opera—Mr. Wesley's. . . . Wondrous clever, but as evidently an actor as Garrick . . . he told stories like Latimer, of the fool of his college who said "I *thanks* God for everything."'[7]

John Nelson, one of his early helpers, describes the power of Wesley's preaching:

'But I was like a wandering bird, cast out of the nest, till John Wesley came to preach his first sermon in Moorfields. O that was a blessed morning to my soul! He stroked back his hair, and turned his face towards where I stood, and I thought fixed his eyes upon me. When he had done I said, "This man can tell the secrets of my heart; he hath not left me there; he hath shewed me the remedy, even the blood of Jesus."'[1]

Sir Walter Scott tells us that he heard Wesley preach more than once in the churchyard at Kelso.

'He was a most venerable figure, but his sermons were vastly too colloquial for the taste of Saunders. He told many excellent stories.'[2]

This man, of five feet three inches, of weight eight stone ten, 'an eye the brightest and most piercing that can be conceived,'[3] with his finely chiselled face which came to view again in that of the Iron Duke,[4] loved men and women not for what they were but for what they might be: he loved colliers, drunkards, cock-fighters, prisoners, because he saw in them the children of the One Father. He gave first his love to God, and that exalted his love for men—that is why it never grew cold. He commands the 18th cent. on the religious side as much as Johnson on the literary. Lecky has told us that Wesley saved England from a revolution, but we must remember that he brought about another revolution which has done more to break down social barriers than men realize—for he taught men and women the essential oneness of us all, that One is our Father and we are all brethren. His doctrine of faith stripped off the superficial disguises of life and revealed the divine possibilities of all men. Wesley was always ahead of his century; he was a great forerunner with regard to social reform; he lived on as little as possible, and gave the rest away. Hampson says, 'Perhaps the most liberal man in England was Mr. Wesley. His liberality to the poor knew no bounds.'[5] He gave the people cheap literature, founded schools and orphanages, wrote numerous pamphlets on public questions, and his last letter was one in which he encouraged Wilberforce in his great fight against slavery—that traffic which he termed 'that execrable villainy, which is the scandal of England, of religion, and of human nature.' This 'brand plucked from the burning' broke up the frost of the 18th cent. by the glow of his flaming message. He formed a society which has become a world-wide Church; he brought inspiration to all the Churches, and his message still rings down the years—'The best of all is God is with us.'

[4] The following is a most interesting reminiscence of Dr. George Osborn: 'Henry Moore, in whose house at City Road, as a young preacher, I lived, once took me to see a review by the Duke of Wellington in Hyde Park. During an interval the Duke, dismounting, stood by his horse near Mr. Moore and myself. Pointing to the Duke (for he was short of stature), Henry Moore said, "That is John Wesley as I knew him"' (*Journal*, vii. 462, footnote). Wesley and the Duke of Wellington sprang from collateral branches of the same family.

tinction between these two branches of the Holy Catholic Church arose from the interaction of many causes, geographical, political, and theological, but ultimately it may be traced to an event of supreme importance in the historic evolution of the Christian faith.

1. **Introduction: schism of East and West.**—Up to A.D. 330, when Constantine the Great chose the ancient Byzantium as the new capital of the Roman Empire and gave it the name of Constantinople, the Catholic Church of Christendom had remained one and undivided; and, though the final schism was to be delayed for centuries, the rivalry between the old and the new Rome at once introduced a divisive factor into the ecclesiastical relationships of the empire. Constantinople, already a Greek city with a large Greek population, was destined to become a second metropolis of the faith, representing Christian life and thought of a distinctively Greek type. Indeed, it may be said that imperial Christianity had shifted its centre of gravity to the Ægean world of Hellenistic culture, intellectual and spiritual. It is significant that, when it was found necessary to formulate the terms of the orthodox creed in order to finish the desolating heresy of Arius,[1] Nicæa and not Rome had been chosen in A.D. 325 as the place of assembly for the historic council which, so far from pacifying the Christian world, was the forerunner of other councils—Ephesus, Chalcedon, and Constantinople[2]—where the various phases of the seemingly perpetual Christological problem received discussion and authoritative settlement. Christianity had spread with a relatively greater rapidity over the Eastern empire than in the provinces of the West. The Greek language known as 'common' Greek—the *lingua franca* in which the early records of the faith were written—was naturally the medium by which the symbols of the Christian faith found their most logical and accurate expression. It is true that the patriarch of Constantinople, who was always under the control of the emperor, was never to achieve a position like that of the pope, who, left free from civil control, became the undisputed pontiff and vicar of Christ upon earth; but by the 5th and 6th centuries he had secured a commanding influence and bore the title of 'œcumenical patriarch'—a designation which, in spite of papal protests, has continued till to-day. The relations of emperor and pope were severely strained during the period of the Christological heresies, and in 680 the Council of Constantinople, when it condemned the Monothelete position, did not hesitate to anathematize the memory of Pope Honorius I. In A.D. 725 the opposition of Pope Gregory II. to Leo the Isaurian, who on the outbreak of the Iconoclastic controversy[3] had vehemently condemned, and commended a crusade against, the use of images, led to a fatal separation between East and West; for Leo transferred Sicily, Southern Italy, and Illyricum from the ecclesiastical jurisdiction of the pope to that of Constantinople. A reaction in favour of images took place in the reign of Constantine VI., and in 786 the so-called Second Council of Nicæa gave a decision in favour of image-worship, which the pope approved. But this reconciliation was temporary and in effect was nullified in 800 on the coronation of Charlemagne by the pope; for, while in the West the pope became the religious head and the emperor the secular head of the Church, the process was reversed in the East, the emperor becoming head of the same Christian Church with a patriarch subordinate to him. Still, though the separation between East and West was complete in secular matters, the final breach did not occur for two centuries. The rejection of the *Filioque* clause,[1] which had been added by the Spanish Church to the Nicene creed in the 5th cent., and which was subsequently inserted in the Roman creed, was definitely decreed by the Council of Constantinople (A.D. 867), which excommunicated the pope. But, though this was significant of the steadily widening breach between the two sections of Catholicism, it was not till a century and a half later that the last blow was struck. The patriarch of Constantinople, Michael Cerularius, closed the Latin churches and convents of the city in 1054, and this drastic act was followed by the written attacks of his clergy on the Latin religion and its observances, and especially the practice of celibacy on the part of its clergy. The pope's legate, Cardinal Humbert, entered St. Sophia on 16th July during divine service and laid on the altar a decree of excommunication against the patriarch and his adherents. This act rent the Catholic world in twain, and it was the climax of the long-continued and deep-rooted misunderstanding between the two great geographical sections of Christendom. The massacre of the Latins by the Greek populace in 1182 and the sack and capture of the city by the forces (chiefly Venetian) of the Fourth Crusade in 1204 were events which revealed and confirmed the hopeless fissure in the unity of the Church and led up to the fateful capture of Constantinople by Muhammad II. in 1453. Western Europe had left the Christian capital of the East to its fate: divided Christendom had enabled Muhammadanism to enshrine itself in Europe, and a sultan sat on the throne which Christian emperors had occupied since the days of Constantine.

The following survey is limited (1) to the general development in history of the polity, organization, and secular relationships of the Western Church, and (2) to its dogmatic history and its position in Christian thought, leaving the reader to study in other articles (to which reference is made) the more specialized treatment of the inner life of the Church, its observances and sacraments, its ritual and its liturgies, its canon law and discipline, its orders and congregations, the history of its movements in their religious, intellectual, and social aspects, and finally the biographies of its outstanding personalities in the annals of its government, sainthood, and scholarship.

Both sections of the survey are conveniently treated in chronological order under the following heads: (*a*) the early period (from Constantine to Charlemagne [A.D. 312–800]); (*b*) the mediæval period (from Charlemagne to Boniface VIII. [A.D. 800–1303]); (*c*) the modern period (from the later Middle Ages to the present time [A.D. 1303–1920]).

In the first period, the period of *expansion*, we have the rise of the papacy[2] with the conversion of the Teutonic races to Christianity; in the second, the period of *consolidation*, we have the papacy supreme in Europe, having attained the zenith of its influence and prosperity; in the third period—the period of *decline*—we have the waning power of the papacy and the rise of Protestantism, which eventually led up to the distinction between religions of authority and a religion of the spirit, and their conflicting ideals of ecclesiastical unity and catholicism.

2. **Ecclesiastical polity and organization.**—(*a*) *Early period.*—With the accession of Constantine in 323, Christianity became the imperial religion, and henceforth its destiny was to be closely associated with that of the empire. The vicissitudes through which the empire passed during the three

succeeding centuries under the attacks of the barbarians of Northern and Eastern Europe left an enduring mark on the constitution and organization of the Church. The monarchical episcopate, which was recognized by Ignatius and accepted by Cyprian as the basis of Church government, was the germ from which the primacy of the bishop of Rome was evolved. The doctrine of apostolic succession (*q.v.*) laid down by Irenæus ascribed a spiritual pre-eminence to the Church of Rome as founded by the two greatest apostles, St. Peter and St. Paul, and Tertullian in his early pre-Montanist treatise, the *Prescription of Heresy*—always a favourite with the Roman Church—eloquently adopted the same line of argument, proclaiming the transmission of the apostolic 'deposit' through the succession of bishops. Established in 'the Eternal City,' which was the visible focus of imperial greatness and might, the bishopric of Rome was invested with a dignity which far surpassed that of the rival sees of Alexandria and Antioch. Moreover, the Latin conception of the Church as an external institution, moulded indeed on the type of the empire, but controlled by bishops who were the vicars of an absent Christ and depositaries of saving grace, led up to the papacy as a logical conclusion. No salvation outside the Church, the Church built on St. Peter as chief of the apostolic college, a hierarchy which traced its lineal descent by due succession from the first of apostles—these are the principles upon which the supremacy of the Roman see was established by Augustine, the greatest of the Latin theologians. In the 4th and 5th centuries the Church as it developed its organization on the new political divisions of the empire—especially Gaul and Spain, following the conquest by Christianity of the nations of the Franks and the Spaniards or Iberians — rose, by its beauty of ritual, its succession of distinguished Christian leaders, bishops, and kings, and its moral influence, to a position of great splendour. A generation after Augustine, Leo the Great, bishop of Rome (440–461), put forth a claim[1] for the authority of the Roman see which was never afterwards relaxed, and which saw its realization in the imperial authority over Christendom wielded by Hildebrand and Innocent III.

In 445 the emperor Valentinian III. issued a law declaring the bishop of Rome the supreme head of the Western Church on the three grounds of the primacy of St. Peter, the dignity of the city, and the decree of a holy synod. Resistance to the authority of St. Peter's successors in the Roman see was thus constituted a State offence.

The title 'papa' (pope), which was applied in the West to all the bishops, became in the 6th cent. the exclusive designation of the bishop of Rome. Gregory VII. was responsible for the decree which thenceforth limited the title to the occupant of the Roman see.[2]

Although for a short time Justinian the Great (527–565) held sway over Italy and placed the Roman bishops on a level with those of Constantinople, the Lombards finally broke the power of the Byzantine emperor in Italy and by their conquest practically assured the independence of the bishops of Rome. The decretals of the popes were codified in the year 500 by Dionysius Exiguus, who included in his collection the decrees of the councils and the chief canons of the provincial synods. The Donatist position,[3] which made holiness of life the test of catholicity, was defeated by the influence of Augustine, and the Donatists were in the end repressed by force of arms. The supremacy of the hierarchy and the efficacy of baptism and the Lord's Supper were maintained to be independent of the personal character of individual officials and members of a Church which was founded on the 'rock' Peter and owed its catholic authority as a visible holy community to its apostolic descent. On the other hand, the rise of monasticism in this period[1]—first in the form of hermit colonies under the inspiration of St. Antony, then in the form of religious communities with a *regula*, or rule, of common-life discipline under Cassian at Marseilles, Benedict of Nursia (480–545) at Monte Cassino, and his disciple Maurus (St. Maur) in Gaul and Sicily—was a movement within the Church towards a higher type of spirituality, though it tended to fix the orthodox separation between things sacred and profane or secular. From 590 to 800 Christianity spread over Western Europe, Anglo-Saxon England, Germany, and the new nations along the Danube, the missionary movement owing much to the inspiring zeal of Gregory I., known as 'the Great.' That the papal power not only survived the political and ecclesiastical fluctuations and unrest of the times, but emerged with added prestige, is due to the personality of this powerful leader who founded the Church in England, consolidated the Church in Spain, brought the Church of Gaul into close connexion with Rome, and checked the abuses which had crept into his own diocese. In contradistinction to the Eastern title of œcumenical patriarch, he assumed as pope (590–604) the title of 'servus servorum,' which his successors have always maintained. After Gregory's death the outstanding event is the anointing of Pepin, king of the Franks, in 751, probably by Boniface, Archbishop of Maintz, with the sanction of Pope Zacharias. A second coronation by Stephen II. of the same king at St. Denys in 754 was the price which a grateful papacy paid to him for his help against the Lombards and his presentation of the lost lands to the Roman Church. Here is a sequence of events which marks a beginning of the long-coveted temporal dominion of the papacy. But the political troubles were not at an end, and Pope Leo III., owing to the disaffection of the Roman nobles, had to flee for his life to the court of Charlemagne, king of the Franks. The result was that, when Charlemagne came to Rome to re-establish order, Leo crowned him at St. Peter's on Christmas Day 800 as emperor of Rome. This event, the significance of which can be paralleled only by Constantine's establishment of Christianity as the religion of the Roman Empire, revealed the fact that the majestic traditions of that empire—for three centuries merely *magni nominis umbra* in the West—still swayed the minds of men. Church and State were once more united, and the Holy Roman Empire became a compelling ideal, if not as yet a historic reality.

(*b*) *Mediæval period.*—In this period the papacy held undisputed sway over Western Europe. Missionary enterprise widened the scope of its influence. If to Eastern Christianity is due the credit of the conversion of Russia under Vladimir, Scandinavia, the Slavic nations, the Moravians, Bohemia and Hungary, the Wends of the north and east of Germany were Christianized by the Church of the West. When warring factions broke up the empire on the death of Charlemagne, the popes took advantage of political changes to secure greater independence and strove to establish the ascendancy of the papal see over the State as the one solution of the European problem. The pseudo-Isidorian decretals (*c.* 850) proclaimed the

[1] Cf. *Serm.* iv. 2: 'De toto mundo unus Petrus eligitur, qui et universarum gentium vocationi, et omnibus apostolis, cunctisque ecclesiæ patribus præponatur: ut quamvis in populo Dei multi sacerdotes sint multique pastores, omnes tamen proprie regat Petrus, quos principaliter regit et Christus.'

[2] See *EBr*[11], *s.v.* 'Pope'; Ducange, *Gloss. Mediæ et Infimæ Latinitatis*, *s.v.* 'Papa.'

[3] See art. DONATISTS.

[1] See art. MONASTICISM.

inviolability of the hierarchy and the pope as the fountainhead of justice, while the *Donation of Constantine*, concocted on even more audacious lines, asserted that no earthly potentate may rule where God's anointed has his throne. In 962 Otto was crowned as the emperor of what is known as the Holy Roman Empire. Otto owed his crown to the chair of St. Peter, but had the power of deposing Christ's vicar and determining his successors; nevertheless this union of two world-rulers—one supreme in secular matters, the other in the spiritual realm—was a fact of transcendent historical moment. Hildebrand, a native of Tuscany, educated in the Cluny monastery at Rome though not himself a monk, was gifted with the instincts of leadership and a genius for statesmanship, and under the name of Gregory VII. ascended the throne of St. Peter in the year 1073 to claim absolute power in the affairs of the Church, the right to depose kings and to sit in judgment on their sins. On a memorable occasion during the year 1077 he proved his strength by reducing the defiant Henry IV. to penitence at Canossa, and his humiliation of the king of Germany had been preceded by threatening Philip I., king of France, with deposition, if he did not mend his ways. The policy of State domination was carried on by his successors Urban II., and, more notably, Innocent III. The protest of Arnold of Brescia, a pupil of Abelard, who advocated a return to apostolic simplicity and the abandonment of secular pretensions, was unavailing. The answer of the papacy was the destruction of the heresy of the Cathari and the Albigenses and the establishment of the Inquisition, while the policy of asserting independent control over the kings of France, Germany, and England was continued until 'Innocent III. had as his vassals the majority of the princes of Christendom.'[1] On the other hand, this struggle weakened the moral influence of the papacy. The Latin Empire in the East fell, and the Crusades (*q.v.*) came to an end in 1272. Monasticism under Bernard (*q.v.*) of Clairvaux (1090–1153) and the Cistercians assumed a more rigid tone and discipline, and the mendicant orders of St. Francis and St. Dominic aroused the conscience of the Church to the needs of the common people, social and spiritual. The Fratres Minores in particular enshrined in their labours and their lives of frugality and simplicity an ideal of self-renunciation joyous rather than austere, and by their care for the poor and their own self-imposed poverty leavened the decadence and corruption of the age with the true spirit of the Christian gospel.[2]

(*c*) *Modern period.*—The two and a half centuries which constitute the later Middle Ages (from the death of Boniface VIII. to the beginning of the Reformation—1303 to 1517) may be conveniently included under this head as bringing to a climax the tendencies prophetic of and preparatory to the rise of Protestantism. The famous papal bull *Unam Sanctam*, issued by Boniface VIII. in 1302, had declared that the belief that every human creature is subject to the pope was necessary to salvation. It was burnt by Philip IV. 'the Fair' of France in Notre Dame, and its author, when about to excommunicate Philip, was made a prisoner in a rising instigated by Philip and a month later died of a broken heart. Such was the tragic end of the papal claim to a world-leadership. The *de Monarchia* (*c.* 1314) of Dante expressed the sentiment of hostility to the papal ambition for temporal power and was significant of the growing reaction against papal pretensions. The 'Babylonian captivity' of the papacy at Avignon was a further blow to the prestige of the holy see. While William of Occam (1280–1347) placed the emperor and the general council above the pope as his judges, and Marsilius of Padua in his *Defensor Pacis* assumed the rôle of higher critic in the matter of the supremacy of St. Peter and the primacy of the Roman see, France reduced the pope to complete submission and Germany disregarded his anathemas. When Wyclif protested that the papal office was poisonous to the Church, the great schism which had resulted in the election of two popes in 1378 was the basis of his argument—an argument which became irresistible when, on the failure of the Council of Pisa in 1409 to solve the problem, three popes instead of two widened the schism. Five years later the Council of Constance condemned John Hus to death.[1] Stimulated by the writings of Wyclif, he had inaugurated a new religious movement in Bohemia and had been invited to the council under a safe-conduct granted by the Holy Roman Emperor Sigismund. There he expounded his views and was called upon to retract what were considered to be erroneous teachings subversive of the authority of the pope. He refused on the grounds of fidelity to conscience, was condemned and on 6th July 1415 burned. A year later his friend and disciple, Jerome of Prague, suffered the same fate. The essence of the Hussite movement was its insistence on the rights of conscience and its appeal to a higher tribunal than that of pope and council. On the other hand, the Council of Constance had ended the schism by asserting its supreme authority over pope and Church. It had established its right to regulate the action of the pope and 'had secured the transformation of the papacy from an absolute into a constitutional monarchy'[2]—an event of great significance for the future history of the papacy. Constantinople fell in 1453, and in the latter half of this century the popes sought to restore their waning supremacy by invoking crusades against the Muslim. Savonarola ([*q.v.*] 1452–98), a Dominican monk of Florence under the rule of the Medici, became alarmed by the prevailing decadence of morals, and owing to his zeal for the purification of society was excommunicated by Pope Alexander VI., who after failing to bribe him into silence secured his death by working on the hostility of the Florentines to their noblest fellow-citizen. Such movements as those of Hus and Savonarola, who were both martyrs in the cause of a higher morality, and the exemplification of an inward and spiritual religion in the lives of mystics like Tauler and Thomas à Kempis,[3] were signs of the coming change. It was in vain that Pope Leo X. (1513–21) secured the repeal of the 'pragmatic sanction'—by which Louis IX. of France had in 1269 asserted the right of the State to refuse papal taxation—and in vain that his imitation of the warlike policy of his predecessor Julius II. and his successful diplomacy had enabled him to recover something of the old papal prestige. It was but a momentary rekindling of the embers of a dying cause. The Reformation had arrived. It is true that the Protestant movement,[4] triumphant in Northern and Central Europe, was checked in Italy, though even in the native land of the papacy hatred of the vices and corruptions of the papal régime rallied many adherents to the new movement. The traditional greatness of an institution which had brought wealth and influence to the Italian

people evoked a patriotic response to the forces of the Counter-Reformation. Moreover, the foundation of the Society of Jesus by Loyola (1491–1556),[1] with its régime of unquestioning obedience to the will of its general and its unswerving devotion to the papal see, was a powerful factor in withstanding the advance of Protestantism, while by its missionary zeal it carried Roman Catholic influence into new lands and reconquered lost territory. The Council of Trent met in 1545 and after two interruptions produced in 1563 under Pius IV. the famous *Professio Fidei*, to which all teachers and ecclesiastics were required to assent. The Catholic theologian Bellarmine with uncompromising dogmatism expounded the Tridentine symbol and the Roman Catechism, which even more rigidly supported the papal supremacy, and his labours for orthodoxy were continued by the Jesuit theologians Suarez and Petavius, while the mysticism of Francis of Sales, Molinos, and Fénelon wielded a powerful influence in favour of the Roman type of piety. The publication of the Catechism, the Breviary, and the Missal, together with an authorized edition of the Vulgate, aided the work of the Counter-Reformation by providing standards of Catholic orthodoxy. The Inquisition[2] was re-organized and carried on in Italy, though not with the fanatical excesses which in Spain under Torquemada had covered the holy office with lasting infamy. The *Index Expurgatorius* pronounced its ban on all anti-Roman books and particular passages of books. In 1685 the repeal of the Edict of Nantes, which was the great charter of Huguenot rights in France, marked the climax of a half-century of persecution and political ostracism. In the 18th cent. the efforts of the Western Church to withstand the Protestant movement had spent their vigour, just as Protestantism had lost its earlier glow and enthusiasm. A spiritual and intellectual lassitude prevailed—a reaction partly from the theological strife of the previous generations and partly from the dynastic struggles caused by the ambitions of Louis XIV. and Frederick the Great. The Society of Jesus was temporarily extinguished. Where religious reforms were attempted—*e.g.*, by Joseph II. in Austria—they proved abortive, probably because they were inspired by the free-thinking spirit rather than by genuine religious earnestness.

Under the French revolution the Church shared the fate of all the privileged classes, and the Catholic religion was formally abolished as being hostile to the new republic. The Goddess of Reason was enthroned in Notre Dame, and Robespierre's attempt to restore religion by enforcing a belief in God only checked for a moment the torrent of infidelity. In 1801 Napoleon concluded a concordat with Pius VII., in which the Catholic religion was declared to be the religion of the majority of the French people; but he provoked the pope's hostility by demanding the right to appoint a patriarch of France, the abolition of clerical celibacy, and the support of the pope against England. Excommunication of Napoleon was followed by a protracted struggle with the pope, which was only ended in 1814 by the fall of Napoleon. In Germany the ecclesiastical states were secularized and subjected to civil rule. In Spain the Inquisition was abolished. The pope espoused the cause of absolutism which the formation of the Holy Alliance of European Powers was intended to uphold, in order to prevent revolutionary and democratic movements aimed at the authority of kings. In 1814 the Jesuit order was revived. Lamennais's attempt in France to associate ultramontane ideas of the pope's spiritual supremacy[1] with the advocacy of freedom of worship and liberty of conscience was repudiated by Pope Gregory XVI. On the other hand, in England Catholic emancipation released Roman Catholics from the political disabilities imposed at the Restoration. In 1846 Pope Pius IX. began his policy of liberalism by providing for his kingdom a constitutional system and cherished a scheme for the unifying of Italy under his control. A quarter of a century later, on the capture of Rome by Victor Emmanuel (1870), Italy was unified under one kingdom with Rome as its capital, and the pope's temporal authority was finally lost. In 1854 Pius IX. had promulgated on his own authority without any conciliar sanction the dogma of the immaculate conception (*q.v.*), and in 1870 at the Vatican Council the dogma of papal infallibility[2] was decreed in spite of the opposition of the 'Old Catholics'[3] of Germany, who held that the concurrence of pope and council was required for the validity of a doctrinal definition. Some of these, like Hefele, submitted, but Döllinger and his associates seceded and formed a confederation of English, Americans, Swiss, Russians, and Greeks, while in Paris Père Hyacinthe Loyson formed an Old Catholic congregation. But the movement never captured the people. Both England and Germany were alarmed by the ultramontane policy of the papacy, and Germany under Bismarck gave political protection to the Old Catholics. In France the National Assembly in 1871 was possessed with the ultramontane ideals, and the Government four years later authorized the foundation of Catholic universities. The inevitable reaction followed, and under Ferry and Gambetta (1880–81) the 'March decrees,' breaking up the Jesuit Society and congregations not recognized by the State and requiring Catholic students to be enrolled in State universities, were carried. During the last generation the secularist movement in France advanced stage by stage—until in 1905 the separation of Church and State was decreed by the French government and all churches and church property became the possession of the State. A situation was thus created for both Catholics and Protestants which called for voluntary generosity on the part of their adherents, with the result that the cause of religion in France has not lost but rather gained in public esteem.

Even from this rapid survey, which has selected what may be called decisive events illustrative of the political aims of the papacy and the development of ecclesiastical life and order within the Roman Church, we may infer what the Western Church has stood for in European history since the days of Constantine. Its aim has been to include humanity within its spiritual fold, while exerting a dominating control over the secular fabric of the State, its kings and governing authorities. This fundamental dualism of spiritual authority and temporal domination, which reached its climax in the Holy Roman Empire, was held to be the secret of progress religious and social, and none can deny the splendour of the conception which inspired Hildebrand and lifted the Mediæval Church to a position of majestic influence and striking prosperity. But it was a glorious dream destined to vanish at the touch of reality, a harmony of incompatible opposites which could not endure, a service of two masters which was to end in disillusion and disaster. The interpenetration of Catholicism with political ambitions and with worldly aims of kingly power tended to weaken its spiritual life. History has but recorded its verdict on the unreality of the Western claim to catholicity by adopting the

limiting epithet 'Roman' in its designation of the Catholic Church of the West.[1] The narrowness of its conception of what constitutes catholicity abides, even when we take into account its splendid annals of saintliness, piety, missionary zeal, its strength and compactness of organization—a bulwark in dark and barbaric ages conserving spiritual truth and light against the powers of evil—its enduring services in the task of redeeming the world from atheism and saving it from sin, and further in its self-renouncing ministries to the poor, the sufferers and outcasts of mankind. From age to age it has received warnings and calls to forsake the path of earthly domination and to seek only the unity and freedom of the spirit; but its answer is the dogma of papal infallibility, which is the admission of a fatal weakness—a bold but despairing attempt to enforce an authority which cannot endure the light of reason and spiritual liberty. Paganism and traditionalism are the perils of most forms of faith—the one, according to Sabatier,[2] finding 'its most obvious and crudest expression in Catholicism, in the constitution of its priestly hierarchy, in the *opus operatum* of its sacraments, and all the superstitious practices with which Catholic devotion persists in overlaying itself'; the other revealing itself in the Catholic apotheosis of the past—whether the history of a period or the body of custom, tradition, and dogma — which in the course of time becomes a hindrance and a despotism fatal to spiritual progress. And the view that the Western Church has been materialized and narrowed by its persistent policy of confining the Spirit within forms and rites and hierarchical authority, and by its fatal distrust of reason and conscience, is confirmed as we trace the attitude of Rome to the developments of Christian thought in the ages under review.

3. Development of theology and religious thought in the Church of the West.—(*a*) *Early period: Augustinianism and influence of Greek theology.*—The evolution of the Christian Church into the unity of Catholicism was not entirely a development of organization necessitated by its progress over the Roman Empire and moulded by its imperial environment and its secular relationships. The external and institutional form of the Latin Church cannot be explained if the influence of its theological standpoint and its fundamental dogmas is ignored. Its claim to authority over the soul and conscience of mankind was based on a type of theology to which the distinguishing epithet 'Latin' has invariably been applied. From this point of view Augustine is more palpably the founder of the Western Church than St. Peter. This remarkable thinker[3] is reverenced by the Catholic and the Protestant alike: by the former because of his emphasis on the authority of the Church and the impossibility of salvation outside the Church, by the latter because of his assertion of the divine sovereignty and of predestination (*q.v.*) and his interpretation and practice of evangelical and experimental piety. But, though it is true that his personal witness to Christianity lifts him beyond all the divisions of Christianity, the fact remains that he devoted all the resources of his intellect and spiritual zeal to the service of the Catholic Church, which he believed to be the only possible medium of salvation to the world. The grace (*q.v.*) which saved came indeed from above, but it was deposited with the succession of bishops who alone were empowered to administer it to the elect. His God was essentially a deistic or transcendent Deity dwelling apart from mankind and regulating human affairs by His commissioned agents, the hierarchy of the Catholic Church. Original sin (*q.v.*) was an effectual barrier to man's reconciliation with God; and Augustine placed a greater emphasis on the external rite of baptism (*q.v.*) as a mode of regeneration than on the merits of Christ. The power of sin which is seated in the will could be broken only by the agency of the Church as the appointed channel of grace. In fact, 'grace' takes the place of Christ in Augustinian theology: on the one hand, it is the sovereign will of God who decrees the salvation of the elect, and, on the other, 'a kind of spiritual potency' deposited in the hierarchy and mediated by the priesthood in the sacraments to the people. Only a portion of the race could be generated in baptism; the residue were doomed to eternal punishment. It was by these views that Augustine made possible the development of the Church of the 5th cent. into the papal empire of the Middle Ages. There is hardly a distinctively Roman doctrine or practice—purgatory, the intermediate state, the celibacy of the clergy, the invocation of saints, reverence for relics and images, the distinction between mortal and venial sins, the loss of unbaptized children—which cannot be found at least in germ among his opinions. With all its defects, however, this can be said in favour of the Augustinian theology, that it consolidated the Western Church, its thinking and its discipline, and saved it from the wave of Muhammadanism which overwhelmed the Church of the East. Augustine was powerfully influenced by the Platonism of the Alexandrian teachers, especially in his earlier life; but his mature treatises show but scanty traces of sympathy with the standpoint of the Greek theologians and are obsessed by his theory of the Church, which in its rigidity and narrowness reveals the mind of a great ecclesiastic rather than of a profound philosopher.

It has often been asked if the principles of Greek theology influenced the thought of the West. While it is universally agreed that the Latin Church borrowed freely from the customs and ritual of paganism, to what extent was its dogmatic teaching affected by the views of Clement of Alexandria, who proclaimed the continuity between Christianity and the higher thought of the Greek philosophers? The Platonists of Alexandria derived this idea of continuity from the truth of the divine immanence (*q.v.*) in human nature, taught that the Incarnation revealed the organic union between God and man and was the real atonement for sin, asserted that there was no opposition between reason and faith, regarded the Church as a community whose spiritual life was that of the Logos (*q.v.*) and its sacraments as symbols of inner processes, and proclaimed that heresy was an aid to the discovery of truth. Origen[1] followed with a profounder learning and philosophic insight to lay the foundation of the doctrine of the Trinity in his teaching respecting the 'eternal generation of the Son.' Athanasius (*q.v.*) shaped in an atmosphere of controversy the orthodox Trinitarian formula against the deistic interpretation of Arius, and secured the insertion of the vital term ὁμοούσιος in the Nicene symbol. His triumph is for ever significant, and the creeds of Christendom show that Greek thought fulfilled a providential task in the reconciliation of Christianity with reason, while the genius of Latin Christianity built up on the model of the empire the government, law, and constitution of the Church. In other words, the Western Church, while in the

spirit of Tertullian's *Prescription of Heresy* always hostile to heretical thought[1] and the independent activities of reason, owed to Greek theology the intellectual gift, the philosophic insight and accuracy of definition, the logical subtlety and lucidity by which alone the truth could be established on a firm basis. It owed its symbols and the power of defending them, its doctrine, and its apologetic to Greek theology; but the findings of Greek theology were held to be valid only when enforced by its authority. Without the benediction of the hierarchy, no truth, no new conception of truth, could be tolerated. Indeed, there were certain principles of Greek thought, such as the essential kinship of man with God, which the Western Church has never regarded with complete conviction; rather it has clung to the conception of the infinite distance between the human and the divine which was characteristic of the theology of Antioch. It has to be remembered that, when Greek theology passed into the Western Church, new peoples and races were coming to the front and were eventually to be won to Christianity; hence the method of presenting the simpler type of Christian thought based on Church authority, rather than the more intellectual and philosophic aspects of the truth, might be justified on grounds of expediency. It remains true, however, that the earlier Greek theology of the Alexandrian type has never really rooted itself in the consciousness of the Latin Church; its breadth and universality of vision, its synthesis of the human and divine, has illuminated but not transformed the dogmatic teaching of Catholicism. With Clement and Origen Rome has shown less affinity than with the pseudo-Dionysius. The *Celestial Hierarchy* (translated by John Scotus Erigena), with its ranges of angelic intermediaries between God on the one hand and the bishops and deacons of the Church and finally common humanity on the other, and with its path to God by the practice of Oriental asceticism, was the very negation of the sane and logical teaching of the Christian Platonists of Alexandria.

(*b*) *Mediæval period: scholasticism.*—The age of Charlemagne marked a low stage of religious thought, although the culture of John Scotus Erigena,[2] based on his knowledge of Greek and in particular of Plato and Origen, enabled him to produce a philosophy of religion far ahead of his times. Alcuin of York was a popular teacher, but he was not an original theologian and has a larger place in the history of the Roman liturgy as a compiler of the Lectionary and works of private devotion. It is significant that in the 9th cent. the dogma of transubstantiation[3] first became the subject of formal discussion. Neither Cyprian nor Tertullian was an exponent of a materialistic conception of the Lord's Supper, while Augustine held that its benefits were available only for the elect. To the monk Paschasius Radbertus, who wrote about 831 a treatise *De Corpore et Sanguine Domini*, belongs the credit of introducing the view that the presence of Christ was not in the soul of the worshipper but in the eucharistic elements. On the other hand, the early Middle Ages had rejected the image-worship of the degenerate East, and it was at a later period, when society was in the state of confusion and unrest caused by the invasions of Huns and Northmen, Danes and Saxons, that a reaction in favour of the Church as the one stable institution and refuge in a world of chaos took place: the great cathedrals were built; gifts of nobles and people were lavished on majestic Gothic temples; art ministered to religious devotion in music, in the impressive ritual and fair pageantries of worship, in the composition of hymns like the *Dies Iræ* and the *Stabat Mater*,[1] which broke with the classic models of poetry, and in the mysteries and miracle-plays staged within the sacred walls. Above all, the scholastic theology of which Anselm[2] was the intellectual offspring expressed the wide-spread feeling that the dogma and ritual of the Church must be harmonized with the intellect and adjusted to the conscience of mankind. If monasticism fostered piety and devotion, scholasticism in schools and universities endeavoured to establish the Christian Church and its doctrine on an intellectual basis. Abelard (*q.v.*) resisted the blind acceptance of traditional dogmas, while sects like the Cathari and Waldenses (*q.v.*) upheld the principle that the Spirit of God was not limited in its operations to the Church but illuminated the soul of man. The supporters of the authority of the Church became alarmed by the prevalence of such teaching. The condemnation of Abelard at the instance of the saintly Bernard of Clairvaux was upheld by the Council of the Lateran (1215), which formally decreed the dogma of transubstantiation. Fourteen years later the Council of Toulouse declared it a sin for the laity to possess a Bible or to read the Psalter or the Breviary in the vernacular. *The Book of Sentences* by Peter the Lombard became the accepted standard of orthodoxy. And finally Thomas Aquinas (*q.v.*) took up the task of reconciling faith and reason and, as a counterblast to the Platonism of Scotus Erigena and Abelard, called to his aid the *a posteriori* method of Aristotle.[3] Rejecting the philosophy which had always produced rationalism—so he believed—by its search for reality in an ideal realm, he based his argument on the views of a thinker to whom reality lay in the actual physical universe. To Thomas Aquinas the ground of truth was in the visible Church, the sole channel of salvation, and in its dogmatic system with its corollaries of transubstantiation, purgatory, and indulgences.[4] The Roman Church has never abandoned the Thomist theology; and whenever, as in this generation, the human reason, curious of the secrets of the universe and enlightened by new discoveries and new aspects of truth, strives to relate traditional dogmas to the larger knowledge won by science and historical research, the papal authority bases its defence of accepted truth on the conclusions of the *Summa Theologiæ*.[5]

(*c*) *The Reformation Age to modern times: Protestantism, Rationalism, Modernism.* — The attempt of Aquinas to compromise with reason came too late. Reason, which had been flouted and repressed, took its revenge. The papacy had flourished on the ignorance of the masses. It had built itself up on a distrust of humanity, which was believed to be unequal to self-government and to stand in need of a controlling visible authority. In the dark ages, let it be admitted, there were grounds for this view of mankind. The world was in the melting-pot. The Church ministered to a great need. By the Crusades it introduced men to new lands and gave them knowledge of other nations than their own; by the worship of relics it cherished a vivid consciousness of the past; by the veneration of the saints it contributed to human reverence; by its art and ritual it ennobled and enlightened personality; by monasticism it ministered to the soul of the individual and recognized its claims; and by scholasticism it quickened the processes of the human mind. But a new order had arisen, and the Church, which had

conferred indisputable benefits on the world, was found unequal to the opportunity. The world had widened; new nations and new languages had appeared. Latin was no longer a medium of communication for the Western world. Wyclif's translation of the Scriptures into homely English had opened the way to a new authority. The Bible, not the Church, was the source of revelation. Mysticism, whether of the Frankish saints belonging to the order of St. Victor, who used the tender and almost voluptuous imagery of love, or of the German saints like Eckhart and Tauler, whose expositions were cast in a sterner and more ethical mould, impressed on the world the truths of the immediate intuition of God by the soul and the divine immanence. The air of Europe was alive with new currents of spiritual and intellectual power. Even prior to the fall of Constantinople in 1453, when Greek scholarship and learning sought a fresh habitation in the cities of Europe, the Renaissance had inaugurated in Italy under Petrarch and Boccaccio the cult of beauty and classical literature and evoked a new sense of the many-sided interest of the present life—in a word, the humanism which was henceforth not only to transform the intellectual and ethical life of society as a whole but also to modify the Christian outlook on the world and the course of Christian thought and theology. It was on the intellectual side an expression of the individualism which within the realm of the spirit ecclesiasticism had failed to quench. By the work of Wyclif and Hus, by evangelical movements like that of the Waldensians, by the mysticism of the cloister and the pulpit and lay-societies such as the 'Friends of God' in Germany,[1] the individual soul had expressed its spiritual conviction and ideals and the way had been prepared for a revolution in Christian thought. Luther[2] entered into the heritage won for spiritual freedom by Wyclif and Hus, the latter of whom had died for the rights of conscience. The Reformation was not a break but a fresh stage in the evolution of Christianity. It was the re-assertion of vital principles of faith which had found expression from time to time in the history of the Church from the days of St. Paul onwards. In essence, the position taken up by Luther was not the negative conviction that certain abuses which called for destruction had crept into the Church: he declared afresh the positive conditions of human salvation. He began with the people, not the cloister, nor the hierarchy. It is true that he rejected the claims of Rome as the primal and absolute authority upon whose will depended the destiny of the soul; but his rejection arose from his broad and clear conception of the value of the individual soul. His emphasis on justification by faith was in effect a plea for human rights—the right of access to God and the right of communion with Him as the condition of ultimate salvation. In other words, Luther came into conflict with the Latin Church because it was founded on ideas repugnant to the Christian conscience. The practice of selling indulgences by which the sinner obtained remission of the 'temporal' penalties of his offence was to him only one among many results of the false assumptions on which Rome based her claims, viz. the supreme authority of the episcopate as constituting the Church and the denial of spiritual privilege to the laity (*q.v.*). He opposed the fatal distinction which the Mediæval Church had emphasized between things divine and human as inherently incompatible with each other—the distinction which had created the opposites, Church and State, clergy and people, nature and grace. It followed, if this dualism was erroneous, that a layman had the power to interpret the written revelation which hitherto had been claimed as a priestly prerogative. Finally, from these premisses flowed the truth of private judgment (*q.v.*)—a position upon which Melanchthon temporized when he appealed for the retention of a visible authority while admitting its human origin. In Switzerland Zwingli (*q.v.*) and Calvin[1] were the outstanding personalities of the new movement. The former by his emphasis on the divine immanence re-affirmed the standpoint of Greek theology, and he was Greek in his denial of original sin, in his assertion of the salvability of the heathen, and in his doctrine of the sacraments as symbolic and memorial. Calvin stood for order and discipline, and founded a Church the polity of which took root in Scotland, the Netherlands, in Germany, in Switzerland, in France among the Huguenots, and in England among the Puritans. He held that the Church consisted of the elect and that the clergy were endowed by the Holy Spirit in ordination with powers which gave them authority over the people. It was, however, less as an ecclesiastical administrator than as a theologian that he left his mark upon the world. His rigid insistence on the verbal inspiration of Scripture, his theory of the fall and election, his rejection of the doctrine of immanence, his assertion of the divine sovereignty which rendered God remote from nature and humanity and made progress depend on His arbitrary will, are the familiar elements of his theology. As compared with Zwingli, he continued the Latin tradition, but, on the other hand, he was essentially Protestant in his doctrine of the individual who, though his conscience was controlled by the clergy, yet owed his ultimate destiny to the sovereign majesty of God—a theory which made for human freedom and was destructive of clerical tyranny, while it disposed at once of the customs of image-worship and Mariolatry and brought to the profession of the Christian a robust ethical standard based on the teaching and example of Christ. As Thomism was wrought into the texture of Dante's *Divina Commedia*, Calvinism received a majestic setting in the epic of Milton, while Bunyan made an appeal alike to the humblest and to the most enlightened intellects by his immortal delineation of the Reformed theology in the *Pilgrim's Progress*.[2]

Protestantism left its mark on Catholicism by producing the kindred movements of Jansenism (*q.v.*) and Gallicanism (*q.v.*), the former for ever to be associated with Pascal as the latter was thenceforth to be distinguished by the great name of Bossuet. Pascal (*q.v.*) opposed the Jesuits with much of the Calvinistic fighting spirit and stands in the line of Augustine and Calvin as a theologian, though at heart a melancholy sceptic who never succeeded in harmonizing his beliefs with the dictates of reason and conscience. Calvinistic Protestantism had left to Christian thought the necessity of defending the Scriptures in an age of cold and unsparing rationalism. The *Augsburg Confession* (1530) and the *Institutes* of Calvin had proclaimed Scripture to be the very word of God—in fact it was the infallible external authority by which Protestantism had superseded the authority of Rome. The 18th century, the age of Voltaire and Rousseau in France and of the English deists,[3] notwithstanding its opposing tendencies—Cambridge Platonism (*q.v.*) upholding the divinity of reason, natural theology contesting the supremacy of revealed religion, new scientific discoveries revealing the reign of law in nature, the attack on the miraculous elements of Christian truth—was not wholly the barren and unspiritual

epoch which it is often supposed to have been. The controversy aided the progress of vital Christianity in the sense that the deists were really preparing the ground for a sounder and more rational conception of the divine nature and government, while their opponents remained loyal to the truth of a divine revelation which had been made directly to the human soul. In fact, the evangelical revival under Whitefield and Wesley[1] provided a memorable and impressive demonstration of the truth which the orthodox apologists had propounded, by bringing to the soul of the 'common people' a divine salvation and assurance of pardon which were declared to be available for simple faith. The 'saving faith,' which enabled the sinner by immediate contact with God to find peace and the strength for a new life of ethical holiness, was the mighty note upon which a renascence of spiritual religion sounded abroad its message of hope for a world in transition.

The Illuminism of Germany[2] may also be claimed as a renascence of the spirit, if on intellectual lines, by virtue of its proclamation of the gospel that the moral consciousness is divinely inspired, and that the Divine Spirit, acting through the letter of Scripture but not bound to it, is universally revealing Himself in history. But the witness of Lessing (1729–81) was of less value as an exposition of the Christian view of history than that of a greater thinker, Schleiermacher (*q.v.*), to whom belongs the credit of originating the critical method as applied to Scripture and religion. His clear grasp of the solidarity of the race, his disbelief in the individualism of Protestant and Catholic as expressed in the doctrines of election and probation, his loyalty to the Church as an institution which expressed the idea that man is saved as the member of a redeemed family, and his conception of the progressiveness of revelation place him in the succession of Greek theologians as they make him the most formative of the Christian thinkers of the last century. His firm conviction of the immanence of God powerfully affected the art, literature, philosophy, and science of the 19th century. Romanticism, the poetry of Wordsworth and Shelley, the truth of evolution as expounded by Darwin, the art of Turner and his interpreter Ruskin, the Christian socialism of Maurice (*q.v.*) and Kingsley, Hegelianism,[3] and the Neo-Hegelianism (*q.v.*) of the Cairds and T. H. Green (*q.v.*)—all these phases and movements indicate the prevalence of a new spirit. The Victorian Age was in effect a period of revolt. The triumph of the critical and scientific method was not less marked in the realm of theology than in other fields of knowledge. De Maistre[4] (1754–1821) in France and John Henry Newman (*q.v.*), from quite different standpoints, opposed what appeared to them the deadly liberalism of Christian thought. Tractarianism resulted in a revival of mediæval practice and ritual in the worship of the Church of England; but Anglo-Catholicism has never, like Roman Catholicism, repudiated the methods and results of modern criticism. Mediævalism in the Anglican Church has shown itself in ecclesiastical observance and in a revival of the Catholic view of the continuity of orders and ecclesiastical tradition, but the Erastianism of the English Church has been a safeguard against the triumph of a narrow orthodoxy and has in fact aided the forces of liberal thought. As we have already seen, the Roman Church under Pius IX. and his successors has shown itself impervious to the newer currents of theological thought. The critical method is anathema to Rome. Science, comparative religion, psychology, have their place in the world, but are banned by the infallible fiat of the Church, whenever Catholic dogma is subjected to the test of their new light.

Newman paved the way to Modernism (*q.v.*)—the name given by Pope Leo XIII. (1878–1903) to the liberalizing movement within the Roman Church—by his famous *Essay on the Development of Christian Doctrine* (1845, new ed. 1878), but the logical issues of his attempt to bridge the chasm between Protestantism and Catholicism were repudiated by the papal see when they were expounded by Alfred Loisy and George Tyrrell. Pius X. (1903–14) in his decree *Lamentabili* (July 1907) condemned the 60 propositions in which he summed up the Modernist doctrine, and by his encyclical *Pascendi* shortly afterwards reasserted the scholastic dogmas of the Middle Ages as the necessary faith of a true Catholic.

The drift to Rome of individual mediævalists within the Anglican pale will continue, but there are no signs of any approach to reunion between Rome and Anglicanism, the validity of whose orders received contemptuous rejection in the bull *Apostolicæ Curæ* (1906). Roman Catholicism and the Holy Orthodox Church remain disjoined, apparently without the slightest sign of a possible reconciliation. In the Reformed and Protestant Churches the cause of intellectual and religious freedom has triumphed beyond the reach of reaction, while there are symptoms both in England and in Scotland of a growing movement towards reunion—in England taking the form of a proposed federation of the Free Churches, which inherit the Protestant tradition, while in Scotland the union of the Established Church and the United Free Church is widely desired and anticipated. Generally speaking, among such Churches the necessary re-adjustments of religious thought and restatements of doctrine are likely to be carried through without any controversial strain, while the authority of the Scriptures will be associated with a more profound and broader view of the Spirit of Truth as 'the Lord and Giver of Life,' not only to the writers and 'holy men' of the Scripture dispensations, but to all the saints of Christ in all ages and in the future. Already with this larger conception of revelation as the perpetual work of a controlling Spirit who is the eternal source of light amidst the fluctuations of dogmas, institutions, and forms, the religious outlook of Western Christendom has tended to a clearer vision of the social and spiritual needs of humanity. The reaction of the European War, which has affected nearly every country in the world, has deepened the sense of international solidarity and has created the ideal of a League of Nations. Whether this new vision of brotherhood will result in a new synthesis of the rival ideals of Catholic and Protestant remains to be seen. For the moment the vision of a new Catholicism of Christendom appears to be both less convincing and less capable of realization than that of a political League of Nations. The old Catholicism, in the sense of ecclesiasticism, is dead or dying. So long as Rome claims absorption into her fold as the price of Christian reunion and so long as she asserts her mediæval standard of authority, she will stand outside the progressive movements of social and spiritual thought. The trend of the modern mind is against any external authority, whether of pope or priesthood or sacred book; and this is in effect a reaction against the extravagant claims which both Catholic and Protestant have put forth on behalf of their respective standards of authority—claims which offend the moral consciousness and intellect of mankind. Nevertheless, the Holy Catholic Church and the written Word

[4] Cf. his work *Du Pape*[2], Lyons, 1819.

alike reveal the directing and controlling authority of the Spirit of Truth: the one proclaims the reality of the *consensus sanctorum*—the community of experience and witness—in the life of Christendom; the other declares the reality of God's perpetual self-revelation in the history of the race. In this corporate and individual response to the Spirit of God, of which both the Scriptures and the Church as an institution are witnesses, is to be found the ground of our hope for mankind. The future lies with the religion of the Spirit of Christ which under many forms of worship, systems of discipline and organization, with interpretations and settings suited to the various peoples of the world, will yet embody the Christian idea. The essence of Christianity is not to be confined to this or that dogma, creed, or institution, but is at once a spiritual experience and an activity of love—a kingdom of heaven within—inspired by the unifying control of the Spirit of Truth over the individual and collective consciousness of mankind. However desirable the consummation of an organic union of Christendom may be to many minds, a review of the history of the Church affords but scanty support to the idea that this result is attainable, or that, granting the possibility of its attainment, it would minister to the highest welfare of humanity. On the other hand there is a wide-spread and growing assent to the interpretation of both Scripture and history which favours a unity that will be not less real because it will co-exist with diversity —the ἑνότης πνεύματος for which St. Paul intercedes —the oneness given by the Divine Spirit who at once overrules and is immanent within the whole body of the faithful upon earth.

LITERATURE.—The leading authorities have already been given under articles referred to above. For the general history of the Western Church the reader should consult lists under artt. CHRISTIANITY, PAPACY, CHURCH; for doctrine CHURCH, DOCTRINE OF (Roman Catholic), CREEDS, CONFESSIONS, and special phases under their own heading—*e.g.*, ARIANISM, NESTORIANISM, etc.; for worship SACRAMENTS (Christian, Western), EUCHARIST, etc.; for law LAW (Christian, Western). In a useful chapter entitled 'Bibliographical Suggestions' in Williston Walker, *A Hist. of the Christian Church*, Edinburgh, 1919, the reader will find the most recent literature in Church History indicated and classified.

R. MARTIN POPE.

WHEEL.—See JEWEL (Buddhist), PRAYER-WHEELS.

WHEEL OF THE LAW.—This Buddhist expression is derived from the earlier Buddhist legend of the Mystic Wheel. This legend, or edifying fairy tale, is told in almost identical terms in several of the most ancient Buddhist documents.[1] It is none the less essentially Buddhist because several details (the ethical, not the essential ones) can be traced back to details in one or other of the pre-Buddhistic sun-myths. The Wheel is said to be one of the treasures of a righteous king who rules in righteousness; and it is because of that righteousness that the Wheel appears. The legend says:

'When he [*i.e.* the king; the names of course differ] had gone up on to the upper storey of his palace on the sacred day, the day of the full moon, and had purified himself to keep the sacred day, there then appeared to him the heavenly treasure of the Wheel, with its nave, its tire, and all its thousand spokes complete.

Then the king arose from his seat, and reverently uncovering his robe from his right shoulder, he held in his left hand a pitcher and with his right he sprinkled water over the Wheel, as he said: "Roll onward, O my lord the Wheel! O my Lord, go forth and overcome."

Then the wondrous Wheel rolled onward toward the region of the East. And, after it, went the king with his fourfold army (cavalry and chariots, war-elephants and men). And wheresoever the Wheel stopped, there too the king stayed, and with him all his army in its fourfold array.

Then all the rival kings in the region of the East came to the king and said: "Come on, O mighty king! Welcome, O mighty king! All is thine, O mighty king! Do thou, O mighty king, be a Teacher to us!"

And the king said: "Ye shall slay no living thing. Ye shall not take that which has not been given. Ye shall not act wrongly touching the bodily desires. Ye shall speak no lie. Ye shall drink no maddening drink. And ye may still enjoy such privileges as ye have had of yore."[1]

Then all the rival kings in the region of the East became subject to the king. And the wondrous Wheel having plunged down into the great waters in the East, rose up out again, and rolled onward to the South . . . and to the West . . . and to the North [and all happened in each region as had happened in the region of the East].

Now when the wondrous Wheel had gone forth conquering and to conquer over the whole earth to its very ocean boundary, it returned back again to the royal city and remained fixed on the open terrace in front of the entrance to the inner apartments of the great king, shedding glory over them all.'[2]

So far the appearance and work of the Wheel. In another passage we are told that on the approach of the death of the righteous king the Wheel falls from its place, and on his death or abdication disappears. Should the successor carry on the Law of the Wheel, it will reappear and act as before, and this may continue for generations. But, should any successor fail in righteous rule, then the country will fall gradually into utter ruin, and remain so for generations till the Law of the Wheel has been revived. Then only will the Wheel reappear and with it wealth and power and the happiness of the people. All this is set out at length in the *Chakka-vatti Sīha-nada Suttanta*.

The *Chakka-vatti*, literally the 'Wheel-turner,' and by implication the ruler who conducts himself (and whose subjects therefore conduct themselves) according to the Law of the Wheel, is the technical term for the righteous king or over-lord. It has not been found in any pre-Buddhistic literature; and, though it is so frequent in later books, it has, in Hindu works, lost its ethical connotation, and simply means a war-lord, a mighty emperor, 'one who unhindered drives the wheels of his chariot over all lands.' But it should be noticed that the wondrous Wheel of the Buddhist legend is not really a chariot wheel. The idea of sovereignty is no doubt linked up with it. The Wheel, however, is a single disk, not one of a pair. And it is very clear that it is really a reminiscence, not of a chariot wheel, but of the disk of the sun, which travels over all lands from sea to sea and sheds glory over all. By the pouring of new wine into the old bottles, it is the sun-god himself, transmuted into a forerunner of the king of righteousness, whose rule of life brings happiness to all.

This is the legend made use of to give a title to the doctrine of the reign of law, the basis of the reformation we call Buddhism and which the leaders of that reformation called 'the Law.' The discourse summarizing this doctrine, the first discourse delivered by the founder of the new movement, is entitled 'The Setting in Motion onwards of the Wheel of Law' (*Dhamma-chakkappavattana*). The allusion is to the action of the king of righteousness in the foregoing legend when he baptizes the Wheel, and exhorts it to roll onward, to go forth and overcome. The allusion is apt; and it gains both in poetry and in its appeal to the mental attitude of the time by the irony with which it enlists the service of the ancient and repudiated sun-god in the propagation of the Buddha's doctrine that the gods too are under the domain of law. Just so was Brahmā made into a convert to the new teaching, and the old god of war and drink, the mighty Indra, had been transmuted into the peace-loving and sober Sakka, devoted to the doctrine of the reign, not of divine whim, but of law.

Very naturally the early European writers on Buddhism, ignorant of the legend of the Wheel,

[1] *E.g.*, the *Mahā Sudassana Suttanta*, *Digha*, ii. 172; the *Chakka-vatti Sīha-nāda Suttanta*, *Digha*, iii. 61.

[1] On this phrase see *Dialogues of the Buddha*, ii. 203, *Kindred Sayings*, i. 15.

[2] *Dialogues of the Buddha*, ii. 202–204.

and ignorant also of the doctrine of the reign of law, completely failed to understand this curious title of the oldest summary of the new teaching. It would be wearisome to point out all their mistakes. Perhaps the worst of the many blunders is the identification of the Wheel with what Anglo-Indian writers call, quite erroneously, the praying-wheels of Tibet. They are not so called by any authority, Tibetan or Buddhist. They are not praying-wheels, but wheels of good luck, containing an invocation to some deity—the contrary therefore to the old doctrine of the Wheel. We may learn some day what the original meaning in Tibetan of *Oṁ maṇi padme Hūm* really was. The phrase is not likely to be less than about 1400 years later than the time of the Buddha. And it is most unlikely that, after that long lapse of time, any memory of the legend of the Wheel or of its adoption to the title of the First Discourse had still survived. To judge from what we know of Lāmaism, the Tibetans had quite forgotten that, in early Buddhism, the reign of gods had been superseded by the reign of law (or, to express the same fact in modern technical terms, that animism had given way to normalism).

It remains to add that some centuries after the canon had closed we find also another use of the figure or simile of the wheel. Only the wheel is here, not the disk of the sun, but a chariot wheel. The figure is used of the circle or cycle of rebirths. Mrs. Rhys Davids has pointed out the use of this simile in Greek and Sanskrit,[1] and it has since then been discovered in Pāli.[2] This is in harmony with the doctrine of the Wheel of Law in early Buddhism, but it is a supplementary idea, and has a different origin, and is never called the Wheel of the Law. It is *saṁsāra-chakka*, not *dhamma-chakka*.

WIDOW.—See MARRIAGE, SATĪ.

WIFE.—See MARRIAGE.

WILL.—The word 'will' (Gr. *βούλησις*, Lat. *voluntas*, Germ. *Wille*, *Wollen*, Fr. *volonté*) is used in a wide variety of senses by philosophical and psychological writers. In the widest sense it means all the 'active powers' which the Aristotelian bipartite division in psychology contrasted with the 'intellectual,' and so includes all striving, appetition, and interest, even at an infraconscious level. In the narrowest sense it is taken to mean, or at least to imply, deliberate and responsible choice.

1. Physiological basis.—The analysis of will in the widest sense requires the analysis of the physiology of movement. Physiologists base their conceptions upon reflex action, and then discuss the integration of reflexes in the brain and spinal cord. The unit of this explanation is the simple reflex. The stimulation of an end-organ *must* issue in movement, and a simple reflex is the simplest possible response of an organism to stimulation. The simplicity of a simple reflex, however, is the result of analysis rather than a fact of observation. What we find in fact is a combination of reflexes into reflex patterns of various kinds.

All reflexes take place through a chain or arc of neurons which passes through the central nervous system, and it is important to notice the differences between the stimulation of a bare nerve-trunk and of a reflex arc. The latter shows slower speed, a marked 'after-discharge,' irreversibility of direction, greater liability to fatigue, notable inhibition, and 'refractory phase,' together with a very marked response to cumulative stimulation where the stimuli are too weak to lead to movement severally. These differences, taken conjointly, show that reflex action, so far from being a mere conduit of nervous discharge, is, even in its simplest form, a kind of response in which the organism counts for more than the stimulus.

Simple reflexes are allied when two or more work together. They alternate, *e.g.*, in the rhythmic contraction of the flexor and extensor muscles in walking. They compensate one another, inhibit one another, and form reflex patterns of great variety. The main points to notice about them, however, are (1) the way in which they reinforce one another in their conjoint eventual discharge through a final common path, and (2) the co-ordination of them in time. The first phenomenon is so marked that some observers believe that reflex patterns work on the 'all or nothing' principle. The second appears in its primary form in the successive stimulation of antagonistic reflexes, and many physiologists suppose this temporal co-ordination to be the principal office of the central nervous system.

This general conception applies to all reflex movements, and its connexion with will becomes manifest when we consider the relation between the nerve-endings specially adapted to the reception of distant stimuli and the muscles of the skeletal system. These skeletal muscles (with unimportant exceptions) are the voluntary ones, and they are intimately connected with senses like sight or hearing which are affected by stimuli from a relatively distant point of origin. It is easy to interpret these facts in a way that has great significance for the economy of organic behaviour. To use Sherrington's terms, while some reflexes are 'consummatory,' those connected with the skeletal muscles are for the most part 'precurrent.' They do not enjoy, but anticipate. The union between sight and the skeletal muscles enables the animal to adapt itself in advance. The end of its action, to be sure, is consummatory, swallowing or being swallowed; but the means to this end is a preparation in the way of movement—crouching, stalking, running, leaping. It is significant in this regard that the head is the organ of the 'distant' senses and of balance. For the head is the rudder of the body, and it steers the quicker in proportion as the path of the nervous impulse to the brain is shorter.

Psychology is concerned with consciousness, first and foremost, and the reasonable inference from this evidence is that consciousness continues the work of the nervous system. Pleasure gives an added zest to action; pain is the body's spur to release from its distress. Consciousness, again, implies a certain 'togetherness' of experiencing. A certain minimum of memory is held together in our consciousness, and this acquired experience is at the behest of action. Consciousness, once again, is most acute in connexion with the organs of exploration, and the connexion between eye or ear or finger-tip and the skeletal or voluntary muscles indicates that consciousness widens the range of precurrent adjustments especially in point of time.

2. Instinctive action.—The theory of impulse and instinct is the natural corollary to this account of neural integration. The connexion between reflexes and impulses or appetites is plainly very close indeed, and instincts are the great racial patterns of co-ordinated action. The moor-hen has a diving 'set' in its muscles when it is little

1 *Visuddhi Magga* (*PTS*), 1920, p. 198.
2 *JRAS*, 1894, p. 388; cf. also Mrs. Rhys Davids, *Buddhism*, p. 98, and art. PAṬICCA-SAMUPPĀDA, vol. ix. p. 674.

more than a fledgling, and it dives as soon as cause and opportunity offer.

The question how far human action or the action of the higher animals is fundamentally instinctive is still hotly debated, but the debate tends to become verbal since the partisans of the instincts insist upon the indefinite pliability of these responses, while their opponents try to narrow instincts down to mere racial routine. The other point in the dispute is the relation of nature to nurture, and this also is a thorny topic which a wise man leaves alone. It is clear, however, that most human activities, whether or not they have become habitual, are acquired in individual experience (even if they are grafted upon a primitive instinctive root), and all these problems are highly speculative in comparison with the fact of the reflective adaptation of human beings to their circumstances. Again, there is another reason why the analysis of will suffers when psychologists devote themselves exclusively to speculative theories concerning the instincts. However important the instincts may be, and however closely allied with normal human perception and action, the consciousness in instinctive behaviour does not differ in kind from acquired or from reflective consciousness, and its principal features cannot be discerned so readily at the instinctive level of consciousness as at others. It is best, therefore, to try to give a direct psychological analysis of the consciousness in ordinary human action.

3. Ideo-motor theory.—Probably the simplest type of conscious action is that which is called ideo-motor. This occurs when the thought of a movement leads directly (so far as consciousness is concerned) to the execution of the movement. A great many movements need no other explanation. Those who take the injunction 'Kill that fly!' seriously begin hostilities as soon as they see the fly; and 'Eight o'clock and time to get up' is frequently a sufficient and the only mental prelude to getting out of bed in the morning.

These instances show that the idea of a movement tends of itself to the execution of the movement, and some psychologists, generalizing somewhat hastily, have concluded that all voluntary action is ideo-motor and nothing else. According to this theory, we learn from impulse, instinct, imitation, and random muscular play what movements can be executed. The immediate antecedent of any movement which is consciously directed, however, is the temporary dominance in our consciousness of the idea of that movement; and this idea is always the cause of the movement.

This theory is plausible because the idea of a future action is a *sine qua non* of voluntary action of any kind, but there are serious objections to it. (1) Our ideas of movement are usually suffused with feeling and tense with conscious endeavour. It is a mistake, therefore, to suppose that these feelings, desires, and strivings do not play their part as directly and as effectually as the bare idea of movement. (2) There is universal testimony to prove that much of our action does not seem to be merely ideo-motor. The bare idea of movement is sometimes merely an idea. We may have to strive most resolutely to bring ourselves to the point of acting—*i.e.*, we may have to reinforce the idea by endeavouring after its end. And sometimes we have to choose between several conflicting ideas of movement simultaneously present to minds.

Since the ideo-motor theory does not dispute these facts (it would not be worth considering if it did), it has to provide an alternative explanation, and so it maintains that striving or choice in these cases secures the temporary dominance of some particular idea of movement. The only possible cause of conscious action, according to this way of it, is a man's temporary single-mindedness towards the idea of the action, and his temporary oblivion of all else. Choice or striving influences the action at second remove, and causes the temporary dominance of the idea of the action.

This theory is unnecessarily complicated. We seem to ourselves to choose this or that, and not merely to attend to some idea of movement exclusively; and there is no good reason why this seeming should not be actuality. Again, the idea of our chosen course of action often does not seem to be the only alternative before the mind either at the time of choosing or afterwards, even granting that we ought to stick to our plan, after we have adopted it, on pain of inefficiency or Hamlet-like vacillation. It is false in fact, therefore, that conscious action is always preceded by this exclusive possession of consciousness. Moreover, this theory is just an attempt to save the 'strongest motive' theory with as little violence as may be. It is assumed that action must be due to the 'strongest motive'; and therefore the motive which immediately precedes the action is assumed to be either predominant or else the only one present; but this argument is circular, since there is no way of telling which motive is the strongest except by saying, *après coup*, that it was *the* motive of the action which followed in fact. Again, even if this theory could account for most specific voluntary movements, it would still be too narrow for voluntary choice as a whole. When a barrister resolves to make out a case for his client, or a journalist tries to discover the gist of Einstein's theory or of Ludendorff's influence, the movements they make in the way of speaking, writing, or travel are quite subsidiary in importance. And the ideo-motor theory simply omits these cases. Movements are seldom chosen for their own sakes. They are usually chosen because they are means to an end, and the ideo-motor theory is so preoccupied with the means that it neglects the end altogether.

This theory, indeed, is too intellectual; for it resolves action into the automatic effect of mere thinking, and rejects the primary and direct influence of interest, passion, and striving. This mistake is not uncommon; it permeates, *e.g.*, the Benthamite theory of psychological hedonism (*q.v.*). To say, with Mill,[1] that 'happiness is the sole end of human action' may mean many things. It might mean, *e.g.*, that no one, on reflexion, judges anything to be good except his own happiness; and in that case the theory would have no bearing on unreflective action. It might also mean that the anticipation of pleasure is the only possible motive for action. This form of the argument is required as a premiss in many of the utilitarian arguments, and it is preposterously false. In impulsive or instinctive action, *e.g.*, the impulse comes first, and the gratification follows; and the baulked dispositions which are the root of psychasthenia (in nine cases out of ten) must exist before there is pain in the baulking of them.

4. Reason and will.—On the other hand, many theories are not intellectual enough, for they take volition to be an affair of impulse or desire, and they leave no place for reflexion, except the recognition of means and the discovery of bad reasons for some sentimental or impulsive *parti pris*. Most of the modern theories of this type, it is

[1] Bentham's argument (*Introd. to the Principles of Morals and Legislation*, ch. i. § 1) is even more explicitly fallacious. 'Nature,' he says, 'has placed mankind under the governance of two sovereign masters, pain and pleasure. It is for them alone to point out what we ought to do, as well as to determine what we shall do. On the one hand the standard of right and wrong, on the other the chain of causes and effects are fastened to their throne. They govern us in all we do, in all we say, in all we think: every effort we can make to throw off our subjection, will serve but to demonstrate and confirm it.'

true, do not seem to have descended *in linea recta* from Hume, but Hume gave what is still the clearest and the most concise expression of them.

Reason, he says, can have no original influence on the will, for reason is either the abstract demonstration of relationships or else the discovery of causes and effects. The will, however, has to do with sensible realities and not with abstract relationships; and the discovery of causes and effects cannot concern us in the least if we are indifferent to them. Hume assumes in the next place that the difference between interest and indifference is wholly identical with the presence or absence of passion, and then he argues with perfect logic that 'since reason alone can never produce any action, or give rise to volition, I infer, that the same faculty is as incapable of preventing volition, or of disputing the preference with any action or emotion.'[1] He concludes that the so-called contrast between reason and passion is really the battle between calm emotions and sudden, tempestuous ones.

There is a double fallacy in this argument. (1) Even if reason were restricted to the means to action, and if the knowledge of these causes and effects were indifferent without emotion, it would not follow that reason was ineffective when allied with emotion. (2) Reason (unless it is robbed of this function by an arbitrary definition) can discriminate the values of ends as well as ascertain the means to them. The values that are important for action, to be sure, are those which are felt with emotion and followed with conviction, but this fact does not imply that the intellectual recognition of these values is of no account.

This consequence would not follow even if all these values were themselves emotions. That, however, is not the case. The principal values which we admit to be intrinsically good are happiness, social intercourse, knowledge, beauty, and righteousness; and perhaps also the bearers of these values—Plato, who had the knowledge, Keats, who was touched with the beauty, Cato, who did what was right, and the greyhound which leaps with the joy of coursing. Most of these values are not emotions, though all are felt with emotion. And there is another point. A man's emotion is his own; and, if nothing but emotion could touch his will, the happiness of others or the honour of his country could not influence him directly. In fact, however, we do not merely judge intellectually that another's good is worth as much as ours, but we frequently choose to sacrifice our own good to his. This personal sacrifice, it is true, is sometimes superficial only. That occurs when we choose a less obvious instead of a more commonplace personal satisfaction; and the existence of non-rational but altruistic impulses and emotions certainly lessens the gap between this theory and the facts. But often we have to accept the truth that a man may sacrifice ease, culture, and leisure to undertake work which he loathes, though he knows that his own loss is certain. For the good, he thinks, constrains him.

5. Analysis of voluntary action.—We may now analyse deliberate voluntary action. Action of this kind implies knowledge of the means which are needed, choice between alternative ends, and the belief that *we* can achieve, or help to achieve, the end by adopting the means. The end, to be sure, may not be wholly attainable by us, but we believe, in that case, that we can contribute towards its attainment; and, for the rest, the thought of *will* implies the thought of *can*. No one deliberately chooses anything which he knows to be utterly out of his reach. We choose between alternatives which we believe are within our power, and our choice, in the end, is a choice between conflicting values.

The difficulties of voluntary choice are due to the false perspective which nearer values may have in comparison with more remote ones, to preoccupation with our own personal welfare and our consequent blindness towards the claims of other people, to our lack of acquaintance with many attainable values, to our ignorance concerning the means which are necessary in fact, to the difficulty of knowing for certain which consequences are most probable, to the doubt whether some means could ever justify some ends, and so on. This subject is too wide to be treated adequately here, even in outline. And there are other complications.

(1) We usually have too little time for mature reflexion. Most of our deliberations are cut short because life is brief and the need for action clamant. We have to distinguish, therefore, between voluntary action and deliberate reflective action. Voluntary action is the genus of which deliberate choice is the species. It implies the adoption of an end (the fact of 'consent') together with belief in the possibility of attaining the end; but there need not be choice between alternatives, since we may be too much pressed for time to take account of more than the first expedient that occurs to us, and our belief may be little more than a vague expectation that something may be done on the lines we have adopted.

(2) The analysis given above was restricted to the deliberate choice of a single course of action, but will is a subtler thing than this, with a wider net. When we speak of a formed will, we mean the whole character of a man so far as it can be expressed in action. A man's habits of choice pertain to his will as well as his choice on this or the other occasion, and so do his capacities and his general aims. The formed or stable will, therefore, has to be examined very carefully in connexion with physiological and instinctive dispositions on the one hand and with conscious personality on the other, and the ramifications extend very far. On the other hand, there are limits set to it through the fact of personality and its 'tunicle' the body (to use Berkeley's phrase). We have no acquaintance with any will that is superpersonal, and, in particular, we are not acquainted with any *volonté générale*. The will of society is not *a* will any more than the spirit of the times is *a* mind. The general will, so called, means (*a*) that the majority of the members of a community may resolve, or act as if they had resolved, to pursue a common end which each of them furthers in his own way; and (*b*) that each member must take account of the other members in considering the ends to be attained and the means of attaining them. More than that it should not mean.

6. Voluntarism.—The most interesting questions arising out of the theory of will are voluntarism, or the metaphysical theory that the will is sovereign over the self or the world, and the perennial problem of the freedom of the will.[1] While voluntarism has many varieties, its main contention is either that knowledge is a phase of willing (or, perhaps, subordinate to it) or else that will is the *causa essendi* of all existing things. Knowing, we are told, must be only a phase of willing, because all speculative activities are either virtual actions or else merely delayed reactions. The psychology of development, *e.g.*, shows that knowledge is a kind of virtual action. *Am Anfang war die That.* Man's earliest and most fundamental business is just to adapt himself to his environment, and so his earliest and most important knowledge is only a retainer to this fundamental need. And it is claimed that knowledge never outgrows its small-clothes. The life of nations, broadly speaking, is the application of their knowledge in the way of machinery, armaments, navigation, and government for the ultimate purpose of maintaining human subsistence as

[1] *Treatise of Human Nature*, bk. ii. pt. iii. § 3.

[1] See art. FREE WILL.

agreeably as possible on a large social scale. The theoretical adventures of the intellect are practical in their germ and in their fruit, and belief is either action or readiness for action.

This line of argument is obviously inconclusive. Even if it be granted that man, at the beginning, had to use all his wits to keep alive, and that most of the able-bodied members of a community have still, in a way, to co-operate for this purpose, there is plainly a huge lacuna between the premisses of this argument and its conclusion. For, even if much knowledge has to be given to the necessities of action, it does not follow that all must be given. The argument, indeed, is quite consistent with the belief that knowledge, originally a servant, may become a master and reign in its own right, or that it is possible, in an ordinary human community, for many people to spend their lives in the pursuit of knowledge for its own sake, and for all members of the community to do so at some times. And the facts seem to support this hypothesis. Those who maintain that all knowledge is only a preparation for action may be invited to say what preparation for action is implied in my knowledge that Bolingbroke wore a wig, or that Sophocles was a greater poet than Dryden, and to explain why gossipy reminiscences or intellectual curiosity concerning Chinese puzzles (to mention trivial instances only) must be 'virtual actions.' They may also be reminded that practical men need not act the worse because their information is accurate. True belief is the most useful guide to action, but some truths do not concern action directly, and it is only a quibble to say that any connexion with action, however remote, is the same thing as 'virtual action.'

Similar arguments apply to the theory that all speculation is delayed reaction and nothing else. It is true, no doubt, that there cannot be deliberate reflective choice without delay in reaction, and that deliberation is a speculative activity. But controversies with circle-squarers, *e.g.*, are not merely delayed reactions; and it is a fallacy to argue either that all speculation is only delayed reaction because some speculations imply delayed reactions, or that the speculative activities which may occur during certain delayed reactions are themselves *only* delayed reactions.

The theory that knowledge is subordinate to will is based either on psychological description or on metaphysical grounds. In the former case it is argued, as a matter of psychological fact, that knowledge is only the attempt to discover ways and means for satisfying impulses. It is sufficient to reply to this argument that these impulses may include curiosity and disinterested impulses towards knowledge for its own sake, and that, even if impulses are always the primary *causes* of knowledge, it does not follow that the effect is subordinate to the cause.

The metaphysical argument is a *non sequitur* of the same type. It maintains that effects are always subordinate to their conditions, and that will is the cause of all mental process including every piece of knowing. This principle, as we have seen, is false, and, apart from that, the premiss of the argument is highly dubious. Will, in the sense of striving or of deliberate choice, is not the sole cause of mental process in any intelligible sense. We have no right to exclude any antecedent from the list of causes of any effect if this antecedent is always present in fact, and if it always seems to play its part along with the other antecedents. And knowledge and feeling are antecedents of any mental process just as plainly as will is. This metaphysical argument, in a word, finds no support in the psychological phenomenon of will.

It may be argued, to be sure, that the scholastic maxim *Operari sequitur esse* is false, or that 'function always determines structure'; and views of this kind (usually with more enthusiasm than knowledge) may even claim kinship with certain modern theories of physics. These arguments are irrelevant, however, because voluntarism is meaningless unless it is based on the psychological phenomenon of willing. The will, as we experience it, is at best only a useful analogy for such theories; and those pluralisms which maintain that the *conatus* (or the desires and appetitions) of every existing thing is its *causa essendi* cannot claim more than a metaphorical support from the facts of will, as we find them. A spiritualistic pluralism of this kind[1] may be true in fact; and voluntarism, possibly, may be the least inept name for it, but it is not a logical consequence from the relation of willing to personality, and it becomes nothing but conjecture when this vague psychological analogy is extended to unconscious things.

LITERATURE.—On the physiology of willing: C. S. Sherrington, *The Integrative Action of the Nervous System*, London, 1906.

On ideo-motor action: W. James, *The Principles of Psychology*, London, 1891, many subsequent edd., vol. ii. ch. xxvi.; G. F. Stout, *A Manual of Psychology*[3], do. 1913, bk. i. ch. ii. § 2.

On psychological hedonism: Bentham, *Introd. to the Principles of Morals and Legislation*, London, 1789 (*Works*, ed. J. Bowring, Edinburgh, 1838-43, vol. i. ch. i.); J. S. Mill, *Utilitarianism*, ch. iv. (any ed.).

On the influence of reason and emotion in willing: Hume, *Treatise of Human Nature* (ed. T. H. Green and T. H. Grose, new ed., 2 vols., London, 1888, or T. Selby-Bigge, Oxford, 1888), bk. ii. pt. iii. § 3; W. McDougall, *An Introd. to Social Psychology*[7], London, 1913, ch. i. f.; Bertrand Russell, *Principles of Social Reconstruction*, do. 1916, ch. i.; Graham Wallas, *The Great Society: a Psychological Analysis*, do. 1914, ch. iii.

On the analysis of choice: Aristotle, *Nicomachean Ethics*, bk. iii. ch. ii.

On voluntarism: Schopenhauer, *Die Welt als Wille und Vorstellung* (any ed.), and the works, *e.g.*, of Fichte or Bergson.

WIND, WIND-GODS.—See AIR AND GODS OF THE AIR.

WINGS (Greek and Roman).—Wings, as an attribute of animals to whom they do not properly belong, were borrowed by the Greeks from Oriental art, mostly that of Mesopotamia.[2] They probably appeared first on composite animals into which the bird form entered as an element, such as the gryphon; but they seem to have been applied almost indiscriminately to quadruped and even human forms as symbolic of divine strength and swiftness. It is doubtful, however, whether this symbolism was what attracted the early Greeks; more probably it was the decorative value of wings, as seen in Oriental carvings and woven stuffs, that first appealed to the Greek artistic sense, though they doubtless were given a symbolic meaning in later Greek art.

In the art of Crete and Mycenæ we find both gryphons and sphinxes with wings, but we have no means of judging whether these had any meaning or were merely borrowed as elements of decoration; the fact that the sphinx is female and winged suffices to show that it came from Mesopotamia and not from Egypt. But the frequent appearance of winged creatures is conspicuous in the great influx of Eastern influence, at first through the medium of the Phœnicians and later, more directly, in the 'Orientalizing' Greek vases and in decorative carvings and reliefs of a similar period. On the sub-Mycenæan vases of Cyprus are various winged animals, including centaurs (a winged centaur appears in Mesopotamia about 1200 B.C.). On the later Orientalizing pottery from Rhodes, Asia Minor, and Corinth

[1] See art. PLURALISM, § 2.

[2] See art. ART (Greek and Roman), § 3 f.

the commonest winged forms, other than birds, are the gryphon, the sphinx, human-headed birds, and human beings; winged horses are also found, especially in chariots of the gods, on Melian and other vases, and winged horses, sea-horses, boars, and other animals, such as the gryphon and sphinx, are common on the so-called 'island gems' and on early coins.

In many of these cases it is evident that the decorative value of the wings, as helping the design to fill a given field, has been paramount; but there are other examples, in which a symbolic meaning may be inferred, and where such winged forms have become the accepted type of characteristic creations of Greek myth. In most of these instances, however, the types were not invented or composed by the Greek artist to express the idea of the myth, but were adopted from foreign or borrowed forms. Thus there is no evidence that the Sirens (*q.v.*) were thought of by Homer and his contemporaries in the form assigned to them by later art; either a fancied appropriateness or a chance coincidence may sometimes have led to such identifications. The type of the human-headed bird was not, however, used only for the Sirens; it occurs constantly on tombs or in connexion with them, and appears to represent a death-dæmon. The best known instance is on the misnamed 'Harpy monument,' which, though not Greek but Lycian, shows evident affinity with Greek ideas. Here the figures in question have not only human heads and breasts, but also human arms, as well as birds' legs and talons, both of which they use to carry off the souls of the dead. Thus they show the same unnatural reduplication of limbs which we find in other winged creatures, and which the human-headed bird sometimes escapes. The wings, here as in human or quadruped winged forms, appear to grow from the shoulder-blades, and yet to work independently of the arms. Such an inorganic composition seems to confirm the view that the wings, except where they belong properly to the bird form, are borrowed from an art in which they were purely symbolic. The funereal connexion in the case of the Siren may perhaps be explained by Egyptian influence, since the human-headed bird is used in Egypt as a symbol of the soul. It is often found as the crown of a tombstone in Athens.

It is not certain that the wonder-horse, Pegasus, was at first thought of as having wings; he appears without them on an early relief; but he early adopted the winged form in which he has been familiar to all later art. Gryphons have a place in myth, since they fought with the Arimaspi in the far North; though they have beaks, their body is that of a quadruped rather than a bird, and their wings are consequently as much out of place as on a horse or lion.

What is, however, most characteristic of the Greek application of wings is their addition to the human form. This also appears first in borrowed forms, such as that of the Oriental Artemis; a similar form is that of the Gorgon, whose hideous grimacing face is set in a human body with wings; here again we have no evidence that the 'head of the terrible monster, the Gorgon,'[1] was thought of in this form by the poet of the *Odyssey*. Another shape akin to the Gorgon is the Harpy. This sometimes seems to be a death-dæmon, though the bird-like figures on the Harpy tomb are probably wrongly named. On early vases Harpies appear in completely human form, winged, and sometimes with talons or claw-like hands; there is no doubt as to identification, since the name is written beside them. These Harpies are sometimes interpreted as maleficent wind-dæmons; and this is consistent with the tale of their being chased away by the Boreads, the sons of the North Wind. Wind-gods generally appear as winged human figures, and the small winged figures that are common on early vases—*e.g.*, those of Cyrene—are probably to be interpreted thus. Boreas himself, who is represented on Attic vases and elsewhere as carrying off Oreithyia, appears as a winged, bearded man, sometimes with a mane of feathers for hair and beard.

It is probable that in early Greek art such winged figures are used with many different meanings; but they come to be differentiated into two main types of constant occurrence—the winged nude male figure or Eros, and the winged draped female figure or Nike. The sculptor Archermos of Chios is said to have been the first to represent Nike with wings, and the statue in which he did this has been discovered in Delos; it represents a female figure in rapid flight, with wings not only on the shoulders, but also on the ankles. Floating figures of winged Victories, as symbolical of victory either in war or in athletic contests, are extremely common throughout Greek and Roman art. Nike was placed on the outstretched right hand of the colossal gold and ivory statues of Zeus and Athene at Olympia and Athens, by Phidias. Eros in earlier Greek art always appears as a youth of fully-grown proportions, though sometimes of diminutive size. In the Hellenistic and Roman ages he becomes the baby Cupid familiar to Renaissance and modern art, and his wings are correspondingly small. Iris, as the messenger of the gods, is usually winged, and so is hardly to be distinguished from Nike, apart from her attribute of the rainbow.

A different series of winged figures, usually diminutive, represent the souls of the dead; as such they are sometimes depicted on Attic vases as hovering about the tomb. Similarly, in the weighing of the Keres of two warriors by the gods—as of Achilles and Hector in the *Iliad*—the usual representation is of two minute winged figures placed in the scales. Homer describes them as *δύο κῆρε . . . θανάτοιο*,[1] and hence it seems doubtful whether the two figures are to be regarded as the souls or lives of the heroes or rather their fates of death. But the resemblance to the little souls on the vases is striking. Keres (*q.v.*) seems to vary in meaning between death-dæmons, who seem usually thought of as horrible, though not necessarily winged, and ghosts or souls of the dead, who almost always are winged. But the Psyche of later times, who is associated with Eros and has butterfly wings—sometimes even takes the shape of a butterfly—is a creation of later allegory. Death (Thanatos) often appears as a winged figure in art; on Attic funeral vases he, with his brother Sleep, often bears the deceased to the tomb. Sleep is similar to him, but beardless, while he is bearded; and both usually have similar wings growing from their shoulders. But in the beautiful figure of Sleep of the Praxitelean age the god has only a small pair of wings growing from his temples: a similar position for the wings is seen in later sentimental versions of Medusa, who has exchanged the horror of the Gorgon for a death-like beauty, and occasionally in other figures.

A variation on wings actually growing from a part of the body, head, or limbs is seen in wings that can be attached to some article of dress, and so put on and off. The most familiar example is offered by the winged sandals of Hermes, which he lends to Perseus; the notion of lending wings to the feet is also seen in the earliest Nike, and in later allegorical figures such as Kairos (Occasion). Hermes sometimes wears also wings attached to

[1] *Od.* xi. 634.

[1] *Il.* xxii. 210.

his cap; the resemblance to wings on Scandinavian helmets is probably accidental. Wings are sometimes attached to other objects—*e.g.*, to the tripod of Apollo when he travels on it,[1] or to the chariot on which Triptolemus carries the gift of corn over the earth, or to that in which Medea escapes after her revenge on Jason. Other gods also have means of swift flight, as exemplified by Athene, when she describes how she came πτερῶν ἄτερ ῥοιβδοῦσα κόλπον αἰγίδος.[2]

It is with much the same associations that gods are often described as coming like birds or even taking the shape of birds. The fatal attempt of Dædalus and Icarus to fly with mechanical wings is probably to be regarded as similar magic. The desires of mankind in this direction are wittily parodied in Aristophanes' *Birds*.

In Roman art the types handed down from the Greek and Hellenistic periods frequently recur, but without any essential additions or difference. Victories, both in the round and in relief, are especially common, and are chiefly interesting as supplying the type which was later to be adopted—with change or rather absence of sex—for the angel of Christian art.

So far, though the position of wings has been noted, nothing has been said as to their shape. The wings of early decorative types are almost always curved back at the end, in a manner which, if not quite unnatural, is at least greatly exaggerated. This is a characteristic which is also found among the winged creatures of Oriental art, and is borrowed from them, but is emphasized for decorative reasons in archaic Greek art. When wings came to be applied freely by Greek artists to various figures, human and other, they naturally supplemented and corrected the conventional forms by their own observation, using especially the wings of large birds as their models, often probably those of the eagle. The wings are frequently outstretched as in flight; when lowered, they do not lie folded close to the body, as in the case of a bird, but usually project at right angles behind the back of the figure. Smaller wings show many varieties; thus, according to H. Brunn,[3] the wings on the temples of the head of Sleep are those of a nighthawk. Such variety of imagination was readily suggested by the subjects themselves.

LITERATURE.—J. Langbehn, *Flügelgestalten der ältesten griech. Kunst*, Munich, 1881; G. Weicker, *Der Seelenvogel in der alten Litt. und Kunst*, Leipzig, 1902; articles on subjects quoted above in Roscher and Daremberg-Saglio—*e.g.*, 'Sphinx,' 'Harpyia,' 'Nike,' 'Eros,' 'Keres.'

E. A. GARDNER.

WISDOM.—As distinguished from the reasoned, systematic view of the world and man which is the conscious aim of philosophy (*q.v.*), wisdom may be defined as the direct, practical insight into the meaning and purpose of things that comes to 'shrewd, penetrating, and observant minds, from their own experience of life, and their daily commerce with the world.'[4] It is the fruit not so much of speculation as of native sagacity and wit. Consequently, while philosophy appeals only to the intellectual *élites*, wisdom appeals to all who are interested in life and have understanding enough to appreciate a word of truth well spoken. In spite of this distinction, however, the two are closely allied. The knowledge of life reached intuitively by wisdom is the raw material out of which philosophical systems are evolved. And in its bolder flights wisdom moves in the atmosphere of philosophy.

1. Proverbial wisdom.—The beginnings of wisdom are found embodied in the terse, sententious sayings known as proverbs (*q.v.*). The art of proverb-making is universal. It flourishes among the rudest of tribes as well as among the more brilliantly endowed peoples of India, Greece, and Palestine. Collections of high value—in substance often much alike—come to us from such widely separated sources as the North American Indians and Negroes and the natives of Australasia and West Africa. But among the most interesting, not only for their intrinsic merit, but also for the light they shed on the development of Semitic wisdom, are those of the Arabs, as they are preserved for us in the great thesaurus of al-Maidānī († A.D. 1124) and still thrown out with astonishing ease by the sharp-edged Bedouin tongue. The simplest are brief similitudes (*amthâl*), like 'bolder in onset than 'Amr b. Kulthûm,' 'faster friends than the two palm-trees of Ḥulwan,' and 'more unlucky than the hamstringer of the she-camel' (*Qudar al-Aḥmar*). But many are finely-polished epigrams on human life, distinguished alike for their literary grace and for the keenness of their moral perception. Though in general the motive is enlightened self-interest, they are by no means forgetful of the nobler qualities of character. Especially do they delight in extolling the virtues of contentment, cheerfulness, truth, self-respect, restraint in word and action, perseverance, kindness, friendship, neighbourliness, hospitality, and love of home and country. In all this they are a mirror of Arabian life at its best.

2. Egyptian wisdom.—While the proverbial lore of Arabia brings us close to the running fountain of Semitic wisdom, the Egyptian sages had at a far earlier date evolved a gnomic literature, in the shape of books of moral precept or instruction (*seb'oyet*), full of sound sense, and sometimes even high moral excellence. The earliest of these books, the *Wisdom of Imhotep*, chief architect of Zoser, founder of the IIIrd dynasty, is known to us only from allusions in later literature; but two products of the IIIrd and Vth dynasties, the *Wisdom of Kegemne* and the *Wisdom of Ptah-hotep*, not only enjoyed wide popularity in their own day, but have been preserved in MSS of the Middle Kingdom. The former is a simple treatise on deportment; the latter covers a much wider range, offering 'maxims of beautiful speech' (as the author himself phrases it) on such subjects as diligence, courtesy, faithfulness to trusts, humility, self-restraint, purity, loyalty to friends, love of wife and family, kindness to dependents. Of similar tenor, though richer in content, and fresher and more artistic in expression, are the later *Maxims of Ani* (from the XXIst dynasty), urging not merely the moral virtues of purity, temperance, modesty of speech, a gracious demeanour alike at home, in the street, and in social fellowship, kindness, consideration for the poor and aged, reverence towards parents, but also the strictly religious obligations of chaste and loving worship, prayer, praise, and sacrifice.

'Celebrate thou the festival of thy God, and repeat the celebration thereof in its appointed season. Bear testimony [to Him] after thy offering.'

'The sanctuary of God abhorreth noisy demonstrations. Pray thou with a loving heart, and let thy words be secret. Do this, and He will do thy business for thee. He will hearken unto thy words, and He will receive thy offering.'

'Devote thyself to God, take heed to thyself daily for the sake of God, and let to-morrow be as to-day. Work thou [for Him]. God seeth him that worketh for Him, and He esteemeth lightly the man who esteemeth Him lightly.'[1]

Couched in a more cynical vein is the *Wisdom of Amenemhet I.*, founder of the XIIth dynasty, written shortly before his death (*c.* 1980 B.C.). Embittered by the rebellion of his subjects, he warns his son Sesostris against putting any con-

fidence in those around him. The only influence that really appeals to men is terror; so let him 'harden himself against all subordinates,' know neither friends nor intimates, 'wherein there is no end,' and guard himself well as he sleeps, 'for a man has no people in the day of evil.' Equally depressing are the *Lament of Khekheperre-Sonbu*, priest of Heliopolis under Sesostris II. (1906–1887 B.C.), with its dismal picture of the corruptions of the time, the *Dialogue of a Misanthrope with his Soul*, ending in a wistful longing for death as the only release from evil, and the *Admonitions of Ipuwer*, the gloom of which, however, is relieved at the end by the vision of a righteous ruler, 'with no evil in his heart,' who goes about like a 'shepherd,' gathering together his scattered and 'fevered' herds. On a different key are the *Precepts of Duauf*, urging his son Pepi to diligence in learning, as the most 'beautiful' and honourable of callings, and the remarkable *Song of the Harper*, which finds the only consolation against the vanity and transience of life in the frank pursuit of pleasure.

'Give comfort to thy heart,
And let thy heart forget these things;
What is best for thee to do is
To follow thy heart's desire as long as thou livest.
Anoint thy head with scented unguents,
Let thine apparel be of byssus
Dipped in costly [perfumes],
In the veritable products (?) of the gods.

. . . . . .

Enjoy thyself more than thou hast ever done before,
And let not thy heart pine for lack of pleasure.

. . . . . .

Pursue thy heart's desire and thine own happiness.
Order thy surroundings on earth in such a way
That they may minister to the desire of thy heart;
[For] at length that day of lamentation shall come,
Wherein he whose heart is still shall not hear the lamentation.
Never shall cries of grief cause
To beat [again] the heart of a man who is in the grave.'[1]

3. Babylonian wisdom.—Thus far the cuneiform records have yielded little in the way of wisdom literature. In Rawlinson, II. p. 16, however, there is found an interesting bilingual tablet (Sumerian and Assyrian), containing a number of riddles, proverbs, and gnomic maxims, apparently but specimens of a class (selected for the training of scholars in 'the grammatical construction of short phrases'), and therefore evidence that in Babylonia also proverbial wisdom was the basis of more conscious reflexion on life and conduct. The following may be quoted as typical:

'The life of yesterday goeth on daily the same.'[2]
'Thou goest and takest the field [*i.e.* property] of thine enemy;
The enemy hath come and taken thy field.'[3]
'If the seed be not good, the stalk will not grow, nor will grain be produced.'[4]
'I am a young heifer, yoked with a mule;
On the wagon to which we are harnessed . . I bear the yoke.'[5]
'What man eateth when he is dead?
Why then should he toil when he is alive?'[6]
'In the case of incurable sickness and insatiable hunger, a box full of silver and a chest full of gold are powerless to restore the health and to satisfy the hunger.'[7]
'He who says, "O that I might have revenge, and more so!" draws from a well without water, pours from a skin that is empty.'[8]

The Epicurean tendency revealed in the Egyptian *Song of the Harper* finds expression also in a remarkable fragment from the Gilgameš epic;[9] while the high ethical and religious note we have heard in *Ptah-hotep* and *Ani* rings through the Wisdom Tablet[10] deciphered and translated by K. D. Macmillan.

'Their freedom [?] thou shalt not take away,
Thou shalt not tyrannically oppress them.
For this [or, he who acts thus], his god is angry with him:
It is not pleasing to Šamaš, he will requite him with evil.

Give food to eat, give wine to drink,
Seek the right, provide for and . . .
For this [or, he who acts thus], his god is pleased with him:
It is pleasing to Šamaš, he will requite him [with good].

. . . . . .

Thou shalt not slander, but speak kindly,
Thou shalt not speak evil, but show mercy.
Him who slanders and speaks evil,
With its recompense will Šamaš visit (?) his head.

Thou shalt not make large thy mouth, but guard thy lip;
In the time of thine anger thou shalt not speak at once.
If thou speakest quickly, thou wilt repent (?) afterward,
And in silence wilt thou sadden thy mind.

Daily present to thy god
Offering and prayer, appropriate to incense.
Before thy god mayest thou have a pure heart,
For that is appropriate to the deity.'[1]

Akin to the more pessimistic wisdom literature of Egypt is the *Lament of Tâbi-utul-ellil*,[2] in which the old king grieves over his own misfortunes and the general evil in the world. As for himself, he has sought consistently to honour God's name and follow His righteous ways.

'I myself took thought only for prayers and supplication.
Prayer was my rule, sacrifice my order,
The day of God's honouring was my heart's joy,
The day of following after the goddess was for me gain and riches. . . .
I taught my land to keep God's name;
To honour the name of the goddess I cautioned my people.'[3]

But how very differently from his deserts has God treated him.

'My house is become a prison for me,
In the chains of my flesh are my arms laid,
In my own bonds [?] are my feet cast.

. . . . . .

With a whip he has beaten me, not . . .
With a staff he has pierced me, the point was strong.
All day long doth follow the avenger,
In the middle of the night he lets me not breathe for a moment.'[4]

Both theme and language remind one of Job. But the *dénouement* is different. Whereas Job returns to a deeper, more personal faith in God, the Babylonian sage finds no help in god or goddess. God's ways are too inscrutable for man to rely on Him. The only hope is in the mercy of one's 'guardian angel'—the ancestral spirit of the family.

'But I knew the time, of all my family,
When among the guardian angels their divinity had mercy.'[5]

4. Chinese wisdom.—Passing eastward to China, we enter upon a larger field. The grave, practical temperament of the Chinese predisposed them to ethical reflexion. And the logical sharpness and balanced harmony of their speech made it a happy medium for sententious expression. The old classics, especially the *Shu King*, are rich in proverbial lore. Confucius and his grandson Tse-sse, Mencius (*q.v.*), and the Confucian school generally[6] are distinguished, not for originality or depth of thought, but for the terseness and point of their sayings as well as for the attractive grace of their personalities. Even the mystical and sceptical writers, like Lao-tse, Yang Chu, and Hui Shih, make their impression not so much by the reasoned compactness of their systems as by the beauty and force of their aphorisms. Chinese literature as a whole is 'seasoned with the salt' of proverbs. And the common people are not far inferior to their masters in the art. 'Chinamen may be almost said to think in proverbs.'[7] And instruc-

tion in proverbs is a main element in the education of the young.

The centre of interest throughout is the *Tao*—the true or normal way of life. Various qualities are singled out by the classical writers as essential to an all-round moral character. But these are reduced by Confucius to the five cardinal virtues of benevolence, righteousness, propriety, wisdom, and sincerity.[1] As a virtue, therefore, wisdom (*chih*) is moral rather than intellectual. It includes, no doubt, knowledge of men and their affairs, acquaintance with the rules of propriety, and the command of language, as the key to success in the world; but its chief concern is with matters of ethical conduct. The wise man (*tse*) is he who knows the principles of right living and is able to instruct his fellows in them. Still higher stands the sage or holy man (*shêng jên*), who not merely knows these principles, but conducts his life in perfect harmony with them and thus becomes the moral teacher and guide of the ages. Such a man is the constant subject of praise in the Chinese classics:

'Perfection of nature is characteristic of Heaven. To attain to that perfection belongs to man. He who possesses that perfection hits what is right without any effort, and apprehends what is true without any exercise of thought;—he is the sage who naturally and easily embodies the right way. He who attains to perfection is he who chooses what is good, and firmly holds it fast.'[2] 'Therefore the movements of the superior man [sage] mark out for ages the path for all under heaven; his actions are the law for ages for all under heaven; and his words are the pattern for ages for all under heaven. Those who are far from him look longingly for him, and those who are near are never weary of him.'[3]

'The superior man [sage] does not, even for the space of a single meal, act contrary to virtue. In moments of haste, he cleaves to it. In seasons of danger, he cleaves to it.'[4] He fulfils completely the rules of a virtuous life: 'when you go abroad, to behave to every one as if you were receiving a great guest; to employ the people as if you were assisting at a great sacrifice; not to do to others as you would not wish done to yourself; to have no murmuring against you in the country, and none in the family.'[5]

As the personal embodiment of the mean—*i.e.* the harmony of all the virtues—'he is all-embracing like heaven, deep and active as a fountain.' 'He is seen, and the people all reverence him; he speaks, and the people all believe him; he acts, and the people are all pleased with him.'[6]

'A man who commands our liking is what is called good. He whose goodness is part of himself is what is called a real man. He whose goodness is accumulated in full measure is called a beautiful man. He whose completed goodness is brightly displayed is called a great man. When this great man exercises a transforming influence [over others], he is what is called a sage.'[7]

On the more philosophical developments of Chinese wisdom see artt. MYSTICISM (Chinese), PHILOSOPHY (Chinese).

5. **Indian wisdom.**—The wisdom of the Semitic and Turanian races we have found to be predominantly practical; that of the higher Indo-European peoples is as distinctively intellectual. This underlying quality of Indian wisdom is suggested from the outset in the name Veda, 'knowledge,' applied to its classical literature; and bright foregleams of its future triumphs in speculative thought appear even in the *Rigveda*, with its questionings as to the 'wood' and the 'tree' from which were fashioned 'the earth and the heaven,'[8] and its bold theories of the evolution of *sat*, the existent, from *asat*, the non-existent.[9] At the same time, the poets of the *Rigveda* are not lost in the empyrean. They have a true feeling for human life, both in its dignity and in its weakness, and clothe this in sententious sayings which are worthy of comparison with the best in other literatures. Some are mildly humorous, such as the song on the pursuit of gain,[1] others pathetic, like the fine *Lament of the Gambler*,[2] still others cynical, especially those that moralize on women and their ways.[3] But others strike a high note—*e.g.*, the hymn in praise of wise speech,[4] and that on generosity:

'Who has the power should give unto the needy.
Regarding well the course of life hereafter:
Fortune, like the chariot wheels revolving,
Now to one man comes nigh, now to another.

Ploughing the soil, the share produces nurture;
He who bestirs his feet performs his journey;
A priest who speaks earns more than one who's silent;
A friend who gives is better than the niggard.'[5]

In the *Upaniṣads* and the fully developed Vedantic system[6] the incipient gnosticism of the Vedic poets reaches its climax. The *summum bonum* is union with Brahman, attained by the *jñāna-mārga*, 'way of knowledge,' though on the higher planes even knowledge is dispensed with, and the individual soul with all its activities is merged in the tideless ocean of the unknown and unknowable. The same intellectualism pervades the other orthodox systems[7] as well as the heresies of Jainism and Buddhism. Salvation is won by *vidyā* (Pāli *vijja*), *jñāna*, or *prajña* (Pāli *paññā*), knowledge of the real, *bodhi*, enlightenment (as distinguished from *avidyā*, ignorance, *i.e.* mere empirical knowledge, *māyā*, illusion, delusion). But for the ordinary man this way of salvation is too high to attain to. Thus we find a lower way offered him—the *karma-mārga*, 'way of works,' or salvation through sacrifice and moral conduct. The choicest expression is given to this 'way' in the later dramas and epics, notably the *Mahābhārata* and the *Rāmāyana* (*qq.v.*), the former of which is 'an inexhaustible mine of proverbial philosophy'[8]—and in the *nīti*, or wisdom literature, which corresponds very closely to the gnomic poetry of Greece. The outstanding examples of *nīti*—the *Pañchatantra* and *Hitopadeśa*—are manuals of instruction for rulers. But others, both Sanskrit and vernacular, are written for the people. With these may be classed the ethical sections of the *Bhagavad-Gītā* (*q.v.*), and the beautiful catena of Buddhist aphorisms entitled the *Dhammapada*, 'Pathway of Virtue.' A few examples of this wisdom may be given:

'To injure none, by thought or word or deed,
To give to others, and be kind to all—
This is the constant duty of the good.'[9]

'High-minded men delight in doing good,
Without a thought of their own interest;
When they confer a benefit on others,
They reckon not on favours in return.'[10]

'Hear thou a summary of righteousness,
And ponder well the maxim: Never do
To other persons what would pain thyself.'[11]

'A man of truest wisdom will resign
His wealth, and e'en his life, for good of others;
Better abandon life in a good cause,
When death in any case is sure to happen.'[12]

'The good show pity even to the worthless,
[As] the moon irradiates the meanest hovel.'[13]

'Act then and do thine own appointed task,
In every action my [*i.e.* Kṛṣṇa's] assistance ask;
Do all with heart and soul absorbed in me,
So shalt thou gain thine end and be from trouble free.'[14]

'Like a beautiful flower, full of colour but without scent, are the fine but fruitless words of him who does not act accord-

ingly. But like a beautiful flower, full of colour and full of scent, are the fine and fruitful words of him who acts accordingly.'[1]

'Do not have evil-doers for friends, do not have low people for friends: have virtuous people for friends, have for friends the best of men.'[2]

'Let no man forget his own duty for the sake of another's, however great; let a man, after he has discerned his own duty, be always attentive to his duty.'[3]

'If anything is to be done, let a man do it, let him attack it vigorously! A careless pilgrim only scatters the dust of his passions more widely.'[4]

6. Greek wisdom.—Intellectualism is as definitely the quality of Greek wisdom as of Indian. Σοφία (from root *sap*, 'to know') is primarily 'cleverness' or 'skill' in any of the arts or professions of life—*e.g.*, carpentry,[5] medicine or surgery,[6] poetry,[7] music and singing.[8] Thence it comes to mean 'sagacity,' 'soundness of judgment,' 'intelligence,' 'prudence,' 'political tact,' and general 'knowledge of life,' sometimes with the sinister suggestion of 'shrewdness,' 'cunning,' 'craft.' Finally, it is applied to knowledge in the pure sense of the term—'learning,' 'science,' and 'philosophy' (as the harmony of all the sciences).

The beginnings of Greek wisdom are found in the outcrop of gnomic poetry associated with the names of Hesiod (*q.v.*), Mimnermus, Solon, Phocylides, and especially Theognis (*q.v.*), who crystallized the current morality in lucid phrases and thus became the favourite teachers of their people. As a whole, their wisdom is trite and prosaic, the keynotes being moderation (*μηδὲν ἄγαν*) and fitness of act to time and situation (*καιρὸν γνῶθι*), though they have all an instinct for justice as the fundamental element in every true life. Through most of them, also, runs the strain of melancholy which reaches such tragic depths in later Greek literature.[9] The Seven Wise Men did little more than point the maxims of the poets. Chilon's *γνῶθι σεαυτόν*, 'Know thyself,' however, lent the initial impulse to the great philosophical movement in Greece. Its first efforts, no doubt, were spent in rather futile cosmogonic speculations; but Pythagoras held fast to the idea 'that philosophy was above all "a way of life,"'[10] while the fragments of Heraclitus and Democritus (*qq.v.*) abound in moral maxims of considerable insight and aptness of expression. With the Sophists ([*q.v.*] *σοφισταί*, 'masters of wisdom') the interest reverted once for all to the problems of human life and conduct. In their persons the pursuit of wisdom—practically equivalent to intellectual culture as a preparation for private and public life[11]—became a conscious profession. The love of money, so often associated with professionalism, the critical and sceptical tendency of their teaching, the charge that they subordinated moral issues to expediency—that in fact they identified right with might[12]—all conspired to bring the later Sophists into disrepute as subverters of the popular faith and jugglers with the great spiritual realities of life. As a school, however, they deserve credit for having broken the crust of dead tradition, and cleared the way for the intellectual renaissance under Socrates and his disciples.

Socrates (*q.v.*) refused to be called either a *σοφός* or a *σοφιστής*. For him God alone was wise; and the man who claimed actual possession of wisdom was guilty of presumption, if not blasphemy.[13] Taking up, then, a term already used by Pythagoras, he described himself as *φιλόσοφος*, 'a lover of wisdom.' The wisdom he thus sought was essentially ethical: it turned on the principles of virtuous conduct. But with Socrates virtue was identical with knowledge. The enlightened understanding was *ipso facto* morally good character. On this basis Plato (*q.v.*) built up his majestic system of ethical idealism, with its four cardinal virtues—wisdom, courage, temperance, and justice. Of these, wisdom, or rationality, is the highest phase of virtue, for it inspires and regulates the whole inner life.[1] Though he recognizes the rationality of virtue in all men, Plato was conscious of a distinction between the virtue of the work-a-day world and that of the philosopher, who spends his days in the disinterested pursuit of truth.[2] The distinction thus vaguely apprehended by Plato was sharply drawn by Aristotle (*q.v.*). Practical wisdom, prudence, or good sense (*φρόνησις*) deals with matters of ordinary human interest; speculative wisdom, which is wisdom *par excellence* (*σοφία*), with the first principles of things. The former enables a man to apply the 'right rule' to every line of activity, whether professional, civic, or strictly moral; the latter leads, by a union of science and intuitive apprehension, to a knowledge of 'those things which are most precious in their nature.'[3]

The later schools also honoured wisdom as the root of all the virtues. For only through wisdom was man able either to know or to pursue the true end of life. Naturally their conceptions of wisdom differed according to their different ideals. For the Sceptics (*q.v.*) it meant the wholesome sense of the relativity of knowledge that permitted a man to suspend judgment where it was impossible to be certain; for the Epicureans (*q.v.*) the insight into life's conflicting motives and desires that set him free from false opinion and helped him to choose the sweetest and most lasting pleasures; for the Stoics (*q.v.*) the grasp of truth, both human and divine, that made him possessor of all virtue, freedom, and inward happiness. In their delineations of the 'wise man' the Stoic writers reach their highest level. He knows all there is to know, for he alone maintains that serenity of soul which is the spiritual presupposition of knowledge. He is thus fitted for every sphere of life. He is likewise free from fault or failing, weakness or passion. He is lord of his actions, as being responsible only to himself. He is truly rich, for he has all he needs. He is also happy at all times and under all circumstances, for the springs of his happiness are in himself.[4]

7. Hebrew wisdom.—In Israel we pass once more to the practical side of wisdom. חָכְמָה is used in a general sense of 'skill' in the ordinary affairs of life—*e.g.*, technical work (Ex 28^{3} etc.), spinning (Ex 35^{25}), war (Is 10^{13}), seamanship (Ps 107^{27}), and often of 'sound judgment' in administration (Gn $41^{33ff.}$, Dt 34^{9}, 1 K 3^{12} etc.)—but it comes to be applied peculiarly to 'moral principle.' The wise man is he who directs his life worthily and well. His wisdom is thus virtually equivalent to 'goodness.'[5] And the root of this wisdom lies in religion. The fool says in his heart, 'There is no God' (Ps 14^{1}); the wise man makes God the centre of all his thoughts, hopes, and endeavours. For him 'the fear of the Lord' is not only 'the beginning' (Pr 1^{7}), but also 'the crown' and 'the perfect fulness' of wisdom (Sir $1^{18ff.}$).

As elsewhere, the simplest expressions of Israelite wisdom are in the shape of proverbs. Originally pointed similes (*meshālîm*), like the Arabic *amthāl*—*e.g.*, 'Like Nimrod a mighty hunter before the

Lord' (Gn 10^9), or 'Like mother, like daughter' (Ezk 16^{44})—they gradually assume the perfect balance of thought and literary finish which we find in the couplets of Proverbs and Ben Sira. These two collections are a compendium of Hebrew wisdom at its purest. In clear-cut vignettes they portray the good man at his various tasks—as workman, citizen, neighbour, friend, husband, and father—and unveil the principles by which he conducts his life. The general motive may be eudæmonistic. Both collections show an undisguised appreciation of the good things of this world—its prizes, honours, riches, and pleasures—and direct men to the best way of winning these. Nevertheless, the moral tone is throughout honest and true. Righteousness is the first concern. Only as men follow after righteousness do they reach prosperity. In the emphasis thus laid on righteousness the proverbs of Israel outshine all other prudential literature. And at their higher levels they draw very near to the standard of Christ.

With this growing refinement in the art of proverbs there developed in Israel also a more professional interest in wisdom. On the pages of the greater prophets 'the wise' appear as a separate gild of spiritual advisers, whose 'counsel' ranked in influence with the *tôrāh* of the priests and the 'word' of the prophets (Is 29^{14}, Jer 18^{18} etc.). In the post-Exilic period the 'wise men' practically replaced the prophets as moral guides and teachers. Gaining wisdom from the study of the older Scriptures, or through prayer and supplication, or in the school of experience, as they wandered about the world, 'travelling through strange countries,' mingling with kings and princes, and 'testing the good and evil among men' (Sir $39^{1ff.}$), they took their stand in the market-place, or at the corners of bustling streets, or by the gates where people congregated, and appealed to the simple ones to embrace wisdom and to fools to turn from their folly and live (Pr $1^{20ff.}$ $8^{2ff.}$), or in their homes and lecture-halls instructed their pupils in the ways of wisdom (Sir 51^{23}). Out of this formal discipline arose not merely the gnomic wisdom of the *Pirkē Ābōth*, 'Sayings of the Fathers,' but also the wisdom-speculation which we find in later elements of Proverbs, in the Apocryphal books of Sirach, Wisdom of Solomon, Enoch, Baruch, and 4 Maccabees, and in outside sources like Philo and the Odes of Solomon.

In Pr $8^{22ff.}$ Wisdom appears as the first creation of God, the 'foster-child' who played beside Him as He wrought His mighty works and now moves among men as His mouth-piece and representative on earth. It seems hardly possible here to deny the fertilizing influence of Greek thought. Yet the picture is Hebrew in its essence. Wisdom is no archetypal hypostasis emanating from the divine. She is still the impersonation of a moral quality, endowed with life by Jahweh, whose place in creation she nowhere usurps. The ethical character of Wisdom is equally evident in the great Song of Praise, Sir $24^{3ff.}$, where Wisdom is ultimately identified with 'the law that Moses commanded,' which found its resting-place and seat of authority in Israel. A similar linking of Wisdom with the Law appears in Bar $4^{1ff.}$ and 4 Mac 1^{17}. Following out the more ethical line, Enoch 42^1 49^1 etc. pictures her as descending from heaven to earth, being rejected by men, returning to heaven, and there awaiting the Messianic age, when she will be poured out in her fullness on the elect. A much bolder attitude is assumed in Wis $7^{22ff.}$, where she is celebrated as the spiritual 'artificer of all things,' an 'effulgence of the everlasting light, and an unstained mirror of the power of God,' which by her purity and mobility 'penetrates and permeates all things.' Here the concrete imagination of Israel has been caught up in the full sweep of Greek influence, and we seem to be actually moving within the inner circle of Neo-Platonic speculation. But the most systematic attempt to blend Hebrew wisdom with Greek idealism is met with in Philo (*q.v.*), whose doctrine of the Logos finds poetical reflexion in certain of the Odes of Solomon ($12^{9ff.}$ $13^{1ff.}$ $16^{9ff.}$ etc.).

In other phases of Hebrew literature there is a decided protest against the current ideas of wisdom. The book of Job challenges the whole theory that outward prosperity is the reward of righteousness, while Koheleth leaves us with the cynical conclusion that 'all is vanity.' Elsewhere the speculations of the wise are traversed by a species of agnosticism which insists that Wisdom is undiscoverable by man. The most brilliant poetic expression is given to this tendency in the Song of Wisdom incorporated in Job 28. The poet has sought wisdom in the depths of the earth, where miners dig for gold and silver, in the heights of heaven, whither the eagles soar in flight, and in the desert places, where the beasts roam in solitary majesty. But nowhere can he find the object of his quest. A still more depressing view is expressed in 'the words of Agur, the son of Jakeh,' incorporated in Proverbs:

> 'I am wearied, O God, I am wearied;
> I am altogether spent.
> I am but a brute, and no man:
> I have nought of human intelligence.
> No wisdom have I learned,
> No knowledge I have of the Holy One.
> Who is He that hath mounted to heaven, and come down,
> That hath gathered the wind in His fists,
> The waters hath wrapped in His cloak,
> And established all ends of the earth?
> What is His name, and His son's name,
> If thou dost know?'[1]

It is significant, however, that Hebrew scepticism never touches the being of God. The beginning of wisdom was 'the fear of the Lord'; and, even when wisdom was despaired of, the fear of the Lord remained the sheet-anchor of faith and hope. However perplexed he was with the mysteries of Providence, Job still clung to God; and at the end he rose beyond himself and his questionings to a new sense of God's wisdom, power, and grace in the boundless universe of nature. Even Koheleth's pessimism is quickened by the fear of God into a certain sanctified common sense. The poet of Job 28 has failed to reach wisdom. But 'God knoweth the place thereof'; He hath 'established and searched it out' (v.$^{23ff.}$). And for Agur, too, God is the great energizing Force behind all the phenomena of nature. He may not be able to 'name' Him; yet he feels His presence all about him. And to Him he addresses his prayer:

> 'Give me neither poverty nor riches,
> Feed me with food sufficient for my wants;
> Lest I be full, and deny thee,
> And say, Who is Jahweh?
> Or be poor, and steal,
> And profane the name of my God.'[2]

8. Christian wisdom.—Early Christianity is a return from speculation to the simple realities of faith and life, which are 'hid from the wise and prudent,' but 'revealed unto babes' (Mt 11^{25}, Lk 10^{21}). In preaching the gospel of the Kingdom Jesus avoided the idiom of the schools and addressed men in that concrete, parabolic style which we have found to be of the essence of the popular proverb. But those who listened to His preaching found in it a 'wisdom' beyond that of all their teachers (Mt 13^{54}, Mk 6^2). He Himself claimed to be 'greater than Solomon,' to hear whose wisdom the queen of Sheba came 'from the uttermost parts of the earth' (Mt 12^{42}, Lk 11^{31}). And this because He had been supremely endowed

[1] 30^{1-4}. [2] $30^{8f.}$.

with 'the grace of God' (Lk 2^{40}), so that the words He uttered were the very wisdom of God (Mt 11^{27}, Lk 10^{22}). To Jesus 'wisdom' was that practical understanding of the mind of God, that entire sympathy with His will and purpose, which enabled men to walk in His ways and do His will 'on earth as in heaven' (cf. Mt $6^{10f.}$ 7^{21} etc.). The same idea is set forth in Ja $3^{13ff.}$, where 'the wisdom that is from above' is contrasted with the wisdom that is 'earthly, sensual, devilish' by the fruit it yields in purity, meekness, gentleness, mercy, and 'a good conversation.' The Pauline Epistles and the Fourth Gospel show a much closer affinity with the Wisdom literature. The apostle, it is true, renounces the 'wisdom of the wise,' which leads to no real knowledge of God, and even obscures the gospel of 'Christ crucified' (1 Co $1^{20ff.}$). But in Him he finds a wisdom higher than that of men, even 'the power of God, and the wisdom of God' (v.^{24}). In the sacred quaternion of graces personally manifested in Christ—wisdom, righteousness, sanctification, and redemption—wisdom takes the foremost place (v.^{30}). But the pursuit of wisdom is reserved for the full-grown in Christ (τέλειοι), who alone have minds to comprehend the hidden mysteries of God (2^{6}). Himself increasingly filled with the spirit of heavenly wisdom, St. Paul elaborates in the Epistles to the Colossians and Ephesians a real speculative philosophy, based on Him 'in whom are hid all the treasures of wisdom and knowledge' (Col 2^{3}). Adapting ideas and phrases from the Wisdom of Solomon, he worships Christ as 'the image of the invisible God, the firstborn of the whole creation,' by whom all things were created—'that are in heaven, and that are in earth, visible and invisible'—in whom all subsist, and through whom all are destined in the fullness of time to be 'gathered into one' (Col $1^{15ff.}$, Eph $1^{9ff.}$). Yet the apostle does not lose sight of the practical aspects of the case. For him true Christian wisdom is still that which consists in 'the knowledge of God's will' (Col 1^{9}) and leads to a consistent 'walk' before those both without and within the fold (4^{5}). Similarly, the Logos philosophy of the Fourth Gospel is valuable only for its results in character. The Logos became flesh and dwelt among us, that we might behold His glory—'glory as of the only begotten of the Father'—and be progressively transformed into the image of that glory (Jn $1^{14ff.}$).

A. R. GORDON.

WISDOM TREE.—The venerable *Bo*-tree at Anurādhapura is the oldest historical tree in the world. The planting of the *Bo*-, or *Bodhi*-, tree (the Sinhalese *Bo* is merely a contraction of the Pali *Bodhi*, both meaning wisdom) is recorded at length in the Chronicles of Ceylon as having taken place in about 245 B.C.[1] Incidental references, in later centuries, to repairs to the enclosure, or to gifts of staircases or statues or ornaments by subsequent kings, show how great was the care that was continually devoted to it.[2] It is now (1920) 2165 years old.

Its botanical name is *ficus religiosa* (the Anglo-Indian *pipal*), and trees of this kind can put out fresh roots if a branch be planted, or if soil be heaped up near the base of the trunk. The soil has been thus so often raised that the tree now appears as three distinct trees (three branches of the old tree), growing from different points of an enclosed plateau about 25 ft. above the level of the spot where the tree was originally planted. A winding staircase of stone leads up to the enclosure of this plateau. Wherever the branches threaten to become too long they have been propped up by rough supports of wood or masonry. A stone slab, a *malāsana*, or flower-stand, has been provided for the memorial presentation of the white blossoms of the *champaka*. Everything about the spot gives the impression of a hoary antiquity. But we could not be sure of the identity of the tree without the long chain of documentary evidence.[3] The trees are somewhat like elms in size and shape; but the tapering leaves, about six inches long and four inches across the broadest part, are lighter in colour underneath, and the never-ceasing rustling of the leaves causes a constant flash of vanishing and reappearing light and colour curiously suggestive of one of the main doctrines both of the ancient Buddhist and of much modern philosophy.

Anurādhapura (*q.v.*) and the country round had been for nearly seven centuries, from the middle of the 12th to the middle of the 19th cent., almost abandoned. The Tamils, after centuries of intermittent attempts to take it, had been driven back to the north of the island. The Sinhalese, outnumbered ten to one, had retired to the fastnesses of the mountains to the south. East to west the jungle stretched from shore to shore, and north to south for a hundred miles. In what had been the most populous and prosperous part of Ceylon there were left a few far-scattered peasantry and woodmen; and the great capital had become a few mud huts. But there were always devoted *bhikkhus* to tend the *Bodhi*, the Wisdom Tree. A railway now runs through the jungle, and roads have been made. The magnificent reservoir, 50 miles in circumference, which had supplied half the country-side with water, has been restored to working order; and population and prosperity are slowly being restored. One consequence is

[1] *Dīpavaṃsa*, ch. xvi.; *Mahāvaṃsa*, ch. xix.

[2] See the appendix to vol. ii. of J. E. Tennent's *Ceylon* for a long list of such references

[3] Much of this is given in an appendix to the second volume of Tennent's *Ceylon*.

that a constant stream of pilgrims comes from all parts of the world to pay reverence to the tree.

Various different, and indeed contradictory, explanations have been given of this reverence paid to the *Bodhi*-tree. The oldest explanation is that given in Ceylon itself. This can be gathered from different passages in the Chronicles and in the Commentaries on the canon, and is best summarized in a book called the *Mahā-bodhivaṃsa* ('Story of the great Wisdom Tree'), probably written about A.D. 950. It is an amplified version in bombastic Sanskritized Pali prose of what had been already said in the older authorities just referred to; and, however interesting as a literary work, the oldest to show that acquaintance with Sanskrit then just beginning in Ceylon, it really adds nothing to the historical details contained in the older documents. The Ceylon view is that the tree is held in so much affectionate esteem and awe because it was grown from a branch of the original *Bodhi*-tree at Gayā (*q.v.*) in India (often distinguished as Bodh-Gayā, 'Gayā of the Wisdom Tree') under which the Buddha had actually sat when he passed through the intense mental crisis, the turning-point of his career, which led to his coming forward as the teacher of a new religion. The 'wisdom' is the wisdom, not of the tree, but of the teacher. It is derived not from the tree, or from any fruit of the tree, but from the mental struggles and the victory won by the founder of their faith. They adore the tree, not because of the power of any spirit or dryad within the tree, but because the outward form of it is a constant reminder of what they hold to have been the most important event in the history of the world. In other words, their attitude towards the tree is much the same as that of many Christians towards the Cross. And, just as opponents of Christianity have thought, quite illogically, that they could score a point against it by showing that the cross was a religious symbol (with quite different associations) before the rise of Christianity, so opponents of Buddhism have sought, and quite successfully, to show that the tree was a religious symbol (with quite different associations) before the rise of Buddhism. They fail to see that that is not the point. Granted that other people had previously used the same (or a similar) symbol in a different sense, the question is: In what sense did the Buddhists use it? We shall deal with only the more important of these theories of the tree.

James Fergusson, the eminent historian of Indian architecture, held that the main features of 'Turanian' belief were tree- and serpent-worship, that the despatch of a branch of the *Bodhi*-tree by Aśoka to Ceylon is a proof of the Turanian tree-worship practised by that Buddhist emperor of India, and that the monuments show that early Buddhism was a 'Turanian' faith. What exactly he means by Turanian he does not state. The conclusions put forward in his massive volume, entitled *Tree and Serpent Worship*, have not been accepted by any other scholar who has written on the subject.

E. Senart, the editor of the *Mahāvastu* and the interpreter of Aśoka's inscriptions, will have none of this. He holds that Buddhism was, in its origin, Aryan; that it was derived almost entirely from the Brāhman mythology contained in the Vedic records; that the legend of the Buddha is almost a myth; that in that myth the tree is almost, if not quite, as important as the teacher; and that the tree is the cloud-tree of the famous atmospheric struggle for the rain when the god with his thunderbolt defeats the demon who keeps back the rain in the clouds. The wisdom of the tree is the ambrosial rain, for is not their *nibbāna* sometimes called by the Buddhists 'ambrosia'?[1] All the author's literary skill, poetic imagination, and great learning have not availed to secure acceptance for this theory. For no attempt is made to explain how or why or when or where the transmutation of the one set of ideas into the other can have taken place.

Heinrich Kern, the late professor of Sanskrit at Leyden, was of yet another opinion. In his view the Buddhist accounts of their teacher's life are a euhemerized sun-myth. The Buddha is really the sun, and his disciples are the stars. He regards the tree, not (with Senart) as the cloud-tree, but as 'the world tree, the tree of life.' This is obscure, as the two are quite different; and he refers only to a post-Buddhistic *Upaniṣad* (*Kaṭha*, vi. 1) which does not clearly speak of either.[1] Even if it did, what evidence could that be of Buddhist belief?

It should be pointed out, firstly, that these theories are mutually exclusive, and cannot be combined. If any one of them is right, then each of the others is wrong. Secondly, they are all almost exclusively based, so far as the Buddhist side of the question is concerned, on late records—records eight hundred years or more later than the events they purport to describe. To the present writer it seems indisputable that, if a historian wishes to ascertain the genesis of a 'legend,' the only scientific method is, first of all, to ascertain what is the earliest form in which the legend is recorded. The earliest form of the legend about the original tree is as follows.

It is well known that there is no consecutive life (or legend) of the Buddha in the canon. But there are incidental references to certain episodes in his career. Of these at least twelve refer to the episode of the Wisdom Tree. But only two of them even mention the tree; and then it is merely to say that when seated under the tree the Teacher thought such and such things. This simple fact is enough to dispose of the theory that the tree was nearly, if not quite, as important as the teacher.[2] In one of the longer composite Suttantas contained in the *Dīgha* there is a short account of six previous Buddhas with a sketch of the life of Vipassi, the first of the six. This is so evidently drawn up as a mere imitation of the life of the historical Buddha that it is suggestive to find that the sketch contains no reference to a wisdom tree. This is the more remarkable since in the tabular paragraphs giving certain details about each of the six the name of the tree under which each attained to enlightenment is also given. In none of the cases is the tree called a wisdom tree.

If the above statements of fact are correct, it follows that the expression 'wisdom tree' or 'tree of enlightenment' does not occur at all in any of the oldest of those canonical works which deal with the Dhamma (the law or religion), that it occurs once in all the other canonical works on the Dhamma, that it occurs only once in those that deal with the regulations of the order (the *Vinaya*), that that single reference is in the very latest portion of the *Vinaya*,[3] and that the expression is then used merely to distinguish from other trees of the same kind and name that particular one under which the teacher was seated when he obtained enlightenment.

For the later history of the original 'wisdom tree' at Bodh-Gayā in India see art. GAYĀ.

WORD (Sumerian and Babylonian).—**1. Original ideas.**—The Sumerian vocable for 'word,' or formal expression of command, is *inim*, deflected early to *enem*, and it was carefully distinguished from the noun *dug*, 'discourse,' 'speech,' and the verb *dug*, 'to speak.'[1] *Inim*, *enem*, is always a noun and was translated into Semitic by *amātu*. Both *enem* and *amātu* obtained the secondary meanings 'affair,' 'matter' (Latin *res*). The Sumerian word also developed the sense 'incantation,' *i.e.* the formal words of the magician, and hence the reduplicated form *inim-inim-ma* (pronounced *inim-nim-ma*) became the ordinary rubric in the magic literature for 'incantation' (Semitic *šiptu*). The present writer derives the noun *inim* from the verbal root *nim*, 'utter a decision,' 'issue a formal word,' whence is also derived the noun *nam*, 'fate,' 'decision.' The Semitic noun *amātu* is derived from a root *wamâ* (ND), 'speak,' 'curse,' found otherwise only in Aramaic in the forms *îāmâ'*, *'āmâ'*. The Sumerians and consequently the Semites regarded a formally spoken 'word,' containing the force of a command or promise, as a definite and real thing. It possessed magical and terrible power if it issued from a deity, from a priest, or from a human being under formal circumstances. Hence witnesses who were present at a legal transaction which ordinarily involved an oath were called *galu inim-inim-ma*, 'men of the words,' or men who were present when formal 'words' or matters were arranged. A witness is sometimes called *inim zu*, 'one who knows the word,' *i.e.* one who knows what formal words were stated in a transaction.

The formally spoken word of any of the great gods was regarded by the Sumerians as a real divine entity. For the early period we have only the personal names of Sumerians as a source for our study, but undoubtedly the conception of the word as an agent of god's wrath, which became in later times one of the principal features of Sumero-Babylonian religion, arose long before the liturgical texts in which alone this doctrine has been preserved. This is the aspect of the word which was chiefly developed in Sumerian theology, but they also held that the *enem*, or word, of a great god might be a good and kind agent of deity when not uttered in wrath to punish the sins of men. Before 2900 B.C. occur such personal names as the following: *Enem-ma-ni-zid*, 'His word is true,' *i.e.* the god's word is a faithful support;[2] *Enem-azag-zu-da-ri*, 'The word of the wise one is eternal.'[2] In the period of Ur (25th cent.) occur the names *Enem-dug-ga-(ni)*, 'His good word,'[3] and *Enim-dBau-ni-gi*, 'The word of the goddess Bau is true.'[4] Even in a passage to the destructive word of the gods Anu, Enlil, Marduk, and Nebo from a liturgy of the 21st cent. a line runs, 'His word has no evil,' *i.e.* does no wrong.[1] It is, therefore, certain that the Sumerian conception of the word of the gods was not necessarily that of an avenging messenger. Nor is the idea of a curse inherent in the original use of the term. They simply attributed to the formally spoken word of a great god a semi-personality; they thought of it as a divine agent.[2]

2. The 'word of wrath.'—The Sumerian liturgies in all periods of their evolution chant at great length the destructive work of the avenging word which is sent by the angered gods to chastise mankind for their sins.[3] In the earliest known liturgical fragment (period of Gudea, *c.* 2650) a passage to the *Verbum Iræ* occurs.

'Thy Word upon the sea has been projected and returns not.'[4]

But passages on the 'word of wrath' must have been employed in public choral services in pre-Sargonic times, *i.e.* before 2800 B.C. The name *Enem-dúg-dúg-ga-ni an-dūb*, 'The word which he spoke shakes the heavens,' is found on a temple record of Lugalanda (*c.* 2850),[5] and an abbreviated form of it, *Enem-du-du*, occurs in the period of Ur.[6] This name, like so many Sumerian personal names, has been taken from the liturgies, and the line which supplied it recurs frequently in passages to the destructive word.

'The Word which on high shaketh the heavens,
The Word which beneath causes the earth to tremble.'[7]

That alone is conclusive evidence for the existence of this theological conception and for these doleful descriptions of the destructive word in public song services at the very beginning of Sumerian civilization.

In the earlier stages of Sumerian liturgical worship, when only single song melodies or lamentations were employed, we find references to this idea. A long lament of the Weeping Mother, who is represented, as so frequently in later compositions, in the rôle of a mother-goddess wailing for her people, has in the very opening lines a passage which attributes all the woes of humanity to the words of Anu and Enlil. Sin invariably provokes the anger of the gods and they send the 'word of wrath' to hasten forth and afflict mankind. Hence the great earth-mother, who loves men and shares their sorrows, is also afflicted by the word.

'In the home it causes life to cease, in the flocks (?) it causes life to cease,
To the wedded ones it causes life to cease, among children it causes life to cease.
It has taken them as prey, it has caused them to disappear.
. . . . . .
His Word speeds me, speeds me forth, as oft as it comes to me my face is prostrated.
. . . . . .
When the Word of Anu came to me,
When the Word of Enlil came to me,
When to my temple he came,
When by the mountain road he entered.'[8]
. . . . . .

A liturgy of the compiled type, which preceded in order of evolution the canonical compositions of the Isin period,[9] has a remarkable melody of the Weeping Mother, in which she thus describes the misery of the city Ur:

'May Anu prevent his Word.
May Enlil order kindness.
. . . . . .

Its foundations it has annihilated and reduced to the misery of silence.
Unto Anu I cry, "How long?"
Unto Enlil I myself do pray.
"My city has been destroyed," will I tell them.
"Ur has been destroyed," will I tell them.'[1]

The fifth melody of this early liturgy is the *Verbum Iræ*, and henceforth all the canonical Sumerian liturgies contain one song to the 'word of wrath.' Before giving a selection from this most notable song to the word, let us note that the idea of *enem*, 'word,' had become so fully associated with divine wrath that it was called *ud*, *udde*, 'storm,' 'angry spirit.' Portions of this melody to the word of Enlil follow:

'Enlil utters the angry spirit and the people wail.
The angry spirit has destroyed prosperity in the land and the people wail.
The angry spirit has taken peace from Sumer and the people wail.
He sent the woeful spirit of wrath and the people wail.
Kingaludda and Uddagubba into his hand he entrusted.
He has spoken the angry spirit which exterminates the Land and the nation wails.
Enlil sent the fire-god as his helper.
The mighty wrathful spirit of Anu was spoken and the people wail.
The city Ur like a garment thou hast destroyed, like . . . thou hast scattered.'[2]

The above is the most important passage in Sumerian literature for the personification of the word. Enlil sends two messengers, Kingaludda and Uddagubba, to attend the word as he goes forth to execute vengeance upon mankind for their sins. The name Kingaludda means 'messenger of the angry spirit,' and Uddagubba means 'he who stands by the angry spirit.' Both of these are minor deities, and the former became a well-known demon.[3] Here also the fire-god is sent forth by the earth-god Enlil as an attendant of the angry spirit—an idea which survived in post-Exilic Hebrew in connexion with the visitation of the *rûaḥ*, or spirit, of Jahweh among men. Joel describes the visitation of God's spirit in the words:

'I will place marvels in heaven and earth, blood, and fire, and pillars of smoke.'[4]

And the idea appears notably in the gift of tongues at Pentecost in NT times:

'And there came suddenly from heaven a sound as of a rushing mighty wind, and it filled the whole place in which they were sitting, and there appeared unto them cloven tongues as of fire.'[5]

In all the canonical Sumerian liturgies which were borrowed by the Semites and continued in use down to the age of Alexander the Great, and even into the era of the Seleucidæ, is found at least one song to the spirit of wrath. Since the word (*enem*) or spirit (*ud*) of Anu, the heaven-god and father of all gods, almost invariably comes first, we infer that the spoken word issued from heaven is the original idea, and then the same power was attributed to Enlil, the earth-god, and to a few others of the great deities. The following list of partially restored liturgies in which the song to the word or spirit has been preserved is in the present stage of Sumerology exhaustive:

(1) Enlil series: *babbar-ri babbar-ri-gim te-ga-bi zal*, 'Like the sun, like the sun his approach illuminates'; inserted in the first melody.[6] Here *ud* and *enem* are both employed.
'Spirit (*ud*) that brings the youth to extremity, spirit that brings the maid to extremity.
Spirit that destroys the stalls, spirit that desolates the folds.
Possessor of *wisdom*, spirit whose intentions are not discerned.
. . . . . .
Spirit that reduces all things to obedience.
The word of Enlil rushes forth and eye beholds it not.'

(2) Enlil series: *elum gudsun-e mu-zu kurkurra*, 'Mighty one that overwhelms, thy name is upon all lands'; fourth song.[1]
'A tempest it is, shattering the mountains.
As for the lord his word is a tempest.
The heart of the mighty one is a tempest.
The heart of Enlil is a tempest.'
(3) Enlil (?) series: *uddam gù-de-de-dè*, 'When like a storm he cries'; first song on tablet 2 of the Assyrian edition; song to the *enem* of Anu, Enlil, and Adad.[2]
(4) Weeping Mother series: *nimalla gu-dé-dúg ki-bi ba-da-nad*, 'The cow wailed and in her place lay down'; song to the word inserted in the first melody, lines 11–15.[3] An extremely long hymn to the word of Anu and Enlil of this series occupies two tablets.[3]
(5) Nergal series: a long hymn to the word of Nergal; the last song of the series, followed by the *eršemma*, or recessional.[4]
(6) Nergal series: two long hymns to the word of Nergal, the first of which is a duplicate of the one cited in no. 5; the last two songs of a liturgy to Nergal followed by the *eršemma*.[5]
(7) Nebo series: two songs to the word of Nebo in the third tablet of the series *ukkin-ta eš-bar-ra til-la*, 'In the assembly wisdom is departed.'[6]
(8) Weeping Mother series: contains two passages to the word of Anu and Enlil inserted into two songs.[7]
(9) A liturgy of songs, all devoted to the word. Particular attention is given to the word of Marduk, and the Weeping Mother is represented in two songs as afflicted by the word:
'The exalted one like a wind, like a wind,
The exalted one like a wind has cast me down, even me.
The exalted one, the lord of lands,
He of intangible thoughts, whose word is true,
Against whose command there is no turning back,
The exalted Enlil, the utterance of whose mouth is unalterable.
This angry spirit destroys the folds, rends the stalls.
My roots are rent, my forests are despoiled of leaves.
. . . . . .
Like a lone *willow*-tree by the river's bank he has made me,
Like a *cedar* in the desert he has made me.
Like a lone tamarisk in the storm he has made me.
Behold the mighty one like a lone rush-reed has brought me low.'
An exceedingly difficult passage attributes the following expression to the mother-goddess:
'I am the word of the lord, because of its misery wailing I sit.'[8]
The first half of the line is interpreted to mean that the mother-goddess is possessed by the wrathful word, she is completely in its power.[9]
(10) Nergal series: *agalgalla šel-susu*, 'Flood that drowns the harvest'; a song to the word of Nergal is inserted into the first litany, and it was followed by a second hymn to the word which has not yet been recovered.[10]
(11) A liturgy to the word of Anu arranged to commemorate the destruction of the city Ur: *anna elume ù-a enemmani*, 'Of exalted heaven lofty is his word.' The first two tablets only are preserved. They include hymns to the words of the moon-god, the sun-god, and the thunder-god. The second song of the liturgy, following upon the hymn to the word of Anu and Enlil, is devoted to the Weeping Mother.[11]
(12) Selection from an unknown series containing two hymns to the word. The first hymn begins, 'His word hastens forth from Ekur, his word is the burden of the storm.' It is an old hymn to the word of Enlil, the earth-god. The litany includes references to the word of Ea, of Damkina his spouse, of Marduk, of Nebo and of Sakkut, all of which are said to proceed from Ekur, the temple of Enlil in Nippur.[12] The second hymn on this tablet is among the most remarkable of all the songs to the word. Fifteen

[4] Published in *BL*, no. 73, pp. 47–49, to be restored from the duplicate, *SBP*, p. 76.
[5] Text in G. Reisner, *Sumerisch-babylonische Hymnen*, Berlin, 1896, no. 7; ed. in *SBP*, pp. 76–78.
[6] *BL*, pp. 65–68.
[7] For the text see *BL*, plates lxix.–lxx. For a tr. of the first passage see p. 74. For the second passage see pp. 107 f. and 74 f.
[8] That is clearly the meaning of the line (see *SBP*, p. 46, 15, where the end of the line should be read *še-dm-du ám-dù*).
[9] The series was called *uddam ki-dm-(mu)-uš*, 'Like the wrathful spirit (his word) has been established.' Six songs of tablets 1 and 2 are edited in *SBP*, pp. 38–55. The remainder of the series, i.e. tablets 3–6, are supposed to contain similar material.
[10] K. 69, ed. in J. Böllenrücher, *Gebete und Hymnen an Nergal*, Leipzig, 1904, pp. 32, 40–35. 35. See also for variant of a part of this song to the word, *SBP*, 43, 49–47, 18.
[11] Ed. in *SBP*, pp. 58–67.
[12] This remarkable hymn to the word is ed. in *SBP*, pp. 72–74 (lines 1–30), and the remainder of the hymn will be found on pp. 76–78, lines 16-reverse 4.

lines from the end of the composition have been preserved, but the opening lines are lost. It reads:

'Its *flail* (*hulippu*) distresses small and great.
Small and great it crushes and pours into a heap.
When on the river it rushes, a deluge it causes.
When on the Tigris it rushes, a deluge it causes.
When on the Euphrates it rushes, a deluge it causes.
[When on the . . . it rushes, a deluge it causes].[1]
When it hastens in the ravines of the hills a deluge it causes.
When the Lord[2] speaks, then it hastens and a deluge it brings.
The child-bearing mother wailed, "Behold my son doth send (the word)."
The mother Damkina wailed, "Behold my son doth send."
Unto her chamber she entered, she hastened (wailing), "Behold my son doth send."
Son whom in the sacred bowl I baptized, "Behold my son doth send."
Son who from the stone bowl has eaten, "Behold my son doth send."
He who ate has of himself grown great, "Behold my son doth send."
Him that with a measuring-rod I proved, "Behold my son doth send."'[3]

We have here an interesting situation. Damkina, a mother-goddess, wife of Ea the water-god, laments the ruin caused by the word of her own son Marduk.

(13) Nergal series, second tablet: a long hymn to the word of Nergal occupies nearly the entire tablet; it is followed by a short song in which Nergal is imprecated to send his destructive word upon all wicked lands.[4]

(14) Enlil series: title unknown. Only one tablet of the series has been recovered. The liturgy contained two short hymns to the word of Enlil at the end of this tablet.[5]

(15) Enlil series: *ame barana-ra*, 'The hero to his sanctuary.' Four of the six tablets of this liturgy are known.[6] The liturgy contained at least one song to the word of Enlil.[7]

(16) Weeping Mother series: *uru ḫulage*, 'She whose city was destroyed.' Four of the six tablets of this liturgy are known. Tablet 5 has a song to the word of Enlil, identical with the one employed in the first tablet of the Enlil series, no. 1 above.[8]

3. The spirit (ud).—In the preceding discussion some attention is necessarily given to the identification of the word of a god with his breath or spirit. As in the case of the 'word' (*enem*, *inim*), the term for 'spirit' or 'breath' (*ud*) of a god had not originally a destructive and violent sense, but its use in that sense became almost universal and consequently should be rendered in most passages by 'angry spirit,' 'spirit of wrath.' In all of the present writer's translations 'angry spirit' renders the Sumerian *ud* = Semitic *ûmu*. The Sumerian *ud* is the ordinary word for 'day,' and so is the Semitic *ûmu*. The Sumerians, and after them the Semites, conceived the breath of a god as a warm flood of light. When a god's anger was aroused, his breath went forth as a storm, and consequently both *ud* and *ûmu* came to mean 'storm.' But the original idea of the divine spirit or breath must be defined. A passage on the wrathful word of Enlil is introduced by the remarkable statement, 'The utterance of thy mouth is a beneficent wind, the breath of life of the lands.' The soul of the god is here defined as a kindly wind[9] which gives life to mankind.[10] A proper name of a man in the period of the Ur dynasty was *Udde-nigšag*, 'the spirit (of god) is a blessing,' and another is *Udde-nigšig*, 'the spirit is goodness.'[11] A name in the pre-Sargonic period is *Ud-mukuš*, 'the spirit has become reconciled,' *i.e.* the wrath of god is appeased.[1] It is said of the mother-goddess Ishtar, *ud-de-da ba-e-sig*, 'by the spirit thou art filled,' *i.e.*, the spirit of one of the great gods was given unto her.[2] She is thus endowed with supreme power. In the same manner kings are given the divine 'word.' Ur-Ninā is called the man *inim-sig* ^{d}*Ninā*, 'unto whom was given the word of the goddess Ninā.'[3] Ur-Bau is described as the man *inim-ma-sig-ga* ^{d}*Innini*, 'unto whom was given the word of Ishtar.'[4] It is obvious, therefore, that the spirit or breath of a god was practically identical with his word, and it was personified as an agent of good works. This phase of its activity as a *verbum creator*, a spirit of wisdom and cosmic reason, appears only in Semitic texts where the Semitic word *mummu* is employed. In Sumerian texts the beneficent and philosophic aspect of the word is wholly overshadowed by its activity as an agent of wrath.

'The spirit (*ud*) of the heart of Anu which has become evilly disposed,' says a line of a hymn to the word, and the *ud* is called the messenger of the lord of the lands (*i.e.* Enlil).[5] Another passage states explicitly, 'The spirit is the word of Enlil.'[6] The expression, 'the merciless spirit,' was so common that it appears in grammatical texts.[7] And, when the wrathful word had executed judgment on the earth, the god who sent him forth recalled him. 'When Anu spoke, the word returned to its place.'[8]

4. The 'word of wrath' in Hebrew.—The Sumerian belief in the wrathful word of the gods passed into late Hebrew theological beliefs. The description of Jahweh's word by an Alexandrian Jew in the Greek book, the *Wisdom of Solomon*, is obviously under the influence of Sumerian liturgies which were being sung everywhere in Babylonia at that time:

'Thine all-powerful Word leaped from heaven down from the royal throne,
A stern warrior, into the midst of the doomed land,
Bearing as a sharp sword thine unfeigned commandment,
And standing filled all things with death.'[9]

A post-Exilic Psalm reflects clearly the Sumerian idea:

'He sendeth his commandment upon the earth;
His Word runneth very swiftly.'[10]

Even more direct is the evidence of the post-Exilic Isaiah, for here we have words written by a prophet who almost certainly lived in Babylonia.

'So shall my word be which goeth up from my mouth; it shall not return unto me void,
For it shall have done that which I desired,
And shall have accomplished that for which I sent it.'[11]

5. The word as creative wisdom.—The Sumerians and Babylonians invariably regarded water as the uncreated first principle and source of all things created. The creative form or principle resided in the primordial watery chaos. Since we do not have any Sumerian sources for the doctrine of the cosmic word, but only a syllabar which gave the term, now unfortunately broken away, it is impossible to state exactly what it was. Evidence deduced above for the beneficent activity of a god's word and breath induces the conjecture that the Sumerians employed the term *inim*, 'word,' for cosmic creative form or reason. At any rate we know that the term *mummu*[12] was said to mean 'loud voice,' apparently because the roar of the thunder- or rain-god was adopted as a term for the indwelling wisdom of water. We know that *ud*,

12 Commonly supposed to be Semitic. *Mummu* may be, however, Sumerian and a word for 'form.' See Thureau-Dangin in *RAssyr* xvi. [1920] 166, II. 3. The Semitic interpretation of

'breath,' 'storm,' was also identified with the thunder-god.[1] *Mummu* at any rate was the accepted Semitic[2] term, and means 'voice.' It was personified and survived in the writings of the Greek historian Damascius as Mōymis. According to Damascius, Mummu was the intelligible world and the only-begotten son of Apsū, the nether sea of fresh water, and Tiamat, the salt water sea. Since all things descended from water and wisdom resided in water, Enki, god of water, was called *mummu bān kala*, 'Mummu (creative reason) which creates all things.' Also Nebo, god of writing and son of Enki, was identified with *mummu*, 'who fashions the things created.' When Marduk, at the hands of the Babylonian priests, became the son of Enki and creator of the world, he also was identified with *mummu*.

According to Sumero-Babylonian philosophy, the reality of anything consists in its 'form' (*ḫar*; Semitic *uṣurtu*), *i.e.* the divine mental concept which is revealed to mankind by its name. For example, the word 'bowl' is a name by means of which its 'form' or the divine concept is revealed to man. All knowledge is revelation, and the reality of things is not their tangibleness but the mental concept, and things cannot exist until a god has this mental concept. Fundamentally all things, material and immaterial, rest upon the mental activity of the water-god, which is *mummu* and was personified cosmic reason. Hence the universe was conceived to be held together by a band or cord, *riksu*, *markasu*, a divine creative reason. Such was the philosophic and mystic concept of the word in Babylonia.[3]

6. The Greeks borrow the Babylonian idea of creative reason.—There can be little doubt but that Thales, founder of the Ionian school of hylozoism, who regarded water as the first principle, borrowed his ideas from Babylonia. Here in the Ionian school of Thales, Anaximander, and Anaximenes, all of Miletus, cosmic substance itself is reason, wisdom, and harmony.[1] That strikingly corresponds to the activity of the Babylonian Logos or Mummu. Heraclitus (*q.v.*) of Ephesus, who developed the ideas of his predecessors at Miletus at the end of the 6th cent. shortly after the fall of Babylonia, adopted fire as the universal element, sometimes defined as hot breath in his writings. He is the originator of the cosmic philosophy of 'becoming,' the ceaseless transformation of all things from fire or heat through various stages back again to fire. And the cosmic law or reason working beneath all this process of becoming is λόγος, or the word. We do not know whether the earlier Ionian philosophers employed λόγος in this sense, but there seems to be an apparent connexion between the creative wisdom or word of the Babylonians and the law of eternal becoming or the 'word' of Heraclitus.[2]

7. Influence of Babylonian creative word in Hebrew.—The Hebrew employs both 'word' (דָּבָר) and 'spirit' (רוּחַ) in much the same way as the Babylonians employed *mummu*. We have seen that the Sumerians and Babylonians regarded the spoken word and the breath of the god as intimately connected and originally as beneficent agents. Although Hebrew has not the profound mystic and cosmic philosophy of the Babylonian, there is an obvious connexion between the two cultures at this point. We may not infer borrowing here, but the similarity must be noted. A passage of an Exilic Psalm confirms the suspicion that the writer knew Babylonian theological ideas:

> 'By the word of Jahweh were the heavens created,
> And by the breath of his mouth all their host.'[3]

WORSHIP (Primitive).—What is worship? The word itself is English, and almost untranslatable into other languages. Originally it implied acts prompted by veneration, but with stress of time and weight of usage it has come to be applied to the whole range of religious behaviour, so that one might well say that worship is the active side of religion. Even so, the meaning does not stop with the notion of act; it is also the attitude which prompts the act; it is the belief which stays the attitude; it is the faculty which empowers the belief. In each of these guises it is multiform: *qua* act it includes cult and tabu, rites sacramental and rites ascetic, indulgence and devotion, feast and penance; *qua* attitude it pairs off fear and love, dread and adoration, or it mingles them in the sense of awe; *qua* belief it ranges from myth to philosophy, from creed to science, from passion for ideas to respect for truth; and *qua* faculty it is said to be absent in some men. Nor can it be defined by its objects; for in the context of worship is included not only communion with deity, but also traffic with the devil, while it cannot be

mummu as 'voice' would then be based upon a false etymology or be influenced by their use of the term *amātu*, 'word,' as a *verbum creator*.

[1] R. E. Brünnow, *A Classified List of . . . Cuneiform Ideographs*, pt. i., Leyden, 1887, no. 7791. It should be noted also that the Hebrews often spoke of the breath (רוּחַ) of Jahweh as a storm-wind (Ex 15^8, Is 59^{19}, Ps 18^{15}) and as his wrath (Job 4^9 15^{30}).

[2] Perhaps a Semiticized Sumerian word *mumma*, 'form' (?).

[3] See, on this section, Langdon, 'The Babylonian Conception of the Logos,' *JRAS*, 1918, pp. 433–449.

[2] For a definition of the metaphysical use of λόγος (word) in Heraclitus see H. Diels, *Herakleitos von Ephesos*[2], Berlin, 1909, p. ix. Diels translates λόγος in Heraclitus by 'world-law'; see also Diels, *Die Fragmente der Vorsokratiker*[2], Berlin, 1912, p. 77. This interpretation is generally adopted by all historians of philosophy. See P. Tannery, *Pour l'histoire de la science hellène*, Paris, 1887, pp. 172, 186–189, and *passim*; E. Zeller, *Grundriss der Gesch. der griech. Philosophie*[7], Leipzig, 1905, p. 60, where λόγος in Heraclitus is rendered by 'universal intelligence'; Max Heinze's ed. of F. Ueberweg, *Grundriss der Gesch. der Philosophie*[8], Berlin, 1894, pt. i., p. 55 and *passim*; also art. LOGOS, vol. viii. pp. 133–138.

[3] Ps 33^6.

separated from the intercourse of man with man. If we were to judge by phrase alone, its comprehensive complexity would be apparent: along with 'divine worship,' the 'house of worship,' etc., come 'ancestor-worship,' 'devil-worship,' 'idol-worship,' 'nature-worship,' 'snake-worship,' 'tree-worship,' and what not? The residual fact seems to be that the word is catholic of all activities—physical, psychical, social—to which the adjective 'religious' can be applied; while, by discourtesy, it passes on to every other kind of pursuit that may be regarded as governed by a sufficiently intense interest, as 'dollar-worship,' 'woman-worship.'

Probably no readier mode of suggesting the range of meaning embraced in the conception of worship is at hand than the presenting of a list of the principal articles in this Encyclopædia which portray its phases (and along with them should be taken the general art. RELIGION). They include ANOINTING, ASCETICISM, AUSTERITIES, BAPTISM, CELIBACY, CHASTITY, COMMUNION WITH THE DEAD, COMMUNION WITH DEITY, CONFESSION, CONSECRATION, DEIFICATION, DEVOTION AND DEVOTIONAL LITERATURE, EXPIATION AND ATONEMENT, FASTING, FEASTING, HUMAN SACRIFICE, HYMNS, IMAGES AND IDOLS, INITIATION, MYSTERIES, OATH, ORDEAL, PENANCE, PILGRIMAGE, PRAYER, PRIEST AND PRIESTHOOD, PROCESSIONS AND DANCES, PROPHECY, PROPITIATION, PURIFICATION, SACRAMENTS, SACRIFICE, SECRET SOCIETIES, TABU, TOTEMISM. All these refer to modes or ideals of worship which are nearly universal among the races of men, while a multitude of special titles indicate particulars of rite and cult developed from these major forms. Along with these designations of ritual forms, constituting the acts of worship, should be considered those having to do with its occasions: BIRTH, DEATH, MARRIAGE, PUBERTY, or, in a social mode, seed-time (cf. PHALLISM), HARVEST, SABBATH, WAR; and again those designating its objects: ANCESTOR-WORSHIP, DEMONS AND SPIRITS, GOD, RELICS, SAINTS; while, finally, the psychical states induced by rites or regarded as their foundation cannot be excluded from the meaning of the term: ANIMISM (which is really a state of mind, not a system of thought), HOLINESS, LOVE (in its theological sense), MYSTICISM, POSSESSION, REVERENCE, SANCTIFICATION are examples. The whole idea is complex beyond definition, and, although it is undoubtedly primarily a designation of the active side of religion, especially of cult and rite, yet the activities are of such a nature as to be beyond characterization except when taken in connexion with their objects, their occasions, and their psychical effects.

1. Cult and culture.—Worship, broadly defined, is the active phase of religion, as made manifest in rite and cult. What, then, is its 'primitive' character? The question has been often debated and is really important: Are we to identify as the primitive (1) modes of worship found among contemporary or recent savage peoples, or (2) the historically and biologically first evidences of religious cult, or (3) the logically prior factors—*i.e.* the psychologically significant and the philosophically essential elements of human nature displayed throughout the whole course of the religious development of mankind? The first of these three is without question the current usage, and the second is commonly aligned with it; *i.e.*, contemporaneous savage cults are regarded as typical of historically primitive ideas by a majority of writers. Nevertheless, there has been in the past, and there is still, a vigorous current of opinion which maintains that savagery shows quite as much degeneration as it does conservation of religion, in its primitive value; and this opinion derives explicit support from the observed facts, for grossness and decadence in rite and cult belong not to the most utter savages, but frequently to peoples well advanced in material civilization, while an enormous amount of superstitious lumber is obvious survival from what was once significant custom or intelligible belief. In short, in the matter of religion, as in all other matters showing the form of evolution, the law of development seems to be that of the central and healthy type, following a true norm of nature, while over against it are all manner of fantastic outgrowths and by-plays, alike degenerative and destructive. Religious cult, formal worship, is, in fact, no direct variable of culture; it possesses a type and significance of its own which must be dissected out from the accompanying contexts of economic, political, æsthetic, and intellectual life, before it can be properly comprehended.

It is at this point that the third mode of consideration, the psychological and the philosophical, becomes important. Recent years have seen the rapid growth of a very considerable literature devoted to the psychology of religion, its effort being (1) to describe the particular states and processes of mind which lead to worship and define it, and (2) to explain their relationship to the whole context of human nature and the world which has created it. If there is a religious 'instinct,' the definition of its forms and occasions is the patent key to the interpretation of all religious phenomena, and from it the 'primitive' in religion must be trued to type. This is the task of the psychologist, while on the side of the philosopher there remain to be put the great problems of the truth and value of religion. The philosophic task, too, is receiving yearly more attention, with the 'philosophy of values' as the central controversy.

A broad observation of the whole range of facts connected with the relation of cult to culture fortifies the significance of the psychologico-philosophical view-point. Shamanism (*q.v.*), in one form or another, with its accompaniments of trance and ecstasy, is the most universal of the ritual forms known to the least cultured peoples; that it is primarily the development of a psychical aptitude is evident. In the higher societies by far the greater number of cults trace their foundation to an 'inspired' founder, be he ancestor or prophet. The great syncretistic religions hark directly back to the life of a master as their source and explanation. In every level of civilization the origin of religious forms and beliefs goes straight to the individual experiences of individual men for foundation and guidance; nowhere is there evidence of an original religious 'compact' (unless totemism may be regarded as such), although, of course, there are plenty of instances of the application of religious forms to social and state interests. On the whole, the type of cult development, in high civilization and low, is (1) the moral or mystical teacher; (2) the ritualization of the original ceremonies, songs, or prayers, accompanied by social recognition; (3) their corruption, partial or whole, through syncretism (*q.v.*); and (4) not infrequently an effort, through a subsequent prophet or reformer, to purify the cult and bring it back to norm. This is obviously the Hebrew development as represented by the OT; it may fairly be applied to Christianity, to Buddhism, to Brāhmanism; and it finds signal illustration in the more backward regions of the world; *e.g.*, the majority opinion of Americanists is that in the Aztec cults, with their horrible rites, we have a clear-cut case of degradation from what had once been a religion (probably Maya in origin) containing much that was clean and noble, while in Peru there is evidence of several successive purifications and degradations of worship; and in neither centre was the highest

religious development invariably concomitant with the greatest material power. Finally, in modern society, the Protestant tendency to identify 'personal' religion with 'primitive' Christianity is clearly a reaction towards a psychical valuation of worship; and, indeed, it is altogether pertinent to note that the three Christian virtues, faith, hope, and love, are essentially and exclusively personal and psychical: here the primitive in religion is clearly individual experience.

2. Ritualism.—However founded, worship inevitably passes over into ritual forms. Rites are variously classified, usually under a broad initial dichotomy, as magical and religious, positive and negative, attractive and avertive, participative and ascetic, etc., though nowhere are these divisions sharp and fast; there are always intermediate classes looking in both directions. Thus imitative magic passes insensibly into devotional prayer; propitiation and praise are directed to the same deity and in the same ceremony; asceticism terminates in its own ecstatic indulgence, hardly to be distinguished from vinal enthusiasm. Furthermore, even where the division is clear, such classifications over-simplify the facts. Similar magical rites may be employed to bind a lover or to destroy an enemy; sacrificial rites, indistinguishable in form, may be designed for propitiation of divine anger or the expression of gratitude for divine protection. Acts of worship no doubt all express desire, but the desires may vary *toto cœlo* in the matter of conscious definition; they may be wholly specific or utterly vague, and their psychical backgrounds as complex as are human moods. The customary classifications afford convenient heads for the arrangement of the facts, but they become dangerous fictions when states of mind or theories of origin are inferred from them.

There are, of course, definable levels in the use of ritual expedients, and these correspond in a general way with cultural development. (1) At the simplest level of life the few rites employed are so nearly *instinctive* in character, and their occasions so spontaneous, that it is hardly necessary even to call upon tradition as an explanation of their presence. Perils which command propitiation, hours of plenty which invite feasting and song, the pains of disease calling for 'medicine' and vision-caught assuagement—all these have obvious, even if psychologically complex, human motives. It is but a step beyond this to the formation of tropaic and apotropaic rituals having to do with the changes which mark the normal lives of men and women: *rites de passage*, with birth, puberty, marriage, parentage, eldership, death, as their posts. Finally, just as there are seasons in the arc of a man's days, so there are the seasons of the natural year which men must observe: rites of seed-time and harvest are doubtless as ancient as is agriculture, while immemorially more ancient still are the simple reactions to the changes of the living world which all known men, at least, make articulate. The fetish, the burial, the primitive calendar, may be taken as symbols respectively of these three elemental directions of ritual life.

(2) Above this first level comes the cultural grade, wherein ritualism is modified to reflect and sustain *social* organization. Already with initiation and marriage rites, with sowing and harvest ceremonies, the social factor enters into the ritual occasion. As community life becomes complex, its enterprises are surrounded and emphasized by prohibitions and commands, tabus and sanctities, which serve as its bond and fixative. This is true not only of the internal life of a community, based on the instincts and the seasons, but also of its external relations: the making of war and the making of peace; and, as time passes, it becomes true in a third dimension, the historical, for the momentous events of tribal and national life inevitably appear to acquire a sanction from nature itself, and their commemoration becomes as seasonal and cyclic. It is worth noting, too, that morality finds its most cogent support in ritual emphasis. The virtues are all in the nature of inhibitions set upon the more animal instincts; they are all in the nature of conscious habits, and are, therefore, subject to deliberate education. It is therefore quite in the order of reason that communal ritualism should become marked by the presence of a definite class of men—the priesthoods—whose special province is the preservation of traditional wisdom and the enforcement of the moral sanctions. Here society becomes specialized, and the religious, as a man apart, answers as it were for the conscience of the group. Worship is no longer governed by the 'inner light' of the elemental instincts, but is established as a moral law.

(3) Still more complex, although by no means rare even among savage peoples, is the level marked by motives which govern *proselytizing*. Cults pass readily from people to people, along with other customs, but there is an especial impulse fathering the desire to convert which is certainly other than instinctive and more than moral. It may be accompanied by motives wholly sordid; it may be utilized by calculating leaders for entirely secular ends; but, whether its character be that of intolerance, of benevolence, or the two admixed, it comes finally to gather to itself the essential zeal of religion. Then it is that the State sheers off from a Church which outgrows it; then it is that religion and morality become divided in consciousness; and then it is, finally, that there arises a problem of reason *versus* faith, of intellectual as against spiritual interests.

(4) Doubtless, a last level should be added—that in which the secular life is felt to be lived in more or less separation from the religious, and in which the motives of the latter become matter of critical and sceptical interest. Conscious study of religion, conscious philosophizing about it, mark this finality; but it is to the point to observe that even here the essential experience maintains itself in the Protestant seclusion of the individual soul. The final rite, the ultimate worship, is retirement into the closet in the hour of spiritual need; and this, after all, is not radically different from the elemental act of instinctive worship, in propitiation or thanksgiving.

3. Objects of worship.—As the occasions of worship give only a partial key to its forms, so the forms afford but a partial clue to its objects. Not all ritual observances are regarded as worship; magical rites are usually placed in another class, and many rites having obvious social values—marriage rites, chief-making rites, the 'potlatch,' are examples—are connected with worship only incidentally, if at all. In order that the ritual form may be recognized as true worship, it must be accompanied by some evidence of a religious sanction; *i.e.*, it must in some sense be directed to powers superhuman, if not supernatural. This means recognition of deity. Ordinarily gods are defined as the objects of worship; the better mode would be to say that the act of worship is the definition of the god. Wherever the religious sanction is present, the conception of God is being created.

Such a reversal in the order of definition would clear the atmosphere of much controversial dust. Many a missionary has accused the heathen of atheism because of his failure to find belief in a Supreme Being with Christian attributes (not infrequently among people incapable of thinking either 'being' or 'attribute'), and many a field

anthropologist has described his savages as totally irreligious in one sentence and in the next has gone forward to describe rites which were obviously directed to superhuman powers. Nor need these be personified: personification is itself an act of some intellectual subtlety, and it appears to be the prime token of animism, as distinct from polytheism, just that the animist has failed of achieving this subtlety; but that animism is in the nature of religion, and its placations and reverences in the nature of true worship, few would care to deny. Again, magic: magical ends are usually clearly definable, but the means employed invariably rest upon an implied recognition of unseen or unfelt forces; and it is at least significant that, when gods come to be formulated in thought, their powers are of a piece with all magic potency: the Great Medicine is another name for the Great Mystery. Wherever men placate unseen foes or make offerings to hidden friends—and there are no human tribes so low in mind that these customs are not found among them — there worship is present and divinity recognized.

Above such formless minima the objects of worship build themselves up hierarchically. The definition of a 'thing' becomes the recognition of a 'power,' and the treatment of the power—if the thing be of any importance—becomes the symptom of a cult. Fetishes, 'medicine,' talismans, belong here; they are cherished, they are tended, they are regarded as vehicles of grace; there is no psychological gulf between the fetish and the idol, between the 'medicine' and the sacrament, between the talisman and the holy relic, or even the holy word. Worship is present even in gross superstition—perverted, no doubt, as to its object, but clear in the mode of its regard. As intelligence grows, the purification of human sentiments is accompanied by the elevation of the objects of regard; the near and trivial objects which attract the feebler animist or fetishist give place to the more inspiring or more august forces of nature, which become the spirits that move in wind and wave, that rise as luminous heavenly orbs, or circle through the year on the swift feet of the seasons. Nature-worship is, even to the last, the great fount of the imagery by which we represent to ourselves the augustness and sublimity of divinity, and if, in the end, we feast our imagination of things spiritual with celestial rather than terrestrial phenomena, this is surely but the natural projection of that recognition of the beneficence of light which makes us also liken our most intimate spiritual inward gift to an 'illumination'; the metaphor of light is equally inevitable when applied to wisdom and to grace.

There are, of course, other images which define the objects of adoration. Foremost among them are kinship terms, which, even among the least tutored of men, are the natural titles of gods. 'Father Heaven' and 'Mother Earth' have each a double title to reverence, for the kinship expressed adds to the sublimity and beauty of nature the whole context of humanity in its most winning character, while behind this is also that prophecy of life which parenthood and the whole mystery of procreation have made central in all religious veneration. Indeed, these two factors (natural sublimity and human kinship) are so powerful in appeal that the remaining imaginal mode, which utilizes the likenesses of human society to picture divinity, has never more than passingly and accessorily aided the picture: gods have been likened to warriors, judges, lords, kings, but in their supremacies the light of heaven and the love of the parent have always been their final attributes.

At the foundation, in the mind of the most beclouded savage, the object of worship is a power in strength transcending his own. Whether in his rite-making he goes forward, timidly, to active adoration and a sense of comradeship with his divinity, or, panic-stricken, strives to exorcize the presence and escape its dooms, may well turn upon the colour of his personal fortunes: the Power will be good or evil according to its effects. But, if good, what more inevitable than that very address by a kinship term which is so often enjoined in mythic teachings and which so naturally adds to the sense of power that of benevolence? The third step is that natural association of wisdom with solicitude which is represented by the idea of Providence and imaged by the idea of illumination. Thus the gods, even of dark-minded men, are conceived as more or less strong and good and wise; and it is only a metaphysical theology which universalizes these attributes into omnipotence, omnibenevolence, omniscience. The presence of all three attributes is, of course, not necessary for the existence of worship, though all three are present where the deity is truly adored. But in many cases strength and knowledge are not known or thought to be accompanied by goodness, and out of the terror of evil appetites, immeasurable in power, have grown most of the cruelties and horrors of superstitious worship. If one may so put it, where there is deformity in cult, there will be found deformity in the conception of God.

4. **Psychical factors.**—Before the conception of worship can be fully developed, to its occasions and its objects must be added the consideration of the distinctive psychical values associated with rite and cult. Here again the problem of the primitive is not easily disengaged. More than any other objects of thought psychical values are dependent upon the associations of words for their designation; and consequently more than any other objects they are subject to the ambiguities and tricks of transference which verbal meanings further. Especially must this be true where the differences in linguistic level are great: words such as 'adoration,' 'communion,' 'reverence,' 'conscience' have no equivalents in untutored tongues, and it is difficult to make certain the presence of analogous experiences. The first problem, therefore, which presents itself to the psychologist is to endeavour to infer from the ritual forms and the imagery involved what modes of experience prompt them, and in particular to separate the symbolical from the literal interpretation.

For it should be borne in mind (and it is too often forgotten) that religious ideas are images or they are nothing. The great elementary psychical fact which makes ritualism ritual is that the act of worship is never realistic: it moves and lives in an atmosphere of double meaning; the feather, the pebble, the geometrical sign, the chanted word, the sacramental bread, and the sacrificial flesh are never what in the bald reality of the senses they appear to be; their sanctities are derived from supersensible modes of experience. That such modes of experience should for their expression resort to every type of the imagery of sensible experience is in the order of nature. That the most intimate of these images should be those most deeply founded in our own organic life, as physical human beings, and in our conscious relations, as social human beings, is equally intelligible. And it is not, therefore, unintelligible that religious meanings should be peculiarly easy to pervert; the very difficulties which make their communication to be symbolical call for a subtlety of response that frequently fails. Thus it is that many rites, conceived in spiritual purity, if their symbolism is lost, become gross because the images in which they are conveyed are bound to be gross.

In particular this is the peril of images of sex: the procreation of life is the most inevitable of human experiences, because of the social as well as the emotional significance, to stand as a religious emblem, and nearly all the noblest modes of religious expression rely upon it for their source (the fatherhood of God, divine love, eternal life); but in the course of religious change no imagery has given rise to more perversion.

Possibly this very fact of ready perversion—'spiritual blindness,' as it is called—may have something to do with the second great source of worship: the sense of a need of salvation. Literal fear and literal desire, sensible ends coupled with sensible means, are the emotions most dealt with as explanations of ritual acts. Bionomically, they are no explanations at all, for the phenomena of worship show little or nothing that can be interpreted as furthering a physical salvation; the irreligious is as healthy and safe as the religious. It is here once more that the images are full of deceit: paradise and hell are painted in the pigments of sensation, whereas the thing meant is supersensible. The fact that calls for a real accounting is just the fact that men (of high culture and of low) feel a need for a salvation which is as a matter of fact inexpressible, just as they feel reverence for a divinity which is indefinable. The quest of this salvation is bound up, on the emotional side, with the group of words ('awe,' 'adoration,' 'communion') whose contextual meaning harks back to the very roots of human life.

One may say, then, that, on the intellectual side, the great factor that is fundamental in the experience of worship is the sense of double-meaning, and therefore of the duality of nature. On the emotional side the key is the feeling of need for salvation (which might be negatively described as a conviction of sin). These two come as near to defining the religious 'instinct' as any broad partition is likely to come. In any case, they give the major forms under which the experiences defining worship are to be subsumed.

The psychology of worship, however, must advance a step beyond this, even to lay its foundations. The human mind, the human being, moves as a unit, as a person; and the act of worship is in some sense so complete an act that it characteristically creates the reciprocal figure in the worshipper of the image of his salvation. Religion in the long run tends to define man, not as an individual, but in his type and form. Animism, in ascribing souls to things, personifies them; personification is the first step towards anthropomorphism, which in itself is but the sensible rendering of a psycho-eidism that is both more elemental and more significant. It is more significant because it defines for us, inwardly, the traits which we regard as ideal, and therefore as divine; and it is thus that the whole psychic play of religious experience takes final form as the depiction of an ideal man, a pattern man, who becomes a saviour, if only through the fact of his recognition. Whether the pattern man be given an incarnation and a story as a human individual, or whether he be read as a man-like God, or whether, in the third place,[1] he be composed through the union of all active ideals, as an *anima mundi*, is accident of tradition. The psychical fundamental is that all forms of worship figure him forth, as in a true theophany.

5. **Philosophical implications.**—Portrayal and analysis of the facts of worship constitute the science of comparative religion. But, when all its labours are completed, there still remains for consideration the thinker's most profound problem, viz., that of the truth upon which it rests, the demand of nature to which it responds. Modes of thinking are as correspondent with their cosmic context as are modes of perceiving; the eye of the mind is as truly adapted to its formative forces as is the physical eye; in the end, no beliefs come into being save in orientation to some truth, and superstition is assigned its character from some measuring rectitude. The facts of worship and the facts of faith spring up in response to some spontaneous impulse of human nature, and, like all other human impulses, this becomes a ground of philosophy. In its first form philosophy of religion is theology: the reason's apology for the man's traditional beliefs. But in its sophistications the philosophy of religion assumes at least the form of utter detachment and sits in judgment not upon the article but upon the fact of faith, as a mode of cosmic intuition.

What the philosophic solution must be, in type, can be answered only by appeal to the whole history of thought. Philosophy is reflexion upon the whole range of human experience; this experience grows in variety and in implication with the continuance of life; philosophies, therefore, form and reform with the changing generations of men. Nevertheless, even as there is a generic human nature which defines the kind through the course of time, so there is a generic form which shapes and limits philosophic thinking; its sources are, after all, as few as are our gifts and aptitudes. Occasionally an anthropologist, with a gesture of impatience, would clean the slate of old significances. Reinach proposes as a definition of religion, 'un ensemble de scrupules qui font obstacle au libre exercice de nos facultés';[1] but this is literature, not science or philosophy. The very question that is most profound is that of the reality to which those scruples correspond: What, in the nature of the world, is their foundation and bearing? If men have prayed and sacrificed for naught, how is this to be accounted for? If their rites have suffered perversion, whence is the evil? and what good does it violate? If the symbolism and *double entente* which pertain to all worship is wholly fictive, what power has written so strange a gloss into the constitution of man? If conviction of sin and yearning for salvation are prompted by no truth, whence is the lie to which they give life? In its pragmatic way the fact of worship is ever rehabilitating the ontological argument. There is something in the old Stoic inference: 'If altars, then gods'; and the philosophy of religion is the exposition of what man may perceive in his own deeply impulsive belief in divinity.

LITERATURE.—Landmarks in the comparative and sociological study of religious forms, indicating both the spirit of the investigation and the content of the science, are: David Hume, *The Natural History of Religion*, London, 1757; E. B. Tylor, *PC*[4], do. 1903; and Herbert Spencer, *Principles of Sociology*, 3 vols., do. 1876–96. J. G. Frazer, *The Golden Bough*, 2 vols., do. 1890, of which the third edition (1907–12) has been expanded into a veritable encyclopædia of religious rite, is doubtless the most important, as it is the most massive, collection of information. With it should be reckoned the numerous writings of Andrew Lang in this field, first in significance, *Myth, Ritual, and Religion*[2], London, 1899; Salomon Reinach, *Cultes, Mythes, et Religions*, 4 vols., Paris, 1905–13; Goblet d'Alviella, *Croyances, Rites, Institutions*, 3 vols., do. 1911; A. van Gennep, *Religions, Mœurs, et Légendes*, 5 vols., do. 1908–14; and *The Mythology of All Races*, ed. L. H. Gray (Boston, U.S.A., 1915 ff.), of which the following have been published: i. W. S. Fox, *Greek and Roman*; iii. J. A. MacCulloch, *Celtic*; J. Máchal, *Slavic*; vi. A. Berriedale Keith, *Indian*; A. J. Carnoy, *Iranian*; ix. R. P. Dixon, *Oceanic*; x. H. B. Alexander, *North American*; xi. H. B. Alexander, *Latin American*; xii. W. Max Müller, *Egyptian*; J. G. Scott, *Indo-Chinese*. Books of an earlier date of value and importance include: P. D. Chantepie de la Saussaye, *Lehrbuch der Religionsgeschichte*[3], 2 vols., Tübingen, 1905; H. Bois, *La Valeur de*

[1] A most interesting and enlightening example of this subtler form of anthroponiorphic thinking, in a primitive community, is the account of 'The Symbolic Man of the Osage Tribe,' by Francis La Flesche, *Art and Archæology*, vol. ix. no. 2 (Feb. 1920).

l'expérience religieuse[12], Paris, 1908; F. B. Jevons, *Introd. to the Hist. of Religion*[4], London, 1908; Charles Letourneau, *L'Evolution religieuse dans les diverses races humaines*, Paris, 1892; Conrad von Orelli, *Allgemeine Religionsgeschichte*, Bonn, 1899; A. Réville, *Les Religions des peuples non civilisés*, Paris, 1883; Raoul de La Grasserie, *Des Religions comparées au point de vue sociologique*, do. 1899; C. P. Tiele, *Kompendium der Religionsgeschichte*[3], Breslau, 1903. Among the more significant works of the past dozen years are G. A. Barton, *The Religions of the World*, Chicago and London, 1917; Karl Beth, *Religion und Magie bei den Naturvölkern*, Leipzig, 1914; A. Bros, *La Religion des peuples non civilisés*, Paris, 1907; S. A. Cook, *The Study of Religions*, London, 1914; E. Doutté, *Magie et religion dans l'Afrique du Nord*, Paris, 1909; Emile Durkheim, *Les Formes élémentaires de la vie religieuse*, do. 1912 (doubtless the most important sociological interpretation since Spencer's *Principles of Sociology*); René Dussaud, *Introd. à l'hist. des religions*, do. 1914; R. Eisler, *Weltenmantel und Himmelszelt*, 2 vols., Munich, 1910; L. R. Farnell, *The Evolution of Religion*, London, 1905; G. B. Foster, *The Function of Religion in Man's Struggle for Existence*, Chicago and London, 1909; George Foucart, *Hist. des religions et méthode comparative*, Paris, 1913; Frederic Harrison, *The Positive Evolution of Religion*, London, 1913; B. S. Hartland, *Ritual and Belief*, do. 1914; Marcel Hébert, *La 'Forme idéaliste' du sentiment religieux*, Paris, 1909, *Le Divin*, do. 1907; Irving King, *The Development of Religion*, New York and London, 1910; A. Le Roy, *La Religion des primitifs*, Paris, 1909; R. R. Marett, *The Threshold of Religion*[2], London, 1914; S. Reinach, *Orpheus*, Paris, 1909. Two recent American books, systematic in character, are G. Foot Moore, *Hist. of Religions*, 2 vols., New York and Edinburgh, 1914–20; C. H. Toy, *Introd. to the Hist. of Religions*, Boston and New York, 1913; while a book which undertakes a critical survey of methods of approach to religious phenomena is Frederick Schleiter, *Religion and Culture*, New York, 1919. For the psychology of religion the fountain-head is W. James, *Varieties of Religious Experience*, New York and London, 1902, which has already proved the inspiration of a large special literature.

H. B. ALEXANDER.

WORSHIP (Babylonian).—Form and content of Babylonian worship are almost entirely borrowed from the Sumerians. This is particularly true of the principles of formal worship or the gestures employed in religious devotion. As to the content of worship or the words spoken therein, the Babylonian public service or daily liturgies are without exception Sumerian. But the prayers of private devotion and all the intricate rituals of the magic cults are largely of Semitic Babylonian origin. The Assyrian religion and worship were thoroughly Babylonian, but here a distinct tendency to preserve the Semitic principle of gesture in private devotion is everywhere noticeable. The Assyrian religion likewise owed much to the Sumerians, and their liturgical offices were borrowed entirely from the old canonical Sumerian breviaries of the 23rd century.

I. *GESTURE IN SUMERIAN PRAYER.*—**1. Pre-historic period.**—Very early Sumerian seals which belong to the pre-historic period (*c.* 3500 B.C.) reveal three orthodox poses in private devotion, or in the gesture assumed by a Sumerian layman when he came before a seated deity to say his prayers.

(1) He is represented in the so-called processional scene, where his own protecting god[1] leads him by the hand and presents him to a seated deity. In the early pre-Sargonic period the posture of the adorant's free arm is not yet fixed. Occasionally the disengaged arm is employed to carry a lamb or kid as an offering. On one very early seal the unoccupied arm is folded across the waist.[2] It is remarkable that this idea is characteristic of both Sumerian and Egyptian religions and of these only—a fact which seems to reinforce much other evidence for an original pre-historic contact between Sumer and Egypt. Naturally the figure of a deity who conducts the worshipper is a pure fantasy. In reality a priest led the layman by the hand in this form of adoration, as we can see from a few scenes which depict the processional form of worship as it really was.[3] (2) The worshipper stands with one hand raised parallel to the breast, palm inward and fingers touching the lips; the other arm is folded across the waist. This is the very ancient salutation by throwing a kiss and is the most common gesture in the private devotions of Sumerians and Babylonians down to the Neo-Babylonian period.[1] (3) The worshipper stands with both hands folded at the waist; from statuettes in the round in all periods it can be seen that this gesture imposed a fixed custom of clasping the hands. The right hand is clasped by the left hand in an extraordinary manner so that the right thumb lies against the body and the fingers of the right hand lie almost horizontal. The position is physically impossible and only an exaggeration of the natural clasp seen in bas-reliefs of Assyria. The gesture seems to belong to the religion of pre-historic Sumer and is as ancient as the kissing hand gesture.

Such were the three positions assumed under various circumstances in private devotion by the Sumerians from pre-historic times down to the period of Agade, when the great Semitic dynasty of Sargon the Ancient seized the hegemony of all southern Mesopotamia for 197 years. Sargon may be dated about 2850.

2. Sargonic period.—The Semites of this period as well as those who had lived in close contact with and among the Sumerians in the pre-Sargonic age adopted the Sumerian principles of gesture. A seal dedicated to Narâm-Sin, fifth king of the Sargonic dynasty, represents the worshipper in the kissing hand position. Although the Sumerians recognized this attitude as consisting in throwing a kiss to a deity by the pictograph for the word 'to pray,' yet they commonly designated it, at any rate in later stages, by the term 'lifting of the hand.' In subsequent discussion, when the expression 'lifting of the hand' is employed, the attitude of the kiss hand is always implied. Archæological evidence for religious gesture in this period is meagre, but a few seals seem to indicate that the folded hands position was also common. The old processional scene with intercessory priest disappears entirely in this age.

3. Period of Gudea and Ur dynasty (2650–2358).—In the age of the great Sumerian revival which terminated in the powerful dynasty of Ur we have first of all a return to the old processional scene. But now the disengaged arm, henceforth always the right arm, is held in the attitude of saluting with a kiss. In the time of the Ur dynasty the folded hand gesture becomes extremely common. The present writer has assumed that this gesture was employed in the penitential psalms or prayers of contrition and sorrow, later known as *eršaghunga* prayers. The kiss hand gesture he takes to be the one adopted in prayers of the magic rituals whose principal motif is praise of the deities. The ancient independent kiss hand gesture, *i.e.* without an interceding figure who leads the suppliant by the hand, appears rarely in this period.[2] In other words, the prayers of the lifting of the hand in the last great age of Sumerian civilization always imply a processional scene and a priest.

4. Period of Isin, Larsa, and Babylonian (1st) dynasty (2357–1926).—Archæological evidence furnished by a great number of seals in this period leads to the inference that the processional scene with kiss hand gesture was abandoned for the independent attitude. The suppliant now stands with right hand raised and fingers touching the lips, the left arm folded at the waist. On the older seals of the period the priest still performs the act of intercession, but he stands before the seated deity in the folded hand pose.[3] The inference from the evidence of seals alone that the ancient custom of approaching a deity through

[1] The Sumero-Babylonian doctrine concerning man's relation to his own god and goddess is discussed in *ERE* v. 637 *f.*; see esp. Langdon, 'Religious Interpretation of Babylonian Seals,' in *RAssyr* xvi. [1919] 49–68.

[3] Stone tablet of Nabuapaliddin (890–854) published in Rawlinson, *WAI* v. 60, a copy of tablet of the 1st dynasty. Engraved memorial deed of Melishipak (end of 13th cent.) (V. Scheil, *Textes élamites-sémitiques*, Paris, 1908, x. pl. 13).

[1] For pre-historic examples see the seals cited in Langdon, 'Gesture in Sumerian and Babylonian Prayer,' p. 533 *f.*, from the publications of Delaporte and Ward.

[2] Cf. a seal dedicated to Dungi (J. Menant, *Recherches sur la glyptique orientale*, Paris, 1888, fig. 86).

[3] See, *e.g.*, L. Delaporte, *Catalogue du Musée Guimet, Cylindres orientaux*, Paris, 1909, no. 45; also *Catalogue des Cylindres orientaux de la Bibliothèque Nationale*, do. 1910, nos. 124–128.

the offices of a priest was abandoned after the Ur dynasty is clearly misleading; for two clear examples of this custom are illustrated on monuments of the Cassite period and on the stone tablet of Nabuapaliddin.[1] Moreover, in prayers of private devotion frequent reference is made to the priest who recites portions of the prayer.[2] But from this period onward until the rise of the Neo-Babylonian empire at the end of the 7th cent. the pose of the kiss hand with left arm folded at the waist is the ordinary gesture in Babylonia.

II. *GESTURE IN ASSYRIAN RELIGION.* — The Assyrians retained the old open hand Semitic pose in prayer, although the kiss hand was also adopted by them from the Sumerians. Since they also borrowed all the prayers and liturgies of the official cults from Sumer and Akkad, the retention of the Semitic gesture emphasizes the tenacity with which they adhered to racial customs. The open hand gesture, which was also the principal one used by the Hebrews, is made by extending both hands upward towards heaven, palms inward. In art the suppliant is always represented standing as in Sumer and Babylonia.[3] But the pose in taking up the gesture of the kiss hand in Assyria was ordinarily modified in two respects. The right arm is now thrown forward and the hand turned outward, the index finger pointing at the god or sacred object. The thumb is closed over the three remaining fingers. This attitude is similar to one seen on Greek monuments and represents the adorant in the later stages of the act of throwing a kiss. But under influence of the Assyrians and Aramæans the old Semitic spirit reasserted itself in Babylonia; seals of the Neo-Babylonian, Persian, Seleucid, and Parthian periods almost invariably represent the worshipper in the open hand pose.

Kneeling and prostration do not appear to have been admitted in the orthodox forms of Sumerian religion, but there is evidence for their use among the Babylonians and the Assyrians. Prostration and kneeling were certainly acts of worship at certain points in the recitation of prayers and penitential psalms among the Semites, and on the whole it seems probable that they are of Semitic origin. In Sumerian literature almost no prayers of the private cults have been preserved. We possess extensive catalogues of the titles of such prayers, and the seals show that they approached their deities in private devotion from the very earliest period. But the spirit of their religion asserted itself rather in communal or public worship, and the liturgies of their various cults are extensive. In the Ur and Isin periods liturgies became canonical and extremely intricate. They were accompanied by music, and in fact the names of instruments were employed as technical terms to describe kinds of songs; *e.g.*, the recessional or final song of a liturgy was sung to the double flute and called the flute song. The canonical liturgies of the Sumerians were borrowed by the Babylonians and the Assyrians and were always said in Sumerian. The greater portion of each liturgy was provided with an interlinear Semitic translation for laymen. No changes in the old Sumerian liturgies were ever permitted, and even in Assyria the national god Ašur is excluded from the deities mentioned in the litanies because his cult arose after the canon of sacred prayer books was closed.

The Babylonians usually employed Semitic prayers in the private rituals of purification, and these were known as the 'prayers of the lifting of the hand.' They were of course modelled on the Sumerian prayers of the kiss hand ceremonies, and a very great number of prayers of this kind have survived in Semitic. They form almost invariably part of the magic ceremonies of purification.[1] A considerable number of the prayers said by the priests in these services of healing and atonement have been recovered, and these were written and recited in Sumerian, and were known by the rubric (*kišub*). Prayers of penance which are pure religious prayers of great spiritual power and unconnected with magic rituals were not popular, and of these comparatively few have survived. They are all composed in Sumerian and probably represented the prayers said in the old Sumerian processional scene. Obviously they could not be employed by the ordinary layman, who knew no Sumerian. They represent the exclusive and aristocratic side of Sumerian and Babylonian religion. In them the priest takes a leading part, and they are usually provided with a Semitic translation.

LITERATURE.—*On gesture in worship.*—S. Langdon, 'Gesture in Sumerian and Babylonian Prayer,' *JRAS*, 1919, pp. 531–556; Friedrich Heiler, 'Die Körperhaltung beim Gebet,' *Orientalische Studien Fritz Hommel zum sechzigsten Geburtstag gewidmet*, Leipzig, 1918, ii. 168–177.

Liturgical worship.—S. Langdon, *Babylonian Liturgies*, Paris, 1913 (esp. the Introduction concerning the use of musical instruments, the origin and development of the breviaries and their theological content), *Sumerian Liturgical Texts from Nippur*, Philadelphia, 1917, and *Sumerian Liturgies and Psalms*, do. 1919 (Introduction has a résumé of most recent knowledge on liturgical worship), *Sumerian and Babylonian Psalms*, Paris, 1909. For the liturgies of the Tammuz cult, whose festival was probably celebrated at mid-summer, see H. Zimmern, *Der babylonische Gott Tamūz*, Leipzig, 1909, and *Sumerisch-babylonische Tamūzlieder*, do. 1907; S. Langdon, *Tammuz and Ishtar*, Oxford, 1914. Liturgical worship in the cults of deified kings of the late Sumerian period is discussed in 'Sumerian Liturgies and Psalms,' and in 'Notes on the Deification of Kings,' by T. G. Pinches, *PSBA*, 1915, pp. 87–95, 126–134, and in 'Three New Hymns in the Cults of Deified Kings,' by S. Langdon, *PSBA*, 1918, pp. 30–40, 45–56.

Prayers of the lifting of the hand and penitential psalms are discussed and full literature given under PRAYER (Babylonian). In addition to the literature there see Erich Ebeling, *Quellen zur Kenntnis der babylonischen Religion*, Leipzig, 1918–19. What is known concerning the great New Year festival at the spring equinox will be found in H. Zimmern, *Zum babylonischen Neujahrfest*, Leipzig, 1903, [2]1918; S. Langdon, *ἐxp* VII. viii. [1909] 143–158. Benno Landsberger, *Der kultische Kalendar der Babylonier und Assyrer*, Leipzig, 1915, has begun a series of monographs upon the Sumerian and Semitic monthly festivals.

S. LANGDON.

WORSHIP (Buddhist).[2]—**1.** Worship (*pūjā, vandana, māna*, etc.) is no part of the Path (*mārga*). Path is insight into and meditation on the four truths (the four *nirvedhabhāgiya, satyadarśana, satyabhāvanā*); but worship is an important part of what is styled *mokṣabhāgiya* ('acts connected with or leading to deliverance'). No man can in this life enter into the Path, if he has not, in a previous existence, 'planted' some 'root of merit' (*kuśalamūla*). Among the 'roots of merit' worship is the best.

2. Worship is the best *dāna*, or giving. A man gives material gifts (*āmiṣadāna*) or security (*abhayadāna*) to his fellow-men, to animals, to *pretas*, for their benefit and also for his own benefit. He shall give to the Buddha, to the

[1] See artt. EXPIATION AND ATONEMENT (Babylonian), MAGIC (Babylonian), and PRAYER (Babylonian).

[2] Details concerning Buddhist worship are to be found in all books dealing with Buddhism. Some of the sources are indicated below. But the principles that command the Buddhist Hīnayāna doctrine of worship have never been elucidated, and there is the justification of the present short note.

[1] See above, p. 757[a], note 3.

[2] So, *e.g.*, in the *erîaghunga* prayer, iv. Rawlinson, no. 2= Zimmern, *Babylonische Busspsalmen*, Leipzig, 1885, no. 6. And a number of prayers of the 'lifting of the hand' end with the phrase 'I will sing thy praise and I the priest of magic thy servant will sing thy praise' (see E. Ebeling, *Keilschrifttexte aus Assur*, Leipzig, 1919, no. 25, rev. III. 10; C. D. Gray, *Shamash Religious Texts*; Chicago, 1901, K. 3394 rev. 14; L. W. King, *Babylonian Magic and Sorcery*, London, 1896, no. 12, 94).

[3] See Langdon, 'Gesture in Sumerian and Babylonian Prayer,' figs. 16, 18–20, and p. 539.

Dharma, to the Church, for his own advantage, because they are 'fields of merit' (*puṇyakṣetra*) *par excellence*. The better the field, the better the fruit. Now the merit of giving is either *tyāgānvaya* or *paribhogānvaya*; *i.e.*, a merit accrues to the giver either because he gives away (*tyāga*) something or because the recipient enjoys (*paribhoga*) the thing that has been given away. Buddha does not enjoy the flowers, etc., that are offered to *chaityas*. The merit is not weaker for that. The point is discussed in Pali and Sanskrit sources.

LITERATURE.—*Abhidharmakośa*, iv. 32 (on the *triśaraṇagamana*), 112 (on the merit accruing to the future Śākyamuni on account of his worshipping Puṣya), 121 (on the worship of *chaityas*; why actual acts of worship are useful), vii. 34 (paradises and *nirvāṇa* obtained owing to a single thought of faith in the qualities of a Buddha), iii. 99 (avoiding *antarakalpas* by giving to the Saṅgha); *Milinda* (*SBE* xxxv. L. DE LA VALLÉE POUSSIN.

WORSHIP (Chinese).—I. *INTRODUCTORY.*—It is not easy to find any Chinese word or phrase which conveys identically the same meaning as that which the word 'worship' conveys to one who has been brought up in a Christian environment. Probably the first word which would occur to most students of Chinese is *chi*. It consists of three parts—the symbols for 'spiritual beings,' 'flesh,' and 'the right hand,' giving the meaning, 'to hold a piece of flesh in the right hand and offer it to the spirits.' One of the pioneer Anglo-Chinese lexicographers, Morrison, gives as one of the meanings of the character *chi* 'to offer flesh in the rites of worship, to sacrifice with worship.' J. Legge criticizes this interpretation by pointing out that it is not countenanced by the compilers of the standard native dictionary, *K'ang Hsi*. He adds, 'The general idea symbolised by the character *chi* is—an offering whereby communication and communion with spiritual beings is effected.'[1] The importance of this criticism will be manifest when we remember that the symbol *chi* is the one which is commonly used to denote the religious side of the cult of ancestors. If *chi* does not mean 'worship,' a doubt at once suggests itself as to whether we are technically correct in describing that cult as the 'worship' of ancestors. This doubt is fully justified if to the word 'worship' in this phrase we attribute a meaning identical or nearly identical with that which it bears in Christianity. If we assume that 'worship' can only be offered to a god or gods (real or imagined), and we insist upon describing the Chinese ancestral cult as the 'worship' of ancestors, it follows that the ancestors so 'worshipped' are regarded as gods. And this is precisely the principal ground on which the cult in question has been attacked by Christian missionaries. Obviously the process of translation from one language into another can give rise to a great deal of misunderstanding and question-begging.

There are, of course, many other Chinese words and phrases which correspond, more or less roughly, to the word 'worship'; but no one of them can be regarded as strictly equivalent. *Pai* means merely 'to bow' or 'to salute'; when *ch'ung* is prefixed, the term acquires a religious meaning and may be translated 'to salute with reverence.' *Li-pai*, much used by Christian missionaries, does not necessarily mean more than to salute in accordance with the appropriate rites. *Ching-yang* means 'to respect and look up to.' There are several other terms which give the idea of ritual sacrifice. It may be urged that these and similar Chinese terms are, after all, just as satisfactory as the English term, which can hardly be said to contain within itself an adequate indication of what it has come to mean in Christian thought and ritual. If we are careful to remember that there are some not readily definable differences in spiritual content between the European and Chinese terms, not much harm will be done by regarding the two sets of terms as roughly equivalent.

In this article it is unnecessary to attempt to make any such subdivisions or differentiations as are used by the Church of Rome to distinguish the varieties of Christian worship. Such differences as those between λατρεία, ὑπερδουλεία, and δουλεία do not exist in China—simply because they have never been called into existence by the exigencies of religious controversy.

II. *CONFUCIANISM.*[1] — 1. **Introductory.** — The clearest expression of the Confucian notions of worship is found in that remarkable collection of religious treatises which goes under the name of the *Li Chi* (*Record of Rites*). 'More may be learned,' says Legge, 'about the religion of the ancient Chinese from this classic than from all the others together.'[2] And it should be added that, as the *Record of Rites* forms one of the Five Classics of the orthodox Confucian learning, it still remains[3] what it has been for many centuries—the principal source of Chinese ideas regarding not only the ritual but also the inner significance of religious observances.

The reader must be warned, however, that, when we give the name of Confucianism to the religious beliefs and rites described in the *Li Chi* and other 'Confucian' classics, we are using the term in a somewhat vague sense as including all that Confucius and his school sanctioned, eulogized, or tacitly accepted. Confucius insisted that he was only 'a transmitter and not a maker,' and in any case he never posed as a religious prophet or as an inspired teacher of religious truth. Much that has come down to us as Confucianism is pre-Confucian in origin; and this we find to be specially true when we enter upon the sphere of religious thought. In the sections that follow it must be understood that 'Confucianism' is used in the looser sense here indicated.

2. Nature of true worship as understood in Confucianism.—(*a*) *Reverence.*—The *Record of Rites* opens with the striking words 'Always and in everything let there be reverence.'[4] In many parts of this classic (which came from many different hands and belongs to many different dates) the supreme necessity of reverence is emphasized, especially in connexion with all ceremonies which regulate the intercourse between the seen and the unseen worlds. Commenting on one of its subdivisions, Legge remarks:

'Throughout the Book it is mostly religious rites that are spoken of; especially as culminating in the worship of God. And nothing is more fully brought out than that all rites are valueless without truth and reverence.'[5]

The *Record* quotes Confucius as saying that in the ceremonial rites of mourning the most important thing is reverence,[6] and in another passage he is

[1] *SBE* xxviii. [1885] 201.

[1] Cf. artt. CONFUCIAN RELIGION, CONFUCIUS.

[3] Or rather remained up to 1911. The whole Confucian system has been more or less on the defensive since that date.

[4] *SBE* xxvii. 61. Cf. Legge's comment on p. 12.

[5] *Ib.* p. 25.

[6] *Ib.* xxviii. 163.

credited with the following remarkable utterance: 'With the ancients in their practice of government the love of men was the great point; in their regulation of this love of men, the rules of ceremony was the great point; in their regulation of those rules, reverence was the great point.'[1] It is an oft-reiterated Confucian theory that reverence in the performance of the prescribed rites and good conduct in the ordinary relations of man with man were inseparable.

'When one has mastered (the principle of) ceremonies, and regulates his person accordingly, he becomes grave and reverential. Grave and reverential, he is regarded with awe. If the heart be for a moment without the feeling of harmony and joy, meanness and deceitfulness enter it. If the outward demeanour be for a moment without gravity and reverentialness, indifference and rudeness show themselves.'[2]

It is evident that Confucius thoroughly approved of the strong emphasis laid by the ancients on the necessity of reverence. 'Authority without mercy, *ceremonial without reverence*, mourning without sorrow—what have I to do with these?'[3] The same lesson of reverence is inculcated in the Classics of Poetry and History.

'From of old, before our time, the former men set us the example;—How to be mild and humble from morning to night, and to be reverent in discharging the service.'[4] In the *Shu Ching* (Classic of History) there is a description of how the emperor Shun (23rd cent. B.C.), when appointing a high-priest or director of religious ceremonies, addressed the newly-appointed officer thus: 'You must be the Arranger of the ancestral temple. Morning and night you must be respectful. Be upright, be pure.' The officer did obeisance and suggested that one worthier than he should be appointed; but the emperor adhered to his decision and said, 'Do you go and undertake the duties. Be reverential.'[5] Similar exhortations are to be found in the *Tso Chuan*.[6]

Irreligion or irreverence is frequently declared to be the cause of the withdrawal of God's support from a reigning house.[7]

(*b*) *Sincerity.*—A fair acquaintance with Confucian thought shows that the true Confucianist is far from exaggerating the importance of ceremonies and ritual as such. He constantly insists that it is the spirit, not the letter, that really matters, and that rites in themselves are worthless without sincerity. A recent writer has said that the earlier types of 'commercialized' religion were displaced by 'faiths like those of Jesus and Mahomet which make God's favor depend on the *heart* of the worshipper rather than on his *sacrifice*.'[8] But this was precisely the teaching of classical Confucianism several centuries B.C. In one of the books of the *Record of Rites* we are told that the 'superior man' is not only extremely reverential in all ceremonial matters but is also absolutely sincere.[9]

'Sacrifice [which in this passage is practically synonymous with religion] is not a thing coming to a man from without; it issues from within him, and has its birth in his heart. When the heart is deeply moved, expression is given to it by ceremonies; and hence, only men of ability and virtue can give complete exhibition to the idea of sacrifice. The sacrifices of such men have their own blessing;—not indeed what the world calls blessing. Blessing here means perfection;—it is the name given to the complete and natural discharge of all duties. When nothing is left incomplete or improperly discharged;—this is what we call perfection, implying the doing everything that should be done in one's internal self, and externally the performance of everything according to the proper method.'[10]

In the *Tso Chuan* we are told that, when 'intelligence and sincerity' are present, almost any offerings, however common and easily obtained, may be 'presented to the spirits and set before kings and dukes.'[11] An English writer has commented on this in the following words:

'The idea that *intelligence* and *sincerity* are prerequisites to *sacrifice* indicates an advanced stage of religious culture on the part of the writer.'[1]

The testimony of the other classical books is to the same effect.

'God has no partialities,' the *Shu Ching* tells us, 'only to those who are reverent does He show favour. The people are not constant in their affections, except to those (rulers) who have charity of heart. The spirits do not necessarily enjoy sacrifices; what they enjoy is the sincerity.'[2]

(*c*) *Simplicity and dignity.*—Next to reverence and sincerity in prayers and sacrifices nothing is more earnestly insisted upon than simplicity and dignified restraint—something very near to the Greek *σωφροσύνη*. Ostentation and a lavish display of costly temple furniture is strongly discouraged; plain water is better than wine, coarse cloth is to be preferred to gorgeous embroideries, expensive mats of fine rushes and bamboo are no better than mats of coarse reeds and straw. The soup which formed part of the sacrificial offerings should be unseasoned, to denote simplicity; the grand symbols of jade should be left plain instead of being carved. The king, when about to take part in sacrificial rites, should not ride in a carved and lacquered state-carriage but in a plain one. 'In all these things it is simply the idea of the simplicity that is the occasion of the preference and honour.'[3] Sacrificial offerings should be chosen not from rare and expensive products, but from what is seasonable and abundant.[4] Self-restraint—a moral quality which manifests itself outwardly in simplicity—is one of the principal Confucian virtues. Without self-restraint there is necessarily a lack of dignity; and without dignity the rites of worship cannot be properly performed. It was not only the actual sacrificial rites that had to be conducted with quiet dignity and solemnity; the temple-dances, too, 'displayed the gravity of the performers, but did not awaken the emotion of delight.'[5] Similarly, 'the ancestral temple produced the impression of majesty, but did not dispose one to rest in it.'[6] This is because 'the idea which leads to intercourse with spiritual Beings is not interchangeable with that which finds its realisation in rest and pleasure.'[7]

3. **Godward and manward aspects of Confucian worship.**—There is another feature of Chinese religion which is perhaps more characteristically Chinese than any of those yet mentioned—a moral attitude which may be briefly summed up in the formula 'Look after the human and the divine will look after itself.' This 'manwardness,' if it may be so termed, does not necessarily imply a neglect of or contempt for the 'Godward' side of religion. It is based on a reasoned conviction that whatever is good for man will satisfy God; that God does not desire and will not accept any offerings or sacrifices that will hamper or impoverish His worshippers in their necessary mundane activities or human relationships; and that in the last resort divine and human interests are identical. To quote the words of Mencius—

'He who brings all his intellect to bear on the subject, will come to understand his own nature; he who understands his own nature will understand God. To preserve one's intellect, and to nourish one's nature—that is how to serve God. To waste no thoughts upon length of life, but to cultivate rectitude—that is to do the will of God.'[8]

Doubtless this view, or something like it, is one to which all evolving religions tend to approximate; what is remarkable is the very early date at which it was reached by the Chinese and the consistency with which it has been maintained.

It may have hampered Chinese religion in its attempts to soar heavenward, but it has undoubtedly had the excellent result of enhancing the honour and prestige of moral values. Nor are these moral values confined to earth. Chinese religious speculation extends them to the spiritual world as well, and this is why we have no capricious or irresponsible despot in the Chinese pantheon, no acts or utterances ascribed to divine beings which are incompatible with the highest moral ideals known to Chinese humanity. In this we have a sufficient explanation of another remarkable fact that has often extorted the admiration of European students: the high moral tone of the whole body of the classical and sacred literature of China and the absence of all expressions suggestive of licentious thought.

A modern writer on Eastern religions remarks that in his opinion Confucius laid 'unnecessary emphasis upon social and political duties, and may not have been sufficiently interested in the honour to be paid to Shang-Ti or God. He practically ignored the Godward side of men's duties.'[1] More just are H. A. Giles's observations on Confucius's general attitude:

'In regard to the relative importance of serving God and serving man Confucius has often been blamed for setting man before God; but it should be remembered that his interpretation of true service to God was embodied in right and proper performance of duty to one's neighbour. The idea of personal service to God Himself, as understood by the Jewish patriarchs, is entirely foreign to the Chinese conception of a Supreme Being.'[2]

In one of the books of the Historical Classic we are told of the eight branches of administration which ought to engage the attention of good rulers. The first is agriculture—the most important of all, because it provides the people with the means of subsistence; the second, commerce, which regulates the distribution of commodities; the third, religious ceremonies. With the fourth, fifth, and sixth we need not concern ourselves; the eighth and last is preparation for war.[3] It is characteristic of China that the rites of religious worship should occupy only the third place; for religion, the Chinese would say, has small practical importance for men who have nothing to eat; and spiritual beings, if they deserve human homage at all, are not likely to demand sacrificial offerings from men who cannot find the wherewithal to feed themselves. The doctrine which is implicit in this ancient passage from the *Shu Ching* reappears in an explicit form in the teachings of Mencius: 'The most important element in the State is the people; next come the altars of the gods; least in importance is the king';[4] and is repeated in the utterances of the first emperor of the Ming dynasty:

'God puts the sovereign in charge of his people, and the sovereign who wishes to serve God properly must first show that he loves the people. To show love for the people—that is the way to serve God. . . . He who would be a true sovereign should regard Heaven as his father, Earth as his mother, and the people as his children, and must carry out his duties to each with the utmost devotion. He does not perform the sacrifice to Heaven and Earth in order to bring prosperity upon himself, he does it to promote the welfare of the whole realm.'[5]

4. The motives of worship.—What, then, is the principal motive of religious worship, according to Chinese theory? Confucius and the majority of thinking Chinese since his day would have assumed that the object of religious rites is a double one—to do honour to spiritual beings and to benefit living men. The benefits anticipated by the living are moral and spiritual as well as material. It cannot be disputed that a great deal of the ceremonial connected with the cult of ancestors has direct reference to purely worldly considerations. It is assumed that the ancestors, if approached with the proper rites and offerings, will maintain the family in a state of prosperity and save it from disaster or extinction. Nevertheless this is not the reason why Confucian orthodoxy sanctions the cult of ancestors. The truly filial son, we are told, should offer his sacrifices 'without seeking for anything to be gained by them.'[1] Further, it should be remembered that there is, and long has been, a very large number of people in China who have been more or less sceptical on the question of the continued existence of human individuals after death, and who have nevertheless been among the most zealous supporters of the ancestral cult. Those who study the cult not merely in books (whether Chinese or foreign) but as it is actually practised by the people will soon realize that the practical if not the theoretical basis of the cult is social and moral rather than religious. As the present writer has said elsewhere, Confucianism has insisted on 'the importance of keeping up the cult of ancestors not so much for the sake of the dead as because it fostered among living men feelings of love, respect, reverence, and duty towards family and state. The souls of the dead might or might not be conscious of what was done for them, but it was in the interests of social harmony and political stability that the traditional religious and commemorative ceremonies should be jealously preserved and handed down to posterity, and that during the performance of such ceremonies the presence of the ancestral spirits should at least be tacitly assumed.'[2] Filial piety is, of course, the principal virtue which the ancestral cult is expected to strengthen and confirm; and it should be remembered that filial piety in China has a much wider and deeper signification than it has elsewhere. We are told that it is the root of all virtue, and the stem which produces all moral teaching; that it is an all-embracing rule of conduct, by the practice of which the people are brought to live in peace and harmony, and ill-will between superiors and inferiors is extinguished; that it commences with the service of parents, proceeds to the service of the king, and is completed by the consolidation of the character.[3]

A well-known Christian missionary in China, J. Edkins, drew attention to what he conceived to be a serious defect in the Chinese attitude towards religion when he said:

'An ethical test is the only one they know. When the evidence of a new religion is presented to them, they at once refer it to a moral standard, and give their approval with the utmost readiness if it passes the test. They do not ask whether it is divine, but whether it is good.'[4]

It is not strictly accurate to say that an ethical test is the only one they know, but it is certainly the test which they show the greatest readiness to apply. Probably the most religiously-minded Chinese would cheerfully admit the truth of Edkins's observation that when confronted with a new religion they 'do not ask whether it is divine but whether it is good,' not because they are contemptuous or oblivious of the divine, but because they feel or believe that the direct and exclusive search for the divine may lead them into swamps and wildernesses, whereas the search for the good is in itself a great good, even if only partially successful; and that, although few glimpses of the divine may be vouchsafed during the arduous ascent of the mountain of good, it will be found, when the summit is reached, if not

sooner, that the good and the divine are twin peaks joined by a level pathway over which men and gods may come and go at will, greeting one another as they pass with the friendly recognition of spiritual kinship.

III. *TAOISM.*[1]—It is unnecessary to deal at length with Taoist notions of worship, because, regarded as a religion, Taoism is almost wholly imitative. Primitive Taoism was not a religion, and, though the mysterious *Tao* was regarded as ineffable, wonderful, omnipotent, immanent in all the universe, infinitely great and infinitesimally small, it cannot be said to have been an object of worship. After the introduction of Buddhism, Taoism found it necessary to go through a process of reinterpretation and reconstruction in order to maintain its position in an environment that was becoming increasingly Confucian on its ethical, increasingly Buddhist on its religious, side; it therefore adapted to its own uses some of the religious formulations and rituals of its Indian rival, borrowed moral teachings from both Confucianism and Buddhism, and turned itself into an institutional religion by adopting monasticism and establishing temples for the worship of the numerous and ever-multiplying deities who began to throng its pantheon. It apotheosized its legendary founder, Lao-tse, and made him one of a divine triad which would certainly never have come into existence had a model not existed in the San Pao, the 'Three Precious Ones,' of Buddhism. As time went on, it also drew into its own system some of the divine beings of the pre-Confucian state religion of China; and so the Shang-Ti, or Supreme God, became (in comparatively recent times) the Yü Huang Shang-Ti, the 'Jade Imperial God,' who is one of the most prominent objects of worship in the debased Taoism of to-day. In spite of all its bare-faced borrowings, its crudely-artificial methods of turning dead men and women and shadowy abstractions into gods and goddesses, and its haphazard deification of animals, real and mythical, there is no doubt that even in these degenerate days the deities of Taoism are capable of inspiring religious devotion and that some of them at least are objects of real worship.

IV. *BUDDHISM.*[2]—It is often said that Buddhism is atheistic and therefore offers the believer no object of worship. However true this may be of Buddhism as a metaphysical system, and of the Hīnayāna (*q.v.*), in its primitive form, it is certainly not true of the Mahāyāna (*q.v.*), which claims the allegiance of practically all Chinese Buddhists. For all but a small minority of Buddhist scholars and mystics the Buddhas and *bodhisattvas* cannot be fitly described as other than objects of worship. The cult of these beings has reached its greatest development in one subdivision of the Mahāyāna, which is known to Chinese as the 'Pure Land' and to Western students as the Amidist school. For adherents of this school the figure of Amitābha has practically taken the place of Śākyamuni, the historical Buddha; and the worship of which he is the object can hardly be described as anything less than λατρεία. For ordinary believers he is the sublime deity who rules over Sukhāvatī, the Western Paradise, and who, with the assistance of the great *bodhisattvas* Avalokiteśvara (Kuan-yin) and Mahāsthama (Ta-shih-chih), brings to salvation all those who invoke his name with sincerity. That Amitābha evokes feelings of deep and sincere devotion is often doubted or thought impossible by those who cannot understand how the contemplation of a non-existing being (for Amitābha is entirely a product of the religious imagination) can give rise to a really devotional attitude. Yet a close observation of the religious beliefs and practices of Amidists will certainly dispel any doubts. Perhaps no more conclusive testimony on this subject could be obtained than that of L. Wieger, whose evidence is all the more important and valuable from the fact that, as a loyal Catholic missionary, he may be regarded as incapable of unduly emphasizing the spiritual fervour that a pagan cult is capable of inspiring.

'The Amidist temples in China and Japan are the only ones in which the people pray—pray truly and from the bottom of their hearts, where they repent and implore, with attitudes so natural and so touching that no suspicion of make-believe is admissible. As long as I live I shall never forget the feelings that I experienced when I saw a young Amidist mother making her devotions before the lighted and empty throne.[1] She began by closing her eyes and concentrating her thoughts, her lips murmuring the words of repentance and petition. Then she brought two little children before the throne. The second could scarcely walk, but both did exactly as their mother had done, correctly and most gravely. Finally she took from her breast a third child, newly-born, and pressing his head very delicately between her thumb and forefinger, made him bow towards the throne.'[2]

In recent years some rather crude attempts have been made by a small school of English writers to prove that the beliefs and rites of Amidism, or some of their most striking features, were borrowed from or inspired by Christianity. Wieger, whose learning, conscientiousness, and comparative freedom from bias make him almost unique among Western missionaries who have studied Chinese religion, unreservedly rejects the theory. He believes, on the contrary, that all the characteristic features of the Mahāyāna—including the 'altruisme exubérant' and the 'fièvre salvifique' associated with the activities of the *bodhisattvas*—are a logical development of primitive Buddhist theory.[3] He sees nothing mysterious in the gradual expansion of the so-called egoism of the Hīnayāna into the altruism of the Mahāyāna; indeed he regards it as necessary and inevitable. He traces Mahāyānist origins to the centuries immediately succeeding the death of Gautama Buddha. The Mahāyāna 'serait donc antérieur de plusieurs siècles au Christianisme.'[4] These views appear to the present writer to be entirely just. The worship of Buddha, or of Amitābha, or of Kuan-yin is, at its best, as true and sincere as the worship of God, of Christ, or of the Virgin in Christendom; and its roots are planted very deep in Buddhist soil.

LITERATURE.—This has been indicated in the footnotes.

R. F. JOHNSTON.

WORSHIP (Christian). — Religious worship being the expression of that sense of 'worth,' or title to honour, which man feels due to the Divine nature, its idea and forms will vary with the notion of God and man and of their mutual relations. Christian worship, moreover, as distinct from the other historic types, has a definite character due to the teaching and example of the Church's Founder Himself. This remains regulative for the whole history of Christian worship, deciding between true and false developments, and forming the standard by which reform or progress is to be judged.

The gospel of Christ itself emerged out of the religion of Israel, and accordingly its genius or distinctive nature defined itself largely in relation to Judaism, both as faith and as worship. In both Jesus claimed to 'fulfil' the religion of the Hebrew prophets, whose emphasis was on the heart or inward attitude, as determinative of real devotion to God and His will; 'obedience' of life was the truest 'sacrifice,' and moral relations, rather than

ritual or formal acts of worship, were the primary form and means of communion with God. Love to God as Father, and to all men as brethren in virtue of their relation to Him—this constitutes essential worship; to it all forms of specific worship are subordinate, and have value only as expressive of this and all it implies, according to Christ's idea of God's character. Where known moral relations are at fault, worship is inacceptable; the 'gift' of homage is to be left unoffered until it can be offered with a good conscience (Mt $5^{23f.}$).

Spirituality, then, in this sense, is the touchstone of Christian worship; and those forms of worship are most entitled to the term 'Christian' which conform most to the simplicity and naturalness which marked Jesus' own devotional practice, or are most analogous to these. This does not fix beforehand how far other modes of expressing the same ideas and emotions, under other conditions of culture and particularly of art, may or may not be allowable. But it does fix where the emphasis which determines the spirit of worship must lie, if worship is to be true to 'the mind of Christ.'

Worship has two senses, a wider and a stricter. The wider, expressing a man's devoutness in all his living, is equivalent to piety; the narrower, denoting specific forms of devotion, personal or social, is nearly synonymous with cultus. It is with the latter that this article has chiefly to do. Yet, since the relation between the two senses of worship, the inward or inclusive and the external and particular, is so intimate in Christianity, it is needful constantly to bear in mind the context of 'holy' or devout life in which worship is set, in so far as it is Christian at all. This we shall find to be very manifest in primitive Christianity, when 'holy' was *the* epithet of the Church, and when participation in its worship, as pure and loving—with the Kiss of Peace as its seal—was conditioned by serious moral Church discipline.

1. **The NT idea of worship.**—(*a*) Religion, according to Jesus, consists in filial trust and love towards God, and loyalty to His will for His Kingdom 'on earth as it is in heaven.' Thus the Christian norm of worship is the Lord's Prayer. In keeping with this, the effect of Jesus' whole teaching, alike by its emphasis and by its silence, is to change the relative importance attaching to heart religion and to outward expression in worship. He never treated ritual or cultus as determinative of man's real relation to God, as did current Judaism—a fact revolutionary in the history of ancient religion. Nor did He, while creating a new religious bond between His disciples and constituting them a new Israel within Israel spiritually, make them a new community for purposes of worship or prescribe new forms of worship proper.[1] 'Pray without ceasing: in everything give thanks' (1 Th $5^{17f.}$; cf. Eph 6^{18}), rightly became a watchword of the Christian life. Worship thus becomes relatively independent of any given forms of expression, so far as these are not bound up with normal human life, the fulfilment of all relations 'as unto God and not (merely) unto men.'

This comes out clearly in Paul's attitude to special seasons in Ro 14. 'One man esteemeth one day above another: another esteemeth every day alike' (v.5). 'He that regardeth the day, regardeth it unto the Lord' (v.6), and *vice versa*. Here we have a principle of all-embracing range, since it turns on the very nature of 'faith,' as Paul is using the term, viz. personal conviction before God. 'Whatever is not of faith is sin' to him who does or abstains. 'For the kingdom of God is not eating or drinking (as religious observance), but righteousness and peace and joy in the Holy Spirit. For he that herein serveth Christ is well-pleasing to God.' There can, then, be no absolute rules or laws of worship in Christianity. This principle of relativity is implied too in the great maxim which sums up the distinctive advance of Christian worship—because of the Christian idea of God—upon that of all previous religion, including Judaism. 'The hour . . . now is, when the true worshippers shall worship the Father in spirit and truth [full reality]: for such doth the Father seek to be his worshippers. God is Spirit: and they that worship him must worship in spirit and truth' (Jn $4^{23f.}$). As J. B. Lightfoot puts it,[1] 'The Kingdom of Christ . . . has no sacred days or seasons, no special sanctuaries, because every time and every place alike are holy. Above all it has no sacerdotal system. It interposes no sacrificial tribe or class between God and man, by whose intervention alone God is reconciled and man forgiven. Each individual member holds personal communion with the Divine Head.' The conception is indeed, as he adds, 'strictly an *ideal*,' which cannot be applied rigorously in the practical life either of individuals or of the Christian society, the Church. But it remains the regulative principle behind all Christian institutions of worship, as of organization generally, giving them only a conventional value, as expediencies tested by much experience, yet as such to be treated reverently, especially for the sake of others, i.e. in love as well as faith.

(*b*) *Forms of worship in the NT.*—Here the main fact is that Jesus' own example and teaching are associated with the synagogal type of worship rather than with the Temple, the seat of the sacrificial and priestly system of worship. For to Him the Temple was primarily 'a house of prayer,' and that private (Lk 18^{10}) rather than public prayer. Indeed the latter hardly seems to be alluded to by Jesus at all (not even in Mt 18^{19}). His teaching on worship is mainly on genuine prayer, as opposed to formal prayers, 'vain repetitions' (Mt $6^{5f.}$; cf. Lk 18^{10-14}); and even 'the Lord's Prayer' is given as an example of prayer of the right sort rather than as a form for regular repetition. Such a valuation of forms of worship, in proportion as they express simply and directly the spirit of worship, is not only continuous with that of the prophets, as of parts of the Psalter and the Jewish Apocrypha; it appears also in some Rabbinic utterances, such as that of R. Menahem of Galilee (about the Christian era):

'One day all sacrifices will cease, only the Thankoffering will not cease; all prayers will cease, only the Thanksgiving prayers will not cease.' Compare the spirit of Ecclus 35^{1-3}.

This Rabbinic saying seems relative to the Messianic era of perfected worship, when sacrifices for sin should no longer be needful; and that is just the position in which the first followers of Jesus felt themselves to be, as spiritually united to Messiah. Thus their relation to God was now conditioned solely by the representative self-oblation of Jesus. This was at first conceived on the lines of 'the Suffering Servant' of Is 53, but was later worked out, as in the Epistle to Hebrews, in terms of the Mosaic sacrificial system, regarded as 'the shadow' of the perfected spiritual reality of purely personal relations, those of the devoted will (He 10^{1-18}). Thus the Christ, as God's sinless Son, is the abiding objective basis of His people's holiness ($2^{10f.}$ 10^{14}). All Christians, then, are in fact made priests to God, as united in spirit with the 'Great Priest,' and as such have access for communion with God of the most intimately spiritual kind (10^{19-22}).

This conception conditions the whole of primitive Christian worship. Its normal character is thanksgiving, at once praise and prayer, which, as Menahem said, remains after other kinds of 'prayers' have ceased. Christians 'offer up' through Jesus 'sacrifice of praise to God continually, that is, the fruit of lips which make confession to His Name' (He 13^{15}; cf. 1 P 2^5, Rev 1^6 5^8 $8^{3f.}$). As for outward sacrifices, only the thankoffering remains, viz. deeds of beneficence and fellowship, 'for with such sacrifices God is well pleased'[2] (He

[1] Mt 18^{17}, the language of which is probably secondary, is no real exception, while our evidence is divided in the case of even the Lord's Supper (see art. EUCHARIST [to end of Middle Ages], I.). But in any case the words 'This do in remembrance of me' would mean only the investing of a Jewish form of worship, the 'breaking of bread' with blessing of God or thanksgiving, with specific Christian associations, in fulfilment of the domestic Paschal meal.

[1] *The Christian Ministry*, London, 1901, *ad init.*

[2] Probably echoing the most striking OT anticipation of this conception of worship, found in Ecclus 35^{1-3}: 'He that keepeth

13[16]). Here the word 'continually' shows that the abiding attitude of a worshipful spirit is what is chiefly in view, as in Paul's 'praying always,' and this on the part of Christians severally. And in fact the bulk of NT references to worship have this personal rather than corporate reference.

Such, *e.g.*, is the nature of another passage which affords striking illustration of the new conception of spirituality of life as itself worship. 'Pure religion and undefiled before our God and Father is this, to visit the fatherless and widows in their affliction and to keep himself unspotted from the world' (Ja 1[27]), where the word rendered 'religion' (*θρησκεία*) means 'devotion' expressed in devout acts.

Once we enter upon the history of Christian worship through the centuries, we shall have to confine ourselves in the main to the corporate or common worship of the Church, with only occasional glimpses at the forms of private devotion, though this all along exists in the background.[1] But here we may note that in the NT itself the relation between personal and corporate worship is peculiarly intimate, the former overflowing into the latter and constituting much of its contents, under the lead of individual members of the Spirit-filled Body of Christ's 'saints.' This meets us particularly in Paul's Gentile churches, *e.g.*, in his advice to the Church at Corinth (1 Co 11–14). 'What is it, then, brethren? When ye come together, each one hath a psalm, hath a teaching, hath a revelation, hath a tongue, hath an interpretation. Let all things be done unto edifying' (14[26], also 15–17, where praying, singing, blessing of God or 'eucharist,' all 'by the Spirit' on the part of individuals in Church worship, are specified; cf. Col 3[16], Eph 5[18-21]).

Evidently the forms of worship in the Apostolic Age were not fixed or uniform. The new Christian spirit brought a fresh element of spontaneity (2 Co 3[17]) into the forms of common worship, which otherwise followed in the main synagogal usage. To this the earliest converts, both Jews and proselytes, were accustomed; and it would naturally be adhered to, save for any feature distinctive of the new Messianic form of their faith, such as 'the breaking of bread' with thanksgiving to God for the Messianic redemption in Christ and in His Name. This note of *adoring gratitude* to God for His goodness in creation and redemption, which explains the term 'eucharist' as used for the central act of Christian worship, remains through all changes its abiding characteristic.

The blending here of old and new would be similar to the use of the Sabbath alongside the Lord's Day, as both special days of worship, though in different modes. But, as time went on and conditions changed, the need was felt (*e.g.*, in 'Barnabas' and Ignatius) to distinguish sharply between the two, as relative to different 'economies' in God's relation to man; and for the most part the Sabbath ceased, especially in the West, to have positive religious significance for Christians.

2. Worship, particularly eucharistic, in the ancient Church.—(*a*) *Worship in the sub-Apostolic Church.*—The forms of Sunday worship were still determined mainly by those of the Synagogue, as modified by the 'prophetic' spirit in the primitive Church. Synagogal worship included recitation of psalms, set prayers, Scripture lessons, address, benediction. Our first glimpse of Christian worship, as reported by Pliny *c.* A.D. 112, shows us, at the Christian assembly before dawn on a stated day (Sunday), 'a hymn (*carmen*) to Christ as to a God' (cf. 1 Ti 3[16], Eph 5[14], 2 Ti 2[12f.] for snatches of such hymns), sung responsively, and a pledging of each and all in solemn form (*sacramento*) against theft, adultery, and other prevalent social wrongs. With the former we may compare the *Odes of Solomon*, and with the latter 2 Ti 2[19], for moral

the law (*ipso facto*) multiplieth offerings . . . and he that giveth alms sacrificeth a thankoffering. To depart from wickedness is a thing pleasing to the Lord; and to depart from unrighteousness is a propitiation.'

[1] See Christian sections of artt. Prayer, Fasting, Festivals and Fasts

fealty as felt to be part of Christian religious allegiance, and as not only made explicit in baptismal vows—witness *Did.* vii. 1 and the *renuntiatio diaboli* found later—but perhaps also reaffirmed week by week in some solemn form during divine service. No doubt there were other less distinctive elements in the morning worship besides the two Pliny names, *e.g.* prayer, Scripture lessons, address, and benediction, as in the synagogal worship familiar to the Romans.

The essential atmosphere of Christian worship, as we see most clearly from the Ignatian Letters, was loving unity.

'For if the prayer of one and another hath so great strength, how much more that of the bishop and of the whole church. Whosoever therefore cometh not to fellowship' [lit. 'together,' as in Ac 2[1. 44. 47]] stands apart from 'the altar' or 'the sanctuary' (*θυσιαστήριον*), the holy place where the assemblage of God's people [which Methodius also later styles 'a bloodless altar'] offers up the sacrifice of prayer, and particularly that of the eucharist.[1]

For a similar reason, viz. as specially devoted to the sacrifice of prayer, widows are called by Polycarp 'God's altar.'[2] The very boldness of these metaphorical uses of 'altar' for persons, in relation to their 'sacrifice' of prayer, shows how intense was the early Christians' sense of the sacredness of prayer as the supreme form of worship, and how spiritual and personal was their idea of the Christian sacrifice. Of this genus the eucharistic prayer of the whole Church corporately was the supreme species; and to this we must now turn.

It was perhaps the association of 'sacrifices' of 'beneficence,' for the service of God in His people (according to He 13[16]), with the offering in prayer of part of such oblations (or 'gifts') for the special purpose of Holy Communion in 'the breaking of bread,' that led in time to the elements so used being also called the Christian 'sacrifice.'[3] But, before this occurred, the bread and the wine over which thanksgiving prayer (*eucharistia*, like the Jewish *Kiddûsh*, or 'hallowing') was uttered themselves came to be styled 'thanksgiving' (eucharist). In Ignatius 'eucharist' as a rule still denotes the communion service, the whole act of eucharistic worship associated with the memorial bread. This act seems also in *Did.* xiv.[4] to be called the Christians' 'pure sacrifice' of praise to God's Name (after Mal 1[11. 14]); and its profoundly spiritual nature is shown by the warning that the Church's 'sacrifice' will not be 'pure' if unbrotherly feeling be present even between two of the worshippers. Beyond this, for the time, the use of 'sacrifice' in this connexion does not go.

So far, then, Christian worship is the fulfilment, general or special, of Paul's exhortation, 'Present your bodies a living sacrifice, holy, well-pleasing to God—your spiritual [lit. rational, as distinct from material] service.' It is the kind of worship which Justin sets over against the pagan type, as worship of 'the Creator of this Universe,' One 'in no need of blood-offerings and libations and incense,' who is worthily to be honoured only by praise, 'in word of prayer and thanksgiving over all our food.'[5] Such worship, generally, does not differ in idea from that of the corporate Eucharist of the Church:[6] each is a form of the 'unbloody sacrifice' which befits the God Christians worship, viz. 'the service of the mind' (*τὴν λογικὴν λατρείαν*; so Athenagoras, xiii. *fin.*; cf. Ro 12[1]; so too Irenæus a little later).

Accordingly the prayer of 'eucharist' or thanksgiving was the heart of primitive Christian worship

(as of that of Judaism, which it modifies),[1] and this as co-extensive with life, in that 'it is very meet, right and our bounden duty, that we should at all times and in all places give thanks' unto God (ancient opening of the Eucharistic Prayer, adopted in the Anglican Prayer Book). But such worship attained special expression in all corporate meetings for Christian fellowship, of which '*the* Eucharist' of the whole local Church was the climax. To these principles striking witness is afforded by that 'missing link,' the Agape (*q.v.*).

This was, even after its separation from the eucharist proper (*c.* A.D. 100 in some, though not all, churches), a corporate meeting of the church, of a more family and informal nature than the liturgical eucharist (now the climax of a Sunday morning service). Such the love-feast still appears not only in the N. Africa of Tertullian's day but in that of Cyprian's,[2] as also in the Ancient Church Order commonly known as Hippolytean, though in this part it may rather reflect Syrian usage *c.* 300. There 'at the Supper of the congregation,' at the 'bringing in of lamps,' the bishop 'gives the Salutation' usual before eucharistic prayer, ending, 'Let us thanks-give to the Lord.' The people reply, 'Right and just,' as before the Anaphora proper; but it is added, 'And he shall not[3] say: Lift up your hearts' (the *sursum corda* formula), because that shall be said at the Oblation alone. Otherwise the prayer of 'eucharist' which follows is obviously regarded as a solemn one, and the fragments from the bread thus consecrated by prayer are taken from the hand of the bishop as *eulogia* (*i.e.* blessed bread), though 'not *eucharist*, as the body of our Lord.'

As regards the Eucharist, what has just been said prepares us for changes due to its separation from the associations of a social meal, and its inclusion in a morning service of the synagogue type, as its central element. Thus it took on a more liturgical and ere long (under the influence of current sacramental ideas other than Jewish) a mysteriously realistic character, alien to the original Jewish notion of a meal of religious fellowship with blessing or eucharist of God. The former of these developments, the liturgical, was fostered by the ancient notion of worship outside prophetic Judaism, that some material offering was essential to worship. Hence the self-oblation of the loyal heart came in time to appear to most Gentile Christians to fall short of perfect worship; and this led to a new meaning being attached to the eucharistic prayer over the bread and wine used for the purposes of Communion (originally as a meal of Christian fellowship), viz. as offering the elements to God, in worship of homage, *as a gift to the Giver of all* (a sanction in Scripture being seen in Mal 1[11. 14]). To this there was insensibly added, by a natural reaction of old associations as to such worship—particularly in connexion with the mysteries (the superficial likeness of which to the Christian Eucharist Justin feels and apologizes for)—the notion that God met the earthly gift with a divine gift in return, by filling it with a new and mysterious quality. The way in which this came about was probably in the first instance purely religious, arising out of the very intensity of the soul's experience of a special quickening in the act of corporate worship, while contemplating and partaking of the symbols of Christ's dying love. This is strongly suggested by the experimental atmosphere and language of the devotional utterances, including eucharistic prayers, in the earliest Apocryphal Acts, the basis of which, if semi-gnostic in type, yet probably reflects the general Christian devotional feeling at Holy Communion both before and after the middle of the 2nd century.

[1] See for full details F. E. Warren, *The Liturgy and Ritual of the Ante-Nicene Church*[2], London, 1912, ch. iv.

[2] In *Ep.* 62 (63) he says that at it 'we cannot convoke the people (the whole Church) to our banquet, so as to celebrate the truth of the sacrament (*i.e.* with 'the mingled cup' for which he is arguing) in the presence of *all* the brotherhood' (ch. 16).

[3] This caution suggests that an older usage to the contrary was in view. If so, the parallel to full eucharistic worship becomes yet more complete.

In the *Acts of Thomas* we have what seems a sample of the more enthusiastic and prophetic type of eucharistic invocation. 'And the Apostle, standing by it ("the bread of blessing"), said: Jesus, who hast deemed us worthy to have communion of the Eucharist of Thy holy body and blood, lo, we make bold with the eucharist and invocation of Thy holy name. Come now and commune with us. And he began to say, Come perfect Compassion; come, Communion of the male (=Christ), come, that [feminine, like 'communion,' the substantive preceding] knowest the mysteries of the Chosen one; come, that hast communion in all the contests of the noble Athlete [against the powers of Evil]; . . . come, Hidden Mother; come, that is manifest in her activities and affords joy and rest to those united to her; come and have communion with us in this Eucharist which we perform in [on the basis of] Thy name and in the love wherein we are assembled in [on the basis of] Thy calling.'[1]

Here what is specially noteworthy is the experimental nature of the grace of Christ's eucharistic presence thus invoked. Added to this, however, we find, first in Justin and then in Irenæus, the belief that the words of institution, cited in the Church's eucharistic prayer, were a formula of Divine power, producing in the elements themselves the presence of the *body and blood* of Christ, the Incarnate Logos; and therewith was laid the foundation of what came to be the specifically 'Catholic' doctrine of the Eucharist, and of the corresponding devotional attitude towards the elements themselves. In Justin and Irenæus it appears only as the belief that the worshippers' bodies are prepared for resurrection by participation in Christ's resurrection body and blood. That such presence of Christ's 'body and blood' was of benefit to the *soul* there is no suggestion. Such a realistic conception (present already in some sense[2] in Ignatius's mystical view of the Eucharist as 'medicine of immortality'[3]) fostered first the habit of taking portions home for private use (already in Tertullian), and then devotional anxiety as to what became of all parts of the consecrated elements. Adoration of Christ as present in the elements, and the notion that He in them was being offered as the Christian sacrifice—and that with propitiatory intent and effect—represent forms of devout thought and feeling of which we have no trace until after Cyprian's day, or indeed until the 4th century.

(*b*) *Justin Martyr's witness.*—At this point we must quote from the famous passages of Justin's *Apology*[4] which afford our one connected picture of Christian corporate Sunday worship in the 2nd century.

On Sundays 'there is a gathering together' of the local church, 'and the memoirs of the Apostles or the writings of the Prophets are read, as long as time allows. Then the president gives by way of discourse admonition and exhortation to copy these noble lessons. Next we all rise together and send up prayers,' 'making common prayers for ourselves . . . and for all others everywhere, earnestly, that we may be deemed worthy . . . by our deeds also to be found good livers and keepers of the commandments, that so we may be saved with the eternal salvation. When we cease from the prayers, we salute each other with a kiss.' 'Next, bread is brought and wine and water, and the president, taking them, sends up (ἀναπέμπει) as best he can prayers in like manner and thanksgivings,' 'sends up praise and glory to the Father of the Universe through the Name of the Son and the Holy Spirit, and makes thanksgiving (eucharist) at length for our having been deemed worthy of these (blessings) at His hands' . . . 'and the people chimes in with the Amen. Then takes place the distribution to each, and the partaking from the elements for which thanks were given; and to the absent portions are sent by the hand of the deacons.'

One or two aspects of the eucharistic prayer of the Church, through the lips of its president, are made clearer by the more general language already cited from ch. xiii. in describing the reasonable nature of Christian worship. But the main point is that in both connexions its essence lay in 'sending (πέμπειν) by reasonable word,' 'to the Creator of this Universe,' 'processions of homage (πομπάς) and hymns (as if on their way to the divine pres-

[1] Ch. 50; cf. ch. 27, for both text and sense.

[4] 65, 67.

ence), in acknowledgment of being and all the means of well-being,' as well as in 'sending requests to be once more in incorruption, on the ground of faith in Him';[1] or, as expressed in the later passages, 'sending up (ἀναπέμπειν) prayers and thanksgivings.'

If we have not here the very origin[2] of the term 'mass' (*missa*=*missio*=Gr. ἀναφορά=ἀναπομπή, which was not used in a special religious sense) and its original meaning, namely 'the oblation' of worship to God on high (cf. the Liturgy of St. Mark, just before offering of incense and a prayer of oblation, σοὶ τὴν δόξαν καὶ τὴν εὐχαριστίαν ἀναπέμπομεν), at any rate this, and nothing else, was *the primitive conception of the Christian sacrifice.* It is one continuous with the later Jewish notion of prayer, in the Dispersion in particular, and is quite distinct from any notion of the body and blood of Christ as 'the sacrifice of the altar'—a notion which had not yet arisen, even where realistic theories existed of the relation of the Incarnate Logos to the elements, as the Christian bread of life or 'food of immortality.' Another and closely connected aspect of the same contrast is the fact that eucharistic worship in Justin, as in Irenæus and during the 3rd cent. for the most part, has no relation to sin in the worshippers. Christians as such are consecrated by union with Christ,[3] and as such are 'counted worthy' of the high function of offering as priests their prayers and giving-of-thanks, as acceptable sacrifices to God.[4] Thus far, then, the Eucharist has no propitiatory aspect even for the living, let alone the dead, although on the anniversary of martyrs, from Polycarp (about the same date as Justin's *Apology*) onwards, eucharist was offered in their name also (as having *par excellence* 'offered their bodies as a living sacrifice'), 'the communion of saints' being conceived to include also the Church triumphant.

(c) *Justin and later 'Catholic' worship.*—The full significance of Justin's witness to the simple spirituality of Christian worship in his day becomes most apparent when we compare it, especially as to order, with extant liturgies from the latter part of the 3rd cent. onwards.[5] To the variations and changes of order in these he gives us the true key, as showing that they reflect a change in religious ideas and emphasis at different stages. The above table of the chief known types will exhibit this.

The changes of order here visible, a progressive series from Justin to the Roman Mass, receive their one adequate explanation in change in the idea of the eucharistic 'sacrifice,' from the people's self-oblation, in thanksgiving and thankofferings 'in memory of' Christ's thanksgiving at the Last Supper and self-oblation on the Cross, to that of the body and blood of Christ (thought of as present in the elements), as the Church's own sacrifice, presented and pleaded anew as propitiation for sins of dead and living Christians. It was natural that to the eucharistic sacrifice so conceived should gravitate the prayers of intercession (now for the sins of dead and living) which originally came before the eucharistic oblation (ἀναφορά, *missa*), in order to give them more efficacy with God. In the Gallican and Alexandrian liturgies, indeed, we see that the sacrifice with which these intercessions are associated is still the Christian people's own oblations, prior to what later was called 'consecration' with the sacred words of institution[1] (without or with invocation of the Holy Spirit to change the elements into body and blood of Christ). In the Roman Mass, however, as it is known to us, the process of change is complete. It has dropped the *Pax* proper, the kiss of brotherly unity which seals the people's fitness to offer their 'sacrifice' as 'pure' (according to early Christian ideas) and acceptable to God; and has only a formal trace of it in the words, 'The Lord's Peace be ever with you,' between the Mass proper and the Communion. It has also gone further than the other liturgies cited in effacing the idea of the service in Justin,

Justin.	Gallican Liturgy.	Egyptian.	Syrian.	Roman.
1. Common intercessions.	1. 'Preces.' Offertory. Intercessions for dead and living.	1. Common intercessions.	1. Common intercessions. Offertory.	1. ('Oremus.') Offertory.
2. Kiss of peace or unity. The elements brought. (Offertory)	2. *Pax.*	2. *Pax.*	2. *Pax.*	2. 'Pax' (simply a formula of peace).
3. Eucharistic prayer(s).	3. Eucharistic prayers.	3. Intercession for dead and living in preface of the eucharist prayers before consecration.	3. Eucharistic prayers. Intercessions for dead and living.	3. Eucharistic prayers. Intercessions for dead and living.
4. Communion.	4. Communion.	4. Communion.	4. Communion.	4. Communion.

by suppressing intercessions (without specific reference to sins) for Christians and all men before the eucharistic worship, retaining only the empty injunction, 'Let us pray.'

(d) *Irenæus on the Christian sacrifice.*—We are now prepared to appreciate to the full Irenæus's emphatic witness to the older idea of the Christian sacrifice, before passing on to refer to some intermediate stages in the change just indicated, as witnessed from the 3rd cent. onwards.

According to Irenæus, 'Our Lord gave counsel to His own disciples to offer firstfruits to God from His creatures, not as to one who stands in need, but so that they themselves may be neither unfruitful nor unthankful.' And so 'the Church offers to God, to Him who affords us food, firstfruits of His own gifts,' as Malachi prefigured.[2] This oblation 'is with God reckoned a pure sacrifice and one accepted of Him, . . . because he who offers is himself glorified in the offering if his gift be accepted.' 'Accordingly *sacrifices do not sanctify a man*, for God needs not a sacrifice, but *the conscience of him who offers sanctifies the sacrifice*, if it be already pure, and causes God to accept it as from a friend.' It is 'because the Church offers with singleheartedness' (*simplicitas*) that 'her gift is rightly accounted with God a pure sacrifice,' like the gift of the Philippians sent to Paul through Epaphroditus. 'For we ought to make oblation to God, and in all things to be found thankful to God the Creator, offering in a pure mind and faith without pretence, in firm hope and fervent love, firstfruits of those creatures which are His. And this oblation the Church alone offers in purity, offering to Him with thanksgiving from his creation.' The purpose of this is that we may

[1] Ch. 13.
[2] Most authorities favour another, connected with the 'dismission' of the worshippers (see Rietschel, *Liturgik*, i. 347 f.).

[5] See artt. EUCHARIST and PRAYER (Christian, Liturgical) for details.

[1] 'All liturgies of every type agree in bearing witness to the fact that the original form of consecration was a thanksgiving' (W. C. Bishop, *CQR* lxvi. 388).
[2] iv. xvii. 4 f.

thereby be fruitful, and so God 'may render to us the recompense of His benefits,' on the principle of Mt 25[34-36]. As 'the Word enjoined on the People (of the OT) the making of oblations, . . . that it might learn to do service to God; so and for that reason He wills us also to offer a gift at the altar often, without intermission. There is, then, an altar in heaven, for thither our prayers and oblations are directed; and a temple, as John in the Apocalypse says, And the temple of God was opened.'

(*e*) *Irenæus and certain 'Catholic' developments.*—Here we have several ideas characteristic of the Christian 'sacrifice' in worship towards the end of the 2nd century. Some are wholly primitive and rooted in the NT; *e.g.*, 'sacrifices do not sanctify a man,' but the worshipper's pure conscience the sacrifice; God's acceptance of a sacrificial gift 'as from a friend' honours the giver;[1] the real, *i.e.* the spiritual, gift is the thanksgiving of the heart, and is offered at the heavenly altar, to which 'prayers and oblations are directed.'[2] The last is implied in the call 'Hearts on high' (*sursum corda*), which prefaces ancient eucharistic prayers generally. But in time the idea lost its pure spirituality, as the notion arose that the material gifts themselves were received by God on His altar on high by the hands of His angels. This notion occurs already in the eucharistic prayer of the 4th cent. North Italian *de Sacramentis*, in several Eastern liturgies, and in the traditional Roman Canon of the Mass. The earlier of these, however, preserve in the main Irenæus's notion of an oblation of bread and wine which Christians were privileged to offer—with clear reference to Ro 12[1]—as expressing their self-oblation, in sacramental commemoration of the self-oblation of their Lord. But the Roman Canon, by substituting for 'since it is *figura* of the body and blood of our Lord' 'that it may become to us the body and blood of . . . our Lord,' and by a good deal else in the context, brings in another train of thought altogether, that of Christ's body being present on the Church's 'altar' on earth and partaken of by the communicants. This is the full realistic form assumed by the secondary and non-primitive element in Irenæus's principles set forth above, viz. that God gives *in this way*, in recompense for the Church's thanksgiving, a certain unique benefit in return. This, in extant liturgies generally, is conceived as communicated first to the consecrated elements themselves and through them to the communicants. In some early Eastern liturgies the Word or Spirit is thought to become present in the elements, so making them, in a metaphorical sense, His sacramental 'body and blood'; but in Irenæus's discussion of this aspect of the Eucharist, as in the Roman Canon and some later Eastern Anaphoras, the above realistic conception appears of Christ's human body as present in the elements. And with this added notion a fresh phase of worship begins to enter into the eucharistic service, viz. the adoration of the Incarnate Saviour in the elements of the oblation, conceived now as effecting afresh, in some sense (that of *re presentare*, 'really presenting'), the offering of His body, once for all offered on the Cross but perpetually presented in heaven with atoning efficacy.

(*f*) *Cyprian transitional.*—'Cyprian is here, as generally, transitional between the second century and the fourth. His eucharistic theory is in the main Tertullian's, as regards the sacramental rather than the proper body of Christ' being present in the elements after consecration. But as regards the prior *offering* of the elements in eucharistic *worship*, Cyprian insists that 'the priest' 'performs his office in Christ's place' (*i.e.* with His authority for the sacramental efficacy of his act) when he 'imitates that which Christ did.'[1] And, though he has in mind what Christ did at the Last Supper,[2] not on the Cross, yet his broad language elsewhere gave a footing for another and less experimental[3] sense being read into his words. So he says, 'The Lord's passion is the sacrifice which we offer,' sacramentally or commemoratively, as 'we make mention' of it in our 'sacrifices' of bread and wine, and speaks of 'offering the blood of Christ' in 'the sacrifice of the Lord,' as commemoratively observed by use of the sacred words of institution in the prayer of consecration.[4] 'Thus in time "the blood of Christ" and His body were thought of as actually present and offered in the wine and bread, and that not only as the prototype of His people's self-oblation, but as a propitiatory sacrifice "for the sins of living and dead."'[5]

(*g*) '*Catholic*' *eucharistic worship and survivals in it.*—From Cyprian's day the whole nature of eucharistic worship insensibly underwent profound alteration in the Church's thought and in the growingly elaborate ritual which expressed it, until in the course of the 4th cent. it attained in most localities that form which is known as 'Catholic.'[6] Yet down to the 5th cent. there remained clear traces of the older order in certain phrases not really of a piece with the conceptions then prevalent. Thus, in addition to those already alluded to, in the Anaphora of Serapion in Egypt, *c.* 350, before the words of institution we read:

'Full is heaven, full also is earth of thy excellent glory, Lord of Powers: fill also this sacrifice (*θυσίαν*) with thy power and participation: for to Thee have we offered this "living sacrifice" (*θυσίαν*, Ro 12[1]), this bloodless oblation (cf. Eph 5[2]): to thee we have offered this bread, the likeness (*ὁμοίωμα*) of the body of the Only-begotten.' Then comes the reference to Christ's example in the institution, followed by: 'Wherefore we also, making the likeness of His death, *have offered* the bread, and beseech Thee through *this sacrifice*, be reconciled to all of us and be propitious, O God of Truth.' Only after this do we get the invocation which is conceived to make the bread 'body of the Word' and the cup 'blood of the Truth,' and so 'medicine of life' for body and soul to those partaking.

Here there seems to be a blending of primitive and later elements.

(*h*) *Retrospect of eucharistic worship to the end of the 4th century.*—In idea it at first corresponded simply to its name, 'thanksgiving' to God for His benefits in nature and grace, as rooted in His adorable being or Name. As *1 Clem.* xxxviii. 4 puts it, 'Seeing, then, that we have all these things from Him, we ought in all things to render thanks [Eucharist] to Him, to whom be the glory for ever and ever, Amen.' Of such a life of thanksgiving the solemn corporate worship in full Church gathering is the climax, being the earthly imitation of the worship in heaven,[7] where (as pictured in Dn 7[10]) 'the whole company of His angels standing near Him do sacred service (*λειτουργία*) to Him,' the adoration attributed to the Seraphim in Is 6[3], 'Holy, holy, holy is the Lord of hosts: the whole earth is full of His glory.' As visible, concrete expression of this homage of thanksgiving, the Church's 'offerings' or 'gifts' in kind from the Creator's own gifts were presented in sacred service or *liturgy*, in the prayer

[1] So Justin, *Dial.* 28. The idea lies at the root of the gift-theory of sacrifice in much Greek religion, the gift being to an Iamblichus's mind, as to Irenæus, 'a symbol of friendship between the mortal and the deity'; see art. SACRIFICE (Greek).

[2] The fullest and still the truest discussion of 'the Christian sacrifice' in the ancient Church is in Bunsen's *Hippolytus and his Age*, 4 vols., London, 1852, iii. 253 ff., iv. 135 ff., where also much bearing on worship at large is well said.

[1] *Epist.* 63. 14. [2] *Ib.* 4.

[3] For his real meaning cf. ch. 11, where he dwells on *wine* as by natural and scriptural symbolism, or sacramental value, able to 'express (*exprimere*) the blood of Christ' as water could not, and so to produce the sense of newness and joy suggested by the blood or passion of Christ, which the wine 'shows forth' (*ostendit* [ch. 4]).

[4] *Ib.* 9. 14. 17.

[5] J. V. Bartlet and A. J. Carlyle, *Christianity in History*, London, 1917, p. 171 f., where also are quoted the chief liturgical types illustrating the developments here in question.

[6] See art. EUCHARIST. [7] 1 *Clem.* xxxiv.

of uplifting (*ἀναφορά*), directed to God's spiritual altar on high (cf. the imagery of the Apocalypse), where Christ the High-priest presents the Church 'sacrifice' of praise—if pure from defilement by sin, such as enmity between any of its members.[1] This prayer was led up to by 'common prayers' of intercession, as Justin says, 'for ourselves . . . and for all other men everywhere,' in urgent petition (*εὐτόνως*) 'that we may be counted worthy, after having learned the Truth, by our deeds also to be found, finally, good in conduct and keepers of the commandments, that we may be saved with the eternal salvation.' After these intercessions the kiss of peace sealed the spirit of unity which was specially asked for, and was the condition of the 'purity' and acceptableness of the coming eucharistic prayer, the Church's 'sacrifice' of praise to God's Name[2] or revealed nature. Of such intercessions as offered in Rome *c.* A.D. 95 we probably have the substance, and largely the very words, in the Epistle of Clement (lix.–lxi.); and we find them strikingly continuous with those of the OT and of contemporary Jewish public worship (cf. 'The Eighteen' Petitions)—a feature also common in the earliest extant Christian hymns. The changes which passed over Christian worship, especially the eucharistic part, show a steady decrease in this Biblical or Hebraic spirit (as distinct from Biblical quotations adapted to new uses), and a corresponding infusion of a non-Biblical or Hellenistic element of thought in the interpretation of the Eucharist as worship and means of grace, together with a transposition of traditional elements in the service generally, in keeping with the new ideas (*e.g.*, the place of the intercessions). This is the most momentous fact in the development of ancient Catholic worship out of primitive Christian forms, and has its parallels in other aspects of Catholic Christianity.[3] The change is associated, too, with a growing sense of sin in 'the saints' or 'the holy Church,' especially from the 4th cent., when Christian wholeheartedness on the average rapidly declined, owing largely to the new relations of State and Church tempting worldly people to join the latter. The eucharistic 'sacrifice' is more and more conceived in a propitiatory sense, which had its roots in the newer view of the elements, as literally made by consecration 'the body and blood' of Christ's passion, though as existing now in resurrection glory. Along with such changes of thought went those of form. The eucharistic prayer became more stereotyped, not only as the habitual usage of a given bishop but also as the fixed tradition from bishop to bishop; and what had once been a single prayer was broken up into specialized moments or phases, marking stages in the sacred drama of the Liturgy. This gave the service a 'hieratic' or formally sacred[4] effect, alien to the genius of primitive Christian worship, but quite congenial to the non-Christian cults around it. To these innovations was now added yet another characteristic of later Catholic worship generally, viz. the notion that the intercession of saints is a factor in the divine pardon provided in the Head Himself.

(*i*) *Persons to whom worship is addressed.*—The practice of direct invocation of saints as distinct from the earlier veneration, especially on a martyr's 'birthday,' itself appears in Catholic piety about the latter half of the 4th cent.;[5] but there is no invocation of this sort in eucharistic prayers, where Saints are 'commemorated,' 'that by their prayers and mediations God may receive our petition.'[1] The Church's prayers are addressed only to God the Father, in keeping with the strict theory of Christian prayer, as expounded by Origen.[2] According to this, the Father was the ultimate, the Son or Word the proximate, object of prayer, as of adoration and thanksgiving. Thus the Divine Word is 'to be petitioned as High-priest to offer up our prayer, that has first reached Him, unto His God and our God.' In practice, however, at least in individual devotions, Christ was directly addressed, all along, in prayer of invocation and petition in particular. In solemn doxologies, on the other hand, a gradual change is visible, both in eucharistic and in other connexions. There Christ, as God's historic Son (originally 'Child' or 'Servant,' *παῖς*, as in Acts), appears originally as the medium through whom glory is offered to the Father; and only from the latter part of the 3rd cent. (as it seems) becomes gradually associated, as the Logos-son, with the Father as also the object of such worship. Similarly the Holy Spirit, which earlier had been thought of as the element 'in' which worship was rendered to God,[3] came to be associated with the Father and the Son as co-equal object of praise. In many MSS the modification of the older form by later feeling gave rise to an awkward blend, like that in the 'Hippolytean' Church Order as current *c.* 350–400, viz. 'through Thy Child Jesus Christ, through (*or* with) whom to Thee (be) glory, dominion, honour — Father and Son, with Holy Spirit' (*or* 'with Holy Spirit,' only). Basil[4] says that 'with' is most fitting in relation to the Son in doxology, 'through' in thanksgiving; but this, while true enough, does not apply to the history of the matter.

3. **Special forms of Catholic cultus.**—(*a*) *The cult of 'saints.'*—It is needless here[5] to go into this subject further than to notice that both in its ritual forms, like so much other fresh ritual (in which the Gnostics often led the way) from the middle of the 2nd cent. onwards,[6] and in its origins this cultus owed much to the funeral and commemorative customs of pagan society, in which Christians lived and from which many of them passed into the Church. 'Prayers and appeals to the dead' were familiar ideas in the one sphere before they appeared in the other—in the case of 'saints,' from Basil's day († 379) onwards. 'Hence it seems probable that the prevalent atmosphere of paganism exercised some vague influence upon Christian feeling, especially in the case of the ruder populace. The strongly marked desire to be buried near the martyrs is no doubt to be attributed to a similar hope of protection. It was a matter not so much of logic as of a deep and primitive instinct—the same which in pagan times had led to the development of hero-worship.' These frank words of a modern Roman Catholic[7] deserve attention as pointing to a principle of wide possibilities of application in the history of 'Christian' worship, especially in view of his later statement that 'the ceremonial of Christianity and that of paganism include many identical elements—*e.g.*, the use of ablutions, lights, incense, prostrations, unctions, linen vestures, *ex votos*, etc.'[8] Few can doubt that they represent a kind of development which the NT writers, particularly St. Paul—not to name Paul's Master—would have found foreign, to say the least, to the genius of 'the Gospel,' as

'worship in spirit.' And, when one reads the words of St. Melania, in 438, at a shrine of the martyrs, 'O ye, who have always free speech with God that loves mankind, be my ambassadors (πρεσβεύσατε) with Him that He may receive my soul in peace'—along with the comment, 'It is just this παρρησία,' or free speech, 'attributed to the martyrs, that is put forward again and again in patristic writers as the motive for having recourse to their help'—one cannot but feel the distance, not so much of time but of spirit, between such worship and that of the NT.[1] For there the same 'free speech,' as of child with parent, is claimed as the glory of all sons of God in Jesus Christ, and particularly right of entry in this spirit into the Holy Place in heaven, as of priests in union with the 'Great Priest over the family of God' (He 10^{19}). As by a lightning-flash, such a comparison reveals the enormous change of attitude which has come about, by insensible stages, in the worship of Christians.

The cult of the relics of saints, as aids to devotion, especially in connexion with the celebration of the anniversary of martyrdom or spiritual birthday (*natalicia*), goes back in its simplest form to a relatively early date, as witness the contemporary *Acts of Polycarp* (*c.* 155). But its developments, both in the Catacombs, where martyrs' remains abounded, and elsewhere, later assumed extravagant and superstitious forms, especially in the 4th cent. and onwards, calling forth the scorn of Julian and many other cultured pagans.[2]

(*b*) *Artistic aids to devotion.*—The place of art in the expression of Christian thought and feeling, and the function of images (*eikons*) or representations of sacred persons to the eye, usually in paint or mosaic work, are dealt with in special articles.[3] There was at first great shyness of such things, on account both of the Jewish and other feeling against all that could be construed as idolatry and of the tainted nature of so much pagan art. Hence the earliest use of art (*e.g.*, in the Catacombs) was symbolic in character; and it was only in the 4th cent., when so many changes, especially in the way of coming to terms with pagan culture, first came about, that such restraint was largely thrown aside. One of the earliest forms in which art was used to assist devotion was in the form of Church buildings, which even from the end of the 3rd cent. begin to be more specially designed to suit the developing ritual of the worship carried on within them.[4] The veneration of 'images' of sacred persons, as manifestations of the divine in creaturely form, was probably stimulated in part by the preoccupation of Christian thought in the 4th and 5th centuries with the idea of the Incarnation.[5]

(*c*) *The Christian Year.*[6]—As the central service of Church worship, the offering of the eucharistic sacrifice came to represent dramatically, or in a series of sacred acts and words, the Christian redemption wrought by the Incarnate Son of God, so the Gospel story of the Incarnate Saviour was set forth ever more fully in the yearly festivals and holy seasons commemorative of the same. Naturally the week first felt the touch of Christ. The Lord's Day, the Christian's day of resurrection joy, took the place of the Sabbath, the Jewish day of grateful gladness. To this were soon added[7] Wednesday and Friday, as fast days, in remembrance of the sin that occasioned the Saving Cross. But what the Lord's Day was to the week, that the anniversary of the central act of redemption was to the year. Thus Easter, with its associated Friday, became the first season in the Christian devotional year; how early we cannot say. Then followed Pentecost, and gradually the other great 'moments' of the Redeemer's life, until each year became a time-sacrament of the divine drama of human salvation. The fact that the birthday of the Saviour came relatively late into the calendar points to the practical rather than theoretic nature of the Church's apprehension of its own salvation, in which the Cross, the final act of Redemption, is more central for Christian experience than His birth.[1] Into the calendar of the Christian salvation, in terms of Christ's history and its sequel in the gift of His Spirit, the Church's birthday, were fitted the 'birthdays' of martyrs into the heavenly realm of life eternal. Such, then, was the Christian Year in idea and as an aid to worship. The festivals in honour of the Virgin Mother of Jesus appeared only late in the calendar.

(*d*) *Devotional 'hours,' in private and corporate worship.*—From the Church Year we turn to the day as a unit of devotion.[2] 'Hours' of worship, other than the Sunday worship centring in the eucharist, came to be of two chief types: (*a*) those for special classes within the Church, particularly ascetics ('virgins' of both sexes), later known as monks and nuns; (*b*) Church services proper. The former type grew out of an earlier kind, namely individual devotions continuous with the three hours of prayer in later Judaism (Ps 55^{17}, Dn $6^{10f.}$), which from apostolic precedents in Acts (3^{1} 10^{9}; cf. *Did.* viii.) came to be called 'the apostolic hours.'[3] Clement of Alexandria refers to Christians who set apart certain hours, viz. the third, sixth, and ninth.[4] Already in Cyprian's day[5] piety had found mystical reasons for the use of the apostolic hours, connecting them generally with the Trinity, and severally with two stages of Christ's Passion and the descent of the Spirit at Pentecost (the third hour). So far, however, such day-time hours were purely private devotions. The earliest Church service other than the Sunday one was the 'vigil,' a night service suggested by the NT calls for vigilance. But it was never of daily occurrence, only on the eve of a holy day—first Easter, then the Lord's Day, the weekly fasts (*stationes*) of Wednesday and Friday, and the yearly festivals of local martyrs.

The night hours proper were, like the day hours, the outcome of private devotions, to judge from Cyprian,[6] who writes:

> 'Besides the hours observed from ancient times [the 'apostolic' day hours], both seasons and mystical reasons for prayer have now grown upon us. At morn, to celebrate the Lord's Resurrection . . . At sunset, when day ceases, prayer must needs again be offered,' alike for the return of the light and for the advent of Christ, the true sun and true day, with the grace of eternal light. 'Let us, however, who are ever in Christ, *i.e.* in the light, not cease from prayer even in the hours of night,' any more than Anna in the temple.

Here we find an hour of early morning prayer on rising, before the first of the 'apostolic hours,' ere putting hand to work, and also a vesper hour. These five hours mostly reappear in the East in the 'Hippolytean' Church Order—the last part of which reflects some circle of piety in Syria about A.D. 300—each with its mystical reference, though a different one from Cyprian's;[7] but there is no vesper hour in the old Eastern Order, possibly

because it was already set apart for more social worship. On the other hand, there are not in Cyprian any night hours, only prayer in the night seasons (*noctibus*). Thus our earliest witness for night hours proper is Syrian, viz. this 'Hippolytean' Church Order.

There, after passing reference to prayer before lying down, solemn prayer (with hand-washing) at midnight is enjoined, 'inasmuch as the fathers have handed down that at that hour all creation pauses for a moment to praise God, and all the angelic host does Him service (λειτουργία)—along with the souls of the righteous, hymning God (almighty) at that hour.' Prayer, too, at this hour fulfils the Lord's words, 'At midnight a cry arose . . . Therefore watch, for ye know not at what hour he (the Bridegroom) cometh.' 'Cock-crowing' is the last of its series of hours, the second of the night hours, when the believer rises to pray in memory of Christ's resurrection and 'in hope of eternal Light in the resurrection of the dead.' About a century later, namely in *de Virg.* 20, the midnight hour seems to last on till 'towards dawn' when come Ps 62[3], the *Benedicite opera omnia*, and *Gloria in excelsis*.

Here we see how the regular hours of those under vows, 'virgins' or 'religious' (in later Latin parlance), grew out of the more informal devotions of earnest Christians living in society or 'the world,' by increasing severity of requirement, which demanded first a midnight hour (a daily, rather than occasional, vigil) and then an hour when the cock heralded the approach of a new day. Such ascetic vigilance of worship was as a rule possible, physically as well as otherwise, only to those who were at leisure (from daily labours) to cultivate a professional and more individualistic life of piety. There is, however, no sign of distinct night hours (even for ascetics) before A.D. 300. Even in Egypt, where asceticism appeared earliest, as late as the end of the 4th cent. there were only two corporate daily seasons of worship, evening and morning. At Antioch we hear that *c.* 350 Bishop Leontius 'brought the congregations collected by the ascetics Flavian and Diodorus in the cemetery chapels, into the city churches,' and so introduced antiphonal singing, by two opposite choirs, into wider use. Here we seem to have a clear case of the transition from the daily corporate worship of ascetics, as a special class, to that of the Church under its clergy, of which Etheria, the female pilgrim to Eastern centres of devotion *c.* 385, affords us evidence at a rather later stage. Describing the public services in Jerusalem, she mentions matin hymns at dawn (= hour of rising, in the foregoing), the sixth (*sext*), and ninth (*none*) hours, vespers ('lighting-up' hour); to which the third (*terce*) was added in Lent. There was also an early vigil from cock-crow to dawn kept by 'all monks and virgins,' and by some lay-folk also. Of course the devotions at the central holy place of Christendom were more generally attended than elsewhere and more elaborate in form, including already four daily services at least. But the account gives us clear insight into the way in which worship became more specialized and developed. And by a good deal of evidence from the last quarter of the century we can 'fix the period A.D. 350–375 as that of the introduction of daily public evening and morning prayers into the Eastern Church, followed a few years later by that of Milan.'[1]

As regards *forms of devotion* dating from the 4th cent., neither the morning hymn (*Gloria in excelsis*) nor the evening one,[2] for instance, seems then to belong to public service. The former appears in varied contexts (*e.g.*, after the Biblical Canticles or 'Odes' in the *Codex Alex.*); and in the Eastern Church it is part of the Daily Office (Lauds), while in the Western it is in the Mass—whither most prized forms tended to gravitate. Once, however, both perhaps were part of the worship of an ascetic community. The evening hymn, like another vesper hymn, 'Hail, gladdening light' (φῶς ἱλαρόν), referred to by St. Basil[3] as already ancient, may originally have been a thanksgiving 'at the lighting of the lamps' either in the home or at an Agape,[2] passing later into use among ascetics, like the table-prayers of the *Didache* into *de Virg.* xii f. In this last the *Gloria* is part of the virgin's praise 'towards dawn.'[3] Closely connected in feeling and ideas with the *Gloria*, and perhaps with its fellow vesper hymn (*Te decet laus*), is the best known Latin hymn, the *Te Deum*, now traced to Nicetas of Remesiana, who as living on the road between the East and West would naturally feel the influence of Greek models. Nicetas in his works 'On Vigils' and 'On the good of Psalmody' illustrates further the similarity of ideals of private and corporate devotional hours in East and West *c.* A.D. 400;[4] and he was one of the pioneers of the newer feeling which allowed hymns other than those in Scripture, the Psalter above all, to form part of corporate Christian worship, though the prejudice against this died hard.[5] The authority of St. Ambrose, who himself wrote hymns for public worship, had no doubt great influence. The musical difficulty to their more general use was a real one. It was in monastic circles, then, that hymns proper took real root, and from their daily offices passed in the later Middle Ages into the Breviary of the ordinary clergy. The early Celtic monks in particular were active in the use and production of hymns; and from the 12th cent. onwards we can trace the periods of fresh revival in monastic religion by this spontaneous form of devotional expression—*e.g.*, in 'Jesus, the very thought of Thee,' *Dies Iræ* (by the Franciscan, Thomas of Celano), and the eucharistic hymns of St. Thomas Aquinas.[6] The Church of Rome did not adopt daily services so early as the N. Italian and Gallican Churches, under the influence of Eastern monastic practice, carried thither by a number of pilgrims and others from those regions, such as Hilary in the middle of the 4th cent. and Cassian of South Gaul towards its end. Rome was always conservative in usages, as appears most clearly in its manner of reciting the Psalms, which were the staple of worship other than prayer. The Eastern form was antiphonal singing between two choirs, a method which took definite shape at Antioch about 350, and spread westwards rapidly—through Cappadocia, Constantinople, Milan. In Rome, as also in Africa, the old 'plain song'—with its simpler style of music—continued longer to prevail, probably seeming to the Roman mind, as to Augustine, to be 'better adapted to the sober gravity of Divine worship.'[7] Yet the practical advantages of the new system, especially as 'winning weaker brethren to devotion by the delight which it ministered to the ear,' were manifest; and ere Augustine's death in 430 the change in Rome had begun to act, though it took effect only gradually.[8] Similarly as regards daily church services 'the recitation of the Cockcrow and Matins office does not appear to have been binding on the clergy, as distinct from monks and nuns, till the sixth century (perhaps under Pope Hormisdas, 514–523); and Vespers was made an obligation still later.'[9] In Gaul and Spain matins and vespers had taken general root rather earlier; while a civil law of Justinian also decreed that all clergy attached to

a church should sing Vespers, Matins, and Lauds themselves, and not leave the duty to others. Almost contemporary with it was the issue of the famous Rule of St. Benedict (*c.* A.D. 528), which prescribed the use of 'the complete circle of eight "hours" for monks which is the foundation of the Breviary.' These hours were much the same as the six of Syrian ascetics in the 4th cent., completed at its close in Jerome's Bethlehem monastery by a supplemental matins, between lauds at dawn and the third hour (to which prime in the West came to correspond), together with compline (*completorium*) before retiring to rest. The last was added by Benedict himself, who dropped the midnight hour, so as to give his monks a longer period of unbroken sleep, and placed matins about 2 a.m.[1]

4. Mediæval worship.—In the main mediæval worship, alike as piety and as cultus, shows simply the working out and adaptation of the traditional cultus to new conditions, created by the break-up of the Roman Empire and its civilization. This meant the flooding of the Church with crude fresh types of humanity, each with its religious bias and customs, largely superstitious, and so fostered those elements in the Church of the Empire which were farthest from primitive piety and cultus, as fundamentally Hebraic. Hence it is the element which Catholic worship owed to other sources than the Biblical—as already described or alluded to—that increasingly distinguishes its mediæval phase, both in the East and in the West.

In the East the hieratic and mystic tendencies, the latter parallel to and influenced by the rise and spread of Neo-Platonism, as a religion as well as a philosophy, are most marked. Particularly was this so in what we may call 'Byzantine' piety, as distinct from various national types of Oriental Christianity, comparatively unaffected by Greek influence. But in all the eucharistic service was essentially a divine drama or 'mystery,' appealing to the emotions through the senses, with the idea of the mystic sacrifice at its heart. The notion of the parallelism between the worship of heaven and of earth, of the celestial hierarchy and the terrestrial, was worked out elaborately and with surprising literalism. It finds its typical expression in the pseudo-Dionysius, through whom it also exercised a deep influence on the more practical and ethical genius of Western, particularly Latin, worship. In both, too, worship, so far as expressed in cultus, becomes more vicarious and sacerdotal, less congregational, in character. The connexion between priest and people, especially in the East—where the cultus went on in the sanctuary or altar-area, largely out of the people's sight—becomes a more formal one; worship is less corporate, less an active participation of all, with mind and voice, in common acts of spiritual and moral communion with the Christ of the Gospels, and through Him with the God unto whom and with whom all life is to be lived in harmony of will.

A special note of mediæval worship, inherited from this later patristic age, was the sense of sins calling for the constant 'propitiation' of God. This was to be achieved partly through special good works (such as alms of all sorts, and various mortifying exercises of penance), often prescribed by the priest through whom absolution was looked for, and partly by private eucharistic oblations or 'votive masses' offered in the donor's name in special services. Parallel with this went a development of purely clerical masses, without lay participants, which in the 7th cent. produced that contradiction in terms, according to primitive ideas of eucharistic worship, 'private masses.' In these the priest administered communion to himself alone. No doubt this unsocial type of cultus was condoned as being ideally corporate in spirit, the priest acting in intention as a member of the whole Church, in its name and as pleading for its welfare. But one result at least of such purely vicarious masses, together with the celebration of several masses by the same priest on the same day (10th cent. onwards), was natural; viz. a concomitant decrease in lay participation. The Church had to be content with two or three communions a year on the part of ordinary Christians; and many communicated once only in the year.[1]

As regards 'hours' services, the new impulse given by Benedict led to 'the erection of monastic communities in connexion with the parishes (*tituli*) of Rome,' which 'supplied the parish churches with clergy at liberty to conduct the daily offices, and qualified by their training in music to do so.'[2] Thus, soon, terce, sext, and none were sung in the Roman churches, and before 800 prime and vespers also. These early Roman offices became, through the abbot Augustine and others, the basis of English mediæval breviaries. Attempts were made, too, as time went on, to extend the 'hours' services to parish churches and get the laity to attend (witness the English names of such services). But for the most part the 'hours' proper remained a monastic or at least clerical form of service throughout the Middle Ages; and in England, owing to historical conditions which effaced the older type of non-Roman Christianity, they were virtually Roman 'offices' or dutiful acts of divine worship. Yet they contained some Gallican elements, especially before the Norman Conquest; and after it these survived in the distinct Uses of the great dioceses, of which that of Salisbury (Sarum) was the chief. Through its influence, in particular, there set in also in the latter part of the Middle Ages a tendency towards a uniform English Use.

Rise of the 'Breviary.'—Ever since the 'hours' services had been adopted, the mass of fixed forms of devotion—psalms, prayer, lessons (not only Biblical, but also *Legenda* from patristic sermons and expositions and from the Acts of the Saints)—had grown to ever greater dimensions. The process of its simplification and unification in one service-book, instead of several, first appears in England about the 11th cent., in the Breviary (*Brev. sive Ordo Officiorum*) or *Portiforium*, i.e. the book 'carried' by the priest when he went 'abroad,' the latter being a smaller and more portable form of the former. It was the Breviary, then, that formed the basis of the first efforts of those who early in the Protestant reformation of worship, as of Christian religion generally, tried to bring back its public forms to primitive and purer models. But an experiment in the way of a reformed Breviary on Catholic lines was also made in 1535 by Cardinal Quignon, general of the Franciscan Order in Spain. Much was omitted as superfluous, and a simplification all round, amounting to a revolution in effect, was carried out. It and its preface greatly influenced Cranmer's first Book of Common Prayer. But Cranmer's purpose was far more radical, viz. 'to produce not merely a good manual of devotion for the clergy, but a Book of Common Prayer'[3] for all Christians, learned and unlearned, if only they could read their mother tongue.

Transition to the new order.—The old service-books were for the use of the clergy and 'the religious': the layman had only the 'little Office,'

[1] For the Benedictine Rule, as for types of monastic piety generally, see art. MONASTICISM.

[1] Funk, *Manual of Church History*, i. 315.
[2] Swete, p. 43. [3] *Ib.* p. 69.

whether the Latin *Horæ*[1] or the English *Prymer* based on it in the late Middle Ages. But the English Prayer Book became the layman's manual, as well as the clergy's, alike in church and in private use. Cranmer compiled it on the basis of the Sarum Breviary in particular, but in the light of principles of religion and worship drawn direct from the NT itself, with the aid of patristic precedent. Thus 'Whitsunday, June 9, 1549, witnessed the beginning of a new era in the public worship of the English Church,'[2] an era already inaugurated in most of the other countries which had gained a new sense of what the Christian 'gospel' was, and what sort of worship best befitted its nature.

In all of these the vital change took place that forms of worship were in a language 'understanded of the people.' This meant an enormous gain in spiritual reality, especially as their Biblical language and allusions could now be interpreted by and fitted into the regular reading of Scripture. The poverty of Scriptural background, and indeed the scarcity of 'the Word' of God in piety and worship, even in the later Middle Ages, when a certain amount of preaching existed in parts of the Church, is hard for us to realize to-day.

Cultus rites and ceremonies, as such, so predominated over the inward element or meaning, or 'faith' in the NT sense (esp. Ro $14^{22f.}$), that average mediæval worship was psychologically legal rather than filial in type. It was in fact such as Christ criticized in current Judaism, and Paul censured as persisting among Christians at Colosse (Col 2^{16} 3^{3}). Religion was statutory in nature and spirit, a being 'subject to ordinances' in daily life and in church, 'after the precepts and instructions of men.' Men were 'judged in meat or drink, or in respect of a feast day'—or a fast day or a saint's day—'which are a shadow of things to come.' Of course the mass alike of clergy and laity were not fit, as things were, for a NT type of worship, because those 'ages of Faith' had not the type of faith to which that belonged. This fact had historic causes, some of which have been indicated. But none the less such cultus, and such spiritually passive and unenlightened worship, represented no normal advance, save in the education of æsthetic and emotional sensibility to the divine, as majestic and mysterious in its nature and ways, with which it affected certain souls. Nor on these lines, from which the official Church through the papacy refused to depart, was there any promise of return to truer continuity with principles and methods of spiritual worship at the first.

It was small wonder, then, if, worshipping with but little direct aid from the NT and its distinctive spirit, mediæval piety was full of 'the spirit of bondage again unto fear,' and sadly devoid of 'the spirit of adoption whereby we cry Abba, Father.' This appears most vividly from many examples of the religious art which was used as an aid to worship.[3] But it was implied also in the elaborate system of mediators, both on earth and in the invisible world—patron saints and the saints at large, with the Mother of Jesus at their head—whose aid was felt needful to supplement the too exalted or remote help, or even to placate the too severe judgment, not only of God the Father but also of Jesus, the 'One mediator of God and man, himself man.' Nor was the element of fear—the fear of mystified minds, as well as of consciences not fully appeased by the Church's rites of penance and absolution that were a large part of the mediæval sacramental system—absent from the sense of mystery with which the central sacrament of worship, Christ's very Body and Blood, present in an inconceivably real sense[4] in the transubstantiated bread offered to God anew as 'the Host,' and eaten for the benefit of body and soul, was regarded by all mediæval Christians.

Finally, participation in the Church's cultus was largely viewed as of value *per se*, like sacraments on the *opus operatum* theory, and as a meritorious work before God, rather than a specially direct and effective mode of attaining spiritual fellowship with God, as the soul's supreme good. A radical revival of the original Christian spirit of faith was vitally needful to a new birth of worship, on lines which could lead to the development of a cultus more suited to the growing spiritual maturity of humanity at large. This needed a system of worship which could first stimulate and educate it in certain directions, and then by gradual modification of the traditional forms make available (for the adherents both of the old and of the new types of Christian piety) the elements of positive value latent in the historical forms of continuous Catholicism.

5. **Protestant worship.**—(i.) IN GENERAL.—The intimate connexion between the kind of religious faith and the worship which expresses it is nowhere clearer than in the change which passed over cultus as a result of the Protestant Reformation. The new experience of saving faith, with its correlative doctrine of grace (*q.v.*), summed up in the twin ideas, justification by faith and the priesthood of all believers, made itself manifest in the sphere of religious feeling to which worship belongs. The sense of assured access to God on the part of Christians, as children reconciled and accepted in His beloved Son, Jesus Christ, brought into worship a fresh note of glad thanksgiving. This ran through all, at first even the confession of sins (as of children in a family, rather than of debtors or lawbreakers before a judge—the prevalent mediæval conception), and particularly the Communion of the Lord's Supper. This was now viewed primarily as a memorial but efficacious pledge, both on God's part and on man's, of the abiding covenant relation of forgiveness and grace brought about by Christ crucified, which it 'sealed' anew by a sacramental or sensibly expressed act, and at the same time strengthened. There was generally no thought of this most sacred act of worship being a 'bare sign' of the spiritual relations which its forms suggested, those of vital communion with God in Christ, and with fellow-members of His mystical Body, the Church. But there was a definite setting aside of the notions specially marking the 'old religion' (as mediæval Catholicism was often called). These were (1) that consecration effected change in the elements themselves (transubstantiation); and (2) that the changed elements were 'offered' as a 'propitiatory sacrifice for living and dead' by the action of the celebrant, viewed as having a supernatural power as 'priest' in virtue of the sacrament of 'orders.' Thus the ritual of the Mass was generally felt by Protestants of all types to involve non-Scriptural, and therefore un-evangelic, ideas of the nature and means of the Christian salvation.

Accordingly, after attempts to retain some of the forms and formulas still dear to many by use and sentiment, both in Lutheranism and in Anglicanism (here the contrast between the First and Second Prayer Books of Edward VI. is most significant), the ritual effects of the new conscience about making NT teaching and precedent sovereign at any cost were accepted in all Protestant communions. The Holy Communion of the Lord's Table replaced the Mass and its distinctive worship.

The retention of old forms for the expression of the new type of faith was pushed to the furthest point of compromise in the Elizabethan Prayer Book, particularly in its juxtaposition of the formulas of administration characteristic of each of the two

[1] 'Besides the canonical hours the mediæval Church observed hours in honour of the Blessed Virgin Mary, known as the "little office."' Originally 'a monastic devotion,' in 1098 it was made binding on the secular clergy, and eventually became popular with the laity. 'Other devotional matter gathered round the Hours of the Virgin,' and the Sarum *Horæ B.V.M.* had its calendar of saints, its penitential psalms, litany, and especially vigils of the dead. 'In this fuller form the Horæ became the prayer-book of the educated laity' (Swete, p. 212 *f.*).

[2] Swete, p. 7.

[3] See, *e.g.*, T. M. Lindsay's study of Luther's early training in the *Cambridge Modern History*, ii. [1903] 106 *f.*

[4] See passages in Darwell Stone, *A History of the Doctrine of the Holy Eucharist*, 2 vols., London, 1909, i. 277 *ff.*, cited also in *Christianity in History*, p. 444 *ff.*

Edwardine editions. But the Articles of Religion, which define the distinctive beliefs of the Anglican Communion, as the Augsburg and other Confessions do those of other Protestant types, make plain the official sense in which these and other formulas were to be taken. See Article xxii. in particular.

Here the experimental cast of the new Anglican formula of administration, framed in 1552, is noteworthy, as well as the declaratory form of the words of absolution. Further the preaching of the Word now held a central place, if not the central one, in the whole service among Protestants. This brings us to the chief difference between Catholic and Protestant worship, viz. their respective emphasis on Word and Sacrament. For Catholicism, with its notion of grace as secretly infused participation in the divine nature, particularly as embodied in Christ's flesh and blood, emphasis falls on the sacrament of the Mass. For Protestantism, which conceives grace as the working of the Holy Spirit mediated primarily through the Word or uttered mind and will of God—the proper object of faith—it falls rather on preaching (*q.v.*); it is the means of grace which conditions the efficacy of all others, and prompts the worship that faith is helped by them to render to God. Even as regards the sacrament of the Lord's Supper, its Protestant form places the rite in a setting of the Word, partly by appropriate Scripture reading, partly by the communion address usual in non-Episcopal communions. Through the latter it is brought in idea within the scope of the 'prophetic' ministry of the Word, to which belongs also the prayer of thanksgiving where there is no fixed liturgy but it is left, as at the beginning, to the prophet 'to give thanks as much as he will.'[1] The Holy Communion being in fact, like other sacraments, 'a visible word' (to use Augustine's phrase), it speaks to the heart by the inward working of the Holy Spirit—the real agent in all grace, and especially in that faith of which other forms of grace are modes—whether mystically, by direct personal appeal through its symbolism, or by reflective unfolding of its meaning by ministry of the Word.

Protestantism, besides its emphasis on Word rather than Sacrament as means of communion with God, and in keeping with its idea of salvation by faith and not by deeds of 'merit' (rendered possible by sacramental grace), regards worship not as a meritorious action or 'service' (λειτουργία) to God, but rather in the light of realized fellowship with God through Christ, as of children with a father.

In worship God's perfections, especially His goodness, are simply answered by the homage of the heart's adoring and grateful recognition, and increasing conformity of man's will and personality to the divine character is sought after. The genius of Protestant religion, then, being to emphasize the filial consciousness, as making 'all things new' in man's outlook on life, all life becomes in idea a prolonged act of worship, because of filial trust and loyalty. Hence the line between such general worship 'in spirit and in truth,' and special acts of worship or cultus, whether private or corporate, is less marked than on the Catholic view—in virtue largely of the latter's sacerdotal and sacramental conception of the Church and its authoritative rites. Docile performance of the divinely appointed forms of cultus, in implicit reliance on Church authority, apart from personal consciousness of their effects in edification, is on the latter view 'meritorious' and will have its reward in divine blessing.

Another feature characteristic of the Protestant form of worship,[2] one expressive of its concern for the active participation of the whole congregation, with a faith fully conscious of its proper objects of adoration, is vernacular singing, whether of psalms or of other forms of devotion. Here a mode of worship which in mediæval Catholicism had been confined to the few, particularly those separated by vows to a specialized 'religious' life, was made part of common worship for all.[1] In this Luther and Lutheranism[2] took the lead, using every form of singing, and all available musical aids, while the Calvinistic branch of reformed religion for long held strictly to Scriptural models, the Psalter in particular. This leads to the consideration of the several species within the common Protestant or Evangelical genus of worship.

(ii.) SPECIFIC TYPES.—The difference, especially in emphasis, between Catholic and Protestant worship is great, as was fully realized by the early Protestants, who had themselves lived first under the one and then under the other. But the degree to which the forms of cultus developed under the one were set aside as alien to the genius of the other, which took as its model the type reflected in the NT, varied with different species of Protestantism (*q.v.*). Among Protestant types Lutheranism and Anglicanism were the most retentive of traditional forms, each in its own way.

(*a*) *Lutheranism.*—Lutheranism (*q.v.*), in keeping with Luther's personal genius,[3] was conservative of the old forms rather than of their informing spirit (which had failed him religiously), save as regards the Holy Communion, where his doctrine of consubstantiation shows much the same mode of conceiving the Real Presence as the traditional Catholic one. Naturally, however, as time went on, the spirit of Lutheran worship prevailed over its forms (even as Melanchthon's sacramental doctrine approximated to Calvin's), save in certain local varieties of High Lutheranism. This inherent tendency is reflected in various ways throughout its history, particularly in the eras of Pietism and the Enlightenment (*Aufklärung*), and under the influence of Schleiermacher's recoil from the latter in the direction of giving feeling its proper place in religion. The most concrete instance of this emphasis on the Evangelical core of Lutheran worship was the union between the Lutheran and 'Reformed' (Calvinistic) communions in the Prussian State Church in 1822, with a revised order of worship (the *Agenda*). It is true that the Romantic movement as a whole led to a certain reaction towards older traditional forms (*e.g.*, a revision of the Church Order of 1650 was adopted by Mecklenburg-Schwerin in 1867), but this meant a break with the mind and feeling of the people at large; and more recently Schleiermacher's ideas of cultus as a corporate representation and expression of the religious life of communion with God in Christ, its exact forms being only of relative moment, have gained ground in thoughtful circles.

1 Cf. *Didaché*, x. *fin.*

2 The hymn-singing of the 'Lollards' was personal rather than in public worship, but illustrates the tendency of fresh personal religion to break into song.

1 See art. HYMNS (Modern Christian).

2 F. C. Burkitt, in an address on 'The Growth of Christian Hymns' (*Proceedings of the Oxford Soc. of Hist. Theology*, 1907–08), points out that Luther's own part in this matter was less than is commonly supposed. German mediæval Christianity was specially rich in vernacular hymns (both original and from the Latin), and 'all he had to do was to select, to revise, and here and there to recast.' Even his own *Ein' feste Burg* is a paraphrase of Ps 46. 'It was the great merit of Luther to recognize the religious value' of vernacular hymnody and to give an impulse to its use and imitation. Conditions were different outside Germany.

3 For Luther's varying attitudes on varying occasions towards cultus in Christian worship 'in spirit and in truth,' and his steady rejection of the statutory notion of cultus, see P. Drews art. 'Gottesdienst,' in *RGG*, on which also is based what follows on the development of Lutheran worship. For the Lutheran order of Sunday worship see Bersier's art. 'Culte,' in Lichtenberger's *Encyclopédie des Sciences religieuses*, iii.; and for extracts from Luther himself on cultus, Daniel, *Codex Liturgicus*.

(*b*) *'Reformed' or Calvinist worship.*—The germ of this type is seen already in Zwingli (*q.v.*), who made the Protestant emphasis on the Word of the gospel rather than its Sacraments determine the order and forms of public worship: such worship, too, was to him only a special mode of the worship of the whole Christian life, and here 'obedience is better than sacrifice' or any formal act of worship. Simplicity, then, in cultus was his practical rule, in the interests of worship 'in spirit and in truth.' Zwingli's influence, however, was soon withdrawn, and was confined to Switzerland save in so far as it was taken up into that of others. Of these Bucer of Strassburg[1] was the chief link in the development between him and Calvin, in whom the 'Reformed,' as distinct from the 'Lutheran,' type of worship took classic shape. Calvin shared his predecessor's suspicion of 'Catholic' cultus as too sensuous in form, leaving the worshippers too purely the subjects of passive impressions and transient emotions, for lack of the interpretative message of the Word, whether of Scripture read in their own tongue or of Scriptural preaching, conceived as a 'prophetic' and expository ministry for adapting and applying, through personal appeal to the conscience and reason, the gospel in all its range to the worshipping people. The traditional cultus, then, failed at the point of spiritual reality, which was the test of true religion for Calvin. Yet there was a true place for the symbolism of cultus and its action on man's complex nature, but one defined and limited by divine gospel ordinance and precedent in Scripture. This alone was binding; what went beyond it could only be justified by strict analogy, and related to minor details such as 'did not matter' in principle (ἀδιάφορα), but were only seemly or convenient in changing times and places.

In keeping with these principles, Calvin insisted on the value of congregational singing, as helping the soul to rise into the atmosphere of worship; but he limited the contents of sacred song to the inspired Scriptural models, the Psalter in particular, adapted only verbally to musical melody. Prayer, by the same canons, in order to be as real and close to personal life as possible, both for the minister and for the people, should include prophetic or unprescribed prayer (analogous to the preaching of the Word), as in the primitive Church, as well as forms familiar to all—the people expressing their co-operation in both by the Amen. The preaching of the Word became a central part of public worship on the Lord's Day, while once a month (not oftener, lest it should lose something of its sacredness and preparation of soul by self-examination [1 Co 11[28]]) the sacrament of the Lord's Supper was added. Before it a confession of faith was made, in the Apostles' Creed, at first sung by the people (in 1545 ed. of *La Forme des prières*, etc.), later as recited by the minister. The simplicity and ceremonial bareness of Calvin's order of worship, deliberately based as it was on Scripture, with its Hebraic forms, was at first made up for by the new realism of the vernacular as used in worship and the new warmth of congregational singing.

In the sphere of private devotion—which dispensed in the main with fixed forms of prayer (save over food)—fasting, for chastening of soul but not as a 'meritorious' work, was practised both on appointed fast days (not the traditional ones of unreformed religion) and at times chosen for personal reasons. The Church Year was set aside, as lacking Scriptural warrant and as having superstitious associations (here Luther's different attitude determined the more conservative practice of Lutheranism as to Church festivals, also as to the crucifix, images, and pictures as devotional aids). The Calvinistic type, with minor variations, came to prevail not only in Switzerland and France but also in parts of Germany, in Holland, in Scotland, and in England among the chief Nonconformist bodies, both Presbyterian and Congregational (including Baptists), while it contributed not a little to the ethos and forms of the Church of England as established by law. Before, however, dealing further with English Christianity, as specially rich in varieties of Church life and worship, reference must be made to the non-established or minority type of worship as represented on the Continent.

(*c*) *Independent or 'Anabaptist' worship.*—From the nature of the case, the worship of these proscribed groups of radical reformers is hard to describe save in general terms.[1] As based on Scripture, read with strong emphasis on the illumination of the individual believer, it was very simple in form and spontaneous in method, having affinity with and aiming at reproducing the Spirit-prompted fervour and freedom reflected in parts of the Pauline Epistles, at which official religion everywhere looked askance. Free prayer, personal witnessing to God's working in religious experience, 'prophetic' exposition of Scripture in the light of this—in fact the features which marked the early 'Quakers' in England—were its chief characteristics. But, unlike the Quakers, the Continental Anabaptists practised both sacraments, in their own simple way and sense, and (so far as persecution allowed) the singing of praise to God in hymns expressive of their new-found and often deep religious feeling. Among them Luther's principle of 'the freedom of the Christian man,' along with love of the brethren, led to a thoroughgoing exercise of 'the priesthood of all believers,' on the lines of the autonomy of the local group or church—to the great scandal of all legally regulated types of State Church in the various lands—much as was the case later with the 'Separatists' under Elizabeth's system of uniformity in worship in England.[2]

(*d*) *Anglicanism.*—While the Elizabethan settlement, no less than Lutheranism, banished mediæval forms savouring of Roman doctrine, especially as to the Mass (not only transubstantiation but also consubstantiation was set aside), there was not the same check upon the return of the older associations of the ritual retained by the conservative and comprehensive policy of the Crown and its advisers that there was in Luther's own influence in Lutheranism. There was besides the extra influence in the same direction of the retention in the one case, and not in the other, of the Catholic order of the episcopate, and that in its mediæval form. Accordingly, although the type and forms of worship in the Elizabethan Prayer Book[3] were fundamentally Protestant rather than Catholic (in the opinion of a 'central' Churchman like Jewell, as of Calvin and other 'Reformed' rather than Lutheran Protestants), yet there were in it, as in Luther's Church order of worship, features proper to the standpoint and tone of 'Catholic' rather than 'Evangelical' religion, which were dropped by the types of Protestantism most careful to conform everything to the NT model and ethos.

Among such features was the litany, which, though it marks a great advance on the mediæval examples, and in its form 'is perhaps Cranmer's greatest liturgical triumph,' yet falls decidedly below the filial type of consciousness. This was partly due to its origin. It was not compiled by Cranmer for the Prayer Book at all, but in 1544 for use in a special season of

[1] See P. Drews, as above.

[1] See art. ANABAPTISM.

[2] See below, and cf. C. Burrage, *The Early English Dissenters*, 2 vols., Cambridge, 1912.

[3] As also in that of 1662; see art. PRAYER, BOOK OF COMMON.

public calamities (like the earliest Western litanies),[1] yet 'was printed also in the Prymer of 1545,' which, like those of the 15th cent., was a book of devotion for lay-people. Thence it passed into the Prayer Book of 1549, with omission of the invocation of the saints. It is natural, then, that its tone is not the normal one for ordinary Christian prayers. It is significant that Luther's litany of 1529, the revision of a mediæval one, and itself a source of Cranmer's, was never part of normal Lutheran worship, but was used only on special occasions; and that the litany was one of the parts of the English rite which the Puritans most objected to as unfitting.

On the whole, then, the amount of traditional language retained in the Prayer Book—particularly its special offices of Baptism, Orders, Visitation of the Sick, etc.—gives no little warrant to those who in later times have gone on a view of its intention not in fact consonant with the Articles, which are of a piece with common Protestant doctrine, *e.g.*, on justification by faith, and with the experiential, rather than *ex opere operato* or Catholic, conception of sacramental grace which went with it. The result of the divergent readings of the Anglican cultus has been a diversity in ritual practice peculiar to Anglicanism among Protestant communions.[2]

(*e*) *The Puritans.*—Divergences began with those who, starting from the belief, probably a correct one, that the doctrinal affinities of the Elizabethan settlement of religion were with the Calvinistic type of Protestantism rather than the Lutheran, pressed for greater conformity to its form of worship as more Scriptural. Aiming at making the cultus yet more 'pure' from 'papal' or traditional Catholic ideas, usages, and especially vestments, the English 'Puritans' (*q.v.*) went further even than their foreign friends, who themselves lived under the Presbyterian system, thought necessary. When repressed by the Crown, using the bishops as its agents, many 'Puritans,' like Cartwright and Travers, worked for a Presbyterian Church polity, and issued in 1572 an 'Admonition to Parliament' to this effect.[3] Their objections to the rigid and exclusive use of fixed forms of prayer in public worship, their emphasis on 'preaching' of the Word, as distinct from mere fixed Scripture lections (with or without printed homilies), and their rejection of the traditional fasts and festivals of the Church Year, called forth from Richard Hooker (*q.v.*), a 'central' Anglican of the end of Elizabeth's reign, as Jewell had been in its earlier half, a classic defence of the worship of the Prayer Book as then understood. He writes, however, on the basis of essential agreement between the Reformed Churches, including the Anglican, as 'Sacramentarian,' not papal or Lutheran, in their view of the Lord's Supper.[4] In this he stands in contrast to those who in the next century went to the other extreme from the Puritan tendency in their views of Prayer Book worship, Laud and the High Church or Catholicizing divines often styled 'Caroline.'

(*f*) *Congregationalism.*—But, while the Puritans as a body remained inside the National Church, until after the Act of Uniformity in 1662, a minority among them gave up, under Elizabeth's coercive policy of ritual uniformity, all hope of further reform and began perforce to worship in semi-private church meetings or congregations. Their ideal of worship appears in R. Browne's *Booke which sheweth the Life and Manners of all True Christians* (1582), in a form which keeps remarkably close in spirit as well as idea to the NT picture of church fellowship in worship. This consists in (1) 'communion of the graces and offices in the Head of the Church, which is Christ,' (2) 'communion of the graces and offices in the Body, which is the Church of Christ,' and (3) 'using the Sacrament of the Lord's Supper, as a seal of this communion.' In such worship on a definitely Congregational basis,[1] whether their baptismal practice was that of Protestantism at large or that of Anabaptism (*q.v.*), two highly primitive features were recovered, namely, the intimate union in idea of Christian worship and Christian walk, and the place assigned to personal graces of the Spirit in fitting each particular church for corporate fellowship in both spheres of its life of union with God in Christ. These were connected with the Separatists' idea of church membership proper, as conditional on a personal act of 'covenant' with God and His people, whereas in national Churches it was determined merely by infant baptism and catechizing,[2] supplemented in Calvinism and English Puritanism by 'a godly discipline' meant to ensure a reasonable loyalty in life and worship. When Congregational ideals and forms of worship had lost something of their original reality, they were more than revived in the Society of Friends (*q.v.*), with its characteristic emphasis on 'the inner light' and its reliance on the promptings of the Spirit of God, alike in life and in corporate worship. Here new traits were fellowship in silent adoration and meditation, waiting for the 'moving of the Spirit,' and complete spontaneity of utterance for mutual edification, whether in the reading or quoting of Scripture, exhortation based on it, or in the form of a more direct message of the Spirit or 'inner light.' Negatively Quakerism dispensed with sacraments and even singing in worship. But the latter received an important extension among Nonconformists at large (with whom adherence to the psalms in one form or another had been stricter than among Anglicans) early in the next century, through the hymns of Isaac Watts, written specially for public worship.

(*g*) *The Evangelical Revival.*—Thereafter in connexion with the Evangelical Revival, both Wesleyan and Calvinist, a greater outburst of hymns and hymn-singing in worship marked the fresh spirit of praise to God which filled men's newly inspired experience of His grace and goodness in Christ. And the like has been true of all revivals of religion, including the Tractarian, down to the revivalism of the latter half of the 19th century.

6. **The present situation.**—In the Evangelical Revival and the succeeding Romantic movement, within both Romanism and Protestantism, religious feeling came again to its rights after the chilling era of rationalism. In Evangelical circles, both in Germany and in England, it appeared mainly in the forms of hymnody and enhanced spontaneity in prayer and preaching; in Catholic and Catholicizing circles it infused fresh earnestness and reality into the ritual and ceremonial aspects of cultus. In Anglicanism in particular it created a zeal for the restoration of 'historic' and 'Catholic' forms, both those allowed by the Prayer Book but fallen into disuse, and others disallowed by it. During the last half-century, moreover, the taste for a 'richer' and more æsthetically suggestive cultus has spread to almost all religious circles in England, and even Scotland, as also in all English-speaking lands. But it remains unassociated for the most part with the specific Catholic and sacerdotal ideas for which ritual was chiefly valued by the leaders of the Oxford Movement and their followers. The fact is that the strong

[1] See art. LITANY, §§ 5, 8.
[2] Cf. art. PROTESTANTISM.
[3] See art. PURITANISM, 2 (*b*).
[4] *Ib.*

[1] See artt. BROWNISM, CONGREGATIONALISM.
[2] In the Prayer Book by confirmation also, though it fell into wide disuse (Hooker, *Eccl. Pol.* v. lxvi. 8) for a time. No reformed Church treated this 'rite or ceremony' (Hooker) as a sacrament, since it lacked Christ's own authority, and Calvinism disallowed it even as a 'profitable ceremony.' Lutheranism, after a period of disuse, like that in England, restored it in a simpler form as a result of Pietism (see art. SACRAMENT [Lutheran]).

recoil from those ideas, especially in their extreme forms, at the eve of the Protestant Reformation led to an undue suspicion of not a few natural forms of symbolism, fitted to express the poetry of the feelings and give appropriate vent and exercise to the mystical side of religious faith, where the reflective expression of the same faith through the spoken word cannot equally secure this, especially for certain temperaments and even for certain moods of most men and women. That recoil has now spent itself, and to-day many are feeling after the proper redressing of the balance of worship long disturbed by historical causes, and are seeking a synthesis of the Protestant or Evangelical emphasis and ethos, on the one hand, and of the Catholic or sacramental, on the other.

The ruling tendency, then, in present-day worship is towards a harmony of the various historic types. These in the past have existed too much as rivals or at least in one-sided self-sufficiency, each as if alone legitimate. Now they are being felt to be all of them but partial embodiments of the possibilities of Christian worship, complementary rather than hostile to one another. They are seen to be methods of meeting the instinctive needs of different types of our manifold human nature, while yet each of us requires, for perfected communion with God and his fellows, a fulfilling on all sides of that nature; and to this end each needs also the help of modes of worship which do not at first come natural to him, but are suited to educate undeveloped capacity. Thus there is abroad a movement towards unity in and through diversity, not only in Church fellowship generally as needful to full Christian unity (cf. the Lambeth Appeal of 1920), but also in the sphere of worship. It is strongest in the younger generation, especially among University and College students, largely through the co-operative, 'interdenominational' spirit of the Student Christian Movement. In the 'give and take' of student life, where personal relationships at close quarters and on the same mental level favour the observation of the similarity of the Christian character fostered by varying modes of cultus, inherited bias least hinders the frank recognition of the strength as well as the limitations of each of these distinct types. Persons are not, as so often in the past, seen through their forms of worship, but these through the persons who practise them. Hence a new and more hopeful, indeed a more reverent, attitude to all such expressions of Christian life.

The result is an ideal of Catholicity in worship that is due, not to lack of personal conviction or preference, but to faith in God and love to all His sincere worshippers. Men conceive of a Catholic worship, within a reunited Church communion, that shall be inclusive of the genius and the more essential methods of 'Catholicism' and 'Evangelicalism,' whether in Orthodox, Roman, or Protestant circles. Historic approximations to a synthesis of such tendencies exist already in Anglican, Old Catholic, Catholic Apostolic (Irvingite) worship, while recently a League of Free Catholics has been formed to work out experiments in this direction. No doubt sure progress will also be gradual. Meantime for all who seek this ideal the master-thought must be, 'Pure worship under the Gospel stands neither in forms nor in the formal disuse of forms,'[1] but in spiritual reality of devotion, evidenced by the fruits of the Spirit in life and character.

WORSHIP (Egyptian). — I. *THE DAILY TEMPLE LITURGY.*—1. Its Heliopolitan origin.—

A striking feature of Egyptian temple worship is the fact that the same daily liturgy was celebrated on behalf of every god and goddess throughout the length and breadth of the land.[1] The reason for this uniformity, which seems to have prevailed as far back as the Old Kingdom, is as follows. The daily temple liturgy, as we know it, seems to be derived from that celebrated on behalf of the sun-god at Heliopolis, which city exercised in early times a very far-reaching religious and political influence. To enhance their prestige, therefore, a number of local gods were identified by their priests with the sun-god, of whom the king was regarded as the son. The king was thus also regarded as the son of the gods identified with the sun-god. As pointed out in the art. PRIEST, PRIESTHOOD (Egyptian), II. 2, this idea of sonship would have soon affected the relationship of the king with all divinities, whether male or female. The king was likewise high-priest of the sun-god, and he became high-priest of all the local divinities of Egypt by the same process as that by which he came to be regarded as their son. The local high-

[1] Printed Epistle of the Society of Friends in 1885.

[1] A. Erman, *A Handbook of Egyptian Religion*, Eng. tr. p. 47 f.

priesthoods also, of course, devolved upon the Pharaoh as representative of the centralized government of Egypt, all political and religious functions, which once belonged to the local chiefs, being united in him. Accordingly, as their son and high-priest, the Pharaoh, or his priestly deputy, celebrated the same liturgy on behalf of the local divinities as on behalf of the Heliopolitan sun-god.[1]

Heliopolitan influence on Egyptian worship is to be recognized not only in the uniform cult of all divinities, but also in numerous cult-accessaries and in the very constitution of the priesthood; furthermore, in the temple structures themselves and the views which the Egyptians entertained about them.

(*a*) Egyptian temples, certainly in early times[2] and often later, looked east, so that the rising sun might light up their dark interiors.[3] Thus in an inscription on the shrine found by Griffith at El-'Arîsh we read that 'the face of this temple (*i.e.* of the god Shu) is towards the east wherein Rê' rises.'[4] The Egyptians, indeed, pictured to themselves the sun-god, before all other divinities, as dwelling in every temple, which they accordingly regarded as a miniature heaven.[5] In texts of the Ptolemaic age, though the idea is probably far older, the two pylon-towers are equated with the two sisters Isis and Nephthys, who, according to one conception, lifted up the sun-god into the sky every morning.[6] The sanctuary or naos, in which the cultus-image was kept, was not infrequently designated 'heaven' or 'the horizon,'[7] and a title often borne by the high-priests of Amûn of Thebes was 'Opener of the doors of heaven in Elect-of-Places (Karnak).'[8]

(*b*) Every temple in historic times seems, like the Heliopolitan sun-temple, to have possessed its House of the Morning (*pr-dw;t*), in which the Pharaoh underwent lustration before celebrating the daily liturgy.[9]

(*c*) The sacred pool for purification, a feature of all temples, was associated not with the presiding deity of the temple but with the sun-god.[10]

(*d*) The obelisk which generally stood in front of the pylon was closely associated with the sun-cult.[11]

(*e*) The boat-shrine was also probably in the first instance a feature of the sun-cult.[12]

(*f*) The practice of offering to a divinity the figure of Mê'et, righteousness personified, in the daily temple liturgy[13] must have grown up at Heliopolis;[14] the formula recited at the presentation of the figure is clearly of solar origin.[15]

(*g*) The historic priesthood also displays marks of Heliopolitan influence. The four watches (*s;w*), or phylæ, of priests bear the names of the four quarters of a ship, which names were also assigned to the four watches into which the crew of the sun-god's heavenly ship were divided.[16] It was evidently the sun-god's priests who were first divided into four watches bearing these names, the sun-god being supposed to traverse the sky in a ship and his priests being therefore regarded as his crew. Even the general term for a priest, *wê'eb*, may be Heliopolitan, for *wê'eb* means 'pure person,' and purity is a very marked feature of the sun-cult.[17]

(*h*) In many temples the high-priestess was identified with Hathor, the wife of the Heliopolitan sun-god, and in this capacity figured as the wife of the god to whom the temple in which she was high-priestess was dedicated.[18]

(*i*) The sistrum-shaking musician-priestesses,[19] who were attached to every Egyptian temple, and the human concubines, who were assigned to several divinities,[20] seem also originally to have been Heliopolitan institutions.[21]

2. Its Osirianization.—As pointed out in the art. PRIEST, PRIESTHOOD (Egyptian), II. 2, the relationship of the king with any god or goddess was, owing to the influence of the Osiris myth, conceived of as that of Horus with Osiris. Accordingly for cult-purposes every divinity came to be regarded as an Osiris, while the king, or his deputy the priest, played the part of Horus. The formulæ, therefore, pronounced during the celebration of the originally solar temple liturgy constantly attempt to equate the various episodes composing it with events connected both with the death and resuscitation of Osiris and with the successful conflict of Horus with Sêth.[1] But, despite this Osirianization of the rite, many of the formulæ still retain clear traces of its solar origin.[2] Indeed, the Egyptian priests with their characteristic disregard for logic often employed both earlier solar and later Osirian formulæ side by side.[3] The Osirianization of the daily temple liturgy did not affect its outward form, which remained unchanged and in its main features is clearly solar.[4]

3. The chief officiants.—(1) *Pharaoh.*—With comparatively few exceptions the temple reliefs represent the Pharaoh not only in the capacity of high-priest in the temple services but as sole officiant. In historic times he could seldom have officiated in person, his place of course being taken by one of the priests who were his deputies.[5]

On the occasions when the Pharaoh actually did exercise his high-priestly functions he was conducted to the temple in procession.[6] At the head of the procession walked the 'pillar of his mother' (*Ḥwn-mwt-f*),[7] burning incense. Immediately in front of the Pharaoh were carried a number of sacred standards, which are said to 'clear the way'[8] to the temple or to 'drive away what is evil.'[9] A chief lector might also walk in the procession, 'adoring the god,' *i.e.* reciting hymns in his honour, and thereby 'warding off those hostile to the king.'[10] On reaching the temple precincts the Pharaoh straightway proceeded to the House of the Morning (*i.e.* the temple vestry). Reliefs at Edfu[11] and Abydos[12] represent him as being welcomed by the souls of Buto and Nekhen[13] (the dead predynastic kings of Lower and Upper Egypt), who conduct him into the House of the Morning for the performance of his ceremonial toilet. Here he underwent lustration,[14] and then he was robed, anointed, decked with ornaments, crowned, and invested with royal insignia, and possibly also presented with a repast. He was then ready to enter the temple to officiate.[15]

(2) *Priest.*—The ordinary chief officiant at the daily temple liturgy was a prophet[16] (*ḥm-nṯr*), *i.e.* a member of the higher class of the priesthood,[17] or else a great *wê'eb*-priest[18] (*w'b ;*). All priests and priestesses had to purify themselves before entering upon their course, and while serving had to adopt various precautions in order to avoid ceremonial impurity. They had also, like the

Pharaoh, to undergo purification before entering the temple to officiate.[1]

4. The resemblance of the daily temple liturgy to the Pharaoh's ceremonial toilet.—A large part of the daily temple liturgy consists of a series of toilet episodes and closely resembles the ceremonial toilet of the Pharaoh in the House of the Morning. This resemblance is due to the fact that both are based upon the same performance, the supposed daily matutinal lustration of the sun-god—the cultus-image of the sun-god undergoing lustration every day at dawn in the Heliopolitan sun-temple, as the god himself was conceived of as doing in the horizon. That the other toilet episodes of the rite of the House of the Morning, viz. robing, anointing, crowning, etc., had their equivalents in the daily temple liturgy is due to the sun-god being regarded as a king.[2]

5. The three divisions of the daily temple liturgy.—There are three main divisions of the daily temple liturgy; (1) a series of episodes preliminary to the performance of the divinity's toilet, (2) the actual toilet, and (3) the presentation of food- and drink-offerings.

We know of two editions of the first two divisions of the liturgy. The one, an illustrated edition, is carved on the walls of the chapels of Horsiēse, Isis, Osiris Onnophris, Amūn, Atum, and Ptaḥ, in the temple of Sēthos I. at Abydos. It consists of a series of reliefs representing the liturgy being performed, each relief being accompanied by the formula pronounced by the priest while the particular episode depicted was being enacted. The other edition, written for the temple of Amunrē' of Karnak,[3] is preserved on papyrus no. 3055 of the Berlin Museum and dates from the XXIInd dynasty.

The Abydos and Karnak liturgies are merely different editions of the same portions of the service-book. The formulæ for the toilet episodes are practically identical in both cases, and, when the pre-toilet episodes of the one correspond to those of the other edition, the accompanying formulæ are often either the same or have points in common.[4]

Both these editions are incomplete, but combined they no doubt supply us with a very adequate representation of the pre-toilet and toilet episodes of the daily liturgy in an Egyptian temple (originally the sun-temple), when the ceremonial was fully carried out.[5]

The third division of the liturgy can be fairly satisfactorily reconstructed from numerous representations and formulæ occurring among the reliefs which decorate the walls of the various temples.

There are numerous indications that the temple service-book assumed the form in which we possess it at a very early date, probably not later than the Old Kingdom.[6]

(1) *The pre-toilet episodes.*—Having undergone purification in the water of the sacred pool or tank, the priest entered the temple, reciting a formula as he did so. His first act after entering the temple was to kindle a fire, a bow-drill being used for that purpose, or perhaps only a spindle and 'hearth.'[7] The priest then picked up the principal part of the censer, which was of metal, usually bronze, and in the form of an outstretched arm with the hand open palm upwards.[8] Taking hold of the rest of the censer, the little brazier in which the incense was burned, he fixed it in its place, namely in the open hand at the end of the arm. Having filled the brazier with burning charcoal from the fire he had previously kindled, he set incense thereon, and, holding the smoking censer in one hand, proceeded to the sanctuary, the double doors of which were bolted and the bolts secured with a clay seal. The bolts seem often to have been tied with a strip of papyrus to which the clay seal was affixed. The priest broke the seal, drew back the bolts, and opened the doors of the sanctuary, whereupon the sacred boat was disclosed with the cultus-image enshrined therein.[1]

After the unfastening of the seal, and presumably the opening of the doors, the priest sometimes burned incense in honour of the uræus goddess. On beholding the image, the priest made a profound obeisance, 'kissing the ground prone,' as it was said, or 'placing himself upon the belly stretched out flat.' Then, standing or kneeling, he chanted first a hymn in honour of the divinity—lifting up both his hands as he did so in the attitude of worship, or else burning incense—and after that a second hymn in honour of *R'yt*, the female counterpart of the sun-god and identified with Ḥathor. The priest next offered the image scented honey, or a figure of the goddess Mē'et, and then burned more incense. Having swept the floor of the sanctuary with a cloth, he was now ready to 'lay his hands upon the god,' *i.e.* take the image out of the boat or naos in order to perform its toilet.

(2) *The toilet.*—The priest's first act after 'laying hands upon the god' was apparently to divest the image of the clothing and ornaments in which it had been arrayed the previous day and to remove the pat of scented grease that had been placed on its forehead.[2] Then, placing the image on a little heap of sand, which he had previously poured out for that purpose, and having fumigated it with incense, he proceeded to sprinkle it with water, first from four *nmst*- and then from four *dšrt*-vessels, or else with water from one so-called '-vessel. He then censed the image again, cleansed its mouth with different kinds of natron, and yet again censed it. Having thus purified the image, he began to dress it, putting on it the white headcloth and arraying it in white, green, red, and dark red cloths in succession. After decking it with ornaments, he anointed it with unguents and then painted its eyelids with green and black cosmetic. Either immediately before or immediately after this application of unguent and cosmetics the priest invested the image with royal insignia—a diadem, *w'š*-sceptre, crook, and whip. The toilet episodes were probably brought to a close with a final burning of incense.[3]

(3) *The presentation of food- and drink-offerings.*—The procedure observed at the presentation of food- and drink-offerings in the temple liturgy seems to have been practically identical with that observed at the corresponding part of the funerary liturgy. This is indicated among other things by the fact that in the temple reliefs depicting a divinity being fed there is sometimes inserted above the altar or offering-table, and between the divinity and the chief officiant, a so-called list of offerings identical to all intents and purposes with the lists occurring in the tomb reliefs and paintings.[4] This is only to be expected, since every divinity was regarded for cult-purposes as an Osiris.

Before the offerings could be laid upon it, the table or altar had to be purified.[5] The act of placing the offerings on the altar or table, or else on mats spread upon the ground, was variously

[1] See art. PURIFICATION (Egyptian), V. 7.

[5] See art. PURIFICATION (Egyptian), V. 5 (*b*); see also Mariette, *Abydos*, i. pl. 21; E. Naville, *The Temple of Deir el-Bahari*, London, 1895–1908, ii. pl. xxviii.; Lepsius, *Denkmäler*, iii. 66*b*.

termed 'setting out the repast upon the altar,' 'setting down the divine offering,' 'setting down the repast.'[1] While thus engaged the officiant either stood or knelt.[2]

The god's meal having been laid before him, two closely connected ceremonies were performed, apparently in immediate succession, the one being variously designated 'presenting the repast,' 'presenting the divine offering,' 'performing the presentation of [or 'causing to be produced'] the divine offering,' and 'performing the presentation to, causing to be produced a great oblation for, NN,'[3] and the other being termed 'bringing the god to his repast.'[4]

At the former ceremony the officiant extended his right arm and bent the hand upwards in the prescribed manner[5] and pronounced the formula beginning with the words 'an offering which the king gives.'[6] When the king is depicted performing this ceremony, he is often shown holding a mace and staff in his left hand.[7] The recitation of the formula 'An offering which the king gives, etc.,' was closely associated with, and, on the analogy of the funerary liturgy, was doubtless preceded by, the burning of incense and the pouring out of a libation of water.[8] At the ceremony of bringing the god to his repast the officiant recited a formula calling (*dwi*)[9] upon the god to come to his bread, beer, roast flesh, etc.[10]

Various attitudes might be adopted by the officiant, whether king or priest, while he pronounced the summons. He might stand with right arm and hand extended in the prescribed manner and with left hand hanging at his side, or he might kneel with both hands, palms downwards, held above or beside the knees. Again he might kneel with left hand held in the attitude just mentioned or holding a censer, while with his right hand and arm he made the ritual gesture.[11]

The act of consecration, by which each item of food and drink was finally[12] made over to the god, was termed 'stretching out the arm four times.' According to the temple reliefs, it was performed in the following manner. The king, standing before what was to be offered, stretched out over or towards it four times the so-called *ḫrp*-baton, which he grasped in his right hand; in his left hand he held staff and mace, or else this hand hung at his side holding the symbol of life.[13]

In the series of temple reliefs depicting the god being fed is one representing the king in the act of 'elevating' (*f*) a tray of offerings 'before the face' of the divinity.[14] Does this scene represent one special episode in this part of the liturgy; *i.e.*, after the pronouncement of 'An offering which the king gives, etc.' was a specimen of the offering elevated in the presence of the cultus image? More probably the scene is a summarization of a series of elevations; for doubtless, as in the funerary liturgy, each particular item of food mentioned in the list of food- and drink-offerings was elevated at its presentation to the accompaniment of a special formula. In the funerary liturgy, according to Utterances 108–171 of the *Pyramid Texts*,[1] each item was elevated four times.

In addition to the meal laid out before the image of the principal divinity in the sanctuary and before the images of the co-templar divinities in the adjacent chambers, offerings were also laid, of course, upon the great altar in the forecourt. If the procedure in the temple of the Aton at El-Amarna prevailed also in other Egyptian temples,[2] it was upon this altar that the Pharaoh mostly laid his oblations.

(4) *The removal of the footprints.*—The final act of the chief officiant before leaving the sanctuary, shutting the doors, and affixing the clay seal to the bolts, was to obliterate all traces of his own and his assistant's footprints. This he did by sweeping the floor with a cloth or with a besom made of twigs of the *ḥidn*-plant.[3] In the sanctuary of the temple of Derr, on either side of the door, is a representation of Ramesses II. holding a cloth for sweeping the floor in one hand and a vase (for sprinkling it?) in the other.[4]

6. The functions of the assistant officiants.—The ordinary schematic representations of the various episodes convey the impression that only one officiant, the king, or a priest acting as his deputy, took part in the celebration of the daily temple liturgy. Inscriptions and a few quite exceptionally detailed reliefs, however, show that in addition to the celebrant a number of other officiants participated in all these ceremonies. The ritual was no doubt particularly elaborate when the Pharaoh himself was celebrant.

(1) A scene in the temple of Luxor depicts in some detail the presentation of the cloths used for Amunrē"s ceremonial toilet. After the burning of incense, the episode immediately preceding the arraying of the image in the royal head-cloth (*nms*), there enters the sanctuary a long procession of priests bearing chests containing the cloths in question, with members of the higher class of the priesthood, the fathers of the god, walking at their head. Some of the latter carry smoking censers and libation- or lustration-vessels, while others clap their hands and sing, one of them rattling a sistrum. Bringing up the rear of the procession is the king, with 'the god's adorer, the god's hand' (the high-priestess of Amunrē')[5] walking in front of him. The king holds out the *ḫrp*-baton and is said to be 'extending the arm four times,' *i.e.* consecrating the offering. But he also forms part of the procession, for between him and the high-priestess are the words 'bringing clothing.' We have here, pictorially combined in one, what were really two distinct actions, namely the procession of priests, accompanied by the king and high-priestess, conveying the clothing into the sanctuary, and the consecration of that clothing by the king assisted by the high-priestess, who either sang a hymn or chanted some formula.[6]

(2) A number of jars of unguent, which another Luxor[7] relief represents the king as consecrating, have been solemnly brought in procession by ten priests.

(3) Another relief in the same temple[8] shows a procession of twenty-eight priests bearing a number of ewers of water, to be used for such purposes as the washing of the altar, the pouring out of the libation before the bringing of the food-offering,[9] and for various drink-offerings.[10] At the end of the procession walks the king. The theory of the ritual demanded that the king should draw the water himself, come running[11] with it into the sanctuary, as he is depicted doing in the adjacent

relief,[1] and then pour it out as a libation.[2] The two vessels which ancient custom prescribed the king should bear did not, of course, contain sufficient water for the elaborate rites of the historic periods. Accordingly the king's running with the water was in practice merely a symbolic act whereby he secured to himself the rôle of sole offerer of the water, whereas nearly the whole of the water actually used was brought in by the priests in a large number of vessels.[3]

(4) Yet another relief at Luxor,[4] depicting the presentation of food-offerings to Amūn and the co-templar divinities, gives one a good idea of the important rôles played by priests even when the king was celebrant. The king appears merely to be presiding during a considerable part of the performance. He stands holding a staff in his left and a mace in his right hand and is said to be 'viewing the presentation' of offerings. Facing the king and at some distance from him are four officiants, one of whom holds some indefinable object (perhaps a libation-vessel?). The other three with right arm extended and hand bent upwards are 'making the offering which the king gives.' Immediately in front of and facing the same way as the king stands another priest—a *sem*, or 'pillar of his mother'—accompanied by the high-priestess of Amūn, 'the god's adorer and god's hand.' This priest, whose right arm and hand are held out like those of the three above-mentioned officiants, is engaged in summoning the divinities to their repast: 'Come ye to this your bread, to your roast meat of the evening meal, which your son Amenōphis . . . has given you.' The high-priestess's hand is raised in adoration, palm outwards, and she is doubtless repeating simultaneously with her companion the formula of summoning the gods. In an adjacent relief[5] the king is seen with uplifted baton consecrating—'extending his arm four times' towards—the repast to which the gods had just been bidden.

7. Music.—Musician priestesses were attached to every temple, and male musicians and dancers also took part in the temple services.[6] The temple musicians of both sexes played a particularly important rôle in festival services and in the processions which were a special feature of these celebrations.[7] There is some reason for supposing that at Thebes and elsewhere, on the occasion of the annual festival of Ḥathor, that goddess's priestesses, when the temple service and the subsequent procession were ended, paraded the streets and, in company with the *ihwey*-priests, stopped at one house after another in order to bestow Ḥathor's blessing upon the inmates. This they did by dancing and singing and holding out to their audience—perhaps that they might touch them—the emblems of their goddess, the sistra and *mnit*-necklaces.[8]

It should be pointed out here that the rattling of the sistrum was supposed to keep at a distance what was evil or inimical to the gods.[9]

8. The object of official worship.—The whole object of official worship, as represented in the temple reliefs, was to obtain the favour of the divinities for the Pharaoh. In return for the offerings which he presents to them they promise him victory, gladness, life, stability, health, good fortune, abundance, millions of years, the duration of Rē', an eternity of jubilees, etc. The very temples of the gods were erected by the king that he might receive in return the 'duration of heaven,'[10] 'hundreds of thousands of years,'[11] and that he might 'be granted eternity as king.'[12] Thus the designation of every ritual act, 'giving [var. doing] this or that to [for] his father [var. mother] NN.' is followed by the words 'in order that he may make an "Endowed-with-life"[13] like Rē' forever,' the 'Endowed-with-life' being of course the king himself.

II. *PRIVATE WORSHIP.*—We know very little about private worship. The individual citizen, we are told, refrained from what his local god hated,[1] avoided his wrath by joining in the celebration of his festivals,[2] and cared for the local sacred animals.[3] In some houses, if Mariette's account of excavations at Abydos is to be trusted, the innermost room served as a private chapel, in which was kept the image of a divinity, offering being made to it on a stone offering-table placed before it. Here, Erman supposes, the householder made his daily adoration.[4] A man would erect a shrine to Ernūtet, the harvest-goddess, in the yard of his granary,[5] or near his wine-press,[6] or he might, it would seem, set aside for his god a portion of his meal, placing it on an offering-stand prepared for that purpose.[7] To prosper his work the scribe, before he began to write, poured out from his water-bowl a libation to Imhotpe, the patron-divinity of scribes.[8] The ordinary citizen might be seen praying outside the great pylon of a temple, after having, perhaps, placed a gift for the god on an offering-table set up there to receive the contributions of humble folk.[9] The middle Kingdom citizens of Asyūt offered the first-fruits of the harvest to their local god Upwawet.[10] Theban landowners, or officials responsible for the harvest on temple- or crown-property, and no doubt the ordinary peasants as well, made offering to Amūn and the harvest-goddess Ernūtet on the twenty-seventh day of the fourth month of Prōyet, *i.e.* the first day of the harvest festival. Also on the last day of that festival, the first day of the first month of Shōmu, the day the corn was winnowed, offering was made to Ernūtet.[11] On the last-named day the winnowers, ere they began their work, set up on the edge of the threshing-floor a rude figure of a harvest-divinity, apparently made out of a bundle of corn furnished with mud hands which grasp ears of corn. Before it they laid an offering consisting of dishes of food and a pot of water or beer.[12] On the analogy of harvest practices in other lands, may we not suppose that this 'divinity' is the first or last sheaf, the embodiment of the corn-spirit?[13]

III. *UNUSUAL POPULAR CONCEPTIONS OF WORSHIP.*—Remarkable ideas about worship and man's relation to the gods were current among the middle and lower classes during the latter part of the New Kingdom—ideas which do not seem to have existed hitherto among the Egyptians and are not met with again till Christian times.

'To the sanctuary of God,' we are told, 'clamour is abhorrent. Pray to him with a loving heart whose words are all hidden; so will he grant thy request, hear what thou sayest, and accept thine offering.'[14] Similarly a hymn to Thōth of this date likens that god to a well in the desert which is 'closed for those who

speak there and open for those who keep silence there. When the silent man cometh he findeth the spring.'[1]

IV. *The Aton-cult of King Amenōphis IV.* ('Ōkhnatōn).—The liturgy celebrated in the temple or temples[2] erected by the heretic king 'Ōkhnatōn at El-Amarna differs in so many ways from the temple liturgy of the preceding and succeeding periods that it must receive separate treatment. For the beliefs responsible for these differences see Erman, *Handbook*, p. 62 ff.; Breasted, *Development of Religion and Thought*, pp. 319–345.

1. **The daily liturgy in the temple of the Aton.**—There was no cultus-image of the Aton, and so all the toilet and pre-toilet ceremonies of the old temple liturgy were done away with. The worship of the Aton consisted mainly in the singing of hymns and presentation of food- and drink-offerings, of perfumes and flowers. The ritual acts, however, accompanying the presentation of these offerings were those of the old worship, the only difference visible in the representations of the various ceremonies being that the queen is shown acting in exactly the same capacity as the king.

As in the case of the old temple liturgy, the presentation of food- and drink-offerings was closely associated with the burning of incense and the pouring out of libation,[3] and the offerings were consecrated by the stretching out of the *ḫrp*-baton.[4] The practice of elevating trays of offerings was also continued.[5] As there was no cultus-image to anoint, unguent was held up to the Aton in alabaster jars and then placed on the altar.[6] The offering of unguent was evidently preceded by the burning of incense.[7]

It is possible that the offering of flowers was a more important feature in the Aton-cult than in the worship of the old Egyptian divinities, though they are constantly depicted as receiving a bouquet from the Pharaoh,[8] while their heaped-up food-offerings were regularly surmounted by a bunch of flowers.[9]

The El-Amarna reliefs permit us to reconstruct to some extent the sequence of episodes in the liturgy celebrated in the larger or outer temple.

(i.) When the king and queen came to this temple, their first act, according to a scene in the tomb-chapel of the high-priest Merirē',[10] was to make each an oblation at offering-stands set up in front of the pylon. After the burning of incense and the pouring out of a libation—the attendant high-priest is depicted bowing low and holding the censer and vase that have just been used for that purpose—the king and queen consecrated their gifts by extending over them the *ḫrp*-baton. During this performance the royal daughters rattled their sistra, and the attendant courtiers stood at a respectful distance bowing low with hands on knees.

(ii.) Having passed through the pylon, the king and queen, as we learn from a relief in the tomb-chapel of Panehesi,[11] proceeded to mount the steps to the high altar in the first court. On this altar a great oblation of joints of meat, poultry, vegetables, and bouquets of flowers was laid, and there was set on top of all three open pans of burning incense. The relief in question depicts the royal officiants in the act of scattering incense into these pans. One of their daughters stands near and holds out two bowls of incense to her parents, and the other two daughters rattle sistra. In front of the altar, facing the king and making profound obeisance, are the high-priest and the 'chief servitor of Aton.' The former, and probably the latter also, holds a bouquet of flowers—perhaps for the king to present after he has burned incense. Behind these two priests are four other priests in the same respectful attitude, each holding a round vessel containing liquid of some kind. Beside these again are four chanters, also bowing low and accompanying their singing with hand-clapping. The rest of the royal retinue remains in the entrance or outer court, or else altogether outside the temple precincts.

(iii.) While the king and queen were thus officiating at the high altar, priests placed offerings upon the altars in the outer court.[1] A relief in the tomb-chapel of Aḥmōse[2] also shows priests attending to the offering-tables, in this case in the outer court of the smaller temple, just before the arrival of the royal party.

(iv.) A visit of 'Ōkhnatōn to the temple was the occasion for the sacrifice of numerous oxen. The victims, beplumed and garlanded, were led straight to the slaughter-house,[3] or else to meet the royal cortège as it drew up at the temple-entrance.[4]

2. **The functions of musicians in the Aton-cult.**—(*a*) *Sistrum-players.*—While the king and queen burned incense, poured out libation, presented unguent, flowers, food- and drink-offerings, raised their hands in adoration before the altar, or performed the ceremony of consecration with outstretched *ḫrp*-baton, the royal daughters rattled their sistra.[5]

(*b*) *Temple choir.*—A body of blind vocalists accompanied by a blind harpist and sometimes by a lute-player, also blind, performed in the outer court or enclosure of the smaller temple.[6] An inscription in the tomb-chapel of Merirē' speaks of 'the singers and musicians . . . in the court of the House of the Benben . . . in Ikhtaton.'[7] The choir evidently sang and played off and on during the whole day, for they are depicted thus engaged both during and outside of the performance of the liturgy.[8]

(*c*) *Male chanters.*—Four chanters also figured in the Aton-worship. They are twice depicted singing and clapping their hands while the king and queen burn incense in the pans placed on the top of the food-offerings, in the one case in the great court of the larger temple,[9] and in the other apparently in the outer court of the smaller temple, where they are seen in close proximity to the blind vocalists and harpist who simultaneously make music.[10] They also ran in front of the royal procession to the temple,[11] thus, perhaps, performing the same functions as the lector of the old religion, who walked in front of the Pharaoh, when he went to the temple, and dispelled inimical powers by his recitations.[12]

(*d*) *Female musicians.*—According to the relief in the tomb-chapel of Panehesi discussed above, among those of the royal retinue who remained ontside the entrance to the enclosure or outer court of the larger temple, while the king and queen officiated at the high altar, were a number

of female musicians. These are depicted singing to the accompaniment of hand-clapping, waving of palm-branches, and the beating of tambourines, or else lifting their hands in worship.[1] These female musicians likewise greeted the king on his arrival at the temple.[2] It was apparently also the same women who participated in the rejoicings at the decoration of courtiers.[3] It is to be noted that the female musicians are never shown performing inside the temple precincts.

3. Private worshippers in the temple of the Aton.—It seems to have been customary for a subject, after he had been decorated by 'Ōkhnatōn, to make a food- and drink-offering outside the pylon of the larger temple and to pray at the same time for the king's life, prosperity, and health, and that the Aton would 'vouchsafe him for ever.'[4]

In the top register of a scene in Merirē''s tomb-chapel depicting 'Ōkhnatōn's visit to the temple[5] two men wearing wigs, and carrying each a bouquet, lead along a beplumed and garlanded cow and a calf. Accompanying them, and also carrying bouquets, is a man with a shaven head, *i.e.* a priest. Possibly the two laymen are offering these victims themselves on the occasion of a royal visit, the presence of the priest being required in order that he might superintend the slaughter of the victims and make certain that they were pure.[6] In the same scene, bottom register, lay-folk are carrying bouquets and duck, while four priests follow, two leading oxen and two carrying bouquets. Both victims and duck are quite possibly private offerings. Davies[7] suggests, indeed, that the offerings placed on the altars in the outer or enclosing court of either temple were those of private people. This would account for priests serving these altars before the arrival of the king,[8] or while the royal party and chief priests were officiating at the high altar.[9]

LITERATURE.—See the works cited in the text and footnotes.

A. M. BLACKMAN.

WORSHIP (Greek).—I. *DEFINITION, ETC.*—Worship, in the widest sense, may be defined as the acknowledgment by man of his dependence on a power or powers beyond himself. And these powers, in whatever form they may be conceived, are believed by the worshipper to be more potent than himself; and, in whatever visible semblance or sign they are worshipped, they are imagined to be normally invisible.

At the outset of our study of Greek worship we are met by a consideration which it is important to realize. The central meaning of worship as we conceive it is the endeavour after a higher and better life. Whether as individuals or on stated occasions with our fellow-men we perform an act of worship, while we do indeed render thanks for blessings received and pray for blessings to come, yet the paramount intention of our worship is that we may be reminded, amid the clash and din of things temporal and fleeting, of the things which are unseen and eternal, to attune our hearts and minds to higher ideals of life. And, while we consider it right and seemly to bring to God offerings of a temporal kind, to beautify His sanctuary, to lay before Him tithes and firstfruits, and in His name to give our goods to feed the poor, yet we count it a better thing to bring the sacrifice of a contrite heart, which He will not despise.

Now, if we leave out of account some rare and sporadic utterances of the more advanced and enlightened thinkers and confine ourselves to the typical Greek conception of worship, we find that the motive and intention is of a wholly different kind. Man worships his god or gods not because he has any lively feeling of gratitude for blessings experienced, still less because he desires to live a better life, but because he has an overwhelming conviction of his dependence on his god or gods for all temporal blessings. H. Usener[1] perhaps rather overstates this point of view, but in general it is true.

'Pray now, O stranger, to the Lord Poseidon: for his feast it is on which you have happened in coming here. And when thou hast made libation and hast prayed, as is right (θέμις), then give to this man also a cup of honey-sweet wine to make libation, since I deem that he too prays to the immortals. All men have need of Zeus.'[2] 'From the gods come all means of mortal excellence—from the gods are men wise and mighty of hand and eloquent of tongue.'[3] 'Always we all have need of Zeus.'[4]

If our definition of worship is open to the objection that it would include magic, the defence must be that it is impossible to frame a definition of worship which would be at once sufficiently wide and yet exclude magic. The acts of worship and the acts of magic are in origin at least inseparable. If we so define worship as to distinguish it from magic, it will be by a definition applicable only to the higher kinds of worship. It is no more possible to distinguish worship and magic by absolute and generally valid *criteria* than it is to distinguish religion from superstition.

Essentially magic is the performance of an act accompanied by verbal incantations which invoke objects of worship not known or not recognized by ordinary society. And just so far the modern view may be justified which makes the prime distinction between religion and magic to be that religion is social and promotes the good of the community, while magic is anti-social and tends to exalt the individual to the detriment of the community.

II. *THE RELATION OF RITUAL TO RELIGION.*—It used to be the fashion to regard the practices of ritual as later than the religious ideas of which they were the expression. The religious theory was regarded as primitive and essential; the religious ritual was regarded as the reasoned form in which the theory found expression. But modern investigation suggests that the reverse is the case. A festival which in historical times is definitely religious in character and is accompanied by a theory which professes to account for the various practices of the ritual may easily have been in its origin of an entirely secular character. The wide-spread practice of seasonal festivals, particularly those of mid-winter and of spring, can hardly be accounted for on any supposition that they were originally religious in character. Their origin is much more reasonably explained and their universality is much more easily understood if we regard them as having been at first purely secular, the natural reaction to the character of the season. The tribe meet at mid-winter and in spring to hold their festival with song and story. The character of the season will naturally influence the character of the festival. But, save in so far as mere ecstasy is religious in character, there is nothing religious in the celebration until a theory is evolved. When at mid-winter all nature is asleep—*ἐνιαυτός*[5] can hardly mean anything else than the sleeping season—the tribal festival may be explained as intended to celebrate the passing of a god who is asleep or is slain. When in spring all nature awakes to life, the festival may be explained as the awakening or the resurrection of

5 The old derivation from *ἐνὶ τῷ αὐτῷ* ('Here we are again!'), though revived in recent times, is of course absurd.

the god. But the ritual in its main outlines precedes the theory. Indeed it is only with the utmost difficulty that the theory will produce any innovation in the ritual. Many of the ritual usages are probably in their origin purely accidental. When on a memorable occasion something happens to be done in a particular way, the tendency will be to do it in the same way again. The usage becomes stereotyped, and the theory will try to account for it: thenceforth it is held to be the only way that is valid and effective. Even if no convincing explanation is found in theory, ancestral custom will be sufficient to perpetuate it. This ancestral custom is what the Greeks call *ὁ πάτριος νόμος*.[1] This *νόμος* (or *νόμοι*) is believed to be of immemorial antiquity, with all the superior sanction that attaches to the unwritten as opposed to the written law, and is held to regulate all the fundamental sanctities of life. The point of view is beautifully expressed in the words of Antigone: *οὐδὲ σθένειν τοσοῦτον ᾠόμην τὰ σὰ | κηρύγμαθ' ὥστ' ἄγραπτα κἀσφαλῆ θεῶν | νόμιμα δύνασθαι θνητὸν ὄνθ' ὑπερδραμεῖν. | οὐ γάρ τι νῦν γε κἀχθές, ἀλλ' ἀεί ποτε | ζῇ ταῦτα, κοὐδείς οἶδεν ἐξ ὅτου 'φάνη*.[2]

Hence in the *Politicus*, 290 E, we find custom almost equated with sanctity: *τὰ σεμνότατα καὶ μάλιστα πάτρια τῶν ἀρχαίων θυσιῶν*. So the solemn supplication of Himilkas is carried out *κατὰ τὸ πάτριον ἔθος*.[3]

III. *OBJECTS OF WORSHIP.*—We may conveniently divide the objects of worship into primitive or non-anthropomorphic and later or anthropomorphic.

A. NON-ANTHROPOMORPHIC.[4]—The evidence for non-anthropomorphic worship cannot occupy much space in a brief sketch like the present, and there is the less need to discuss it in detail because in general the lower strata of Greek religious ideas resemble those found in the earlier stages of development of other peoples or among primitive peoples of the present day. As among these, so among the Greeks we find traces of the worship of inanimate things and of animals. But before we glance at the evidence it is desirable that we should represent clearly to ourselves what exactly such worship means.

The ultimate root of religion is to be found in the instinctive sense of the mysterious, the uncanny. This sense is not equally strong in all men any more than all men are equally religious, and the things by which it is excited vary indefinitely, from the uttermost of beauty to the uttermost of loathing. In the street and under the garish sun all experience is immediate and commonplace. But if, for instance, one make his way to some lonely glen high among the hills—'per loca pastorum deserta atque otia dia'—where only the moorfowl call and only the whaups are crying, then even the most commonplace feels an instinctive awe, a sense of mystery which he cannot express even to himself. This is what the Romans call 'religio loci.' The origin of the word *religio* is a matter of dispute to-day as it was among the Roman antiquaries themselves. But even through the perplexities of the Roman discussions[5] there shines some perception of what we believe to be the right idea of the word, which corresponds very closely to 'reflexion,' *ἀναλογισμός*, the 'sense of something far more deeply interfused,' the 'misgiving of a creature moving about in worlds not realized'—in a word, the sense of the uncanny. This sense may be awakened merely by the loathly, as, *e.g.*, the toad, to which the rustic mind ascribes all manner of strange powers,[1] or by the merely curious—a stone or tree of fantastic shape. Objects which in whatever form have power to excite such emotions are regarded with awe. They must be approached with circumspection. They are looked upon as things apart: they are *ἱερά*. When then we find it said that a certain Greek tribe worship a particular animal or a particular object, often no more is meant than this. Their worship is predominantly fear.

But there are higher mysteries than these: the mystery of death and birth, of growth and adolescence, of the regular recurrence of the seasons, of mother-love and self-sacrifice, of instincts which 'aspire to immortality and seem to promise it.' It is by way of such mysteries that the religion of fear becomes transformed and transfigured into something higher: if not into a religion of love, which is essentially a Christian idea, at least into a religion in which reverence is more prominent than fear, in which the gods are no longer imagined as the jealous enemies of mankind but as their protectors. Swift to punish transgression, yet they do not will that any should perish. They are givers of good things,[2] if they are also givers of evil. Even if they 'deal to men two evils for one good,' only the foolish murmur. Good men loyally accept the conditions of mortality, turning the bright side out.[3]

1. **Holy places.**—Among non-anthropomorphic things to which sanctity, in the sense we have described, attaches we have first of all holy places. The Mucklestane Moor was felt by Hobbie Elliot to be 'an unco bogilly bit.'[4] The same sort of feeling was perfectly familiar to the Greeks. A bush-clad hill in Arcadia was fabled to be the place where Rhea gave birth to Zeus:

'In Parrhasia (Arcadia) it was that Rhea bare thee, where was a hill sheltered with thickest brush. Thence is the place holy and no four-footed thing that hath need of Eileithyia nor any woman approacheth thereto, but the Apidanians call it the primeval childbed of Rhea.'[5]

As a typical case we have the cave sanctuaries all over Crete, particularly those on Mount Ida and Mount Dictæum associated with the worship of the Cretan Zeus.

2. **Holy animals.**—The same kind of sanctity attached to various animals in different localities: storks and ants in Thessaly; weasels in Thebes; especially the snake—*e.g.*, in connexion with Asklepios, Sopolis, Cychreus. Best known of all is the *οἰκουρὸς ὄφις* on the acropolis at Athens which every month received honey-cakes.[6] Other familiar cases are the mice in the temple of Apollo Smintheus, the owl of Athene, etc.

3. **Holy trees.**—Among proofs of the cult of living trees we have the familiar idea of the tree-nymphs under their various names—Dryads, Hamadryads, Meliæ, etc.—who live in the life and die with the death of the holy tree. Where myth gives an ætiological legend to explain just why a tree is sacred, we may quite confidently neglect the legend and infer that the holiness attached to the tree before myth gave the alleged reason.

Thus the Delian palm was sacred. Myth gave as the reason that this was the palm which supported Leto at the birth of Apollo. So the laurel in the vale of Tempe, from which crowns were made for the victor at the Pythian games, derived its sanctity, according to myth, from the purification of Apollo at Tempe after he had slain the Python. Similarly the stump of the wild strawberry-tree at Tanagra was held sacred for the alleged reason that Hermes had been reared under it.[7]

1 Plato, *Laws*, 959 B; Thuc. ii. 34.
2 Soph. *Ant.* 453 ff.; cf. Plato, *Laws*, 793 A, 680 A.
3 Diodor. xiii. 86. See also E. Monseur, 'La Proscription religieuse de l'usage récent,' *RHR* liii. [1906].
4 See M. W. de Wisser, *Die nicht menschengestaltigen Götter der Griechen*, Leyden, 1903.
5 Esp. Aulus Gellius, iv. 9. 1; Cic. *de Nat. Deor.* ii. 28, 72; Cato, *ap.* Fest. *s.v.* 'Repulsior.'

1 Hence the magic potency of 'Eye of newt, and toe of frog' (Shakespeare, *Macbeth*, iv. i. 14).
2 *θεοὶ δωτῆρες ἐάων*; Hom. *Od.* viii. 325.
3 Pind. *Pyth.* iii. 81 ff.
4 Scott, *The Black Dwarf*, ch. ii.
5 Callim. *Hymn.* i. 10 ff. 6 Herod. viii. 41.
7 Paus. ix. 22. 2.

In these and in numberless other cases we must recognize now that the holiness is a much earlier thing than the myth—which merely attempts to explain an existent fact.

4. Holy stones.—Stones to which a special sanctity attaches form one of the most common features of early legend everywhere. Greece is no exception.

Thus Phemios, king of the Ainianes, fought a duel with Hyperochos, king of the Inachians, for their land and guilefully slew him by hurling a stone, which was thenceforward regarded by the Ainianes as holy.[1]

There are a number of references in Pausanias to 'undressed stones,' λίθοι ἄργοι, which were the object of veneration.

Thus in vii. 22. 3 he tells us that at Pharai in Achaia certain square stones (τετράγωνοι λίθοι), about thirty in number, were worshipped by the people of Pharai, who applied to each of them the name of a god: and he adds an important remark: τὰ δὲ ἔτι παλαιότερα καὶ τοῖς πᾶσι Ἕλλησι, τινὰς θεῶν ἀντὶ ἀγαλμάτων εἶχον ἄργοι λίθοι. In ix. 24. 3 Pausanias mentions at Hyettos in Bœotia a shrine of Herakles where the image was 'not artistic but an undressed stone in the ancient fashion.' On the acropolis at Athens Pausanias, i. 28. 5, mentions two λίθοι ἄργοι: τοὺς δὲ ἀργοὺς λίθους, ἐφ' ὧν ἑστᾶσιν ὅσοι δίκας ὑπέχουσι καὶ οἱ δωκόντες, τὸν μὲν Ὕβρεως τὸν δὲ Ἀναιδείας αὐτῶν ὀνομάζουσι.

The typical case of the holy stone is the *βαίτυλος*, which legend explained to be the stone which Rhea gave to Cronus in place of the infant Zeus.[2] Pausanias, x. 24. 5, speaking of Delphi, says:

ἐπαναβάντι δὲ ἀπὸ τοῦ μνήματος (of Neoptolemus), λίθος ἐστὶν οὐ μέγας· τοῦτον καὶ ἔλαιον ὁσημέραι καταχέουσι, καὶ κατὰ ἑορτὴν ἑκάστην ἔριa ἐπιτιθέασι τὰ ἀργά· ἔστι δὲ καὶ δόξα ἐς αὐτόν, δοθῆναι Κρόνῳ τὸν λίθον ἀντὶ τοῦ παιδός, καὶ ὡς αὖθις ἤμεσεν αὐτὸν ὁ Κρόνος.

This brings us to the question of the place in Greek worship of the holy pillar. Every one is familiar with the passage in Gn 28[18ff.] which tells how 'Jacob rose up early in the morning and took the stone that he had put under his head and set it up for a pillar (מַצֵּבָה), and poured oil upon the top of it [as the Delphians did with the *βαίτυλος* in Pausanias, *loc. cit.*]. And he called the name of that place Bethel [House of God], . . . and Jacob vowed a vow,' etc. It is an old suggestion that *βαίτυλος* is nothing else than a Greek transliteration of the Hebrew בֵּית־אֵל. But, in any case, the important thing to realize is that there are two kinds of sanctity attaching to such things as we have been discussing: natural sanctity and derivative sanctity. There is what may be called the natural sanctity which everywhere attaches to the uncanny. To this class belongs the *λίθος καππώτας* which is mentioned by Pausanias, iii. 22. 1:

Γυθείου δὲ τρεῖς μάλιστα ἀπέχει σταδίους ἀργὸς λίθος· Ὀρέστην λέγουσι καθεσθέντα ἐπ' αὐτοῦ παύσασθαι τῆς μανίας· διὰ τοῦτο ὁ λίθος ὠνομάσθη Ζεὺς Καππώτας κατὰ γλῶσσαν τὴν Δωρίδα.

That is to say, there was something which seemed uncanny about this stone, and so an ætiological legend arose to explain it. But in the case of Jacob there is no hint that the stone which he selected for his pillow possessed in itself any unusual virtue, and, familiar as we are with the potency of, say, a bit of wedding-cake as a provoker of auspicious dreams, we seem to have no right to read any such meaning into Jacob's use of the stone. Indeed in Gn 28[22] it is rather emphasized that its particular meaning derives from the voluntary act of Jacob and not from any natural quality.

We hold, then, that the holy pillar in worship is originally purely symbolical. That this is the case and that we have here to do with no original sanctity is already obvious when we consider that the pillar is rather an artificial than a natural form. It seems to be generally assumed that the *ἀργὸς λίθος* of Pausanias is merely an 'undressed stone,' of no particular shape. We think there is better reason to suppose that it was a stone dressed to a quadrangular shape but not carved into a definite anthropomorphic type. The quadrangular block seems quite well established as a half-way stage to the fully developed image. There is a very significant passage in Pausanias, viii. 48. 6, where, speaking of Tegea in Arcadia, the natural home of 'pre-lunar' customs, he says:

'There is also erected an altar of Zeus Teleios and a square image (ἄγαλμα τετράγωνον): *for this is a type in which*, it seems to me, *the Arcadians particularly delight.*'

The two most familiar Greek forms of this type are the pillars of Hermes and the pillars of Apollo Agyieus. For the shape of the Hermai we have the very definite testimony of Thucydides, vi. 27:

ὅσοι Ἑρμαῖ ἦσαν λίθινοι ἐν τῇ πόλει τῇ Ἀθηναίων· εἰσὶ δὲ κατὰ τὸ ἐπιχώριον ἡ τετράγωνος ἐργασία,

where, with Sir Richard Jebb (against Hude), we regard the last three words as thoroughly genuine. The shape of the Apollo pillars is perhaps not quite so clearly established by the ancient authorities. But it is quite clear that they had an artificial shape, and therefore an artificial, and not a natural, sanctity.[1]

But it is to be clearly understood that this is a question of origins only. Derivative sanctity may be quite as valid and quite as potent as natural sanctity. The landmark of my neighbour or the coffin in which he obtains his last landtenure may be made of common wood, but just because the timber is employed for this solemn purpose it acquires extraordinary virtues. And in the same way the symbolic pillar may easily acquire unnatural virtues, and may indeed, as seems well attested, be regarded as the abode, at least temporarily of the godhead. And the pillar may, of course, survive as a symbol even in a fully developed anthropomorphic worship—*e.g.*, the obelisk as the *βαιτύλιον* of Apollo Agyieus on coins of Ambracia.[2]

B. ANTHROPOMORPHIC CULTS.—It is characteristic of the objects of anthropomorphic cult that they are all, in greater or less degree, worshipped in the higher sense: that is to say, they are invoked with prayer and offerings. A rigid classification is difficult, because there is a continual transference of the members of one class into another, from higher to lower, no less than from lower to higher. But the classes of cults may be conveniently arranged as follows.

1. The dead.—We find in Homer that the funeral of a great prince is accompanied by funeral games. Thus in *Il.* xxiii. we have the ἆθλα ἐπὶ Πατρόκλῳ, in Hesiod, *Works and Days*, 654, the ἆθλα Ἀμφιδαμαντος. In the case of a private individual doubtless the ceremonies were less elaborate, consisting of the offerings at the grave and the funeral feast,[3] with which we used to be familiar in Scotland, and which might be of decent proportions or might rise to the extravagance of Lord Ravenswood's funeral, when, according to Caleb Balderstone, 'there was as much wine drunk in this house as would have floated a pinnace.'[4] But in any case the funeral feast did not terminate the dues of the dead (*γέρα θανόντων*). In historical

[1] Cf. Harpocrat. *s.v.* ἀγυιᾶς . . . ἀγυιεὺς δέ ἐστι κιὼν εἰς δὲν λήγων (*i.e.* terminating in a cone) ὃν ἵστασι πρὸ τῶν θυρῶν ὡς σαφὲς ποιοῦσιν Ἀριστοφάνης τε ἐν Ἀφηξί (875) καὶ Εὔπολις = Suid. = schol. Aristoph. *Vesp.* 870; cf. Hellad. *ap.* Phot. 535[b] 33 ff.; Æsch. *Ag.* 1081; Eur. *Ph.* 631; Pherecr. frag. 87; Plaut. *Bacch.* 170.

[2] B. V. Head, *Hist. Numorum*, Oxford, 1887, p. 319 f. Into the details of pillar cult we cannot here enter. For a somewhat extreme view the reader should consult the important paper by Arthur J. Evans in *JHS* xxi. [1901] 99–204, on 'Mycenæan Tree and Pillar Cult and its Mediterranean Relations,' and in the same volume, p. 268 ff., the reply by W. H. D. Rouse, and for a *via media* L. Ziehen, in *Bursian's Jahresbericht*, 1908, who thinks that both Evans and Rouse have rushed to extremes which the evidence does not justify.

[3] περίδειπνον (Dem. xviii. 288).

[2] Cf. Hesych. *s.v.* *βαίτυλος*· οὕτως ἐκαλεῖτο ὁ δοθεὶς λίθος τῷ Κρόνῳ ἀντὶ Διός.

times we hear of a further celebration on the third, ninth, and thirtieth days after the funeral.[1] The character of these celebrations, attended by the friends and relatives of the dead, is sufficiently attested.[2] The ceremonial on the thirtieth day, which apparently marked the end of the normal period of mourning,[3] was noteworthy for the fact that the company who met to banquet together in honour of the deceased (*ἐπὶ τῷ ἀποθανόντι*) did not *recline* but *sat*, in accordance with ancient custom; hence the ceremonial was called *καθέδρα*.[4] Still further there was the annual festival called *γενέσια*. It is disputed whether this celebration was held on the anniversary of the birthday of the deceased or on the anniversary of the day of his death.[5]

The generic term for offerings to the dead is *ἐναγίσματα*,[6] which is precisely the Latin *sacra* and implies that the offerings were 'consecrated' to the dead: that the living did not partake of them. The corresponding verb is *ἐναγίζειν*. These offerings (called also *χοαί*, because normally they were 'poured' into the grave) consisted of milk, honey, water, wine, oil.[7] The schol. on Eur. *Hec.* 527 adds *ἄλευρον* (wheaten-flour).[8] Eustath. *Hom. Od.* 519, says the *μελίκρατον*, as the offering was called, was honey and milk in Homeric times, but honey and water in historical times. Stengel holds that milk was always an ingredient.

The libation was poured upon the grave and was accompanied by prayer.[9] The tomb was sometimes so constructed that the liquid could easily reach to the bones or ashes below.

Besides the libation there were other offerings constituting the *δεῖπνον* of the dead.[10] Naturally the constitution of this would be fairly constant, but would vary to some extent with individual taste or with the locality of the offerer.

The meal presented to the dead was not one which the living could share and was therefore wholly burnt.[11] The lexicographers define *ἐναγισμοὶ* as *ὁλοκαυτώματα*.[12] In other words, they belong to that class of sacrifices which were called *θυσίαι ἄγευστοι*.[13] It is sometimes said that these offerings to the dead were made at night, but there is no evidence of this; and, since funerals took place by day, there seems no reason why offerings to the dead should not also take place by day. In classical times they certainly did so.[14] Hom. *Il.* xxiii. 217 ff. certainly does not prove the contrary for Homeric times.

Mourning dress was worn.[1] No garlands apparently were worn; the music (it is sometimes said there was none), if any, was provided not by the cithara but by the flute or pipe.[2] The usual statement that there were no *ὅλαι*[3] is highly disputable.

To sum up, the essential features of the ritual of the dead are: (1) the ritual is restricted to the tomb; (2) liquids are poured into the tomb; (3) foods are burnt entirely and are not partaken of by the offerer; (4) prayer is, or at any rate may be, made to the dead, at least by members of their family.

2. The heroes.—Greece, like other countries, was full of legends of an earlier race of men upon the earth, who were mightier than their degenerate successors.[4] It was natural to imagine those heroes as the offspring of gods and human beings. It is precisely the idea of Gn 6[4]: 'There were giants in the earth in those days; and also after that, when the sons of God came in unto the daughters of men, and they bare children to them, the same became mighty men which were of old, men of renown.' Hence *ἥρως* was identified with *ἡμίθεος*. The idea was perfectly familiar to Homer. Every one admits that Hesiod equated *ἥρως* with *ἡμίθεος*. But equally in Hesiod and in Homer this express identification is confined to a single passage: Hom. *Il.* xii. 23; Hesiod, *Works and Days*, 160; cf. Hom. *Hymn.* xxxi. 19, xxxii. 19.

From these imagined heroes the great families of Greece traced their descent. It is easy enough to understand that this canonization or 'heroization' was extended to contemporaries: thus Brasidas, the famous Spartan who fell at Amphipolis in 422 B.C., received heroic honours.

The terms used in heroic worship are closely akin to those which are used in the worship of the dead.

ἐναγίζειν, ἐναγίσματα. Herod. ii. 44 f.: *δοκέουσι δέ μοι οὗτοι ὀρθότατα Ἑλλήνων ποιέειν, οἳ διξὰ Ἡράκλεια ἱδρυσάμενοι ἑκτηνται, καὶ τῷ μὲν ὡς ἀθανάτῳ Ὀλυμπίῳ δὲ ἐπωνυμίην θύουσι, τῷ δ' ἑτέρῳ ὡς ἥρωι ἐναγίζουσι*; i. 167: *καὶ γὰρ ἐναγίζουσί* (*sc.* the people of Agylla) *σφι* (*sc.* the Phoceans whom they had stoned to death) *μεγάλως καὶ ἀγῶνα γυμνικὸν καὶ ἱππικὸν ἐπιστᾶσι.*

The offerings, or *χοαί*, in the case of heroes consisted of blood, and the more strict term for those was *αἱμακουρίαι*.[5] It was the custom to kill the victims[6] over an *ἐσχάρα* (hearth) or over a trench (*βόθρος*), so that the blood flowed into the earth.[7] But other things than blood were offered. Thuc. iii. 58 speaks of firstfruits of the crops: *ὅσα ἡ γῆ ἡμῶν ἀνεδίδου ὡραῖα, πάντων ἀπαρχὰς ἐπιφέροντες.* This refers to the annual offerings made to those who fell at Platæa (479 B.C.). They received also *ἐσθήματα καὶ τὰ ἄλλα νόμιμα.*[8] There is here no mention of blood-offerings. But Plutarch[9] very clearly recognizes blood-offerings.[10]

The testimony is uniformly that hero-worship was performed by night.[11]

In the case of the hero the place of the tomb was taken by the Heroum (*Ἡρῷον*).

A very important feature was the solemn procession.[12]

The essential features of heroic worship are thus: (1) the offerings belong to the class of *θυσίαι ἄγευστοι*: they are *ὁλοκαυτώματα*, wholly burnt, and the offerer does not partake; (2) the place of offering is a trench (*βόθρος*) or at any rate an *ἐσχάρα* (hearth);[13] (3) normally these offerings are performed at night (this statement can be taken only

[1] Cf. Poll. viii. 146: *τρίτα, ἔνατα, τριακάδες*; Aristoph. *Lys.* 611 ff.; Isæus, ii. 36, viii. 39.

as a very general assertion); (4) it is usually, and very naturally, said that there were no ὅλαι in the worship of the heroes. But this statement, resting apparently on a non-fundamental hypothesis, is doubtful. In Heliod. *Æth.* iii. 2 there are certainly *κανᾶ*, which should normally imply ὅλαι.

3. **The chthonian gods.**—The term 'chthonian' as used in Greek is ambiguous. A god may be associated with earth as Mother of all and be in this sense chthonian. Or a god may be associated with this or that land and be χθόνιος in that sense.[1] Lastly, a god may be associated with the under world, *i.e.* chthonian in the strictest sense. But here again a god may be chthonian in one aspect who is in all others Olympian. Hence 'chthonian' really denotes rather an aspect of this or that god than a permanent attribute. Perhaps the only purely chthonian deity is Hades—and that only if we neglect his non-chthonian representative. Hecate also would seem to be a purely chthonian deity; but we are immediately confronted by her confusion or amalgamation with Artemis. The fact is that any god may assume a chthonian character. When, then, we speak here of 'chthonian' gods, we mean either specifically chthonian gods, if there be such, or gods in their chthonian character.

The ritual is, naturally, precisely parallel to that of the dead and the heroes. The offerings are *θυσίαι ἄγευστοι*; they are made, or are supposed to be made, at night; and so on.

But, as we shall see, this is only when the 'chthonians' as such preserve their full authority. In numerous cases, where the ultimate sanction lies with the chthonians, the sacrifices take place in name of the Olympians, and so take place by day.

4. **The Olympian or Ouranian gods.**—We come now to the highest rank of gods, who are most usually denoted as Olympian, sometimes as Ouranian. The two terms are to all intents identical since even in Homer Olympos, the abode of the gods, sometimes loses its geographical meaning of a mountain in Thessaly and is really identified with Heaven (*οὐρανός*)—*e.g.*, *Il.* viii. 25, where Zeus threatens to suspend earth and sea by a chain attached to a 'peak of Olympus.' They are conceived as dwelling somewhere 'on high'; and so the Homeric worshipper when he prays 'looks unto the wide Heaven.'[2] They are gods of mercy rather than of anger, of blessing rather than of bane.[3] They keep the cities of men, and hence their worship comes first.[4]

We propose now to sketch the main features of Olympian worship. It will be easily understood that there must have been innumerable divergences in detail, according to date, place, and circumstance, which cannot be noticed here. All that we can endeavour to do is to give a reasonably complete and intelligible account of the fundamental principles.

(i.) *The apparatus of worship.*—(*a*) *The image* (*ἄγαλμα*) *of the god.*—The image is a characteristic feature of Greek worship, and Herodotus, i. 131, notes it as a remarkable fact that the Persians have neither image nor temple nor altar, which he attributes to their non-anthropomorphic conception of the gods. It is, of course, to be remembered that the absence of images characterizes both the lowest and the highest stages of religion. But in historical times at least the absence of an image was so exceptional as to call for special remark.[1] That the image, and that too in a fully anthropomorphic form, was known to Homer is clear on any reasonable interpretation of *Il.* vi. 92=273=303, where the Trojans lay a robe (*πέπλος*) 'on the knees of fair-tressed Athene,' *i.e.* on the knees of the image in her temple on the acropolis of Ilios.

The motive of the *ἄγαλμα* is well put by Dio Prus. *Or.* xii. 60-61:

'Nor would one say that it were better that no statue or image of the gods had been shown among men, it being meet that one should look only to the heavenly things. For all those things the wise man worships, believing in blessed gods whom he beholds afar. But through their yearning for the supernatural (*τὸ δαιμόνιον*) all men are possessed by a strong passion to honour and worship the divine at close quarters, drawing nigh to them and touching them convincingly, sacrificing to them and crowning them with garlands. It is with men just as with little children, who, being separated from father or mother, out of their great desire and longing stretch out their arms many a time in their dreams to their absent parents. Even so men, loving the gods as is their duty both because of their benefits and by reason of their kinship, yearn everyway to be with them and to walk with them. Hence also many of the barbarians, through poverty and through lack of art, give the name of gods to mountains and to unhewn trees (*δένδρα ἀργά*) and undressed stones (*λίθους ἀσήμους*).'

Historically the image is probably a development from the symbolic pillar, and it is more likely that its sanctity was acquired than that the sanctity was original and the image developed from a fetish object. Had the latter been the case, we should have expected a greater diversity of form than there seems actually to have been. The best example and the most familiar of the gradual transition from pillar to a more or less anthropomorphic form is afforded by the Hermai busts to which we have already referred. Even in historical times the images in many temples seem to have been mere uncarved 'boards,' *βρέτη* or *ξόανα*.[2] It is a matter of dispute whether *ξόανον* necessarily means a wooden image or whether it might not include metal or other material. In later times it is true that the word is applied to other than wooden images.[3] Yet on the whole it seems likely that the word primarily denoted a wooden board, planed (*λεῖον*) but not carved. The making of these old *ξόανα* was frequently attributed to Daidalos.[4]

(*b*) *The altar* (*βωμός*).—The usual term for altar is *βωμός* (cognate with *βῆμα*, 'platform'), whether used (like the Hebrew מזבח העלה [Ex 38[1]]) for burnt offerings or for the burning of incense (like the Hebrew מזבח מקטר קטרת [Ex 30[1]]). In the strict sense the *βωμός* is a 'high place,' an erection on which offerings are made to the Olympians, as opposed to the low *ἐσχάρα*, or hearth, on which offerings are made to the chthonians, the heroes, and the dead.

The altar was of course an essential part of the equipment of a temple. The chief altar stood

[1] So the *χθόνιαι νύμφαι* (Ap. Rh. ii. 504, iv. 1322).
[2] *Il.* iii. 364, vii. 178, 201, xix. 257, xxi. 272.
[3] Cf. Isocr. *Philip.* 116 f.: 'Do not be surprised if throughout my speech I urge you to render benefits to the Greeks—urge you to mildness and to loving-kindness. For I observe that severity is painful both to the severe and to those that have dealings with them, whereas mildness not merely in the case of men and all other animals is in good repute, but also in the case of the gods those who are the authors of our good things are called Olympian, while those whose function is to bring affliction and punishment receive harsher titles; and to the former temples and altars are established both by individuals and by cities, while the latter are honoured neither in prayers nor in sacrifices: on the contrary we perform rites to avert (*ἀποτροπάς*) their anger.'
[4] Cf. Plato, *Laws*, 717 A: 'In the first place, we say that next after the Olympian gods and those who keep the city, honour should be given to the chthonians,' etc.

[1] Paus. ix. 25. 4 mentions a temple of the Moirai at Thebes in which there was no image (*ταῖς Μοίραις δὲ οὐκ ἔστιν ἄγαλμα*); cf. x. 33. 11.
[2] Cf. Callim. frag. 3 Mair=105 Schneid.: *οὔ πω Σκέλμιον ἔργον εὔξοον ἀλλ' ἐπὶ τεθμῷ | δηναιῷ γλυφάνων ἄξοος ἦσθα σανίς | ὧδε γὰρ ἱδρύσαντο θεοὺς τότε· καὶ γὰρ Ἀθήνης | ἐν Λίνδῳ Δαναὸς λεῖον ἔθηκεν ἕδος.*
[3] *E.g.*, Eurip. *Tr.* 1074: *χρυσέων τε ξοάνων τύποι*: Xen. *Anab.* v. 3. 12: *καὶ τὸ ξόανον ἔοικεν ὡς κυπαρίσσινον χρυσῷ ὄντι τῷ ἐν Ἐφέσῳ*; cf. Ammon. p. 97.
[4] Cf. Paus. viii. 35. 2, ix. 39. 8, and x. 40. 2 f., where he describes among other works of Daidalos a *ξόανον* of Aphrodite at Delos which *κάτεισι ἀντὶ ποδῶν ἐς τετράγωνον σχῆμα*—a good parallel to the Hermai at Athens (*ἡ τετράγωνος ἐργασία*, Thuc. vi. 27).

inside the temple proper.[1] But outside the temple there stood in the *περίβολος*, or temple-court, other altars—*βωμοὶ πρόναοι*.[2] To the number of these there seems to have been no limit, the dedication of an altar being much like any other offering and corresponding very much to our custom of putting a stained-glass window in a church.[3] Stengel is of opinion that usually the altars inside the temple were used only for unburnt offerings, though he admits there were exceptions to this.[4] He maintains, however, even in the face of Paus. ii. 35. 5, that animals were never slaughtered at these inner altars. We think it impossible to reconcile Stengel's view with Pausanias.[5]

As for altars unconnected with a temple, these were to be found anywhere and everywhere, in town and country, in street and in market-place, in the house and in public places, in the workshop and in the gymnasium.

The size, shape, and material varied indefinitely. Some of the most curious were the *κεράτων*[6] or *βωμὸς κεράτινος*[7] of Apollo at Delos which was made entirely of horns,[8] and was reckoned among the Seven Wonders of the World; altars at Olympia, Pergamos, and Samos made from the ashes of victims;[9] and an altar at Miletus made from the blood of victims.[10]

Where no altar was at hand it could be improvised.[11] It was customary to garland the altar with leaves[12] or flowers.[13]

(*c*) *The temple.*—The earliest 'holy place,' as we have seen above, is simply a place which in one way or another suggested the presence of something more than human. Such a place was felt to be *ἱερός*, *sacer*, something with which man must deal circumspectly: it was a 'God's acre,' to be set apart from secular use. Now, when in Homer, *Il.* vi. 194, the Lycians gave Bellerophon a 'choice portion' of land, the phrase is *τέμενος τάμον ἔξοχον ἄλλων*. Precisely the same word *τέμενος* is used of the portion of ground set apart for a god. The Latin cognate *templum* (from which we get 'temple') had the same original meaning of a marked-out space. That old sense is still familiar in the *cæli cærula templa* of Ennius[14] and the *cæli lucida templa* of Lucretius, i. 1014. The extent of this *τέμενος* might vary indefinitely. Thus Hom. *Il.* ii. 696 speaks of Πύρασος as *Δήμητρος τέμενος*, and Pindar, *Pyth.* ii. 2, of Syracuse as the *τέμενος Ἄρεος*. These are, of course, poetical expressions. More strictly the *τέμενος* includes only the immediate environs of the temple proper, and normally it was marked off by a fence (*περίβολος*). If we may take a modern analogue and suppose that a country church, the churchyard and other ground round the church, the manse and the manse garden, the stabling accommodation for worshippers from a distance, are all enclosed within a fence, which might even include the glebe, we have a good parallel to the Greek *τέμενος*.

It is natural to suppose that many of the places to which sanctity was felt to attach would be groves of trees. Again, even when trees were cut down elsewhere to enable the land to be made arable, the trees of the holy *τέμενος* would be spared. Hence *ἄλσος*, or grove, is in Greek almost a synonym of *τέμενος*. At the present day in an otherwise rather treeless landscape you may pick out the church by its clump of trees. When Herakles consecrated a *τέμενος* to Zeus at Olympia, Pindar tells us that suddenly Herakles was struck by the absence of trees and bethought him of the wild olives which he had once seen by the shadowy springs of the Ister (Danube), and so he went and brought the wild olive to Olympia to be at once a prize for the victor and a hospitable shade for the visitor.[1]

Within this *τέμενος* is the temple proper denoted by *ναός* (Attic *νεώς*) or by *τὸ ἱερόν*. When a distinction is made between these two words, *ναός* is rather the inner sanctuary, while *τὸ ἱερόν* is wider. Again *ναός* may have practically the same sense as *ἄδυτον*, the Holy of Holies,[2] or may mean the temple generally.

Historically the temple is doubtless later than the *τέμενος* and the *βωμός*. Thus Homer, *Il.* viii. 48,[3] mentions *τέμενος* and *βωμός*, but does not refer to any temple. Pindar, *Pyth.* iv. 204 ff., tells how the Argonauts came to the Axeine (Euxine), *ἔνθ' ἀγνὸν Ποσειδάωνος ἔσσαντ' εἰναλίου τέμενος, φοίνισσα δὲ Θρῃκίων ἀγέλα ταύρων ὑπᾶρχεν καὶ νεόκτιστον λίθων βωμοῖο θέναρ.* What the motive of the temple (*ναός*) was is not easy to determine. It is suggested that it was meant to protect the image of the god and the dedicated offerings. Whether this be so or not, a motive which must have come quite early into force was the feeling that the god must have his house even as men: only it must be more splendid and more beautiful. But perhaps the most potent motive of all was to create a definite centre for the worship of the god.

The sanctity attaching to the temple proper was extended, though doubtless in less degree, to the whole space enclosed by the *peribolos*. Ritual purity—the details are infinitely various—was demanded of all who came within it, and *περιῤῥαντήρια*, or vessels of holy water, were provided for purposes of lustration. We may quote as a single example of the sort of prohibition practised an inscription from the temple at Jerusalem: *μηθένα ἀλλογενῆ εἰσπορεύεσθαι ἐντὸς τοῦ περὶ τὸ ἱερὸν τρυφάκτου (=δρυφάκτου) καὶ περιβόλου· ὃς δ' ἂν ληφθῇ, ἑαυτῷ αἴτιος ἔσται διὰ τὸ ἑξακολουθεῖν θάνατον.*[4]

(*d*) *The priest.*—See art. PRIEST, PRIESTHOOD (Greek).

(ii.) *The ritual of worship.*—The two most essential elements of ritual are prayer and sacrifice. We frequently of course find prayer without sacrifice; but sacrifice without prayer occurs only when an offering is made by way of expiation. Perhaps it is hardly worthy of the name of sacrifice, but, when the soilure of purification is cast into the sea or into running water, or when the filth (*καθάρματα*) of the house is deposited at the No Man's Land of the cross ways, no words are spoken: *ἡ σῖγ' ἀτίμως, . . . τάδ' ἐκχέουσα, γάπτοτον χύσιν, | στείχω καθάρμαθ' ὡς τις ἐκπέμψας πάλιν, δικοῦσα τεῦχος ἀστρόφοισιν ὄμμασιν.*[5]

(*a*) *Prayer.*—There is no more characteristic expression of man's dependence on a higher power than prayer. The self-sufficient man—*ὁ αὐθάδης*—is *δεινὸς τοῖς θεοῖς μὴ ἐπεύχεσθαι.*[6] For the special characteristics of Greek prayer the reader is referred to the art. PRAYER (Greek).

1 *τὸν βωμὸν τὸν ἐντὸς τοῦ ναοῦ* (Paus. v. 14. 4).

2 Ἅγια Ἁγίων (He 9[3]; cf. Ex 26[33] 40[3], which, however, seem to imply that the *θυμιατήριον* stood not in the Holy of Holies but in front of the curtain [פָּרֹכֶת] which shut off the Holy of Holies).
3 Cf. xxiii. 148, *Od.* viii. 363.
4 W. Dittenberger, *Orientis græci inscr. selectæ*, 2 vols., London, 1903–05, ii. no. 598.
5 Æsch. *Ch.* 95 ff. 6 Theophr. *Char.* iii. (xv.).

(*b*) *Sacrifice.*—The general features of ritual sacrifice are sufficiently well known to us, and a comparison of Hom. *Od.* iii. 417 ff., *Il.* 410 ff.; Ap. Rh. i. 402 ff. with Aristophanes, *Peace*, 937 ff., where Trygaios sacrifices to the goddess of Peace, shows that, as we should expect, the ritual remained very conservative. The procedure is outlined in art. SACRIFICE (Greek), where also the oath-sacrifice is discussed. See also art. PROPITIATION (Greek) for expiatory sacrifice, and art. VOTIVE OFFERINGS (Greek).

A. W. MAIR.

WORSHIP (Hebrew).—I. Introductory.—(*a*) *Terms and underlying conceptions.*—The fundamental idea of worship, as conceived by the Hebrews, was expressed by the term 'service' (*'abôdâh*), the corresponding Greek term being λατρεία ('servitus religionis quam λατρείαν Graeci vocant').[1] 'To perform the service of God (or the Lord)' means, in the Pentateuch, to carry out the worship of God in accordance with the requirements of the Levitical Law (Nu 8^{11}, Ex 12^{25}). While such 'service' is, on its external side, elaborated in a series of ceremonial and liturgical acts, its inward and spiritual side is also emphasized; it is essentially a 'service' of heart and soul (Dt 11^{13}: 'And it shall come to pass, if ye shall hearken diligently unto my commandments which I command you this day, *to love the Lord your God*, and to serve him with *all your heart and with all your soul*,' etc.).

From the time when worship at one central shrine was established (*i.e.* the 18th year of Josiah, 621 B.C.) down to the destruction of the Jerusalem Temple in A.D. 70 the worship of God was regarded as finding its only complete and adequate expression in the Temple service, with its elaborate cultus of priesthood and sacrifice (cf. Jn 4^{20}).

'The immense and manifold religious activities that concentrated themselves in the temple worship, can only be adequately realized when it is remembered how unique was the position occupied [for nearly seven centuries] by Judaism's central shrine. It was absolutely the one and only sanctuary where the highest expressions of the religious life of a whole people could be offered. Judaism possessed but one sanctuary, and that was in Jerusalem.'[2]

Jerusalem was for a long period visited by pilgrims from all over the ancient world, who appeared in the Holy City laden with gifts for the Temple. They came to Jerusalem 'for to worship' (Ac 8^{27}; cf. 24^{11}), and it was a pious duty for every faithful Jew to visit in this way the sanctuary at least once in a lifetime. This happened more particularly at the great feasts.[3]

The term *'abôdâh*, while it primarily had reference to the worship of the Temple, and more particularly to the ministry of the officiating priesthood therein, received further an extended application, and is used in the sense of divine worship generally, and especially prayer. A famous dictum ascribed to the high-priest Simeon the Just (*c.* 200 B.C.) runs: 'On three things the world stands: On the Torah, on the 'Abôdâh (*i.e.* the Temple-service), and on acts of love.'[4] It was after the destruction of the Temple that the term was applied specifically to prayer; cf. *Ta'anith*, 2*a* (with ref. to Dt 11^{13}): What is meant by the 'service of the heart? Prayer'; and (with ref. to Dt 28^{47} and Nu 4^{47}) *'Arak*, 11*a*: 'What is meant by service (worship) in joy and cheerfulness of the heart? It is song . . . What service is that which accompanies sacrificial service (worship)? It is song.' This spiritualizing of the idea of sacrificial worship had already made progress within Judaism (cf. *e.g.*, Ps 51^{17}), and is strongly emphasized in the NT. St. Paul speaks of 'your reasonable service' (τὴν λογικὴν λατρείαν ὑμῶν, Ro 12^{1}), which means 'a service to God such as befits the reason' (λόγος), *i.e.* a spiritual sacrifice and not the offering of an irrational animal; cf. 1 Pet. ii. 5.[1]

The other general term for 'worship' is in Hebrew *hishtaḥawâh* (השתחוה), the Greek προσκυνεῖν. This means 'prostrate oneself,' the most characteristic form of which action was among Orientals to fall upon the knees and touch the ground with the forehead as a mark of supreme reverence (the 'salaam'). This was one of the attitudes of prayer—prostration for prayer—which is defined in the Talmud[2] as 'spreading out the hands and feet.' It is related in the Rabbinical sources that, when the Temple was thronged with pilgrims, assembled to worship at the great feasts, though the congregation was wedged together so tightly as to be unable to move freely, when the moment arrived for prostration, in some unexplained and miraculous manner every member was able to prostrate himself.[3] The term (השתחוה) is often employed in Scripture in the sense of 'worship,' though it is not confined to acts of worship directed to God. Thus it is used to express supplication or reverence towards men.[4] But it is applied to acts of public worship in the Temple, especially in the Psalms and Chronicles. Such characteristic phrases occur as 'O worship the Lord in the beauty of holiness' (*i.e.* in festal attire); Ps 29^{2} 96^{9} (cf. 1 Ch 16^{29}, 2 Ch 20^{21}). Perhaps the idea of worship is most fully expressed in Psalms 93 and 95–100, especially in such verses as the following:

> 'O come, let us worship and bow down:
> Let us kneel before the Lord our Maker' (95[6]).

The other great element in the fully developed worship was that of praise, or thanksgiving. One of the keynotes of the Psalms is 'give thanks' (*hôdû*)—cf., *e.g.*, Pss 118, 105–107—or 'praise' (*Hallel*); cf. Pss 111–113, etc. 'Praise ye the Lord' (*Hallelu-jah*).

A good illustration of the acts of worship which were typical of Jewish piety is contained in the following passages:

> 'Sing unto the Lord, all the earth;
> Shew forth his salvation from day to day.
> . . . . . .
> Give unto the Lord the glory due unto his name:
> Bring an offering, and come before him:
> Worship the Lord in the beauty of holiness' (1 Ch $16^{23.29}$).

'And Ezra opened the book in the sight of all the people; . . . and when he opened it, all the people stood up: and Ezra blessed the Lord, the great God. And all the people answered, Amen, Amen, with the lifting up of their hands: and they bowed their heads, and worshipped the Lord with their faces to the ground' (Neh $8^{5f.}$).

(*b*) *The ancient cultus.*—Before the centralization of the cultus in the Jerusalem Temple, worship was carried out at various local shrines or altars, which were numerous throughout the land. Probably every city or village had its *bâmâh*, or 'high place' (cf. 2 K 17^{9} 23^{8}, Ezk 6^{3}), and in some cases the seat of the local worship was of more than local importance. There were famous shrines at Dan, Bethel, Gilgal, Beersheba, Shechem, Gibeon, and Samaria, some (but by no means all) of which figure in the patriarchal history (cf., *e.g.*, for Bethel Gn 28^{19}, Am 5^{5}, etc., and for Beersheba Gn 26^{23-25}, Am 5^{5}).

That Jahweh could be worshipped at the local *bâmâh* in a perfectly legitimate way is clear from 1 S 9, 10, where Samuel the seer is represented as going up to the *bâmâh* to worship, and where his arrival to bless the sacrifice is awaited by the people. To this a room or hall (Heb. *lishkâh*) is attached, where the sacrificial meal is eaten by the assembled guests. In the time of David, and during the early years of Solomon, Gibeon was the great 'high place,' to which the king himself resorted for sacrifice (1 K $3^{3.4}$, 2 Ch $1^{3.13}$). In the earlier period (of the Judges) a special importance seems to have been attached to the place where the ark was located, and during the period of its existence Shiloh may be regarded as the principal sanctuary. Here a special building (a 'temple,' *hekal*) was erected for the greater safety of the sacred symbol; a local priesthood, the house of Eli, was attached to it; and its annual festival was much frequented (cf. Jg 21^{19}, 1 S $1^{3.21}$). This sanctuary, which R. H. Kennett regards as a genuinely Israelitish sanctuary, not taken over from the Canaanites, and possibly the original sanctuary of the Levites, was probably destroyed by the Philistines after the battle of Ebenezer (1 S 4^{11}), a catastrophe to which Jeremiah, apparently, alludes (Jer 7^{12}). Subsequently the family of Eli was established at Nob, which thus became a sacred shrine.

What became, however, the most important of all the Israelite sanctuaries was that of Jerusalem, which was held by the Jebusites till the time of David (cf. Jg 1^{21} $19^{11ff.}$, 2 S 5^{6-9}). Here the sacred rock and cave, which have played so conspicuous a part in Hebrew, Christian, and Muhammadan worship, may already have been the seat of an earlier Jebusite shrine. When Solomon built on this site his splendid Temple and royal palace, the former (as in the case of Shiloh) was sanctified by the presence of the ark.

An interesting survival of the earlier Israelite shrines is probably to be seen in the institution of Levitical cities. This is a feature of the late priestly legislation, and is probably to be accounted for by the fact that the Levites, who in the post-Exilic period occupied a position subordinate to the priesthood proper, were the descendants of the old local priestly families, which ministered at the local sanctuaries or 'high places.' The Levites possessed large estates at such places as Shechem, Gezer, Hebron, Beth-shemesh, Kedesh, Taanach Ashtaroth, Ramoth-Gilead, Bezer, Gibeon (cf. Jos 21^{1-42}). These priestly estates existed in the various localities where there had been a 'high place.' 'Could the complete history of these Levitical cities be written it seems probable that in each case it would be found that each had been the centre of an independent shrine in the days before Josiah's reform.'[1]

Recent excavation in Palestine has brought to light many remains of ancient 'high places' and altars.[2] It was around these shrines that the worship of the ancient Hebrews was concentrated. To these spots they flocked as the annual festivals came round, and at the recurring new moons and sabbaths, to offer their tithes, their firstfruits, and their sacrifices (cf. 2 K 4^{23}, Am 8^{5}, etc.). The character of this worship was essentially joyous, music, dancing, and revelry being marked features (cf. Am $6^{5f.}$). Unfortunately it is impossible for us to reconstruct fully and adequately the ceremonies that accompanied the ancient worship. All we can say with certainty is that its centre was the local altar—in some cases the local shrine being of more than local importance (Shiloh, later Dan, Bethel, and Jerusalem). The altar had as its practically indispensable adjuncts the sacred pillar (*maṣṣēbāh*) and *ăshērāh*, or sacred pole, which was the symbol, apparently, of a goddess.[3] Another adjunct was the sacrificial hall or room (Heb. *lishkāh*) where the sacrificial feast was held.

The local sanctuaries were served by a local priesthood, though it is improbable that, as a rule, more than one family exercised the priestly office at any smaller particular locality. The story of Micah given in the appendix to the book of Judges (ch. 17 f.) shows how a shrine could be set up by the head of a household, who could appoint one of his sons (an Ephraimite) to act as his priest. It is only later that a wandering Levite is appointed in his place, who subsequently was carried off by the Danites and became the founder of the long line of priests who ministered at the famous sanctuary of Dan in the far north. Similarly David made his sons priests (2 S 8^{18}), although the principal priest at the time was Abiathar, a descendant of Eli. It was natural that the priests who were attached to the more important shrines should themselves increase in importance and wealth, in course of time. 'The wealth thus acquired was in many instances invested in land in the vicinity of the city in which the priests officiated. In course of time, therefore, there were large priestly estates in and about the cities where temples or high places were situated.'[4] According to Ezk 44⁷, in the pre-Exilic period the manual labour connected with the shrines and sacrifices had (doubtless only after wealth had increased) been performed by foreign slaves, who were kept by the more wealthy priests.

The character of the old simple worship of Jahweh was fundamentally transformed when the Israelites passed from the nomadic stage and became a settled agricultural community. Jahweh, who had at first been regarded as essentially a war-god, who led His chosen people to victory against enemies—though this was not the only aspect of His character—now became the God (Baal) of the land, and as such the God of agricultural law. The body of agricultural laws which gradually grew up under these conditions came to be looked upon as an essential part of the original covenant by which Jahweh became the God of the Hebrews (Ex 21–23). Another result was that the great festivals were placed upon an agricultural basis.

'To the simple Passover feast, which commemorated the yeaning time of domestic animals, an agricultural offering of first fruits in the form of unleavened bread was added. This occurred because the first ripe grain was gathered at the very season in which the old nomadic feast fell. Seven weeks later a new agricultural festival, commemorative of the completion of the harvest, was added, while the old autumn festival of the date harvest became the festival of the grape-gathering.'[1]

The local sanctuaries were the centres at which this worship was carried out, and it was at these shrines that for several centuries Jahweh was worshipped with the full sanction of the religious leaders (cf. 1 S 7^{17}, 1 K 3^{4} 18^{30}, etc.). 'Such local worship is alone contemplated in the oldest Hebrew legislation ("in every place where I record my name I will come unto thee and I will bless thee" [Ex 20^{24}]).'[2] But by this very fact it was exposed to serious dangers. The admixture of heathen Canaanitish elements threatened seriously to imperil the purity of the old simple tribal religion, and it was against this, the mixed cultus, that the 8th cent. prophets, especially Hosea, raised their powerful opposition. The great prophetic movement marked the conflict of Israel in strife with its own paganism. It is clear from the language of the prophets that in the 8th cent. B.C. during the prosperous reigns of Jeroboam II. and Uzziah public worship, both in the Northern and in the Southern Kingdom, was carried out, especially at the great central shrines (Bethel, Jerusalem), with great zeal, elaboration, and pomp. The ceremonial was splendid, wealth was lavished on the sanctuaries, and these were thronged with zealous worshippers. And all this, it must be remembered, was ostensibly worship of Jahweh. What Amos inveighs against is not open disloyalty to the national God, but a wrong conception of the kind of service acceptable to Him. The worship is Jahweh-worship, but inspired by heathenish ideas.[3] Doubtless this worship was, on the whole, purer in Judah than in N. Israel. But in Judah heathen tendencies, though submerged, were powerful, and asserted themselves in violent reactions, such as occurred, in the 7th cent., in the reign of Manasseh.

Perhaps the general character of the old worship at the local shrines, or *bāmōth*, may be illustrated from similar festivals that take place in Syria and the neighbouring lands to-day. S. I. Curtiss has illustrated this aspect of the matter in his *Primitive Semitic Religion To-day*,[4] where the results of considerable and extensive research are gathered together. He shows that many sacred spots, probably in some cases the very sites of ancient 'high places,' are still venerated and resorted to by the peasantry. At many of these time-honoured spots 'there is virtually a priesthood in existence. . . . They do not have the designation of priests; they are known rather as sheiks of certain shrines, or as servants of certain saints. But their duties and emoluments correspond in some degree to those about which we read in the Old Testament.' Usually one priest or priestly family is connected with such a shrine, though cases occur where several priestly families live together at one shrine, as at Nebi Daud (outside the wall of Jerusalem). Sacrifices are still, apparently, offered at some of these shrines, especially in connexion with vows, and dues in the shape of the hide of the animal, and one of the quarters, are paid to the minister of the shrine, who in ordinary life is an orthodox Muslim.[5]

Vows at such spots play a considerable part in modern popular religion in Syria. 'During the year, at a popular makam [sacred spot or shrine], many sheep and goats, and sometimes larger animals, are killed in payment of vows. Besides there are vows of grain, which are promised on condition of good harvests. These vows are collected by a servant of a shrine.' According to a native authority,[6] 'if the sheik, that is, the minister of the shrine, is present, he kills the victim, otherwise any one who can read the first sura of the Koran. He uses the formula, "This is from thee and for thee." The *ḍaḥhiyeh* sacrifice is slaughtered by the one who brings it. If, however, it is brought by a woman, she puts her hand on that of the man who kills it.' The minister of the shrine is not

only its guardian, but also the repository of the legends connected with its origin and the life of the saint whose name and deeds are commemorated. Not all the modern shrines have annual festivals. Where such a festival occurs it is in some cases attended by thousands of people.

The festivals referred to by Amos (5$^{21-23}$) must have borne a strong general resemblance to these present-day celebrations, which are probably their lineal descendants. Reference may also be made in this connexion to the annual feast of Jahweh at Shiloh (Jg 21$^{19.21}$), where dancing by the maidens of the locality was a feature (cf. also Ex 32$^{5.6.18}$).

For the use of images by the early Hebrews, and the prevalence of idolatrous tendencies among them, see art. IMAGES AND IDOLS (Hebrew and Canaanite), vol. vii. pp. 138–142. It was by the 8th cent. prophets Hosea (8$^{4-6}$ 13$^{1f.}$; cf. 3^{4}) and Isaiah (2$^{8.20}$) that the first effective protest was made, apparently, against the use of idolatrous emblems in Jahweh-worship. It was probably at Isaiah's instigation that Hezekiah was moved to destroy the brazen serpent (*neḥushtan*) which had long been an object of worship (2 K 18^{4}). Such serpent-worship was widespread in antiquity, and appears to have prevailed, as a popular superstitious practice, among the Hebrews, if we may judge from the results of the Gezer excavations.[1]

(*c*) *The effects of Josiah's reformation.*—The remarkable and far-reaching movement of reform which expressed itself in the Deuteronomic legislation and was inaugurated in practice by the drastic action of King Josiah in 621 B.C. was the outcome of an alliance between the prophetic party and the priesthood. We have already noted that the possibilities of such an alliance had always been greater in Judah than in the Northern Kingdom. It now became an accomplished fact, and the results were momentous. The two great elements in the religious life of the community now united in a sustained and sincere effort to translate the lessons of the teaching of the great 8th cent. prophets into practice, by fundamental reforms in the religious institutions of the nation. The aim was to make public worship a more fitting and adequate instrument for expressing the prophetic religion. It was essential that the rites of worship should be purified, and divorced from the heathen accompaniments and associations in which they were involved. To effect this end the reformers insisted on two things, the nationalization of the worship and its centralization in Jerusalem. The old time-honoured, local sacrifices of clan and family were to be suppressed, and all the worship (including the private sacrifices) was to be concentrated in one central sanctuary in Jerusalem.

It was only by such a drastic reform that the necessary break with age-long traditions and associations could be effected. We are expressly told that the Passover celebrated as a result of the reform movement was unprecedented (2 K 23$^{21f.}$). This was because it was kept, on this occasion, not as in the past by the people in their own homes, but by the united nation in Jerusalem.

The suppression of the local shrines and the centralization of the worship mark a revolution. With the publication and national acceptance of the Deuteronomic code the beginnings of the Canon were formed which was to grow into the Hebrew Bible; and with the centralization of the worship the first stone of the edifice was laid which was later to develop into the post-Exilic Jewish Church. The foundations of Judaism were laid.

The aim of the reformers was to gather up the local sacrificial rites into a truly national worship. Deuteronomy 'cuts at the roots of the family and tribal sacrifices when it forbids the offering of sacrifice elsewhere than at the central sanctuary (12$^{13-19.27}$). But it does more than merely forbid. It provides the great festivals, which had their close association with the spring sowing and the harvest, and which, being common to all men, brought the people into contact with their heathen neighbours, with motives taken from the history of Jahveh's dealings with His people. The people, when they come together to worship their God, are to come to a shrine which has associations with their national life and with that alone; and they are to worship through forms which continually impress upon them the unity of their historic life as a people. Even when the private man comes to offer his personal recognition of Jahveh's bounty to him, he does it through a ritual in which he recounts how he belongs to a nation with a past which is great because it is full of God's grace (xxvi. 1–11).'[1]

This national impress upon the character of the worship was never lost. The old agricultural feasts, though their primitive features were not eliminated, acquired a new significance. The Passover became the festival of national redemption; Pentecost (the 'feast of weeks') was transformed into a commemoration of the giving of the Law—the festival of Revelation; and Tabernacles was invested with the associations of the wilderness life. The old unity of the nation, which had expressed itself in the nomadic period by the gathering of the clans at a central shrine, was recovered, and henceforth remains a permanent feature of the cultus.

Another momentous result was the disestablishment of the local priesthood. The legislation of Deuteronomy provides no complete law of the priesthood. It merely deals with the practical consequences of the centralization of the worship as these affected the old order of priests. The members of this order, who are referred to as 'Levites,' are still priests *de jure*. They are all 'levitical priests,' and are so styled in the Code ('the priests the Levites' [Dt 18^{1} etc.]). But in consequence of the new legislation the exercise of priestly functions can only be carried out legitimately in the central sanctuary. The rural priest ('the Levite within thy gates') can only secure the name and rights of a priest when he removes to Jerusalem (Dt 18$^{6f.}$).

It was only in the later legislation of P that the distinction between priests and Levites grew up, The Levites, who were the descendants of the old local order of priests, were then degraded to an inferior rank, and the priesthood proper was confined to the family of Aaron.

The immediate results of the Deuteronomic reform seem to have proved disappointing. So drastic a break with age-long tradition could not at once be absolutely successful. In the dark days that preceded the final extinction of the Southern Kingdom there were lapses to older practices, and even to idolatry. But a real step forward had been taken and the way had been prepared for the later reconstruction of the Jewish community who survived the Exile as a Church-nation with one holy sanctuary served by an official priesthood which is set apart for the performance of holy functions. The central idea of Ezekiel and his successors is that of a holy God, worshipped in the holy land in one holy sanctuary by a holy people whose sacrifices are offered by a sacred order of ministers, who constitute a holy priesthood.

2. **The worship of the second Temple.**—The erection of the second Temple was not improbably the work of the remnant of the old Israelites who had been left behind in the land; but the leaders seem to have been Babylonian Jews. It was from the exiles in Babylonia that the enthusiasm and energy were drawn which impelled the somewhat weary and sluggish Palestinians to move forward. But it was, at first, a 'day of small things.' The new structure appeared mean and despicable in the eyes of those who remembered 'this house in its former glory' (Hag 2^{3}). But Haggai's bold prophecy of future glory (2^{7}) was destined ultimately to be fulfilled.

It is important to realize that the worship of the restored Temple, though influenced to some extent by Ezekiel's ideas, did not at first conform to the elaborate prescriptions of P. It was based upon the Deuteronomic law, which was still the only written form of the Tôrâh of Moses. Even in Malachi (? *c.* 450 B.C.) the conception of the

[1] See R. A. S. Macalister, *The Excavation of Gezer*, ii. 399.

[1] A. C. Welch, *The Religion of Israel under the Kingdom*, London, 1912, p. 209.

priesthood is still essentially that of Deuteronomy; it belongs to the House of Levi (Mal $2^{4f.}$). It is true that the distinction between priests and Levites had been recognized already at the time of the Return, if we may judge by the list of those who came up with Zerubbabel (Neh 7). But the relatively small number of Levites there given may be explained, perhaps, by supposing that most of those tabulated as priests were originally Levites whose claim to the priesthood had been recognized. Ezekiel's influence was obviously at work. A clear indication of this appears in Zec 3^{7}, where one of the principal functions of the high-priest is to keep God's courts.

'Here we have an unmistakable indication,' says Robertson Smith, 'that Ezekiel's conception of holiness, and his jealousy of profane contact with holy things, had been taken up by the spiritual leaders of the new Jerusalem. There is, therefore, a strong presumption that from the first the arrangements and ritual of the second Temple were more closely conformed to the principle of concentric circles of holiness than those of the first Temple had been.'[1]

The ideas of Ezekiel were potent—in particular the conception of the service offered as a stated and regular ceremonial; but the ceremonial had not yet attained the elaborateness of the Priestly Code. That was only realized later, when Ezra promulgated his edition of the Tôrâh.

The date for this event usually given (444 B.C.) is by no means certain. Ezra's mission may plausibly be assigned to the reign of the second Artaxerxes, in which case some date between 400 and 390 B.C. is more probable.

'That the stated services of the first ninety years of the new Jerusalem were much less elaborate and costly than the Priestly Code prescribes seems to follow from Ezr 9^{5}, where we learn that [at the time when Ezra arrived in Jerusalem] the evening oblation was still only a *minḥa* or cereal offering. The same thing follows still more clearly from Neh 10^{32}, where we see that a new voluntary tax became necessary when the full Pentateuchal ritual was introduced. Before that time the stated service appears to have been maintained, with much grumbling and in an imperfect way, at the expense of the priests (Mal 1^{6-13}).'[2]

With the promulgation and public acceptance of the full priestly law in Jerusalem by Ezra the services in the Temple became more elaborate and the priesthood more fully organized. This process, perhaps, did not begin till after 400 B.C. Unfortunately the history of the period 400–200 B.C. is very obscure. That Ezra encountered much opposition from the old conservative party in Jerusalem is clear; and this ultimately culminated in the Samaritan schism and the erection of a rival Temple on Mount Gerizim (probably about 330 B.C.). After this event the strict hierarchical party within the Jewish community held undisputed sway. The elaboration of the Temple worship proceeded, it would seem, without a check; and its effects are visible in the work of the chronicler (*c.* 300–250 B.C.). The elaborate organization of the Levitical arrangements in the Temple described in 1 Ch 23 ff. no doubt reflects the realities of the writer's own time. Here the duties of priests and Levites (now two completely distinct orders), with those of the subordinate classes of doorkeepers and singers, are fully set forth. The *teaching* of the Law to the people had now, apparently, become a recognized part of the functions of the priestly class. The priest was also a teacher (2 Ch 15^{3}). Possibly a system of schools for such teaching had been established (cf. 2 Ch 17^{7-9}). The priestly class was also in control of the courts of justice (2 Ch 19^{4-11}), and this function descended from them later to the Rabbinical doctors of the Law (scribes). The care for public worship and its elaborate organization which the chronicler ascribes to such kings as David, Solomon, Hezekiah, and Josiah illuminate the actual state of affairs as he knew them.

[1] *The Old Testament in the Jewish Church*[2], London, 1892, p. 443.
[2] *Ib.* p. 444.

In these acts praise, supplication, and thanksgiving are a prominent feature. The old abuses of worship denounced by Isaiah and Jeremiah have passed away. We are confronted with a pious community that finds in the great services of the Temple its highest satisfaction and constant care. The ancient ritual of animal sacrifice was celebrated with pomp and impressive ceremonial. But it was no mere empty formality, devoid of spiritual significance and appeal. It was hallowed by true spiritual fervour, by the sense of sin forgiven and by unstinting recognition of the goodness of the Giver of all good things. Especially significant in this connexion is the large place given to prayer. 'It is hardly possible to read the prayers of the great kings in Chronicles and not feel that they echo a liturgy of prayer—for the individual and for the nation.'[1] It is indeed highly probable that some of the older liturgical prayers, embodied in the Prayer Book of the synagogue, were already, in an earlier form, in existence at the time of the chronicler. The service of music and praise was especially rich, and is dwelt upon with loving minuteness by the chronicler, who was himself, perhaps, a member of one of the Levitical choirs (cf., *e.g.*, 2 Ch $5^{12f.}$). The Psalter was the book of praise (cf. 1 Ch $16^{36f.}$).

That the service of prayer and praise was liturgical in character is clear from the fact that the people were expected to respond: 'And all the people said, Amen, and praised the Lord' (1 Ch 16^{36}). It is probable also that the Law was read in public worship. At any rate, the recital of the *Sh^{e}ma'* ('Hear, O Israel') is almost certainly as old as this period, as can be shown by the antiquity of the present (synagogue) Benedictions that accompany it.

As Elmslie remarks: 'Even if it be thought that this picture represents rather the ideals of the Levites than the actual attainments of the community, it is still important that such a standard of worship was conceived by the priests and set before the people. One recalls the words of the great prophet of exilic or post-exilic times who wrote: "for mine house shall be called an house of prayer for all peoples" (Is 56^{7}). His was a vision of the Temple as the centre of the whole world's worship. To the Chronicler it had at least become a true "house of prayer" for Israel.'[2]

How deep and real the devotional spirit could be that underlay the imposing ceremonial of the Temple worship can be seen from the Psalter, which may be regarded as the hymn-book (and also, to some extent, as the prayer-book) of the second Temple.

Here the worshipful spirit, which lingers so lovingly on the services and devotions of the House of God (cf. Ps 84, 27^{4} 42^{2} 100^{4}, 122, 15), which finds in that House the focus of its devotion (Ps 57 138^{2} $99^{5.\ 9}$ 1327), which delights to celebrate the pomp ('the beauty of holiness'=holy adornment or vestments': Ps 29^{2} 96^{9}; cf. 1 Ch 16^{29}), and the stately processions (Ps 68^{25-29} $24^{3f.\ 7-10}$) of the Temple, has yet no narrow conception of worship. To the Psalmists the God of Israel is also the God of nature, and is celebrated as such in the splendid nature-psalms (8, 19^{2-6}, 29, 104, 107, 139, 147, 148); and the transition from one aspect to the other is easy (Ps $29^{2ff.}$). Thus in the composite Ps 19 the psalmist passes from extolling the wonders of nature (the light of nature) to praise of the Law (the light of revelation). But in truth the range of the Psalter is as wide as the outlook and experience of man; the Psalmists touch the height and depth of the human spirit; and the universality of their appeal reveals how an intense and particularistic religion can expand and deepen when it is founded upon a genuine and profound spiritual experience.

The feeling excited in the breast of a pious Jew by the splendid ceremonial of the Temple worship as it could be witnessed at the end of the century (about 200 B.C.) during which the Chronicler flourished, is fervently expressed by Ben Sira in his striking tribute to the high-priest Simon (II.), surnamed 'the Just.' He is pictured as he appeared in the Temple on the Day of Atonement, where 'clothed in his glorious robes' and surrounded by 'all the sons of Aaron in their glory' he 'went up to the altar of majesty and made glorious the court of the sanctuary.' The crowded court and

[1] W. A. L. Elmslie, *The Books of Chronicles*, Cambridge, 1916, p. lii.
[2] *Ib.* p. liif.

the worship of the people who receive the high-priestly blessing are vividly described :

'Then the sons of Aaron sounded
With the trumpets of beaten work;
Yea, they sounded and caused a mighty blast to be heard
For a remembrance before the Most High.
(Then) all flesh hasted together
And fell upon their faces to the earth,
To worship before the Most High,
Before the Holy One of Israel,' etc.[1]

The upheaval produced by the attempted suppression of Judaism at the hands of Antiochus Epiphanes, and the consequent Maccabean revolt, was fruitful in momentous consequences. Judaism was rooted more firmly than ever in the hearts of true believers by the persecution. Affection for the Law was deepened, and the study and knowledge of its ordinances was more widely diffused and more actively pursued among laymen. When the fury of the storm had spent itself, Judaism emerged profoundly modified in many important ways. New parties—the Pharisees and Sadducees—came into existence; a new literature, which found its classical example in the book of Daniel, emerged. A new native dynasty ruled, and communal life was re-organized. A new Temple-feast, commemorating the re-dedication of the sanctuary (164 B.C.) after its defilement by the Syrian tyrant, was added to the sacred calendar. This is known as the Feast of Dedication (cf. Jn 10^{22}), or *Chanukkah*, and is celebrated in the winter for eight days. It was inaugurated in the circumstances described in 1 Mac $4^{36ff.}$: 'After the Temple had been purified, a new altar of burnt-offering built, and new holy vessels made, the fire was kindled on the altar, the lamps of the candlestick lit, and the re-dedication of the altar celebrated for eight days.'[2] According to Josephus, its popular name was the 'Festival of lights.'[3] But during the period that followed the establishment of the new Jewish state a profound change in the whole character of Jewish piety manifested itself in the rise of the Pharisaic party and wide extension of the synagogue as a religious institution. The monopoly of religious leadership, which had hitherto been enjoyed by the priests, was now, perforce, shared by the popular party of the Pharisees, who represented the pious laymen, the old priestly party, which was still all-powerful in the Temple, being represented by the Sadducees.[4] The synagogues were under the control of the Pharisees.

The origin of the synagogue as a religious institution is enveloped in obscurity. The Jewish scholar Moriz Friedländer[5] regards it as a product of the Diaspora, which came in to Judæa from outside. If the synagogue had already become an institution in Judæa at the time of the Maccabean revolt, the silence of the books of Maccabees regarding it would be inexplicable. On the other hand, the existence of synagogues in Egypt during the second half of the 3rd cent. B.C. (during the reign of Ptolemy Euergetes, 247–222 B.C.) seems to be demonstrable;[6] while a famous synagogue was certainly in existence at Antioch in the reign of Antiochus Epiphanes. The circumstances of the Diaspora would naturally promote the growth of such an institution.

Friedländer insists that the synagogues of the Diaspora were pervaded by a much freer atmosphere than those of Palestine, which were under Pharisaic influence. The former, he thinks, were in reality places of teaching and instruction (*Lehrhäuser*). They were thus far more than houses of prayer; while the Pharisaic synagogues, which arose later, were more of the latter character. Though sections from Scripture were read, and edifying discourses were given in them, prayer still remained the principal element, and had many points of contact and relation with the sacrificial cultus, as the existing prayers of the synagogue liturgy, which originated from the time both before and after the Roman destruction of the Temple, testify. The Sabbath worship of the Diaspora was, according to Friedländer, of a different character; it consisted not merely of lections from Moses and the Prophets, and of prayer, but principally in the exposition of Holy Scripture, which was allegorical in character, which saw 'in the words [of the text] symbols of a secret nature revealed in allegories,' and deduced from them the loftiest philosophical ideas. The Diaspora synagogue also, according to Friedländer, had as a distinguishing feature that it did not derive its instruction from the authoritative oral teaching of the priest, but that whoever possessed knowledge in the Scriptures was here at liberty to come forward in order to expound God's word. This was still the case in the Diaspora synagogues in the times of the Apostles (Ac 13^{15}).

Friedländer in these contentions seems to exaggerate the difference between the orthodox synagogues of Palestine and those of the Diaspora. In both the element of instruction—the reading and exposition of the Law and the Prophets—was the main element. In both, also, prayer occupied an important place. Indeed, the most frequent designation of 'synagogue' in Philo is *προσευχή*—a term which also occurs in Josephus.[1] One principal difference there was: in the synagogues of the Diaspora the Scriptures, and probably the prayers, were recited in Greek. The allegorical method of expounding the Scriptures was more freely employed in the Dispersion—though it was by no means absent from the ancient homiletic discourses given in the synagogues of Palestine. Pharisaic restrictions only became marked after the close of the 1st century A.D. Up to that time a greater freedom prevailed, probably, in the synagogues of Palestine as well as in those of the Diaspora. A trace of the survival of such a spirit in certain Hellenistic synagogues may be seen in the fact that in the time of Origen the book of Baruch was still publicly read (in Greek).[2]

3. The later Temple service.—It has already been pointed out that the system of worship which was developed by the Jewish community in Palestine found its most elaborate expression in the services of the Temple of Herod. How elaborate the organization of these services was can be seen from the details that have been preserved regarding the priestly arrangements,[3] which need not be repeated here. Reference may also be made to such Rabbinical evidence as is contained in the Mishnah Tractates *Middôth* and *Yômā*—to cite only the most obvious sources. In the former minute details are given regarding the Temple structure and arrangements; while in the latter a full account is set forth of the elaborate Temple services and ceremonial on the Day of Atonement.[4]

It should be remembered that for the purposes of the national worship the land of Palestine was divided up into 24 districts (corresponding to the 24 'courses'), and one 'course' from each district (consisting of priests, Levites, and lay Israelites) was on duty in the Temple for a week at a time. Not all the priests belonging to a particular course could do duty at the same time at the sacrifice; the 'course' was therefore divided into 'father's houses.' In the same way not all the laymen belonging to a particular 'course' could be present during the whole week when its course was on duty in the Temple. It was consequently represented by a deputation at the sanctuary; the others, who had been left behind, assembled in the local synagogues (at the time when the sacrifice was actually being offered in the Temple) and engaged in prayer and the reading of Scripture.[5] To illustrate the character of the worship which was focused in the later Temple, it will suffice here (1) to describe the ceremonies associated with one of the more popular occasions for such service, outside the three great national festivals of Passover, Pentecost, and Tabernacles; and (2) to summarize briefly the ceremonial of the daily service.

(1) The presentation of the firstfruits (*bikkurim*) was one of the occasions which gave opportunity for pompous pilgrimage to the Holy City outside the cycle of the great festivals. It was concerned with the fulfilment of the command: 'The first

of the firstfruits of thy ground thou shalt bring into the house of the Lord thy God' (Ex 23^{19} 34^{26}). These gifts formed part of the revenue of the priesthood, and were destined to be stored in the Temple. Great importance was attached to this offering, which alone among the offerings that were given to the priests by the people had to be brought by them directly to the Temple. It was of great antiquity and naturally lapsed with the destruction of the sanctuary. The description of the scene by Franz Delitzsch[1] is well known and need not be repeated.

(2) The daily routine of the Temple-worship, including the weekly Sabbath celebrations, was interrupted only by the great festivals, the most important of which were kept with special ceremonial, for several days. The characteristic features of the worship, however, are well illustrated by the ceremonial of the morning and evening sacrifice (*Tāmîd*). Delitzsch as before gives a good reconstruction.[2]

In the Temple itself the opening of the sanctuary gates was the signal for the actual slaughter of the sacrifice, the sprinkling of its blood upon the altar, and the flaying of the victim. The pieces into which the sacrifice was divided were carried by the six allotted priests (each taking one piece) to the altar, while a seventh carried the offering of flour, an eighth the baked meal-offering (of the high-priest), and a ninth the wine of the drink-offering. These were all laid at the foot of the altar-ascent and salted: and then all the priests assembled once more in the Hall of Polished Stones, there to celebrate, first of all, a service of prayer. It is highly significant that the sacrificial service should have been interrupted at this point and temporarily suspended. This can only have grown up as a concession to the overwhelming popular feeling in favour of the recital of the prescribed sections of the Law, with the appropriate accompaniment of prayer. The priests retired for this purpose to the Hall of Polished Stones, which was sufficiently near the court to allow of their quick withdrawal to it and rapid return to the sanctuary. It will be remembered that they had already assembled at early dawn in this chamber to cast the first lots for determining the distribution of certain priestly duties. The passage in the Mishnah[3] which speaks of this meeting and its purpose runs as follows:

(1) And they descended and entered the Hall of Polished Stones to read the *Shema*.
(2) The president said to them: 'Give one blessing'; and they blessed,
(3) And recited the Ten Commandments and the *Shema* (in its three sections)
(4) And they blessed the people with three blessings; viz. (the blessing) 'True and firm' (אמת ויציב), that of 'service' (עבודה), and 'the blessing of the priests' (ברכת כהנים).

This brief account is extraordinarily interesting, but not free from difficulty. The purpose for which the priests forgathered is described as 'to read (or recite) the Shema.' This is a summary way of describing the reading of certain portions of Scripture the most important of which was the *Shema* (Dt 6^{4-9}), and certain accompanying liturgical Blessings. The leader or 'president' is to be regarded, not as the minister who recites the prayers on behalf of the congregation, but as the leader who leads in the recitation, the assembled priests all joining in. Possibly 'Bless' here means merely 'Begin the liturgical service.'

It is explicitly stated in line three that the Decalogue was recited in close connexion with the *Shema*. This was the ancient practice, later discontinued because the *Minim* were wont to allege that the moral law, summed up in the Decalogue, was more important than all the rest.[1] Possibly the first two sections only of the *Shema* were recited in the ancient liturgy, and the addition of the third may be due to a gloss, reflecting the later practice. The recital of the *Shema* was *preceded* by a Benediction; but the Mishnah here gives no clue as to what it was, though, according to the Babylonian Talmud,[2] the question was early disputed by the Rabbinical schools. Probably the form used was that known as *Ahabah rabbah* ('with abounding love'), which is still chanted in the synagogue service.[3]

In the fourth line of the Mishnah passage the present text runs: 'And they blessed *the people* with three blessings.' As I. Elbogen has pointed out,[4] the words *the people* are probably an incorrect gloss. The priests were engaged in a service of prayer within a semi-private room, outside the Temple proper. There could be no question of blessing the people, which would naturally form part of the *public* service within the sanctuary. The three blessings that followed coincide partly with well-known liturgical forms: 'true and firm' is the name still given to the Blessing recited after the *Shema*—as used in the Temple its form was doubtless much shorter than the recension now current in the Prayer Books. 'Service' (עבודה) was probably an earlier form of the 17th paragraph of the *Shemōnēh 'Esrēh*,[5] and expressed gratitude for the splendid Temple-worship. The last 'Blessing of the Priests' was probably a petition uttered *for* the priests.

This liturgical service of prayer for the priests is noteworthy. It shows how high a place prayer had come to assume, even in the sacrificial worship. The high place accorded to the liturgical recitation of the Scriptures is also a remarkable feature, and serves, perhaps, to show how far-reaching the influence of Pharisaic and synagogal piety really was.

After the conclusion of this priestly liturgy the assembled priests again drew lots—the third and fourth—to determine who should offer the incense in the sanctuary, and who should lay the various parts of the victim upon the altar. Those on whom no lot had fallen were now free to go away, after divesting themselves of the priestly dress. Then followed the sacrifice proper—the offering of incense and of sacrifice, accompanied by prayer. At the solemn moment when the chief officiating priest, alone within the sanctuary, offered the incense, which became visible in clouds of smoke, the people withdrew from the inner court and prostrated themselves, spreading out their hands in silent prayer (cf. Rev $8^{3ff.}$). The incensing priest, after prostrating himself for worship, also withdrew from the sanctuary. A period of silent prayer followed, and the people were then blessed by the priests, the five priests who had been engaged in the offering of the incense standing on the steps in front of the Temple proper, and, led by the principal officiant, pronouncing the blessing on the people with uplifted hands.

The offering of the burnt-offering now went forward, together with the appropriate accompaniments (meal-offerings and drink-offering), and then followed the musical part of the service. The Levitical choir, to the accompaniment of instrumental music, sang the psalm of the day. The psalm was sung in three sections, the end of each

being marked by three blasts on silver trumpets (blown by a body of priests), at the sound of which the people once more prostrated themselves for worship. This terminated the morning service, and private sacrifices were then proceeded with. The evening service (about 3 o'clock in the afternoon) was practically a repetition of the morning, the same priests officiating—except in the case of the incensing priest, for whom a fresh lot was taken. On the Sabbaths and great festivals the essential features of the services were the same. There was more elaboration, and a larger number of sacrifices were offered, but the character of the worship was substantially identical.

There are, of course, to be noted special ceremonies in connexion with particular occasions. The most remarkable of these, perhaps, was the Water-Feast held in connexion with the Feast of Tabernacles. It began at nightfall on Tishri 15 (first day of Tabernacles) and lasted till the following morning; and was repeated on other nights of the festival (except Friday). This was the only celebration in the Temple that took place by night. The place was the court of the women, which was specially illuminated for the occasion, the women looking on from their galleries. A torchlight procession, dances, and singing followed. Towards morning a more solemn note was introduced by the chanting of the fifteen 'songs of Degrees' (Pss 120–134) led by the Levitical choir to the accompaniment of various musical instruments. During the day the great feature was the procession which accompanied the priest who had been allotted the duty of drawing water for the libation from the pool of Siloam.[1] A relic of these processions still survives in the worship of the synagogue.

4. **The synagogue worship.**—For the transition, which had been gradually prepared for, between the sacrificial cultus and the form of worship which found expression in the synagogue, as well as for the rivalry between synagogue and Temple, the momentous consequences of the destruction of the Temple, and the character of the synagogue prayers, reference may be made to the article PRAYER (Jewish).[2] Here it must suffice to make a few general observations on the characteristic features of the synagogue worship. (1) In harmony with its origin the synagogue worship is essentially of a popular and democratic type. It has no organic connexion with the priesthood; its ministers are essentially laymen—at first it had no professional ministers at all, the Rabbis whom it singled out for special honour being simply learned laymen; its services, though liturgical in character, and provided with (in many cases) interesting and dignified ceremonial, are essentially simple in character; their tendency is to emphasize the element of instruction and edification (the reading and exposition of Scripture), with which is combined the service of praise and prayer.

(2) As has already been pointed out, the synagogue, as a religious institution, had already come into existence long before the destruction of the Temple and the consequent cessation of the sacrificial worship. It met a widespread religious need, owing to the centralization of the sacrificial worship in Jerusalem. While only a limited number of Jews could be present at any one time in the central sanctuary, and assist in the offering of the sacrifice, no such disability would apply to the services of the synagogue. To a certain, though limited, extent the synagogue was affiliated to the Temple worship.[3] It will be remembered that, for purposes of the daily sacrificial worship, not only the priests and Levites, but also the lay Israelites generally were divided into twenty-four courses of service, each of which had to take its turn in coming before God (in the Temple) every day for a whole week by way of representing the whole body of the people, while the daily sacrifice was being offered to Jahweh. But it appears that not the whole division of Israelites on duty but only a deputation from it was actually present at any given time in the Temple; the others, who had been left behind, assembled in the local synagogues (at the time when the sacrifice was actually offered in the Temple) and engaged in prayer and the reading of Scripture.[1] But in spite of this affiliation the synagogue was entirely free from the limitations applying to a centralized worship and a sacerdotal system. 'Hence, when the latter disappeared in the great catastrophe of 70 A.D., the synagogue was the one institution exactly fitted to be the instrument for the reconstruction of Judaism.'[2]

(3) At the same time it is important to remember that the Temple-worship has profoundly influenced not only the structure of the synagogue liturgy, but also the form and substance of its prayers.

The disappearance of the old sacrificial cultus was felt by pious Jews at the time as a real catastrophe. But the way had already been prepared by Rabbinical teaching (not to speak of that of the great prophets and some of the psalmists) for a spiritualizing of the sacrificial idea; and this tendency received a strong impulse from the exigencies of the situation which left the synagogue as the sole religious institution in which the Jewish religious consciousness could express itself. A real satisfaction of the instincts and cravings which had been, to some extent, met by the splendid Temple-worship was provided by the traditional liturgy of the synagogue, which could be regarded as a sort of parabolic and metaphorical fulfilment of sacrifice in the following ways:

(*a*) It furnished forms of prayer for daily worship which corresponded to the original daily sacrifice. In accordance with this principle those days for which additional sacrifices had been appointed (Sabbaths, new moons and Festivals) were provided with additional forms of prayer, called *musaf* (='additional').

(*b*) In the synagogue Liturgy special sections from the Law and the Mishnah, which contain the original enactments about the daily and Sabbath offerings, occupy a place at the beginning of the service:[3] and on high days and festivals it is the rule to supplement the Pentateuch lesson by the paragraph from the Law which prescribes the sacrifices appropriate to the day. For instance, during the Feast of Tabernacles the paragraph Nu 29^{12-39} is read in addition from a second scroll.

The principle underlying all this is stated in a haggadic passage in the Talmud. Abraham is represented to have anxiously asked God 'how the sins of Israel would be forgiven when their Temple was destroyed, and they should have nowhere to bring their sacrifices, and he was told that to read the duty of these sacrifices from the *Torah* would be accepted as a full equivalent.'

(*c*) Further, various petitions have been introduced into the prayers for the restoration of the Temple services and sacrifices. In some cases an older prayer has been amplified in this sense.

In these various ways the sacrificial idea has been largely spiritualized. 'The daily offering of prayer, praise, and thanksgiving morning and afternoon in the Synagogue is a spiritual counterpart and fulfilment of the old daily sacrifice in the Temple. In this way the words of the prophet Hosea are in spirit fulfilled: *We shall render as bullocks (the offering of) our lips* (Hos 14^{2}).'[4]

(4) The language employed in the synagogue liturgy is Hebrew, with a slight admixture of Aramaic. As has already been pointed out, the older elements in the prayers go back to a considerable antiquity (long before the Christian era) —possibly, in some cases, to the late Persian period. In such cases the prayers very probably

[1] See W. O. E. Oesterley and G. H. Box, *The Religion and Worship of the Synagogue*[2], p. 401.

[2] I. 3 ff.

[3] During the latter years of the Temple's existence there was, apparently, a synagogue within the Temple precincts.

[1] *Ta'anith*, iv. 2; Oesterley and Box, *The Religion and Worship of the Synagogue*[2], p. 360.

[2] Oesterley and Box, *loc. cit.*

[3] Cf. Singer, *The Authorised Daily Prayer Book* (*Hebrew and English*), p. 9 ff.

[4] Oesterley and Box, *The Religion and Worship of the Synagogue*[2], p. 362. It may be added that in the Talmudic period the synagogue building seems to have been modelled, to some extent, on the Temple. The entrance was from the east, and the ark, containing the scrolls of the Law, was in the west. In the modern synagogue the position is exactly reversed, the ark being placed in the east end, and the reader, while on the *bema*, facing east.

grew up in connexion with the Temple liturgy and were afterwards transferred to the liturgy of the synagogue.

The language in the fixed parts of the liturgy is not only Hebrew, but largely Biblical Hebrew—in fact a Scriptural character is deeply impressed upon the prayers generally. Whole passages (Psalms and other sections) are taken from the Bible, and Biblical language is interwoven into the texture of the prayers.

Outside Palestine among the Jews of the Dispersion in Greek-speaking countries the case was different. There Greek was largely, if not exclusively, used. It seems that not only the Scriptures, but also the most important parts (if not all) of the Liturgy—such as the *Shema* and *Shemōnēh 'Esrēh*—were regularly recited in the Hellenistic synagogues in Greek, and not in Hebrew at all.[1] In the vast synagogue at Alexandria, where the Jews who attended the services were ranged according to their trades, this was the case. We are told that the signal for the vast audience to join in the Amen response was given by the reader waving a cloth from the *bema*.[2] Even in the Mishnah sanction is given to the use of any language whatever in repeating the *Shema*, the *Shemōnēh 'Esrēh* ('Eighteen Blessings'), and the grace at meals.[3] In later practice, however, Hebrew has been the only language recognized as legitimate for prayer and worship in the orthodox synagogue.

(5) In studying the synagogue liturgy it is all-important to realize the central position of the Law. The recitation of the *Shema* (which may be regarded as a summary of the Law) is invested with great solemnity, and is preceded and followed by special Benedictions, as we have seen. But the Sabbath morning service—which is the principal one—culminates in the chanting of the lesson from the Law. The reading of the sections is the occasion of much ceremony—the carrying of the scrolls to and from the 'ark' is invested with great solemnity, not to speak of the scrolls themselves, which are prepared with the most elaborate care, according to minute rules, and are treasured in gorgeous and valuable vestments. The Law itself, *i.e.* the Pentateuch, is regarded as the supreme and final revelation of God. It stands at the head of the canonical books, and by the side of it the other two divisions of the Hebrew Scriptures, the Prophets and the 'writings' (Hagiographa), occupy quite a subordinate place. They but serve to illustrate and enforce its precepts, and are interpreted accordingly. All this is but the expression of a profound conviction that God has chosen to make a supreme revelation of Himself and His requirements in the divine Law; and that man is sanctified by the divine Law, which is the very principle of his perfection.[4]

Jewish piety thus exhausts and expresses itself in the minute and punctilious performance of the divine Law as elaborately codified and defined by the Rabbis. The performance of these duties is regarded as exercising a sanctifying influence on the worshipper; he feels that he is, by so doing, obeying the divine voice; and in this utter obedience he finds a real spiritual satisfaction; the practice of it evokes in the breast of a pious Jew a genuine devotional spirit which finds expression in constant and regular acts of praise and thanksgiving. A characteristic feature deeply impressed upon the liturgy is the regular recurrence of formulas of blessing or benediction (Heb. *berākāh*); something like a hundred are extant in Rabbinical literature. As a Jewish writer well says: 'Every manifestation of divine protection and help became an opportunity for the pious Israelite to offer up thanksgiving in the usual form of a benediction.'[5] In the liturgy proper the set Benediction plays an important part. One of the most famous of its constituent elements—the so-called 'Eighteen Blessings' (*Shemōnēh 'Esrēh* = 'Eighteen')—consists of a number of Benedictions constructed in regular form, which are strung together, and invariably end with the formula: 'Blessed art Thou, O Lord our God, King of the Universe, Who,' etc. Here remarkably the element of petition is mingled with that of blessing. The *Shemōnēh 'Esrēh*[1] is one of the central parts of the Prayer Book of the synagogue; it recurs in various forms in all the services, and, moreover, is recited in double form, first silently and then audibly, by the congregation. It is the Prayer (*Tephillah*) *par excellence* (*Tephillah* is one of its designations), and is recited by the congregation standing (*'Amidah* = 'standing' is another designation), the most solemn attitude for worship recognized in the synagogue service.

Special benedictions are also recited before and after the recitation of the Law, being introduced by the formula 'Bless ye.' This is in accordance with Biblical precedent (Neh 8^6). The element of praise is also, of course, represented by the recitation of certain psalms, especially the Hallel (Pss 113–118). Another element of great importance is represented by various forms of confession of sin (Heb. *widduy*). The two great forms of this are the *Abinū malkēnū*, 'Our Father, our King,'[2] and the *'Al Ḥet*, 'for the sin.'[3] The latter is appended to the *'Amidah* prayer for each service of the Day of Atonement.[4]

LITERATURE.—For the ancient cultus: much new light has been thrown on this department of knowledge by excavation and discovery. For a good summary of these results see S. R. Driver, *Modern Research as illustrating the Bible (Schweich Lectures)*, London, 1909; cf. also, H. Vincent, *Canaan d'apres l'exploration récente*, Paris, 1907. For the discoveries at Gezer and elsewhere, the *PEFSt* of recent years, and R. A. S. Macalister's full summary in his *Excavation of Gezer*, 2 vols., London, 1912. All-important, too, are such studies as those of W. Robertson Smith, *Religion of the Semites*[2], London, 1894; W. W. Baudissin, *Studien zur semitischen Religionsgeschichte*, Leipzig, 1876–78; and the researches of S. Ives Curtiss, *Primitive Semitic Religion To-day*, London, 1902. See also the Hebrew, Jewish, and Semitic sections of artt. ALTAR, HIGH PLACE, IMAGES AND IDOLS, PRAYER, PRIEST, PROPITIATION, SACRIFICE (with the literature cited), and the corresponding artt. in the Bible Dictionaries; and the art. 'Kultus (Gottesdienst)' in Hamburger, ii. 658 ff.

For the later Temple-service, Hamburger as just cited; the elder Lightfoot (J. Lightfoot), *The Temple-Service* (*Works*, ix.), London, 1823; A. Edersheim, *The Temple: its Ministry and Services*, do., n.d. (still useful); art. 'Temple-Service' in *EBi*, cols. 4943–4956; A. Büchler, *Die Priester und der Cultus*, Vienna, 1895; J. Hochman, *Jerusalem Temple Festivities*, London, 1908 (important for sources). See also G. H. Box, *Virgin Birth of Jesus*, do. 1916, where various ceremonial usages of the later Temple are described. For the synagogue worship see the art. 'Gottesdienst, synagogalen,' by G. Dalman, in Herzog-Hauck (with the literature cited). The various works of L. Zunz are important in this connexion; also I. Elbogen, *Der jüdische Gottesdienst in seiner geschichtlichen Entwickelung*, Leipzig, 1913 (indispensable); I. Abrahams, *Annotated Edition of the Authorised Daily Prayer Book*, London, 1914, *Festival Studies*, do. 1906; cf. also W. O. E. Oesterley and G. H. Box, *A Short Survey of the Literature of Rabbinical and Mediæval Judaism*, London, 1920, pt. iii., *The Jewish Liturgy*; cf. also Lewis N. Dembitz, *Jewish Services in Synagogue and Home*, Philadelphia, 1898; and W. Rosenau, *Jewish Ceremonial*, Baltimore, 1908.

The following works of a general character deal with the worship both of the Temple and of the synagogue: Schürer, *GJV*[3], § 24; W. Bousset, *Die Religion des Judentums im neutestamentlichen Zeitalter*[2], Berlin, 1906; W. O. E. Oesterley and G. H. Box, *The Religion and Worship of the Synagogue*[2], London, 1911. Other works have been cited in the body of the article.

G. H. BOX.

WORSHIP (Hindu).—Worship springs from the inward feeling of dependence upon other powers, from the awe caused in man's mind by the perception of supernatural agents which influence his or others' welfare. The desire to gain their favour or propitiate them, to call forth their sympathy, to appease or inflame their wrath, has led men to invent that instrument of rite and spell which is thought to ensure and even to enforce

1 It can be read in full in Singer, pp. 44–54.
2 Singer, pp. 55–57. 3 *Ib.* pp. 259–262.
4 See, further, art. PRAYER (Jewish).

their assistance. Rite and spell form the centre of primitive belief and of institutions of religious or social character in ancient times. The hypothesis advanced by R. Karsten 'that strange and dangerous objects and phenomena as well as fatal events of every kind have suggested to primitive man the existence of invisible spiritual powers in the universe,' 'that at first only the cruel and destructive aspect attracted man's attention, whereas the fruitful and beneficial one almost entirely escaped him,'[1] is, though well founded otherwise, not in accordance with the facts to be gathered from Sanskrit texts and needs reconsideration in that respect, or the Indian sacrifice must be assumed to have already passed this supposed stage of primitive belief.

Hindu writers divide the various kinds of sacrifice into two principal classes: *nitya* ('regular') and *naimittika* ('accidental') *karmāṇi*, one following the course of the year or the duties imposed upon man during life, the other comprising incidental offerings occasioned by special wishes of the sacrificer. This is, of course, a distinction more of practice than of principle, but it seems better than the modern distinction into thanksgiving, suppliant, and expiatory sacrifices, which to the student of Indian rituals will not appear sufficient; *e.g.*, the series of regular periodical offerings cannot be subsumed under any of these three classes. On the other hand, some scholars (*e.g.*, Wundt)[2] seem to overestimate the importance of expiatory ceremonies. The *prāyaścitta*, though often mentioned, is more an accessory than a constructive element and mostly intended to rectify blunders committed against the ritual. We do meet with expiatory rites in Indian ritual,[3] but on the whole the idea of expiation, as far as sin is concerned, plays no prominent part; it is more a juridical than a ritual subject and is elaborately discussed in the lawbooks. We do not hear of thanksgiving sacrifice; even the term 'suppliant sacrifice' we cannot accept without restriction. Gods are invoked to come and take their share in offering, but there is no deep emotion, no uplifting of the heart or stirring of the soul; there always lingers the old idea that the god is ensnared by sacrifice and bound to render his assistance.

India thus testifies to the results arrived at by ethnographical writers 'that primitive worship, being prompted merely by the instinct of self-preservation or by interested motives, has no ethical character.'[4] It must, however, be added that in the *puruṣamedha* and the *sarvamedha* we find examples of the 'self-denying sacrifice'; for they enjoin abandonment of all property and renunciation of the world;[5] but it is to be remembered that the general tendency of these sacrifices has grown on Indian soil and seems to be somehow connected with the later idea of the *parivrājaka*, or 'religious mendicant.' Of the three purposes of sacrifice distinguished by La Grasserie[6] only the first can, in fact, be said to hold true of the Vedic sacrifice.

Every sacrifice forms an intrinsic unity, the special character of which throughout is dictated by the particular wishes for the fulfilment of which the sacrificer sets in motion the ritualistic apparatus. If the sacrificer aims at the life of an adversary, the priests offering the *śyena*-sacrifice must wear a red frontlet, sacrificial butter is made from the milk of a sick cow, and the skin necessary for *soma*-pressing is taken from a cow used as *anustaraṇī* during the burial ceremonies. Subjects who wish to prosper their king offer the *gosava*-sacrifice, in which he is anointed on a levelled piece of ground (*sthaṇḍila*) and addressed as '*sthapati*.'[1] Of still more interest are the *vrātya-stomas*[2] and the *mahāvrata*, or solstice-sacrifice, where drums are beaten in order to dispel the demons and assist the sun, and obscene rites symbolize the desired fertility. *Similia similibus* is the principle which permeates the whole cult.

The sacrifices of the domestic ritual, which are described in the *gṛhyasūtras*, are very simple; they are as a rule performed by the householder and his wife, but they often call in a *brāhmaṇa* or *pūjāri* to function in their stead or to assist. Persons of high rank, especially kings, had their spiritual adviser, the *purohita*; for the gods, it is said, do not eat the food of a king who has no *purohita*.[3] The sacrifices of the *śrauta* ritual, the complicated system of which is taught with the utmost care, all need priestly help, and the number of Brāhmanical functionaries increases up to sixteen in the *soma*-sacrifice, with its intricate ceremonial, its many hymns and chants.[4] Nearly all functions are left to this band of scholarly priests, with whom rests the power even to destroy the life of him who has entrusted them with their office. The *yajamāna* had to select the priests from the families of the Brāhmanical caste, and particular care had to be taken that they should be without bodily defects and well instructed; for any blunder in the strict observation of rules, in the proper wording or pronunciation of the sacred *mantras*, might annihilate the result of the sacrifice and even endanger the health and life of priests and *yajamāna*. It is comparatively little that the sacrificer and his wife can do themselves. Their part gradually became restricted to personal preparation or points of minor consequence.[5] An exception is found only in great *sattras*, or sacrificial sessions, where none but Brāhmans are admitted and the priestly duties devolve on the partakers. In India, therefore, more than elsewhere sacrifice has lost its social aspect, and, except in a few cases like the *rājasūya*, the *aśvamedha*, the aforesaid *sattras*, and a few traces of *sacra publica* in the *Rigveda*,[6] it can be regarded only as a private institution.

Particular care was bestowed on selecting the day fit for sacrifices and the place where the *tantra*, the sacrificial 'tissue,' was to be woven; there were no temples as in later times, but the special character of the sacrifice and priestly knowledge determined the spot where the holy grass had to be strewn as carpet for the gods and the fires had to be made. All *śrauta* sacrifices require three fires: the *āhavanīya*, the *dakṣiṇa*, and the *gārhapatya* fire, corresponding to heaven, antariksa, and earth, and dedicated to the world of gods, ancestors, and men.[7] No doubt, this way of selecting and preparing the sacred ground had its origin in the custom of pastoral tribes[8] pitching their tents anywhere, and had been retained by the conservative mechanism of sacrificial rules. Between the three fires (of which the *dakṣiṇa* serves also for conjuring purposes and is probably the successor of the old magic fire) the *vedi* is traced, a place of special sanctity, where the gods

are supposed to sit down and take their meal, and every precaution is taken by word and action to ward off the demons and destroy their evil influences.

In the objects of sacrifice there is little variety. Different kinds of milk, cakes made of rice or barley, flour, etc., form the materials for the oblations of the new and full moon sacrifice and its almost endless modifications; the cakes are offered on potsherds or tablets, the number of which depends upon the character of the god to whom they are given. The ordinary *paśubandha*, or animal-sacrifice, requires goats, rams, bulls, which are offered almost indiscriminately to all gods, the difference generally being expressed by the shape, colour, and other bodily characteristics of the animal.[1] Horse-sacrifices (*aśvamedha* [*q.v.*]), which are regarded as an act of state and are of great importance, are of course an exception. There were in ancient India even human sacrifices, celebrated with the same pomp and following nearly the same ritual as the horse-sacrifice, till they were gradually replaced by the milder practice of an ordinary *paśubandha*.[2] Of other materials we find in a few cases *surā*, an intoxicating drink, sometimes in the *Rigveda* honey; the liquor the gods like best is the juice of the *soma*-plant, pressed and offered in the *agniṣṭoma* (a spring festival), and its numerous varieties. More than other sacrifices the *soma*-sacrifice is an imitation and representation of heavenly proceedings. As Soma, the moon, contains the heavenly ambrosia, so the yellow shoot of an unknown (and probably often changed) plant is supposed to yield that costly drink enjoyed by *devas* and *pitaras*. If an analogy to the 'sacrifice of the God,' so well treated by J. G. Frazer, ever existed in India, it cannot be looked for anywhere else than in the sacrifice of the plant representing a ray of the lunary god.

The norm of all sacrifices belonging to the *śrauta* ritual is given by the *darśa-pūrṇamāsaiṣṭi* (the new and full moon sacrifice), the *paśubandha* (animal-sacrifice), and the *agniṣṭoma* (the *soma*-offering); all other sacrifices follow these, with variations required by the special case. The whole series of ceremonies forms a *tantra*, 'tissue,' the framework, into which the *āvāpa* is inserted. The *tantra* remains the same for almost every sacrifice; the *āvāpa* consists of the chief offerings and invocations (verses, etc.) and varies according to circumstances. All ceremonies, unctions, libations, spells, etc., converge to the one point, to bring about that religious potency, 'the magical soul of the sacrifice,' as it may be called, which forms the spiritual instrument that ensures success. Hubert and Mauss[3] have well illustrated the metamorphosis which takes place in the persons as well as in the implements needed for sacrifice. All that concerns gods must be of divine character; the *yajamāna* must be prepared by certain rites in order to be worthy to approach the precincts of the supernatural. This is done by various penances, by shaving, bathing, abstaining from food and sexual intercourse, etc. Different substances are used to impart their mystic power, are poured over him, inhaled by him, etc. The implements are consecrated with *mantras* or *yajus*; *e.g.*, the rice is thrown into the winnowing basket with the words, 'I take you at the impulse of God Savitṛ, with the arms of the Aśvins,' etc. If they bring an animal-sacrifice, the sacrificial post erected on the *vedi* is sanctified by unctions and *mantras* and looked upon as a thing of superior holiness. The oblations are consecrated by various ceremonies, among which the *paryagnikaraṇa* deserves special mention.

The priest takes a firebrand and carries it three times round the oblation or the animal, describing thus a magic circle in order to keep off the demons and make the victim appropriate to the gods. Several libations precede the main offering. In an animal-sacrifice the divine essence, which permeates the animal when it is on the point of being immolated and sent along the path of gods, communicates itself to the *yajamāna*, who touches it on its way to the slaughtering place by means of the *vapāśrapaṇī*, the two spits upon which the *vapā* (the omentum) is later to be roasted. After the recitation of expiatory *mantras*, apologizing for the crime to be committed, the animal is 'quieted' by strangulation. Those performers who are not immediately concerned in this act step back and sit down, turning their face towards the *āhavanīya* fire in order to avoid being eye-witnesses of the act. The religious drama has then reached its climax. Among the parts of the animal assigned to the gods the omentum is most conspicuous; the blood is poured out for the demons, who later receive also the husks of the grain. Special parts of the principal oblations form the *iḍā*, which is the portion of the priests and the sacrificer and is regarded as a mystic deity who is invoked with great solemnity to come together with other mystic powers of the universe and bestow prosperity on the *yajamāna*. The ceremony then gradually relaxes: the 'tissue' has been woven, it must be dissolved again. As the drama after the peripetia, so the sacrifice must descend from the summit which it has reached and dismiss the performer from its magic circle to his worldly atmosphere. Various libations follow the *pradhānas*. The butter or fat that is left over is thrown into the fire; so are some of the implements, while others, especially those penetrated by some magic substance imparted to them by the purpose which they served, are concealed in the ground. The sacrificer finishes his vow by repeating the same *mantras* which he said at the beginning, of course with the modifications required by the different situation: he 'loosens' the sacrifice (*vimuñchati*). A bath in some cases concludes the sacrifice.

A good many accessory practices serve to enforce the general purpose of the sacrifice: the heads of certain animals, immured in the *agniciti*, give the altar strength and solidity; an *avakā* plant laid in the holes dug for the pillars or posts of the house prevents the house from breaking into a blaze. These accretions are like small rivulets which feed the main stream of sacrificial effectiveness. But secondary designs may also be fulfilled.

He who stands in need of rain has to fasten the rope by means of which the animal is tied to the sacrificial post, round the bottom; if the priest's intentions are friendly towards the sacrificer, he holds himself straight while offering; if his intentions are inimical, he stoops; if he wants somebody to be his friend, he turns the press-stones one towards the other. It is possible to foretell the future from single occurrences, to expiate certain blunders or faults, etc.—practices accompanying the sacrifice which crept into the ritual from an older stratum, from times when the ritual was less developed and mere symbolic actions sufficed to work man's will. But the difference is only one of degree. It is usual to draw a sharp line between magic and sacrifice (or, rather, religion; for sacrifice formed part of ancient religion). But the present writer fails to discover the line in the face of facts. Magic is the lowest stratum in the development of religion. The limits between magic and sacrifice are constantly shifting, in consequence not of change of system, of inward dissimilarity, but of intellectual progress and growing enlightenment.

'To the operator the magical act,' say R. R. Marett, 'is generally a projection of imperative will, and specifically one that moves on a supernormal plane.'[1]

If that will has become less imperative, a little more subdued by the feeling of being subjected to supernatural powers independent of itself, magical art has changed into religion. As the genius of Greek art lies concealed under the awkward attempts of antecedent times and awaits its release by the progress of intellect, so the genius of religion in order to be freed from the entangling net of magical superstition awaits the progress of civilization. If to a symbolic action the performer prefers a sacrifice, the instrument becomes some-

what loftier, more refined by the invocation of higher powers, but remains altogether akin to the lower art of the magician. The god receives his share in order that he may grant the request; but he stands in need of the oblation as much as the sacrificer stands in need of his assistance. In the Indian sacrifice the mutuality begins to give way to the conception of the god's grace, but is not yet vanished. The mind of the ancient poets and ritualists is perfectly aware of the mystic power of sacrifice; we see it personified in the Vedic hymns and considered as a magical element by means of which the gods produced the world[1] and the ancestors achieved their wonderful deeds; to the ancient ritualists who invented countless legends in order to account for its origin, its disappearance and its single practices and variations,[2] it is still more; to them it appears as creator and creation, as centre of life and universe, even as a living being that is created and killed and reborn again in innumerable alternations. The present writer therefore agrees with Haug,[3] who was the first to define Indian sacrifice as 'a kind of witchcraft,' with Wundt,[4] who defines sacrifice as 'an outgrowth of magic art,' with Marett, who, though conceding that from one point of view magic and religion must be held apart in thought, yet thinks that from another point of view they may legitimately be brought together.[5] Sylvain Lévi is also of the same opinion:

'Le sacrifice qui règle les rapports de l'homme avec les divinités est une opération mécanique qui agit par son énergie intime; caché au sein de la nature, il ne s'en dégage que sous l'action magique du prêtre. Les dieux inquiets et malveillants se voient obligés de capituler, vaincus et soumis par la force même qui leur a donné la grandeur. . . . Le sacrifice a donc tous les caractères d'une opération magique.'[6]

The Indian sacrifice has, it is true, partly passed beyond this first stage and ascended a higher step; the very word *yajna*, equal to Iranian *yasna*, already betrays a loftier conception, and with still more reason this may be said of a great part of the Vedic hymns; but the ceremonial itself leaves no doubt that it is deeply rooted in magical art.

Inseparable from the sacrifice is the word.[7] With a few exceptions, which are met in ancestor-worship and offerings to malign deities and are easily accounted for,[8] the word, be it prose or verse, is the constant companion of ritual action, a kind of spiritual agent directing it to its goal.

'The spell or uttered "must,"' Marett says, 'will tend, I conceive, to embody the very life and soul of the affair. Nothing initiates an imperative more cleanly, cutting it away from the formative matrix of thought and launching it on its free career, than the spoken word. . . . It is the very type of a spiritual projectile.'[9]

The mystery of human speech has led to many speculations in India as well as elsewhere;[10] but it becomes, even according to Indian notions, especially important by association with sacrifice:[11] *vāg devebhyo yajñam vahati* ('speech leads the sacrifice to the gods'), says *Śat. Brāhm.* i. 4.4.2. Corresponding with the tendency to make everything subordinate to the general character of the sacrifice, the ritual tries not only by different modulations (low, loud, mezzo, very frequent stoppings) to accommodate speech to the different situations, but also to distinguish from the formulas and prayers of the ordinary sacrifice the imprecations aiming at the destruction of the foe and his prosperity. The person who utters the malediction has to use 'rudenesses of speech,' *i.e.* words distinguished by hard consonants or otherwise expressive of its inward tendency.[1] A hymn having this imprecatory character, which may have once accompanied an act of sorcery, is met with in the collection of the *Rigveda*.[2] It is worth mentioning that also in other cases verses or formulas try to indicate, by choosing adequate expressions, the action they are intended to accomplish; a conciliatory spell, *e.g.*, repeats the preposition *sam* ('together' or 'with'), the plant *arundhatī*, healing broken limbs, is addressed in a *mantra* that often makes use of derivations from the root *ruh*, 'to grow.' The magical art often presses verses or formulas of the higher descent into its low service; prayers addressed to Artemis, Helios, or Christian saints sometimes appear auxiliary to witchcraft practices. The question has as yet not been answered—and probably remains unanswerable—whether this abuse is not comparatively modern and the texts may not have replaced older wordings more in keeping with the stratum to which the practices they are alluding to belong. It is a long way from spell to prayer, as long as from magic to sacrifice. The word ceases to be spell and turns into prayer as soon as it is felt to be depending in its effect, not upon the imperative will of the speaker, but upon the good will or the grace of a superhuman power. The modern notion of prayer, fashioned under the influence of Jewish and Christian creed, as lifting the heart to God and abiding in His will and law has not yet sprung up in Indian sacrifice. Even the prayer which we find at the end of the new and full moon sacrifice[3] seems more a conclusive recapitulation of the principal wishes than a prayer in our sense. The only exception in the ritual seems to occur in the sacrificial atmosphere of Varuna, where devotion of heart and forgiveness of sin form a characteristic feature. But it must be owned that there are prayers, at least in the Vedic collections of hymns and also in India, that testify to the universal existence of prayer in primitive times.[4] The 'salvum fac regem' of India[5] is by no means inferior to national anthems of modern nations, and there are other hymns of still higher type in the *Rigveda*. It seems probable that they represent, though earlier in time, a higher state of civilization than the sacrificial practices, which, though later recorded, nevertheless were inherited from remote antiquity.

A. F. ALFRED HILLEBRANDT.

WORSHIP (Jain). — I. Śvetāmbara.[1] — (*a*) *Morning worship.*—The hour of the morning and more elaborate worship in a Śvetāmbara temple is 7.30. Leaving their shoes at the gateway that guards the temple courtyard, the worshippers come to a room where the more devout and more leisured exchange their secular dress for the two freshly-washed cloths[2] (a loin-cloth and a shoulder-scarf) in which alone they may enter the inner shrine. They also leave in this room any money they have brought and desire to keep, for the *tīrthaṅkara* must have everything on which his eye 'lights,' and those two cloths admit of no pockets for concealment. The worshippers now ascend the steps to the temple proper, at the doorway of which are two carved beasts supporting the threshold.[3] These are said to represent Yakṣa and Yakṣaṇī, the servants of the *tīrthaṅkara* to whom the temple is dedicated. It is left to the temple-servants to worship these beasts, the ordinary devotees having, so they say, no time to spend on them. The ritual acts of the lay-worshipper are our best guide in investigating this worship, for the temple-officiant, usually a Brāhman, or even a gardener by caste, can give no reliable instruction.[4]

In the open porch (*maṇḍapa*) outside the temple-door the devotee marks his own forehead with the auspicious saffron-mark (or *chandana*), using, of course, his third finger to make the mark, and then circumambulates the temple outside three times in the auspicious way, *i.e.* with his right hand nearest to the building. Still standing outside the temple, the worshipper joins his hands together in the attitude of prayer immortalized in Dürer's 'Praying Hands,' and says for the first time '*Nissahi*.' An instructed devout worshipper uses this expression not once (as is the common wont), but three times:[5] (1) he says it outside, in the temple-porch, asking that he may be cut off and freed from all worldly cares; (2) crossing the threshold and standing just inside, he again says it, asking that he may be cut off and freed from all thought of the temple-servants or his fellow-worshippers; (3) when he comes to the great spiritual point of his worship, he repeats the word once more, asking that he may be cut off from all thought of the worship he himself has offered, and enabled to concentrate all his thoughts on the qualities of the *tīrthaṅkara*.

As the worshipper crosses the raised threshold, it is interesting to see that he does not hesitate to put his foot on the plain boss of it—a thing no Brāhman would do, believing it to be the seat of Gaṇeśa.[6] The worshipper is now in the Hall of Assembly, or *sabhā maṇḍapa*, a hall supported by a circle of pillars and at the present day generally disfigured by the crudest colourings, terrible blues and reds and yellows mingled together on a plaster background; but in the older temples on Mount Abu (Rajputānā) or Śatruñjaya Hill (State of Palitāṇā) the delicate tracery in stone or marble of the struts between the pillars in this hall and the carved work surrounding the doorway leading to the inner shrine make the whole resemble a veritable ivory palace in fragility and delicacy. The worshipper proceeds at once to cross the threshold and enter the inner shrine (*gabhāro*). Visitors, however, must advance only up to the doorway; but, standing there, they can gain a view not only of the big image of the principal *tīrthaṅkara* (*mula nāyaka*) of that particular shrine,[1] perhaps Mahāvīra, to whom the whole temple is dedicated, and the two servants (Yakṣa and Yakṣaṇī) that flank the big image, but also of the rows of twenty-four smaller *tīrthaṅkara* that, arranged on a long altar-shelf, stretch on either side of the main image for the whole length of the inner shrine. There are very often two smaller doors leading from the Hall of Assembly to this inner shrine, and opposite each of these on the altar-shelf are arranged large images of some other *tīrthaṅkara*, perhaps Ādinātha and Ṛiṣabhadeva respectively. All the *tīrthaṅkara* in a Śvetāmbara temple are represented with staring glass eyes, and with carved stone loin-cloths. They are nearly always, too, seated figures, the larger images being adorned with jewels and flowers. Below the big central statue of Mahāvīra (let us say) may be seen a gleaming image of some *tīrthaṅkara* (perhaps Pārśvanātha) fashioned out of five metals.

On a lower altar-shelf there may or may not be a folding brass lotus-flower with some *tīrthaṅkara* in the centre and twenty-three smaller images of *tīrthaṅkara* in bas-relief on the petals; or a little tray with the eight good omens that always precede a *tīrthaṅkara*; or a copper plate (the *mantra* of Vijaya) covered with mystic symbols; or twenty-four two-inch brass plates, each bearing outline pictures of the *tīrthaṅkara*. All of these may or may not be present, but there must be at least one *Siddha chakra*, for no temple is complete unless it contains this crystallized creed of Jainism. The *Siddha chakra* resembles a little tray; in the centre is a raised figure of an Arihanta, and around it the figures of Sādhu, Upādhyāya, Āchārya, and Siddha, and between the encircling figures are written the names of the Three Jewels of the Jain faith: Right Knowledge, Right Faith, and Right Conduct, and *tapa* (austerity), the key-word to the Jain system.[2]

In a Śvetāmbara temple the worshipper bids for the right to win merit by performing the worship under the form of 'auctioning the *ghī*.' Any number of worshippers may purchase the right for sums varying from five annas to one rupee or more, and each successful bidder starts the morning worship again from the very beginning as soon as his predecessor has finished. The first worshipper enters the inner shrine and, removing the jewels and old flowers, performs *jula pūjā*, *i.e.* washes the idol with water and milk and the five nectars, drying it afterwards most carefully with different cloths (*aṅgaluñchchanā pūjā*). As soon as the idol is dry, the worshipper rubs a little *barāsa*[3] all over it with his second and third fingers, and then marks it with liquid saffron (*chandana pūjā*) in fourteen different places in the following order:

[1] The worship of the non-idolatrous Sthānakavāsī sect has already been described in art. PRAYER (Jain).

[2] These two cloths the worshipper keeps in this room and pays the temple-servant to wash for him after every act of worship.

[3] These strange animals are also seen in every Hindu temple-threshold; for other explanations of them see the present writer's *Rites of the Twice-Born*, Oxford, 1920, p. 372.

[4] Śvetāmbara Jains can never in a Śvetāmbara temple receive money for worshipping; indeed they cannot even act as head clerk to the temple, so that those responsible for temple worship necessarily belong to an alien faith; hence the difficulty of gaining accurate knowledge of Śvetāmbara worship. Many Jains have private shrines in their own houses (there are said to be 360 in Ahmadābād alone); if they have, they worship there first in private before coming on to public temple worship.

[5] So far the writer has found no trace of this custom in a Hindu temple.

[6] See the present writer's *Rites of the Twice-Born*, p. 373.

[1] Recognizable at once by the differing symbols at the base of the idols.

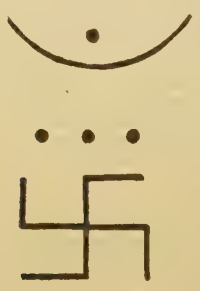
[2] See the present writer's *Heart of Jainism*, p. 262.

[3] This *barāsa* is so expensive that it can only be applied to the chief image. A very rich worshipper might also case the image all over with gold- or silver-leaf.

right toe, left toe, right knee, left knee, right wrist, left wrist, right shoulder, left shoulder, top of skull, forehead, throat, heart, navel, and centre of right palm; and, as he marks it, he sings ten separate verses in its praise.

If the worshipper is a very rich man, he may now offer fifty rupees, in return for which he or (if he be indolent as well as rich) the temple-officiant will put on the idol its very best jewellery[1] —crown, necklace, ear-rings, bracelets, armlets, girdle, sandals, all of gold—and give it a gold or silver coco-nut to hold in its hands. (The best jewellery may also include ropes of pearls.) If the worshipper cannot afford more than twenty-five rupees, the second-best jewellery only will be brought out. Except when a wealthy client is present or on great festivals, the ordinary worshipper proceeds at once to decorate the statue with flowers and garlands (*puṣpa pūjā*). He then steps outside[2] the inner shrine to perform the remaining ritual acts; he waves a stick of incense (*dhūpa pūjā*) and a lamp (*dīpa pūjā*) at the threshold of the shrine, and places on the table in the Hall of Assembly before the doorway of the inner shrine rice (*akṣata pūjā*), the only grain which (unlike Hindu ritual) can ever be offered in a Jain temple, sugar (*naivedya pūjā*), and fruit (*phaḷa pūjā*), such as coco-nut, plantains, mangoes, or almonds.[3] It is important to notice how the last three offerings are made.

The worshipper arranges the rice in the following form:



On the centre of (*a*), if a rich man, he places a coin of varying value, and beside it or on it he places the sugar and the fruit. This *swastika* sign (*a*) symbolizes the *gati* in which a man may be born according to his accumulated hoards of past *karma*, either as a dweller in heaven or in hell, as a man or a beast. The three little heaps (*b*) represent the Three Jewels of the Jain faith which lead a man to *mokṣa* (*c*), symbolized by the sign of one dot in the segment of a circle.

In studying the worship in a Jain or a Hindu temple special attention must always be paid to four points:

(1) Who is allowed to go into the inner shrine. It was surprising to be told that in a Śvetāmbara temple any devout Jain lady of position who had bathed and came wearing clean clothes might enter the inner shrine and indeed perform every ritual act that a layman is allowed to do.[4]

(2) What change the offering undergoes by being offered to a god. In a Jain temple the deeply interesting change from *naivedya* to *prasāda*[5] is unknown, and the word *prasāda* is never used, but in a Śvetāmbara or Digambara temple, once food has been offered to the *tīrthaṅkara*, it is called *deva dravya*, or, very often by the ignorant, *nirmalya*.[1]

(3) What may and may not be offered. In a Digambara temple no fresh fruit may be offered, and in a Śvetāmbara temple no over-ripe fruit may be given.

(4) Perhaps most illuminating of all, who eats the offering. In a temple of Viṣṇu all can take communion with their god and eat the food, which is known as *prasāda*; in a temple of Śiva only a fallen and despised set of *pujāris* known as *atita*[2] can eat the food, which, once it has been offered, is called *nirmalya*; but in some Śvetāmbara temples, as a mark of special honour, Bhāṭas are given the fruit and the sugar, the rice being sold to 'menial people' in open market, for no Jain of position would knowingly buy and eat *deva dravya*.

To account for the honour paid to the Bhāṭas, the legend is told of how, when Muhammad Ghazni was in power, two Bhāṭas laid their living bodies on the burning pyre at Pālitāṇā day after day and were burnt to death, to ransom the images on the sacred Hill of Śatruñjaya from desecration. In commemoration of their heroism, the whole offering (fruit, sugar, and rice) is given to Bhāṭas in the State of Pālitāṇā; elsewhere they are sometimes given the fruit and sugar only.

If there be no Bhāṭa, the head-clerk of the temple distributes the fruit and sugar among the temple-servants and their children.

As a rule, cooked food is not offered in a Śvetāmbara temple, but on the occasion of a marriage in his family some wealthy client might send down a specially dainty dish. This would be put on the open table in the Hall of Assembly, and not offered behind a curtain, as in a temple of Viṣṇu,[3] and would afterwards be eaten by a Bhāṭa or, failing him, by a temple-servant.

When these offerings have been duly made and arranged, all is ready for the great act of spiritual worship. 'As bread is flavourless without salt,' runs the proverb, 'so worship is without savour and useless, unless *bhāva pūjā* be performed.' The worshipper first prostrates himself three times (*chaityavandana pūjā*) before the main idol (the *mula nāyaka*), which gazes out from its shelf in the inner shrine into the Hall of Assembly, and then says the third *Nissahi*, asking to be cut off from all remembrance of his own acts of worship and offerings. He proceeds to perform *bhāva pūjā*; but neither then nor at any other time does he offer petitions for any spiritual or material boon; rather he encourages himself by remembering the virtues of the *tīrthaṅkara*, 'like a soldier before the tomb of Napoleon,' and devotes himself to singing the saint's praises. Finally he walks backwards, as though in the presence of royalty, to the main door, towards which the chief image is looking ('only a "fool-man" walks out by a side door'), and, arrived at the threshold, repeats the word *Āvissahi*, thereby asking to be allowed to follow his necessary avocations every day. As he says it, he bows with joined hands to the idol. A devout Jain will say this word again as he leaves the porch of the temple, and a third time before he passes out into the street from the gateway of the temple courtyard; but the uninstructed generally content themselves with saying it once.

'It is "compulsory" on us to do part of this worship in the early morning, and part of it at noon,' said a leading Jain official to the writer, 'but, as we are in Government offices at mid-day, we do it all together in the morning.'

On the great festivals, and at places of pilgrimage like Śatruñjaya, Abu, and Girnār, the writer has witnessed more elaborate worship. Sometimes royal worship is offered, when a brush of Tibetan cow's hair (*chamarī pūjā*) is waved in front of the main image, and three silver umbrellas are placed

[1] Note that, unlike a Vaiṣṇava idol, the images of the male *tīrthaṅkara* are never draped in actual clothes.

[2] A worshipper in ordinary dress can perform the remaining acts, as they are done outside the inner shrine.

[3] If a child, *e.g.*, comes into a temple accidentally bringing with it a plantain, or some sugar, or a copper coin in its open hand, these must be added to the offering, for 'the eye of the god has lighted on them.'

[4] The present writer, however, has never actually seen a woman enter the inner shrine.

[5] For the change the offering undergoes in a Hindu temple see the present writer's *Rites of the Twice-Born*, p. 385.

[1] This word properly belongs to food offered to Śiva.

[2] See *Rites of the Twice-Born*, p. 320.

[3] *Ib.* p. 402.

over it. At other times a silver image of some *tīrthaṅkara* is placed on a silver throne in the Hall of Assembly. The men all sit on one side and the women on the other and offer *snātra pūjā*, by singing songs in its honour. Or a pilgrim may purchase the privilege of sitting in a silver chariot, holding a little silver image in his lap, and being thus dragged three times round outside the temple —a sort of circumambulation *de luxe*. On Śatruñjaya Hill a special pilgrimage is performed, known as 'the Ninety-nine,' when daily for over three months the pilgrim must toil up the stone stairway to the top of the hill, circumambulate the most famous temple, and tramp down again in honour of the ninety-nine thousand times that a *tīrthaṅkara* visited Śatruñjaya. 'But, as life is short, we only do it ninety-nine times, and leave out the thousands!' On the last day of the ninety-nine the pilgrim offers the eightfold worship with more than the usual 'harmony-barmony,'[1] as an English-speaking Jain once called it.

In a big Śvetāmbara temple there is often a map of Mount Abu, a plan of Sameta Śikhara (in Bengal), or a model of the great temple of Śatruñjaya. On the special days when merit is gained by going to these pilgrim resorts a man who is too poor or too busy to undertake the journey may yet gain merit by offering to the map or plan or model the fourfold *pūjā* of lamp, incense, rice, and fruit. In the same way, if a man is too ill to get out of bed and come to the temple, he may offer worship to a picture of the twenty-four *tīrthaṅkara* at home,[2] for the Indian proverb runs prettily: 'If you cannot offer a flower, offer a petal.'

All through the day worshippers can come and do *bhāva pūjā*, for the god is never put down for a siesta as among the Hindus in a temple of Viṣṇu, though the wired doors of the inner shrine are often locked to keep off thieves.

(*b*) *Evening worship.*—In the evening, as a rule, only the paid temple-officiant enters the inner shrine, for no layman wants the trouble of bathing and donning the special dress so late in the day. At sunset the hanging lamps in the Hall of Assembly are lighted, as are also two or more lamps of clarified butter in the inner shrine; and, before beginning the evening service, the officiant lights some incense and places it in front of the chief idol of the temple. Then the right to perform the evening worship is auctioned (it can be sold to five successive worshippers), and the officiant from inside the shrine hands to the highest bidder the little *āratī* lamp. This consists of two tiers of lamps; in the upper tier is only one lamp, and in the lower there are five; in each of these six lamps a little wick is floating in clarified butter.[3] Five times the worshipper waves this from left to right, singing, as he does so, the special *āratī* hymn, whilst all the other worshippers bang gongs, beat drums, and make as much noise as possible. Each successful bidder follows suit. When the *āratī pūjā* is complete, the waving of the *maṅgala-dīpaka* is performed. A *maṅgala* lamp consists of a lamp in a saucer; it burns camphor in the saucer and *ghī* in the lamp itself; it has only one wick and can be auctioned to only one worshipper. As the worshipper waves it from left to right three times, he sings the *maṅgala-dīpaka* hymn, and again all the instruments, musical and unmusical, are played. The object of the *āratī*-waving is said to be to protect the worshippers themselves from all molestation by evil powers of darkness during the night. The *maṅgala-dīpaka* is waved for the welfare of the whole world. The incense is allowed to burn itself out, which it does by about 8.30 p.m., when all the shrine doors are locked by the officiant and (since the jewels are left on the idol all night) inspected by the temple watchman before the final shutting up of the temple about 9 o'clock. It is noticeable that (unlike the evening ritual in a temple of Viṣṇu), there is no stretching out of the hands by the worshippers to either *āratī* or *maṅgala-dīpaka*.

2. **Digambara.**—(*a*) *Morning worship.*—It is easier to obtain information in a Digambara temple, since the officiant there is himself a Jain. The main lines of the worship are the same as in the Śvetāmbara temple (washing, drying, offering rice, dry fruit, incense, and lamp); but between the worship in a Digambara temple which belongs to the Terāpanthī and that in one belonging to the Visapanthī there are many minor differences. In any Digambara temple the idols on the long shelf in the inner shrine have no eyes, no carved loincloths, and wear no jewels or flowers. Fresh fruit cannot be offered to them, and no woman on any consideration is allowed to enter the inner shrine (for with the Digambara no woman as such can obtain salvation). The privilege of performing worship is not put up to auction, and the *jala pūjā* can be performed only at one time, not at intervals of thirty minutes or an hour, as in a Śvetāmbara temple. The idol is washed with plain water (not water mixed with milk or nectars), and it has seemed to the writer, as she watched, that even greater care is shown by Digambara that not one drop of water should fall to the ground. Among the Visapanthī the idol is marked with *chandana* on both toes; but the Terāpanthī do not mark the idol itself when performing *chandana pūjā*, but mix the saffron with the rice on the table.

One main difference that strikes every visitor is that, whereas in a Śvetāmbara temple the whole Hall of Assembly is dotted with worshippers, who (having done at any time they chose as many of the ritual acts of washing, drying, marking, and offering as they had leisure for) are now seated each before a separate little stool, arranging the rice in the mystic way and offering coin and fruit, then telling their beads, and doing their *bhāva pūjā*, in a Digambara temple there is one united act of worship.[1] The rice and dried fruit are all arranged in separate little heaps on one tray on one table, and are removed by the priests from that tray to form a large mound on another tray. In front of the main idol on a table in the Hall of Assembly the officiant arranges a tall vase like an upturned chalice, two brass tumblers of water, a full tray containing rice, almonds, and sugar arranged in separate heaps, and an empty tray marked with a *swastika*. He then stands behind the table on a little stool and to the accompaniment of elaborate genuflexions and intonings transfers the contents of the full tray to the empty one[2] and the upturned chalice. The food thus ceremonially transferred in the presence of the idol changes from *naivedya* to *deva dravya*. But here again the most important part of the worship is the mental *bhāva pūjā*, when the officiant stands silent, then bows, and finally kneels, touching the floor with his head, mentally repeating *mantras* all the time. So essential do they count this that an officiant in a Digambara temple said to the writer: 'If any one spent a lakh of rupees on performing the eight-fold worship, it would all be worthless without *bhāva pūjā*.'

[1] See *Heart of Jainism*, p. 254.

[2] In this case, instead of marking it with freshly ground and moistened saffron, he scatters over the picture dried saffron (*vaskepa*) brought from the temple.

[3] No lamp may be burnt in the inner shrine, unless it contains *ghī* or camphor. Oil is never allowed there.

[1] At least in the writer's part of India.

[2] For full details of the transference see *Notes on Modern Jainism*, p. 91.

(*b*) *Evening worship.*—All sects of the Śvetāmbara that the writer has met perform *ārati*; but, though among the Digambara it is performed by the Visapanthī, the Terāpanthī perform neither *ārati* nor *maṅgala-dīpaka*, contenting themselves with lighting a lamp, carefully protected by glass, in the inner shrine and burning incense there. But, though Terāpanthī have no lamps, they sing songs and read some of their scriptures aloud in the temples at their evening worship.

It is interesting to notice that (unlike the ritual in a Viṣṇu temple) neither among the Śvetāmbara nor among any sect of the Digambara is food ever offered to the gods at night.

'We account it a sin to eat after the lamps are lit, for inadvertently we might eat some insect; how could we then offer food in the temples after sunset and so force our *tīrthaṅkara* to sin?'

LITERATURE.—The writer has confined herself to temple worship, as other forms of worship have been dealt with under PRAYER (Jain), FESTIVALS AND FASTS (Jain). The researcher should notice local differences; *e.g.*, temple worship on Mt. Abu is described in the present writer's *Notes on Modern Jainism*, Oxford, 1910, while for temple worship in Rājkot and Pālitāṇā reference may be made to *The Heart of Jainism*, Oxford, 1915. In addition to these, new material for the present article has been derived mainly from the worship in the temples at Junāgadh at the foot of Girnār, the famous Jain pilgrim resort.

MARGARET STEVENSON.

WORSHIP (Japanese).—I. *SHINTŌ CULT DESCRIBED IN THE ECLIPSE-MYTH.*—The various component parts of Shintō worship have already been treated in separate articles. The best way to gather them into a complete whole, and to picture the actual worship, will be to give the old account of the eclipse-myth, and by simple references connect with it the details already examined. For this story is not only the nucleus of Japanese mythology, but also the most primitive and most authentic description of Shintō worship, since it was written expressly for the purpose of giving the legendary origin of the chief ceremonies of this worship, as officially practised at the court of the mikado in the most ancient times, and of explaining the ascendancy of the great priestly families who officiated in them. We therefore have in this text, which is more than 1200 years old, a brief account of all that is essential in the rites of Shintō worship and its priests.[1]

First of all, let us recall how, by reason of certain offences committed by the terrible god Susa-no-wo,[2] the sun-goddess, Amaterasu, shut herself up in the rocky cavern of heaven, and left the world in darkness (*toko-yo*, 'eternal night'); how the eight hundred myriad gods in dismay then assembled in the dried-up bed of the Tranquil River of Heaven (the Milky Way), to take counsel as to how they might induce the goddess to come forth from her retreat; and how for this purpose their usual counsellor, the god of artifice, Omohikane, conceived a plan, which was nothing else than the transference to the sky of the terrestrial rites of Shintō, but which, naturally, is given us as having been, on the contrary, their prototype. The plan was as follows:

'Assembling the long-singing birds of eternal night and making them sing; taking the hard rocks of heaven from the river-bed of the Tranquil River of Heaven, and taking the iron from the heavenly Metal-Mountains; calling in the smith Amatsu-mara; charging His Augustness Ishi-kori-dome to make a mirror, and charging His Augustness Tama-no-ya to make an augustly complete string of curved jewels eight feet long, of five hundred jewels; and summoning His Augustness Ame-no-Koyane and His Augustness Futo-dama, and causing them to pull out with a complete pulling the shoulder of a true stag from the heavenly Mount Kagu, and take heavenly *haha-ka*[1] from the heavenly Mount Kagu, and perform divination; and pulling up by pulling its roots a true *sakaki* with five hundred branches from the heavenly Mount Kagu; and taking and putting upon its upper branches the augustly complete string of curved jewels eight feet long, of five hundred jewels, and taking and tying to the middle branches the mirror eight feet long, and taking and hanging upon its lower branches the white soft offerings and the blue soft offerings; His Augustness Futo-dama taking these divers things and holding them together with the grand august offerings; and His Augustness Ame-no-Koyane prayerfully reciting a grand ritual; and the deity Ame-no-Tajikara-wo standing hidden beside the door; and Her Augustness Ame-no-Uzume hanging round her the heavenly *hikage* of the heavenly Mount Kagu as a sash, and making the heavenly *masaki-no-kazura* her head-dress, and binding the leaves of the *sasa* of the heavenly Mount Kagu in a posy for her hands, and laying a sounding-board before the door of the heavenly Rock-Dwelling, and stamping till she made it resound, and doing divine possession, and pulling out the nipples of her breasts, and pushing down her skirt-string *usque ad privatas partes*.'[2]

Thereupon, as the *Kojiki* says, 'the Plain of High Heaven shook and the eight hundred myriad Deities laughed together.' Amazed at this Homeric laughter, the sun-goddess slightly opens the door of the heavenly cavern. To entice her further, the artful Uzume explains to her that the gods are rejoicing 'because there is a Deity more illustrious than Thine Augustness,' and at the same time Ame-no-Koyane and Futo-dama push the mirror towards her, which induces her to come out still farther from the door. At this moment Ame-no-Tajikara-wo seizes her by the hand and drags her out, while Futo-dama immediately stretches behind her a *shiri-kume-naha* ('bottom-tied-rope,' *i.e.* a rope made of straw drawn up by the roots, which stick out from the end of the rope), saying to her, 'Thou must not go back farther in than this.'[3] From this moment the universe is illuminated anew, to the great joy of gods and men.

II. *ANALYSIS OF THE VARIOUS ELEMENTS OF CULT EMBODIED IN THIS MYTH.*—In this famous episode we observe certain rites which are more especially connected with the special object of the story, *i.e.* with the magical means to be employed to cause light to reappear when, for some reason or other (eclipse, typhoon, heavy clouds), the sun hides for such a long time that primitive man becomes afraid. These means are the 'long-singing birds of eternal night,'[4] *i.e.* cocks, which were made to utter their long cry in front of the cavern, and which are found symbolically represented in the old temple of the sun-goddess at Ise by dancers called *tona-ko* ('bird-cry'); with the roosts of those sacred birds (kept for the ordinary purpose of heralding the dawn, but also, when need arises, for evoking daylight by magical means) native philologists connect the origin of *tori-i*,[5] the well-known gateway of Shintō temples, although it seems rather to be a continental importation.[6] It is in the same spirit that, in another version of this myth,[7] it is stated that the goddess Uzume, in the midst of her dance, 'kindled a fire,' the aim of which was likewise to evoke the solar light by imitative magic, and which represents the legendary prototype of the *nihabi* ('courtyard fire'), practised in certain ceremonies of Shintō worship, especially in the nocturnal rite of the *nihi-name* ('new tasting'). But, besides those rites which belong more specially to eclipse-ceremonial, this episode also describes rites of a more general character.

1. The solar mirror, central point of the national worship.—First of all, we see the celestial gods

[1] The original text in Chinese characters, with reading in *kana* and transcription, is published in M. Revon, *Le Shinntoïsme*, pt. i., Paris, 1907, pp. 414–428. An English tr. will be found in B. H. Chamberlain, *Kojiki*[2] (*TASJ*, vol. x., suppl.), Tōkyō, 1906, p. 63 ff., and a French tr. in M. Revon, *Anthologie de la littérature japonaise*[4], Paris, 1919, p. 46 ff.

Tuke, 'Notes on the Japanese Tori-i,' in *Trans. Japan Soc. of London*, iv. [1898] pt. ii. p. 81 ff.; W. G. Aston, 'Tori-wi, its Derivation,' in *TASJ* xxvii. [1899] pt. iv. p. 153 ff.; Eugène Goblet d'Alviella, *La Voie des Dieux*, Brussels, 1906, p. 22.

[7] *Nihongi: Chronicles of Japan . . . to A.D. 697*, tr. W. G. Aston, London, 1896, i. 44.

taking rocks from the River of Heaven and iron from the Metal Mountains, *i.e.* the iron mines of primitive Japan, for the purpose of manufacturing a mirror under the superintendence of the gods Ama-tsu-mara (the Cyclops of Japanese mythology, also with a single eye, whose name, meaning *cœlestis penis*, is evidently connected with the old phallic cult)[1] and Ishi-kori-dome (the mythical ancestor of the manufacturers of mirrors, whose obscure name may mean 'stone-cutter,' and consequently call up the idea of stone moulds in which certain metal objects were cast). This 'mirror of eight feet' (*ya-ta-kagami*) is still a magical means of recalling the star whose form and brilliance it imitates, in the same way as other 'mirrors of the sun' (*hi-kagami*) which are discussed elsewhere.[2] But, besides the special function which it is called upon to perform in this episode, the solar mirror fills a much larger rôle in Shintō worship in general, in which, in the temple of Ise, it represents the sun-goddess herself, and therefore forms the very centre of the national worship.

The fact that the present mirror at Ise is, in the imagination of the Japanese, the same as was forged at the time of the eclipse is due both to the *Kojiki*[3] and to the *Nihongi*.[4] The latter says that the mirror of the eclipse 'is the great deity who is worshipped at Ise'; and, as this sacred object shows a slight flaw, it is explained quite naturally by the hypothesis of a blow which it received against the door of the cavern.[5] It is therefore a case of a primitive talisman which afterwards became the greatest national fetish. For before long the sun-goddess herself bestows it upon her grandson, Ninigi-no-mikoto, in terms which clearly show that her soul is united with it, by the application of a conception, wide-spread among primitive races, of the mysterious relations that may exist between a mirror and a soul.

'Regard it,' she said, 'as my august spirit, and worship it as if thou wert worshipping in my presence.'[6] And again: 'Let it be with thee in thy home, on thy mat; let it be sacred to thee!'[7] And, when she deputes two other gods to accompany her grandson on the earth, viz. Ame-no-Koyane and Futo-dama, who are precisely the ancestors of the great national sorcerers, 'Watch over me,' she commands them; 'take care, both of you, of this mirror and guard it well.'[8]

From that time the solar mirror becomes the most important and most precious of the three regalia (mirror, sword, and jewel) of the sovereign house. Later, however, a timid emperor, worried with his responsibilities in a time of public disorders, was uncomfortable at the thought that he was living with such a formidable deity; he broke the tradition which had been observed up to this time and entrusted the mirror to an imperial priestess, who kept it in a neighbouring village; she, in her turn, transferred it to the princess of Yamato, the famous vestal who, after various religious travels, stopped finally at Ise according to the instructions of the goddess.[9] There, in the bosom of the 'inner temple' (*naïku*), the mirror will henceforward rest, invisible in its precious tabernacle.

This supreme object of Shintō worship is, as a matter of fact, enclosed in a brocade bag, which is never opened; when the old material shows signs of giving way, the whole is put into a new bag: so that to-day the mirror is enfolded in several layers of silk. Thus protected, it is in addition enclosed in a box of *hi-no-ki*,[10] provided with eight handles, placed on a slightly raised stand, and covered with a piece of white silk. Lastly, above all this there is a sort of cage of white wood, with ornaments of pure gold, itself enveloped in a rough silk curtain, which reaches to the ground on every side. These coverings of the box are all that the people are allowed to see on the festivals on which the sanctuary is opened.

Viscount Mori, the Minister of Public Instruction, who dared to raise a corner of an outer curtain of the sanctuary at Ise, was soon after, on the very day on which the new constitution of Japan was proclaimed in 1889, assassinated by a fanatic Shintōist, whose tomb became a place of pilgrimage.

Although the sun-goddess was the only one in the mythology who assumed the particular form of a mirror, other deities are represented by the same object; *e.g.*, it is said that in the other great temple of Ise, the 'outer temple' (*geku*), the *mi-tama-shiro* (substitute for the august spirit) of the goddess of food is likewise a mirror, as well as the fetishes of the *ahi-dono no kami* (deities of a joint shrine), which are also worshipped in those two great temples. This is simply a natural generalization of the material side of the cult. The mirror of the sun has gradually become multiplied, and, under Buddhist influence, it has ended in being exhibited in all the temples, though the sacred fetish of Ise remained hidden from human eyes.

2. The sacred jewel.—The eclipse-myth relates further that the god Tama-no-ya ('jewel-ancestor'), from whom the hereditary corporation of jewellers claims to be descended, makes a necklace of numerous jewels. The name of this necklace is very difficult to interpret,[1] and its history throughout the centuries is no less uncertain.[2] The imperial jewel, at first identified with the necklace of the eclipse,[3] was gradually reduced to the single sacred stone, two or three inches in diameter, which is carefully preserved to this day in the palace of Tōkyō. But, in spite of the religious character of the mikados, this jewel is evidently of little cult importance compared with the sacred mirror.

3. Priests.—Later in the text there appear two gods who are important from the point of view of worship—Ame-no-Koyane (etymology uncertain), the ancestor of the *nakatomi*, the high priests, 'mediators' between the gods and the mikado, who recited the ritual in name of the latter, and Futo-dama (perhaps 'great jewel,' but more probably 'great gift'), the ancestor of the *imibe*, those 'abstaining' priests who were specially charged with preparing the offerings.[4]

4. Divination.—Those two gods pull out the shoulder of a stag from Mount Kagu (mountain of heaven, which quite naturally has its homonym in Yamato), and take from the same mountain the bark of a certain tree (*haha-ka* [cherry? or birch?]) in order to light a fire to roast the shoulder-blade, the cracks in which they will then examine for divinatory signs. The ancient Japanese, as a matter of fact, always practised divination when they found themselves in presence of any unusual phenomenon, and their gods naturally did the same, for they were by no means conceived as omniscient.[5] Omoplatoscopy was the favourite form of divination—the official 'greater divination.'[6]

5. Sacred tree of Shintō.—The gods then uproot a *sakaki*[7] with five hundred (*i.e.* countless) branches. This tree, which is evergreen, is the sacred tree of Shintō, and is usually found planted in the precincts of the temples; it furnishes wands

7 *Cleyera japonica*; a fairly good idea of this tree may be got from the fact that the family of *Ternstræmiaceæ*, to which it belongs, includes also the camellia and the tea-plant.

for the *oho-nusa* and the *tama-gushi*,[1] and its branches, which are always carried in funeral processions, make it possible to distinguish at a glance a Shintōist funeral from a Buddhist one. The use of evergreen trees, especially cypress, in ancient times in the West and also in China is analogous.

6. Offerings.—The gods now hang the necklace on the higher branches, the mirror midway, and the offerings of soft materials on the lower branches. The natives of Banks Islands have a similar rite to obtain sunlight; they employ a circular stone, called 'the stone of the sun,' which they decorate with ribbons and fix in a high tree.[2] The offerings of white and blue materials made on this occasion are the general type of Shintōist offerings which play the chief part in the worship,[3] and which have already been exhaustively treated.[4]

7. Recitation of the ritual.—While Futo-dama presents these offerings, Ame-no-Koyane fervently pronounces a ritual whose powerful words (*futo-norito-goto*) are to force the will of the goddess. The character of these Shintō liturgies has already been treated.[5] It should be noted that, besides the magical effect of the recited formula, those old Shintō prayers had also the intention of charming the gods by their literary beauty, as a sort of offering.[6] The respectful gestures accompanying them have also been described.[7]

8. Sacred dance of priestesses and divine possession.—Lastly there appears upon the scene Ame-no-Uzume ('heaven's dread female'), the legendary ancestress of the Sarume-no-kimi ('princesses of Saru,' from *saru*, 'monkey,' and *me* 'woman'), a priestly corporation of court dancers, so called by reason of another myth.[8] With some *hikage* she makes an arm-support (*tasuki*, 'hand-helper'), *i.e.* a kind of cord like that which the imperial stewards, referred to in this connexion in the Ritual of the Great Purification (*Oho-harahi*), had round their necks: the ends were fastened to their wrists to enable them to carry heavy things more easily; she makes a garland for her head (*kazura*) with *masaki-no-kazura*,[9] and a bouquet (*ta-gusa*) with leaves of *sasa*[10] (generic name of various small bamboos). Then she places in front of the cavern the sounding-board on which she is to perform her dance, the prototype of the sacred pantomime (*kagura*) which is still one of the regular rites of Shintō worship—an æsthetic offering to the gods—and which may be seen danced at the present day by young priestesses wearing masks and damask draperies, on the platform of a special building in the precincts of certain temples, like those of Ise and Nara.[11] Uzume soon reaches a state of ecstasy (*kamugakari-* or *kangakari-shite*), 'doing divine possession,' the real or simulated character of which may be disputed,[12] but which in any case corresponds exactly with what we know of the important rôle of nervous phenomena in the ancient practices of Shintō, as they may be observed even at the present day.[13]

As regards the indecent gesture with which this scene ends, and which the *Nihongi*, which appeared only eight years after the *Kojiki*, thought right to omit in the corresponding account,[1] but whose reproduction even the *Nihongi* mentions in another connexion,[2] it gives a good idea of the naively bold character of this goddess, whose sportive naturalness the mythology associates with that of the monkey-god Saruta—an interesting point for phallic worship.[3]

9. Magic cords.—All these rites having been performed, the sun-goddess is gradually attracted outside, first by the clamorous mirth of the gods, then by the mirror which, in the *Kojiki* account, seems mainly to have a psychological action, exciting the curiosity of the goddess, but which, in the original form of the myth, must have been regarded as having rather the action of imitative magic. The god Ame-no-Tajikara-wo ('hand-strength-male'), who is hiding near the door, seizes this moment to drag the sun-goddess forcibly outside, and Futo-dama immediately prevents her from stepping back by means of a magic cord, just as, in the Fiji Islands, they tie grasses to stop the sun.[4] This cord is the prototype of the *shime-naha* ('close-rope'), the cords of rice-straw which are usually to be seen in front of Shintō temples. At Ise a huge *shime-naha* unites two rocks between which one gets an admirable view of Fuji-yama, and which are regarded as the best point of view in the archipelago for admiring and worshipping the rising sun. In a more popular form of the cult these cords are hung in front of the houses at the New Year to ward off evil influences—a custom whose origin local legend of smaller importance attributes to an adventure of the god Susa-no-wo.[5]

10. Other cult-forms.—Thus the eclipse-myth is the central point towards which all the paths of Shintō converge, and it is only necessary to start from this centre to see radiating in all directions, not only the essential rites of this worship, but also branches which end in secondary practices. The only cult-forms of any importance which are not found here are those which naturally could not figure in a story of this kind, such as the custom of pilgrimages to distant sacred places—*e.g.*, to the ancient temples of Ise or to the top of Fuji-yama, to which thousands of worshippers flock every year—or, as a substitute for such pilgrimages, the custom of worship from a distance (*em-paï*) by going to some neighbouring temple easier of access. But, although these customs are highly developed in Japan, they are found in other religions also, and there is nothing specially Shintōist about them.

LITERATURE.—This is cited in the foot-notes.

MICHEL REVON.

WORSHIP (Jewish).—The Hebrew term for 'worship' is עֲבוֹדָה and in the famous saying of Simon the Just (*c.* 300 B.C.) with which the Tractate *Ethics of the Fathers* opens[6] '*abhōdah* is the second of the 'foundations of the world.' At that period, no doubt, the word '*abhōdah* primarily implied the sacrificial system of the Temple, though this system was also accompanied by prayers, but the meaning was not necessarily restricted to the altar. This term[7] has developed, but the saying

7 The literal meaning is 'work,' 'service,' and, like the English equivalent, it may be used in various senses. Thus '*Abhōdah Zārāh*, 'strange worship,' is idolatry. It can refer to song or gladness, *e.g.*, עבודה שבשמחה ובניוב לבב איזו היא עבודה שבלב הוי אומר זו תפלה (*Erekhin*, 11*a*), or to prayer, *e.g.*, איזו היא עבודה שבלב הוי אומר זו תפלה (*Ta'anith*, 2*a*). With the article, it is sometimes used as an asseveration, 'By religion!' (see

of Simon remains none the less characteristic of Jewish theology, which lays more stress on *'abhōdah* (works) than on *'emūnāh* (faith).[1]

With the destruction of the Temple, worship naturally concentrated on the synagogues.[2] Had the altar system been the exclusive means of divine access available to the Israelite, the cessation of sacrifices would have marked a much greater liturgical disturbance than actually took place. As a fact, continuity was preserved; the keynote of the transition was Hos 14^3 (Heb. = 14^2, RV), 'Let our prayers make up for the bullocks of our sacrifices.'[3] Even to-day the services, in particular those relating to atonement, re-echo this sentiment,[4] and, in almost every rite, the portion from the Pentateuch which ordains the morning, afternoon, or additional sacrifice is recited, at the appropriate occasion. This is done to show the correspondence between the particular service and the sacrifice instead of which it is offered. Nor must this feature be regarded as, *eo ipso*, a prayer for the restoration of sacrifices in their old form. It has often been shown that a belief in the restoration of the Temple, as a Messianic event, to be a centre of universal worship, may not necessarily be linked with the re-institution of the altar, and it cannot be demonstrated beyond doubt that this re-institution is an axiom of Jewish belief, for it has been repudiated by some orthodox Jewish authorities (as well as upheld by others; thus it is not included in the Thirteen Articles of Creed and Maimonides).[5]

In the synagogue worship subsequent to the Destruction the service developed on three lines: (1) prayers of repentance and penitence; (2) thanksgiving and praise; (3) petitions. Study and the recital of didactic passages of post-Biblical literature were a later institution.[6]

In (1), *i.e.* penitential worship, asceticism and fasting naturally find a place. But the limits of this asceticism were strictly defined. Fasting (*ta'anîth*, which really means 'affliction') was, generally speaking, restricted to prescribed occasions and rites. This element should be studied in connexion with FEASTING (Hebrew and Jewish). Indiscriminate and exaggerated asceticism was rather the mark of sects, such as the Essenes, Zadokites, or certain Qabbālists; it was not general. Confession, expiation, and atonement constituted acts of worship in connexion with penitence.[7]

(2) Thanksgiving in worship centred in the festivals, with the ceremonial appropriate to each, such as the palm branch,[1] tabernacle,[2] the *Hallel*[3] Psalms, the *Qiddush*,[4] etc. There is a special benediction of thanksgiving for joyous occasions and anniversaries, 'Blessed art Thou, O Lord our God, King of the universe, who hast kept us in life, and hast preserved us, and hast enabled us to reach this season.'[5]

(3) Petitions, the outpourings of the heart in supplication for the private needs of the individual, have their proper place in the Jewish system of prayer.[6] Some of these needs are specifically mentioned, when they are objects for which every individual will necessarily pray, such as health, in the *'Amīdah*,[7] or sustenance, in the grace after meals.[8] But in most cases these petitions are formulated in the plural number; cf. 'Give *us* this day *our* daily bread' (*lḥḗm hūqqḗnū*). There are opportunities accorded for the individual to offer his own special prayers. But the service represents rather a corporate act of worship on the part of the community. Hence in the confessions the plural number is always used.[9] On the other hand, 'ancient formulæ, written for individual prayer, were often adapted to public worship.'[10] The needs of the individual might come under the heading of תחנונים, though this word is used in *Mishnāh Bᵉrākhôth*, iv. 4,[11] in the sense of prayer in a proper spirit. For the necessity of devotion, and of praying when in a fitting mood, is over and over again prescribed in the *Mishnāh*. Early saints, we are told, used to spend a preliminary hour in attuning their minds,[12] and, when under the stress of strong emotion, such as deep sorrow or supreme joy,[13] or when in situations of difficulty,[14] the regular prayers were postponed or abrogated.

It is an axiom of worship that praise and thanksgiving should precede petition, as being more disinterested in quality.[15] For this reason the morning service opens with *Pesuqe de Zimra*, psalms and versicles of this description. After the recital of the sacrificial descriptions[16] the 'blessing of praise' (ברוך שאמר) introduces the thanksgiving of 1 Ch 16^{8-36}, Pss 100, 145–150, and the following doxologies: 1 Ch 29^{10-13}, Neh 9^{6-11}, and the Song of Moses (Ex 14^{30}–15^{18}). These passages are brought to an end by the formula of praise ישתבח,[17] and the first portion of the service is concluded. Then follows the שמע[18] (with its blessings) or, as this section is termed, 'the assumption of the yoke of the kingdom of heaven,'[19] and then, in the תפלה (*'Amīdah*), opportunity is given for private devotions. This order shows the Jewish scheme of worship. For this reason it was considered proper to 'join Redemption to the Prayer' (סומכין גאלה לתפלה),[20] *i.e.* to proceed without interruption from the daily

---

Levy's *Lexicon*, *s.v.*). In the daily *'Amīdah* the term is applied to the 16–17th benediction of the *y"w*, in which the restoration of the *'abhōdah* is the subject of prayer (see Singer, p. 50, par. 2). In the *Muṣaf* service for the Day of Atonement, the *'Abhōdah* is the recital of the expiation ritual of the high priest in the Temple on that day, in the Holy of Holies (see M. Gaster, *Book of Prayer*, London, 1904, iii. 167 f., or H. M. Adler and H. Davis, *Service of the Synagogue Festivals*, etc., 'Atonement,' pt. ii. p. 159 f., London, 1904–08). Finally, see also the opening words of the concluding blessing after the reading of the prophetical lessons (Singer, p. 149, last line).

1 See *JE* ii. 148b.

2 See art. JUDAISM, vol. vii. p. 586a foot; see, however, art. PRAYER (Jewish), vol. x. p. 192b foot, for another view.

3 See *JE* viii. 132a, x. 166b, 622a, 625a.

4 See, *e.g.*, Adler and Davis, p. 169.

5 Singer, p. 89; see art. SACRIFICE (Jewish), but see also *JE* x. 628b.

6 After such passages a special *Qaddish* was pronounced (see Singer, p. 86). Such passages may be found in Singer, p. 167 *f.* Yemenite Jews more frequently do not read a set passage, but insert in their daily service a portion of the book they happen to be studying. The Mesopotamian rite assigns a greater place to study as an act of worship than do others. Not only are the first night of Pentecost and the night of *Hosha'ana Rabba* kept as vigils and devoted to study, as in Europe, but the custom called חתימה ('Sealing') on account of *Hosha'ana Rabba* associations prevails at other times.

thanksgiving for the deliverance from Egypt to the recital of the *'Amīdah*.[1]

Practically every item of Jewish ritual, synagogal or domestic, is an act of worship, for in Judaism the secular sphere has very little independent existence, and thus many acts, not in themselves religious, are associated with blessings and become acts of ceremonial. In order that these blessings should not be forgotten, or to give opportunity to an individual who might have omitted to say them, or to enable the congregation to respond 'Amen,' some of these blessings have been incorporated in the liturgy itself.[2] Others that have not been thus incorporated, because they were not likely to be needed every day, may be seen in Singer, p. 287 f. The ideal of the pious Jew was to pronounce a blessing on the name of God one hundred times a day;[3] 'in all thy ways know Him.'

'For every enjoyment and *in* every enjoyment he is to render thanks to God the Giver. He is to smell the rose, and to rejoice in its perfume. And he is to say and to feel: "Blessed art Thou, O Lord, who createst fragrant plants."'[4]

The Sabbath, with all its domestic ceremonies, has become practically a day of acts of worship; the three meals are preceded by sanctification and followed by hymns and carols. But such a day, far from being a burden to an orthodox Jew, is to him a day of spiritual happiness, for the highest bliss in the world to come is poetically described as a period 'wholly a Sabbath,' which 'will bring rest in life everlasting.'[5]

The term 'worship,' therefore, logically includes many more operations, besides prayer, by which the Jew seeks to serve God, in addition to numerous acts of his daily life and his private and public devotions. A specific act of charity may become an adjunct of worship, if not worship itself. Thus, in the East, Jews sometimes make use of *tsedaqah* (charity) boxes containing eighteen apertures, each devoted to a different philanthropic institution. As each of the eighteen blessings of the *'Amīdah* is recited, a coin is placed in one of the slots.[6]

The scheme of synagogal worship may thus be analyzed.[7] The normal daily services, associated with the statutory Temple offerings,[8] and also ascribed by tradition to patriarchal institution,[9] are three—morning, afternoon, and evening. On Sabbaths, festivals, and new moons, and on the Day of Atonement, but not on the other fasts, there is an 'additional service,' called *Muṣaf*.[10] There is no *Muṣaf* on Ḥanuca (the Maccabæan Feast of Dedication, Encœnia), or on Purim, the Feast of Esther, because the ordinances for these days are post-Biblical and no special offering was brought. Every service includes an *'Amīdah*[11] as its essential element, other features being thanksgiving Psalms, *Sh'ma'*, *Hallel*, reading of the Law and Prophets. Propitiatory prayers, hymns (*piyyūṭim*),[12] study, and sermons are not original statutory components, though antiquity and popularity have often endowed them with an importance which their origin does not altogether warrant. The recital of the Ten Commandments in public worship was discontinued,[13] and the doxology was altered,[14] on account of the Minim, but the private reading both of the Decalogue and of the Maimonidean Creeds is regarded as desirable after the morning service.[1] The essential features of Jewish worship may thus be summarized:

At every morning service throughout the year.—(1) *Pesuqe de Zimra*, or introductory Psalms and versicles of thanksgiving; (2) *Shema'* and blessings; (3) *'Amīdah*; (4) the *Hallel* Psalms on new moon, festivals, and Ḥanuca; (5) reading of the Law on Mondays and Thursdays, Sabbaths, fasts, festivals, New Year, Day of Atonement, new moon, Ḥanuca, Purim; (6) reading from the Prophets on Sabbaths, festivals, New Year, and Atonement, ninth of Ab; (7) *Muṣaf*, or 'additional' service, on Sabbaths, festivals, new moon, New Year, and Atonement; additional items where appropriate, such as *Seliḥoth*, blowing of *Shofar*, prayer for rain, *Hosha'anōth*, etc.

At every afternoon service throughout the year.—Passages reminiscent of sacrifices and incense, Ps 145, *'Amīdah*; reading of the Law on Sabbaths and Day of Atonement and on certain fasts; *haftarah* on Atonement and certain fasts; Canticles, Ruth, Ecclesiastes on the Three Festivals.

At every evening service throughout the year.—*Shema'* with blessings, *'Amīdah*, introductory Psalms on Friday night; special Psalms or poems for festivals in some rites; Lamentations on ninth of Ab, Esther on Purim, etc.

The two main divisions into which the present liturgy may be divided are the Ashkenazic and Sefardic rites. These correspond, to some extent, with the early Palestinian and Babylonian uses,[2] but there are other uses—*e.g.*, Italian, N. African, Turkish, Mesopotamian and Indian, Cochini, Persian, etc.—being modifications of the main Sefardic use, and certain Ḥassidic, Qabbālistic, and other rites in Russia and E. Europe, which are Ashkenazic variants. Among extinct rites may be mentioned the *Seder Amram* (use of Amram Gaon, 870 C.E.), Maḥzor Vitry, Maimonides, Isaac Lurya, and C. Vital, Castile, etc. Little is known of the ritual of the Falashas or of that current among the Chinese Jews. Qaraites and Samaritans have their own worship, which has been printed.[3] Modern Reform rites, generally speaking, contain vernacular translations and sometimes additions, and modify certain references to the restoration of sacrifices. The *piyyūṭim*, or hymns, are of two main types, Kalirian and Spanish;[4] they do not form a statutory constituent and are often shortened or omitted. The divergencies of rites are due to the circumstance that the liturgy was originally not stereotyped. 'Those who write down blessings' were considered as reprehensible.[5] The reader was told the subjects to be mentioned by him and their order; hence the variety of prayers arose. The whole of the tractate *B'rākhōth* is an indication of this method. The reader was 'free.'[6]

The underlying theory of the Jewish conception of worship can best be studied in chs. l. and li. of pt. iii. of the *Guide* of Maimonides.[7] Maimonides calls worship 'the highest aim man can attain.' He insists that worship must be based on the intellect, if it is to have real value. 'The intellect which emanates from God unto us is the link that joins us to Him.' The chapters should be carefully studied.

Pilgrimage as an act of worship occurs only sporadically in Judaism.

WORSHIP (Parsi). — **1. Pre-Zarathushtrian period.**—That the attitude of the early Iranians towards those whom they conceived as the Supreme Powers was one of adoration and worship is practically certain.[1] In what precise outward forms that attitude expressed itself during the earlier period is a question which can be only partially answered. We may safely assume, however, that Herodotus's description[2] of Persian habits and modes of worship was, in its essential features, applicable to the Iranians generally centuries before his own time, and probably more generally and truly applicable to the Persians of that period than it was to those who were his contemporaries. In the Greek historian's account of Persian worship the whole ceremony centres in an act of animal sacrifice.[3] It was accompanied by prayer on the part of the offerer and the intoning of some form of liturgy on the part of the priest. When this 'theogony' ceased to be a mere form of incantation or magic formula, which originally and for a long period it undoubtedly was, we have no means of determining. The sacrifice was individual in its presentation—there is no hint of a united offering—but the sacrificer was expected to be imbued with a sense of solidarity; for, in its main character and content, his prayer must needs be intercessory—embracing the welfare of the king and the whole Persian people. It is to do violence to the text of Herodotus, however, to make him say that the bringer of the sacrifice could ask nothing for himself. The natural inference from Herodotus's narrative is that, so far as the outward and visible forms of Persian worship were concerned, they consisted of merely an occasional act of animal sacrifice performed on a mountain top or beside a stream of water. We can scarcely imagine that all their religious impulses and beliefs found their full and only expression in such forms. Still, the small value the Persians placed upon architectural aids to outward worship prepares us to find among them a very simple ritual and perhaps a not very multiform mode of religious expression. Regard must also be had for the early period that we are treating—perhaps more than a millennium before our era.

2. Zarathushtra's time.—Like the founder of Christianity, Zarathushtra, so far as the records enable us to judge, made no provision whatever for ceremonial or outward forms of worship. The *Gāthas*, which are the truest reflexion of his teaching and spirit, contain not the remotest hint[4] of such matters. There we have an intensely earnest soul seeking to learn the truth and to get into the right inward relationship to its God. The outward expression and symbolization of that relationship receives no consideration at all. Spirit and conduct are the all-absorbing subjects of the *Gāthas*. *Vohumano*, best thought; *Asha*, right; and *Aramaiti*, piety, are the ever-recurring objects of the prophet's desire. It is hardly too much to say that Zarathushtra's ideal of worship is best expressed in Christ's great and final saying that 'they that worship him must worship in spirit and truth.' How far this high ideal was appreciated and accepted by his contemporaries, and to what extent his influence availed to ensure its persistence after his death cannot be ascertained. Certainly some of the divinities invoked and praised in the *Yasna haptaŋhaiti*, which, on linguistic grounds, cannot be assigned to a very much later date than the *Gāthas*, clearly indicate that at that early time there was a distinct descent from Zarathushtra's high spiritual conception of worship.

3. Late Avestan period.—By the time of the Later Avesta Mazdaism had developed an elaborate system of ceremonial worship. Animal sacrifices on the largest scale prevailed. *Haoma* had regained more than its pristine veneration in the new order; and henceforth the preparation of its juice (*para-haoma*) becomes the central point of the Mazdæan ritual[1]—a position from which, to this day, it has never receded.[2] The return of the old Iranian gods as angels (*yazatas*, beings meet to be worshipped) in the new pantheon increased enormously the ritual of Mazdaism and the acts of worship devolving upon the followers of the faith. Every day of every month was devoted to some special divinity, who was specially invoked, praised, and sacrificed to in addition to the regular worship of that day. Thus the 1st, 8th, 15th, and 23rd of each month were consecrated to Ahuramazda; the 3rd and 5th to the *ameshaspentas*; and in a similar manner the remaining days to other genii.[3] Over and above these were the special feasts, such as New Year in honour of Mazda. Prayers, hymns, and liturgies befitting all these occasions were utilized.[4] Each day was divided into five parts, and at each division a special prayer, one of the so-called *Gâhs*, was uttered. For the elaborate ritual associated with the rites of initiation and the disposal of the dead see under those headings. What worship gained in extent and elaborateness during this period it seems to have largely lost in inwardness and spirituality. The value of the prayers came to be regarded as consisting mainly in the words and their correct utterance. We get the impression that they came to be employed as mere charms and magic formulæ.[5]

4. Present time.—If animal sacrifices are excepted, Parsi worship is to-day, outwardly, practically what it has been from late Avestan days. Before the sacred fire of their temples the same Avestan liturgy is recited, accompanied by the priestly performance of the same ceremonies. The same divinities are invoked and praised by the orthodox Parsi to-day in the same prayers and hymns as were used two millennia earlier. But it should be noted that a strong reform movement has set in among many educated Parsis, the tendency of which seems to be not so much to work radical changes in the outward form of their worship as to change the whole emphasis from outward forms to the moral and spiritual ideas symbolized in the ceremonies. In one or two instances lately, it is true, the priest has gone to the length of introducing a sermon or address into the service. But this is exceptional.

5. Collective and individual worship.—Although devout Parsis often frequent the fire-temples, as, we gather from *Visparad*, iii., their ancestors also did, especially on sacred days, such as those consecrated to Atar (3rd, 9th, 17th, and 20th), yet the Parsi does not consider attendance at the temple

[1] Cf. Skr. *yaz*, 'worship,' 'dedicate,' 'offer'; Av. *yaz*, Gr. ἄζομαι; indicating that, before the separation, the habit of worship obtained among the Indo-Europeans.

[2] i. 131 f.

[3] See art. SACRIFICE (Iranian).

[4] The occurrence of the word *zaotar*, 'priest,' in one passage in the *Gāthas* (*Ys.* xxxiii. 6) cannot be held to require the modification of the above statement. See J. H. Moulton, *Early Zoroastrianism*, London, 1913, p. 116.

[1] For a detailed account of that ceremony and of the successive steps by which ritual and liturgy alternate in the preparation of the *haoma* juice see M. Haug, *Essays on the Sacred Language, Writings, and Religion of the Parsis*, ed. E. W. West, London, 1907, p. 393 ff.; and art. HAOMA.

[2] See art. SACRIFICE (Iranian).

[4] See art. FESTIVALS AND FASTS (Parsi).

[5] See art. PRAYER (Iranian).

indispensable to worship, and places far less store upon it than the faithful Christian does upon church-going.[1] One reason for that fact is that much of the priestly worship at the temple is without special reference to any laity that may be present—the long *Yasna* ceremony is a conspicuous example. But, even when assembled in large numbers at the temples, their worship seems to be almost if not quite entirely individual and separate, not collective and united. These two facts are surely very significant. We noted them in Herodotus's description of early Persian worship—slight regard for religious edifices as aids to worship, and absence of united action in public worship. But they are in perfect keeping with the highly individual and independent character with which Zarathushtrianism imbues its adherents. Moreover, the private and individual devotions of a faithful Parsi are as numerous as those of the devotees of most religions. We give the following quotation to substantiate this fact:

'For the modern Parsees the precise forms of prayer are strictly laid down; a brief survey of them will be sufficient. On rising, washing, and dressing, especially on tying the sacred string, a series of prayers are to be repeated. Next follows the special morning-prayer. Before and after each meal, likewise, prayers are said; and in the evening, before the Parsee goes to sleep, he has, further, to reflect upon and examine what he has done in the course of the day, and then only, after reciting certain prayers, he retires to rest. To the prayers which form part of the order of the day are added a number of others which must be said on certain occurrences, viz. after sneezing, after connubial intercourse, after satisfying natural purposes, after pollutions during sleep, after the cutting of nails and hair, as well as after the lighting of candles.'[2]

LITERATURE.—In addition to the works already referred to see Anquetil du Perron, *Zend-Avesta, Ouvrage de Zoroastre*, 2 vols., Paris, 1771, 'Usages civils et religieux des Parses,' pp. 527–591, and 'Système théologique cérémonial et moral,' pp. 592–618; Dosabhai Framji Karaka, *Hist. of the Parsis*, London, 1884; Maneckji Nusservanji Dhalla, *Zoroastrian Theology*, New York, 1914; J. H. Moulton, *The Treasure of the Magi*, Oxford, 1917. The reader will find much relevant material in the two last-mentioned works.

E. EDWARDS.

WORSHIP (Roman).—1. General principles.—The term 'worship' may be treated as comprising all modes of giving expression to the various feelings entertained towards the divine powers—feelings of awe, reverence, obligation, deprecation, gratitude, hope, and others. The forms given to the expression varied, first, according to the conceptions entertained about the nature and functions of the beings who swayed the destinies of men and women, next, with the development of civilization among the people. The limitations of certain kinds of worship to certain classes of people, public and private, also fall to be considered.

2. Worship as related to conceptions of divinity.—In the earliest known forms of Roman religion men's conceptions were vague, and the divine influences were not supposed to pertain to definite personal gods, being described by the shadowy phrase *numina*. Observances of worship were therefore naturally far more simple than they afterwards became. The early Roman did indeed regard divine power as perceptible in every portion of the world, and in every department of life. In a sense he may be said to have entertained the opinion of the Greek philosopher, Heraclitus, who said that 'all things are full of gods' (*πάντα πλήρη θεῶν*). Every stage in human life was passed in contact with superhuman powers. The Roman nursery was haunted by a host of divinities, whom the fathers of the early Church were given to ridicule. The earliest religious observances reflect the life, mainly, of an agricultural community, and aimed at securing the safety of men and animals, and of the boundaries of the farm. In many cases the actual implements used in life, or accessory to it, were regarded as in some way the seats of the superhuman influences. Thus each *terminus*, or boundary-stone, was regarded as the seat of a *numen*, and this idea seems to be anterior to that of a god Terminus protecting all boundary-stones.[1] Another primitive notion which influenced the forms of worship was that each community had its own protecting divinities, who belonged to it and no other. Gods were generally supposed to confine their interest to particular tribes, clans, or civic organizations or to groups of persons within them. There were therefore in Italy infinite diversities of local religious usage, many of which, when Rome became the governing power, affected and complicated the religious practice of the dominant city.

Political and religious obligation were never held asunder in the ancient world. It was in theory the duty of every citizen to maintain intact the religious observances which had been handed down to him from his ancestors. But no such theory has ever prevented change. At most it has restrained changes not sanctioned by political authority. The literary Romans regarded all the institutions of religion as owing their existence to a single lawgiver, King Numa. Later rulers were only imitating him when they adapted religious practice to the changed needs of their times.

3. Rigorousness of ancient forms.—At all times the Roman was deeply impressed by the importance of ascertaining precisely the forms of the words, actions, and offerings which he should use in doing honour to divine personages. First, the proper divine title must be ascertained if possible. To the latest times expressions were introduced into formulæ which might obviate the evil effects of a slip. Thus, if there was a doubt as to the sex of the divinity, the words 'siue tu deus, siue dea es,' were added. Precise accuracy in the words of which the petition or salutation consisted was of the highest consequence. This rigorousness applied also to the secular formulæ of the law, to which, indeed, in early days, a certain sacredness attached. This strict formalism led to the publication by the priestly authorities of a religious document which bore the name of *Indigitamenta*, and preserved for later times names of divinities and lists of usages which would otherwise have died out of memory.[2] Down to the latest times the simple offerings which had satisfied the old *numina* were preserved side by side with the more elaborate dedications. At the family shrine the *far pium* and *saliens mica* of Horace continued to be presented, and the *mola salsa*, prepared according to a very primitive method, was placed before Vesta three times a year by her priestesses, the Vestals, who performed for the great State-family at the State altar the functions which belonged to the unmarried daughters of the private family. Similar offerings, prominent in the worship of different divinities, were bean-meal, lard, milk, wine, and honey.

As to animal sacrifices, their oldest form of which record is preserved was the peculiar ceremonial offering called *suovetaurilia*, in which a bull, a sheep, and a pig were led three times in procession round the farm, and then the victims were sacrificed, and a prayer couched in Latin of ancient form was pronounced, which is preserved by Cato.[3]

4. Changes in worship due to external influences.—The Roman pantheon and Roman worship had doubtless gone through a number of changes before the earliest time which has left traces in historical practice of religion. Many attempts have been made by modern scholars to pierce the dense pre-historic darkness in which the state of early Italy is enveloped. The material, however, which has come down to us from ancient days is so completely untrustworthy that the efforts of scholars have chiefly testified to their power of imagination. This material indeed, if it deserves the name, was produced mainly by the unbridled imagination of poets, genealogists, annalists, grammarians, and antiquaries of the late Republic and early Empire. To correlate even the results of modern archæological research with this heterogeneous mass of statements, so as to produce any solid results, is a hopeless task. The earliest safe source of information about Roman cults is to be found in the inscriptions which have preserved the remains of the ancient Roman calendar. When ancient Roman scholars, like Varro and Verrius Flaccus, drew from the actual records of the cults illustrations of the ceremonies mentioned in the earliest calendar, they preserved actual religious history. And religious usage was so tenacious in Rome that the light thus obtained carries us back a long way.

Conservative as the early Roman State was with regard to religion, the recurring desire for novelties in cults was from a very early time satisfied in a remarkable way. When the demand became clamorous, in times marked by great public disasters, such as severe defeats at the hands of enemies or sore famines or pestilences, the Senate would order the mysterious *Sibylline Books* to be consulted, so that the proper mode of meeting the religious emergency might be discovered. It was felt that conjunctures occurred when the aid to be drawn from the gods who ordinarily protected the country was insufficient. It dawned upon the consciousness of the citizens that perhaps divinities who presided over foreign communities might be able to come to the rescue. At a very early time the Greeks were recognized as masters of divine lore, and the *Sibylline Books* were believed to enshrine precious results of their experience. An inquiry therefore into the proper mode of expiating disasters, which were naturally supposed to indicate divine wrath, almost invariably resulted in an injunction to adopt into the ceremonial of the State religion some rite derived from Greece. The *Sibylline Books* therefore constituted a sort of open door through which entered such a mass of new religious usage that the Roman religion was extensively Hellenized. Sometimes the new usage was connected with a divinity not previously worshipped by Romans, at other times the new practice was grafted on the cult of an old Roman divinity. For one great feature of the movement was the identification of Roman divinities with Greek, the divine beings concerned being supposed to differ only in names.

This process of Hellenization began very early, and the legend which attributed the introduction of these books to the period of the monarchy enshrined a particle of historic truth. But the religious revolution was much accelerated by the advance of Rome to world power, when important crises, giving rise oftentimes to superstitious fears, were multiplied. Some of the most archaic forms of Roman ritual survived in the late Republican time as popular festivals with disorderly accompaniments. Such were the Saturnalia and the *Festum geniale* of Anna Perenna,[1] the Floralia in April,[2] the festival of Fors Fortuna in June,[3] the *Ancillarum feriæ* in July (mentioned in late literature), and others. Many, however, of the most venerable survivals in Roman religious practice of the later time were maintained by the appointed administrators merely from a conservative sense, and were forms that excited little interest except among scholars and antiquarians. Such ceremonies were, *e.g.*, the driving of the nail into the wall of the temple of Fortuna, the Fordicidia,[1] and many others. The influence of Augustus led to an archaistic religious revival, which re-established many primitive rites that were all but forgotten, and prevented many others from sinking into complete oblivion, under the weight of indifference induced by many influences, especially the sceptical tendencies stimulated by the Hellenization of culture, and the manifold new impressions produced by contact with various peoples during the process of world conquest.

The Oriental religions came more and more to attract the Italic and Western populations after the establishment of the Empire. During the Republican age, the government had opposed barriers to the advancing tide of Orientalism in religion. The first Eastern cult to find a place in the official framework of Roman religion was that of the Magna Mater, adopted in 204 B.C. It is not easy to explain the official acceptance of a form of worship of such a frenzied character at so early a date, even when one takes into account the enormous strengthening of superstition by the tremendous experiences of the Hannibalic war: the old feeling reasserted itself in 186 B.C. when the so-called 'Bacchic conspiracy' was ruthlessly suppressed by the Senate, with whom rested the final authority in such matters. In the later days of the Republic many private attempts to establish at Rome Egyptian forms of worship, especially those of Isis and Serapis, were frustrated. These cults naturally tended to find a refuge in the seaports to which fleets from Egypt came, especially the Campanian maritime towns. At Puteoli, for instance, there was a temple of Serapis as early as 105 B.C., and near the coast, at Pompeii, a shrine of Isis existed even before the Roman conquest of the town. Three times in the ten years between 58 and 48 B.C. shrines of Isis were destroyed in Rome. Under Augustus the pressure produced by the popularity among the masses of Egyptian rites became very great, but naturally the ruler could not favour divinities who had allied themselves with his enemy Mark Antony. In 19 B.C. Tiberius, in consequence of a gross scandal, destroyed a shrine of Isis, and caused her image to be cast into the Tiber. Nevertheless private dedications of temples continued to be increasingly common. The government did attempt to prevent them from being erected within the *pomœrium*, but in vain; for in A.D. 69, when the army of Vitellius beset the city, Domitian assumed the garb of a devotee of Isis and sought safety among the servants of her temple.[2] The full tolerance of this divinity at Rome took place before the death of Lucan in A.D. 65, as we see from a scornful reference in his poem.[3] The actual formal inclusion of Egyptian deities in the Roman pantheon, whereby they were thoroughly naturalized and no longer restricted by authority to the space outside the *pomœrium*, came in the time of Caracalla. This emperor built a sumptuous temple of Serapis on the Quirinal. The attraction of the public to the ritual of the Egyptian deities was largely due to the mysteries which were connected with them. Brotherhoods and initiations, whereby these 'saviour' gods (*σωτῆρες*) rescued the

[3] viii. 831 ff.

devotee from evil, exercised a powerful fascination. The Roman soldiers who had served in the East brought with them on their return, from the time of Sulla onwards, many Oriental cults, which tended to flourish greatly in the time of the Severi, whose origin was in the East. Some of these divinities assumed Roman names, such as Jupiter Dolichenus, Invictus Sol Elagabal (from whom the emperor Elagabalus took his name). The worship of Mithras reached its height in the West in the 3rd and 4th centuries A.D.

The divinization of the Roman emperors changed in many respects the whole face of Roman religion. Their cult became the strongest bond of union between the different populations of the Empire, and it became, from another point of view, an important element in the scheme of provincial government.

5. **Important public rituals.** — The different rituals under which the gods were officially venerated may be distinguished. At Rome the State priests came to bring together under the title of *ius sacrum* all the principles and practices of Roman religion, just as the secular law was comprised under the *ius publicum*. The severance between sacred and secular law was indeed not completed until a comparatively late date. Survivals in late Rome indicate that in early days a kind of religious sanctity attached to the formulæ of the civil law, and the great exponents of the two systems were often the same. The *pontifices maximi* were in primitive times generally distinguished lawyers also. And Roman religion was at all times under the final control of secular authorities, the magistrates and the Senate. When a colony was founded, the fundamental charter always required the first magistrates to consult their Senate as to the divinities whom the colonists were to serve, and the modes of their service. These divinities were naturally, as a rule, taken from the Roman pantheon, because, according to a common saying, a Roman colony was 'quasi effigies parua simulacrumque populi Romani';[1] but, like the parent city, the new community had full autonomy in the arrangement of its public worships.

Whenever the State undertook a new duty towards the divine power, it was expressed in the form first of a *uotum*. The conditions which constituted the validity of the *uotum* of the magistrate were well understood; but in important cases the magistrate would be careful to obtain a preliminary understanding with the Senate. The recorded cases in which a question was raised whether the *uotum* was binding on the community are few in number. The contents of the *uotum* might be of many descriptions, as its objects might vary from the perfectly general *uota pro rei publicæ salute* which the principal magistrates pronounced each New Year's Day to some specific thing. Sometimes the *uota pro salute* mentioned a particular number of years; the *decennalia uota* of the emperors asked for the safety of the empire during a period of ten years. There were also *quindecennalia* and *uicennalia*. The fulfilment of the *uota* was carried out by the secular magistrates, though the precise forms which had to be employed (concerning which usage was extremely conservative) were prescribed and supervised by the experts in the *ius sacrum*, the *pontifices*.

The fulfilment of the *uota* would generally issue in the dedication to sacred uses of some material thing — often a *templum*. This thing became technically *res sacra*, and was protected against secular encroachments by the *ius sacrum*. On the whole, the Roman government watched rather jealously the transference of rights in property from the secular to the sacred sphere, but when the transference was accomplished, it was rigidly maintained by law.

In the case of the *uota* the community, through its magistrates, approaches the divinity and practically enters into a legal compact with the god. Not only the community, but the god also is bound, and the procedure had a distinctly legal aspect.

There were other ways in which the community might be bound. Certain occurrences showed that in some way the gods were offended, and it was the duty of the public officers to find a way of averting the divine wrath. Thus *prodigia*, portents which seemed to interrupt the order of nature, called for *piacula*, offerings or services intended to secure appeasement of the offended deity. Thus Livy says:[1] 'C. Servilius pontifex maximus piacula irae Deum conquirere iussus.' In times of stress and public peril, *prodigia* (or *ostenta*) would be reported to the authorities in great numbers. The information was carefully sifted and often some of it was rejected; the signs of divine wrath which were accepted as real were then expiated (*procurata*). Signs which occurred 'in privato loco' or 'in loco peregrino' were not admitted.[2] The *haruspices* had a great part in these expiations.

It was also foreseen that, apart from such special indications, the community would continually contract pollution from the imperfect or erroneous performance of religious duties, so that provision was made for a general clearance of offences at regular intervals. The *lustrum* (literally 'washing') with which the proceedings of the census concluded was a clearance of this kind. The annual perambulation of the city (*amburbium*) was another. An ancient body of priests, the *Fratres Arvales*, annually performed a *segetum lustratio* at Rome. Similar, though not regular, was the *lustratio* of the army, when it was overcome by some superstitious dread. Scipio had to pause before crossing into Asia, in order to free his force from the sense of pollution. Similar was in part the purpose of the *supplicatio* which after a victory was held in honour of the whole body of divinities, in order to get rid of the taint of blood-shedding. The procession took place round all shrines ('circa omnia pulvinaria') and provided the population with an enjoyable holiday. The ancient temple was not freely open to be seen; there were no recurring services such as take place in a modern church. In most instances there was but one festival in a year at a temple. Therefore, as many contained wonderful monuments and precious treasures dedicated by Roman heroes of former times, there was great eagerness to survey them. The *supplicatio* took place in early times on one day only. Later, generals pressed to have the importance of a victory emphasized by repeating the *supplicatio* on succeeding days, and in the age of Cæsar the number of days might extend to forty or fifty. The triumphal procession also doubtless belonged to the same class. Both it and the *supplicatio* were probably of Hellenic origin. Similar was the procession of twenty-seven virgins, round the city, singing a sacred hymn, which was sometimes ordained.[3] All *ludi* were in one aspect religious performances, offered to some divinity. The gladiatorial *ludi* came from Etruria, and were intended to appease the partly divine spirits of the dead, which were reinvigorated by the blood which was shed. Even at the end of the Republic, these *ludi* were always, as a matter of form, declared to be held in honour of some deceased person con-

[1] XL. xxxvii. 5. [2] XLIII. xiii. 23. 25.
[3] Livy, XXVII. xxxvii. 7.

nected with the exhibitor. It is in connexion with the *ludi* in general that we hear most of the practice called *instauratio*, the repetition of a ceremony because of the discovery of some flaw which vitiated its effect. In the time of the later Republic, when men ambitious to obtain high office paved their way to it by vast expenditure on *ludi*, these flaws were artificially created in order to justify additional lavishness.

Rules relating to sacrifice were elaborate. Particular deities called for particular offerings, and the accompaniments of sacrifice were very various. The separation between the divinities of the under and the upper world was in this respect specially important. Thus to Varro is attributed the view that *altaria* were appropriate to the *di superi*, *aræ* to the *di terrestres*, and *foci* to the *di inferi*.[1]

Public and private cults to some extent were parallel. For example, the worship of Vesta was as important for the family circle as for the State, which, like the family, had its own *lares* and *penates*. Many cults were indeed adopted from patrician families by the community. Rites in honour of the dead were extensively rendered by private persons as well as by the magistrates and priests of the community. Almost every regularly constituted group within the State had its own special cults. Thus every *collegium*, whatever might be the principal bond of union between its members, had its own special form of worship. Some groups within the city of Rome, which had survived from very primitive times, such as those called *pagani* and *montani*, maintained down to a late date their special religious usages. The *sacra* attached to families occupied an important place in the *ius sacrum*, the policy of the religious lawyers having been to prevent, so far as possible, the extinction of these *sacra* by the dying out of the families. To the *gens* as well as the *familia* also appertained its own *sacra*.[2]

Among important public ceremonies to which reference has not been made above may be mentioned the *lectisternium*, certainly borrowed from the Greeks, and the *ludi sæculares*, which originated from the *ludi terentini*, a ceremony connected with departed spirits, celebrated at an altar of Dis pater. These *ludi* and the *ludi sæculares* which succeeded them were supposed to occur at the end of a *sæculum*, which was first assumed to comprise a hundred years, but in later times the period was fixed at 110 years. The ceremony is best known from the records of the celebration ordered by Augustus in 17 B.C., for which Horace wrote his *Carmen Sæculare*. This series of celebrations went on until A.D. 314, and another series, theoretically to celebrate the end of each century from the foundation of Rome, ran parallel with it.

The observances due annually to the gods were prescribed at settled dates on the calendar, published yearly under the supervision of the college of *pontifices*.

6. Ritual proper to groups.—Among celebrations (*feriæ*) connected with groups of men may be noted the *Quinquatrus*, observed by the *artifices* in honour of their patron divinity Minerva, and the *Quinquatrus minusculæ*, held by the flute-players (*tibicines*). There were many similar festivals. One was carried out by the *mercatores*, on the foundation-day of the temple of Mercurius by the Circus, another by the workmen where trade depended on the use of water (*aquatores*). The date for this was 11th Jan., a day sacred to Iuturna, a goddess of springs and fountains, fabled by Virgil to have been sister of Turnus, king of the Rutuli. Not all persons were qualified to be present at all services; from some women were excluded, and men from others.

7. Religious officers.—Along with the *pontifices*, the *augures*, and the keepers of the Sibylline oracles (*Quindecimviri sacris faciundis*) were the great priestly colleges; membership of these was a great object of ambition to men engaged in public life. The *haruspices* had not the same distinction; they did not really constitute a college, like the other bodies. Until a late date they were Etruscans, summoned by the Senate from time to time as occasion required, to expound the peculiarly Etruscan lore of means of expiation, chiefly for the evil sign of the thunderbolt. Later, *haruspices* trained in Etruria were settled in Rome and employed publicly and privately.

8. Minor collegia.—Real standing *collegia* of minor importance, but great antiquity, were those of the *fetiales*, the Salii, the Luperci. In order to assure itself that a war was correct in the eyes of heaven, the early State employed the *fetiales* to make a demand on the opposing power, according to a certain fixed form, and if the demand was not conceded, instructed the same priests to announce in another fixed ceremonial fashion to the opposing power that peace had been replaced by war. On the conclusion of the war, the same *fetiales* supervised ceremonially the conclusion of a treaty (*fœdus*). No compact was a *fœdus* unless its conclusion had been so carried out by the *fetiales*. The *ius fetiale* has often erroneously been regarded as a sort of international law. But the *fetiales* were not concerned with policy, or with questions of right and wrong. A *iustum piumque bellum* was not one which was morally correct, but one which was ceremonially flawless, having been opened with some forms on which the gods had looked with favour from immemorial time. The Salii were priests who specially served Mars. Priests bearing that name existed in a number of ancient Italic cities besides Rome. At Rome itself these priests were, even in late time, patricians. There were really two *collegia* which bore the name, one with a sanctuary on the Palatine hill, the other on the Quirinal. Each of the colleges must have originally represented a separate independent community, and both survived after the two had coalesced. The ceremonies, supposed to have been instituted by King Numa, were of the most archaic description. They sang hymns in honour of Mars as war-god, and danced in armour, in procession round the city, twice in the year, in March and October. They bore lances and the sacred *ancilia* (shields), preserved in shrines, from which they were taken on these occasions with great solemnity. The purification of the holy weapons (*armilustrium*) was performed with minute ceremony. Virgil[1] speaks with reverence of the ceremonial, but Seneca[2] allows himself to deal lightly with the *saltus saliaris*. The Luperci also had two distinct forms, like the Salii. One was connected with the Palatine hill, the other with the Quirinal. As in many other instances, it is clear that the State at an early time took the services out of the hands of particular families, for the two bore the names respectively of *Luperci Quinctiales* (from the Quinctii) and *Luperci Fabiani* (from the Fabii). In 44 B.C. Cæsar's memory was honoured by the creation of a third *collegium*, the *Luperci Iulii*, but its duration was brief. The ritual of the Luperci (evidently connected with a primitive pastoral community) was directed to purification and reconciliation with the divinity honoured (Faunus or Silvanus). The Luperci ran round the foot of the Palatine hill, on

[1] *Æn.* viii. 285. [2] *Ep.* xv 4.

the north-west side of which lay the sacred cave called Lupercal. The priests sacrificed goats, and ran their ceremonial course with the skins of the sacrificed animals round their hips, their bodies being otherwise unclad. They bore whips in their hands, made of strips of goatskin; with these they struck women who ran in their way, desirous to escape from the reproach of barrenness. The thongs bore the name of *februa*, a word connected (as in the name *mensis Februarius*) with purificatory ritual. It is no wonder that, as Plutarch says, the Luperci themselves were constrained to laugh at portions of the ceremonial.[1] The Lupercalia continued to be performed down to A.D. 494, when Pope Gelasius I. appointed the day for the ritual of the Purification of the Virgin. The worship of Faunus, the deity with whom the festival was concerned, was a cult almost peculiar to Rome and the country immediately round it.

Although the *Fratres Arvales* are only once mentioned in extant Latin literature[2] they are well known to us from inscriptions discovered on the site of the shrine of the brotherhood, a few miles from Rome on the right bank of the Tiber, in the direction of its mouth. The first discovery was made in 1570; afterwards fragments which had been removed from the site came to light, and then in the years 1867–71 excavations on the site greatly increased the number of fragments. The whole were carefully studied by a succession of scholars, especially by W. Henzen, who published the whole with a commentary (Rome, 1868, and Berlin, 1874); also (without commentary) in *CIL* vi. (1876). The inscriptions proved to be an important source for the earlier imperial history. They embody minutes of proceedings of the brotherhood from A.D. 14, when it was refounded by Augustus, to A.D. 238. The fact of the connexion of Augustus with the shrine seems to have given the brotherhood a special interest in events and anniversaries connected with the emperors and their families; on the suitable days offerings were made and recorded in the minutes. The inscriptions have preserved (in an entry relating to A.D. 218) a hymn in Saturnian metre which is the most ancient monument of the Latin language.[3]

One college of importance, that of the Vestal Virgins, was composed of women. The early Romans were conscious of a parallelism between the religion of the family, whose centre was the family hearth, and that of the great State family, for which the hearth was in the temple of Vesta. There, as in the separate families, the unmarried daughters had a great share in the family cults. The *rex sacrorum* stood in the same relation to the Vestals as the *paterfamilias* held with the maidens of his family; and this *rex* succeeded to some of the duties which had belonged to the old *reges* before the institution of the Republic.

Other brotherhoods subsisted, some from primitive days, like the *sodales Titii*, who traced their origin to King Titus Tatius, and were supposed to maintain a ritual borrowed from the old Sabines.[4] Others were of late creation, such as the *sodales Augustales*, devoted to the imperial cult, that of the *diui imperatores*, the divinized emperors. The brotherhood consisted of twenty-one ordinary members, chosen (Tacitus says) from the very highest ranks, with four members of the imperial family. The first of these representatives were Tiberius, Germanicus, Drusus, and Claudius. Similar brotherhoods were established in honour of later emperors, Claudius, Vespasian, Titus, Hadrian, Antoninus Pius, and others; but these never attained to the same importance.

Many separate priesthoods, to which the name *flamen* was attached, also existed; some, like the *flamen* of Jupiter (*flamen Dialis*), of Mars (*Martialis*), Quirinus (*Quirinalis*), from time immemorial, others of later creation and less consequence. The three just mentioned were *flamines par excellence*, sometimes called *maiores* in contrast to all others. The *flamines minores* were attached to the service of a great many divinities, and in later time were all of plebeian quality. The really ancient offices were concerned with ritual of a remarkably archaic type. The rigorous restrictions under which the *flamen Dialis* lived are well known. He and his wife (the *flaminica*) must be married by the very ancient form of *confarreatio*. If the *flaminica* died, the *flamen ipso facto* lost his office; he could originally undertake no civil duties, though he wore the distinctive robe of civil office, the *toga prætexta*, and sat on the chair of office (the *sella curulis*); could look on no armed array; could not absent himself from his house (the *regia*, attached to the temple of Vesta) without leave from the *pontifex maximus*. He was hemmed in by many minute rules of the nature of 'tabus'; for example, it was not permissible for him to have a knot anywhere in his clothing. The office of *flamen*, generally speaking, involved personal participation in certain definite sacrifices.

LITERATURE.—The course run by Roman religion during the time of the empire is brilliantly sketched by G. Boissier, *Religion romaine d'Auguste aux Antonins*[4], Paris, 1892, and *La Fin du paganisme*[2], do. 1894. For all the subjects mentioned in this article, the best work in English is W. Warde Fowler, *Roman Festivals*, London, 1899; in German the most useful are J. Marquardt, *Römische Staatsverwaltung*, vol. v. 'Das Sacralwesen,' Leipzig, 1878, and G. Wissowa, *Religion und Kultus der Römer*, Munich, 1902 (vol. v. pt. 4 of *Handbuch der klassischen Alterthumswissenschaft*, by Iwan Müller). Many valuable articles on separate topics are in Pauly-Wissowa, and also in Roscher. J. S. REID.

WYCLIF.—I. *LIFE.*—1. **Early years and parentage.**—John Wyclif, or Wycliffe, 'drew his origin'[1] from the village of that name in Yorkshire on the southern banks of the Tees. The name of this village, the first syllable of which is *wy*, 'water,'[2] determines the spelling; the German form 'Wiclif' should be avoided. The manor of Wyclif was in the honour of Richmondshire, and the Wyclif family were undertenants of the Earl of Richmond. We first hear of the Wyclif family in 1253, when a certain Robert de Wyclif was granted a messuage in the manor; in 1263 he obtained the advowson of the church,[3] and in 1287 held of the mesne lord, William de Kirkton, twelve carucates of land in Wyclif, Girlington, and half of Thorpe.[4] In 1316 a Robert de Wyclif was lord of the manor.[5] His son or nephew Roger[6] married in 1319 Katherine, the Reformer's mother. At that time Roger's father or uncle, Robert, the lord of the manor, was still alive, and this may account for the uncertainty as to the birthplace of their

son. According to Leland,[1] he was born at 'Ipreswell, a poor village, a good mile from Richmond.' But Hipswell is at a considerable distance from Wyclif village, nor is there any proof that the Wyclifs owned land there.[2] On his marriage Roger Wyclif would be assigned one of the smaller houses on the estate, possibly Thorpe, close to Wycliffe, for which he paid the relief in 1319 of 25s. for three carucates of land that he held.[3] At what date Robert Wyclif died is unknown, but the Reformer's father Roger paid the subsidy for the whole estate in 1332–33[4] and was still alive in 1347–49.[5] The year of his death is also unknown, except that it was before 1362, for unfortunately the black letter inscription in the church at Wyclif over the tomb of Roger and Katherine gives no date.[6]

The date of birth of the son of Roger and Katherine is unknown. He is usually assumed to have been the eldest son, born shortly after the marriage.[7] But it is probable that there was an elder brother William.[8] Moreover, the date at which John Wyclif took his doctorate, in or about 1372, points to a later date of birth, nearer 1330 than 1320. Before 1362 Wyclif's father Roger died, and the Reformer became the lord of the manor. His mother was still alive in Oct. 1369, when John associated her with himself in a presentation to the living.[9] The only other connexion of Wyclif with his family estate was his nomination on 17th May 1367 on a commission issued to seven Yorkshire gentlemen to see to the keeping of the statute recently passed prohibiting the taking of salmon in certain seasons in the Tees and other rivers.[10] After Wyclif's death the estate passed to a Robert Wyclif, probably his brother, an energetic ecclesiastic who from 1390 to 1405 acted as chancellor to Walter Skirlaw, bishop of Durham. As such he took a prominent part in the trial at Bishop Auckland of the famous Lollard, Richard Wyche.[11] In 1412 Robert settled the estates on a John de Ellerton, who assumed the name of Wyclif[12] and from whom the later lords of the manor were descended. They were noted for their intense fidelity to Rome after the Reformation.

2. Early Oxford career.—At what date Wyclif went to Oxford is unknown. If he was born in 1330, it would be in or about 1345. Three colleges claim him. The claim of Queen's[13] may be dismissed as due to a confusion with a John Wyclif, possibly the Reformer's nephew, an 'almonry boy' in the Queen's grammar schools for whom in 1371 we find the college buying Latin grammars, etc.[14] The claim of Merton rests upon a catalogue of Fellows made in 1395 by Thomas Robert, still in the possession of Merton.[15] This John Wyclif, a steward or seneschal,[16] may be John Whitclif of Mayfield († Nov. 1383).[1] Possibly John Wyclif was the rare exception, a northerner in a southern college, and a recent writer claims that he had 'been worked into Merton to pacify the Northerners,'[2] and was thus the seneschal of the week expelled in 1356, as the result of a college struggle.

Wyclif's connexion with Balliol is certain. That he was Master of Balliol in the spring of 1360 (and therefore presumably previously a Fellow) is clear from a document citing his taking possession as such of a property in Gresham St. E.C.[3] His predecessor Robert Derby[4] still acted in 1356.[5] This gives the earliest possible date of Wyclif's Mastership. On 9th April 1361 Wyclif was still Master and took possession for the college of the living of Abbotsley.[6] But on 14th May 1361 he was instituted to the college living of Fillingham, near Lincoln, value 'thirty marks,' and by the then statutes was forced to resign his Mastership. Some delay, however, occurred, for in the following July he still signed himself 'Master' in a legal document connected with the transfer to the college of Abbotsley.[7] The restriction of the Fellowships at Balliol founded in 1340 by Sir Philip Somervile for those proceeding to a degree in theology to six in all will account for Wyclif leaving.

After his presentation to Fillingham Wyclif vanishes for a while from clear vision. But on 29th Aug. 1363 he obtained from his bishop, John Buckingham of Lincoln, a licence for non-residence at Fillingham 'that he might devote himself to the study of letters in the university.'[8] In consequence he paid a short visit to Oxford in Oct. 1363, living in rooms in Queen's, and a longer visit between 21st March 1365 and 26th Sept. 1366, paying 40s. 'for the rent of his room for two years.'[9] Meanwhile on 24th Nov. 1362 the University in presenting its annual 'roll of Masters' had petitioned Urban V. to provide Wyclif with 'a canonry and prebend in York, notwithstanding that he holds the church of Fillingham.' Urban granted instead the prebend of Aust in the ancient collegiate church of Westbury-on-Trim, near Bristol, worth £6, 13s. 4d. *p.a.*[10] Wyclif accepted the prebend[11] but did not reside. He was, as we have seen, reading for his doctorate at Oxford. In the spring of 1366 William Wittlesey, bishop of Worcester,[12] visited Westbury. He found that all the five canons were non-resident, and that only one had provided a vicar to discharge his duties. 'Master John Wynkele' (for thus the bishop spells the name) is expressly mentioned among the delinquents; and on 28th June 1366 Wyclif was cited to appear before the bishop on 18th July. Meanwhile his 'fruits' were sequestrated. Of any further action by Wittlesey there is no record. Wyclif continued to hold the prebend to the day of his death,[13]

11 Rashdall's doubts in *DNB* lxiii. 205 are contrary to the evidence.

12 *DNB* lxi. 158.

13 In most lives of Wyclif (*e.g.*, *DNB* lxiii. 205) it is assumed that he resigned Aust in Nov. 1375. On 6th Nov., for reasons that are not clear, he was confirmed in this prebend, which on 18th Nov. was given by the king to Robert de Farrington. On 22nd Dec. 1376 this grant to Farrington was revoked on the 'information' of John of Gaunt as given in error under the

but of any discharge of duty there is no evidence.[1]

One other matter in connexion with Aust should be mentioned. By the constitution *Horribilis* of Urban v., 3rd May 1366, a return was demanded of all pluralities. Wyclif's return, which should have been made to Bishop Buckingham, does not exist, whether through his neglect or because now lost cannot be determined.[2]

While these matters were in dispute at Aust, Wyclif was nominated by Archbishop Islip[3] in a deed dated at Mayfield, 9th Dec. 1365, to be the warden of Canterbury College, Oxford, founded by Islip in 1361. Islip intended it to be a joint college of eight seculars and of four regulars from Christ Church, Canterbury. The college was started on 13th March 1363, Islip selecting as head Henry Wodehull, a monk of Abingdon. On 9th Dec. 1365 Islip dismissed Wodehull and substituted 'John de Wyclyve.' The regulars were driven out and three seculars from Merton introduced. Not content with this, Islip furthermore changed the statutes and altered the whole character of the college. While accepting the position, Wyclif did not choose to give up the rooms at Queen's. Wyclif's tenure of the office was brief. On the death of Islip (26th April 1366) the monks of Canterbury lodged an appeal. Islip's successor, Simon Langham,[4] deprived Wyclif of his office (30th March 1367), sequestrated the revenues, and finally expelled Wyclif and his three secular colleagues. Wyclif thereupon appealed to Urban v., but meanwhile for two years, if his opponents may be trusted, still lived on at Canterbury, spending freely the college goods. Wyclif's proctor, Richard Benger, one of his associates at Canterbury, failed to put in an appearance when summoned at Viterbo, and on 23rd July 1369 Cardinal Androin de la Roche, to whom Urban had referred the case, gave his decision at Monte Fiascone, though, owing to his death, it was not published until 15th May 1370. The action of Langham was upheld in every detail and Wyclif's appeal dismissed. The costs, however, were thrown upon the estate. There is no doubt that this decision was right. Islip had acted illegally in altering the trusts, upon which the royal licence in mortmain had been secured,[5] and for the condonation of this offence the monks of Canterbury were condemned on 8th April 1372 to pay a fine of 200 marks.[6] Urban evidently had some sympathy for Wyclif, for in 1369 he reserved for him a prebend in Lincoln, which, however, Wyclif never obtained or, if he obtained it, soon resigned.[1]

While the controversy over Canterbury College was still unsettled, Wyclif's licence for five years for absence from his cure expired. So on 13th April 1368 he obtained an extension 'for two years.'[2] In the following autumn he exchanged Fillingham for Ludgershall in Buckinghamshire, where he was instituted on 12th Nov. 1368. The nearness to Oxford would compensate for loss of income (10 marks instead of 30).[3] In Nov. 1371 Wyclif was one of the executors of the will of William de Askeby, archdeacon of Northampton, who in 1369 had been appointed chancellor of the exchequer.[4] Towards the close of 1372 Wyclif completed the long course of nine years and a term after Mastership necessary for taking his doctorate[5] and shortly afterwards entered the king's service.

3. In the king's service.—We date Wyclif's entrance into the civil service as about 1372. Possibly it may have been a little earlier, for Wyclif gives us a report of a speech which he himself 'heard' in the parliament which met in Westminster on 24th Feb. 1371.[6] At once he seems to have allied himself with John of Gaunt and his faction, altogether unconscious of the unscrupulous ambition and selfishness which underlay the duke's politics. But Wyclif's first appearance as a publicist was as the representative of the nation in resistance to papal exactions. On 6th June 1365[7] Urban v. had demanded the payment of the King John's annual tribute of 1000 marks together with arrears since the last payment made on 7th July 1333. Edward laid the matter before the parliament of May 1366, which indignantly refused.[8] Until recently it was believed that 'this solemn declaration set the question at rest for ever,'[9] and the older historians have all dated Wyclif's public life from 1366.[10] But there is evidence that the question of tribute was reopened by Gregory XI. in 1374, and it is in connexion with this later event that we would date Wyclif's first political tract. To consider this and other demands of Gregory a council was held at Westminster on 21st May 1374,[11] at which a prominent part in defence of papal claims was taken by a monk, John Ughtred of Boldon,[12] assisted later by William Binham, a monk of St. Albans. The debate and consequent controversy led to the publication by Wyclif,

belief that 'the prebend was vacant' (see H. J. Wilkins, *Was John Wyclif a Negligent Pluralist?*, Bristol, 1915, p. 33; *Cal. Pat. Rolls Ed. III.*, xvi. 121, 195).

[1] For Wyclif and Aust reference should be made to the researches of H. J. Wilkins, *op. cit.*, and *An Appendix to John Wycliffe*, London, 1916.

[2] A. H. Thompson's note in Wilkins, *Negligent Pluralist*, p. 86.

[3] *DNB* xxix. 74. [4] *Ib.* xxxii. 99.

[5] *Cal. Pat. Rolls Ed. III.*, xii. 139.

[6] The identification of the warden of Canterbury with the Reformer has been a matter of much controversy. It was accepted by N. Harpsfield in his *Historia Wiclefiana*, printed in his *Historia Anglicana ecclesiastica*, London, 1622, p. 668; then by A. Wood, Lewis, Vaughan, Lechler, Poole (*Med. Thought*, p. 287 n.), Milman, Matthew. The best arguments in defence are by Canon Wilkinson in *Church Quart. Rev.* v. [1877–78] 119–141; and Cronin, pp. 55–76. The main documents have been printed by Pratt in his ed. of Foxe, *Acts and Monuments*, 1870, ii. App. 922 ff. (hereafter cited as Foxe, *AM*). Doubts were first cast by W. Courthope in *Gent. Mag.* xvi. [1841] 146, followed by Shirley, *FZ*, pp. 513–528, H. Rashdall (*DNB* lxiii. 203 f., *Universities of Europe in the Middle Ages*, London, 1895, ii. 498 n.), and others (*e.g.*, *Vict. Co. Hist. Oxford*, ii. 68), who identify the warden with John Whitclif, vicar of Mayfield, for whom see above. This identification should be rejected, for the scanty arguments in its favour cannot outweigh the evidence of contemporaries—*e.g.*, William Woodford in his *Septuaginta Questiones de sacramento altaris* (in *FZ*, p. 517), of the *Chronicon Anglicæ* (Rolls Ser., 1874), p. 115. The present writer suspects also a reference in Netter, *Doctrinale*, ed. F. B. Blanchotti, Venice, 1757, iii. 485. In his *de Ecclesia*, p. 371, Wyclif makes a singularly impersonal reference to the matter.

[1] *Cal. Pap. Letters*, iv. 193.

[2] *Mem. Ep. Buckingham*, f. 56 d.

[3] *Reg. Buckingham Instit.* x. f. 419; cf. f. 130 d.

[4] A. W. Gibbons, *Early Lincoln Wills*, Lincoln, 1888, p. 25 f.; also in *Gent. Mag.* xxii. [1844] 136; Foxe, *AM* ii. 946.

[5] Knowledge of this important date, usually given, *e.g.*, by Shirley in *FZ*, p. 527, F. D. Matthew, *Eng. Works of Wyclif*, p. vi (hereafter cited as *EWW*), as 1366, can now be inferred from *Cal. Papal Letters*, iv. 193, from which we learn that Gregory XI. in a provision dated 26th Dec. 1373 (not Jan. 1373, as *DNB* lxiii. 206, copied by many) states that Wyclif recently became 'master of theology.' The date given by Bishop Bale, in the margin of *FZ*, p. 2, of 1372 is thus accurate. This date is of fundamental importance for the chronology of Wyclif's life and works, the earlier date leading to disastrous results. Unfortunately in many of the prefaces to the works of Wyclif printed by the Wyclif Society this earlier date is taken as a basis.

[6] *De Civ. Dom.* ii. c. 1. The idea of Lechler (*JW*, p. 130 f.) that Wyclif was a member of parliament either at this time or later should be dismissed. The speech in question is merely a tale taken from the contemporary *Vade mecum in tribulatione* written in 1349 by the Spiritual Franciscan, Jean de la Rochetaillade, and will be found in E. Brown's ed. of Ortuin Gratius' *Fasciculus rerum expetendarum*, London, 1690, ii. 496–507.

[7] *Cal. Pap. Lett.* iv. 16; not 13th June, as Raynaldus, xxvi. 116, followed by most historians.

though possibly not until two years later, of his *Determinatio contra unum monachum* (*i.e.* Binham).[1] Special reference is made in the tract to the question of the tribute. Wyclif replies to Binham by giving the answer 'which I heard recently was given by secular lords in a secular council,' and reports seven so-called speeches. On analysis the speeches resolve themselves into the various 'conclusions' of Wyclif condemned by Gregory XI. in 1377, while the sixth lord gives us a brief outline of Wyclif's views of 'lordship.' To suppose that we have in them 'the earliest instance of a report of a parliamentary debate'[2] is absurd. They are all reflexions of Wyclif's own views, written, probably, eighteen months after the council.

Wyclif's services had already been rewarded by his presentation by the Crown to the rectory of Lutterworth (7th April 1374).[3] On 26th July 1374 he was appointed a member of a small commission, with John Gilbert, bishop of Bangor, as the head, to meet at Bruges a commission from Gregory.[4] For his travelling expenses Wyclif received 42s. 3d., and for his other expenses 20s. a day.[5] On the day before his departure Wyclif took some legal steps on behalf of his former proctor Richard Benger. Along with Ralph Strode, the Common Sergeant of London,[6] he went bail for him that Benger would not at Avignon attempt to obtain any papal provisions, etc.[7]

The conference at Bruges effected nothing, and by the middle of September Wyclif was back in Oxford, living in rooms at Queen's, which needed much repair, in that month.[8] In Aug. 1375 another deputation was appointed to go to Bruges to confer with Gregory's nuncio. In this deputation, though most of his former associates were retained, Wyclif was left out.[9] This omission (usually overlooked by historians, who have in consequence exaggerated his influence at Bruges) probably shows that he was too unbending for Edward's purpose. As a result on 1st Sept. 1375 a concordat between Gregory and Edward was struck.[10] Wyclif had thus no complicity in a great sham, in its main provisions a victory for the papacy.

As a result of the conference several of the actors in it received preferments. In after years Wyclif's enemies invented the story that he expected to obtain the bishopric of Worcester.[11] The story is worthless. Months before Wyclif sailed to Bruges a nomination had been made to the vacant see by Edward III.[12] That Wyclif, however, expected to receive the prebend of Caistor in Lincoln has more basis.[13] Wyclif returned from Bruges a disillusioned man. He formed the idea of writing a *Summa* of his doctrines, the introduction to which should deal with the philosophical positions which underlay the recent dispute. For the two years, Sept. 1374–Sept. 1376, he probably resided at Lutterworth, but with frequent visits to Oxford (Queen's). During those two years he developed his theory of 'lordship,' expanding his tracts against Ughtred and Binham into the two great political treatises *de Dominio Divino* and *de Civili Dominio*. He was probably engaged upon these writings during the meeting of the 'Good Parliament' (28th April 1376–6th July 1376). It is difficult to explain Wyclif's action in the autumn of 1376. John of Gaunt packed a parliament, which met on 27th Jan. 1377, with his followers, who at once proceeded to annul all the acts of the Good Parliament, while Wyclif, 'running about from church to church' in London, denounced the episcopate, who under the lead of Courtenay and Wykeham were the duke's chief opponents.[1] Wyclif's protest against the wealth, luxury, and worldliness of the clergy fell on willing ears; but nevertheless he unconsciously played the duke's reactionary game. The parliament of Jan. 1377, with its iniquitous poll-tax,[2] its restoration of Alice Perrers, and the aggrandisement of the duke by the creation of Lancashire into a county palatine,[3] is one of the worst on record.

The bishops, powerless in parliament, struck at the duke through Wyclif, and summoned the latter to appear before Convocation in St. Paul's on Thursday, 19th Feb. 1377.[4] The duke took up the challenge and, together with Earl Percy, the king's marshal, accompanied Wyclif to the trial. The proceedings ended in a riot. Wyclif was carried off by his supporters, while the London mob, on the following day, burned the duke's palace of Savoy.

Meanwhile some of Wyclif's old opponents at Oxford had accused him at the papal court. On 22nd May 1377[5] in S. Maria Maggiore in Rome Gregory issued a series of bulls directed against the Reformer.[6] With these bulls Gregory forwarded a schedule of nineteen erroneous 'propositions and conclusions,' culled from Wyclif's political and politico-ecclesiastical writings. These Gregory identified with the 'opinions and ignorant doctrine of Marsiglio of Padua and John of Jandun' condemned by John XXII.[7] An examination of the pope's schedule shows that the theses concern the status or polity rather than the doctrines of the Church.[8]

Before Edward could receive the bulls, he had passed away at Sheen (21st June 1377). His death caused delay, and the bulls were kept back until after the meeting of parliament on 13th October. This parliament was in no mood to truckle to Rome. By a writ dated 12th Dec. 1377 the bishops were ordered to make a return of all aliens, including cardinals, who held benefices.[9] To stop the drain the Council asked Wyclif for his advice 'whether the kingdom of England may lawfully . . . keep back the treasure of the kingdom.' Wyclif replied in a state-paper,[10] in which he advocated not only the stopping of all the drain to Rome but the 'prudent distribution to the glory

[1] For this tract, first imperfectly printed in Lewis, *JW*, pp. 363–371, we have now Loserth's ed. in *Op. Minora*, p. 415 f. The tract should be distinguished from the *Determinatio ad argumenta Outredi*, published at the same time (*Op. Minora*, p. 405 f.).

[3] Rymer, iii. 1073.

[4] For the events that follow the chief authority is the full *Chron. Angliæ*, 117–134, copied by Foxe, who had access to it, in *AM* ii. 800 f. Narratives written before the publication in 1874 of this long-lost *Chron. Angliæ* often go sadly astray.

[5] Not 30th May, as *FZ*, p. xxviii.

[6] For these bulls see Walsingham, *Hist. Ang.* i. 345–353; Wilkins, *Conc.* iii. 116–118, who omits those to Oxford and to Edward III.; Lewis, *JW*, pp. 46–49, 254–264, or Foxe, *AM* iii. 4–7.

[7] From a study of Wyclif's works the present writer is of opinion that Wyclif knew nothing of Marsiglio first hand.

[8] The schedule is best studied in Wyclif's *Protestatio* (see below), or in *FZ*, pp. 245–257. The first eight theses are taken almost verbally from Wyclif's *de Civ. Dom.*

[9] *Rotuli Parl.* iii. 19; E. Powell and G. M. Trevelyan, *The Peasants' Rising and the Lollards*, London, 1899, p. 57 f., gives the return.

[10] For this see *FZ*, pp. 258–271; partly translated in Foxe, *AM* iii. 54–56.

of God' of the goods of the Church. At this point 'silence was imposed upon him by the king.' Wyclif had probably been consulted by the Crown because of a paper recently published by him on the question of the oath sworn by the papal nuncio, Arnauld Garnier, on 13th Feb. 1372 that he would do nothing to the hurt of the kingdom.[1] Wyclif printed the oath and asked whether there was not a contradiction between its terms and the permission to collect monies for Rome.[2]

No steps had yet been taken to publish the bulls, though Thomas Brunton, bishop of Rochester,[3] told Wyclif in the hearing of many members of parliament that he had been condemned.[4] About this time Wyclif entered into controversy with a 'motley doctor' of Oxford, probably his accuser at Rome. This tract[5] is remarkably bold in tone. Wyclif calls upon 'the soldiers of Christ, especially the professors of evangelical poverty,' to rouse themselves against the claims of the papacy. On 28th Nov. parliament was dismissed,[6] and probably Wyclif returned to Oxford.[7] On 18th Dec. a mandate was issued to the chancellor of Oxford enclosing one of Gregory's bulls. The mandate ordered the chancellor to ascertain whether Wyclif had taught the theses in question, and to cite him to appear within thirty days at St. Paul's.[8] As the pope's bull demanded that Wyclif should be arrested,[9] the Oxford authorities were in a dilemma, for to obey 'would seem to give the pope lordship and regal authority in England.' So the vice-chancellor contented himself with ordering Wyclif 'to stay in Blackhall and not to go out.' Wyclif's theses were sent to the masters regent in theology, who 'all handed to the chancellor their conclusions.' They 'declared publicly in the schools that Wyclif's theses were true, though they sounded badly to the ear.' Wyclif replied that catholic truth should not be condemned because of its sound.[10] A few months later, on the occasion of a student-row, the vice-chancellor, who was a monk, was thrown into prison on the pretext 'that he had imprisoned John Wyclif at the mandate of the pope.'[11] About this time Wyclif published an edition of his *Protestatio* in a shortened, popular form.[12] The tract is really an appeal to the educated public against the pope's decisions. He also published an appeal to the nobility, in defence of disendowment, entitled *Speculum Secularium Dominorum*.[13]

The imprisonment by the Crown of the vice-chancellor of Oxford seems to have been intended as a warning to the papal commissioners that the Crown would not recognize papal penal jurisdiction. About the same time Wyclif appeared at Lambeth. The date is fixed by a statement of Walsingham[14] that it was shortly before the death of Gregory XI., *i.e.* before 27th March 1378, probably at the end of February, which would fit in with the summons given to Wyclif at Oxford to appear at St. Paul's. The queen-mother, Joan of Kent, sent a message to the bishops ordering them to abstain from pronouncing any final judgment. But the trial proceeded, and Wyclif put in a paper that he called a *Protestatio*[1] in which he expanded more fully the meaning of his theses. At the same time the citizens broke into the archbishop's chapel and tried to stop the trial. So the bishops contented themselves with prohibiting Wyclif 'from canvassing such theses in schools or sermons because of the scandal thereby given to the laity.'[2] Wyclif replied by publishing *Conclusiones Triginta tres de Paupertate Christi*, dealing with his idea of poverty and disendowment.[3]

In the autumn of 1378 Wyclif was seen, for the last time, in alliance with the Crown. On 11th Aug. 1378 by the order of the Government the sanctuary of Westminster was violated in order to capture two English knights between whom and the Government there had been a struggle over a Spanish captive, the count of Denia, and his ransom. One knight, Shakyl, was arrested—he had been enticed outside; the other, Haulay, was chased twice round the chancel and killed 'beside St. Edward's shrine.' Excommunications followed; and, as the outrage was popularly attributed to the hated John of Gaunt, London seethed with excitement. On 20th Oct. 1378 parliament met at Gloucester, and Archbishop Sudbury at once demanded satisfaction. The court retorted by claiming the right of arrest. The privilege of the Church was not denied, but the matter, it was pleaded, was one of debt, for which there were no rights of sanctuary. 'And on this there came into parliament doctors of theology and civil law who made argument against the prelates by many colourable and strong reasons.'[4] Among the doctors was John Wyclif, who interrupted the writing of his *de Ecclesia* to lay before parliament a defence of the Crown's action.[5] He claimed for the Crown a right to absolute obedience in all matters not contrary to God's law and, while admitting sanctuary for accidental homicide, subjects the right in general and of Westminster Abbey in particular to severe criticism. Shortly after this incident Wyclif finished his great treatise *de Ecclesia*. This was followed by a companion work, *de Officio Regis*, the two forming a complete exposition of his views on the relations of Church and State.

4. Break with the Mediæval Church.—The Great Schism in the autumn of 1378 flung Wyclif into complete antagonism to the papacy. Hitherto Wyclif had not disputed the spiritual primacy of the popes, though ready enough to attack papal pretensions and to speak ill of individual popes.[6] His position had been this: we must obey the pope as the vicar of Christ, but the vicar of Christ, who could have no temporal sovereignty, must be the holiest, the most God-enlightened man in Christendom. Moreover, 'no pope is to be believed unless he is teaching by the inspiration of God, or founding his utterances on Scripture.'[7] The whole authority of the office was thus determined by the pope's character as one of the elect, and, inasmuch as this knowledge was beyond human ken, could only be judged from his deeds. Obedience to the papacy was thus a matter of convenience and church order—a position in which Wyclif unconsciously closely followed Marsiglio in his *Defensor Pacis*.

The schism drew Wyclif from this standpoint. He had hailed the election of Urban VI. (8th April

5 Wyclif's defence of the Crown and his general attack on sanctuary was expanded by him into six chapters which he incorporated in his *de Ecclesia*, pp. 142–274.
6 *De Eccl.* p. 358; cf. *ib.* p. 366.
7 *De Apostasia*, pp. 65, 173. Wyclif's middle views on the papacy can best be studied in his *de Potestate Pape*, ed. J. Loserth, 1907.

1378) and had 'thanked God for providing our mother church with a catholic head, an evangelical man.'[1] But the tactlessness of the new pope, the breaking out of the schism by the election at Fondi on 20th Sept. of the French pope, Clement VII., and the subsequent conduct of Urban drew Wyclif into a fierce antagonism, the more bitter because he acknowledged that Urban had been lawfully chosen. This antagonism became complete when on 6th Dec. 1382 Richard II. authorized Bishop Despenser[2] to proclaim a crusade on Urban's behalf against the antipope.[3] The later development of this crusade,[4] its disgraceful attack upon Dunkirk, its defeat at Ypres, and the return to England in Oct. 1383 of the discredited host infused into all Wyclif's later writings a deadly hatred to the papacy itself. At first he attempted to save his position by maintaining that 'our Urban' was innocent of this 'crime,' which was really the work of the friars.[5] But, when this argument was cut away by Urban's deeds, he averred that the cardinals had no right to choose a man who acted contrary to God's will.[6] All his theories were wrecked by the spectacle of two popes each claiming to be the sole head of the Church, each labelling the other as antichrist 'like dogs quarrelling for a bone,' 'like crows resting on their carrion,'[7] each seeking to bring about a general Armageddon for the destruction of his rival. The writings of his last years, especially in 1383, are full of this theme.

Wyclif's break with the papacy might have been passed over as an extreme form of the Gallicanism of the age which culminated in the Council of Constance. But his anti-papalism developed side by side with his attack upon the central doctrine of the mediæval Church, transubstantiation. Wyclif's attack flung Oxford into an uproar, and the new chancellor, William de Berton,[8] in the autumn of 1379 or early in 1380,[9] called a council of twelve doctors, of whom six were friars, to consider Wyclif's heresies. Their verdict, published late in 1380, was a foregone conclusion.[10] It was read unexpectedly in Wyclif's presence while he was sitting in the schools of the Augustinians and 'determining the contrary.' On hearing the condemnation Wyclif was 'confused,' but he recovered himself sufficiently to say that 'neither the chancellor nor any of his accomplices could alter his convictions.'[11] He might have appealed to the Congregation of Regent Masters and from their decision to the Great Congregation of the University;[12] characteristically he appealed instead to the king. John of Gaunt hurried down and urged him to be silent.[13] Wyclif refused. He had done with his entanglement in the Lancastrian alliance, and on 10th May 1381 published a Latin defence of his views called the *Confessio*.[14] This was followed at Oxford by a series of determinations against him, three of which have come down to us.[1]

After the publication of his *Confessio* Wyclif left Oxford for ever, and retired to Lutterworth. To those last months at Oxford must be assigned the familiar tale of his illness and of his declaring to certain friars who came to counsel him: 'I shall not die, but I shall live and declare the works of the Lord.'[2] To this period also we assign the commencement by Wyclif and his assistants of his translation of the Bible, and the full organization of his Poor Priests, who, however, had already been at work for some years.[3] The Poor Priests were not laymen, as is so often assumed, but 'unauthorised preachers,' *i.e.* without a bishop's licence, who moved from place to place, carrying Wyclif's tracts and sermons with them. Clad in russet robes of undressed wool, without sandals, purse, or scrip, for a few years they became a power in the land until crushed out by the legislation of Archbishop Arundel and Henry V.

Meanwhile at Oxford on 30th May 1381 Berton was turned out of the chancellorship, and Robert Rigg[4] took his place. Rigg allowed full liberty to teach the condemned doctrines, and during the winter of 1381–82 feeling ran high. The flames were fanned by the Peasant Insurrection of the summer of 1381. Both parties sought to fasten upon the other the opprobrium of this revolt. The regulars accused Wyclif and brought forward alleged confessions of John Ball.[5] Nicholas of Hereford[6] and the Lollards retorted by accusing the friars. On 18th Feb. 1382 the friars appealed to John of Gaunt through Stephen Patrington.[7] As the duke returned no answer, the friars appealed to Courtenay. On 7th May 1382, when parliament assembled,[8] Wyclif laid before it a memorial. He claimed that England should obey no prelate unless such obedience agreed with Christ's law, that money should not be sent to Rome unless it could be proved from Scripture to be due, that the Commonwealth 'should not be burdened with new tallages' until the endowments of the clergy be exhausted, that the king should employ neither 'bishop nor curate' in secular business, that the temporalities of any bishop 'living notoriously in contempt of God' should be confiscated, and that no one should be excommunicated until it is proved that the sentence is according to 'God's law.'[9]

Along with this formal petition Wyclif prepared an English *Complaint*, which has come down to us in an incomplete form.[10] In this *Complaint* he deals with four only of the seven matters of his petition, but includes the request that 'Christ's

[9] The date of Wyclif's attack is usually placed later (Matthew, *Eng. Hist. Rev.* v. 328–330, in the summer of 1380, and most writers later still), following *FZ*, p. 104. The date will depend upon that of the Council of Twelve, usually placed (*e.g.*, *DNB* ix. 229) as early in 1382. But this date is too late (see *DNB* iv. 412). Berton was chancellor from 1379 to 1381 (*Eng. Hist. Rev.* v. 329), and the council must have been held within these limits and before the publication of Wyclif's *Confessio*. According to a note on the MS of *FZ*, p. 115, this was published on 10th May 1381.

teaching concerning the Eucharist, that this sacrament is very bread and also very Christ's body,' 'may be taught only in churches.'

To these attacks the new archbishop, William Courtenay, replied by summoning a committee to meet on 17th May in the Blackfriars. Nine bishops, sixteen doctors of theology, eleven doctors of laws, seven bachelors of theology, and two bachelors of laws were selected by Courtenay.[1] Of the sixteen doctors of theology all but one, and he a monk, were friars, several of them noted opponents of Wyclif.[2] Wyclif himself was not summoned to appear,[3] nor was his name mentioned. Twenty-four conclusions from his writings were produced which were deemed 'heretical' or 'erroneous.'[4]

On Wednesday 21st May the Committee met again. Between two and three in the afternoon a terrific earthquake shook the city. Courtenay pointed out that it was the effort of the earth to purge itself, 'though not without violence,' of heresy. Courtenay's happy interpretation saved the Committee, and Wyclif found it necessary to publish an interpretation in an opposite sense. 'The earth-din,' he maintained, was the outcry of the world against the heretic prelates and friars.[5] Henceforth Wyclif always called it in contempt 'the Earthquake council,'[6] so much so that Netter complained that Wyclif treated the earthquake as a miracle wrought for his benefit.[7]

On the day after the Earthquake Synod Courtenay persuaded Richard to admit into the final statute of parliament a chapter ordering sheriffs, upon certification from the bishops, to arrest and imprison all itinerant preachers. The ordinance had never received the consent of the Commons.[8] This was followed on 26th June by letters patent from Richard directed against the itinerant preachers.[9] When parliament reassembled on 6th Oct., protest was at once made against the pretended statute,[10] but to no avail, for in after years it was treated as still valid.[11] Action more constitutional was taken by Courtenay when on 30th May, a week after the Blackfriars Synod, he forwarded a mandate to the bishops bidding them publish Wyclif's condemnation 'with all possible speed.'[12]

5. Last years.—After the Blackfriars Synod Wyclif took no further public part in controversy at Oxford. On 30th July 1382 his followers, Nicholas of Hereford and Repingdon,[13] were excommunicated, but Wyclif's name was not inserted.[14] Possibly he owed his immunity to John of Gaunt. The idea that Wyclif, when summoned in Nov. 1382 before a Synod at Oxford, made a recantation[15] may be dismissed. In the minutes of the Synod[16] there is no such record. The whole story rests upon a blunder of Knighton,[1] who has confused an uncompromising defence by Wyclif of his views[2] with a recantation.

Nothing in fact more emphatically marks the hold that Wyclif still had upon the nation than the reluctance of Courtenay to push matters to the extreme. Wyclif was left to close his days in peace at Lutterworth. In the autumn of 1382 he was stricken with paralysis[3] and thereafter was largely dependent on his curates, John Horn and Purvey. But his pen was never more prolific than in these latter days. He published polemic after polemic, as well as finishing the *Summa* of his doctrines in thirteen volumes. With tireless energy he repeated all his old attacks, dwelling especially on the need of disendowment—this he carried to the extreme of demanding even the confiscation of the revenues of Oxford colleges[4]—holding up to ridicule the misdeeds of the friars and the unapostolic character of the papacy, and defending at length his views of the Eucharist, to the need of which sacrament he attached less importance than formerly.[5] In matters of Church organization he became completely critical and destructive. He seems to have been occupied with many works at once, dictating the main lines of thought and leaving to his disciples the necessary copying of material, a method which led to repetition and frequent inconsistency. In two of his *Sermons* on the same Gospel we have a totally different translation.[6] Several of his works, including the important *Trialogus* and his *Opus Evangelicum*, were still unfinished when the end came.

Wyclif's English writings form one of the special features of these last years. Abandoning Oxford and the appeal to the Schoolmen, he became a popular pamphleteer, trusting to his Poor Preachers to scatter the tracts broadcast. To this period also we must ascribe the publication of his English *Sermons*. Wyclif's last works are also marked by an extreme bitterness of tone, especially in his attacks against the friars.[7] To this he was aroused by the part they had taken in 1383 in Bishop Despenser's blundering crusade in Flanders, and by their attacks upon his Poor Preachers. Despenser's crusade also completed the break between Wyclif and the papacy. No words became too strong with which to express his detestation of the whole institution.

There are grounds for believing that the friars in their anger appealed to Rome and that Urban replied by citing Wyclif to appear before his court. All we know, however, is deduction from a reply or letter of excuse which Wyclif addressed to Urban VI., in reality a keenly ironical statement of his attitude towards the papacy. He excuses himself from obeying 'this unskilful summoning' because of his physical infirmities, for the 'king of kings has willed it that he should not go.' The reference is to a stroke of paralysis from which he suffered 'for two years before his death.'[8]

The account of Wyclif's death has been handed down by John Horn, his curate at Lutterworth after his stroke. In 1441 Horn gave his evidence to Dr. Thomas Gascoigne. He stated on oath that on 28th Dec. 1384 'as Wyclif was hearing mass

in his church at the time of the elevation of the host he fell down, smitten by a severe paralysis especially in the tongue so that neither then nor afterwards could he speak to the moment of his death.'[1] Three days later, Saturday, 31st Dec. 1384, he passed away.[2]

On 4th May 1415 the Council of Constance, acting on the request of an English Synod under Arundel held in the early spring of 1411,[3] condemned 260 propositions in Wyclif's writings and ordered 'his bones to be dug up and cast out of the consecrated ground, provided they could be identified from those of Christians buried near.'[4] After some years of delay the decree was carried out by the ex-Lollard Richard Fleming, bishop of Lincoln,[5] acting on the peremptory orders of Martin V. (9th Dec. 1427).[6] On 16th Dec. letters were sent by Martin V. to various mayors to assist.[7] So shortly after 25th March 1428 'his vile corpse they consigned to hell and the river (Swift) absorbed his ashes.'[8]

II. *TEACHING AND WRITINGS.* — **1. Philosophical.**—Wyclif's philosophical writings were written in his earlier Oxford career, when he was the 'flower of Oxford' Scholasticism. At a later date they were collected into a *Summa*. Some of the works have come down to us—*e.g.*, *de Compositione Hominis*—rather as notes for lectures or disputations than as mature treatises. All his works abound in quotations, often vague and inaccurate, from the accepted authorities of his day, including the great Arabians.

Judged as a Schoolman, Wyclif belonged to the moderate realists. He had learned much from the criticisms of Ockham,[9] of whom he speaks with respect. But the Platonism to which he leaned he had derived from St. Augustine, though in his method he bowed, as did all Schoolmen, to the authority of Aristotle. To Wyclif nominalism in any form was an impossible creed. He held that names stand for realities.[10] He therefore held, as his many writings on the subject show, that the most important question in metaphysics was that of universals.[11] As with all realists, Wyclif was at times in danger of pantheism. When he states that body and soul are united eternally, it is because he considers man as *materia prima*, 'in consequence created in the beginning of the world,' whose individuality therefore as distinct from the common 'form' of humanity becomes unreal and phenomenal, or at any rate hard to explain.[12]

2. Political and social.—(*a*) *His theory of 'dominion.'*—Shortly after his return from Bruges Wyclif commenced the expansion of his *Determinatio* into two large treatises, the *de Dominio Divino*—which work was intended to serve as an introduction to the *Summa*—and the *de Civili Dominio*. In both we note the influence upon Wyclif of Richard Fitzralph, archbishop of Armagh.[13] Wyclif 'has added no essential element to the doctrine which he read in the work of his predecessor.'[1] Wyclif commences his *de Dominio Divino* with a distinction between 'lordship' and 'use,' in which he followed, through Fitzralph, the views of William Ockham, and the Spiritual Franciscans to whom the distinction had been fundamental in their struggle with John XXII. 'Lordship' is the prerogative of God and is never separated from possession. The possession of the creature is always held subject to due service to the lord in chief; it is but the possession of a steward. Thus Wyclif works out by use of feudal ideas the same belief in the duties of property which modern reformers attempt to reach by other means. From this fundamental position it is an easy transition to the corollary that dominion is founded on grace and that mortal sin is a breach of tenure and so 'incurs forfeiture.'[2]

Wyclif's doctrine would have led to anarchical consequences, as indeed was pointed out to Hus at Constance,[3] had it not been for Wyclif's careful distinction between 'dominion,' which belongs to the righteous man alone, and power, which the wicked may have by God's permission. From this main thesis 'that every righteous man is lord over the whole sensible world' it was an easy step to Wyclif's doctrine of communism.[4] But Wyclif always insists that the righteous must in nowise attempt to acquire their inalienable rights by force. He had yet to learn, through the Peasants' Revolt, that a smouldering fire and a powder magazine are dangerous neighbours. When the blaze came, he was, in consequence, charged with being responsible. The charge was unjust; the two movements were coincident.[5] The confessions of John Ball were fictitious; nevertheless the Peasants' Revolt (1381) was but the rude translation into the world of practice of a theory of 'dominion' that destroyed the 'lordship' of the wicked. 'It is to Wyclif's credit that, when the Peasants were defeated, he dared to own his sympathy with their wrongs and to put in a plea for mercy.'[6] But sorrow for the woes of the poor runs through all his English writings like a wail of love and redeems his fiercest denunciations, his most impossible dreams. 'Poor men,' he cries, 'have naked sides, and dead walls have great plenty of waste gold.'[7]

(*b*) *Church and State.*—His theory of 'dominion' drew Wyclif into an examination of the limits of obedience[8] and of the prerogatives and duties of the kingly office in his *de Officio Regis*, in reality his most complete treatise on the relations of Church and State. The dignity of the king, he held, was derived immediately from God. The king represents the glorified and therefore ruling Christ, the priest the suffering and submissive Christ; the king represents the will, the priest the love of God.[9] As God's vicar the king has supremacy over the clergy.[10] Episcopal jurisdiction is derived from the king,[11] and the king may inquire into all sins[12] and must withdraw temporalities from those in sin—a duty which Wyclif soon widens into that of general disendowment. By His obedience to Pilate Christ has shown that even tyrants must be obeyed.[13] Henry VIII. could have asked no more thoroughgoing defence of Erastianism or of the divine right of kings against

13 This is the origin of Wyclif's famous fatal contention that 'God must obey the devil,' Walsingham, pp. 52, 58.

Church and pope than this treatise, with its claim that it is lawful to pull down a church to build a (military) town, or to melt chalices to pay for soldiers.[1]

3. **Theological.**—(*a*) *Doctrine of the Church.*—Wyclif's realism lay at the root of all his views of the Church and its sacraments. It led him to warn his hearers against the nominalist heresy that there was no Church before the incarnation of Christ.[2] It drew him into an extreme determinism. Above all it brought him into collision with the prevailing nominalist heresies concerning the Sacrament. For the nominalist, who held that the universal name was but a mere *flatus vocis*, found it easy to believe in the Scotist doctrine of the annihilation of the substance of the elements. To Wyclif such an idea was an absurdity; his whole philosophical system fell to the ground with its mere possibility. If in one case accidents can exist without substance, why postulate substance at all?[3] Hence his realism is a protest against any doctrine of illusion. So, in the interpretation of his ideas, we must remember that, when Wyclif speaks, as he sometimes does, of the host as a 'sign,'[4] he does not use the word in any Zwinglian sense. With him every figure is a reality, with its own real though ideal existence, while every real is also of necessity universal. To this philosophic basis we may also attribute Wyclif's complete repudiation of the nihilianism as to the humanity of Jesus which through Peter Lombard's *Sentences* had infected the mediæval Church. He identifies Christ, especially in his early scholastic treatise, *de Benedicta Incarnatione*, with the *communis homo*, or universal man, who is identical with all His brethren.

Wyclif's views on the Church are best studied in his *de Ecclesia*, written about Easter 1378.[5] The key to the whole is his rigid predestinarianism, in which he shows the influence upon himself of Archbishop Thomas Bradwardine's *de Causa Dei*.[6] Like Bradwardine, he bases everything upon the all-conditioning absolute will of God. The Church Militant he defines as the whole number of the elect, containing 'only men that shall be saved,' and who cannot as predestinate cease to be such even by mortal sin, for theirs is the grace of final perseverance.[7] He adds that no man, not even a pope, 'wots whether he be of the church or whether he be a limb of the fiend,'[8] nor will he allow that 'the church can ever be called the whole body (*universitas*) of faithful travellers.' In this narrower view Wyclif shows a marked contrast to Marsiglio. He refuses therefore to allow that 'Christ is the head of all men, both of the faithful and unfaithful,' but claims that this is restricted to the predestinate.[9] Nevertheless he guards his doctrine from some of its dangers by his warning that, 'as each man shall hope that he is safe in bliss, so he should suppose that he be a limb of holy Church.'[10]

From this basis of the Church certain conclusions followed. The pope is not necessarily the head of the Church, for it is not certain that he is a member of it. His position is therefore determined not by his institutional status but by his conformity with the tests of the predestinate, especially harmony with the teachings of the Bible.[1] Much also of the Catholic system as then believed was swept away as needless for the predestinate and useless for the foreknown—*e.g.*, prayers for the dead, the cult of saints, absolution—nor is he clear as to the value of the priesthood, the sacraments, or even of prayer which 'standeth in good life' and 'holy desire to do God's will.'[2] We may note that Wyclif's theory of spiritual values grounded in worthiness, resting on the absolute Divine Will, was logically one with his theory of dominion grounded on grace, and led to a sweeping doctrine of disendowment.

(*b*) *Doctrine of the Eucharist.*[3]—In the mediæval theory of the Eucharist there was at consecration a twofold movement: the cessation of the bread and the creation of the Body. Wyclif's difficulties lay with the former of these. It was acknowledged that as regards the cessation of the bread the movement was not complete, for it did not extend to the accidents. The *noumenon* was changed, but the *phenomena* remained. Explanations of this mystery varied. Thomas Aquinas answered the question by his conception of *quantitas*—or, as we should now term it, 'subsistence' as distinct from 'substance.' 'Quantity' is not extension or a mere abstraction or a mere mode of being. It may be defined as the force which makes extension, *vis extensiva materie*. At the words of consecration 'quantity' takes the place of the substance of the bread and upholds the accidents, and therefore whatever the bread can do, even to feeding the body, is performed by the 'quantity' that remains.

The same question was answered by Duns Scotus, following Ægidius Romanus,[4] by his doctrine of absolute accidents, maintained, on the annihilation of the substance, by the unconditioned will of God. The Eucharist is thus the cons ant repetition of a stupendous miracle. To Wyclif as a realist the annihilation of anything was inconceivable.[5] At first he fell back in his defence of the Real Presence upon the Thomist idea of 'quantity,' then prevalent in Oxford, though he subjected it later to considerable criticism.

It is not possible out of Wyclif's later writings to deduce a consistent system. Of the Real Presence he had no doubt, and looked upon its denial as a renewal of the heresy of Berengarius,[6] but he lost himself in trying to explain his position. He was driven by his nominalist opponents from position to position until he put forth a theory practically identical with consubstantiation, full of hair-splitting distinctions. He regarded as

1 *De Off. Reg.* p. 185; cf. *de Eccl.* p. 376 f.
2 *De Eccl.* chs. 17, 18, also p. 123 f.
3 *De Euch.* p. 69 f.
4 *Ib.* p. 16, *de Apost.* p. 223.
5 Wyclif published in 1383 a compressed version which he called *de Fide Catholica* in *Op. Minora*, p. 98 f. This was widely disseminated in Bohemia.
6 For Bradwardine, who is not mentioned by Ueberweg, see *DNB* vi. 188, and the preface by H. Savile in his ed. of T. Bradwardine's *de Causa Dei*, London, 1618. Wyclif differed considerably from Bradwardine in his definition of free will (*de Ente*, p. 152 ff.).
7 *SEW* iii. 447; *de Eccl.* pp. 74, 111, 140.
8 *De Eccl.* pp. 3, 5, 29, 130, 464; cf. *SEW* iii. 339.
9 *De Eccl.* p. 57 f.; cf. *SEW* iii. 395; *EWW*, p. 198.
10 *EWW*, p. 350.

1 *De Eccl.* pp. 84, 88; *de Apost.* p. 200; *SEW* iii. 505.
2 *EWW*, pp. 76, 274; *SEW* iii. 219, 425.
3 Wyclif's earlier views are best summed up in *PZ*, pp. 104–109, 115–132. The last is of special importance, and should be studied by all. His later and larger Latin works add little but expansion and repetition to the above, and may be passed by save by the specialist. But the reader should not neglect Loserth's Introduction to the *de Eucharistia*, London, 1892, or M. H. Dziewicki's Introduction to the *de Apostasia*, do. 1869. (Of the body of the *de Apost.* chs. xv. and xvi. are the most valuable; of the *de Euch.* pp. 15, 16, 18, 53, 83, 84, 85, 90, 93, 99, 111, 113, 123.) Cf. also Dziewicki's Introduction, *de Simonia*, London, 1898, xvi–xxi. His views in English are best summed up in *SEW* iii. 426, 403–410, 502. This last is practically identical with the *Wycket*, which, if written by Wyclif, represents a very late phase, almost Zwinglian in outlook. The present writer inclines to ascribe it to his followers. For other important passages of Wyclif dealing with the Eucharist, see *EWW*, p. 465, *SEW* ii. 358, 386, 404, iii. 484, 500, *de Blas.* 26–30, 287, *Trial.* iv. 247–255, *Serm.* ii. 453 f., 458 f., 461–463. For the relation of Wyclif's doctrines of space and time to his doctrine of transubstantiation see M. H. Dziewicki, *Johannis Wyclif Tractatus de Logica*, London, 1893–96, iii. Introd. vii–viii. The withholding of the cup from the laity, which played so important a part in Bohemia, did not trouble Wyclif.
4 *Theoremata de Corpore Christi*, Venice, 1502, prop. v. 38 f.
5 *De Ente*, p. 288 f. 6 *De Apost.* p. 79.

beyond question 'that Christ lies hidden in the elements,' that we can 'see' Him there 'by faith,' and receive Him in the host as the sun's fire is received through a sphere of crystal, and that Christ is in every part of the host, as when you break a glass and in every part 'thou mayest see thy face, and thy face not parted' or 'as a man may light many candles at one candle.' But the words of consecration 'make the occasion only' of Christ's presence, who is there 'not identically according to substance,' but 'really and truly according to His whole humanity.' On the logical side Wyclif never wearied of pouring scorn upon the idea of 'accidents without subject.' Such a doctrine seemed to him to strike at the root of all being, including that of the saints, and by throwing a doubt on the testimony of our senses to discredit all science.[1] Unfortunately in his abhorrence of all Scotist annihilations he used language that easily became twisted, especially by his more ignorant followers. That which is not or which is mere phantasm is necessarily less perfect than that which is, especially that which has life. Hence the unfortunate comparisons of the host to 'rat's bread,' 'spiders,' and the like,[2] especially by the later Lollards—*e.g.*, John Badby.

Along with this main position Wyclif advocated other doctrines that seemed to him corollaries. In his earlier years he insisted on the sacramental function of the priest,[3] though regarding it as inferior to the duty of preaching, in Wyclif's view the highest duty of all clerics.[4] In his later developments he allowed that under certain circumstances the Eucharist might be consecrated even by a layman.[5] Nor did he always make clear even to himself the relation of sacramental grace to character and to foreknowledge. At one time he maintained that the foreknown even when in actual sin can administer the sacrament with profit to the faithful, though to his own damnation, Christ supplying all the defects of the priest;[6] but later that the value depended on the character of the priest and the nature of his prayers—in a word, on the priest 'being consecrated by God.'[7] But he is careful to redeem this last conclusion from perilous uncertainty by pointing out that the sanctity, which comes from Christ's presence, is always the same.[8]

4. Wyclif and the Bible.[9]—Even in his earlier days Wyclif, following Ockham, appealed to the Bible as the primary, unconditional, and absolute authority, of universal range and entire sufficiency. He differed from Ockham in distinguishing between the Bible and the teaching of the Church, which Ockham had regarded as in harmony. He further asserted the right of every man to examine the Bible for himself. This was a corollary from his theory of 'dominion.' Every man was God's tenant in chief holding direct under 'God's law,' Wyclif's usual title for the Scriptures. He had a right therefore to know on what conditions he held. Nor would he allow that the tradition of the Church is the standard of interpretation. He sweeps away therefore the whole mass of tradition, doctrine, and ordinance, whether papal or conciliar, which had claimed to be of equal or superior value to Scripture. Nor has he any place for a doctrine of development.

Wyclif's appeal to the Scriptures was followed by the translation under his inspiration of the whole Bible from the Vulgate into English.[1] The first form of this translation would seem to have been a translation of the Sunday Gospels, still extant in his English *Sermons*. Independently of this his followers brought out a version of the whole Bible. The exact share that Wyclif took is uncertain, and probably was slight. But the fact of this translation is beyond doubt, though recent research has shown that the so-called Wyclif version, the first of the complete Bible, had been preceded by other partial versions. Translation of the Bible was in the air. Wyclif's first version, a large part in whose production was taken by Nicholas of Hereford, was very unsatisfactory—a verbal, almost gloss-like, rendering into a midland dialect, without clearness of expression or idiomatic use of language. Accordingly before 1388 the revision of Wyclif's version was begun by John Purvey, Wyclif's secretary at Lutterworth, who smoothed out the harsh literalness of the original, changed its dialect to the uninflected type common at that time at Oxford, and contributed, about 1395, a notable General Prologue.[2] The two versions of Wyclif and Purvey have often been confused, and the influence of Wyclif's translation upon the development of the English language has been exaggerated. In later years the existence of Wyclif's version became almost forgotten, and its authorship unknown, though the translation of Purvey's version into Scots by Murdoch Nisbet, about 1520, proves the latter's continued influence.[3]

III. *INFLUENCE.*—**1. In England.**—During his lifetime Wyclif's influence passed through marked changes. At Oxford there was a time when he was acknowledged by his enemies to be supreme,[4] and in 1378 he bade fair to lead the nation in his own direction. But after that year, with the promulgation of his doctrine of the Eucharist, his influence rapidly waned both at Oxford and in the nation at large. Men woke up to find whither he was leading them, while the growing violence of his views estranged his more moderate adherents. Moreover, his influence was local rather than national. South of the Thames and north of the Trent it scarcely existed. Scholasticism also proved fatal to him. His prestige as a Schoolman, which first secured him a hearing and gave weight to the movement he started in Bohemia, ultimately reacted against the success of his reforms. When driven out of Oxford, he found no suitable environment for the spread of his ideas, and his intellectual type of piety lacked that

2 *De Apost.* pp. 172, 205.
3 *De Euch.* p. 99, *de Eccl.* p. 457 f.
4 *SEW* i. 288, iii. 143; *EWW*, pp. 111, 189, 441; *Serm.* iv. 47; *Polem. Works*, i. 261.
5 *Trial.* p. 280.
6 *De Eccl.* pp. 448, 456 f.
7 *De Euch.* p. 113; *SEW* iii. 426. But in *SEW* iii. 227 the opposite is held.
8 *De Euch.* p. 114.
9 Wyclif's views on the authority of the Bible can be briefly studied in his *de Veritate Sacræ Scripturæ*, 3 vols., ed. R. Buddensieg, London, 1905, *Op. Evang.* i. 79, 368, *Trial.* p. 64, or, in English, *SEW* i. 225, ii. 343, iii. 186, 362.

1 The older views on Wyclif's version are set forth in Forshall and Madden's great ed. (1850) of Wyclif and Purvey's versions. For recent research on the partial versions of R. Rolle of Hampole and others see *Camb. Hist. Eng. Lit.*, Cambridge, 1908–16, ii. 43–48; A. C. Paues, *Fourteenth-Century English Version*, Cambridge, 1902; a less valuable reprint in 1904; H. R. Bramley, *Rolle's Psalter*, Oxford, 1884; M. J. Powell, *The Pauline Epistles contained in MS Parker 32* (E.E.T.S.), London, 1917, and, above all, M. Deanesly, *The Lollard Bible and other Medieval Biblical Versions*, Cambridge, 1920. Cardinal Gasquet's scepticism (*The Old English Bible*, London, 1897) has been answered by F. Matthew, *Eng. Hist. Rev.* x. 91–99, *Church Quart. Review*, li. [1900–1901] 138, 265, and Miss Deanesly. For early references to Wyclif's version see Knighton, *Chron.* ii. 152; Wilkins, *Conc.* iii. 350, 498; Lyndwood, *Provinciale*, ed., Oxford, 1679, p. 286; and *Hist. et Monumenta J. Hus*, Nuremberg, 1558, i. 108. Gasquet's scepticism originated with Sir T. More, *Dialogus* (*Works*, London, 1557), i. 233, 241.

2 Deanesly, p. 275 f.; and for the proofs of Purvey's authorship, *ib.* pp. 260–267, 376 f. Gasquet's arguments were founded on failure to note the Lollardy of this General Prologue.

3 *The New Testament in Scots*, ed. T. G. Law, 2 vols., Edinburgh, 1901.

4 Knighton, *Chron.* ii. 151; *Eulog. Hist.* iii. 345: 'flos Oxoniæ.'

personal magnetism which might have drawn the people to him.

To the end of his life Wyclif 'stammered out many things which he was unable clearly to make good.' He wanders about in worlds not realized. Like other men who have ventured on the great task of forming a scheme of religion for themselves, Wyclif often is and must be inconsistent. All attempts to hammer out of his writings a symmetrical body of doctrine must fail because they ignore the successive, contradictory stages of his own development.

Considered as a statesman, Wyclif was unfortunate in that there was no deep national movement with which he could ally himself. If he could have had in England the same conditions as in Bohemia, his success might have been equal. But in England the national movement lost itself in the follies of the Hundred Years War with France, and Wyclif mistook the selfish John of Gaunt for a leader. If in this Wyclif showed an unfortunate opportunism, at other times he lost much by mental detachment. In his idealism he even regarded the loss of Oxford with indifference, fatal though it proved to his cause. Like most Schoolmen, he trusted too much in his logic, and allowed it to lead him too far. We see this in his proposal to include the universities in his scheme of disendowment, and in his advocacy of a system of voluntaryism which would have reduced the clergy to beggars, to the level, in fact, of the mendicant friars whom in his last years he ceaselessly denounced, but with the spirit of whose founder he was always in more sympathy than he knew. Another illustration will be found in his demand that the life of the priests should be purely spiritual. He wished to narrow down their studies at the university to theology merely; 'the lore that Christ taught us is enough for this life; other lore,' even mathematical studies, should be 'suspended.'[1] Thus Wyclif destroyed his influence among the educated and reduced his movement to an illiterate sect[2] which in the hundred years after his death slowly lost balance and influence, though surviving, in spite of persecution, to the dawn of the Reformation. Nor did he know how to gain the reform that lay next to hand by keeping back ideas not immediately practicable. He failed also to see the injury he did his cause by mixing himself up with doubtful transactions, as in the affair of Shakyl and Haulay. He allowed his hatred of the false to get the better of his judgment, while by the violence of his language he estranged many. But the vehemence of his temper was not without its advantages. A calmer spirit would have counted the cost or awaited the future; Wyclif, who felt deeply the needs of the present, placed himself at the head of a forlorn hope.

We believe that the failure of Wyclif's premature reformation was, on the whole, for the good of the Church. His conception of the Church was too Erastian, his claim for the royal supremacy too absolute, and would have made the Church a mere department of the State. The unscrupulous pillage of the Church by Henry VIII. and Edward VI. was but slight compared with the disaster that would have followed an immediate acceptance of Wyclif's schemes and theories.

Finally, Wyclif's revolt was too negative. He swept away rather than established, though in his assertion of the supreme authority of Scripture he laid the foundation upon which a later age should build. But his teaching, though containing the principles of the 16th cent. Protestants, lacked the definiteness of their theological reconstruction. He abolished existing forms of Church government without devising, like Calvin, any scheme that should take their place. As his crude views on the marriage of brothers and sisters show, he was an individualist without the social instinct.[1] Viewed as an evangelist, he lacks the consciousness of the reality of sin. His doctrine that sin is a negation, 'that it has no idea,' linked on Wyclif the realist with the philosophers and St. Augustine, but proved a poor substitute for conversion. He identifies knowing and being, and in consequence his theology is intellectual and ethical and, unlike St. Augustine's, lacks a sufficient foundation in grace.[2]

2. **In Bohemia.**—It was in Bohemia that Wyclif's influence was greatest and, if the Moravians be included, most abiding. The marriage of Anne, the sister of Wenzel, king of Bohemia, to Richard II. of England on 14th Jan. 1382 led to much Czech intercourse.[3] On 4th March 1388 Adalbert Ranco founded in his will scholarships at Oxford for Czech students.[4] By these students the philosophical works of Wyclif were introduced into Prague shortly after Wyclif's death. In 1401 Jerome of Prague brought back from Oxford Wyclif's *Dialogue* and *Trialogus* together with some lesser works,[5] and introduced the writings to Hus, who had previously known only the philosophical works, five of which, written out in his own hand in 1398, are now at Stockholm.[6] Under the influence of Hus the influence of Wyclif soon became a dominant force in Bohemia, and large sums were given for corrected copies of the works of the English doctor.[7] Hence often the only MSS of works of Wyclif are now in Prague or Vienna, whither they were carried after the Thirty Years War. Of Wyclif's *de Ecclesia*, for instance, only one small fragment is found in Dublin; the MS at Vienna was 'corrected' at Oxford on 1st Feb. 1407 by two Czechs, and the only other MS of any value is at Prague.[8] The Vienna MS of his *de Officio Regis* belonged to a Czech student who took his degree in 1395. Other illustrations of the intercourse between English Lollards and Bohemia are found in the correspondence between Sir John Oldcastle, the most prominent Lollard of the generation after Wyclif,[9] and the Czech leaders in 1410, and Hus and Richard Wyche.[10] Hus's dependence on Wyclif is very complete. His *de Ecclesia* is taken almost word for word from that of Wyclif—with the omission of the incident of Haulay and Shakyl. By a strange historical injustice the doctrine of the Plagiarist, because linked with a national consciousness, came to be regarded as almost the original, while Wyclif, from whom Hus had borrowed, receded into obscurity, especially after the failure of Oldcastle's rebellion. No doubt this may be explained by the troublous wars and crusades which the doctrines caused in Bohemia.[11]

[10] *Eng. Hist. Rev.* v. 530–544; H. B. Workman, *Letters of John Hus*, London, 1904, pp. 32–38.
[11] For Hus and the Hussites, and the dependence on Wyclif, see *ERE* vi. 886 f. This dependence is often exaggerated. See Workman, *The Letters of Hus*, pref. p. ix, who points out that both Wyclif and Hus were alike copying from Gratian's *Decretum*.

LITERATURE.—(*a*) *Contemporary records.*—The most important of these is the collection of documents bearing on Lollardism made by the famous Carmelite, Thomas Netter of Walden or possibly by Stephen Patrington (*FZ*, pref. p. lxxvi), with additions by Netter, about the year 1423. Of this work, entitled *Fasciculi Zizaniorum*, the only existing MS, now in the Bodleian, bearing date 1439, was freely annotated by Bishop Bale, and from Bale was borrowed by Foxe. In 1858 it was published by W. Shirley in the Rolls Series. Another work by Netter of great value for the study of Wyclif's doctrines is his *Doctrinale Antiquitatum Fidei Ecclesiæ Catholicæ* (best ed. by F. B. Blanciotti, 3 vols., Venice, 1757, with valuable introduction and life of Netter), written by him in 1426–28. Other records published in the Rolls Series of great importance are the *Chronicon Angliæ*, ed. E. M. Thompson, London, 1874; Thomas Walsingham, *Historia Anglicana*, ed. H. T. Riley, 2 vols., do. 1869; Henry Knighton, *Chronicon*, ed. J. R. Lumby, 2 vols., do. 1889–95 (the last is of special value for matters connected with Leicester, of whose abbey Knighton and his unknown continuator were inmates); also, in the same series, the continuation of the *Eulogium Historiarum*, ed. F. S. Haydon, 3 vols., London, 1858–63. The usual sources of history, *Calendars of Patent Rolls, Calendars of Close Rolls, Calendars of Entries in Papal Registers, Rotuli Parliamentorum*, must not be neglected, while *Piers Plouman* (ed. W. W. Skeat for the E.E.T.S.) is indispensable for the knowledge of the age. D. Wilkins, *Concilia Magnæ Britanniæ et Hiberniæ*, 4 vols., London, 1737, iii., though badly edited, is of great value. The bishops' registers, which might throw much light, for the most part have not yet been printed—*e.g.*, the registers of Lincoln. For extracts from those of Courtenay we are still dependent on Wilkins. Wyclif's own writings are strangely impersonal and give little assistance to his biographer.

(*b*) *Wyclif's writings.*—Wyclif's voluminous writings have only recently become accessible in print, and some are still unpublished. The MSS of the Latin works for the most part were in Prague or Vienna, while the English works in British libraries, especially at Dublin and in Corpus Christi, Cambridge, were neglected. The earliest work of Wyclif to be printed was his *Trialogus* (under the title *Dialogorum libri quattuor*) at Basel on 7th March 1525, probably by Frobenius, reprinted in 1752 by J. G. Vierling, Frankfort and Leipzig, under the inspiration of P. W. Wirth. An English tract on the Eucharist, *The Wycket*, usually ascribed to Wyclif, was printed at Nuremberg in 1546, reprinted by Coverdale, London, 1548, 1550. In 1608 Bodley's first librarian, Thomas James, published at Oxford Wyclif's *Two Short Treatises against the Orders of the Begging Friars*, and in 1612 the *Wycket* was reprinted at Oxford. Apart from the publication in his appendix of a few short pieces by J. Lewis in 1720 and of Purvey's *New Testament* by J. Lewis in 1731 no other original work of Wyclif either in Latin or in English was printed for over two centuries, unless we may count the reprint of Purvey's *New Testament* by H. Baber, London, 1810, and S. Bagster, do. 1841. With his customary ill-luck, the first sign of revived interest was the publication of a spurious fanatical tract, probably the work of some Spiritual Franciscan, entitled *The Last Age of the Church*, and attributed by its editor, J. H. Todd, to Wyclif (Dublin, 1840; republished by Wilmot Marsh, *Biblical Versions of Divine Hymns*, London, 1845, p. 221 f.). This work deceived many and did not conduce to a higher estimate of the Reformer. In the same work Wilmot Marsh also published one of Wyclif's sermons on the Annunciation (pp. 91–93). The long neglect of Wyclif and Purvey's English versions of the Bible was broken by Lea Wilson's ed. of Wyclif's *New Testament*, London, 1848, and by the publication at Oxford in 1850 of the fine edition of the whole by J. Forshall and F. Madden in 4 vols. Of the Old Testament no part had hitherto been printed except Purvey's tr. of the Song of Songs, by Adam Clark in his *Commentary*, London, 1808. In 1851 Todd printed at Dublin *Three Treatises of John Wyclif*, namely, 'Of the Church and her Members,' 'Of the Apostacy of the Church,' and 'Of Antichrist and his Meynee.' In 1863 G. V. Lechler published at Leipzig Wyclif's *de Officio Pastorali*, and in 1869, at Oxford, his *Trialogus*. In 1865 W. Shirley pointed out what had yet to be done by his *Catalogue of the Original Works of John Wyclif*, Oxford. Though many of its details need correction, it is still of great value and superseded the inaccurate lists in J. Bale, *Scriptorum illustrium Majoris Brytanniæ Catalogus*, 2 vols., Basel, 1557, i. 451 f.; J. Bale, *Index Britanniæ Scriptorum*, ed. R. H. Poole and M. Bateson, Oxford, 1902; or T. Tanner, *de Scriptoribus*, London, 1748, p. 761 f. Between 1869 and 1871 Thomas Arnold edited for the Oxford University Press *The Select English Works of John Wyclif* in 3 vols. Several of the works included are by disciples and not by Wyclif himself.

On this matter of authorship no decisive opinion is yet possible. The student should note the able paper of E. D. Jones in *Anglia*, Halle, xxx. [1906] 261 f., and J. E. Wells, *Manual of the Writings in Middle English*, Yale, 1916, ch. 12. The approach of the fifth centenary of Wyclif's death brought home to English scholars the disgrace of their continued neglect. In 1880 F. D. Matthew brought out for the Early English Text Society *The English Works of Wyclif hitherto unprinted*, but much that is here included should be rejected. In the same year R. Buddensieg published at Gotha Wyclif's *Tractatus de Christo et suo adversario Antichristo*. At last in 1883 the foundation of the Wyclif Society led to the publication of Wyclif's more important Latin works. With but indifferent support from the public the society has brought out some 30 volumes of Wyclif's Latin works. To the more important of these reference has been made in our text. Their various prefaces are of great value, though often the works are dated too early owing to ignorance of the date of Wyclif's doctorate.

For the literature and views of the later Lollards reference should be made to the *Twelve Conclusions* presented to parliament in 1394. For this document, probably the work of J. Purvey, see *FZ*, pp. 360–369; Wilkins, *Concilia*, iii. 221–223; and H. S. Cronin, in *Eng. Hist. Rev.* xxii. [1907] 292–304. For the reprobation by Boniface IX. see *Cal. Papal Letters*, iv. 515. To Purvey has also been assigned the *Ecclesiæ Regimen*, published in 1851 by J. Forshall with the title *Remonstrance against Romish Corruptions . . . in 1395*, London, 1851. The work is really of composite origin, its kernel consisting of the *Thirty-Seven Conclusions* of earlier date, the authorship of which is assigned in the flyleaf of the only existing MS to Wyclif. For this work see *Eng. Hist. Rev.* xxvi. [1911] 738–749. A work of considerable interest is *The Lantern of Light*, written after 1408, ed. 1917 by L. M. Swinburne for the E.E.T.S. This work is far more restrained in its judgments than Wyclif. About the same time there was brought out *An Apology for Lollard Doctrines*, ed. J. H. Todd, Dublin, 1842, and assigned to Wyclif. But the most interesting Lollard document is the *Examination of Master William Thorpe*, written by himself in 1407. This valuable autobiography was first edited 'from a text copied out and corrected by Master William Tyndale' by Foxe (*AM* iii. 249–285). It is also found in *The Select Works of John Bale* (Parker Soc.), Cambridge, 1849, pp. 62–133; in E. Arber's *English Garner*, 8 vols., London, 1895, vi.; and in A. W. Pollard, *Fifteenth Century Prose and Verse*, do. 1903, pp. 97–167.

(*c*) *Lives of Wyclif.*—The first life of Wyclif was that of Foxe in his well-known *Acts and Monuments* (best ed. by J. Pratt, 8 vols., London, 1877). Though the work of a partisan, it is still of value for its many official documents. From Foxe and Bale all other 'lives' were compiled, including that of T. James, *An Apologie for John Wicklyfe*, Oxford, 1608. The prejudiced references of Anthony Wood and T. Hearne culminated in the publication of *The Pretended Reformers*, by Matthias Earbery, London, 1717. This scurrilous work was really a translation of A. Varillas, *Histoire du Wiclefianisme*, Lyons, 1682. Its only importance lay in its leading John Lewis, 'minister of Margate' (for whom see *DNB* xxxiii. 186 f.), to write his valuable *History of the Life and Sufferings of the Reverend and Learned John Wicliffe*, Oxford, 1720, 1723, and 1820. Its collection of documents made it for over a century the only life of Wyclif of value. In 1754 the first German biography of Wyclif, *D. Johannes (sic) Wiclef wahrhafte und gegründete Nachrichten von seinem Leben, Nachsaetzen und Schriften*, was published by P. W. Wirth. In 1823 Robert Vaughan brought out *The Life and Opinions of John de Wycliffe* in 2 vols., London, a work superseded by the writer's more mature judgments in *John de Wycliffe, D.D.: a Monograph*, do. 1853. Vaughan's work showed industry and sympathy, but suffered from his limited acquaintance with Wyclif's writings and with English history. Passing by as of little value C. W. Le Bas, *Life of Wiclif*, London, 1832; S. A. J. de Ruever Gronemann, *Diatribe in Johannis Wicliff reformationis prodromi, vitam, ingenium, scripta*, Utrecht, 1837; O. Jäger, *John Wycliffe*, Halle, 1854; A. Jeep, *Gerson, Wiclefus, Hussus inter se comparati*, Göttingen, 1857, we come in 1858 to W. W. Shirley's valuable study in his introduction to his *Fasciculi Zizaniorum*. In the same year G. V. Lechler published at Leipzig an inauguration thesis, *Wiclif, als Vorläufer der Reformation*. This was followed by his *Johann von Wiclif und die Vorgeschichte der Reformation*, 2 vols., do. 1873. Lechler's knowledge of English mediæval life and history is very imperfect, and much has come to light since he wrote. But no student, except possibly J. Loserth, has ever surpassed Lechler in his intimate knowledge of Wyclif's writings and theological system. Though in many places misleading, Lechler's is still the only authoritative life of Wyclif (tr. into English, abridged, by P. Lorimer, *John Wiclif and his English Precursors*, 2 vols., London, 1878, new ed. 1 vol. in 1881, 1884; to this ed. the references in the art. have been made). The following, some written with a view to the quincentenary, should also be mentioned: the excellent introduction by F. D. Matthew in his *English Works of Wyclif hitherto unprinted* London, 1880; M. Burrows, *Wyclif's Place in History*, do. 1882–84; R. Buddensieg, *J. Wiclif und seine Zeit*, Halle, 1883, 1885, Eng. tr., *John Wyclif, Patriot and Reformer*, London, 1884; V. Vattier, *J. Wyclyff, sa vie, ses œuvres, sa doctrine*, Paris, 1886, with good catalogue of Wyclif's writings; R. L. Poole, *Wycliffe and Movements for Reform*, London, 1889. Poole has also given a valuable study of Wyclif's doctrine of 'dominion' in his *Illustrations of the Hist. of Medieval Thought*, London, 1884, ch. 10. L. Sergeant, *John Wyclif*, New York, 1893, is popular and often inaccurate. Its first chapter on the birthplace of Wyclif contains some material of value, previously printed in *Athenæum*, 1892, pp. 344, 405. The opposition views were given by J. Stevenson, a Jesuit, in his *The Truth about Wyclif*, London, 1885. The best sketch of Wyclif is undoubtedly H. Rashdall's in *DNB* lxiii. 202–223, especially if read with G. M. Trevelyan's study of Wyclif's environment in his *England in the Age of Wycliffe*, London, 1899, or J. H. Wylie's valuable *History of England under Henry IV.*, 4 vols., do. 1884–98. A short work by the present writer, *The Dawn of the Reformation*, 2 vols., vol. i., 'The Age of Wyclif' (London, 1901), will shortly be brought out as a comprehensive study.

H. B. WORKMAN.

X

XAVIER.—St. Francis Xavier was the son of Juan de Jassu, a hidalgo and formerly a high official at the court of the last kings of Navarre. The name Xavier was that of the castle (*castillo*), some thirty miles from Pampeluna, which belonged to the family of his mother, Maria de Azpilcueta, and in which he himself was born (7th April 1506). Francis apparently counted himself a Basque, for he said that Basque was his native tongue, but the language is now no longer spoken so close to the borders of Aragon. Whilst his brothers followed the career of arms, Francis, as the youngest son of an impoverished family, was driven to seek a livelihood in the profession of letters. His abilities were remarkable, and, on coming to the University of Paris in 1525, he seems to have been regarded as a student of exceptional promise. He took his degree of licentiate in 1530 from the Collège Ste. Barbe, and was then made reader in philosophy at another college of the University, known as the Dormans-Beauvais. While still at Ste. Barbe, he fell under the influence of Ignatius Loyola (*q.v.*), a man some fifteen years his senior. Ignatius (who was then feeling his way towards the organizing of a band of followers pledged to labour for the greater glory of God in whatsoever form the summons might come to them), discerning a conflict in Xavier's heart between worldly ambition and the call of grace, plied him again and again with the gospel warning: 'What is a man profited if he shall gain the whole world and lose his own soul?' In the end Xavier surrendered, and he was one of the seven who, on 15th Aug. 1534, took vows of poverty and chastity at Montmartre, thus laying the foundations of the Company of Jesus or Jesuit Order.[1] Their original intention was that, after completing their theological studies and receiving ordination, they should all make their way to Palestine and take up the preaching of the gospel in the very spot where Christ Himself had lived. However, it was foreseen that it might be difficult to execute this plan, and they decided that, if after waiting a year in Venice, where they expected to arrive in Jan. 1537, it was found impossible to obtain a passage to the Holy Land, they should go to Rome and place themselves at the disposition of the pope. It was the latter alternative that was forced upon them. They were ordained priests at Venice in June 1537, spending their time in preaching and serving the sick in the hospitals; but in 1538 they all met in Rome and offered their services to Pope Paul III. It seems that already at this time Xavier had some strange presentiment of what his future career was to be, for in his dreams he thought he was carrying an Indian on his shoulders under whose overwhelming weight he cried out so loudly that he awakened his companions. It was not, however, Xavier who was first nominated when King John III. of Portugal in 1539 instructed his ambassador at Rome to obtain some of Loyola's followers from the pope to serve as missionaries in the Indies. The choice fell upon Rodriguez and Bobadilla, but the latter became ill, and his place was taken by Xavier.

During a long delay at Lisbon such wonderful results followed from the preaching and example of the fathers that the king wished to retain both in Portugal. Finally, by the decision of Loyola, Xavier alone set sail (7th April 1541), bearing with him briefs from the pope appointing him apostolic nuncio in the Indies. The voyage occupied more than a year. He reached Goa on 6th May 1542, and it was not until October that he began missionary work in a strict sense by preaching to the natives of the Fishery coast in the extreme south of the Indian peninsula. In this region, including Ceylon, he remained for over two years, interrupted only by one visit to Goa. The continuous strain of the work was almost beyond human endurance, but its manifold consolations buoyed him up. His letters to Europe give a most vivid picture of his methods, more particularly of his care to have the elements of Christian doctrine translated into the vernacular, so that they could be learned by heart and even sung by young and old alike. It was always characteristic of him to take immense pains with the children. He went about ringing his bell and apparently had a wonderful power of attracting and impressing the little ones. No doubt a large proportion of those whom he baptized were quite young children, the families of adult converts.

'Often,' he wrote on 15th Jan. 1544, 'my arms are weary from baptizing and I cannot speak another word from having so repeatedly recited the prayers to the people, one after another, and given instruction in Christian doctrine to them in their native tongue.'[1]

So again in a letter, written a year later from Cochin (27th Jan. 1545), in which he supplies much detail regarding his methods of instruction, he states that in the space of one month he had baptized more than 10,000 persons. The *Exposition of the Creed*, of which a good English translation is provided by Edith A. Stewart,[2] and which is by her rightly stated to be 'more characteristic of Xavier than anything else he has left except the letters,' may probably be accepted as representative of all the elementary instruction, to whomsoever addressed, which he made the foundation of his missionary efforts.

A contemporary letter from Portugal (dated 22nd Oct. 1545) reproduces the description of Xavier brought back by one who had known him well in the Indies:

'Father Xavier goes about with bare feet; his garments are shabby and torn. He is called the "great father," and all love him well. A rajah has given orders throughout his kingdom that all are to show obedience to his brother the "great father," as though it were to himself; all who wish are free to become Christians. He also gave him much money, but Xavier distributed it all among the poor. Along the coast he has built 44 or 45 churches. He has four native-born Indians with him whom he has had ordained as priests. Six other Indians from the College of Goa are on the point of taking Orders. He carries with him two, three, four, yea six thousand men into the open country, climbs a tree and then preaches to them.'[3]

The creation of the College of Goa, here referred to, was one of the most far-seeing of the measures adopted by Francis to secure the permanency of his conquests. By his influence with the Portuguese authorities, he obtained ample means of support for this foundation, and here he was able to train a considerable number of natives, many of whom persevered and after ordination did excellent work in the missions which Xavier himself had started.

The three years from 1545 to 1548 were almost entirely spent in the Eastern archipelago, Malacca, Amboyna, and the Moluccas. He was shipwrecked three times, lost his slender possessions, was attacked by the Muhammadans, and was always cut off from all human sympathy and congenial companionship, and yet he could write of his stay at Moretai:

[2] *Life of St. Francis Xavier*, pp. 242–251.
[3] *Monumenta Historica Societatis Jesu* [Madrid, 1894], 'Epistolæ Mixtæ,' i. 231 f.

'I cannot remember having so much spiritual consolation anywhere else, nor more continuously. . . . These islands ought to be called the "Isles of Hope in God."'[1]

By the middle of January 1548 he was at Cochin, from which as a centre he revisited the Fishery coast. Thence he returned to Goa, but this was only to make preparations for a yet more adventurous expedition, with the idea of which he had been inspired by a meeting with a Portuguese merchant at Malacca who had brought in his company a native Japanese. This young man, called after his conversion Pablo de Santa Fé, was afterwards of great use. Even as early as 1547 Francis was convinced that in these newly discovered islands of Japan

'our holy faith might be spread with great success, and that there, more than any other country of the Indies, were great things to be hoped for, since the people of those islands were quick-witted and eager to learn.'[2]

Further intercourse with merchants returning from Japan seems only to have deepened the impression, and from that time forth Xavier's heart was set upon this new conquest, although it was not until April 1549 that he was able to carry out his purpose. He went by way of Malacca, making provision from there for the needs of his recent converts in the Moluccas. There seems, however, no ground for the assertion, which has sometimes been made, that Xavier ever landed in the Philippines. After many delays and inconceivable vexations Xavier eventually reached the port of Kagoshima in a Chinese junk on 15th Aug. 1549, accompanied by Father Cosmo de Torres, a lay brother named Juan Fernandez, and the Japanese convert Pablo de Santa Fé. As Kagoshima was the native place of the last-named, a kindly welcome was accorded to the missionaries by his relatives, and a breathing-space was found during which it was possible to learn something of the people and the language. Progress was at first slow, but three months after his arrival Xavier wrote most enthusiastically of the natural qualities of the Japanese, and two years later his admiration had not evaporated.

'This is the only country yet discovered in these regions,' he wrote to Ignatius on 29th Jan. 1552, 'where there is hope of Christianity permanently taking root.'

He planned an expedition to Meaco (the modern Kioto), then the residence of the mikado. The journey to and fro entailed terrible sufferings from cold and other causes. Owing to political disturbances, the visit was ill-timed and almost fruitless of results. But at Yamaguchi, and particularly in Bungo, many conversions were made, and there is good evidence of the steadfastness of these Christian communities.[3] In Yamaguchi a formal document[4] records the conveyance to the missionaries in 1552 of a former Buddhist monastery. The church founded in Japan by Xavier spread and prospered. Thirty years afterwards Father Coelho estimated the number of Christians there at 150,000, and James Murdoch, an unfriendly critic, while admitting that the estimate is reliable, remarks that this constituted a wonderful record for thirty years, when we consider the small number of missionaries engaged in the work.

It is Murdoch who informs us that 'in Hideyoshi's famous invasion of the Corea in 1592 the first and third divisions of the invading army totalling nearly 30,000 men were almost entirely composed of Christians,' while the great *daimyos* who commanded those divisions—Konishi, Kuroda, Otomo, Arima, Ōmura, and Sō—were also all converts with the single exception of Ōmura.[5]

Some thirty years after this Christianity in Japan was exterminated literally by fire and sword; but even so, when Japan was again opened up to the missionaries in the middle of last century, some village communities were still found who retained the Christian beliefs and practices taught to their forefathers in the 17th century.

After two and a half years spent in Japan Xavier thought it necessary to return to his base at Goa, both to look after things there and to make better provision for a succession of suitable missionaries in the Far East. In a letter addressed to his brethren in Europe from Cochin in Jan. 1552 we find that a new field of labour had already attracted his attention. He had met a number of Chinese in Japan and had heard much of their country from merchants and others.

'Like the Japanese,' he wrote, 'they are acute and eager to learn. In intellect they are superior even to the Japanese.' 'I hope,' he added, 'to go there during this year, 1552, and penetrate even to the Emperor himself.'[1]

In intermediate letters he refers to this great design again and again, being full of courage and hope. Before the end of April he was well on his way. After overcoming interminable opposition from the Portuguese at Malacca and Singapore he reached the little island of San Cian, opposite the mouths of the Si-kiang, on which Canton is situated, before the end of August. He could find no one who would take the responsibility of conveying him across to the mainland. The trading ships began to sail away. Xavier, prostrate with illness, was left with only a Malabar servant and a Chinese boy. After endless alternations of hope and disappointment he himself began to lose heart. On 13th Nov. he wrote, 'Shall I reach China? I cannot tell . . . everything is against it.' To the last, however, he strained every nerve to accomplish his purpose, but his illness grew upon him, and on 27th Nov. 1552 (not 2nd Dec., as often stated) he died, in sight of the land which he had fought so hard to reach.

If Xavier has found many indiscreet panegyrists, he has also been much criticized. Many of these criticisms will be found effectively answered in the brilliant pen sketch of the great missionary by C. C. Martindale.[2] Others are discussed in *The Month* for Feb. and March 1905 and Dec. 1912. A good deal of the criticism turns upon the miraculous incidents with which the life has been overlaid by later biographers. As Astrain remarks:

'In the case of a life so extraordinary as that of Xavier, a life spent in such far distant lands, the presence of a legendary element was inevitable, and, in point of fact, it manifested itself at an early date. Already in the second half of the 16th century Fathers Teixeira and Valignano, in passing judgment upon the Life of St. Ignatius written by Ribadeneira, protested against various miracles falsely attributed to Xavier, and reduced to their just proportions the magnitude of certain of his missions and apostolic undertakings.'[3]

Again, Xavier has been accused of 'restlessness,' but is it sufficiently remembered that his charge embraced the whole mission field of the Indies, and that it was his duty to look after the base at Goa as well as to establish those advanced posts for which he, more than any other man, had the necessary enterprise and capacity? Shall we blame him because in many cases he was content, like the great *conquistadores* of the New World, to take possession of a vast province, to hoist a standard and leave a tiny garrison, knowing well that years must elapse before the full tide of Christian life could pulsate through its arteries? Nor can we admit, as is often alleged, that the conversions effected by him were 'mainly nominal.' The evidence of the Calvinist Dutch *predikant* Baldæus, who spent many years on the Malabar

coast and in Ceylon, a century after Xavier's time, goes far to prove the contrary, as does also the whole history of Japanese Christianity. Nor was the saint so fanatically intolerant as has sometimes been pretended. Xavier undoubtedly in his letters of Jan. 1548 to King John III. and to Simon Rodriguez speaks of forcing the governor to give the gospel to India. But, as E. A. Stewart remarks:

'The force, we have in fairness to observe, was not to be used towards the converts—he knew well enough that, with these southern tribes of which he was thinking, the Gospel had only to be preached in order to be received—it was the authorities who were to be forced to give opportunities of hearing the Word.'[1]

And Xavier himself adds:

'In this way the injustices and robberies towards the poor Christians will cease, and those who are ready to become Christians will get good courage to do so.'[2]

If Xavier can in any sense be described as fanatical, it is only in the heroic self-denial and austerity of his life. No missionary has realized more perfectly than he the counsel of becoming all things to all men, resolute to see and develop in every lawful way all the elements of good in those with whom he was brought into contact.

LITERATURE.—The sources, the most important of which are Xavier's own letters, are all, practically speaking, contained in the two volumes of *Monumenta Xaveriana ex autographis vel ex antiquioribus exemplis collecta* (forming vols. vi. and vii. of the *Monumenta Historica Societatis Jesu*), Madrid, 1899–1912. For English readers the most reliable biography is that of Edith A. Stewart, *The Life of St. Francis Xavier, Evangelist Explorer, Mystic*, London, 1917; the most complete is that of A. Brou, *Saint François Xavier*, 2 vols., Paris, 1912. Other useful books are J. M. Cros, *Saint François de Xavier, sa vie et ses lettres*, 2 vols., Toulouse, 1900, *Saint François de Xavier de la Compagnie de Jésus, son pays, sa famille, sa vie*, do. 1894; H. J. Coleridge, *Life and Letters of St. Francis Xavier*, new ed., 2 vols., London, 1886; C. C. Martindale, *In God's Army*, vol. i. 'Commanders in Chief,' do. 1915; A. Astrain *Hist. de la Compañia de Jesús*, vol. i.[2], Madrid, 1912; H. Haas *Gesch. des Christenthums in Japan*, 2 vols., Tokyo, 1902–04; J. Stephen, *Essays in Ecclesiastical Biography*, 2 vols., London, 1849, and many subsequent edd., Essay no. 3, 'The Founders of Jesuitism'; A. Dickson White, *A Hist. of the Warfare of Science with Theology in Christendom*, 2 vols., do. 1896; H. Thurston, in *The Month*, Feb. and March 1905, and Dec. 1912.

YAKUT.—1. Distribution.—The northernmost branch of the Turkish race, the Yakut, live in the Yakutsk district, along the Lena as far south as the Amur and the Island of Sakhalin and to the north-west as far as the Yenisei.[3] The region between the Lena and the Aldan is especially densely populated. This region was formerly occupied by the Tungus (*q.v.*), with whom the Yakut, who came from the south, had many fights before they succeeded in obtaining the best pastures. From their metropolis, the district of Yakutsk, the Yakut went to Olekminsk, down the Lena to its mouth, and spread along the Vilui, Yana, and Indigirka, and a very few reached Kolima. Meanwhile another immigration to the north went along the Yenisei as far as the Lower Tunguska, thence to Lake Chirinda, where they met the Yakut who migrated north through the Lena. Their original home may have been in Central Asia between the sources of the Yenisei and the Amur. N. A. Aristoff[4] thinks that the Yakut are the remnant of a Turkic nation called the Sakha (Saka?). The Saka, who in the 2nd cent. B.C. were expelled from their home in the north of Syr Darya southwards by the Yuechi, migrated to India. Towards the end of the 2nd cent. A.D. they seem to have been driven northward again. On their way back they left one branch, now called the Kara-Kirgis, in West Tian-Shan. The Kara-Kirgis have a clan called Saka.[5] Recently noticed linguistic evidence (tribal and clan names) makes the two routes of Yakut migration from Central Asia to the north something more than a hypothesis.

In 1897 the Yakut numbered 225,772; in 1911, 245,406.

2. Physical type.—The Yakut are now much mixed, first with the Neo-Siberians, *i.e.* Tungus, Mongols, and Manchu, and then with the Russians. They seldom have any moustache or beard, their hair and eyes are dark, and their heads round. All these characters are Mongolian, but the setting of their eyes is not Mongolian. The Russian anthropologist A. A. Ivanovsky[1] thinks that he can distinguish a special Yakut group, but this group has more in common with the Northern Tungus and Astrakhan-Kalmuk than with other Turkish nations. They are of medium size with many tall individuals, broad-headed, but not pre-eminently so, and long-faced.

3. Technique.—Originally horse-breeders, the Yakut are now horse-breeders where the climate permits, and in the north reindeer-breeders; but, as far north as they can, they keep the horse for its meat and *kumys* (mare's milk). How highly the Yakut values his horse is shown by the fact that to the good gods he will sacrifice a horse, but to the bad gods only cattle. In matchmaking, to compare the girl to a mare and the youth to a colt is the greatest compliment that can be paid them. In their mythology the horse always appears as the adviser and friend of man, often wiser than man himself. The Yakut, many of whom have never seen a horse, trace the origin of man to a being half-horse and half-man. A horse must not be struck, nor even must unkind words be said to it. While cattle are used for heavy work, the horse is kept for riding. In the region where there are horses no longer, reindeer bucks are trained for riding—a custom known also to the Tungus, but not to the old inhabitants of the Tundra, as the Samoyed or Eskimo.

Where possible, the Yakut become seasonal nomads. Only the people south of Vilui, the agriculturists, are quite sedentary, and even these have a winter house (*balagan*) and a summer house (*urasa*, sometimes called *yurta*). The *urasa* is often covered with birch-bark beautifully engraved and painted, but the *balagan*, made of logs of wood and covered with earth and snow, is pre-

ferable in winter. Their most strenuous time is the hay-making season.

The Northern Yakut are hunters, fishermen, and reindeer-breeders. As net- and trap-makers they are much superior to the other natives. They are also known as iron-smelters. They place their ore in the fire hole and pile coal round it, then they keep the fire blazing by means of hand-bellows. When the coal is used up, they dig out the metal and hammer it into implements. They used the iron ore of the Aldan near Yakutsk long before it was known to the Russians.

Like the Azarbaijan Tatars in the Caucasus, the Yakut are the cleverest traders in Northern Siberia; their language became a *lingua franca* and till recently had to be known even by Russian fur-traders. As reindeer-breeders, however, they are not so clever as the Palæo-Siberians or even as the Tungus. They are people of the Iron Age with all the characteristics which this age implies in Asia, pre-eminently horse-breeding. Since the clan crests are usually used as *tamga* (cattle or horse brands), it is possible to trace the Yakut's emigration and contact with other peoples by tracing the distribution of some particular *tamga*. The *tamga* usually represent an animal, but it would be an exaggeration to see in that any totemistic notions. Certain animals—*e.g.*, the bear, wolf, eagle, white crane, and goose—appear as the shaman's spirit assistants, but they are never called high gods.

4. Sociology.—The Yakut of to-day are grouped in clans (*aga-usa*), *naslegs*, and *uluses*. A clan is composed sometimes of only a few individuals, and sometimes of several hundred. A *nasleg* comprises from one to more than thirty clans. The *ulus* often includes several *naslegs*. The Yakut reckon as descendants of a clan only as far as the ninth generation. Of course at the present time the blood-relationship within the clan is hardly more than a tradition. When the Russians first came into contact with the Yakut, their clan system was quite highly developed, and the head of a clan had his power limited to that of a judge and leader in war.

All economic questions were decided by a council of elders, *i.e.* fathers, uncles, and elder brothers. Thus *aga* ('elder'; fem. *agas*) is the name for the father, *abaga* for other of his relatives older than himself, *ini* (fem. *balys*) for a father's younger brother and any other younger relative who was not his son. Relatives in the third degree are called *sian*. The name for mother is *yä* (literally 'embryo'), for wife *oyokh*, while there is no specific name for the husband, who must be called by his wife *är*, 'man,' or *ogonior*, 'old man.' The term *aga* used for the father really means 'older'; thus one asks about a person, 'Is he *aga* or *balys* ['younger'] than yourself?' There are special terms for the wife to use when addressing her husband's relatives (*e.g.*, *toyon*, 'chief,' for the husband's father), and for the husband addressing his wife's relatives (*e.g.*, *aga-kylyn*, 'wife's father'). The terminology of relationship takes into consideration primarily sex and degrees of age. Thus the Yakut clan is divided into two main groups: (*a*) men and women of the paternal and maternal line born earlier, and (*b*) men and women of the paternal and maternal line born later.

Clans sometimes made alliances. All the traditions testify to the great solidarity of these alliances between the chiefs of clans and also to their independent attitude to one another. Superior to them all was the council of the confederation.

(*a*) *Marriage.*—The Yakut are exogamous, so the wife must be taken from another clan (*aga-usa*) and another settlement (*ulus*). In their marriage ceremonies several stages may be distinguished: (1) the matchmaking, (2) the compact, (3) the betrothal, (4) the bringing home of the bride. Children are betrothed when only one or two years old, but the bride cannot leave her father's house till all the *kalym* (bride-price, called by the Yakut *suwu*) has been paid. Serving for a wife is often met with instead of the *suwu*. The young man has the rights of a husband after he has paid the first instalment of the *kalym*. After the betrothal the young man remains in the bride's house. At the head of the bed the first night a meal consisting of flour and melted butter is placed. If the bridegroom is not pleased with the bride, the meal is left untouched, and this is considered a great disgrace to the girl. This points to the fact that chastity is required of the bride.

The custom of avoidance is especially strictly observed in relations called *kinitti*—*i.e.* the bride to her father-in-law and all other older male relatives. Thus she must not show her hair or her bare feet, step in front of them, address them directly, or call objects of common use by their real names (a paraphrase must be used).

(*b*) *Birth.*—According to W. Sieroszewski,[1] Yakut marriages are generally fruitful, averaging ten children to a woman, but becoming less so in the northern districts, although the Yakut are everywhere more prolific than the Tungus. Lack of children they attribute entirely to the woman, as their proverb says, 'If there are no children, the woman is to blame.' According to Jochelson, the women of the north have very difficult deliveries. The Yakut regard the pains of childbirth as a sickness caused by evil spirits, and therefore, if the assistance of a midwife or the goddess of fertility, Ayisit, is of no avail, a shaman is called in to fight the evil spirits. No consideration is shown to either mother or child, for women possessed of evil spirits are regarded by the Yakut as no less perilous to society than those infected with germs of an epidemic. This accounts for the entire absence of compassion and for the cruelty manifested towards women suffering from the pains of labour. When a child is born, the Yakut make holiday on the first and after the third day. On the first day they prepare a large quantity of fat which they melt and drink, sacrificing a portion to the fire. After the third day the friends and relatives visit the mother and child, and it is customary for the former to serve the guests herself. Nowadays it is not fat but meat that forms the principal dish. The birth of a foal is accompanied by ceremonies slightly less important.

(*c*) *Burial.*—The only thing that the Yakut really cares for before death is to be certain that an animal will be slain directly after he dies in order that, accompanied by this animal, his soul may make its journey to the abode of the departed. On the death of a man a bullock or a horse is killed, on the death of a woman a cow or a calf. If the deceased is rich, the animal is fat and able to be ridden, otherwise the soul must drive it in front of him or drag it by the horns. The flesh of the dead animal is eaten by the gravediggers and all the funeral company. When a man dies, the body is clothed in a rich garment and placed in a corner of the dwelling, where it lies for three days; on the third day it is placed in a wooden coffin, which is drawn to the grave by a horse or bullock. No one accompanies it but the gravediggers, and even they hasten to complete their work and return home; on their way back they do not stop or look behind, and, when they enter the gate of the village, they and the animal must pass through a fire made from

[1] *The Yakut*, St. Petersburg, 1896

the straw on which the dead man lay and the wood left from the making of the coffin. Other things which have been in contact with the dead, such as the shovel, are also broken and burnt. On the death of a child its cradle is left on the grave and its toys hanging on the nearest tree. The Yakut have great fear of a corpse (especially that of a shaman) before it is buried; it is supposed to be able to disturb the forces of nature, producing great storms. A great wind is held to be favourable, as it will smooth out the tracks on the way to the place of the funeral; otherwise many of the living will follow the dead. There is another form of burial among the Yakut, which consists in abandoning the dead in the house with all the utensils belonging to him.

The custom formerly existed that an old or very weak person should request his relatives to bury him. All the villagers were invited to a three days' feast, at which the old man, attired in his finest garments, occupied the chief position. On the third day his relatives took him to the forest, where a grave had been prepared, and one of them would suddenly strike him down. Food and his weapons were placed with him in the grave. Until the corpse is buried the soul remains near the house and endeavours to remind the relatives of its existence.

Some souls never leave the earth and are never quiet; such souls are called *yor*. The souls of those who have died an untimely or a violent death, or who were buried without ceremonies, and those of shamans and great people become *yor*.

5. Soul.—Like other Turks, the Yakut believe in the existence of several souls all more or less material. *Kut* seems to be one of the most important of these. Thus they think that the *buor-kut*, 'earth soul,' is communicated to the infant at the moment of birth from the earth; *salyn-kut*, 'air soul,' it receives from the air shortly afterwards; while the third element, *yä-kut*, 'mother soul,' comes to the child from the mother. *Kut* is a physical conception of the soul, while *sür*, although in some degree a material conception, has a more psychical character. After death *kut* is devoured by the *abassylar*, though there is a belief also that the *kut* remains for some days near the body of the deceased, and then departs to the other world. *Sür* is a kind of 'soul shadow' common to men and animals; it is even possessed by fishes.

6. Gods and spirits.—Although most of the Yakut are now officially reckoned as Christians, belief in the good old gods and shamanistic ceremonies is still alive. The gods are divided into nine *agas* (clans) or *bis*, and the malicious gods into eight. The natives are quite ready to give information about the clan arrangement of the kind gods, but it is very difficult to get similar information about the gods of the under world west and north, since few of the ordinary people know anything about them and the shamans are afraid of betraying the secrets of these formidable beings.

According to Sieroszewski, the chief of the sky-gods is Art-Toyon-Aga, the powerful ruler of light and life, speaking in the storm and thunder, somewhat indifferent to human affairs, and appealed to only in exceptional circumstances. In his honour are celebrated the great clan ceremonies, *ysakh*, in which the sacrifice of *kumys* is made to him. The *kumys* festival is a ceremony performed very regularly. Its object is to secure fertility for the family and for the herd. Lads and girls are placed opposite one another and sprinkle the *kumys* on one another as a sacrifice to the god. In the north, where horses cannot live, reindeer milk is used, though it is still called *kumys*.

The chief of the dark spirits is called Ulutuyer-Ulu-Toyon, 'omnipotent lord.' He is always described as living in the western sky, and, in contrast to the indolent Art-Toyon-Aga, he is the personification of action and of the passions. Ulu-Toyon is not always harmful to men, for he gives to them one of their souls, *sür*, and defends them from the attacks of *abassylar*. The *abassylar* are divided into 'upper,' living in the western sky, 'middle,' living on the earth, and 'lower,' inhabiting the subterranean world; but, wherever they live, they are all harmful to man.

Ichchi, literally 'owner,' signifies the 'owner-spirit' of various objects. Every river, lake, stone—and even parts of these sometimes—has its own *ichchi* controlling it. Movable objects and those which can produce sounds also have their *ichchi*.

The Yakut divide the universe into seventeen stories. They have also a horizontal division comprising two parts—east and south, the habitation of good spirits, and west and north, that of evil spirits. The great evil spirit, Allara-Ogonür, 'underground-old-man,' lives in the far north.

7. Shamanism.—The study of Yakut shamanism, which is one of the most developed forms of northern shamanism, can be limited to the study of the shaman (*oiun*), his ceremonial coat (*tanara*; same word for 'sky') and ceremonial drum (*tünür*). The preparation of his official garment is accompanied by ceremonies no less important than the shamanizing itself. Even those who, like the smith, prepare the metal symbolical adornments attached to the shaman's leather coat occupy a half-magical position, being credited with 'peculiar fingers.' The smith is often approached for assistance if there is no shaman to be found in the neighbourhood. The smith in the ninth generation acquires certain supernatural powers and can without harm to himself prepare the iron symbols of the shaman's costume and especially the *ämyägat* (a metal plate representing a human figure sewn on the ceremonial coat over the heart and symbolizing the special shaman's ancestor, *i.e.* the spirit of some dead shaman).

There are 'black' shamans and 'white' shamans; the duties of the latter are not clearly defined, for in cases of great urgency, as in sickness, it is the black shaman who is called in to fight the spirits of disease. At the spring festivals, however, performed in daylight and called *aiy-ysyakh*, it seems that white shamans always officiate, while the autumn festivals, *abassy-ysyakh*, performed in the darkness, are conducted by black shamans. Troshchanski,[1] who made an exhaustive study of Yakut shamanism, believes that the duties of the black shaman were originally in the hands of women, and that the Yakut black shaman even now assumes some women's characteristics: (*a*) two iron circles on his apron represent women's breasts; (*b*) he braids his long hair like a woman; (*c*) the place on the right side of the tent, covered with horseskins, is forbidden to shamans and women; (*d*) when he does not use the ceremonial dress, he wears that of a young girl; (*e*) he is allowed to visit a woman after childbirth before the three days are over and men are allowed to approach her. As the office of hereditary smiths became powerful, the duties of the black shamans passed to them. Seeing that the family among the Yakuts, as among the other Turks, is patriarchal, this theory seems very improbable. The women's characteristics adopted by the shaman point to something else, viz. that, being a person with supernatural powers, the black shaman is supposed to have both female and male qualities; whether sexual abuses follow this conception it is difficult to ascertain.[2] Generally speaking, women, being more nervous and suffering more often from the Arctic forms of hysteria (*menerik* and *amürakh*)

[1] *The Evolution of the 'Black' Faith*, Kazan, 1912.
[2] See M. A. Czaplicka, 'Shamanism and Sex,' in *Aboriginal Siberia*, London, 1914.

than men, are more successful as shamans.[1] The shamans, especially the black shamans, form a professional class, and a period of preparation under the guidance of an old shaman is necessary. The initiation into the shamanistic office is finally accomplished by the clothing of the novice in the ceremonial coat and presenting him with the drum and stick.

The shamanistic ceremony, as elsewhere,[2] is divided into the following parts: (*a*) preparations for the shaman's journey, (*b*) songs, which among the Yakut are unusually rhythmical and are answered by the chorus, beating the drums and dancing, (*c*) the going out of the fire, when the shaman is supposed to have gone away, (*d*) a period of silence, after which he comes back and relates his experiences.

8. Ceremonies.—There are among the Yakut two kinds of sacrificial ceremonies, bloody (to the *abassy*) and bloodless (to the *aïy* and *ichchi*). Although bloody sacrifices are not made to Urun-Aïy-Toyon, yet it is customary to dedicate certain animals to him; *i.e.*, such animals are not to be used for work, and mares so dedicated are not to be milked. Formerly it was the custom to dedicate in this manner all mares which had foals; they were let loose to wander on the tundra. The offerings to *abassylar* have the character of a compromise or bargain. The evil spirit wishes to have the *kut* (one of the souls) of a man, and the shaman gives instead the *kut* of an animal.

There are two tribal festivals: a spring festival, *aïy-ysyakh*, and an autumn festival, *abassy-ysyakh*. As the name shows, the first is celebrated for the good spirits in general, and for Urun-Aïy-Toyon in particular. After the sacrifice, which is followed by certain sports and games, a dramatic representation of the struggle between spring and winter is given. One man, called the *aïy-uola*, is dressed in white and mounted on a white horse to represent spring, while another, *abassy-uola*, represents winter, being dressed in black or reddish garments and mounted on a horse of corresponding colour. The *abassy-ysyakh* is held in autumn, and in the open air like the first festival, but at night. It is dedicated to the black spirits, and especially to Ulu-Toyon. While the first festival is conducted by the clan-father, the second is under the direction of nine shamans and nine shamanesses.[3]

9. Legends.—The Yakut possess the richest mythology, in both form and conception, of all the natives of Siberia. The richness of imagination shown in their oral compositions is only comparable to that of the Iranians, and one can indeed find some traces of Iranian mythology, probably brought from Central Asia. They are not lacking in the humour for which the Tungus legends are justly famed. The legend of creation bears witness.

The evil spirit wished to show the good spirit that he had the greatest power, so he dived into the water and came up with a mouthful of clay. From this the good spirit created the earth, but, not having sufficient clay, he made it flat. He then noticed that the evil spirit had not given him all the clay; therefore he struck him on the neck so that he had to spit it all out. It fell on the earth and so mountains were formed.

The origin of grass is explained by a more romantic legend.

The god Yassagai-Toyon directs the movements of all migratory birds. His seven daughters, in the form of seven white cranes, also often come down to the earth. Once Yassagai-Toyon commanded his most beautiful daughter to help and serve the Yakut. (The crane is always considered a sacred bird by these people.) The girl begged to be excused, and as a punishment the father cut off her wings and she became a blade of grass to feed the animals of the Yakut.[4]

These ætiological myths form but a small part of their literature, for it is the heroic stories that are the longest and the most elaborate.

The Yakut do not possess a written character, but the few who have been educated in Russian schools write in Russian.

M. A. CZAPLICKA.

YASHTS.—See AVESTA.

YASNA.—See AVESTA.

YAWNING.—1. The primitive conception of the soul.

The conception of the soul among the lower races has been described as follows:

'It is a thin unsubstantial human image, in its nature a sort of vapour, film, or shadow; the cause of life and thought in the individual it animates; independently possessing the personal consciousness and volition of its corporeal owner, past or present; capable of leaving the body far behind, to flash swiftly from place to place; mostly impalpable and invisible, yet also manifesting physical power, and especially appearing to men waking or asleep as a phantasm separate from the body of which it bears the likeness; continuing to exist and appear to men after the death of that body; able to enter into, possess, and act in the bodies of other men, of animals, and even of things.'[1]

J. G. Frazer likewise maintains that the savage explains the phenomena of life by supposing the living body to be animated by some power within.

'If an animal lives and moves, it can only be, he thinks, because there is a little animal inside which moves it: if a man lives and moves, it can only be because he has a little man or animal inside who moves him. The animal inside the animal, the man inside the man, is the soul. And as the activity of an animal or man is explained by the presence of the soul, so the repose of sleep or death is explained by its absence; sleep or trance being the temporary, death being the permanent absence of the soul. Hence if death be the permanent absence of the soul, the way to guard against it is either to prevent the soul from leaving the body, or, if it does depart, to ensure that it shall return.'[2]

2. The escape of the soul through the mouth.

The soul is commonly supposed to escape by apertures of the body, especially the mouth and nose.

'The Marquesans used to hold the mouth and nose of a dying man, in order to prevent his soul from escaping; the same custom is reported of the New Caledonians. . . . The Itonamas in South America seal up the eyes, nose, and mouth of a dying person in case his ghost should get out and carry off others'; and the people of Nias, who identify the spirit of the deceased with the breath, tie up the jaws of the corpse to confine the vagrant soul.[3] The Hindus always snap their thumb and finger and repeat the name of some god, as Rāma, when a man yawns in their presence, believing that by so doing they prevent the soul from escaping through the open mouth. To neglect this is a sin as great as the murder of a Brāhman.[4]

Great care is taken at the time of a birth lest the soul of the child should escape and be swallowed by a gaping mouth.

To prevent this calamity, the Alfoors of Celebes, when a woman is about to be delivered, 'tie up the mouths of all animals inside and outside the house'; and 'all persons present in the house, even the mother herself, are obliged to keep their mouths shut the whole time the birth is taking place.' Noses are not similarly secured because the breath is exhaled through the nostrils, and therefore 'the soul would be expelled before it could have time to settle down.'[5]

Even in sleep it is possible for the soul to escape through the sleeper's mouth if it is not kept tightly closed, its departure being sometimes indicated by snoring.[1]

Mary H. Kingsley tells of a Kruman who 'for several nights had smelt in his dreams the savoury smell of smoked crawfish seasoned with red peppers. He became anxious, and the headman decided some witch had set a trap baited with this dainty for his dream-soul, with intent to do him grievous bodily harm.' For the next few nights, to prevent his soul from straying abroad, he lay in the heat of a tropical night under a blanket, his nose and mouth tied up with a handkerchief.[2]

The legend of King Gunthram shows that this belief long survived in Europe. As the king lay asleep in the wood with his head in his henchman's lap, his servant saw as it were a snake issue from his mouth and run to the brook. His progress being hindered, the servant laid his sword across the water and the creature ran along it and up into a mountain; after a while it came back, and returned into the mouth of the reposing king, who, upon waking, told him how he had dreamt that he went over an iron bridge, and into a mountain full of gold.[3]

3. Possession through the open mouth.—As the human soul is considered to enter and leave the body by the mouth, so it is with other spiritual beings, particularly such as possess people with evil intentions.

According to the Ewe-speaking peoples of the Slave Coast, when the indwelling spirit has left the body, 'it behoves a man to be careful about opening his mouth, lest a homeless spirit should take advantage of the opportunity and enter his body. This, it appears, is considered most likely to take place while the man is eating.'[4] The Zulus, like the Persians, regard repeated yawning and sneezing as a sign of approaching spiritual possession,[5] and in N. Africa men constantly keep the lower part of their face veiled, even while eating and sleeping, in order to protect themselves against evil spirits.[6] The same reason may explain the custom observed among Arab women of muffling their faces.[7] In Samoa a man whose family god was the turtle was obliged to wear a bandage tied over his mouth if he were taking any part in the cutting up or cooking of the animal, lest an embryo turtle should enter his mouth and grow up within him.[8] In S.E. Australia a newly-initiated youth must always cover his mouth with a rug in the presence of a woman,[9] just as in W. Timor 'a man holds his right hand before his mouth in speaking lest a demon should enter his body,' and lest the person to whom he is speaking should harm his soul by magic.[10] To prevent the soul of a fox killed in the chase from escaping and revenging itself on the hunters or warning its fellows of their approach, the Ainus, in former days, took care to tie up the mouth of the animal tightly.[11]

From this brief survey of the part played by the open mouth in primitive cult it will readily be understood how the act of yawning has come to be associated with the exit of the soul and the entrance of evil spirits. This ancient belief still survives in the polite custom of putting the hand before the gaping mouth, thereby (it was originally supposed) impeding the flight of the soul, and barring the way to a spiritual foe. Even to this day, when a man yawns, the Muslim puts the back of his left hand to his mouth saying, 'I seek refuge with Allah from Satan the accursed,' just as in the Tyrol the sign of the cross is made to prevent the entrance of an evil spirit when a person gapes. The Jewish proverb, 'Open not thy mouth to Satan!' shows that the Hebrews associated the devil with a gaping mouth—a conclusion supported by the story narrated by Josephus,[12] describing how Eleazer, a Jew, cured demoniacs in Vespasian's time by drawing out demons through their nostrils by means of a ring containing a root of mystic virtue mentioned by Solomon. It was probably supposed that the evil spirits entered through the mouth and were exhaled through the nose, much in the same way as the Alfoors regard the wandering soul of a child as expelled with the exhaled breath, after having entered the body of a bystander through the mouth.

It will thus be seen that the folk-lore of yawning has arisen from the primitive doctrine of the separable soul and the notion of possession by spiritual beings. It is not surprising that the uncultured races should thus think of the relation of the human body to the spiritual world, since they are ignorant of the very rudiments of science and can only explain the phenomena of life, consciousness, disease, and death by what the senses seem to tell. In sleep, trance, and death the soul appears to leave the body. To the rude philosopher this is the only possible interpretation of the facts which his senses can give. The most natural means by which these exits and entrances are made is through the mouth, and therefore the opening and closing of this organ—especially in an involuntary act like that of yawning—is beset with no small danger. If the soul were to escape, it might never return, and, in consequence, death to the body would ensue. Likewise, when the mouth is open, a homeless spirit is liable to take up his abode in the body. To prevent this calamity, the entrance has to be carefully guarded.

LITERATURE.—The literature has been given in the footnotes.

YEAR.—See CALENDAR.

YEMENITES.—See ARABIANS.

YENISEIANS.—See OSTYAKS.

YEZIDĪS.—The name of Yezidīs has been given to a religious sect numbering about 50,000 persons, scattered from Mossul to the Caucasic region (districts of Mossul, Van, Diarbekr, Bitlis). They call themselves Dasni and speak a Kurdish dialect.

At the head of the community is a *khalīfah*, who is a descendant of Shaikh Adi. Under him are *shaikhs*, *kavvals*, and *faqīrs*. Priesthood is hereditary. Morality is above the average in that part of the world. They are brave and shrewd. Their temperament is cheerful but calm. They have cleanly habits. Their women are not veiled and may receive strangers. They feel great repulsion for the colour blue. Being completely illiterate, they handed down their traditions orally. Their greatest festival is on 10th Aug., when a procession of flagellants takes place in the village of Ba'adri. There is the grave of their great saint, Shaikh Adi ben Musafir, who died in A.D. 1155. All around fires of naphtha and bitumen are kept burning.

The Yezidīs have been often persecuted by the Turks. During the 19th cent. efforts were made repeatedly to force them into the Turkish army. They have stubbornly resisted that pressure.

The origin of the word Yezidī has been much discussed. Most probably it is related to Av. *Yazata*, 'deity,' Pers. *Yazdān*, 'God.' It was given to them in contrast either to the Zoroastrians or to the Muhammadans. Although their priesthood is of the Muhammadan type and they recognize Muhammad and Abraham as prophets, they are far from being a Muhammadan sect. Nor are they Nestorians, although they have baptism and regard Christ as an angel in human form. In fact, they perpetuate with various admixtures a doctrine of the Magian type, combining Iranian and Assyrian elements. Their cult of fire is Iranian. They profess that the devil is a creative agent of the supreme God, inasmuch as he produced evil. Hence he deserves our adoration.

These ideas resemble closely Mazdæan cosmogony.[1] Zoroastrianism regarded the worship of the evil spirit (Ahriman) as an abomination, but this did not apply to all Iranian sects. The Mithraists used to offer sacrifices 'deo Arimanio,' and Plutarch[2] reports that the Magians invoked Hades and Darkness in a sombre place, with libations of the *haoma*-plant juice and of the blood of a wolf. No doubt, the devil-worship of the Yezidīs is a survival of the Magian sects who in those districts could resist orthodox Mazdæism.

The doctrine is supposed to be contained in a sacred book called *Yalvah*. It is said to be hidden on a mountain-top where nobody can go and see it. In fact, the real book, in the form in which it exists at present, is written in an obsolete dialect of Kurdish that apparently was in use in the time of Shaikh Adi. Particulars about the Yezidī books, their authenticity, and their contents are given by Bittner,[3] Mingana,[4] and Horten.[5]

Although the publication of these books has been on the whole disappointing, it has made more certain that Yezidism is an offshoot of Mazdæism. It is, in fact, simply an effort to bring unity in dualism. It secures that result through presenting darkness as a mere absence of light, and evil as imperfection the positive element of which is good in the eyes of God, whose plan it serves although, to our insufficient knowledge, it seems to be bad. The book literally says: "I [the Spirit of Good] am active in all events which the outsiders regard as bad because they do not answer to their wishes while they answer to mine." Sin therefore can only be a deficit which is to be made good through the wandering of the soul. The Good Spirit or First Principle is conceived in a pantheistic way as the light radiating from God and a kind of λόγος. It is compared to a white pearl in the sea of Chaos out of which everything has arisen. In this conception we recognize the White Hōm of Pahlavi books, a sacred plant growing in the sea Vourukasha and in which the creative power of God is contained. This white pearl is also a bird, a peacock, the most revered symbol of the Yezidīs (Malak-Tāus). It is also an old Iranian symbol. On the Gaokerna (another name of the White Hōm) growing in the cosmic sea roosts the marvellous bird Simūrgh (Av. *saēna*), who, under the name of Vāregha, is said to have seized the godly glory (Old Pers. *farnah*) that rested on Yima, the primeval king (also on Zoroaster). The λόγος-bird of the Yezidīs was also supposed to incorporate himself in prophets. They believe him to have manifested himself both in Christ and in Shaikh Adi. The Aryans often compared the sun to a bird. Preference is given to the peacock on account of its way of spreading out its tail like a wheel (the wheel is a still better known symbol of the sun). The same symbol has been found on a Coptic coffin, and in the sacred books of the Mandaites. To what extent the Yezidi doctrine is permeated by that old symbolism can be shown by a quotation from their books: "Before heaven and earth arose, God rested on the seas. He had made for Himself a boat and was sailing on the waves, glorifying Himself alone. Then emanated out of Him a white pearl, and He reigned upon it forty thousand years till He threw it off out of anger." This mysterious language is very much in the manner of the Iranian Bundahishn. It is clear only to those who know that the Iranians compared the sun not only to a bird but also to a ship.

YGGDRASIL.—See NATURE (Teutonic).

YOGA.—The word *yoga* has two meanings in India: (1) contemplation raised to a formal art, and (2) the system to be treated below, which is entirely taken up with it, gives it a philosophical basis, and ranks as one of the six systems of Brāhmanic philosophy. Contemplation exercises for the attainment of higher states of consciousness and faculties are very old in India. It has been shown, especially by Hermann Beckh (*Buddhismus*[2], 2 vols., Berlin and Leipzig, 1916), that they were of great influence at the foundation of Buddhism. The Yoga system had its rise at a later period, which cannot be determined with certainty. Nor is there absolute certainty yet about the age of the Yogasūtras, *i.e.* the text-book in which the system was first set forth by Patañjali. The Hindus unanimously regard Patañjali as the founder of the system and as identical with Patañjali, the grammarian, the author of the *Mahābhāṣya*, who lived in the 2nd cent. B.C. But Hermann Jacobi (*JAOS*, xxxi. [1911] 24 ff.) has made it probable on philosophic-historical grounds that the Yogasūtras were composed after A.D. 450 by another man of the same name. On the other hand, Bruno Liebich (*Zur Einführung in die indische einheimische Sprachwissenschaft*, i. 'Das Kātantra,' Heidelberg, 1919, p. 7 ff.) has asserted noteworthy philological-critical grounds *for* the identity of the two Patañjalis. The question therefore still awaits the final solution. But in any case the Yoga system is in the main essentially older than the Yogasūtras of Patañjali. We find almost completely developed in the *Maitrī Upaniṣad* the technique prescribed in the Yogasūtras.

In Indian literature the Yoga system is rightly regarded as a branch of the Sāṅkhya (*q.v.*). For all the doctrines of the Sāṅkhya on cosmology, physiology, and psychology have been simply adopted by the Yoga. So, too, the doctrine of emancipation is the same—not merely the conception of emancipation itself as a complete separation of the soul from matter, but also the theory that this emancipation is effected solely by means of the clear distinction drawn between matter and spirit. The characteristics of the Yoga philosophy, apart from points of less importance, are—(1) the rejection of the atheistic views of the Sāṅkhya, and (2) the treatment of the doctrine of absorption as the most effectual means for the attainment of the knowledge that secures emancipation. The technical detail of the theory of absorption forms the proper contents of the Yoga system, and has given to it its own name; for *yoga* signifies originally 'yoking,' then 'diversion of the senses from the external world, and concentration of thought within.'

The object of the Yoga system in inserting the conception of a personal God into the Sāṅkhya is merely to satisfy the theists, and to facilitate the propagation of the theory of the universe expounded in the Sāṅkhya. The idea of God, far from being organically interwoven in the Yoga system, is only loosely inserted. In the Yogasūtras the passages that treat of God stand disconnected, and are, indeed, in direct contradiction to the contents and aim of the system. God neither creates the universe, nor does He rule it. He does not reward or punish the actions of men, and the

latter do not regard union with Him (at least according to the older doctrine of the Yoga) as the supreme object of their endeavour. God is only a 'particular soul,' not essentially different from the other individual souls which are coeternal with Him; the distinction consists solely in the manner of His connexion with matter. God cannot in this philosophy be conceived as existing unrelated to matter like an emancipated soul, for then He would be without consciousness. It is assumed, therefore, in the Yoga doctrine that the divine soul stands in an eternal and indissoluble connexion with the noblest and most refined constituent of matter, *sattva*, which is completely purified from the lower material elements; and that this soul is in consequence from and to all eternity endowed with supreme power, wisdom, and goodness. Being free from entanglement in worldly existence, which is full of misery, or in the cycle of births, God lives in eternal bliss, without merit or guilt, unaffected by all the impulses and fatal dispositions with which all other living beings are burdened.

It is evident that this is no God in our sense of the term, and that we have to do with perplexing speculations the aim of which is to conceal the originally atheistic character of the system, and to bring the assumption of God into bare accord with its fundamental teaching. Assuredly these speculations prove, were there any need at all for proof, that in the real Sāṅkhya-Yoga there is no room for a personal God. The two systems are frequently thus joined together in India, in order to emphasize their unity. The idea of God, however, once having been received into the Yoga system, it became necessary to establish a connexion between God and the world of mankind, for God could not continue to exist for His own sake alone. A relation between God and man was found in the fact that, while God does not bestow earthly or heavenly felicity (for this is to be obtained only by individual merit and springs necessarily from it), He in His mercy aids the man who is entirely devoted to Him to remove the hindrances which stand in the way of the attainment of deliverance. But even this slight relation dependent on human devotion to God and on divine favour is with difficulty intelligible as combined with the doctrine of the Yoga.

Nevertheless, in the later Yoga literature, especially in the numerous more recent Upaniṣads which are founded upon and develop the Yoga doctrine, the conception of God takes a much more definite place. God gradually becomes more personal, and the relation between God and man closer. Here also, therefore, the universal need of the human heart has proved stronger than the logical reasonings of philosophy.

The true subject of the Yoga is the doctrine, discussed at great length in the text-books, of *yoga*, or concentration of thought. These texts describe how the senses may be withdrawn from the objects of sense and reduced to inactivity, so that their natural tendency is reversed, and they assume altogether the character of the inner central organ, whose emanations they are; how, in the next place, the activity of the organ of thought, in which all the functions that are dependent upon the influence of the external world are suppressed, is wholly centred upon the *ātman* (the self, the soul); and how, finally, in the last stage of absorption, thought and its object completely coincide. By regular observance of the Yoga praxis the hindrances arising from our natural disposition, which make the attainment of saving knowledge so difficult, are most successfully overcome. When absorption has risen to such a height, or rather has penetrated so deep, that no wandering of thought towards other objects is any longer possible, when that disposition of our organ of thought which is prone to go astray can no longer manifest itself, the knowledge of the essential difference of soul and matter is revealed in the form of an intuitive perception, and therewith the final goal of human endeavour is reached.

The Yoga praxis consists in a series of stages which have to be traversed, in which external aids play a large part. Various bodily attitudes, named *āsana*, are prescribed, the counting of the inhalations and exhalations, but especially the holding of the breath, and the concentration of the gaze on a definite point—on the tip of the nose, the navel, etc. One result of these external Yoga practices is the loss of consciousness, the so-called Yoga-sleep (*yoganidrā*), which is considered to be a stage preceding emancipation, in those cases especially in which during the Yoga-sleep the life becomes extinct. That this Yoga-sleep, which naturally among Indians is regarded as a supremely marvellous phenomenon, is none other than the hypnotic sleep scarcely needs formal demonstration. In fact, the Yoga texts describe a whole series of hypnotic devices which have been effective at all times. Under the name of *trāṭaka*, for instance, Yoga texts which are themselves late, but rest upon an older tradition, enjoin the concentration of a steadfast gaze upon a small object until the eyes begin to shed tears. The result of such practices is declared to be that the body becomes as stiff as a piece of wood, *i.e.* becomes cataleptic. One method, which is especially significant in view of the artificial production of apparent death by the Yogins (see art. YOGĪS, and cf. James Braid, *Observations on Trance or Human Hybernation*, London and Edinburgh, 1850), is the so-called *khecharī*. This consists in artificially extending the tongue, bending it round and inserting the tip in the hollow of the throat, while at the same time the gaze is steadfastly directed on the spot between the eyebrows. Even among ourselves in recent times it has been noticed that the persistent turning upwards of the eyeball at a certain angle induces the hypnotic sleep.

When employing these methods the Yogī, according to the *Haṭhayogapradīpikā* and other texts, before completely losing consciousness hears within his body (in the heart and throat, between the eyebrows, and in other parts) various sounds, viz. those of a drum, the roaring sea, the thunder, a bell, a shell, a reed, a lyre, and a bee. There can be no doubt that as a result of self-suggestion such sounds were actually heard.

The Yoga praxis when correctly and perseveringly observed has, according to the Indian view, therapeutic effects, and other consequences of various kinds. In particular, according to the belief universally held in India, the practice of Yoga procures for a man the miraculous powers often mentioned in Indian literature. When the authors of the Yoga texts hold out the promise of these supernatural powers, it must not be forgotten that these authors were men who regarded very seriously their task of expediting the final attainment of the supreme goal. They certainly did not intend consciously to deceive. They have simply given expression to the conviction of the Yogīs, who believed themselves by means of suggestion in the hypnotic state to be in possession of such powers. These alleged miraculous powers are, in fact, partly the same as our mesmerists think that they possess. Only a few of the many powers that are enumerated can here be named. Among them was the ability to become infinitely small or invisible; to swell to an

immense size, so as to reach even to the most distant objects—*e.g.*, to the moon with the tip of the finger—or to be transported anywhere by the simple act of will. There is mentioned also such an intensification of the perceptions that the most remote things, even though separated by intervening walls or the like, come under the cognizance of the senses, and the processes going on in the minds of other men become known in the same way (thought-reading). Other faculties obtainable are the knowledge of the past and future, especially of the hour of one's own death; or the ability to make the dead appear, and to hold converse with them. Many more are cited. That these miraculous powers may be gained by means of the Yoga praxis the most enlightened Brāhmans of the present day are themselves immovably convinced. The reason why such powers of the Yogī are not openly exercised is attributed to the preliminary condition of their attainment, viz. to the absolute indifference of the Yogī to the things of this world.

The conditions of ascetic contemplation practised in the Yoga are the final result of a long development, which takes us back to primitive times, to the ecstatic rites of savage peoples, of which we find traces also in the Veda. Following the analogy of primitive peoples of the present day, we may confidently ascribe to that early period the belief that it was possible by ascetic practices to win the power to hold intercourse with the spirit world, and in a marvellous way to change the ordinary course of nature. In ancient India the name for asceticism was *tapas*. This word signified in the first instance 'warmth,' 'heat,' 'fervour,' in the literal sense; then, 'the sweat generated by self-mortification,' and 'the condition of internal heat thus caused,' *i.e.* 'ecstasy.' As at the present day the conjurers among the Indians of America and among the Negro peoples are wont to proceed in a similar way, so according to the ancient Indian ritual the offerers of the Soma juice prepared themselves for their task by prolonged fastings, while, clad in dark skins of wild animals, and 'speaking in a stammering voice,' they tarried by the magic fire. The fact that the word *tapas* in its metaphorical meaning is found first in the later hymns of the Rigveda proves nothing against the extreme antiquity of the above-mentioned ideas or their practical application; for the circle in which the thought of the Rigveda moves has few points of contact with ascetic practices. *Tapas* meets us more frequently in the Yajur- and Atharvavedas, and very often in the literature of the Brāhmaṇas and Upaniṣads. Since *tapas* occupies here the position of a cosmogonic power, by means of which the creator of the universe produces living beings and inanimate objects, it is evident that already at that period no less influence was ascribed to asceticism than in classical Sanskrit literature, in which the ascetics appear as all-powerful magicians. While, then, originally the ecstatic condition, in which man believes himself capable of rising to higher spheres, was sought mainly by fasting and other self-mortification, in India, owing to the increasingly introspective character of the spiritual life, stress was laid more and more on meditation and absorption. The conception of *yoga*, therefore, was developed out of that of *tapas*. In this meaning the word *yoga* is first met with considerably later than *tapas*. But the existence of the peculiar Yoga doctrine is certified already, as stated above, as early as pre-Buddhist times.

The attempt was made by A. E. Gough [1] to trace the origin of the Yoga praxis back to the influence of the dark-skinned races with whom the incoming Aryans mingled. For proof he relies upon Tylor's *Primitive Culture*,[1] where it is shown that the ecstatic conditions excited by meditation, fastings, narcotics, stimulants, or disease are held in high esteem among savage peoples. According to what has been stated above, there is no need to subject Gough's opinion to a more searching examination; for what he regards as a borrowing in historical times is, in fact, an inheritance from the most hoary antiquity of the Indo-Germanic race.

Mention must be made finally of a subordinate doctrine, which had its origin among the grammarians, but which then came to form a subject of discussion in the text-books of the Yoga system. This was a philosophical and philological theory on the relation of word and meaning. We read of a 'supersensible word' (*sphoṭa*), which is said to inhere in the word as formed by the letters, but to be distinct from it. That which thus conveys the meaning contained in the word as apprehended by the senses is explained to be an indivisible imperishable element which 'breaks forth,' *i.e.* manifests itself on the articulation of the sounds that form the word. It will be seen that a true thought is here presented, though obscurely expressed. This obscurity, however, will not appear strange to any one who considers that here for the first time a difficult problem is touched which since then has occupied many minds; for that 'supersensible word' is, of course, no other than the idea which is expressed by the combination of the letters.

YOGIS.—*Yogī* is a term denoting in India a follower of the Yoga system (*q.v.*). The word is used especially as a name of the Brāhman ascetics, who devote themselves to the practice of *yoga* as laid down in the rules of the system, and seek thus to gain in the first instance the possession of miraculous powers, and finally deliverance from the cycle of existence. The *yogīs* in India are frequently, in consequence of the *yoga* exercises, plunged in hypnotic slumber, the so-called *yoga*-sleep; and several have been able to remain for a lengthened period in a cataleptic condition without any indication of life, thereby acquiring a reputation for sanctity. A few individuals, by virtue of peculiar disposition and constant training, have succeeded in so prolonging the cataleptic state that they have been able to allow themselves to be buried alive for several weeks without suffering any immediate injury to life and health.[2] In Indian story *yogīs* appear as wizards and all-powerful magicians. The feminine *yoginī* denotes a kind of witch in the train of Śiva and his wife Durgā. The most important of the Yogī sects are the Kānphaṭā Yogīs. See the following article.

LITERATURE.—J. C. Oman, *Mystics, Ascetics, and Saints of India*, London, 1903; R. Schmidt, *Fakire und Fakirtum im alten und modernen Indien*, Berlin, 1908. R. GARBE.

YOGIS (KĀNPHAṬĀ).—The Kānphaṭā Yogīs are a sub-sect of Śaiva ascetics, so called from their

[1] *Philosophy of the Upanishads*[2], London, 1891, p. 18f.

peculiar custom of slitting their ears (*kān*, 'ear,' and *phaṭā*, 'slit') and inserting huge earrings in the holes. They are also known under the names of Darśanīs from their earrings (see below), and Gorakhpanthīs or Gorakhnāthis from their founder Gorakhnāth (*q.v.*).

Their origin is involved in great obscurity. They trace their tenets to a much earlier period than Gorakhnāth's, and consider the latter as merely the reorganizer of the doctrine and the founder of the sub-sect. Gorakhnāth himself is said to have been a pupil of Machchhendarnāth (Skr. Matsyendranāth)—the Nepalese local deity [1]—who in his turn is represented as the pupil of Ādināth, and in some accounts the list is still more prolonged. A tradition current in N.E. Bengal (Rangpur District) identifies the Kānphaṭās with Śaṅkarāchārya's disciples, who, having taken to drinking, were consequently disowned by their teacher.[2] In the Tibetan tradition Gorakhnāth is recorded as a Buddhist thaumaturgus, and his Yogīs are accused of having passed from Buddhism to Śaivism simply to please their heretic rulers and to gain political favours.[3] What seems to be most likely, amidst the general confusion of the various accounts, is that the Kānphaṭā sect came from the north of India, where it was probably already in existence during the prevalence of Buddhism, but it grew to power only when the latter religion began to lose ground and Brāhmanism to make its reconquest. It is possible that, while Buddhism prevailed, the Yogīs could not help being in some way attracted into its sphere, and that Gorakhnāth was the man who rallied them out from the ranks of the Buddhists and brought their principles into harmony with the philosophy of the *Upaniṣads*; and he was not much posterior to Śaṅkara; at least he certainly acted under the influence of the Brāhmanic renaissance.

The particular tenets of the Kānphaṭās are also clad in darkness, not only for us, but even for their present adepts, who seem to have long forgotten them. Little light can be derived from the *Haṭhayogapradīpikā*, a Yoga treatise,[4] which is said to be one of the books of the sect,[5] or from the *Gorakhnāth-kī Goṣṭhī*, a kind of controversial dialogue between Gorakhnāth and Kabīr concerning their respective doctrines.[6] All that can be gathered from the above sources is that the Kānphaṭās recognize Śiva as Supreme God, and hold that emancipation from worldly existence lies in the union of the individual soul with him, and recommend Yoga as the means of achieving this end. A short poetical composition, bearing the title *Gorakhnāth-ke Vacan*, is included among the works of Banārsī Dās,[7] a Digambara Jain poet, who flourished in the first half of the 17th cent., and who for some time in his youth had also been a follower of Śaivism (probably of the Lingāyat sect); but that too is of little help. The most important source of information, which has remained unedited to the present day, is, therefore, the *Gorakhbodh*, a work written in an old form of Hindī and reported to date from the 14th century.[8] The work is in rhymed prose, sixty stanzas in all, and is in the form of a conversation between Gorakhnāth and his *guru* Machchhendarnāth, the stanzas being a question and an answer alternately. Unfortunately the extreme conciseness and difficulty of the text and the particular character of the exposition make this source only partially utilizable; yet there seems to be sufficient ground in it for concluding that the system here expounded is a combination of Śaivism with the Yoga philosophy, and apparently closely related to the Śaivism comprehended by Mādhavāchārya under the name of *Śaiva*,[1] though different from it. The close alliance of the Kānphaṭā system to the Yoga both of Patañjali and of the *Upaniṣads* is visible from the prominent part given to the Yoga praxis as well as to the mystical theory of the circles in the body (*chakra, kausala*), arteries (*nāla*), vital air (*pavana*), and breaths (*haṃsa*).

According to the authority of the *Gorakhbodh*, the vital air resides in the circle of the navel (*nābhi*), and is supportod by the void (*śūnya*), which is spread everywhere. In its turn, the vital air vivifies the *manas*, which resides in the heart. The *manas* is open to the influence of the moon (*chandra*), which resides in the sky, the vital air to the influence of the sun (*sūrya*), and the void to that of the time (*kāla*). There is, further, another element, the word (*śabda*), which resides in form (*rūpa*). Before the coming into existence of heart, navel, form, and sky, the *manas* was contained in the void, the vital air was shapeless (*nirākāra*), the word was unformed, and the moon resided in the intermediate space between heaven and earth. The void is of four kinds: *sahaja-*, *anubhava-*, *parama-*, and *atīta-śūnya*, and it is to it that the vital spirits (*prāṇa*) resort during sleep or death. There are five principles (*tattva*), one of which seems to be *nirvāṇa*, and ten *dvāras*, or means of attaining perfection, which are not named.

From this it would seem that Gorakhnāth too resorted to a symbolism of the kind found in many of the *Upaniṣads*, especially the later ones,[2] to account for such metaphysical problems as cannot be solved by reason. The phrase *yato vāco nivartante*, occurring in the *Taittirīya* and *Brahma Upaniṣads* to signify incapability of definition, is also found in the *Gorakhbodh*, 50–51 (*vācha nivaṭṭai*). Contrarily to what had been asserted on the authority of the *Haṭhayogapradīpikā*,[3] a Kānphaṭā Yogī is not necessarily obliged to remain within a monastery, the second stanza in the *Gorakhbodh* allowing him to live in market-places and roads, and under the shade of trees. One of the most important features of the doctrine of Gorakhnāth is, no doubt, its universality, it being open to all castes and being not very particular in regard to food, in both respects bearing an analogy to the Vaiṣnava system of Rāmānanda. The affinity between the two systems is increased by the adoption of the same term *avadhūta* for the designation of their respective ascetics.[4]

The present Kānphaṭās are more or less spread all over India, and their customs are substantially the same in all places. They have no caste prejudices and freely eat flesh, with the exception of beef and pork, and indulge in spirits and opium, whenever they can afford it. They bury the dead. Those who take to secular callings are mostly money-lenders, weavers, cultivators, peddlers, or soldiers. They are said to be good soldiers, and

[4] Throughout the *Gorakhbodh* Gorakhnāth is addressed by Machchhendarnāth as *avadhu*, a corruption of *avadhūta*, and in the *Gorakhnāth-kī Goṣṭhī* he calls himself *Yogī Gorakha avadhūta*.

their military fame seems to be of an ancient date.[1] In some parts of India they live by singing cyclic poems[2] or religious songs.[3] They are generally believed to be soothsayers and sorcerers, and to have the power of curing children and protecting them from the evil eye.[4] Marriage is common among them.[5] Those who live by begging smear their bodies with ashes and wear a waist-cloth and an upper-sheet dyed in ochre, a woollen string (*jāneu, sailī*) round their neck with a horn-whistle (*nād*) attached to it, a wallet (*jholī*) hanging from their left shoulder, and a hollow gourd, in which to receive alms, in their right hand. But the great characteristic of the Kānphaṭās is the huge earrings (*darśana, mudra*) which they wear in their slit ears. These earrings are generally made of agate, horn, or glass, about 2½ ounces in weight, and are conferred on the Kānphaṭās at the time of their initiation. They are worn as a kind of fetish and are regarded by them as the symbol of their faith.[6] The initiation takes place as follows:

First there is a preparatory ceremony, in which the neophyte, after having been shaved and smeared with ashes, is invested with the woollen string and horn-whistle and is appointed to serve his *guru*. After a period of six to eight months, during which his conduct is strictly watched, the novice is admitted to the ear-slitting ceremony, which is performed before the head *guru* or the god Bhairava, with the novice sitting with his face turned to the north. The slit is made with a double-edged knife and is about three-fourths of an inch to an inch in length; in the wound a *nimb* stick is inserted and the cure is made by a treatment of *nimb* oil and daily bathings with pure water.[7] When the ear is well again, the earrings are conferred on the neophyte, and he has his name changed into a new one ending in *-nāth* and becomes a regular Yogī.

Of all Kānphaṭās of India the best known to us from trustworthy accounts are those of the west. These generally trace their origin to Dharamnāth, who is said to be one of Gorakhnāth's disciples, who went from Peśāwar to Kāṭhiāwāṛ and Kachchh to perform penance and turned the sea between the two peninsulas into the present Raṇ. The Western Kānphaṭās live in monasteries, the most celebrated of which are that of Dhīnodhar in Kachchh on the edge of the Raṇ, which claims to have been founded by Dharamnāth himself on the spot of his penance,[8] and that of Gorakhmaḍhi in Kāṭhiāwāṛ.[9] The characteristic of the Western Kānphaṭās is charity; they make it a rule to distribute provisions, twice every day, to any who ask for them;[10] they can well afford to do this, as they are rich and have been endowed with lands by more than one of the former Rāos. The monastery (*maṭh*) of Dhīnodhar Hill is the most important; it is a large fenced and turreted establishment, comprising dwelling-houses, temples, tombs of the former *pīrs*, halls for the treating of guests, etc. The *pīr*, or abbot, is held in great honour by the Rāo himself, who after his election invests him with a dress and instals him on his seat. Both the Yogīs and the *pīr* of Dhīnodhar are said to observe the strictest celibacy, but in the case of other monasteries the abbot (who takes also the name of *mahant* or *bāvā*) is allowed to marry and, failing issue, to adopt one of his disciples.[1] The chief object of worship of the Dhīnodhar Kānphaṭās is Dharamnāth, whom they habitually call by the term *dādā*, 'father.'

The Kānphaṭās of Bombay and Belgaum are peculiar in so far as they carry a trident (*triśūl*)—the emblem of the god Śiva—when they go for alms.[2] In Bombay they also carry a drum (*daur*), whence their name of Daurī Gosāīns. These marry freely and are said to bury their dead in a sitting position. In most of Northern and Eastern India the Kānphaṭās still appear to perform some sort of sacerdotal functions, to officiate as priests in the temples of Bhairava, and even to offer sacrifices to the village-gods.[3] In Gorakhpur, where Gorakhnāth is said to be buried, they worship, besides Bhairava, a goddess called Bālā Sundarī,[4] which is probably another form of the Tripurasundarī of the Śāktas.[5] The Kānphaṭās of Benares have the temple of Kāl Bhairo as their headquarters and bury their dead in their own houses. The most depraved of all the Kānphaṭās of India seem to be those of the hills, who are said to follow the ritual of the *Tantras* and to indulge in the orgies of the left-hand Śākta cult.[6] These too, like the Kānphaṭās of Kachchh, trace their origin to Dharamnāth.

LITERATURE.—This is given in the footnotes.

L. P. TESSITORI.

YOUNG MEN'S CHRISTIAN ASSOCIATION.—The Young Men's Christian Association (Y.M.C.A.) was founded on 6th June, 1844, by George Williams. Twelve young men were present at the first meeting, which was held in his bedroom in St. Paul's Churchyard, London. Years afterwards it was discovered that of the twelve gathered in that upper room three belonged to the Established Church of England, three were Congregationalists, three Baptists, and three Methodists. It was the day of small things, and half a crown only was the weekly rent of the first headquarters of the movement. Organized Bible Classes became an important feature of the work in 1847, and in the following year the famous series of Exeter Hall Lectures was inaugurated. In 1851 Lord Shaftesbury became President, and in the following year a Y.M.C.A. was formed in Paris and another in Holland, whilst farther afield the movement took root in Adelaide, Calcutta, Montreal, and Boston, U.S.A. An epoch-making World Conference was held in Paris in 1855, when what is known as the Paris Basis was adopted, and on this simple statement of faith the Associations of the world, through their national organizations, are still affiliated. It reads:

'The Young Men's Christian Associations seek to unite those young men, who, regarding the Lord Jesus Christ as their God and Saviour according to the Holy Scriptures, desire to be His disciples in their doctrine and in their life, and to associate their efforts for the extension of His Kingdom amongst young men.'

In 1863 the aims of the British movement were defined in the following words:

'The one great aim of the Association is to win young men for the Saviour,'

and that note has been dominant ever since. Educational features were adopted in 1864, and the Central International Committee as the executive of the World's Alliance was formed in 1878 with headquarters in Geneva. The jubilee of the movement was celebrated in London in 1894, and on that occasion the founder, George

Williams, received the honour of knighthood from Queen Victoria. The official figures issued by the World's Committee show that on 1st Jan. 1920 the Y.M.C.A. was represented in 8789 centres, of which 6250 were in Europe, 32 in Africa, 2098 in America, 386 in Asia, and 23 in Australasia.

The Association has thus been in existence for three-quarters of a century, and in all parts of the world has proved the friend particularly of the young man away from home. The exceptional conditions of the Great War have brought it into the limelight and gathered round the Y.M.C.A. a host of new friends and naturally not a few critics. On the one hand, it has been urged by many that there is no need for the Y.M.C.A., and that the Churches can do all that is necessary as far as Christian work among young men is concerned. Many Christian people have gone even further and said, 'Drop the "Christian" out of your title and confine your efforts to social service, and you can count on our cordial support.' In like manner it was often said, even during the Great War, by certain Army people who had no sympathy with the higher aims of the Association: 'We have our own canteens, and, therefore, we do not need the Y.M.C.A.'—forgetting that the Association is something far more than a canteen and seeks to introduce through its programme that inspiration and uplift which men so greatly need.

Many have accused the Association of being too broad, and others have withheld sympathy and support because in their judgment it is administered on too narrow lines. Then, again, during the War many have accused the Y.M.C.A. of being too much commercialized, though, on the other hand, they insist on the work being self-supporting. The fact is that, if it was to meet the real need of the men during the War, it was compelled to trade, though never for trading's sake or for private profit, and indeed all the profits were spent for the direct and immediate benefit of the men.

The Y.M.C.A. commenced its work on somewhat narrow lines. It had a definite objective which it kept always before its members—to win men for Christ and to enlist them in His service. The story of the movement has been a story of gradual but steady and constant evolution. It has gradually extended, and to-day it stands for a broad progressive programme of Christian and social service. To appreciate the importance of the service it has rendered during the past seventy-five years, and the programme it is gradually evolving for the future, certain facts must be borne in mind concerning the Association.

1. Its functions are those of the pioneer.—It does not seek so much to build upon the foundations laid by others as to find new methods of serving and enlisting men. As an emergency organization it appealed to the imagination of the public in August, 1914, when, through its mobile machinery, it was able to meet a definite national emergency with unexpected rapidity. Long before the adaptation of the Labour Exchanges to meet the needs of discharged men, the Y.M.C.A. in London had its own employment agency, through which it found work for more than 20,000 ex-soldiers and sailors. Before the Armistice it had its own training workshops in London, Manchester, and other centres, and the little farm colony it has established in Dorset for tubercular ex-service men has been regarded by the authorities as one of the best things of the kind, though to meet the need fully the machinery of no private organization would be adequate. The Y.M.C.A. was the pioneer of the present Army system of education, and more than £140,000 was spent by the British movement on educational work among the soldiers in France. As the War went on, many other societies and private individuals organized recreation huts and tents on the lines mapped out by the Y.M.C.A., but it was the pioneering work in the early days of the century in volunteer and territorial camps that provided the experience upon which all this work in war-time has been built up.

2. It is essentially an auxiliary movement.—It does not profess to be an educational authority, but in a hundred ways it supplements the work of school, university, and educational committee. On the battlefield it supplemented the work of the official R.A.M.C., attending to the needs of the walking wounded, and in the base camps caring for the relatives who visited their loved ones when dangerously ill in hospital. So in like manner it seeks to supplement the work of the Churches, and has always resisted the temptation to develop into another denomination, whatever it may be called, or to take to itself functions that rightly belong to the Churches, or to supplant or in any way supersede their work.

3. It is interdenominational rather than undenominational.—It holds that the first duty of the member is to his Church. A recent official declaration states:

'(1) The Y.M.C.A. does not come on the scene to teach the Churches how to do their work, much less to supplant them. It desires to help and serve the Church as the permanent Divine Institution designed by God to help and save the world.

(2) It believes it is called of God to serve our soldiers, sailors, and airmen until demobilisation is complete, and then to continue to serve them when demobilised or disabled, and, as far as possible, all the young men and boys of the Nation in town and city, camp and barracks, village and hamlet, East End and West End, guiding and befriending them as they move from place to place, and looking after their interests when in response to the call of commerce or vocation they travel in search of health or wealth to the most distant parts of the British Empire, or to the utmost parts of the earth.

(3) It regards the whole world as its parish, believing that the work done during the war has demonstrated that the Red Triangle has a message for the men of every creed and nation. It believes it can help the Churches to find the key to the solution of one aspect of the Missionary problem, and that the "Hut" will prove as helpful to the young men of missionary lands as to those of our own country.

(4) It believes that the very success of its war service constitutes a challenge to undertake work on an adequate scale for the men and boys of every class.

(5) It holds that it is of more importance that the need should be met, and the work done, than that any particular society or organisation—even the Y.M.C.A.—should do it. It recognises that the field is so wide that there is ample scope for the activities of all societies that have the same end in view, and it earnestly desires that over-lapping and consequent waste of energy should be avoided, and all such work co-ordinated.

(6) It seeks to provide a rallying centre for those who, irrespective of distinctions of creed or party, desire to engage in social service and to work for the extension of the Kingdom of God.

(7) It would state definitely and categorically that, whilst fully recognising its position as an agency of the Christian Church, it regards as the primary aim of the movement the winning of young men for our Lord Jesus Christ, and the leading of them into the fellowship and service of the Churches.'

4. It is missionary in its outlook.—The mission of the Y.M.C.A. is to the man outside, and it seeks to touch him at every point and, as far as possible, in every place. It seeks to form a half-way house, a kind of communication trench, between the men of the nation and the Churches. It has always placed emphasis upon the work of the member in the sphere of his daily calling. Meetings for prayer and for the study of the Bible have ever held a prominent place in the programme of the Y.M.C.A., and it seeks through its members to proclaim the message of the Evangel in the language of the times. It has always made a feature of meetings in the open-air and in unexpected places. It counts more upon atmosphere than meetings, and depends, more than upon any other single factor, on the personality of its workers.

As may be inferred from the foregoing, the

Association has spread to non-Christian lands, where it has speedily become an indigenous movement. In India, China, and Japan it has been proved that the countries of the Orient can themselves provide leadership that will compare favourably with the best that the Western nations can produce.

5. It is essentially a layman's movement.—Possibly the greatest service the Association has rendered to the cause of Christianity has been in winning men when young for Christian discipleship and providing them with their first training in Christian service. Such training must often have been crude, but it has been practical and effective, and has provided the incentive to further study and an earnest longing for fuller knowledge. It will probably be conceded that the greatest weakness of many of the Churches to-day is to be found in their failure to fire the imagination of their male members and to enlist their co-operation in the work of winning men. This lack, to a certain extent, has been supplied by the Y.M.C.A. —to how large an extent has not been fully realized. Leading ministers of every denomination have told the story of the help and training the Association gave them at a critical period of their careers. It is true that many a branch of the Y.M.C.A. does not live up to the high ideals of the movement, but no Association is regarded as really efficient from the Y.M.C.A. standpoint unless it aims at keeping first things first and inspires young men to help their fellows in the daily fight against temptation. Emphasis is placed, too, on the importance of the voluntary worker. In the great city Association the General Secretary is the key to the situation. The work must be built up largely around his personality, but his business is to inspire men and work through his members. The very last thing to be desired is the development of a professional class of men, however able, who will do the work themselves rather than through others.

In the early days of the Great War the Y.M.C.A. had to face a serious crisis with regard to personnel. Hitherto it had been regarded as 'a work for young men by young men.' The very men on whom it relied for its ever-expanding war work were needed for the Army and Navy, and their places had to be taken by men who, through age or health, were disqualified for active service. It was soon found, however, that there were many things women could do even in the work of a Young Men's Christian Association, and, as a matter of fact, later on there were in the war service of the British Y.M.C.A. alone more than 40,000 women workers as compared with less than 4000 men. There can be no doubt that the Y.M.C.A. woman worker has come to stay, and that to the great advantage of the movement.

6. Emphasis is laid on practical service.—In the early days of the War some people spoke sneeringly of what they termed 'canteen religion.' As the War years passed slowly by, the vast majority saw its utility and learned that it was not incompatible with the teaching and example of our Lord. He spoke of the 'cup of cold water' given in His name, and many a war-weary soldier saw the Master's hand in the hand that gave him a cup of hot coffee or cocoa when he was 'up against things' in the trenches. The Y.M.C.A. believes that the most effective way of combating intemperance is by providing an effective counter-attraction. Given the 'Hut' run by the right people and with a strong constructive programme, there will be little need to fear the wet canteen, the public-house, or the far more deadly drinking club. The Association seeks to promote purity of life, not only by education and precept, but also by making provision for the sexes to meet amidst wholesome surroundings and by catering for the leisure of young people. A well-equipped hostel is an important feature of most of the large city Associations at home and overseas, and in a hundred practical ways the all-round needs of young men and boys are being looked after. It is the conviction of the leaders of the movement that it is possible to serve God acceptably in any one of the many activities of the Association. The Hut, or the Red Triangle Club, as it is usually called, with its big lounge or common room, is regarded as a centre to work from, and an object lesson in practical Christianity. It is recognized that

> 'Where Truth in closest words may fail,
> Then Truth embodied in a tale
> Shall enter in by lowly doors.'

7. It is a unifying force.—Sir George Williams always regarded the prayer of the Master—'That they all may be one'—as a call and a challenge to the Association which he founded and with which his name will for ever be identified. Through the whole period of its existence the Y.M.C.A. has been a unifying force, though it has talked little about unity. It has provided a common platform for Christians of all denominations, and has actually succeeded in bringing together and uniting in Christian service those who never otherwise found opportunity to move beyond their denominational barriers. We believe it is destined to play an important part in years to come in bringing together class and class, party and party, creed and creed, nation and nation. None will be asked to give up their special beliefs or convictions, but all will be invited to co-operate in the service of the Kingdom of God. In the War the Association was allowed to serve the Indian troops only on condition that there should be no religious work as men commonly call work religious. There were to be no hymns, no prayers, no addresses, no distribution of Bibles or Testaments. The leaders of the movement gave their promise and carried it out to the letter. It is doubtful if anything that has ever been done will have more effect upon the future of Christianity in India than the unselfish Christian social service carried out by consecrated men under the sign of the Red Triangle. Not only during the War, but before and since, the Association has had the privilege of serving men of every nation and creed.

8. It begins with the boy.—The hope of the future of the Y.M.C.A. is to be found in the fact that it begins with the boy, and it seeks to get him at the age when he begins to feel too big for the Sunday School. If we can only reach and influence the boy during the crisis of adolescence, the future is assured.

9. The significance of the Red Triangle.—During the War the Red Triangle had become almost as familiar as the Red Cross itself. It typifies the service the Association seeks to render. Its very colour signifies sacrifice, and its three sides speak to the Association man of the needs of body, mind, and spirit, all of which may be consecrated to the service of the living God. Nothing that can be used to the glory of God is regarded by the Association as common or unclean. Its programme is ever widening and its roots getting deeper down. For years the leaders of the Y.M.C.A. set their faces steadily against even the most innocent of games, and, when these were included, another running fight, which lasted for years, took place over the proposed inclusion of smoking rooms and billiard tables. These have now become almost universal in Britain, though there are still many of the great Association buildings in the United States where smoking is

not permitted. More recent agitation has been in favour of cards, dancing, and the drama, and almost imperceptibly the Association has seemed to modify its position to meet the new needs of a new generation. Emphasis is placed on proper supervision, right company and hours, a programme that is clean and elevating and in connexion with which there is no gambling. It is urged that these innovations can only be included as part of a well-considered constructive programme. In these days, when there is a more or less general tendency to kill time, everything that can be done is being done to build up in every Association centre a programme that will lead the members on to aspiration and achievement.

Critics have accused the Y.M.C.A. of attempting the impossible, of building on the apex of the Triangle. They gladly accept the criticism. They *have* attempted the impossible, and by God's grace the impossible has been achieved, for the secret of the Red Triangle is that it is upheld by invisible hands.

A. K. YAPP.

YOUNG WOMEN'S CHRISTIAN ASSOCIATION.—I. *IN GREAT BRITAIN.*—The Young Women's Christian Association (Y.W.C.A.) has been a growth, not an organization, a creation rather than a manufacture; its very nomenclature denotes this. Quite naturally and gradually branches have grown up all over the world. A branch involves a living organism, so that the Y.W.C.A. has sometimes been compared to a tree with its central stem and spreading branches whose leaves have been for the healing of the nations. As in all human activities, the spirit has been too often lost in the letter, and life cramped by form and substance; there have in consequence been many failures, but its motto, 'Not by might, nor by power, but by my Spirit, saith the Lord of hosts,' still binds the Y.W.C.A. together as an international federation; the British Y.W.C.A. was one of the first to join it.

1. **History.**—The history of the Association circles round three great events in the spiritual, social, and political realms which have in a special way affected women.

(1) First in 1855 began the spiritual movement which culminated in the revival of 1859–60 in Great Britain and Ireland, on the Continent, and in U.S.A. The idea that 'thy sons and thy daughters shall prophesy' was revived at this time, and it was then that women shared in the blessings which accrue from a fully developed spiritual ideal. To a daughter came the idea of forming a Y.W.C.A. worked as a prayer union for young women. Girls became anxious for the welfare of their friends, and, as the new tide of life began to flow, they were caught into it and began to realize their responsibilities. Up to that time it was not considered proper for a woman to attend even a missionary meeting, much less to go out as a missionary, or to take part in evangelistic work. The present writer remembers attending a meeting where no hymn could be sung, for it was not considered proper or right for a woman to raise the tune at a religious meeting, even when no man could do so. Emma Robarts asked ten friends to join her in intercession—a prayer union, as it was then called—and these women, filled with the spirit of revival, began to bring the names of others to be prayed for. A list of the first 27 members still remains in a tiny book, and a quarto sheet, of a few years later date, is in the writer's possession, containing a list of some 140 names, each undertaking some small piece of religious and social service. Gradually the list grew until 10,000 members were enrolled in different branches, each member being taught to realize her corporate as well as her individual responsibility. Thus the foundation of the Y.W.C.A. as a fellowship of service and prayer was laid.

(2) In 1887 came the social upheaval which followed the revelations of W. T. Stead. Wages boards were unknown, and few girls earned a living wage. The consequence was grave moral danger, and many indications of evil were discovered and made public at that time. It was an appeal to a Christian association of women. The London Y.W.C.A. made an appeal to the public which for the first time brought the Association into national prominence, and set it on its path of social as well as definitely religious work. Hostels were opened all over London and in other towns; the Travellers' Aid Society was inaugurated; the Park Mission for visiting in the London parks; and the Factory Helpers' Union, which has since developed into the Federation of Working Girls' Clubs, began its useful work under the Y.W.C.A., while the Association gathered educated girls into a 'Time and Talents' movement, quickly followed by the Guild of Helpers.

An association which belongs to the British Empire and has its part in the life of a nation which has ever offered hospitality to the people of all nations could not fail to extend beyond its own borders. The Y.W.C.A. was carried to India, with Bombay as its first centre, to S. Africa at Cape Town, to the Continent, and to Australia. The Provincial Council (as the South of England Council was then called) had its links in many lands. The Y.W.C.A. became the office in England for the 'International Union of the Friends of Young Women,' an organization which had spread all over Europe. 'Prevention and Protection' was its watchword, and its motto 'By love serve one another.' A visit of the then president, the present Lord Kinnaird, with his sisters Gertrude

and Emily Kinnaird, to the U.S.A. brought the British Association into touch with a similar movement among students, which was organized along the lines of the Y.M.C.A., and formed the student department of the Y.W.C.A., which has been adopted in many lands as an integral part of the national Y.W.C.A. work of the country. This led to frequent communication and inter-visitation until finally an entirely new policy was adopted. All the branches which had been started by the British Association and linked to it, but which were not in Great Britain or Ireland, were cut off gradually and formed into national groups under national committees; each could make its own rules and affiliate to the World's Y.W.C.A. office.

(3) The third national movement which brought a call to the British Y.W.C.A. was the Great War of 1914–18. On the first day of war, 4th August, some of the workers met, and within a week called together the National Council to consider the responsibility of a women's association in time of war; it established a War Emergency Committee in the first month, which eventually developed into a War Department with six different committees. The Association put itself at the disposal of Government for anything that might concern women. It was found that London had become a cosmopolitan city, and girls of all lands were working in it. Immediately they were anxious to get back to their own country, the Y.W.C.A. provided the necessary links, and thousands of girls found that the Association Directory could guide them and that its membership meant friendship and fellowship above national or denominational ties. The Blue Triangle, similarly to the Red Triangle of the Y.M.C.A., became the symbol of Y.W.C.A. activities. It was evident to the nation that a Christian association could be looked to to provide for the physical and social well-being of the soldier boy and the girl war-worker. The War Department gradually became responsible for establishing and expanding work along two lines—those of providing for the mental and for the physical needs of girls—and on a third line to carry on the religious work of the Association, thereby completing the triangle symbol. The three—physical, mental, religious—are equally dependent on the spiritual force which energizes and binds them together. The Blue Triangle is now seen in Government enclosures and controlled factories, in the centre of busy cities and in the lonely countryside wherever munition and aerodrome settlements were established. It denotes to the girl of to-day, as the letters Y.W.C.A. denoted to the girl of yesterday, that family life, community life, and the life of the State are better if animated by the spirit of Jesus Christ their Lord, which is the animating spirit of the Y.W.C.A. The Association also makes its contribution to the Kingdom of God on earth by remaining in close relation to all the Christian Churches; it is strictly interdenominational, and its service is rendered to all women irrespective of creed.

2. Organization.—(*a*) *National.*—The activities of the Association are carried out on certain well-defined lines under the direction of: (1) the National Biennial Conference elected by the membership, thus aiming at the development of democratic management; (2) a National Council appointed at the Conference and composed largely of national and divisional office-bearers, with co-opted members, representative of labour and Church, meeting at least once a year; (3) a National Executive, meeting monthly to direct and evolve any activities necessary for the growing needs of the girls of the land. The work is directed by a president, four acting vice-presidents, a treasurer, a general secretary, and a staff of national secretaries.

(*b*) *Departmental.*—National, departmental, and sectional committees, meeting every month or in alternate months, are appointed for studying problems affecting girls, and thus a large body of women take part in and guide the activities of the Association. The Overseas and Foreign Committee seeks to interest members in Association work in non-Christian lands; secretaries are sent out to all parts of the world.

(*c*) *Basis and aims.*—All women taking up active work, salaried or honorary, on these councils and committees must agree with the basis and aims:

'Faith in God the Father as Creator, and in Jesus Christ, His only Son, as Lord and Saviour, and in the Holy Spirit as Revealer of Truth and Source of Power for life and service, according to the teaching of Holy Scripture.'

'The aim of the Young Women's Christian Association is:—To call young women and girls to the allegiance of Our Lord Jesus Christ, the fellowship of His Church and the service of His Kingdom.

To unite them in a fellowship of prayer, Bible study and service, through which they may make their contribution to the spiritual, moral and social progress of the world.

To make available for them all that will minister to character, mental capacity and physical health.'

(*d*) *Training of secretaries.*—The aim is to have a well-staffed training centre where students offering for home or overseas work can receive a year or more of training, so that the Association secretaryship may be looked on as a vocation as important as teaching.

(*e*) *Headquarters.*—The Headquarters of the British Y.W.C.A. are at 22, 25, and 26 George Street, Hanover Square, London, W.1.

(*f*) *Membership.*—Membership in the Association is open to women who desire, in fulfilment of the motto, to serve one another and the world by love in the spirit of Jesus Christ. There are also associate membership and club membership which do not involve membership of the Association.

(*g*) *Magazines.*—By its literature the Association seeks to carry its ideals to all sections of the community. Its magazines are: *Woman's Outlook* (monthly), *Our Own Gazette* (monthly, for younger members), *Home and Overseas Bulletin*, *The World's Quarterly*, *The Y.W.C.A. Almanack and Motto Card*, *The Monthly Letter*.

(*h*) *Territorial work.*—The activities are carried on through divisions, embracing a given number of counties: London, East of England, Midlands, North of England, South of England, West of England, Scotland, Wales. Each has its president, general secretary, and council, and directs the work of the local branches by grouping them into district councils.

3. Methods.—Along the lines of the physical, intellectual, and religious development of the young women of the land, and through its departments, the Association moves forward. The most important methods are:

(*a*) *Canteens.*—The Y.W.C.A. has the honour of starting the first women's restaurant, which is still feeding hundreds of working girls at 'Ames House,' Mortimer Street, London, W.

(*b*) *Hostels.*—The largest of these is Bedford House, London. Others are Ashley House, London; 4 Saville Place, Newcastle; 116 George Street, Edinburgh; Sherbrook House, Bristol, etc.

(*c*) *Clubs.*—Clubs are carried on under the direction of a club-leader, who organizes their operations with the help of committees consisting of members, and encourages Y.W.C.A. membership, so that club-membership may lead to national and international interest in all that concerns young women.

(*d*) *Branches.*—Groups in any locality where there are a sufficient number of girls needing Y.W.C.A. fellowship and protection are called branches.

(*e*) *Holiday Homes.*—In Holiday Homes and Holiday Camps (with Convalescent and Holiday Club Department) recreation, fellowship, and comradeship are promoted, and all classes meet together.

(*f*) *The Social Question Department* is continually watching the needs of working girls and spreading information as to legislation on questions affecting women.

(*g*) *The International and Emigration Department* works in

co-operation with the Immigration Departments of other lands and the Employment Bureau (foreign), and seeks to solve some of the problems of household work by establishing training hostels and rewards for long service. The Blue Triangle Household Orderly Corps is the newest development.

(*h*) *The Educational Department*, with its libraries and a growing staff of secretaries, seeks to fit the girl of labour for her future life, and to induce the girl of education and leisure to share her opportunities with those who have fewer advantages. In clubs, though they are mainly recreational and social, it encourages study by means of circles and lectures. Co-operation with the Y.M.C.A. is being arranged. A Working Women's College has recently been established.

(*i*) *The Reception Hostel and Moral Question Department* has for its aim to maintain a Christian attitude towards all moral questions, and by practical work to help every girl to attain it.

(*j*) *The Religious Work Committee* touches the very centre of Y.W.C.A. work. Its aims are to promote the spiritual life of workers and members by Quiet Days, Retreat conferences, Camps, and Summer Schools. There are special secretaries for promoting Bible study, evangelistic efforts, prayer and fellowship, home study, and co-operation with the Church.

II. *THE WORLD'S Y.W.C.A.*—At first looked on as undenominational, the Y.W.C.A. has proved itself to be interdenominational. In its earliest years avoided by some sections of the Church, and its position misunderstood, it held to its principles, which have been formulated into a truly catholic basis, and with a truly world-wide aim—the winning of the girls of the world to recognize the claims of Jesus Christ as a personal Saviour and Lord.

The basis was at first that of the British Association, but at the Stockholm Conference the following was adopted:

'Faith in God the Father as Creator, and in Jesus Christ His only Son as Lord and Saviour, and in the Holy Spirit as revealer of truth and source of power for life and service, according to the teaching of the Holy Scriptures.'

The first World's Committee met in London in 1894; Mrs. J. H. Tritton was appointed president and Mary Morley treasurer. A sum of £800 was guaranteed by the United States and Canada, which were then united, and by Great Britain and Ireland, also united at that time. It was agreed that the general secretary of the World's Association should be from another country than that in which the World's Office was located, and therefore Annie M. Reynolds, the first general secretary, came from the U.S.A. An executive committee was chosen, composed of women resident at Headquarters, to which is committed the work for the period between one World's Conference and another. On this committee women of several nationalities have served during residence in London. The office was located first at 26 George Street, Hanover Square, and has since been removed to 22 York Place, W. 1. Although at present in London, there is no rule as to which country the office of the World's Y.W.C.A. should be located in. It is at the choice of the Quadrennial Conference. Two other national Associations were sharers equally with Great Britain and the United States in their moral earnestness and desire to form a World's Association—those of Norway and Sweden.

In the two years which intervened between the conference held in London, 8th–11th April 1892, and the formation of the World's Committee in 1894 the committee appointed had been carefully drawing up a constitution, which, while it should leave entire freedom of control and direction to each national organization, should guarantee federation on the basis of the voting membership of all branches according to each national membership. The object of the new body is threefold: (1) to bring into closer mutual knowledge the national associations already existing that they may be more practically helpful to those of their members who go out from their own country; (2) to help countries having only scattered Associations to form such into self-reliant national committees; (3) to develop a greater spirit of responsibility among the young women of Christian countries towards the young women of non-Christian countries.

The first four years—November 1894 to June 1898—had naturally to be spent in striving to attain the first object of the World's Association and in becoming mutually acquainted. The second object of the World's Association also had its place in the first year, when in May 1895 the Canadian Associations, through accredited representative and honorary secretary, made formal application for admittance. The American committee, under whose direction they had formerly been, appreciated their spirit of self-reliance and bade them God-speed. The year 1895 also saw a closer union established between the S. African as well as the Australian Associations. At the fifth regular meeting of the Executive Committee (9th March 1895), the third object, of greater interest in non-Christian countries, was foreshadowed by a note from Madras, India, recording that Agnes Hill 'has made a splendid start here and been greatly blessed in all her work since her arrival in India.' At the meeting of 18th Feb. 1897, formal notice was given of the organization of the National Committee of India, Burma, and Ceylon, with headquarters at Calcutta. Agnes Hill was asked to take the position of national secretary. China and Japan were not long in developing more purely Chinese and Japanese National Committees.

The first World's Y.W.C.A. Conference was held in London, 14th–18th June 1898. The basis of representation adopted was that each national committee should have the right to send ten voting delegates to the World's Conference, provided each national committee represented 100 or more branches; if it represented less than 100 branches it should have power to send only five voting delegates. Every five branches after that should have the right to send one delegate to the conference. It was recommended that a 'quarterly' from October 1898, called *The Women's International Quarterly*, be regarded as the official organ of the World's Y.W.C.A., that the second Sunday in November and the week following be considered as the International Week of Prayer for the World's Y.W.C.A., and that the Executive Committee be empowered to select a suitable international badge, which is now the Blue Triangle.

The first event of active importance after the conference was the application of the German national council for affiliation with the World's Association.

At the London conference eighteen countries were represented, at Geneva (1902) nineteen. At the London conference English had been the only language; in Geneva French was the prevailing language. The Geneva conference was privileged to welcome the Danish national committee to active membership in the World's Association.

All through the Great War, although no international work could be undertaken, there was no breach in the World's alliance, and most national associations developed on very similar lines. In June 1920 representatives of 28 countries met at Champeri, Switzerland, for a World Y.W.C.A. Commission to inquire into the social and industrial conditions which affect women so largely. It was followed by a meeting of the World's Y.W.C.A. Committee, the meeting of which had been suspended during hostilities. No affiliated country held aloof, and there were added representatives of South America and Central Europe, on which continents Associations are rapidly developing.

LITERATURE.—The work which the Y.W.C.A. is doing is recorded in its magazines. The chief of these are (1) *Our*

Own Gazette, (2) *The Y.W.C.A. Monthly Letter*, and (3) *The Y.W.C.A. Bulletin of Home and Overseas News.*

For further information the following publications may be consulted: *The Y.W.C.A. Overseas; The Y.W.C.A. in China; The Y.W.C.A. in Africa; The Woman's Movement in India; Social Service in South Africa: The Y.W.C.A. and Reconstruction; The Y.W.C.A. and Education; The Y.W.C.A. in the Twentieth Century.* These publications are all issued at the offices of the Y.W.C.A. in London and New York.

EMILY KINNAIRD.

YUAN-CHWANG, FA-HIAN, and I-TSING. — Yuan-chwang (Hiuen-tsiang), the greatest Chinese traveller in India (A.D. 629–645), is also one of the most important figures in the history of the development of Chinese Buddhism. There were three pilgrims before him, among whom Fa-hian was the first to penetrate (A.D. 399–413) into the holy land of the Buddhists, and his return marks a step in the progress of the study of Buddhist literature, while the two others, Sun-yun and Hui-seng (A.D. 418) by name, left only a short narrative of their travel[1] and do not seem to have done any important work at home, though they brought back with them some 170 Buddhist texts. After Yuan-chwang in the T'ang dynasty there were so many travellers in India that those recorded by I-tsing alone amount to 56.[2] The recorder himself, who stayed for a prolonged period (A.D. 671–695) in India and the Malay islands, was by far the most prominent among them and the only scholar who could in any way be compared with Yuan-chwang himself.

The three, Fa-hian, Yuan-chwang, and I-tsing, are styled in Japan the 'three mirrors that reflect Indian Buddhism.' They are therefore treated together in the present article.

1. **The routes.**—There were from of old four principal routes into India, two through Central Asia, the northern and the southern. On his journey out Yuan-chwang took the northern road through Turfan, Kucha, Issik-kul, Tashkend, Samarkand, Kunduz, Kabul, and Peshawār, while on his way home he preferred the southern road, turning eastward from Kunduz and passing Pamir Kul, Kashgar, Yarkand, Khotan, and Nainshe (Ansi).[3] The southern road is much shorter and the most direct way to India, and corresponds roughly with the route of Fa-hian and other predecessors. The third route to India was through Tibet, leading either to Bhutan or Sikkim or sometimes to Nepal. During the T'ang dynasty there were many who took this road, especially after the marriage of a Chinese princess to the Tibetan king Srong-tsan-gampo, who sent envoys to India in A.D. 632.

The fourth route was the over-sea one which was chosen by I-tsing, who embarked in a Persian ship from Kwang-tung to Sumatra, where he changed to a Malay boat, sailing through the strait to Tāmralipti near Calcutta. Fa-hian as early as A.D. 413 embarked in a Brāhman ship to cross the Indian ocean to Java, there taking another merchant ship for China. Thus the journey to India of the earliest traveller Fa-hian was over-land, and his return journey over-sea *via* Ceylon and Java. Yuan-chwang, on the other hand, confined himself to the over-land route, not even crossing over to Ceylon, while the last pilgrim I-tsing took the sea route both ways.

2. **Records.**—(*a*) ***Fa-hian.***—As he himself says towards the end of his record, Fa-hian started in A.D. 399 from Ch'ang-an, the western capital of China, reached India after six years, and, staying there another six years, returned in A.D. 413, spending three years on the way. His record, which was finally revised in A.D. 414, was called sometimes *Fo-kwo-ki*, 'Record of the Buddhist Countries,' or simply *Fa-hian-chüan*, 'Record of Fa-hian.'[1] The word 'high priest' is often added before the title *Fa-hian-chüan*, so it is certain that this designation was not given by the author himself. At the beginning of the record we find a note, 'Fa-hien's own record of his travels in India,' which is in all probability the writer's original title. The work was rendered into French by A. Rémusat in 1836, into English by S. Beal in 1869 and 1884, and again by J. Legge in 1886, the last with the Chinese text as well.

His six years' travel, beginning from Peshawār and ending at Tāmralipti, covers almost all parts of India, 30 countries in all, except the Dekkan, which he himself says that he could not visit. From Tāmralipti he crossed to Ceylon, thence to return to China.

When he left China, he was accompanied by some ten priests, but a party of three went to Turfan in the second year with the intention of getting the royal patronage there, and another party of three retraced their steps from Peshawār to China in the fourth year for a reason not stated, while two others died in Peshawār and on the Hindu Kush. Fa-hian with his sole companion Tao-chêng visited Mathurā, Kanauj, Śrāvastī, Kapilavastu, Vaiśālī, and Kuśinagara, and, having made a pilgrimage to all the sacred spots of the Buddha, came to Pāṭaliputra, whence they visited Rājagṛha, Gayā, Kukkuṭapadā, and Benares. They returned to Pāṭaliputra, where they sojourned three years and collected and copied the sacred texts of various schools. Tao-chêng was charmed with the fine discipline of the Buddhist order there, and, having been disgusted with the ill-regulated manners of the Chinese Buddhists, he decided to live in India and never to return home. Fa-hian, whose desire was to enlighten China by his newly-acquired knowledge, took leave of his companion and travelled alone farther down the Gangā to Campā and Tāmralipti on his way home. He seems to have found Buddhism in general in a very flourishing state, as it was in the imperial Gupta period. Though the Mahāyāna and the Hīnayāna are mentioned now and again, there are as yet no traces of a dispute between the two schools nor signs (such as we find in Yuan-chwang's record) of either being much more influential than the other.

(*b*) ***Yuan-chwang.***—The record of the great traveller is handed down to us in three forms. The first is of course his own work, *Hsi-yü-chi*, 'Record of the Western Region,' in 12 volumes, translated by Yuan-chwang and compiled by Pien-chi, his pupil, A.D. 646.[2] The travels cover 138 countries in all—110 which he himself visited and 28 of which he gathered news from his informants, as we are told in an introduction by Ching-po.[3] The characters and usages of the people and the state of Buddhist learning and practices are minutely described. The book is unique and in-

[1] Samuel Beal, *Fô-kwô-ki by Fâ-hien*, London, 1869 and 1884, pp. 174–208.

[2] Edouard Chavannes, *Voyage des pèlerins bouddhistes, mémoire composé à l'époque de la grande dynastie T'ang sur les religieux éminents qui allèrent chercher la loi dans les pays d'occident, par I-tsing*, Paris, 1894.

[3] Tao-hsüan, in his geography of the region of the Śākya (Bunyu Nanjio, *Catalogue of the Chinese Translation of the Buddhist Tripiṭaka*, Oxford, 1883, no. 1470), calls this route the 'middle' and the Tibetan road the 'southern.' Hui-lin, in his *In-i* (vol. 81), describes the Tibetan route rather minutely (Tokyo ed., case 39, vol. x. fol. 45a).

[1] Nanjio, no. 1496. [2] *Ib.* no. 1503.

[3] This introduction was not translated by Julien. The separate edition of Kyoto University has it. In the postscript of the record it is expressly said that the use of the word *hing* ('gone') indicates a country which was visited by Yuan-chwang himself, while the word *chih* ('arrive') shows a place which was described from hearsay. Thus we can easily distinguish the countries which the traveller did not visit, *i.e.* 21 countries in Central Asia (vol. i.), Nepal in the Himālayan district (vol. vii.), Ceylon and Persia (vol. xi.), and 4 countries again in Central Asia (vol. xii.), 28 altogether. It is strange that no scholar has hitherto called attention to this fact.

dispensable for the study of Indian history and the geography of the Buddhist period. In 1857 Stanislas Julien published his French translation with the title *Mémoires sur les contrées occidentales traduits du sanscrit en chinois, en l'an 648*[1] *par Hiouen-thsang*,[2] *et du chinois en français par St. Julien.* An English translation by S. Beal followed in 1884 with the title *Si-yu-ki, Buddhist Records of the Western World, translated from the Chinese of Hiuen-tsiang*, 2 vols., London.

The second is a résumé of Yuan-chwang's travels contained in the *Record of the Region of the Śākya* in 8 books by Tao-hsüan.[3] It is interesting to note that the author was Yuan-chwang's pupil and one of his assistant translators, and that the work was compiled during Yuan-chwang's life-time, *i.e.* A.D. 650.

There seems to have been another work in 10 books entitled *Hsi-yü-chüan*, 'Record of the Western Region,' by Yen-ts'ung, another pupil of the traveller. This record, it is said, treated more of the Indian life than the religion itself, whereas the traveller's own *Mémoires* paid more attention to the religion than the life. Tao-hsüan says in his own preface that both of these were too minute and copious for general information and that this very fact led him to a fresh compilation of his own work. No European translation of it has as yet appeared.

The third is a curtailed form of the *Mémoires* given in the life of Yuan-chwang in 10 volumes, compiled by Hui-li and annotated by Yen-ts'ung, A.D. 665.[4] Julien published it, at the same time as the *Mémoires*, in an abstract under the title *Histoire de la vie de Hiouen-Thsang et ses voyages dans l'Inde, 629–645*, London, 1853, and Beal has also given us a similar abstract.

So far as Yuan-chwang's routes and geographical names are concerned, Thomas Watters, a great Chinese scholar, did a great deal, and the result of his studies was published in 1904–05 by T. W. Rhys Davids and S. W. Bushell with the title *On Yuan Chwang's Travels in India, 629–645, by Thomas Watters.* His researches are accurate as usual, and, if he could have made more use of the results of the Indian and Central-Asian excavations and several old MSS of the record discovered in Japan, nothing would remain to be desired.

Yuan-chwang's record can be divided roughly into five parts: (1) a general introduction to Jambudvīpa and a description of Central-Asian countries along the northern route, *i.e.* Agni to Kapiśa (vol. i.); (2) a detailed introduction to India (name, geography, calendar, life, language, customs, religion, castes, products, etc.) and a description of countries in the Panjāb and in the north of the Gangā as far down as the valley of the Gandakī, *i.e.* Lampā to Nepal (vols. ii.–vii.); (3) a detailed description of Magadha, including Nālanda (vols. viii.–ix.); (4) the lower region of the Gangā, countries on the south sea coast, in the Dekkan and on the lower Indus, *i.e.* Iraṇa to Varaṇa (vols. x.–xi.); (5) Central-Asian states along the southern route, *i.e.* Jāguda to Khotan (vol. xii.).

A résumé of the contents can be obtained best from Watters' work, which gives the travels in their shortest possible form. Further, a lengthy note on the itinerary was added by Vincent A. Smith at the end of the work.

When Yuan-chwang, as a young and brilliant scholar, expressed his desire to visit India, there seem to have been some willing to accompany him in his journey, but when he came near to the Desert he had only two companions, of whom one was sent back to China as he was thought unfit for the hardships of the journey, while the other started in advance to T'un-hwang and was heard of no more. Finally, when he took leave of his patron the king of Turfan, four novices were allotted to him as his attendants. The king helped him with brotherly care and introduced him to many of the Central-Asian chieftains; consequently he was welcomed everywhere and travelled with great facility. In India too he was patronized by King Harśa of Kanauj and had opportunities of meeting many worthies and savants of his time. At Nālanda, the then centre of the Mahāyāna learning, he found an able teacher in Śīla-bhadra, the president of the university, and there he spent several years[1] learning Sanskrit and chiefly Buddhist idealism, occasionally discussing or disputing with sectarian teachers. The interest of the Buddhists of his time seems to have centred in the Mahāyāna, though the Hīnayānistic schools too were followed in all India.[2]

(c) *I-tsing.*[3]—I-tsing's record was called *Nan-hai-chi-Kuei-nei-fa-chüan*, 'Record of the Buddhist Practices sent home from the Southern Sea,' in four volumes.[4] The 'Southern Sea' means in Chinese the Malay islands (Sumatra, Java, and the neighbouring places). It is so called because he sent his record home while he was sojourning in Palembang (Bhuje), Sumatra, collecting and copying Sanskrit Buddhist texts. The record was translated into English by the present writer in 1896 and published at Oxford with the title *A Record of the Buddhist Religion in India and Malay Archipelago* (*A.D. 671–695*) *by I-tsing.* The text is entirely different from the two preceding ones, inasmuch as it records only the religious life and practices, especially discussing minute points of the Vinaya rules. The author does not describe his travels at all. The record will prove indispensable, however, when research into the Vinaya branch of Buddhist literature is seriously taken up. Further, it is very interesting that he limits his discussions of the Buddhist practices to the Sarvāstivāda (realistic) school. For it is a very difficult task definitely to class Vinaya practices of that epoch in various schools.

There is another record by I-tsing giving biographical notices of 56 Chinese priests who travelled in India before or during his stay abroad.[5] This is practically a book of travels, and it is in this that he describes the incidents which happened on his journey to India, the chance return to China, and the second sailing to Sumatra to copy the sacred texts.[6] E. Chavannes published his French translation of it in 1894, with the title *Voyages des pèlerins bouddhistes, mémoire composé à l'époque de la grande dynastie T'ang sur les religieux éminents qui allèrent chercher la loi dans les pays d'occident, par I-tsing.* The two records of I-tsing should always be consulted together, for the whole of his life and work cannot be known without either one.

The biographer[7] tells us that I-tsing was 25 years (A.D. 671–695) abroad and travelled in more than 30 countries. That he made a pilgrimage to all the sacred spots of the Buddha can be seen from his own narratives, but we cannot state with certainty that he travelled in so many countries as the biographer asserts.

As was the case with Fa-hian and Yuan-chwang, he had some five or six followers at the outset, but finally started with only a young priest, Shan-hing by name. In India he himself says that he lived ten years in the University of Nālanda (probably A.D. 675–685), chiefly studying the Vinaya. On his way home he stayed in Palembang, Sumatra, to collect and copy more of the Sanskrit texts.

[1] This date must be a mistake. Yuan-chwang's own memorial to the emperor T'ai-tsung on the presentation of the record is dated the 13th of the 7th moon in the 20th year of the Chêng-kuan period, *i.e.* 646. Julien's Chinese text probably did not include this memorial.

[2] Hiouen-thsang = Yuan-chwang. Seven different ways of spelling the name have been discussed by Rhys Davids (see T. Watters, *On Yuan Chwang's Travels in India, 629–645*, 2 vols., London, 1904–05, i. 17).

[3] Nanjio, no. 1470. [4] *Ib.* no. 1494.

[1] According to the life of Yuan-chwang (vol. iii.), he stayed there five years. Vincent Smith makes it two years (see Watters, ii. 325).

[2] *JRAS*, 1891, p. 420. [3] Otherwise spelt I-ching.

[6] These facts are summed up in the present writer's introduction to *Life and Travels of I-tsing*, p. xxv.

[7] Nanjio, no. 1495.

One day he wanted to send letters home and went on board a merchant ship, when a favourable wind began to blow and the ship set sail at once. He thus came back by chance to Kuang-tung, and, meeting his old friends, tried to obtain some new companions for his work abroad. At last he succeeded in finding four able assistants, Chêng-ku, Tao-hung, etc., with whom he set out once again in A.D. 689, when he was fifty-five years of age. He finally returned in midsummer A.D. 695.

3. Their work at home.—Buddhism was introduced into China in A.D. 67. The emperor Min-ti sent envoys to India and invited two Buddhist priests, Kāśyapa Mātaṅga and Fa-lan[1] by name, to come to China. They were stationed in a specially built monastery called the 'White Horse' and were kept busy translating. The following three centuries were a period of translation by foreign priests. This we can call the first period of translation (A.D. 67–414). Those foreign priests who came from India itself were surnamed 'Chu,' a curtailed form of 'Tien-chu' (=Sindhu, *i.e.* Indian),[2] while those from Yue-chi (Kuṣana) were styled 'Chi.'[3] Those surnamed 'An' are from An-hsi (=Arsak, Parthian),[4] 'K'ang' from K'ang-chü (=Samarkand)[5] and 'Po' from Kucha (for the royal family was so named).[6] There were practically no Chinese priests who carried out translations by themselves, though there were a few who assisted in the work as subordinates.

The second period of translation (A.D. 414–645) was inaugurated by Fa-hian's return. He brought home the Vinaya texts of the Mahāsaṅghika and the Sarvāstivāda schools, the *Mahāparinirvāṇa Sūtra* of the Mahāyānists, and also the *Abhidharma-hṛdaya Śāstra*; and he himself did the work of translating some of these texts[7] with the assistance of Buddha-bhadra, an Indian priest. Almost at the same time Chi-yen[8] and Pao-yun,[9] his companions half-way to India, and Chi-mang[10] and Tao-tai,[11] both of whom went to India soon after Fa-hian, followed the latter's brilliant example in independent translations. Many priests seem to have done the same, though some of their works are lost.[12]

This period of translation, though conducted by Chinese priests, was not without brilliant works achieved by gifted foreigners, such as Kumārajīva,[13] who is said to have had 3000 pupils, Gunabhadra,[14] Paramārtha,[15] Bodhiruchi,[16] and Jñānagupta.[17]

The above two periods are generally designated the old era of translation. The following period opens the new era of translation (A.D. 646–1127), which was begun by the epoch-making work of Yuan-chwang[18] and was continued by I-tsing,[19] the two being the most prominent figures in the Buddhist culture of the T'ang dynasty. Yuan-chwang brought home the Mahāyāna *Sūtras* (224 texts), the Mahāyāna *Śāstras* (192 texts), the works of the Sthavira school (14), those of the Mahāsaṅghika school (15), those of the Sammitīya school (15), those of the Mahīśāsaka school (22), the Kāśyakīya texts (17), the Dharmaguptīya texts (42), the Sarvāstivāda texts (67), the Hetu-vidyā (Logic) (36), and the Śabdavidyā (Grammar) (13), altogether amounting to 520 bundles and 657 different texts. What he specially laid stress on was the Vijñānamātra doctrine (idealism), and he may be deemed the founder of the Buddhist idealism in China.

The catalogue of I-tsing's collections is not given so minutely as his predecessor's. The Sanskrit texts of the *Tripiṭaka* collected by him during his stay of ten years at Nālanda were nearly 400 in number, amounting to 500,000 *ślokas*, which he himself says he had in hand whilst in Palembang.[1] What he considered most important was the Vinaya literature, and his translations in this branch of study are very full and minute, especially in the Vinaya of the Sarvāstivāda (realistic) school, which amounts to 19 texts in 209 volumes out of 56 texts in 256 volumes in all. His works in this line are generally called the 'New Vinaya,' while those of Tao-hsüan, a pupil of Yuan-chwang, and of the other predecessors are styled the 'Old Vinaya.'

Thus he founded a new school in the study of this branch of Buddhist literature and made his own school the most influential of all. The work of translation in the T'ang dynasty was on a grand scale. All had to be done by the imperial sanction, so many officials and assistants being specially appointed. The completed texts had to be presented to the imperial court to be authorized for publication or to be incorporated into the Buddhist library.

This new era was further enriched by the works of Amoghavajra,[2] Dharma-deva,[3] Dāna-pāla,[4] etc., but their translations, numerous as they are, cannot be compared in nature and bulk with those of Yuan-chwang and I-tsing, for almost all of them are *dhāraṇīs*, *stotras*, or mystic texts of the kind.

With the Sung dynasty (A.D. 960–1127) the periods of translation which were so ably represented by the three travellers practically came to an end, Indian Buddhism gradually giving its place to Tibetan Lamaism.

LITERATURE.—All the translations of the records referred to have been indicated in the article. For reference the following may be recommended: J. Z

ZAIDI.—Zaidi (Zaidiyyah; in Arabia Zuyud) is the name of a Muhammadan sect, called after Zaid, son of 'Alī, son of Ḥusain, son of 'Alī, cousin and son-in-law of the Prophet Muhammad. This person came forward as a pretender in the reign of the Umayyad Hisham (121–122 A.H.) in Kufah, was defeated, and was put to death. His story is told with unnecessary prolixity by Ṭabari.[1] His sect survived, though doubtless in secret, in Kufah, where they were concerned in various risings of 'Alid pretenders, such as those of 151, 250, and 251 A.H.;[2] on the last occasion they are called 'men of wool,' *i.e.* ascetics, and the same historian casually mentions them after this time among heretical sects.[3] If it be true that Harun al-Rashid employed one of the community to assassinate Idris, founder of the Idrisi dynasty of Fez,[4] it is likely that they were tolerated by the legitimate khalifahs to the same extent and for the same services as were afterwards the Assassins by the Egyptian sultans.

1. History.—The first dynasty founded by a member of the sect was that of the Idrisids (172–362 A.H. = A.D. 788–973), called after Idris b. 'Abdallah, a descendant of Ḥasan, who, after a rising organized by a nephew of his in the Ḥijaz in the time of the 'Abbāsid Mahdī had been suppressed, escaped into Africa and gained a following among the Berbers of Ulili (Volubilis) near one of the sources of the Sebou. After winning over or subduing a great number of tribes, he took the title khalīfah, and was, as has been seen, assassinated by an emissary from Baghdād in A.D. 793. He was succeeded by his infant son, called by the same name, who founded in 808 the city of Fez, which became the capital of the dynasty. Its population was supplemented in 814 by some 8000 families exiled by al-Ḥakam from Cordova, but welcomed by Idris II., 'whose subjects, being for the most part nomads, showed an invincible repugnance to becoming citizens.'[5] At the time of his death, in 828, his kingdom comprised the whole of the Farthest Maghrib and reached Mina in the Central Maghrib. His successor Muhammad divided his territories (other than Fez itself and its neighbourhood) between eight of his relatives, reserving the capital and the suzerainty for himself; this act led to the permanent break up of the kingdom, which was left in a state of civil war at his death in 836. The princes who succeeded him in Fez were involved in wars with other sects, such as the Khārijis and the Fāṭimids of Africa, the latter of whom took Fez in 959. In 973 it fell into the hands of the Spanish Umayyads, and the last of the Idrisi monarchs, named Ḥasan, was compelled to abandon his fortress, 'The Vulture's Nest,' somewhere in the neighbourhood of Ceuta, on condition of his life being spared.[6]

The next and most important dynasty of Zaidites was that founded in S. Arabia by a descendant of 'Alī, Yaḥyā b. Ḥusain b. Qāsim Rassi; his grandfather Qāsim was a son of one Ibrahim Ṭabāṭabā, and brother of a Muhammad whose abortive rising at Kufah about 200 A.H. is described at length by Ibn Khaldūn.[7] This Yaḥyā established a khalifate at Ṣa'dah in Yemen, taking as his imperial title al-Hādī ila al-ḥaqq (280 A.H. = A.D. 893). The story of this dynasty, as told by Ibn Khaldūn,[8] is translated by H. C. Kay,[9] who corrects some mistakes. The name Rassi, whereby this dynasty is known, is said to come from Rass, a mountain in Najd, where Yaḥya's grandfather Qāsim took refuge. Yaḥya was himself the author of numerous works, among them refutations of the Shī'ah sect called the Imamiyyah, and of the views of the contemporary historian Ṭabari. The capital of the dynasty was sometimes Ṣa'dah, sometimes Ṣan'a, and the territory included within its dominions varied greatly at different times; the earlier geographers (of the 3rd and 4th Islāmic centuries), so far as they allude to these princes, call them 'resident in Ṣa'dah.' In the 6th Islāmic cent. they were driven out of Ṣa'dah by the Meccan Sulaimanis, but towards the end of that century a Rassi monarch resumed possession of the place with the title Manṣūr. He is said to have dispatched missionaries to remote parts of the 'Abbāsid empire, such as Jilan, and to have attracted the notice of the 'Abbāsid Nāṣir (1180–1225), who, however, did not succeed in securing his person. In the year 1258 (about the same time as the fall of Baghdād) their imām Yaḥya b. Ḥusain was killed in battle.[1] Their political power was for the time broken; but imāms continued to be appointed, and to maintain themselves in some regions till the date at which Ibn Khaldūn's narrative closes, 793 A.H. Probably this condition was maintained till 945 A.H. (A.D. 1538), when the Yemen fell under the domination of the 'Ottomans; but in 1597 one Qāsim, who claimed to be a descendant of the Rassi family, assumed the imāmate at a place called Ḥadīd-qara, and found numerous adherents; after a long series of struggles with the Turkish pashas, with varying success, in 1619 he obtained recognition from the Ottoman authorities as ruler of a considerable portion of Yemen; he died the next year (1620), and was succeeded by his son the imām Muhammad the Muayyad. In 1626 this person, owing to the execution of an agent of his by the Turkish governor Ḥaiuar Pasha, started a fresh revolt, and with the aid of his brothers conducted it so successfully that before the end of the year few places, besides Ṣan'a, Aden, and the ports, remained in Ottoman hands; everywhere else the Zaidi power was recognized in Yemen. In 1629 Ṣan'a, after a siege of two years, was surrendered to the Muayyad; and in 1635 Yemen was definitely evacuated by the Ottomans, and the Zaidi ritual established in the mosques. These details are taken from the Turkish *History of Yemen and Ṣan'ā*, by Aḥmad Rashid,[2] who attributes the expulsion of the Ottomans chiefly to the incompetence, laziness, and corruption of the governor Ḥaidar Pasha, who was exiled in consequence. The new Zaidi ruler, as has been seen, took a title in the style of the khalifahs, and similar titles were taken by his successors, of whom the first was his brother Ismā'īl, called the Mutawakkil, who captured Aden in 1640, and extended his rule into Ḥadramaut and other regions neighbouring Yemen. From this time till 1750, though there were numerous wars of succession and local revolts and insurrections, the Zaidi realm remained intact; after 1750 it split up into numerous petty governments, of which the most important continued to be that of Ṣan'a. To the list of imāms given by Stanley Lane-Poole,[3] after Niebuhr, we should add Mutawakkil, who ascended the throne on the death of his father Manṣūr in 1814, and Mutawakkil's son Mahdī, who succeeded in 1820–21, and after whose demise in 1830–31 there was a period of anarchy, which ended in 1846 with the restoration of the Ottomans, one Tewfiq Pasha being installed as governor in that year at Ṣan'a. Since that time, however, there have been numerous revolts and internal dissensions.[4]

Besides the Zaidites of Fez and Yemen there were in the 3rd and 4th Islāmic centuries those of Tabaristān and Jilan. Various pretenders of the family of 'Alī, entertaining the Zaidi system, established themselves, though ephemerally, in these regions, where they are thought to have made converts among the till then pagan populations.[5]

2. Characteristics.—In the Diplomatic Encyclopædia of Qalqashandī called *Ṣubḥ al-A'shā*[6] some notices of the Zaidi court are collected from various authors. According to these, the imām lived in Arab simplicity with no attempt at magnificence or display. He claimed, however, to be the supreme sovereign, the usurpers of whose rank (such as the 'Abbāsid khalīfahs) would be punished in the next world for their rebellion. His followers looked forward to the time when his supremacy would be generally acknowledged, and expected that his family would produce the Mahdī who is to appear at the end of the world. His prayers were regarded as intercessory; his hand was laid on the sick; and at times of drought it was his business to procure rain. The emirs of Meccah (in the 6th Islāmic cent.) were supposed to favour his claims secretly. The imām was thought to possess a secret store of knowledge, handed down from his predecessors, and going back ultimately to 'Alī and

[5] Some account of these persons is given in Ibn Isfandiyār's *History of Tabaristān* and by H. L. Rabino, 'Les Provinces caspiennes de la Perse,' *RMM* xxxii. [1915–16]. An abridged translation of the *History*, by E. G. Browne, was published as vol. ii. of the Gibb Memorial Series, London, 1905.
[6] Cairo, 1915, v. 51–54.

the Prophet (a common Shī'ah notion). He maintained agents who travelled over all Islāmic countries, associating with those who were already adherents and winning others. These were all on the look-out for the collapse of the khalifate (in 732 A.H. that maintained by the Egyptian sultans) and the exaltation of the imām. In the effects of a man who had died in Aleppo (somewhat before this time) letters had been found addressed to him and to his ancestors from the imāms soliciting information about the Shī'ah in that country and also aid. There were different accounts of the number of the imām's armed followers, but there was no question of their valour. The Rasulids, who from 1229 to 1451 A.H. were the chief power in Yemen, ordinarily treated the imām with respect; during the reign of Nāṣir in Egypt (1293–1340) an imām had sent a proposal to form an alliance for the purpose of ousting the Rasulids, which had been rejected.

3. Doctrine.—The Zaidis in doctrine come between the Shī'ah (*q.v.*), to whom they technically belong, and the Sunnah (see SUNNITES). They maintain that the imāmate is inherent in the house of 'Alī and Fāṭimah; but they revere the memory of the first two khalīfahs, holding that, though 'Alī had a right to the office, there were political reasons which rendered his appointment undesirable. Their theory is known as *tafḍīl*, meaning the legitimacy of the appointment of the *mafḍūl*, *i.e.* the person whose claims are inferior, while the *fāḍil*, or person with superior qualifications, is accessible. Copious extracts from their literature on this subject are given by R. Strothmann.[1] The imām Hādi, as has been seen, compiled a treatise on the subject. In normal times the imāmate in their system belongs to the fittest person among the descendants of either Ḥasan or Ḥusain, the grandson of the Prophet whose duty it is to 'come out.' To rebel against an iniquitous ruler (*al-bāghī*) is in their opinion a duty. This, according to the author of *al-'Alam al-shāmikh* (Sālih b. Mahdī, † 1108 A.H.), is their most distinctive tenet and that which separates them from the other schools.

'Otherwise,' he says, 'there is little that is distinctive about them; in the articles of religion they agree with the Mu'tazils, whereas with respect to the Branches (*i.e.* the religious and civil code) they differ; with some of them the system of Abu Ḥanifah prevails, whereas with others that of Shafi'i, though this is not a case of following, but of agreement; some however are not of this sort, but are like other independent enquirers (*mujtahidūn*); only fanaticism makes people anxious to differ from others. Thus the Expiatory Prostration (*sujūd al-sahw*) has become a kind of badge of the Zaidites; the followers of the four Sunni systems are abandoning it altogether, indeed we have never seen them practise it; the reason being the anxiety of the Zaidites about it, which is like their caution in other matters, *e.g.* the Minor Ablution. Damaghani [perhaps Muhammad b. 'Alī Dāmaghānī, † 478 A.H.] found fault with them for over-ablution, which he rightly said is contrary to the Sunnah.'[2]

Of their law-books the first part of one called *Muntaza' al-Mukhtār* ('The Abstract of the Select'), based on the *Kitāb al-Azhār* of the imām al-Muhdi li-din Allah Aḥmad b. Yaḥya (775–840 A.H.), was published at Cairo in 1328, but has up to the present date remained unfinished. It deals only with ceremonies, and differs in minute points from the law-books of the Sunni schools. Many other law-books of the Zaidis are contained in MSS. A *Corpus Juris* of Zaid b. 'Alī, edited by E. Griffini, Milan, has been issued.

4. Divisions.—The classical heresiologists, 'Abd al-Qāhir[3] and Shahrastani,[4] divide the Zaidis into three sub-sects—the Jārūdiyyah, the Sulaimāniyyah or Jarīriyyah, and the Butriyyah, with whom the latter of these writers couples the Ṣālihiyyah. The three names Jārūdiyyah, Sulaimāniyyah, and Butriyyah are given in the *Mawāqif* of 'Aḍud al-Din Iji († A.D. 1355).[1] The second are called after one Sulaimān b. Jarīr; the third, according to this work, after Butair al-Thūmī, but, according to the *Firaq*, after Kuthayyir called Abtar and Ḥasan b. Ṣāliḥ b. Ḥayy. In the *Ghunyah*[2] of 'Abd al-Qādir al-Jīlānī, who is but slightly later, they are divided into six sub-sects—Jārūdiyyah, Sulaimāniyyah, Butriyyah, Nu'aimiyyah, Ya'qūbiyyah, and a sixth. In the Persian *Bayān al-adyān*,[3] which is about a century earlier (A.D. 1092), the number of sub-sects is said to be five—Jārūdiyyah, Dhākiriyyah, Khashabiyyah (the followers of Sarhāt Ṭabarī, who used wooden weapons at the time of their rising), and the Khalafiyyah. The questions about which they differed were mostly concerned with the imāmate, or aspects of it—*e.g.*, whether Muhammad had appointed 'Alī as his successor or not; whether he had also appointed his grandsons or not; it is asserted that the Jārūdiyyah (called after one Abu'l-Jārūd Ziyād) denied the death of Muḥammad b. 'Abdallah, a pretender of the time of the 'Abbāsid Manṣūr, and looked forward to his return as Mahdī (though some of them looked forward to the return of some other pretender); further, that they call the first two khalīfahs 'unbelievers,' and in consequence are execrated by the rest of the Zaidis, who in turn execrate them. The only claim of this sub-sect to be called Zaidis would then lie in their recognizing the imāmate of the Zaid after whom the sect is named. The doctrine mentioned above is usually regarded as characteristic—*e.g.*, by the Spanish traveller Ibn Jubair, who indeed does not expect his readers to have heard of the sect.[4] A traveller of a century earlier (1035–1042), Nāṣir-i-Khusrau, who found them in Yemamah, apparently expects his readers to know their name, but not to know that they were of the Shī'ah.[5] It is probable that the names of the sub-sects were little known.

LITERATURE.—A few works emanating from Zaidi theologians are mentioned in the *Kitāb al-Fihrist*, ed. G. Flügel, Leipzig, 1871–72, i. 193. Their literature is, however, very copious, and there is a large MS collection of it lodged in the Ambrosiana of Milan, of which notices have been given by E. Griffini, in *Rivista degli Studi Orientali*, i.–iii., Rome, 1908–10; many Zaidi MSS are also to be found in the Berlin Library. A treatise on rhetoric called *al-Ṭirāz*, by the Zaidi khalifah Yaḥya b. Ḥamzah (729–749 A.H.), was published in Cairo in 1914.

D. S. MARGOLIOUTH.

ZANZIBAR AND THE SWAHILI PEOPLE.—The name Zanzibar, now applied only to the town of that name and the island in which it is situated (both called in Swahili *Unguja*), anciently designated the whole coast, from the Juba River to Sofala.[6] Originally Zangibar (Zengibar, Zanguebar), from the Persian زنگی; 'negro' and بر, 'region,' it was modified by Arab and Portuguese pronunciation into Zanjibar and Zanzibar. The town is said to have been founded by settlers from Shiraz, in the 8th or 9th cent.,[7] but there is less definite information available as to its early history than in the case of Kilwa, Lamu, and Pate. Sacleux[8] suggests that the Wahadimu (the early inhabitants, whose chief, the *Mwinyi mkuu*, ruled the island up to the time of Sayyid Barghash) may have been a colony from Kilwa. The coast

is also known by its Arabic designation of ساحل (*sahil*, 'coast'—hence the term 'Swahili coast' is a pleonasm, like 'Lake Nyasa,' etc.), and its inhabitants as سواحل, 'coast-people'—in African pronunciation 'Swahili.' (They are spoken of in their own vernacular as Waswahili, pl. of Mswahili; the language as Kiswahili.) They are called by the 'Nyika' tribes Adzomba (Wajomba), by the Pokomo Watsawaa or Wadzawaa, and by the Galla Hamara.

The name 'Swahili'[1] does not belong to any one indigenous African race: it connotes the descendants of Arab settlers by native women of various tribes, chiefly Bantu. There are also traces of Persian descent, and possibly their pedigree includes other ethnic elements.

1. Distribution of the Swahili.—The territory inhabited by the Swahili is the strip of coast defined in 1886 as the Sayyid of Zanzibar's dominions—viz. from Warsheikh on the Somali coast to Cape Delgado. This, however, does not include all, as distinct dialects of Swahili are recognized for Ibo and the Kirimba Islands, nearly two degrees south of Cape Delgado, and for the Angoshi Islands, half-way between Mozambique and the mouth of the Zambesi. The people themselves—at any rate those of the northern parts—limit the expression 'Swahilini' (=the Swahili country) to the coast north-east of the Tana mouth, though some extend it as far south as Malindi. This fits in with the assertion made by various writers that the dialects of Lamu and the adjacent coast are reckoned the purest,[2] or, as Krapf says,[3] that 'the real home of the Swahili language is considered to be in the islands of Patta [Pate], Lamu, and in the country opposite to those islands.' Swahili, however, is spoken and understood far beyond the confines of its proper home: it has been carried half-way across the continent by traders and caravan porters and is current, in debased forms, both on the Congo and in Sindh.[4]

2. Physical characteristics.—There is probably no uniform Swahili type, and this is scarcely surprising when we consider, not only the composite origin of the people and the various sources whence their race has from time to time been recruited, but the fact that there are many persons calling themselves Swahili who have not the slightest claim to Arab descent. These may be the descendants of imported slaves, or they may be members of inland tribes who have adopted Islām and settled on the coast. Consequently shades of complexion (the darker and lighter being broadly distinguished by the people themselves as 'black' and 'red') and types of feature vary indefinitely; and we must remember that the compound factors are not merely the Oman Arab (with the possible, or indeed probable, Persian) and the Bantu native, but the tribes of Hamitic or 'Helot' stock, of whom the Wasanye and Dorobo are present-day representatives, and the various Galla, Abyssinian, Somali, and even Georgian or Circassian women who have at different times found their way into the harems of wealthy Arabs. Characteristics are apt to vary greatly, even within one and the same family; *e.g.*, a member of the 'l Batawi (Arab) clan, living at Mombasa, has decidedly negroid features and woolly hair, while his sister, as dark as himself in complexion, has fine, silky, and perfectly straight hair. As Baumann says:

'Gar leicht kann man schliesslich zur Ansicht gelangen, dass es überhaupt einen Swahili-*Stamm* nicht gebe, dass das Wort keine andere als die ursprüngliche arabische Bedeutung "Küstenbewohner" habe.'[1]

Burton's description[2] is too sweeping, as regards both appearance and character, though he appears to have chiefly in view the island of Zanzibar—perhaps the least favourable ground for observation.

3. Origin.—It is uncertain at present whether there were any Arab or Persian settlements in pre-Islāmic times; and the vexed question of the Zimbabwe mines cannot be discussed here; but it is worth noticing that the Karanga language of Rhodesia has some words in common with Swahili, which do not seem to occur in languages geographically intermediate.[3] There was, however, commercial intercourse at a very early period. The first Arab settlement to which a definite date is assigned is that of Pate, in A.D. 689;[4] the colonists are said to have been Syrians. Native tradition says they found Waboni and Waemezi hunters living in the island.[5] They intermarried with these people, though their descendants have tried to suppress the fact. Vague traditions (which the present writer has never been able to verify) of pre-Islāmic people worshipping a golden idol (a calf or bull?) at Kau may point to some early Persian or Hindu settlement of which no other record survives. Contact with the Bantu was probably, in the first instance, with the Pokomo, who, according to native tradition, were settled in the Tana valley long before the southward migration of the 'Nyika' peoples in the 16th century. The Pate colonists are said to have come from Syria; and some ascribe the same origin to Malindi, Zanzibar, Mombasa, Lamu, and Kilwa;[6] though the Kilwa Chronicle states that the founder of this city came from Shiraz. The settlement of the 'Emozeids' (Ummu Zayd), somewhat later than that of Pate,[7] seems to have introduced a considerable Persian element. Baumann says:

'Der Name Swahili ist bei den Angehörigen des Stammes selbst nicht sehr verbreitet; am liebsten hören sie sich *Schirazi* nennen und leiten ihre Abkunft von Schiraz her.'[8]

This probably applies to Tanga and neighbourhood: it is certainly not true of Mombasa or the coast north of it, where the present writer has never heard of the slightest objection to the name Swahili—not even on the part of some men at Jomvu who said their ancestors came from 'Shirazi.' In fact, the people of Jomvu are known to have emigrated thither, not more than three or four generations back, from Shirazi, near Vumba, which was originally a colony from the Persian Shiraz. Shaka, near Kipini (celebrated in connexion with Liongo Fumo, and possibly the 'Jaca' of the Portuguese inscription on the Mombasa fort), was also a Persian colony.

4. History.—The sources are: native tradition, Portuguese records and historians, and Arabic documents, of which only two have been published, viz. the Chronicle of Mombasa, printed in Owen[9] and also as an appendix to Guillain's first volume, and the *History of Kilwa*, edited by S. Arthur Strong.[10] This seems not to be quite identical with the *Chronica dos Reys*

[1] This is the commonly accepted spelling, though some French writers still cling to 'Souahéli'; and 'Suaheli' is the form current in Germany. Salt has 'Sowauli' and 'Sowaiel,' Owen, 'Sowhylese'; see Cust, *Modern Languages of Africa*, ii. 345.

de Quiloa, of which the substance has been fortunately preserved by Barros.[1] Another Arabic MS, known as the *Book of the Kings of Pate*, after being preserved at Pate for some time, was carried to Witu when Ahmad Simba fled thither (about 1856) and was finally destroyed in the bombardment of 1890; no other copy is known to be in existence. Some Swahili MSS, written down in recent times at Lamu, preserve what has hitherto been handed down orally; one of these was published in the *Journal of the African Society*, 1913–14. Similarly, the second chapter of Stigand's *Land of Zinj* embodies the result of conversations with the oldest living authority, 'Bwana Kitini' (Muhammad bin Fumo Umari) of Lamu. The scattered notices of E. Africa in the works of Greek and Roman geographers and other ancient writers, as well as in those of the mediæval Arabs, have been well summarized by Guillain in his first volume. The Arab geographers have also been carefully studied from this point of view by Gabriel Ferrand.

Intercourse between Arabia and the east coast of Africa seems to have taken place from very early times. Indonesian influence is also probable, and by Stuhlmann[2] is made responsible for the introduction of the coco-nut palm and the outrigger canoe; he assigns a similar origin to the curious kitchen implement (*mbuzi*) used for scraping coco-nuts. One of the Lamu MSS above referred to says that seedlings of coco-palms (*mite ya minazi*) were brought by certain Arabs from 'Kalhindi'—but there is no clue as to what is meant by this name. Ferrand[3] places the Indonesian colonization of Madagascar (which has notable Malayo-Polynesian affinities) not earlier than the Christian era; but it by no means follows that this was the earliest contact.

Pate was founded (A.H. 69, A.D. 689) by colonists of the il-Batawi tribe (or clan?)—hence, say some, the name (Ar. Bata or Batta). The royal house of these Batawi continued in power till A.D. 1204 (A.H. 600), when a fugitive from Maskat, Suliman b. Suliman of the house of Nabhan, landed there, was hospitably received, and ultimately married the daughter of the last Batawi chief. The Nabhans remained sultans of Pate till 1866.

About 740 the followers of Zaid, great-grandson of the 4th khālif, 'Ali, escaping from the persecution of the Umayyads, fled to E. Africa and became the ancestors of the people now called Wagunya (or Watikuu) who inhabit the mainland north of Lamu, speak a peculiar dialect of Swahili, and are regarded as in some respects a distinct people by their southern congeners. They are known in history as 'Emozeids' (Ummu Zaid). Makdishu and Barawa are said to have been founded about A.D. 909 and Kilwa in A.D. 975; but the Kilwa Chronicle quoted by De Barros and that published by Strong show some discrepancy with regard to these two migrations. Both agree in saying that Kilwa was founded by 'Ali ibn Hasan of Shiraz. One of his brothers is said by the latter authority to be the founder of Mombasa; but elsewhere[4] its origin is ascribed to Muhammad, son of 'Ali ibn Hasan. Zanzibar does not figure conspicuously in the early records; it was long tributary to Mombasa, though by some said to be equally ancient. The various small city-states were originally independent of one another, and, though one might, for a time, establish a sort of precarious hegemony—as was the case, in turn, with Kilwa, Mombasa, and Pate—no empire or permanent confederacy was ever established. Lamu differed from the rest in being ruled, not by a sultan, but by a council of elders (*wazee*).

The Portuguese arrived at Malindi in 1498 on their way to India, and established friendly relations with its ruler, who asked for help against his rival, the shaikh of Mombasa. Mombasa was burnt by Nuno da Cunha in 1529[5] (it had been previously in 1505 sacked and burnt by Almeida, who took Kilwa in the same year). By 1530 the whole coast, from Barawa to Cape Corrientes, was under Portuguese dominion, and this continued intermittently (one town or another being usually in a more or less successful state of revolt) until 1652. In that year an Arab fleet arrived from Oman, the Swahili towns having some time previously entreated the help of the *imām* in order to drive out the Portuguese, and the war thus begun culminated in the fall of Mombasa, 12th Dec. 1698, which was followed by the occupation of Kilwa, Zanzibar, and Pemba. Thenceforward, except for the short time during which they held Mombasa and Pate, retaken in 1728, the Portuguese were restricted to their present possessions, south of the Rovuma. It is curious that Pate, where their rule was far less continuous than at Mombasa, seems to keep the most vivid traditional memories of them. 'Violent [or 'proud'] as a Portuguese' is still a proverbial saying; and the townsmen of Pate point out, in the bed of the tidal creek, the remains of the causeway by which, as they affirm, the invaders dragged their cannon up from the anchorage at Shindakazi. It is impossible to assign a date for the destruction of the towns whose ruined sites occur almost every few miles between the Juba and Mombasa. Some may be accounted for by the invasion of the Zimbas, a warring people not yet certainly identified, in 1586–89.[1] Later came the Galla raids which (probably during the 18th cent.) reduced Malindi from a flourishing city to the heap of ruins found by Krapf in 1846.[2]

From 1729 onward the coast was supposed to be under the suzerainty of Maskat, and the *imām* placed governors in Mombasa and Zanzibar, but apparently not at Pate, which was frequently at war with both Lamu and Mombasa. The reigning family of Maskat, in the early part of the 18th cent., was that of Ya'arubi, and the first Liwali who administered Mombasa under him was Muhammad b. Said 'l Maamiri;[3] but in 1739 the appointment was given to Muhammad ibn 'Athman of the Mazrui clan, afterwards so famous. Shortly after this, in 1741, the imāmate was transferred from the Ya'arubi to the house of 'l Bu Said (Albunseyidi), from which the present sultan of Zanzibar is descended. One result of this change was the virtual independence of Mombasa under the Mazrui, which lasted till 1837. The Mazrui attempted, in 1823–24, to place themselves under British protection;[4] but their request was refused, owing to the representations of the Indian Government, who considered it important to keep on good terms with Maskat; and Mombasa was ultimately reconquered by Sayyid Said, who had, in 1832, removed from Maskat to Zanzibar and thenceforth made the latter his principal residence. Details of events subsequent to that date will be found in some of the works already referred to; also in those of Charles Eliot, Lyne, Craster, and the Blue Books.

5. Religion.—The Swahili are, almost without exception, Muslims and of the Shafi'i sect.[5] The Sayyid's family and most of the Oman Arabs are Ibadis.[6] The people in general, especially the women—so far as the present writer came in contact with them—seem better instructed than some writers admit.

E.g., Burton says: 'The Wasawahili calling themselves Moslems know little beyond the Kalmah, rarely pray, and fast only by compulsion';[7] and Baumann: 'besonders jüngere Leute stehen dem ganzen Islam auffallend gleichgiltig gegenüber und können oft nicht einmal die Fatha hersagen. Noch mehr ist diese Indifferenz bei Weibern zu beobachten.'[8]

This did not seem to be the case at Jomvu, Mambrui, or Lamu, where there is comparatively little contact with Europeans. It is quite true, however, that there is a marked absence of fanaticism. Strangers are admitted, even invited, into their mosques. Women do not as a rule go to the mosques, though 'some of them are as well or better read in the Koran than the men.'[9] Each town—even small ones of a few hundred inhabitants—has one or more schools, where boys are taught to read (and sometimes to write) the Arabic character, and learn the Qur'ān by heart. More advanced instruction is occasionally given by *mu'allims*, who hold evening classes at the mosque and explain the sacred text in the vernacular. The writer heard of schools for girls, both at Lamu and at Mambrui, though none were actually in existence at the time of her visit, and well-to-do parents, at least, engaged visiting teachers for their daughters.

'Among the pure Swahilis many of the women are well educated in reading and writing, while in the Lamu Archipelago they are often better than the men in versifying.'[10]

A feature which has hardly attracted the attention it deserves is the wide diffusion of a considerable body of religious poetry in the vernacular. MS copies are handed down in families, and many men and women who cannot read know long passages by heart. Among the most popular are: a poem of 264 stanzas, relating the death of the Prophet, another on the history of Job, the *Utenzi wa Shufaka* published by Büttner, and *Qissat Sayyidinā Isa*, which relates the life of Christ according to Muslim tradition and the Apocryphal

Gospels. A didactic and devotional poem known as the *Utendi wa Mwana Kupona*, composed by a Lamu woman, some 60 or 70 years ago, was published in 1917, in the *Harvard African Studies*.

As in other cases where the Muslim religion has been superimposed upon a system of primitive beliefs, it has absorbed all sorts of extraneous elements. The Bantu cult of the ancestral ghost has passed into something like saint-worship at the graves of noted shaikhs — *e.g.*, the shrine known as Pa Shehe Jundani at Mombasa. The diviner, instead of casting lots by means of the 'bones' or analogous objects (a practice still in vogue among the Giryama, etc.), uses the sand-board (*kupiga ramli*) or writes texts from the Qur'ān and the names of the four angels (Gabriel, Michael, Azrael, Israfil), on paper or parchment, to be used as charms.

'Descended from "devil-worshippers"'—a designation based on a misapprehension—'the Waswahili rather fear the "Shaytani" than love Allah, and to the malignant powers of preternatural beings they attribute sickness and all the evils of human life.'[1]

The word *shaitan* has been borrowed from the Arabs and is applied to the spirits haunting rocks, trees (more especially baobabs), etc., for which the genuine Swahili word is *wazimu* or *wazuka*. These are originally, in all probability, ghosts of the dead, but imported notions, such as that of the Arab *jinn*, have introduced some confusion. In Krapf's time every boatman who passed 'Makame's Rock' (on the landward side of Mombasa Island, almost opposite Frere Town) threw a lime into the sea; the custom is still remembered, but reduced to a mere symbolic act, like the throwing of a pin into a holy well in this country. Probably offerings were once made to propitiate the ghost of a man drowned there, but the story told to Krapf was that Makame was a fisherman who had been turned into a rock because he followed his occupation on a holy day.[2] Similarly, there are lonely spots in the bush, known as *kwa kibibi* ('the place of the little lady')—probably forgotten graves — where passing travellers are wont to lay down a stick, stone, leaf, or other trifle. Spirits haunting trees may at any time seize and possess passers-by; they are then known as *pepo*, and there are recognized and usually very elaborate formulas for exorcizing them. In fact, there is a whole hagiology of these *pepo*, and each one has his special *ngoma*, or 'dance.'[3]

6. Customs.—As may be inferred from what has already been said with regard to religion, we meet here with an interesting blend of imported and indigenous ideas. The reckoning of kinship in the male line cannot be counted as one of the former, as the transition from mother-right to father-right has already taken place in many Bantu tribes. But the prohibited degrees enumerated by Velten[4] are those recognized by Muslim law, and the clan system, still in full vigour among Giryama, Pokomo, Digo, etc., who may not marry inside their clan, has fallen into oblivion. (The so-called twelve 'clans' [*kabila*] of Mombasa, seem to be local associations, *i.e.* the Wapate, Wapaza, etc., are immigrants from the places denoted by their names.) The tabus (*miiko*) observed in families[5] would probably give a clue to former clan-relationships. All persons who have any claim to Arab descent keep the records of their genealogy with the greatest care, adding the clan name to their own—*e.g.*, 'Alī ibn Muhammad ibn 'Umar 'l Batawi, or 'l Mandhiri, or 'l Auzii, etc., as the case may be. The Muslim rite of circumcision has been blended with the Bantu initiation-ceremonies (*kumbi*, *manyago*) and consequently takes place earlier than it would, as a rule, among the Bantu.[1] Girls are not operated on by the Swahili, though they are by some of the Arabs. Much valuable information, derived from native sources, is given by Velten; but it is by no means exhaustive and applies chiefly to the Mrima, the coast-land opposite Zanzibar. A native authority[2] says that, in all essentials, Swahili customs are the same from Lamu to Lindi—but this possibly needs some little qualification.

7. Language and literature.—Swahili is not, as some have thought, a mere composite jargon, comparable to 'Pidgin-English' or 'Kitchen Kafir'; but it is not the language of any indigenous African tribe—*i.e.*, it did not exist before the Arab colonization. The Bantu groundwork may, as Krapf thought,[3] have been Pokomo; certainly it seems to have taken shape in the Lamu archipelago and adjacent mainland, including the Tana delta. But other tribes may have exercised a modifying influence, especially in the southern dialects, where intervocalic *l*, elsewhere consistently dropped out, has a tendency to reappear (*fungula* for *fungua*, etc.). Arabic has contributed largely to the vocabulary (about to the same extent as Latin in English), but has not influenced the grammar to any appreciable degree. A few Persian and a few Portuguese words have been incorporated with the language—in the latter case, not nearly so many as might have been expected. It has been written (probably for some centuries, but at present it is difficult to procure evidence on this point) by means of the Arabic character, which, however, is by no means well adapted for the purpose; and even with the help of additional symbols such as are used in Persian—*e.g.*, for *p* and *v*—a Swahili MS may be very difficult to read, even for a native. It is obvious that the vowel points are indispensable; they are only omitted in Arabic words which are easily recognized, such as the conventional phrases at the beginning of a letter. The oldest MSS examined by European scholars may go back to the 18th or possibly the late 17th century; perhaps some still older ones may exist in the archives of the mosques. The poems (there are no ancient Swahili prose-writings)—if not the actual copies—may be of considerable antiquity, but we have no certain data on this point. W. E. Taylor thinks that the *Inkishafi* (a religious poem edited by him and published as the appendix to Stigand's *Dialect in Swahili*) may have been written before Vasco de Gama's arrival in Africa (1498), and, if the poems assigned to Liongo Fumo are genuine, they must go back at least to the 16th, and possibly to the 12th cent., or earlier. Very few of these poems have found their way into print. Büttner, in his *Anthologie*, published three long poems, all of a religious character, and a charming selection of recent lyrics and folk-songs and a large body of minor verse has been collected by Velten, while the *Chuo cha Herkal* ('Book of the Emperor Heraclius'), of which a MS was brought to Europe by Krapf, was published by Meinhof in the *Zeitschrift für Kolonialsprachen* for 1912–13. With the exception of the *Utendi wa Mwana Kupona* mentioned above, and the gnomic stanzas attributed to Liongo, in Steere's *Swahili Tales* (there is a MS of this poem in the British Museum), this is all that has been done so far in this direction. Swahili has eminent possibilities as a literary language, and some attempts recently made—notably the traditions of the Wakilindi (Usambara), written down by the late Abdallah ibn Hemedi Liajjemi—promise well for the development of prose writing.

A. WERNER.

ZAPOTECS.—See MEXICANS.

ZARATHUSHTRA.—See ZOROASTRIANISM.

ZEALOTS.—1. Name.—The term 'Zealots' (*i.e.* 'the zealous') is derived from ζηλωτής, the Greek equivalent of the Hebrew קַנָּא, *Qannā*, pl. *Qanna'im* and the Aramaic *Qannāi*, pl. *Qannā'in*.[1] The terms both in Hebrew and in Greek have a general and a specific usage. The former is naturally of most frequent occurrence in Scripture and Jewish literature.[2] The latter usage as a designation of the fanatic Jewish nationalists and opponents of Roman domination is rare. *Qanna'im* is not found in the Targum Onḳelos.[3]

[1] The adjectives קִנְאָא, קִנְאָן, קִנְיוֹן, and קִנְאִי are found in the Talmud and Midrashim, but the plural in a technical or quasi-technical sense occurs only twice: *Sanh.* ix. 11, 'Whoever steals a libation-cup, or curses one by the Holy Name, or has intercourse with a Syrian woman shall be struck down by the *Qanna'in*' (קנאין, Zealots, apparently in a religious sense only); and *Ābōth de R. Nathan*, vi.: 'And when the emperor Vespasian came to destroy Jerusalem the *Qanna'im*[4] attempted to burn everything with fire'—the only Talmudic passage mentioning the political Zealots.

How early the title *Qanna'im* was applied to the extreme anti-Roman political party is uncertain. According to Josephus,[5] it was a self-designation. If this is so, it is impossible to determine whether 'Zealots' was a self-designation from the beginning of the movement under Judas the Galilæan and became generally known and recognized as their title under Gessius Florus because of their remarkable activity and increase then, or, on the other hand, whether these 'fanatics of Roman hate' had no definite appellation for the first sixty years (A.D. 6–66) of their history until the time of Florus, under whom Josephus first employs the term.[6]

The epithet 'the Cananæan' in Mk 3^{18}, Mt 10^{4} (for which 'the Zealot' is given in Lk 6^{15}, Ac 1^{13}), has been variously interpreted. The AV reads Καναίτης, 'the Canaanite' (which is given in Mk by A and other second-rate uncials and later versions, and in Mt by ℵ and later authorities), but that would require χαναναῖος=קְנַנְיָא. Jerome interpreted it as *de vico Chana Galileæ*, and Holtzmann[1] as קִנְאָנִי='a man from (an unknown) Kanan,' both of which interpretations would require the Greek Καναῖος. Dalman[2] considers Καναναῖος an error for Καναῖος by assimilation to the more familiar 'Canaanite.' These explanations are superfluous. Καναναῖος is simply the Greek transliteration of קַנָּאנָא, *i.e.* קַנָּאן, with the post-positive article א—and so='the *Qanna'* (Zealot), just as in Aramaic מַלְכָּא='the king.' Luke has therefore rightly and literally translated it ὁ ζηλωτής.[3] Whether Simon was an adherent of the Zealot party before he joined the company of Jesus, or the term was won subsequently through zeal in Jesus' service (as the brother of Andrew won the surname Peter, and the Zebedaides that of Boanerges) may not be quite certain, but the probabilities point to the former view.

2. Origin.—As the oppression and Hellenizing policy of the Seleucids caused the Maccabæan revolt and the rise of the Ḥasîdîm, the policy of Rome, especially from A.D. 6, caused the rise of the Zealots. The genealogical descent of the Zealots may be traced from the Ḥasîdîm through the Perûshîm (Pharisees), who appeared in opposition to the Hellenizing sympathies of the aristocratic Sadducees about the time of John Hyrcanus (135–105 B.C.). The Zealots thus combined the policy of the Ḥasîdîm (against foreign domination) with that of the original Pharisees (against liberalism towards foreign thought and manners and laxity towards the Law).

Although the Zealot movement dates from A.D. 6, there had been for years previous a growing discontent against both Idumæan and Roman rule. The statement of Rabbi Kohler that 'the reign of the Idumæan Herod gave the impetus to the organization of the Zealots as a political party' seems to go beyond our evidence. But the Zealots had forerunners in the 'robber' bands of Herod's reign. Ezekias 'the arch-robber' (ὁ ἀρχιλῃστής) at the head of a strong 'robber' force caused great trouble to Herod, by whom he was finally captured and executed.[4] His son Judas, after the death of Herod, made an insurrection in Sepphoris in 4 B.C.[5] Even conspirators with concealed daggers banded together against Herod,[6] the forerunners of the later Sicarii.

The Jews had come into contact with Rome in the days of the Maccabees. If Pompey captured Jerusalem in 63 B.C., and abolished the Hasmonæan kingship, he left the Jews in the enjoyment of a considerable independence and respected their nationhood. In A.D. 6 Archelaus, who for ten years as ethnarch had ruled Judæa, Idumæa, and Samaria, was accused before Augustus by a joint commission of Jews and Samaritans of intolerable cruelties, for which the emperor recalled and banished him. Judæa was then loosely annexed to the Roman province of Syria, to be administered under a procurator.[7] From this date the Jews began to discover—what they learned better on the extinction of the Herodian dynasty in A.D. 44—that the sly half-Jewish Herods understood and respected their peculiarities and religious customs better than did the Romans. The Jews found the Roman administrators to be other than they had imagined. There was to be no return to the 'honours and alliances of the Romans and their emperors with our nation'[8] of Maccabæan days, nor to the δόγματα of the great Julius in the years 47 B.C. and following, which bestowed upon the Jews all the privileges of Roman protection together with religious toleration and political home rule. These Julian decrees were regarded later by the Jews as their Magna Charta, and by them all subsequent Roman administration was appraised.

[1] קִנְאִי, קִנְאָן; not *Kenaim*, as given in *PRE*[3] xxi. 655; cf. J. Levy, *Neuheb. und chald. Wörterbuch*, Leipzig, 1876–89, and M. Jastrow, *Dictionary of the Targumîm*, etc., London and New York, 1886–1903.

Roman interference had never been palatable to the masses of the people, and it was among the lower classes that the hatred of Rome now became intensified, though, as often in popular upheavals, many of the leaders were supplied from the aristocratic classes. The conflict began with the resentment caused by the census of Quirinius (A.D. 6–7) to which Judæa as a procuratorial province was subjected. The Jews at first resented the taxation, but were persuaded to submit by the high-priest Joazar. The Zealot movement began as a protest against this census when Coponius was procurator of Judæa.[1] The outbreak did not occur in Judæa, but in Galilee, which was not directly affected by the census. The insurrection was headed by Judas,[2] a Gaulonite of the city of Gamala (better known as 'the Galilæan'), who allied himself with a prominent Pharisee, named Sadduk, probably a member of the more nationalistic school of Shammai. Though Josephus speaks of Judas and Sadduk as joint authors of the Zealot movement,[3] he more frequently represents Judas as the prime mover.[4] Judas the Galilæan became leader of the fourth of these sects.[5] The motives of the party were partly political and partly religious, but the political and the religious were always conjoined in Jewish history. In the closing scenes the political and secular far overshadowed the religious. The Roman taxation meant 'nothing else than downright slavery';[6] it was a breach against the theocracy.[7] The census was a sign to the people that the Romans designed to destroy the last trace of their liberties: it was a gross insult both to them and to Jahweh. The object of the Zealots was to preserve intact Jewish nationalism and cult-traditions, and, by force if necessary, to throw off the Roman yoke and restore the theocracy. Thus they would hasten the Kingdom of God. The Zealot party was a 'combination of noble and base elements; superstitious enthusiasts, and political assassins, the so-called sicarii, were conjoined with honest but fanatical patriots.'[8]

3. Subsequent history.—The history of Zealotism extends from A.D. 6–7 to the fall of Jerusalem, Sept. A.D. 70, or to the capture of Masada, April 73. The slighting reference of the Pharisee, Gamaliel, in Ac $5^{37ff.}$ might give the impression that the insurrection of Judas did not assume grave proportions, being suppressed immediately by the Roman authorities by the death of the leader and the scattering of his followers. Josephus does not chronicle either the fate of Judas or the history of the revolt, but affirms that it was the beginning of the end for the Jews.

'The daring plot made great headway. There is no evil that did not spring from these men [Judas and Sadduk], and the nation was filled with it to an incredible extent . . . whence seditions were engendered and as a result political bloodshed . . . and famine reducing us to extreme shamelessness, and the capture and sacking of cities, until finally this insurrection consumed the temple of God in the fire of the enemy.'[9]

Another proof of the importance of Judas's rebellion is the fact that his sons and descendants inherited his fanatical hate of Rome and became outstanding exponents of Zealotism until it was extinguished at Masada. Two sons of Judas, Jacob and Simon, were crucified by Tiberius Alexander.[10] Another son, Menahem, was a protagonist in the rising of A.D. 66.[11] A descendant, named Eleazar, was commander of the garrison of Masada and perished there, probably by his own hand.[1] The Roman question became the test question in political life and led to a fatal split in the Jewish nation. This internal division affected to a greater extent the Pharisaic party which had first resented the direct interference of Rome in the affairs of Palestine. The majority of Pharisees, however, were pacifists and fatalists; only a minority became extremists anxious to appeal to the arbitrament of the sword, and, under Sadduk, seceded to the Zealots.

After the first challenge of the Zealots to Rome was crushed, the Roman government seriously attempted to understand their Jewish subjects and in many ways humoured them. For a time the Zealot movement lost in numbers and influence, for lack of matters of complaint. Quirinius deposed the unpopular high-priest Joazar, who counselled compliance with the census.[2] The Jews were excused from Roman military levies: the auxiliary troops under the procurator were recruited from among the non-Jewish populations of Palestine.[3] The first four procurators were friendly disposed towards the Jews. Roman authority, most tolerant of Jewish customs and religious beliefs, placed the Jewish cult on the status of a *religio licita*. The cult of the Cæsars, elsewhere established and even welcomed in the empire, was not forced upon the Jews except during the mad attempt of Caligula which led to fearful massacres in Alexandria and caused much heart-searching in Judæa. On this occasion the holy city was spared desecration, through the tactful and generous management of P. Petronius, the legate of Syria, who pleaded the cause of the Jews at the risk of his own life, for Caligula, offended at Petronius's hesitation, ordered him to commit suicide—a command which fortunately did not arrive until after the assassination of Caligula. King Agrippa I., a special favourite with Caligula, likewise used all his influence to secure the withdrawal of the offensive decree.[4] The Romans, out of regard for Jewish scruples concerning the imperial image on coins, granted Judæa a copper coinage which bore only the name of the emperor and inoffensive symbols. When from time to time Roman troops marched into Jerusalem, they did so without the usual military banners which bore the image of the emperor—a considerable condescension on the part of the conquerors.[5] Unfortunately, between Jewish demands and scrupulosity on the one side and Roman arrogance and ignorance of their subjects on the other, even this *modus vivendi* was not destined to succeed or to reconcile Palestine to accept the Roman yoke. Moreover, Roman practice did not always harmonize with Roman theory. The result was an ever-widening cleft between the pro-Roman and the anti-Roman parties in the nation, with increasing bitterness and recklessness among the latter. The pro-Roman or pacifist party was represented by the Sadducees and the Herodian rulers and the aristocracy generally, together with the more prudent of the Pharisees; the anti-Roman party was composed chiefly of the Zealots and the populace. The Pharisees, at first decidedly anti-Roman, after A.D. 66 generally sided with the Sadducæan aristocracy and the party of law and order against the extremists.

Under the first four procurators (Coponius, A.D. 6–9; Marcus Ambibulus, A.D. 9–12; Annius Rufus, A.D. 12–15; Valerius Gratus, A.D. 15–26) Judæa seems on the whole to have been equitably

administered, and there was little disaffection to further the Zealot party. But the fifth procurator (Pontius Pilatus, A.D. 26–36) was a man of a different mind. He was, according to a letter of Agrippa I. to Caligula,[1] 'naturally inflexible and stubbornly relentless,' and guilty of 'acts of corruption, insults, rapine, outrages on the people, arrogance, repeated murders of innocent victims, and constant and most galling savagery'—a description quite in keeping with the impression given of him in the Gospels.[2] He defied Jewish religious prejudices by introducing a Roman garrison with the imperial ensigns into the city by night—an act which met with such opposition that Pilate was obliged to yield.[3] Another offence was his confiscation of part of the Temple treasury (the Corban) to build an aqueduct for Jerusalem. To the Jewish protests against this sacrilege Pilate replied by commanding the soldiery to punish the mob, which they did so thoroughly that many lives were lost.[4] Again, he set up gilt shields without the imperial image, but bearing his own and the emperor's name, in the palace of Herod within the city, 'not so much for the honour of Tiberius as to annoy the people.' He was ordered by the emperor to transfer them to the Augusteum at Cæsarea.[5] His last act of carnage was committed against the Samaritans, who laid their complaint before Vitellius, legate of Syria, by whom Pilate was sent to Rome to answer for his conduct, and Marcellus was appointed in his place.[6] All Vitellius's conciliatory acts could not undo the anti-Roman feelings engendered by the late procurator. It was under this Pilate, when the spirit of the dead Judas of Galilee again inspired the people with a desire for liberty, that Jesus taught and suffered. One of His disciples was probably a Zealot. In Galilee especially Jesus came in contact with Zealot propaganda which, in its advocacy of violence, ran counter to His preaching concerning the Kingdom of God, and against which He raised His protests.[7] Our Lord's death is also, possibly, linked with the history of Zealotism. It was the plots and violence of the Zealots which aggravated Pilate's apprehensions upon which the Jewish authorities played. At Jesus' trial before Pilate the multitude was granted the option between 'Jesus Barabbas' (Mt $27^{16f.}$) and 'Jesus called Christ.' This Barabbas was a 'robber' (Jn 18^{40}) who had been 'imprisoned with the insurrectionists who in the insurrection had been guilty of murder' (Mk 15^{7}). The word found in the Fourth Gospel (18^{40}), λῃστής, is the word most frequently used by our chief historian of Zealotism (Josephus) as synonymous with Zealot; and Mark's account indicates that Barabbas was no ordinary highwayman, but one who had headed one of the numerous revolts (στάσις) against Roman authority. Barabbas was, therefore, probably a Zealot leader.

The objection urged against this interpretation is that as a Zealot leader Barabbas would be in favour with the masses and likely to be preferred by the people, whereas Pilate hoped, by permitting the choice, that the multitude would ask for the release of Jesus. But (1) the accounts are somewhat confused. According to the Fourth Gospel and Matthew, Pilate proposed the choice as a possible means of acquitting Jesus, while, according to the oldest account (Mark), the people reminded Pilate of his customary clemency at the feast. (2) The alternative was not between a popular Zealot and an unpopular Messiah. Both Barabbas and Jesus were popular. Pilate knew that Jesus was in such favour with the people as to be called 'King of the Jews' (cf. Jn 6^{15}), but that by the authorities He was regarded with jealousy. Of these two popular prisoners Pilate was convinced that Jesus would be preferred by the multitude, which, however, partly under the influence of the high-priest, demanded Barabbas. It was not the first time that a procurator misunderstood Jewish feelings, nor the first occasion on which a ruler was misled by the psychology of the mob.

Little is known of the next two procurators—Marcellus (A.D. 36–37) and Marullus (A.D. 37–41).[1] Such was the Jewish national consciousness that the news of the bloody persecutions to which their brethren in Alexandria were subjected towards the close of A.D. 38 (and which continued fitfully until the close of Caligula's reign because of their opposition to the erection of the imperial image in the synagogues) would intensify the fanatical hate against Rome. The same demand for the recognition of the imperial cult was made upon Judæa the next year as a punishment for the act of the Jews of Jamnia in overthrowing an altar erected to Caligula.[2] After much hesitation the emperor yielded to the entreaties of the Syrian legate, Petronius, and Agrippa I. and withdrew the edict. The act of Claudius immediately on his accession, whereby he restored to Agrippa I. (the Herod of Ac 12) the dominions of his grandfather, Herod the Great, by adding Judæa and Samaria to his kingdom, was intended to placate Jewish nationalism. This arrangement continued in force till A.D. 44, when, on the death of Agrippa I., Rome passed over his twelve-year-old son and incorporated all Palestine with Syria under a procurator.[3] This disappearance of the semi-Jewish Herodian dynasty, which had stood as a buffer between Rome and the Jews, formed a crisis in Jewish history and caused a renewed outbreak of Zealotism. The social peace and material prosperity of the few years under Agrippa I., together with bitter memories of Roman procurators, made a return under direct Roman administration repugnant to the masses. Fuel was added to the fires of fanaticism. From this important date till A.D. 66 seven procurators administered Palestine.

'If the history of the Roman procurators, to whom Palestine was now entrusted, is reviewed, one might imagine that all, as if by some secret compact, systematically aimed at driving the people into revolt. Even the best of them—not to mention the others who trod all right under foot—had no idea that a people like the Jews desired above everything else tolerance toward their distinctive customs. Instead of practising mildness and caution, they opposed all the vital agitations (*Lebensregungen*) of the people with a pitiless severity.'[4]

The régime of the first two procurators after A.D. 44 (Fadus from 44, and Tiberius Alexander, nephew of Philo, till 48) was mild compared with that of the subsequent five: 'by making no innovations in our ancestral customs they kept the nation quiet.'[5] The misdeeds of Fadus recorded by Josephus are (1) his demand that the high-priest's vestment should be restored to Roman custody, which Claudius rescinded,[6] and (2) his suppression of the 'magician' or prophet Theudas, an idol of the people.[7] That Zealotism broke out with fresh vigour under Fadus's administration we may infer from the words of Josephus about the death of Tholomaios 'the arch-brigand'[8] and the clearance of all Judæa of 'robberies.'[9] We are

1 Philo, *ad Gaium*, xxxviii. (Mangey, ii. 590).

2 Cf. Lk 13[1]: 'the Galilæans, whose blood Pilate mingled with their sacrifices.' It is quite possible that these Galilæans were Zealots whose opposition would be aroused by the cruel régime of Pilate. In the list of heresies in Justin Martyr, *Dial.* 80, and in Hegesippus (Eusebius, *HE* iv. 6) the Zealots are called Galilæans. The Zealot followers of John of Gischala are referred to as Galilæans in *BJ* IV. ix. 10.

not informed whether the motive of Fadus was an insight into the nationalist danger or merely to keep order. The fact that the next procurator, Tiberius Alexander, deemed it necessary to crucify the Zealot leaders, Jacob and Simon, sons of Judas, shows that there was an alarming recrudescence of Zealot agitation such as to require summary treatment.[1] Under Ventidius Cumanus (A.D. 48–52) the people were in a constant state of insurrection.[2] Their resentment was embittered by (1) an indecent act of a Roman soldier at the Passover leading to a tumult, in which 30,000[3] Jews perished; (2) an order of Cumanus that whole villages be plundered in retaliation for the robbery of an imperial official by 'robbers' (probably Zealots): in the execution of this command a Roman soldier tore a copy of the Law to shreds with obscene language, upon which the people became so threatening that Cumanus beheaded the guilty soldier to placate them.[4] (3) As a result of the refusal of Cumanus to do justice to the Jews in a quarrel with the Samaritans, the people, against the advice of their elders, called in the help of the Zealot leader, 'Eleazar, son of Dinæus, a robber,' and Alexander, doubtless also a Zealot chief. Cumanus fell upon them and slew many. An appeal was carried to Ummidius Quadratus, legate of Syria, who referred the matter to Rome. Claudius, well-disposed through the offices of Agrippa II., condemned the Samaritans and banished Cumanus.[5] The administration of Felix (A.D. 52–60) formed 'the turning-point in the drama which commenced in 44 and reached its bloody issue in 70.'[6] 'The affairs of Judæa continued to grow steadily worse.'[7] Felix intensified the revolutionary spirit by (1) his offensive marriage with Drusilla; (2) his treacherous capture of the Zealot leader, Eleazar; (3) the murder of the high-priest, Jonathan, which he perpetrated by means of the Sicarii; (4) the slaughter of 400 followers of the Egyptian prophet who led 30,000 men[8] into the wilderness; (5) unfair treatment of the Jews of Cæsarea in their quarrel with their Syrian townsmen.[9] He endeavoured to exterminate the 'robbers' (Zealots), who, nevertheless, became increasingly numerous and influential among the masses. His conduct rendered the nationalist party eager to bring the matter to the issue of arms. The sympathies of the people, now driven to desperation, were alienated from the pacifist leaders to the side of the Zealot party. Further, alongside, or within, the Zealot movement appeared a more extreme faction known as Sicarii, or 'dagger-men,'[10] who from then till the end of the siege struck down indifferently pro-Roman and Roman. Under Porcius Festus (A.D. 60–62) the cancellation of the Jewish *isopoliteia* in Cæsarea roused bitter resentment. The imperial letter relative thereto 'furnished the causes of all the subsequent evils to our nation.' Another popular movement led by an 'impostor' (probably a would-be Messiah or a Zealot) was suppressed by Festus. The opposition of Agrippa II. and Festus to the erection by the Jews of the wall to prevent the Temple sacrifices from being overlooked from Agrippa's palace was another instance of blind neglect of Jewish sentiment.[11] Though Festus did not stain his office by the cruelties of his predecessor, the national party grew apace. The Sicarii who appeared under Felix became numerous. Festus attempted to exterminate the Zealots: 'he captured the majority of the "robbers" and destroyed many.'[1] The last two procurators, Albinus (A.D. 62–64) and Gessius Florus (A.D. 64–66), acted as if they were resolved to provoke the Jews to rebellion. They reduced the country to anarchy. Josephus relates of Albinus: 'There was no species of wickedness which he left undone.'[2] He levied oppressive taxes, plundered privately and publicly, sold justice, and released all prisoners who could pay. He alternately connived at and punished the actions of the Sicarii and Zealots. Hearing that Florus was coming as his successor, he executed his most dangerous prisoners and released the others. As the released prisoners belonged mostly to the Zealot faction, 'the land was filled with robbers.'[3] Josephus has left a terrible account of the villainies of the last procurator, Florus,[4] by comparison with whom Albinus was upright. He flaunted his crimes publicly, took bribes, and wrung all he could out of the miserable people. On the one hand Bernice interceded, but in vain, for a more humane treatment of the Jews, while Agrippa II. attempted to appease the people. Florus desired war to cover his misdeeds, and the younger men, mostly Zealots, were likewise eager for war. The provocation was furnished on Florus's part by his seizure of part of the Temple treasury and by his brutal attack on the people when they resented the insolence of the two cohorts which they were ordered to welcome from Cæsarea; and on the part of the Jews by a jest of some Jewish wags who pretended to beg for the destitute Florus, by the seizure of Masada and the slaughter of the Roman garrison by the Zealots, and by the discontinuance of the daily sacrifice for the emperor. Even now the peace party—the Sadducæan high-priests and the chiefs of the Pharisees—advocated conciliatory measures with the seditious Zealots, who refused to hearken.[5]

The insurgents under Eleazar, son of Ananias, allied with the Sicarii, attacked Agrippa's troops, upon whom the peace party relied.[6] Menahem, son of Judas the Galilæan, armed the Zealots, entered the city, and forced the capitulation of the soldiery of Agrippa and the citizens of the peace party. The war party further celebrated their victory by murdering the high-priest Ananias. Menahem's cruelty led to a quarrel with the other Zealot leader, Eleazar, which resulted in the death of Menahem. Eleazar celebrated his uncontested leadership by a shameful butchery of the Roman garrison under Metilius, which had capitulated on terms.[7] The successful defence of the capital against Cestius Gallus, governor of Syria, and his defeat at Beth-horon inspired enthusiasm in the Zealot and war party.[8] Many pro-Romans and moderates now abandoned the holy city. The war party came into control by violence or persuasion,[9] and the moderates were much disheartened.[10] As the die was now cast and an attack expected from Rome, the authorities proceeded to organize for war and appointed generals for Jerusalem and the provinces.[11] It should be noted that at this early stage those in authority were mostly members of the aristocracy—Sadducees and Pharisees—who considered it prudent to put themselves at the head of the popular revolution. The position of affairs was reversed after the misfortunes of the first year of the war, as fortress after fortress fell before the Romans. The revolution which unseated the native authorities and put provincial

radicals in power was brought about by the Zealot, John of Gischala, the enemy of Josephus, in the winter A.D. 67–68. On the fall of Gischala (Nov. A.D. 67) John fled to Jerusalem, gained over the youth of the city, and was abetted by the increasing numbers of provincial refugees entering the city.[1] The authorities were, with some truth, accused of lack of energy in the prosecution of the war and even of Roman sympathies. The Zealots believed that the safety of the nation lay in ousting the aristocratic native leaders and in taking control themselves. They began by imprisoning Antipas (one of the royal lineage and public treasurer) and other persons of rank, and elected a new high-priest from the proletariat. The native party of order strenuously opposed the provincials and their Zealot supporters. The former was led by Gorion, son of Joseph, Simon, son of Gamaliel, and the high-priests Ananus and Jesus, son of Gamaliel. A speech of Ananus roused a majority of the inhabitants against the Zealots, who, in self-defence, summoned the Idumæans on the pretext that the authorities of Jerusalem had made common cause with the Romans. The Idumæans on arrival were refused admission by the inhabitants, but were secretly introduced at night by the Zealots. The Idumæans signalized their entrance by the perpetration of intolerable cruelties, in which the Zealots heartily joined, against the bourgeoisie and the aristocracy. This reign of terror accomplished the utter collapse of the native party of order and ended in a victory for the Zealots and reactionaries. The high-priests, Ananus and Jesus, and a prominent citizen, Zecharias, son of Baruch, were put out of the way. When the Idumæans, satiated with the blood of the citizens, realized the falsity of the pretence upon which they were introduced by the Zealots, they withdrew, but assassination and *sabotage* were continued by the Zealots. John, at the head of the Zealots, now became undisputed dictator of the city, while the Sicarii and Zealots carried on their brigandage and murders throughout the country. The Roman civil wars delayed military operations for a time. Meanwhile Simon, son of Giora, at the head of a mixed following of slaves and Zealots, overran a large portion of S. Palestine (A.D. 68–69) and came into conflict with the Zealots under John. The Romans, under Cerealis, put an end to Simon's marauding by conquering all Palestine outside the capital, except the three fortresses of Herodeion, Machærus, and Masada, held by the Zealots (summer of A.D. 69). Simon now appeared with his army before the walls of Jerusalem, the inhabitants of which, groaning under the tyranny of John, invited, at the suggestion of the high-priest Matthias, Simon 'as a second tyrant' within the city. There were now two factions, each distinguished by the same Zealot hatred of Rome and the same indifference to the rights of the citizens. Vespasian had meantime ascended the throne and commissioned Titus with the reduction of the Jewish rebellion. While the Romans were preparing to invest the city, there appeared a third faction headed by Eleazar, son of Simon, who, with a large following of priestly Zealots, revolted from John's party.[2] The incessant bickerings of these three tyrants, John, Simon, and Eleazar, caused terrible misery to the city and led to the disastrous burning of vast stores of grain sufficient to withstand a siege of many years.[1] A bloody riot occurred at the Passover of A.D. 70, in which John vanquished Eleazar's party and thus reduced the three Zealot factions to two.[2] As the Romans commenced to beleaguer the city, party faction was stilled. Eleazar with 2400 Zealots again united with John and his Zealots, while the Idumæans united with Simon.[3] The two leaders, John and Simon, made such an heroic and strategically planned defence against the Roman beleaguering forces that, had it not been for the previous internecine strife, which lessened the defenders, and the mad destruction of the ample supplies of grain, it is improbable that the Romans would have succeeded. In spite of Titus's desire to shorten the campaign and spare the city, the appeals of Josephus to his countrymen, and the famine prevailing within, the peace party was silenced by the Zealots. On the capture of the city (Sept. A.D. 70) John and Simon fell into the hands of the Romans; the former was condemned to life imprisonment, the latter was spared to grace the triumph and then executed. Herodeion, Machærus, and Masada still remained in the hands of the insurgents, chiefly Zealots and Sicarii. Lucilius Bassus captured Herodeion, and compelled Machærus to surrender. The last stronghold of the Zealots was Masada, occupied by the Sicarii and Zealots early in the war under Eleazar, a descendant of Judas the Galilæan.[4] This place fell in April, A.D. 73, before Flavius Silva, who discovered to his chagrin that the defenders had by agreement slain each other and the last survivor had committed suicide, only two women and five children surviving. With the fall of Masada the history of the Zealots as a party ends. The Jews had ceased to be a nation: it was, however, the spirit of the Zealots that inspired the sanguinary insurrections in the reigns of Trajan and Hadrian.

There is much in the history of Zealotism which recalls the Highland devotion to hopeless causes. Zealot enthusiasm was doomed to failure because it was not guided by prudence. Their indiscretions, their separatist spirit, their disregard of the other parties in the nation, and their enormities led to the defeat of the cause to which they devoted themselves with such indefatigable heroism in a life-and-death struggle with the imperial might of Rome.

4. Relation to other Jewish parties.—The chief questions are those of the relation of the Zealots to the Pharisees and to the Sicarii.[5] Josephus speaks of the Zealots as a fourth party alongside of the Sadducees, Pharisees, and Essenes.[6] His description of the Zealot sect is:

> 'Of the fourth of these philosophies Judas, the Galilæan, became leader. In all other respects they agree with the opinions of the Pharisees, but they are distinguished by an unshakable devotion to liberty, holding that God alone is Ruler and Lord (*ἡγέμονα καὶ δεσπότην*). They consider it a trifling matter to endure extraordinary deaths and the tortures of relatives and dear ones, in their refusal to address any mortal as "Lord." And since multitudes have witnessed their immovable courage under such circumstances I do not dwell upon it in detail. For I am not afraid that anything related of them should be disbelieved, but on the contrary I fear lest the narrative may do less than justice to their contempt in enduring the misery of pain. The nation commenced to suffer from the malady of this madness through the reckless insolence of Gessius Florus, the procurator, in driving the people to revolt from Rome.'[7]

The Zealot movement arose in the bosom of Pharisaism and retained throughout its brief

[1] *BJ* iv. iii.

[2] Ewald (*Hist. of Israel*, Eng. tr., vii. 559 ff.) classifies these three Zealot factions into the learned Zealots (who came into power under John in spring of A.D. 63), the popular Zealots (admitted under Simon, April, A.D. 69), and the priestly Zealots (who seceded under Eleazar early in A.D. 70); *per contra* Jackson and Lake, *Beginnings of Christianity*, i. 423, who contend that the name 'Zealot' applies to John of Gischala's following and to no other.

[1] Tacitus, *Hist.* v. 12. [2] *Ib.*; Jos. *BJ* v. iii. 1.

[3] *BJ* v. vi. 1. [4] *Ib.* ii. xvii. 9, vii. viii. 1.

[5] Hippolytus in his *Ref. of all Heresies*, ix. 21, represents the Zealots or Sicarii as an extreme sect of the Essenes. His account disagrees with all the other accounts of Essenism given by Philo, Josephus, Pliny, Hegesippus, Porphyry, and Epiphanius, and with that of Zealotism given by Josephus.

[6] See *Ant.* xviii. i. 3 f., *BJ* ii. viii. 2. In *Vita*, 2, he mentions only three parties.

[7] *Ant.* xviii. i. 6.

history a striking resemblance to Pharisaism. The Pharisees represented generally the popular party, distinguished by their dislike of Roman overlordship and their zeal for the Law and the theocracy. The Roman question caused a split among the Pharisees into the majority of moderates and the minority of extremists or war party. The former were fatalists,[1] who viewed Roman domination as due to an act of the inscrutable will of God or as a punishment for the people's infidelity. While their ideal was national independence, their policy was passive resistance. The other party favoured war *à outrance*. The one party valued the liberal measure of tolerance granted by Rome for the exercise of their religion: the other believed that autonomous nationalism was requisite for the very existence of the theocracy. These extremists, led by Sadduk, gladly attached themselves to a nationalist like Judas. The Herodians[2] were probably not strictly a separate party, but belonged to, or for political purposes allied themselves with, the most pacific section of the Pharisees. Herodians and Pharisees would agree (1) in discountenancing everything which threatened to disturb the political *status quo*, while (2) preferring the Herodian dynasty (instead of a Roman procuratorship), which some Pharisees would view as a compromise for the fuller theocracy. The Zealots occupied, therefore, the extreme right of the Pharisees, and the Herodians the extreme left, on the question of the *status quo*.

Unfortunately our chief source for the history of Zealotism is Josephus—a moderate Pharisee and pro-Roman, with a decided penchant against the Zealots,[3] probably due to the fact that he wished in the minds of the Romans to throw the blame of the rebellion upon a party which became extinct with the Roman victories, and partly to screen his own sect, which after the end of the Jewish nation became the guardian of its traditions. The excesses of which the Zealots were guilty furnished him a feasible excuse. The Zealot movement not only arose within Pharisaism, but throughout its course really stood for the ideals of the Pharisees, though adopting different means.

'The latter [Zealot party] only drew the last practical conclusions out of the hate of the Pharisees against heathen domination. The Pharisees therefore never disapproved of their conduct until it degenerated into absolutely unlawful proceedings. Where this happened [*BJ* IV. v. 9], the doctors of the Pharisees broke loose from the Zealots, who now betrayed their connexion with the Pharisees by immediately falling upon the Sadducean aristocracy.'[4]

The Zealots did not scruple to accomplish the death of Sadducean high-priests. Even Josephus cannot conceal the close relations between Zealots and Pharisees, the Zealots being distinguished only by their marked devotion to independence,[5] though elsewhere[6] he speaks of Judas as *σοφιστὴς ἰδίας αἱρέσεως οὐδὲν τοῖς ἄλλοις προσεοικώς*. But from A.D. 66 the Pharisees, foreseeing the issue of a conflict with imperial Rome, withdrew more and more from the Zealots and joined the Sadducees in advocating conciliatory measures.[7] Josephus generally speaks of the Zealots as 'brigands' (*λησταί*). This nomenclature was due to (1) the absence for some time of any definite party name for these radicals, the title 'Zealot' being a self-designation of the party,[8] and perhaps not definitely chosen till the days of Florus, under whom Josephus first employs the term,[1] his ordinary designation up to this point being 'robbers' or 'assassins'; and (2) the fact that, being outlawed by the Romans and hated by and hating the pro-Romans, the Zealots in self-defence organized into bands and lived in troublous times by brigandage.

The Sicarii are thus described by Josephus:

'The Sicarii, as they are called (they are robbers), then grew very numerous. They use swords similar in length to the Persian *acinaces*, but curved and very like what the Romans call *sicæ*, from which the robbers received their appellation because they destroyed with this weapon many victims. They mingled themselves at the festivals, as described elsewhere, in the multitude of those who had assembled from all quarters for worship and easily murdered whom they chose. And often they proceeded armed against the villages of their enemies pillaging and burning.'[2]

Josephus seemingly identifies the Sicarii and the Zealots.[3] (1) He also indirectly identifies them by assigning to the Sicarii the same policy as that pursued by the Zealots[4] and their refusal to acknowledge the emperor as *δεσπότης*;[5] and (2) the Sicarii became prominent under Felix and Festus when the Zealots were a source of annoyance to the procurators.[6] Elsewhere[7] Josephus says that the Sicarii first appeared on the scene in the days of Quirinius synchronous with the rebellion of Judas the Galilæan, the father of all Zealotism; he apparently regards the agents in that rebellion indifferently as Sicarii or Zealots. But Josephus sometimes uses language which would also suggest some distinction in his mind between Zealots and Sicarii.[8] Originally the Sicarii were perhaps a separate group from the Zealots. As the Zealots were an extremist offshoot of the Pharisees, the Sicarii were originally an extremist offshoot from the Zealots. The Zealots were the soldiers of the theocracy and the Sicarii the *francs tirailleurs* of the Zealots. In the confused years following A.D. 66 the Sicarii increased in numbers and in frightfulness, and the line of demarcation between them and the Zealots, if remaining, became very faint. Whether the Sicarii remained the extremists of the Zealots or whether Zealots and Sicarii became ultimately synonyms (so Renan and Kohler) our sources do not determine with certainty.[9]

LITERATURE.—(1) *Ancient.*—The chief ancient source is Josephus, esp. *Ant.* XVIII. i. 1, *BJ* II. viii. 1 ff., and IV. Cf. Tacitus, *Hist.* v. 1–13; Philo, *Leg. ad Gaium*; Dio Cassius, *Hist. Rom.* lxvi. 4 ff.; Hippolytus, *Ref. Omn. Hær.* ix. 21.

ZIONISM.—1. Title and object.

Zionism is the designation of a modern nationalist movement among the Jews, the programme of which was definitely formulated at an international congress held in Basel, Switzerland, on 29th–31st Aug. 1897, in the following terms: 'The object of Zionism is to establish for the Jewish people a publicly recognized, legally secured home in Palestine.'[1]

2. The basis.—The aim of Zionism, the re-establishment of the Jewish people in the land promised to the patriarchs as an eternal inheritance of the people of Israel, is a fundamental conception inherent in the religion of the Jews, and has actively asserted itself at various epochs since the destruction of Jerusalem by Nebuchadrezzar.

ארץ, the land *par excellence*, became to Israel a symbol of God's grace. The possession of the land was a sign of Israel's faith, as its loss was to be the result of disobedience. In the Tôrâh this is a recurring theme, and the prophetic utterances ring its changes in every key. Concurrently with this idea the religious ordinances took shape in accordance with political circumstances—first in close attachment to the land, and then by reason of exile from it. Psalms 137 and 126 mirror the despair of those who were driven away from, and the joy of those who returned to, Zion. A special virtue or sanctity was ascribed to its very soil: 'For thy servants take pleasure in her stones, and have pity upon her dust' (Ps 102^{14}). The Talmudic ritual and other legislation, which declares mere residence in Palestine, *Yishub Ereṣ Israel*, to be of the utmost merit, observes this standpoint throughout and contains special religious precepts, *Miṣvoth ha-teluyoth ha-areṣ*, applicable only to those living in *Ereṣ Israel*, as Palestine came to be called in the language and literature of the Jews.

Of essential importance to the religious mentality of the Jews became the yearning for the departed glory of Israel, of which the sanctuary on Mount Zion was the sacred symbol, and the prayer for the restoration of the kingdom of the house of David, which was synonymous with the Messianic age, is a *Leitmotiv* in the Jewish liturgy that is repeated in almost endless variety. The prophecies and incidents which accompanied the return of the exiles from the Babylonian captivity were applied to the ages and circumstances following the destruction of the Second Temple (A.D. 70). Even though in the course of time life proved stronger than ritual and the universalist aspirations of Judaism inspired a prophetic vision which turned the restoration of Israel into a far-off spiritual ideal, it nevertheless assumed concrete appearance at the first favourable opportunity.

The patriarchate and academies which maintained a Jewish spiritual centre in Palestine for centuries after the fall of the Jewish State, the pilgrimages to Judæa from all parts of the Diaspora, and the continuous attempt to create Jewish settlements on what was always regarded as Jewish soil, testified throughout the ages to the intense desire of the Jews to regain a footing in their ancestral country. The succession of pseudo-Messiahs, from Bar Kokhba († A.D. 135) to Shabbethai Ṣebi (1626–76), always appealed successfully to this Jewish passion.[1]

Even non-Jews (such as Napoleon, in his manifesto to the Jews of Asia and Africa to re-establish themselves under his auspices in Palestine [1799]; Henry Dunant, the founder of the Red Cross, in his efforts to organize Jewish colonization there; Lord Shaftesbury, Lord Palmerston, and other Englishmen, in their sympathetic support; and Laurence Oliphant in his scheme in Gilead [1890]) realized the hold which the idea of a Jewish State in Palestine had on the Jews.

3. The revival of Jewish nationalism.—But it was only towards the middle of the 19th cent. that the sense of a national and political revival of the Jewish people assumed reality. The national resurrection of ancient Hellas, and the resurgence of national sentiment in Europe generally, proved a stimulus to Jewish hopes. The wave of Jewish solidarity that followed in the wake of the Damascus affair (1840) was a symptom, as the establishment of the Alliance Israélite Universelle (1860) was the first organized embodiment, of the re-awakened Jewish collective consciousness. Foremost in this direction was Sir Moses Montefiore (1784–1885), who, since his first visit to Palestine (1827), proved the forerunner in Western Europe of a keen, though none the less discriminating, interest in the Jewish future of Palestine. This inter-relation between Palestine and the Diaspora acted and reacted upon the general course of Jewish life, and eventually proved a measure of its vitality.

This was, however, the period of Jewish history when all the energies and resources of the Jews were wholly directed to their civil and political emancipation. This tendency, which derived its spiritual conception from the ideas of enlightenment and reform emanating from Moses Mendelssohn (1729–86) and his followers, received its most striking manifestation in the promulgation of the principles of the French Revolution, which, by the Napoleonic conquests, spread over Central Europe. The so-called Sanhedrin convened at the behest of Napoleon (1806) gave to the new orientation of Jewish life a formal sanction. It became an axiom of Jewish thought, at first in Western lands and then among the upper strata in the great communities in Eastern Europe and the Orient, that the Jews were no longer a nation but a faith, that the *beau idéal* of the Jewish future was a complete social and political adaptation to the dominant surroundings. Even in the religious sphere this process of 'assimilation,' as it is technically termed, came to be applied in an ever-widening measure. The national or particularist elements of Judaism were put into the background, and the universalist aspects emphasized. In the liturgy the references to the restoration and the rebuilding of the Temple were toned down, and in some prayer-books the words 'Zion' and 'Jerusalem' even eliminated; the vernacular began to rival, and gradually to supersede, the original Hebrew, and, while avoiding schismatic tendencies, this reform of Judaism assumed distinctive colourings adapted to the circumstances of time and place.

4. The Chovevé Zion.—While traditional and modernist conceptions of Judaism as a religion struggled for mastery on the question of the validity of ancient dogmas, forms, and ordinances, there set in a fermentation in the racial consciousness of the Jews that gave a new direction to their aspirations. True, in the West, the devoted efforts of Sir Moses Montefiore to bring his English co-religionists to a realization of Jewish potentialities in Palestine met with no effective response. The publication in 1862 by Moses Hess of *Rom und Jerusalem*, advocating the recognition of a distinctive Jewish nationality and a Jewish re-settlement in Palestine, also found no favour among the Jews of Germany, where it appeared. The publication of a pamphlet, *Auto-Emanzipation*, by Leo Pinsker, of Odessa (1881), definitely proclaiming the necessity for the establishment by the Jews of a country of their own marked, however, a definite stage in the emergence of a movement which was to captivate the imagination of the mass of the Jewish people.

The consequent rise of the movement of the Chovevé (Ḥobébé) Zion ('Lovers of Zion') broke

[1] The title 'Zionism' is said to have been used first in 1886 by Nathan Birnbaum (*nom de plume*, Matthias Acher) in his art. 'Selbst-Emanzipation,' *Ost und West*, 1902, p. 576. He subsequently, however, expressed his preference for the designation, 'Jewish Renaissance Movement,' as more comprehensive (cf. *Ost und West*, 1902, p. 526).

[1] See art. MESSIAHS (Pseudo-).

with the ideology of assimilation that had been taking hold of ever-increasing numbers of the Jewish people.[1]

5. Jewish nationalist aspirations.—The outward events detailed in art. ANTI-SEMITISM[2] reinforced the trend of sentiment and thought that was proceeding within Jewry. A complete spiritual transformation took place, particularly in the outlook of the younger generation. The effort to turn the Jews into a mere religious denomination, distinguished from their neighbours only by their religion, and even in this approximating to the ideas and customs of time and place, was opposed by the affirmation that the people of Israel, though dispersed over the whole earth, was still one people, not only bound together by a common past, but consecrated by the hopes and aspirations of a common future. It was put forward that the Jews had indeed a distinctive mission in the economy of the world—as was claimed by those who would insist upon the universality of Judaism as a world-religion—but, while recognizing that only a part of the Jewish people would settle in Palestine, it was asserted that the spiritual purpose of Israel could be worthily accomplished only in its hallowed homeland, whence, as in the days of old, it would draw inspiration from its native soil, and give again of its own genius, unaffected by alien influences, its distinctive contribution to the religion and civilization of the world. It was particularly in the cultivation of the specific Hebraic spirit of righteousness and social justice that the Jewish nationalists saw the Messianic fulfilment of the destiny of the Jew in history.

6. Modern Hebrew literature.—The nationalist conception of Jewish life found in time a host of advocates in the Jewish literature of all languages, so that it is now, particularly in the press, the most potent intellectual force in Jewry. In particular the Hebrew language, hitherto confined to prayer and study as well as to religious and literary correspondence, proved both a means and an end in nationalist propaganda. Hebrew, adapted to modern needs, became the vehicle for the issue of original works and translations, and a Hebrew press fashioned the ancient tongue for everyday use. It became the medium of instruction in schools, and finally in Palestine the vernacular of the younger generation. In the course of a few decades modern Hebrew literature revealed an intellectual individuality of a high order. Perez Smolenskin (1842–85), by his Hebrew periodical *Ha-shaḥar* ('The Dawn'), was a nationalist pioneer among the intellectuals of his time. Aḥad Ha-'am (Asher Ginzberg) (born 1856) is a thinker of profound depth and endowed with extraordinary clarity of judgment and diction. He has given a philosophical content to Jewish nationalism, and the idea of a Jewish spiritual centre in Palestine is emphasized by him in contradistinction to an exclusively politico-economic conception of the movement. Ḥaim Naḥman Bialik (b. 1873) and Saul Tchernichowsky (b. 1875) stand out among those who in these latter days have revived the inspiration of Hebrew poetic expression. Nahum Sokolow (b. 1859) wields the Hebrew language with a versatility and grace reminiscent of the wealth of classical Greek and the elegance of French literature. The new Hebrew University in Jerusalem will give modern Hebrew the definite scientific canons of which it is still in need.

Modern Hebrew is based on the Bible, with its developments in the Mishnâh, Talmud, and mediæval literature. A complete lexicon, with the latest terminology, is the מילון (*Thesaurus Totius Hebraitatis*) of Eliezer ben Yehudah, now in course of publication.

7. Jewish colonization in Palestine. — In its practical development the movement assumed the form of colonization in Palestine with the aspiration for the ultimate revival of the Jewish people, not only in its homeland but in the whole Diaspora. The work of agricultural colonization was initiated by Sir Moses Montefiore in 1854 by the settlement on the land of 35 families from Safed, and by Charles Netter in 1870 in the foundation of the still existing training farm Miqveh Israel, near Jaffa. There followed the establishment of the agricultural colony Petaḥ Tiqvah in 1878 and of Rishon le-Zion and Zikhron Ya'acob in 1882. The movement of the Chovevé Zion had by then gathered sufficient force to hold in 1884 an international conference at Kattowitz, Silesia. The idea of the colonization of Palestine, which, amid exceptional difficulties, has been put into effect by men of high ideals but no practical experience (notably, in 1882, by the so-called 'Bilu' group, composed mainly of Russo-Jewish students), enlisted the sympathies of the Western Jews more out of philanthropic than nationalist motives, while in Eastern Europe the imagination of enthusiasts was stirred by visions of a Jewish national revival. Baron Edmond de Rothschild, of Paris (b. 1845), with an idealism equalled only by his princely generosity, provided the financial means by which alone the colonies could have been maintained. In 1889 the Russian Jews established the Odessa Committee for the colonization of Jews in Syria and Palestine, while in Western Europe benevolent efforts were made to further this object. But the disappointingly slow progress in Palestine and the gradual restriction of the horizon of the Chovevé Zion led to general disillusionment and apathy.

8. Herzl and Political Zionism.—It was in 1896 that the Jewish world was aroused by the appearance of Theodor Herzl, of Vienna (1860–1904), who, in his *Judenstaat*, promulgated the view that Jews should leave the inhospitable lands inhabited by them, and set out in detail a scheme for the creation of a Jewish commonwealth. Though this publication may be said to have been distinguished by its boldness and lucidity, it was only the magnetic personality of Herzl that made of this apparently utopian project a living reality to the great masses of his people. In other ages he might have been invested with Messianic claims. In the authority he wielded and the extraordinary fascination he exercised over those who came under his sway he stands beyond compare among the Jews since Moses Maimonides (1135–1204), and time has confirmed his position in modern Jewry as that of judge and prophet in Israel. He found many notable adherents, such as Max Nordau (b. 1849), who, though holding no office, enjoys the moral leadership of the movement, and Israel Zangwill (b. 1864), who, since his secession, has become the 'candid friend' of Zionism. A congress of Jews from various parts of the Diaspora took place in Basel, 29th–31st Aug. 1897, at which there was established the Zionist Organization with its fundamental programme:

'The object of Zionism is to establish for the Jewish people a publicly recognized, legally secured home (öffentlich-rechtlich gesicherte Heimstätte) in Palestine. In order to attain this object, the Congress adopts the following measures:—

1. To promote, in so far as it serves the above purpose, the settlement in Palestine of Jewish agriculturists, craftsand tradesmen;
2. To select and organize the whole Jewish people in appropriate local and general bodies in conformity with the laws of the land;
3. To strengthen Jewish national sentiment and self-consciousness;
4. Preparatory measures to obtain the sanction of governments required for attaining the object of Zionism.'

[1] But see art. ANTI-SEMITISM.
[2] *ERE* i. 598 *f.*

From the fact that this new development of the nationalist movement laid special stress on the thesis that the Jewish question could not be solved in the Diaspora by the prevailing methods of philanthropy, but only in Palestine on political lines, the adherents of the Basel programme came to be known as Political Zionists, in contradistinction to the former Chovevé Zion and those who claimed that all faithful Jews are Zionists in the spiritual sense. The Zionist Organization further assumed a definite nationalist attitude on Jewish public matters, as, indeed, it developed a Jewish *Weltanschauung* generally, and thereby aroused fierce and wide-spread opposition from the leading ecclesiastical and lay heads of the Jewish communities. Zionism, however, continued to gather force in most parts of the Jewish Diaspora, and became the largest organized body of Jews since the days of Jewish independence. Altogether it exercised an ever-increasing influence on Jewish life. In Jewish communal politics, in literature, art, and education, it endeavoured to create a specific national Jewish note. The hold which it has obtained over the numerous Jewish university students, particularly on the European continent, has secured for Zionism the intellectual leadership of the Jewish people.

The immediate object of Zionism, which was to obtain from the sultan of Turkey a legal concession or charter for the settlement of large numbers of Jews on a basis of local self-government, failed. Three personal interviews of Herzl with Sultan Abdul Hamid (1901 and 1902) proved fruitless. Impelled by the pressure of urgent circumstances in the general condition of the Jews, Herzl considered the advisability of acquiring from the Anglo-Egyptian Government the region of El Arish, on the Sinai peninsula, for a Jewish autonomous settlement (1901); but, owing to the lack of water for irrigation, the scheme was found impracticable. This was followed in 1903 by an offer to the Zionists by Joseph Chamberlain (then Secretary of State for the Colonies) of the Guas Ngishu plateau in the East Africa Protectorate, which was submitted to a Zionist congress, but the mere suggestion of any project outside Palestine aroused violent opposition. A commission of exploration was sent out, but on its report to a subsequent congress this so-called Uganda scheme was definitely rejected. The secession of a number of Zionists followed and led to the establishment of the Jewish Territorial Organization (colloquially termed 'ITO') in order 'to procure a territory upon an autonomous basis for the Jews who cannot or will not remain in the lands in which they already live.' After unsuccessful attempts to find a suitable territory, in Cyrenaica, Canada, Australia, Mesopotamia, and Angola, the Jewish Territorial Organization has ceased to function.

The death of Herzl (who, in 1905, was followed in the office of president of the Zionist 'Actions Comité' [central executive] by David Wolffsohn, of Cologne, and in 1911 by Otto Warburg, of Berlin) created a profound depression in the movement, which, in the absence of political success, attempted to develop the existing institutions in Palestine and—with a hope for better prospects—to cultivate as *Gegenwartsarbeit* the nationalist idea in the Diaspora.

9. Organization and finance.—The membership of the Zionist Organization consists of those who pay annually the shekel (one shilling [raised in 1919 to 2/6], or its nominal equivalent in other coinage), which gives the right to a vote in the election of delegates to the congress, the highest Zionist forum. Women have the franchise on the same terms as men. About 800,000 persons paid the shekel in 5681 (1919–21).

The Zionist Organization is composed of national federations of Zionist societies or other bodies all over the world (*e.g.*, the English Zionist Federation, the Federation of American Zionists, etc.), and, in addition, there are recognized international federations representing specific principles, as, *e.g.*, the Misrahi, which endeavours to promote Zionism on an 'orthodox' religious basis, or the Poalé Zion, which professes Socialist doctrines.

As a general rule, Zionism is in favour of traditional Judaism, at least in a spiritual sense, but recognizes complete liberty of conscience for the individual, in accordance with the official declaration at the second congress (1898):

'Zionism does not only aim at the economic and political but also at the spiritual regeneration of the Jewish people, and in this respect stands on the basis of modern civilization, with the achievements of which it identifies itself. Zionism does not undertake anything which conflicts with the religious law of Judaism.'

In 1899 there was established, as the financial institution of the Organization, the Jewish Colonial Trust Ltd., with an authorized capital of £2,000,000, of which about £380,000 was subscribed by December 1920. Over 100,000 persons were holders of single £1 shares, the largest number of shareholders of any joint-stock company. In 1903 the Trust established a subsidiary body, the Anglo-Palestine Co. Ltd., for the special purpose of transacting banking business in Palestine. The Jewish National Fund was created in 1897 for the purchase of land in Palestine as the inalienable possession of the Jewish people. The principle regarding the nationalization of the land and the co-operative experiments undertaken by the Fund will render it not only one of the most useful agencies in the Jewish colonization of Palestine, but, from the general economic and sociological point of view, valuable and interesting in its practical application. During the Great War (1914–18), and even more since its conclusion, the Jewish National Fund has received wide-spread support all over the world.

10. Zionism since 1914.—The outbreak of the Great War necessarily created a cleavage in the international Zionist Organization, which, for geographical reasons, had its central office in Berlin. The political, and, later on, the administrative, headquarters were transferred to London, which, by the registration of its financial institutions, was already the legal *locale* of the movement.

Zionism received its most powerful impetus by the recognition on the part of the British Government of the historical connexion of the Jewish people with Palestine and the claim which this gives them to reconstruct Palestine as their national home.

There are in England traditions, dating back to Puritan times, which favour the restoration of the Jews to their ancient country. It was also in England that the first society for the Jewish colonization of Palestine was formed by George Gawler in 1845. George Eliot's *Daniel Deronda* (1876) was in those days a remarkable revelation of the Jewish nationalist aspirations of a Gentile, while the romanticism of Benjamin Disraeli, with his strong Jewish sympathies, gave a glamour to the idea of the restoration of Israel, with which the English-speaking world is familiar through the Bible.

Since 1915 the diplomatic activities of the Organization have been centred in England and the United States. In the latter country the movement received its greatest impetus by the accession of Louis D. Brandeis, Justice of the Supreme Court (since 1920 President of the Organization). In England Chaim Weizmann, whose extraordinary gifts of eloquence and statesmanship have raised him to the leadership of the movement, and Nahum Sokolow (Chairman of the Executive), who combines the philosophical serenity of a man of letters with a keen judgment of men and affairs, were able to enlist the sympathies of British public opinion and ultimately the support of the British Government. Herbert Samuel (subsequently the first British High Commissioner for Palestine) ranged his Jewish influence, while in the Cabinet as well as out of it, definitely on the

side of Zionism, which found also convinced advocates among other British statesmen, notably Lloyd George, Arthur J. Balfour, and Lord Robert Cecil. Sir Mark Sykes (who in 1916 had acted for Great Britain in the Sykes-Picot Agreement with France) became the champion of Zionist interests in the settlement of the Palestine question.

On 2nd November 1917 Arthur J. Balfour, as Secretary of State for Foreign Affairs, addressed to Lord Rothschild a communication in the following terms:

'His Majesty's Government view with favour the establishment in Palestine of a national home for the Jewish people, and will use their best endeavours to facilitate the achievement of this object, it being clearly understood that nothing shall be done which may prejudice the civil and religious rights of existing non-Jewish communities in Palestine or the rights and political status enjoyed by Jews in any other country.'

This declaration, which was hailed in the Jewish world as a counterpart to the edict of Cyrus, was followed in 1918 by similar statements from the Governments of France and Italy, as well as by the support of President Wilson, and the friendly acquiescence of the pope.

On 3rd February 1919 a delegation, headed by Sokolow and Weizmann, and including the Russian Zionist leader M. Ussishkin, who spoke in Hebrew, submitted to the Peace Conference in Paris the Zionist claims in Palestine with these proposals:

'The sovereign possession of Palestine shall be vested in the League of Nations, and the government entrusted to Great Britain as the mandatory of the League, it being a special condition of the mandate that Palestine shall be placed under such political, administrative and economic conditions as will secure the establishment there of the Jewish National Home and ultimately render possible the creation of an autonomous commonwealth.'

Following the conquest of Palestine by the British under Lord Allenby, in which officially designated 'Jewish troops' took part, the above Zionist proposals to the Peace Conference were on 25th April 1920 adopted at San Remo by the principal Allied Powers and incorporated in the British Mandate for Palestine under the League of Nations, as was also the Balfour Declaration in the Treaty of Sèvres. With this solemn international recognition of the Jewish title to Palestine there emerges after a millennial struggle the national revival of a people comparatively small in numbers but incomparable in endurance and faith.

LITERATURE.—There is an extensive Zionist literature in almost all the languages spoken by Jews, notably in Hebrew, Russian, German, and English. *Die Welt*, the official organ of the movement from its inception in 1897 till 1914, contains all official statements and current topics, while the Reports of the Congresses (in German) give a full reproduction of their deliberations. Among authoritative works on Zionism are Theodor Herzl, *Zionistische Schriften*, ed. Leon Kellner, Berlin, 1905; Leon Kellner, *Theodor Herzls Lehrjahre*, Vienna, 1920; Adolf Friedemann, *Das Leben Theodor Herzls*, Berlin, 1914; Max Nordau, *Zionistische Schriften*, Cologne, 1909; Marcel Bernfeld, *Le Sionisme*, Paris, 1920; N. Sokolow, *History of Zionism: 1600-1918*, 2 vols., London, 1919; Richard J. H. Gottheil, *Zionism*, Philadelphia, 1914; Aḥad Ha-'am, *Selected Essays*, tr. Leon Simon, do. 1912; *Zionism and the Jewish Future*, by various writers, ed. H. Sacher, London, 1916; *Zionism: Problems and Views*, by various writers, ed. Paul Goodman and Arthur D. Lewis, with an Introduction by Max Nordau, do. 1916; *Zionist Work in Palestine*, by various writers, ed. Israel Cohen, do. 1911; Frank G. Jannaway, *Palestine and the Powers*, do. 1914; H. Sidebotham, *England and Palestine*, do. 1919; Albert M. Hyamson, *Palestine: The Rebirth of an Ancient People*, do. 1917; Norman Bentwich, *Palestine of the Jews*, do. 1919; Leon Simon, *Studies in Jewish Nationalism*, do. 1920; *Reports of the Executive of the Zionist Organisation to the XII. Zionist Congress*, do. 1921. There are numerous pamphlets published by the English Zionist Federation (official organ, *The Zionist Review*) and the Federation of American Zionists (official organ, *The Maccabæan*, and, since 1921, *The New Palestine*). Views opposed to Jewish nationalism are to be found in the writings of Claude G. Montefiore, the leader of Liberal Judaism in England, and in America the Central Conference of American Rabbis (representing Reform Judaism) has repeatedly expressed itself in its *Year Book* and other publications against Zionism. Cf. also Laurie Magnus, *Aspects of the Jewish Question*, London, 1902; Morris Jastrow, Jr., *Zionism and the Future of Palestine: The Fallacies and Dangers of Political Zionism*, New York, 1919; Lucien Wolf, art. 'Zionism' in *EBr*[11], and 'The Zionist Peril,' *JQR* xvii. [1905] 1 ff. On special subjects cf. *JE*.

PAUL GOODMAN.

ZÔHĀR. — From the 14th cent. the *Zôhār* ('Splendour') has been the fundamental book of Jewish Ḳabbālā (*q.v.*), the fountainhead of all mystical inspiration. It has exercised a deep influence upon the spiritual and religious life of the Jews, and has extended its influence beyond the borders of Judaism. An ever-increasing literature has gathered round it; for from its first appearance it excited the curiosity of the scholar and the mystical philosopher. Its origin seemed wrapt in mystery, and to this day the problem presented by the *Zôhār* has not been solved. It is a curious fact that only one manuscript prior to the first edition seems to exist. All the researches therefore start from the printed edition. And even then they have been limited to the *Zôhār* alone, instead of being extended over the whole range of the Ḳabbālistic literature, of which this book forms only one, though a very prominent, portion.

1. Problem of origin.—The most widely accepted theory as to the origin of this book is the somewhat legendary report of the investigation which a certain Rabbi Isaac made in Spain immediately after the book became known.

Rabbi Isaac belonged to a school of mystics which had made its headquarters in Acco, and was one of the foremost representatives of the Ḳabbālistic interpretation of the Law in accordance with the system of Naḥmanides; he himself composed a supercommentary on Naḥmanides, *Meïrat Enayim*, hitherto still in MS, a veritable mine of information on the pre-Zôhārite phase of the Jewish Ḳabbālā. He is said to have travelled to Granada in Spain, and to have inquired of the widow of a certain Rabbi Moses de Leon what she knew about her husband's activity in connexion with the book which he for the first time had circulated among the scholars. He offered her a very high price for the original MS, from which Rabbi Moses said that he had made the copies which he sold. The woman declared that she knew of no such copy and that Rabbi Moses used to write the things himself. On the strength of this curious report modern scholars have not hesitated to declare that this book was a deliberate forgery made by Rabbi Moses and palmed off on his contemporaries as the work of Rabbi Simeon ben Yoḥai, and that it was thus quite a modern fabrication by this obscure scholar of the 13th century. The reason assigned for ascribing this book to Rabbi Simeon ben Yoḥai (2nd cent.) was that, according to an ancient legend found in the Talmud, he and his son had taken refuge in a cave from the Roman persecution, and that he dwelt in it for thirteen years, giving himself up entirely to solitary meditation and mystical speculations. Proofs were then adduced to show the improbability of early origin, as the book teems with anachronisms. References made in it also to Talmudic laws and ceremonies of a later origin, and the author's knowledge of the system of vowels and accents, also precluded the possibility of such high antiquity.

But the whole investigation was vitiated by the fact that it rested exclusively on the printed text, which, as will be shown, was of a composite character. But even in this form the *Zôhār* is only a portion of a much larger mystical literature which has been preserved in part to this very day under various names. The relation of these independent treatises and works to the larger compilation commonly known as the *Zôhār* has not yet been investigated, and thus the true character of the *Zôhār* has remained obscure, and the legendary origin which ascribes it to an almost unknown scholar of the 13th cent. has most uncritically been accepted. It is utterly impossible to conceive that such a vast literature, containing elements of the most diverse and often contradictory character, should be the work of a single man. It is much more probable that the real *Zôhār* was only one out of many treatises of a similar kind, which by fortunate accident had come into the hands of a diligent scribe, who could easily make copies of it and profit by the sale.

(*a*) *Evidence from contents.*—The mystical speculations contained in these writings can often be traced back to those of the Hellenistic period, intermingled with later developments, but all centring in the word of the Bible. We find in them almost every system—new Platonism, the teachings of the Stoa in its later form, the allegorical interpretation so prominent in Philo, the

gnostic theories—and very often in a distorted form. No less prominent are the apocalyptic visions of heavenly halls and heavenly glories of the temple in heaven, and of the terrors of hell. The ineffable name of God forms another centre of speculation, and the mystical value of letters and vowels, just as in the ancient magical papyri according to the school of the new Pythagoreans. The theories of dualism are not wanting in these schools, and often develop into a kind of trinity, consisting of father, mother, and son. The demiurgos, the syzygies, and the archons have also found a place in them. They often dissolve the literal meaning of the words and rest upon fantastical etymologies, and apparent similarities in sound and form are often the only basis for these extraordinary speculations which never lead to a logical conclusion. Almost every principle or law or even every name in the Bible is subjected to this peculiar process of sublimation, and all the thoughts float and run into one another as so many nebulæ which change their shape and form constantly, and which elude the grasp. It is all a world of mystical and fantastic imagery, in which only one principle is constant, viz. that the harmony of this world, and especially that of the celestial world, is dependent on carrying out these laws, and that Israel has the merit of being chosen to be the foremost representative of the Law, charged with its fulfilment, and thus guaranteeing not only the stability of the world, but its ultimate perfection.

The conception of God is just as vague as all the rest, for each school seems to have had its own theory, and these are all hopelessly blended. God is the *Ên Sôf* ('Infinite'), the Hoary Head, the Long Face (or, rather, the Long Suffering), Erech Appaim. He is the centre of various emanations, or rather manifestations. He is depicted as the head of the divine college, and very numerous are the anthropomorphic representations of the Shekinah, and just as vague and contradictory are the systems of creation and the many conceptions concerning the evil power (the other, or left, side) with its hosts of demons male and female, all wishing to join man for his destruction, to cover him, as it were, with so many *keliphin*, like invisible skins. There is also to be found the Platonic theory of Ideas, or divine prototypes for every earthly creature. In one separate treatise, also embodied in the *Zôhār*, the theory of metempsychosis is taught, the existence of which can be traced back to very early times in Syria and Palestine no less than in Egypt, and which later became one of the new principles carried by the Gnostic and Manichæan sects into Europe. Two physiognomic treatises called 'The Secret of Secrets' have also found a place in this compilation.

It is obvious from this brief sketch that a work of such complexity cannot be the result of a single man's activity. The utmost that can be said is that Moses de Leon either pieced some of these treatises together or copied them from older MSS in a haphazard manner.

Interspersed throughout the book there are numerous tales and legends, some of which have parallels in the other Rabbinical literature, but a large number are quite independent and cannot be found anywhere else. Some apocalyptic visions are also recorded which have a character of their own, and the whole setting reminds one strongly of the literature of the monks and cenobites, or ascetics, in Egypt and Palestine—*e.g.*, the *Lausiaca* of Palladius and others. The sages are represented as walking together in the open, discoursing on metaphysical problems, when they are joined by an aged man, the Saba, almost equal to the Abba in the *Lausiaca*, a Ta'yya, a travelling Arab, who explains the questions put and who afterwards disappears, being either the prophet Elijah or some other heavenly personage, even God Himself. The whole picture is one which can only be conceived as drawn by one of these ascetics, given up to his meditations in the wilds of Galilee or in some part east of Jordan.

Some beautiful hymns of a very exalted type, almost pantheistic, have enriched this compilation and, together with these tales, have largely contributed to its great popularity among those who were unable to follow the mystical speculation contained in its pages.

(*b*) *Evidence from language.*—The book, as printed, is not uniform. The largest part of it is written in a peculiar Aramaic dialect, which is unquestionably Palestinian. It is not the classical form, but a popularly corrupted form, such as would be the living language of the people of Galilee between the Hellenistic and Arabic periods. It approximates partly to the language of the Palestinian Talmud, which is also of Galilæan origin, and in many ways reminds one of the Targum to Ecclesiastes. It is evidently the language spoken by the Jews in Galilee, who refused to adopt Greek and to whom this was the only language. Some parts are written more correctly, others show greater corruption, and a few of the technical terms the present writer believes to be of Greek origin. Other sections of the book are in Hebrew, also of a popular form. Corruptions in either portion, especially in the Aramaic, are probably due to a large extent to the fault of copyists not fully conversant with the Aramaic, to whom these new words appeared strange. No forgery was intended, and even the association with the name of Moses de Leon as author is out of the question, and, even as copyist, should perhaps be limited to that portion of the compilation which is specifically called the *Zôhār* (for it must be made definitely clear that only a portion of the book has a right to claim this title).

The problem thus presented can now be more easily solved. It must be once for all established that the book is a compilation of a large number of independent treatises which belong to a wider circle; out of them a certain number have been selected in a haphazard manner and pieced together not by any author who endeavoured to write what it appears now to be, viz. a commentary to the five books of the Pentateuch, but by the enterprising publishers and printers of the first editions. These men have collected and selected a certain number of books, one of which—the largest one—was the *Zôhār*, or, as it was called, the *Midrash Ha-Zôhār*, or the Midrash of Rabbi Simeon b. Yohai. They have deliberately and arbitrarily arranged these writings together, like a chain or *catena patrum*, as a continuous commentary to the Pentateuch in the same manner as an unknown author has pieced together various other Midrashim of a Haggadic character and made out of them the well-known *Yalkut*. These writings were not intended to form continuous commentaries, and the largest portion deals almost exclusively with the first part of Genesis, whilst originally there was no commentary at all to Deuteronomy. In order to obtain such a commentary the publishers and printers transferred wholesale portions from one section to another, and, whenever this was found impossible as the text had already been allocated to another section, they contented themselves with inserting a note to the effect that an appropriate commentary to these passages would be found in some of the preceding sections. They did not even keep the various portions carefully separated; but, when the fragments were too small, they printed them one after the other, often omitting even the name, sometimes, however, inserting in the text the

title, such as *Raza* ('Mystery'), which a reader could not now easily understand, being unaware of the fact that it was an interpolation. Thus it confuses still more the already difficult text.

The printers, however, endeavoured to make it clear that the book published by them was a compilation of various treatises pieced together by them, for they stated on the title-page that in addition to the *Sepher Ha-Zôhār* they had included in this publication the following: *Sitre Tôrāh* ('Mysteries of the *Tôrāh*'), *Midrash Hane'lam* ('The Hidden Midrash'), *Tosefta* (additions to some sections), *Ra'ya Mehemna* ('*Pastor fides*,' 'The True Shepherd')—thus far in the Mantua edition, and in the Cremona edition the following are also added: the *Bahir*, *Midrash Ruth*, *Midrash Ḥazita* (on Songs), the section *Ta Hazi* ('Come and Behold'), *Hekhalot* ('The Halls of Heaven and Hell'), and again other additions, such as *Pikkudîm* ('Ordinances'). This fact, hitherto entirely ignored, is of decisive importance for the history of the *Zôhār*, inasmuch as it proves that in the very first editions both of Mantua and of Cremona we have only a compilation before us, and not a homogeneous work. All the investigators who have taken the *Zôhār* to be a homogeneous compilation, the skilful forgery of an ingenious author, have been led completely astray.

Moreover, no notice was taken by the scholars of the other books belonging to the same cycle. Nor have the two editions, which appeared almost simultaneously, been compared—the folio edition of Cremona (1558), which already contains various texts printed side by side, and the other edition at Mantua (1558–60) with the introduction by Rabbi Isaac de Lattes, in three quarto volumes, which has since become the authorized edition, all subsequent editions being faithful reprints page for page of this edition. The Cremona edition has only been reprinted twice, once in Lublin (1623) and a second time in Sulzbach with the help of the famous Knorr von Rosenroth (1684). In all the other (quarto) editions Genesis and Exodus form each a separate volume. The third volume contains the *Zôhār*, etc., of the remaining three books of the Pentateuch. Curiously enough, even before the *Zôhār* appeared in Mantua, the *Tikkune ha-Zôhār*, or 'Additions and Improvements to *ha-Zôhār*,' appeared in Mantua in 1557. It consists of 70 chapters, all dealing practically with the cosmogony and with the first verse of Genesis. They are all written in the same style (except that they are arranged in a more systematic order) and show the same peculiarities as the chief portion of the *Zôhār*. The language is also Aramaic, and there is scarcely anything to distinguish one from another. The same holds good of the *Zôhār Ḥadash*, 'the *New Zôhār*,' which appeared for the first time in Salonica (1597), compiled from MSS brought from Palestine. It contains, in addition to the new Zôhāric matter on the Pentateuch, similiar mystical commentaries to the five scrolls or *Megilloth*, *i.e.* Lamentations, Song, Esther, Ruth, and Ecclesiastes.

In addition it may now be mentioned that the present writer possesses separate MSS of those writings which have been incorporated in the *Zôhār*, such as *Sitre Tôrāh* and fragments of *Ra'ya Mehemna*, all corroborating the view that the book in its printed form is a compilation made in modern times of older material. A further and more decisive proof is now found in the MS of the *Zôhār* (*Codex Gaster*, no. 747) in the present writer's possession, older than the print and of Spanish Oriental origin. It differs very considerably from the printed edition. It contains only parts of what is now called the *Zôhār*, but none of the other texts which have been joined on to it in that edition. With the help of this MS also one of the chief problems connected with the *Zôhār* can now be satisfactorily solved. It is well known that the book is ascribed to Rabbi Simeon b. Yoḥai of the 2nd cent., and it was not very difficult for the critics to prove this claim untenable, inasmuch as the book in its entirety not only contains unquestionable anachronisms but also refers in sundry passages to and quotes from the Talmud and even from later forms of liturgy. But this wrong assumption of Simeon b. Yoḥai's authorship rests upon a mistake or a neglect on the part of the printers. The opening formula has been omitted, and this made all the difference, for it is a well-known fact in the Midrashic literature that many an ancient book is quoted by the first name which is mentioned at the opening of the book; it does not mean, *e.g.*, that R. Kahana is the author of the Pesiḳta or R. Tanhuma of the Midrash which go under their names. The title is derived from the opening sentence where these two scholars are mentioned. There are other books of a similar character, such as *Midrash Ḥazita*, mentioned on the title-page of the *Zôhār* and forming part of the compilation. It is the initial word of the book, and it is the same with the *Midrash Tadeshe*, etc., and the very title of the *Zôhār* is probably derived from that name occurring in the opening sentence. In the MS, similarly, the opening formula is 'Paṭaḥ R. Simeon b. Yoḥai,' which would thus explain absolutely the origin of the title *Midrash of R. Simeon b. Yoḥai*, by which this Midrash was quoted almost on its first appearance by the oldest authorities. This does not mean that R. Simeon was the author, but only that the book began with the mention of his name. Unfortunately the printers left out these initial words, for no obvious reason except perhaps in order to give prominence to that weighty mystical pronouncement which stands as a fitting introduction to this mystical book. Now there can no longer be any question of connecting this book with R. Simeon and considering him as the author. The anachronisms, on the other hand, are not general. The treatises embodied in the book may and probably do all belong to different periods. They represent a constant development which has been going on for a long time in various schools of Palestine. Each of these component elements must henceforth be studied separately, for we are dealing with a mass of material accumulated during centuries, much of which is evidently of high antiquity.

2. History and influence.—The history of Jewish mysticism has still to be written, for much of it which is very old has for some reason or other been declared to be of more recent origin. The *argumentum ex silentio* has been too often used to prove the non-existence of mystic speculations in olden times in spite of the apocalyptic and magical literature which flourished already in the early centuries before and after the destruction of the Temple. The mystics had very little in common with the scholars; they very seldom committed their speculations to writing—it was all secret lore; even that which they wrote down they hid away carefully. Yet the continuity was not broken, and the secret doctrine was handed down from generation to generation as Ḳabbālā, *i.e.* oral mystic tradition. Thus old and new were constantly blended; to old systems of theosophic speculations newer were added, until it was found necessary to fix them in writing, and in this Ḳabbālistic activity must be found the origin and the explanation of the *Zôhār* and the Zôhāric literature. In it we find embedded, side by side, those old speculations from the time of Philo downwards, on to probably the 5th and 6th cent., when they were the object of concentrated meditations in Galilee and there pre-

served until the time when they became the common property of scholars and mystics alike. It would be easy to trace almost every phase and aspect of older mysticism which flourished in Syria, Palestine, and Egypt in one page or another of the books referred to; they will often stand together on one page. It is therefore futile to draw up the system of the Ḳabbālā contained in the *Zôhār*, and those systems that have hitherto been evolved out of that book are only partial representations of one section or another, far from exhausting even one of the many writings embedded in the *Zôhār*. Mystical commentators have felt this, and have therefore often singled out one portion as the object of their interpretation. Such has been the case with the so-called *Idra Rabba*, 'The Big Hall,' and *Idra Zutta*, 'The Small Hall,' in Num. and Deut., or again the *Siphra de Seniuta*, 'The Book of the Veiled Mystery,' in Exodus. These were treated either together with other treatises or published and commented upon separately.

The philosophic movement which found its highest expression in Maimonides' († 1204) *Guide of the Perplexed* led to a rationalistic interpretation of the Law, which by its very extravagance called forth the mystical reaction which succeeded in practically extinguishing it.

The Ḳabbālistic doctrine then received a great impetus through the works of Naḥmanides (1263), especially through his widely read and highly appreciated commentary to the Pentateuch.

Mysticism flourished then. There were other great scholars who had been deeply impressed by the older Ḳabbālistic speculations by Naḥmanides, Solomon b. Adrat, and others who had formed a school of mystics in Palestine, and especially in Acco. These schools were probably revivals of older schools and mystic circles which continued to flourish unobserved in the mountains and caverns of Galilee, and also on the banks of the Jordan, where from immemorial times schools of prophets, of ascetics and recluses, of Essenes and Ḥasîdîm, have continued their mystical speculations and contemplative life. The storm of the Crusade swept over those parts, destroyed the schools, and drove the adepts into other countries. The remnants of their literature were also carried far and wide, and that is, to the present writer's mind, the only explanation of the sudden appearance in the 12th and 13th centuries of such a large number of mystical writings; it is probable that some of these fell into the hands of Moses de Leon, if he is at all to be connected with it. They represent often divergent tendencies, and are the outcome of various schools of thought.

The Ḳabbālā entered into ever-widening circles, especially as men of the highest authority in Rabbinical learning confessed themselves to be students of it. No wonder, therefore, that the new mass of Ḳabbālistic material should overflow its narrower borders and cover practically the whole field of Jewish learning. The political persecutions to which they were exposed also drove the Jews more and more to an inner contemplative life. Soon after their appearance these mystical writings spread far and wide, and within a short space of time had conquered the mind of the people.

Menaḥem Recanati (1290–1330) already makes full use of this *Midrash of R. Simeon b. Yoḥai* in his commentary to the Pentateuch, in which he gives large abstracts—a few years only, as it were, after the death of Moses de Leon. And, if it could be proved that the author of the *Libnat Hasappir* (Jerusalem) had lived before that period, that would at once destroy the legend of de Leon's authorship, for he also quotes large portions from the *Zôhār*. Be that as it may, the *Zôhār* henceforth held undisputed sway, and it was universally accepted in the form of the Mantua edition which had the 'imprimatur' of R. Isaac de Lattes. All the other mystical writings, some of which, as shown, were of equal antiquity and of equal importance, were none the less considered of less value.

The influence of the *Zôhār* became still greater when a new mystical school rose again in Galilee in the middle of the 16th century. There R. Isaac Luria (1534–72) evolved a new system of Ḳabbālā, a further development of some of the leading principles found in the *Zôhār*, and founded a school in Safed. It became the ruling system, being further developed by his colleagues and pupils, Ḥayim Vital Calabreze († 1620), Moses Cordovero († 1570), and Meir Popers († 1662). The Jews became then so deeply immersed in the study of the Ḳabbālā, and so much intoxicated by the fumes of these mystical speculations, that they easily fell a prey to the Messianic claims of Shabbethai Ṣebi. The pseudo-Messiah, his prophet Nathan of Gaza, and most of his followers were deeply versed in the study of the *Zôhār*, and were able to manipulate its obscure wordings to further their own purposes. Real learning was sapped by this mystic teaching of the *Zôhār*, which superseded the study of the Talmud and of Rabbinical literature. A prominent place having been given to the efficacy of prayers and their mystical meaning, the whole character of the Prayer Book became almost totally changed by the introduction of mystical formulas, and by the interpolation of mystical names and symbols which almost entirely destroyed the sublime simplicity of the original diction. Through the influence of the *Zôhār* and the Ḳabbālā, a new mystical force was developed among the Jews. A spiritual love, an immersion in the Divine, was taught by the founder of the Ḥasîdîm to be of higher value, if possible, than the strict observance of the letter of the Law. Thus light and shadow, action and reaction, have succeeded one another with the spread of the Ḳabbālā, and notably of the *Zôhār* and the Zôhāric literature. Its influence is now greatly on the wane, and the time has therefore come when all the problems connected with that literature can again be taken up and studied in the light of independent scholarship.

The study of the Ḳabbālā and subsequently of the *Zôhār* was not limited to Jews alone. One has only to mention Pico della Mirandola, Reuchlin, Paracelsus, and even Luther to show the keen interest Christian scholars have taken in it. Many a Christian scholar found in the *Zôhār* proof of the dogmas of the Trinity, hence a large number of pamphlets *c.* 1650–1800. Especially meritorious was the work of Knorr von Rosenroth, whose *Kabbala Denudata* (i., Sulzbach, 1677–78, ii., Frankfort, 1684) has remained the most reliable source for subsequent Christian scholars, down to the latest translation in *The Kabbala Unveiled*, by S. L. Macgregor Mathers (London, 1887).

Jewish commentators ever since the appearance of the *Zôhār* have been busy drawing up glossaries of its rare and technical expressions, and then explaining the text itself, or laying down rules of exegetical interpretation. Some attempted to draw up a system of the Ḳabbālistic teaching of the *Zôhār*, but these stood already under the influence of Luria and his school. Towards the middle of the 18th cent., and in Italy before that time, doubts began to be raised as to the genuineness of the authorship, and practically the whole controversy turned round the one question as to whether the *Zôhār* was written by R. Simeon b. Yoḥai or not. A commentary to the whole of the

Zôhār, consisting of twelve folio volumes, the work of a modern scholar in Morocco, was seen by the present writer many years ago, in MS, but so far all traces of its whereabouts seem to have been lost.

LITERATURE.—The fullest bibliography on the *Zôhār* and Zôhāric literature down to 1863 is that given by J. Furst, *Bibliotheca Judaica*, iii. [Leipzig, 1863] 329–335. For additional bibliography see *JE*, *s.v.* 'Zohar,' xii. 693, to which may be added the French translation by Pavly. M. GASTER.

ZOROASTRIANISM.—Zoroastrianism is the religious doctrine attributed to Zoroaster which gradually became the prevalent religion of Īrān and notably was the State religion under the Sasanian dynasty (A.D. 211–640). It is still professed by the Parsis of Bombay and by some sporadic communities in Persia. Zoroastrianism is one of the most interesting religions of the world. Its doctrines and rites are well known either in their present form or as they are to be found in the Pahlavi books and in the Avesta (*q.v.*).

1. Zoroaster (Zarathushtra).—There is much obscurity concerning the person of the founder and the time and place of his preaching. Although the Avesta is the Zoroastrian Bible, it is quite certain that only a small portion of the book can with probability be regarded as the work of the prophet. That portion is the *Gāthās*, or versified preachings, written in a dialect slightly different from the language of the rest of the Avesta. The Gāthic dialect, the late Avestan dialect, and the language of the inscriptions of the Achæmenids are three closely related forms of Old Iranian.

In the *Gāthās* Zoroaster appears as a very real and human personality, devoid of all the marvellous features which surround him in later literature. He is presented there as the son of Pourushaspa of the Spitama family. For ten years he had only one disciple, Maidhyoimaoŋha, his cousin. At last he converted to his doctrine Vīshtāspa, a local prince; but the *Gāthās* show that much resistance still was offered to the prophet, who, in some places, exhibits signs of anxiety. He had undertaken to reform not only the beliefs but also the social habits of the tribes of Eastern Īrān among which he had settled. His desire was to deter them from nomadic life and to induce them to devote themselves to husbandry. According to tradition, Zoroaster had come from Western Īrān (he is represented as a native of Raghæ in Media), a region which was more advanced in civilization. He was, so it seems, trying to introduce the Western customs into the wilder districts of the East. The names of Zoroaster and all the persons of his and Vīshtāspa's families have nothing mythical about them, but refer to horses, camels, etc. In later tradition Zoroaster's birth has been surrounded with marvels. He was supposed to have inherited the *xvarenaŋh* (= O. Pers. *farnah*), or 'glory,' of Yima, the law-giver of ancient ages. The *daēvas* repeatedly sought to kill him. Ahura Mazdāh and the *amesha spentas* entered into communication with him and revealed to him the tenets of the new faith. He is represented as having subsequently travelled in Bactria and in Seistan.

Vīshtāspa's conversion took place after the prophet had given miraculous signs of his power. It was followed by a long series of wars against the unbelievers. During those battles Zoroaster was killed near an altar with a group of priests. There was all the time a conflict going on between the sage and sorcerers—a feature which is probably truer to the facts than most of the other elements of the legend. Zoroaster was a Magian who, no doubt, rebelled against the practices of the majority of the members of his corporation. As will be shown later, Zoroaster's doctrine is a reform and an epuration.

The Magi (*q.v.*) are mentioned by Herodotus as a Median tribe along with the Ἀριζαντοί ('the nobles') and a few other names which may have referred to groups of the population more or less similar to the Indian castes. In *Museon*, new ser., ix. 121, the present writer has interpreted the name 'Magi' as meaning 'the helpful, the curers or the averters of evil spirits' (cf. Gr. Μαχάων, μῆχαρ, μηχάνη). This is quite consistent with what is known of their activities through the statements of the ancients. Astyages consulted them as oneiromancers.[1] They were astrologers, physicians, magicians. While there is little trace of those functions in the Avesta, two of their most characteristic customs have crept into Zoroastrianism—probably after Zoroaster's time: the giving over of dead bodies to the vultures and the next-of-kin marriages. The former of those practices is apparently borrowed from the populations of Central Asia, whose shamans are a kind of prototype of the Magians.

Although Zoroaster occupies a very special position among those Magians, he has been regarded by the Greeks as the Magian *par excellence*. Folk-etymology has connected Ζωροάστρης with ἀστήρ and has contributed in associating Chaldæan astrology with the Iranian sage. The Magi of Persia gradually adopted a form of Zoroastrianism combined with less exalted beliefs (cf. below). In this way the name of Zoroaster was attached to Magians and magic by the Greeks, who do not seem to have had—at an ancient period—any clear idea of the prophet's own teaching and real personality. In ancient as well as in modern times Persia was a country of religious thought. Moreover, the Aryans there were in contact with the ideas of Semites, Sumerians, Caucasians.[2] The unity of faith as it is found in Sasanian times is the final stage of an evolution and has resulted in the suppression of the records concerning the other forms of Mazdæism which existed in Media and Persia and of which some scanty trace seems to have been preserved in Armenian literature.[3] Zoroastrianism ignores the Achæmenians. On the other hand, neither these kings nor Herodotus, their contemporary, mention the name of the prophet. This circumstance, of course, is not in favour of the opinion often given that Darius and his successors were faithful Zoroastrians.[4]

2. His reform.—Herodotus gives a description of the religion of the Persians which applies admirably to what we know of primitive Aryan religion.

'The Persians ascend the highest peaks of the mountains and offer sacrifice to Zeus, calling the whole vault of the sky Zeus, and they also sacrifice to Sun, Moon, Earth, Fire, Water and Winds. . .'[5]

For many Persians this sky-god may still have been called Dyāus pitar. The Achæmenian inscriptions, however, show that Darius called his supreme god Auramazda, like the Zoroastrians, and this deity appears there with the lofty features which he possesses in the Avesta. He has an omnipotent will (*vashna*) and an absolute power (*xshathra*). There are representations of the 'confessions' (*fravarti* = Av. *fravashi*) or *genii* of the Mazdæans, an expression preserved also in the name of the Median king Phraortes. Names like Artaxerxes, Artaphernes, etc., show reverence both for *arta* (Av. = *asha*), 'truth,' 'justice,' and for *farnah* (Av. = *xvarenaŋh*), 'supernatural glory of the kings.' Moreover, there is a solemn con-

demnation of *drauga*, 'lie,' which recalls the hatred of the Zoroastrian for the *druj*. On the other hand, the specific name of the spirit of lie, Angra Mainyu, is not mentioned, while much emphasis is laid on other gods (*aniyā bagāha*), and especially on Mithra and Anāhita.

Now, it is precisely the originality of Zoroaster's reform to have rejected all the 'other gods,' including those two prominent deities who later found their way back into Zoroastrianism. The use of representations for the gods and the practice of burial are other un-Zoroastrian features, so that one is impressed equally by the striking resemblances and the essential differences between the two creeds. Darius's Mazdæism represents precisely the kind of *milieu* in which Zoroastrianism could have arisen as a special sect, under the influence of a reformer inspired by an exalted religious ideal. It is probable that Zoroaster's school, although it had not yet taken hold of Īrān at large, had already existed for some time at that period. The name of Darius's supreme god, Auramazda, is a crystallization of Mazdāh Ahura, 'Wisdom, the Lord,' as it appears in the *Gāthās*. The language of those hymns is much more archaic than Darius's language. Both versification and expression in Zoroaster's sermons have a flavour of antiquity quite familiar to a reader of the Veda. The fact that the dialect is different from the normal form of the sacred language of the Avesta makes it almost certain that it was the vernacular actually spoken by the prophet. This obliges us to push the date of his publication back at least two centuries before Darius's reign. This impression can only be confirmed by the great phonetic adulteration in the names of the Mazdæan religious terms as they appear in Pahlavi, the vernacular of Persia from 300 B.C. onwards.[1] While the Pahlavi translation of the later parts of the Avesta is not too far from the original, it gives a very poor rendering of the *Gāthās*, which have been misunderstood both in their expression and in their spirit. The translation of those hymns by J. Darmesteter, based mainly on the Pahlavi rendering, is a demonstration *ab absurdo* of the impossibility of understanding the *Gāthās* in the atmosphere of the 2nd cent. A.D. Darmesteter's great effort to place the composition of the whole Avesta in that period is no less of a failure. His argument is only secondarily based on a few passages of the latest parts of the Avesta which may show traces of Judaic or Buddhistic literature. His main reason for placing the Avesta in Neo-Platonic times is derived from resemblances between the religious allegories of the *Gāthās* and the δυνάμεις of Philo, and especially between Vohu Manah and the Logos. This circumstance has also struck Lagrange.[2] 'To suppose the gāthic system old,' he says, 'is to suppose the development of philosophy before the Greeks.' The fault of those scholars is that they have mistaken ethical abstractions or allegories for philosophical concepts and have ignored the fact that the antiquity of most of those very conceptions is vouchsafed by their presence both in the proper names of ancient Persia and in the Veda.

Asha (*arta*), 'justice,' 'truth,' the law of men, gods, and the universe is the Vedic *ṛta*. It appears in Artatama, the name of a Mittani king, and later in Artaxerxes, Artaphernes, Artachæes, etc. *Armaiti*, 'prudence,' 'wisdom,' is the Vedic Aramati, 'prudence,' 'piety'; *Haurvatāt*, 'salvation,' 'health,' is Ved. *sarvatāti*; *Xshathra Vairya*, 'wished-for kingdom,' recalls the *kṣatra* of Varuṇa, the great moral god of India, protector of the *ṛta*, in the same way as Mazdāh is the god of the *asha* (=*arta*). Varuṇa is called 'Wise Asura,' just as Mazdāh is 'Asura-Wisdom.'

The very name of Ahura Mazdāh, often regarded as characteristic of Zoroastrianism, has been found in a list of Assyrian gods published by Scheil[1] in the form of Assara Mazaash. It is immediately followed by the seven *igigi*, or 'good spirits,' which suggests that the association of Ahura Mazdāh with the *amesha spentas*, 'immortal holy spirits,' may be an old one like that of Varuna with the *ādityas* in India.[2] There are many abstractions in the Veda. It is clear that Zoroaster has combined in a coherent ethical system data which he found around him, transmitted in the teachings of the sages of Īrān as well as of India. By comparing the religion of the *Gāthās* with that of the oldest Vedic hymns and with what is known of the current beliefs of ancient Īrān one can form an idea of Zoroaster's originality. The Vedas knew of two series of gods, (1) the *devas*: sky, light, storm, etc., *i.e.* gods as powers of nature (sensuous deities—*θεοί*), and (2) the *asuras*, or gods in their relation to men as protectors of morality, inspiring awe, reverence, and fear (*δαίμονες*). Varuna, the great *asura*, was the ethical god *par excellence*. In later times the term *asura* came to be used of dreaded deities and evil spirits (the moral aspect of divinity with the Aryans was mostly associated with the cult of the souls—*e.g.*, in the Great Erinyes), while the *devas* became the real gods. The exaltation of Ahura Mazdāh in Īrān, which is certainly older than Zoroaster, shows that there was a school there promoting the ethical side of religion. As Herodotus shows, however, the people remained attached to the *daēvas* (=*devas*). Darius's religion is a combination in which the Magian ethical system is predominating. The same compromise eventually prevailed in later matured Zoroastrianism, which accepted Mithra (god of light, etc.), Anāhita (goddess of water, great mother), and the sacrifice of the *haoma* (=Ved. *soma*, 'the drink of life'). The old mythical apparel came back in the *yashts*, or hymns, addressed to the moon, Sirius, the god of victory, etc. But Zoroaster carefully avoids alluding to any of those deities and condemns the sacrifice of *haoma duraosha*[3] practised by the *kavis*. This very name, execrated in the *Gāthās*, is applied to the devotees of the *devas* in India and reappears in late Mazdæism as the name of a dynasty of legendary heroes. Zoroaster is evidently a radical reformer wishing to extricate the strict monotheism which existed potentially around him from all the concessions which it was making to tradition, and to rid man completely from all allegiance to deities implicated in magic.

The systematic character of his reform is even more clearly seen in his way of handling the moral abstractions. Much older than himself, they had had time to receive a materialization in the religion of the people, while their abstract meaning had not been lost by the priests. In Zoroaster's writings their moral meaning is always the real one, unmistakable for the initiated devotee, but at the same time there is in many passages an allusion to the material aspect of the hypostasis, so that sometimes the text has both an esoteric and an exoteric meaning.

So in *Ys.* xxxi. 10 the 'cattle-tending husbandman' is called 'the man that furthers Vohu-Manah,' 'Good Mind,' while for a simple devotee this would apply to Vohu Manah as the protecting genius of cattle. Xshathra Vairya is the 'Kingdom to be wished for,' the 'reign of justice and of Mazdāh,' but it is also 'the genius of metals.' In *Ys.* xxx. 7 one sees how both conceptions are reconciled: 'By thy retributions through the metal, man may gain the prize.' That prize is often called *xshathra savanham* ('kingdom of blessings'). It is paradise, the kingdom of the righteous, which will follow the universal ordeal through the molten metal. Asha (=Arta) 'Law,' 'Right' is the genius of fire, and, in *Ys.* xxxiv. 4, it is easy to

[1] Οσλαγρο=Verethraghna, Μιορο=Mithra, Φαρρο=Xvarenañh, Σαορηαρ=Xshathra Vairya, on the Indo-Scythian coins—Vohu Manah is rendered in Strabo by Ὦμανός.

find that the connexion existed in Zoroaster's times, although Asha in his writings always means 'Law': 'Of thy Fire, O Ahura, that is mighty through Law (Asha), we desire that it may be for the faithful (*ashavan*) delight . . .' And, indeed, the relation of fire to the great law of the universe is much older, since it already transpires in the Vedas in which *agni*, 'fire,' is called *prathamajas ṛtasya*,[1] 'primogenitus Legis,' *ṛtaprajāta*,[2] 'natus de Lege,' and very often *ṛtavan*, 'the faithful of Law.'

Ārmaiti, 'Good Purpose,' 'Prudence,' 'Devotion,' was at the same time a name of the earth, as shown, *e.g.*, in a passage like *Ys.* xlvii. 3, which literally reads: 'Thou art, O Mazdāh, the Holy Father of that Spirit (Vohu Manah) that has created for us the Ox, bringer of blessings. Good Purpose (Ārmaiti) is his pasture giving him peace.'

Comparison with parallel passages shows that Xshathra, 'the Kingdom,' is compared to a meadow,[3] that the Ox, bringer of blessings, is another name of the paradise.[4] The passage, therefore, was quite spiritual, but, no doubt, the uninitiated were likely to find in it an invocation to obtain from Mazdāh, through the genius of cattle, that he bestow cattle, while earth would provide meadows and peace would reign. Similarly Haurvatāt, 'Perfect Happiness,' and Ameretāt, 'Immortality,' may express the blessings of future life, but they are also water and plants, and in *Ys.* li. 7 both meanings are present together: 'Give me, O Thou, the creator of cattle, water and plants, give me immortality and perfect happiness.'

In everything, thus, the reform of Zoroaster appears to us as a purification, a spiritualization of the beliefs current at the time among both the sages and the people. It is also a systematization. The preacher has built up a coherent religious doctrine out of elements provided by a tradition in which the ethical element was predominating.

3. His doctrine.—The substance of Zoroaster's doctrine is to be found in this sentence of *Ys.* xxx.:

'The two primal spirits who revealed themselves in vision as twins are the Better and the Bad in thought, word and action. And between these two the wise knew to choose aright, the foolish not so.'

This is the essence of Zoroaster's morals which developed later into a large cosmogonic system. By his right choice the man who obeys law (*ashavan*) helps in the final victory of the good spirit, the spirit of the wise lord (Ahura Mazdāh), over the spirit of deceit and treachery (*druj*, Angra Mainyu). Inspired by a right mind (Vohu Manah), he takes his stand against the whole world of the *druj*, its satellites (*daēva*), its priests (*kavi*, *karapan*), its sorcerers (*yatu*) and fairies (*pairikā*), and its cult (sacrifices of living creatures and of the intoxicating drink, *haoma*). He repudiates with special emphasis nomadic life with brigandage and strife, the life of infidels (*dregvant*) and Turks. He leads with wisdom of purpose (*ārmaiti*) an orderly existence, according to law (*asha*), in obedience (*sraosha*) to the good spirit represented by a moral adviser (*ratu*). In this way he will realize in this world and hereafter the 'wished-for kingdom' (Xshathra Vairya), the kingdom of blessings, the kingdom of the best (Vahista manah), the good reward (*ashi*, *adā*) with perfect happiness (Haurvatāt) and immortality (Ameretāt), that will follow the last ordeal (*yāh mazishta*) and the renovation of the world (*frashō-kereti*).

4. Mazdæism matured.—Although pure Zoroastrianism was not very mystical, it was fairly abstract and was very radical in its rejection of some essential elements of traditional Persian religion. The profound impression which the prophet made on some elements of the Iranian population has gradually secured the victory to the doctrine bearing his name, but only at the price of a compromise with the current beliefs. Dualism loses its strictly moral character. It is interpreted in terms derived from the old mythical contest found among both Babylonians (Marduk and Tiamat, Zu and Enlil,[5] etc.) and Aryans (storm-myths in which some god of light or sky kills a dragon).

There were from the beginning two principles, independent, hostile, and essentially opposed to one another. The evil spirit (Pahl. Ahriman), spirit of darkness, having arisen from the abyss, has rushed to destroy the light and the creatures of Ormazd (=Ahura Mazdāh). The latter hits him with the *Ahuna-vairya* prayer as a weapon, but the fight is not concluded. There will be a period during which there will be some kind of equilibrium between the power of the two spirits. The good spirit will finally conquer. There are pure and helpful creatures in the service of Ormazd, and impure ones constituting the host of his opponent. The whole world is divided in that way. Any defilement of a good being by an impure one helps Ahriman, but the moral contest of Zoroaster is introduced into this system also, and by his 'right choice,' his good deeds, good words, and good thoughts, man is fighting for the victory of Ormazd.

Mazdæan dualism approaches monotheism closely, since Ormazd is to prevail ultimately and since the evil spirit is a mere negative entity. Moreover, serious efforts were made in Īrān to reduce dualism to unity. The Zervanites placed *zervan akarana*, 'unlimited time,' at the beginning of things. Others presented *bakht*, 'fate,' as the ruler of everything. In that dualistic division of the universe the *daēvas* as a whole have remained the servants of Ahriman, and among them are even Indra and Nāsatya (=Aśvins), who are among the most revered gods of the Indo-Iranians. Yet, under the name of *yazatas*, a few have been admitted into the host of Ormazd. Among them in particular is Mithra, god of contracts and oaths, eye of Mazdāh, the god that gives victory to the armies. His association with the sun, his part as a mediator, as a benefactor of mankind by his killing of the primeval bull, etc., are explained in art. MITHRAISM. The longest hymn of the Late Avesta (*Yasht* x.) is addressed to Mithra. It is one of the finest, with *Yasht* v., devoted to Ardvī Sūra Anāhitā (Y+5), the female member of the great Persian triad: Mazdāh—Mithra—Anāhitā. She is 'lady of waters' and 'lady of birth,' the Iranian equivalent of Ishtar and of the Sumerian Nin-Ellā.[1] She is sometimes identified with a mythical source on Mount Hara, from which all waters flow down in a thousand outlets, fertilizing the earth.

Another *yazata* enjoying a very special position is Ātar, 'fire.' For Indo-Iranians fire was the most essential part of the cult. Their priests were *ātharvan*, 'fire-priests.' Fire was conceived as a representative of divine essence on earth. It was the great source of life, burning in the bodies of men and animals (as *vohu fryana*, 'good friend'), in the stems of plants (*urvazishta*), in air and ether, in paradise itself. As *berezisavaŋh*, 'very useful,' it shoots up before Ahura Mazdāh and is kept with great care in the fire temples. The fire that represents the emanation of divine essence in kings is the famous *xvarenaŋh* (=O. Pers. *farnah*) mentioned above. It decides the fate of the kings. The Avesta preserves a curious myth in which Frangrasyan (Pers. Afrāsiyāb), a fiend, in a series of onrushes endeavours to catch hold of the *xvarenaŋh*, just in the same way as Zu on high battles for the tablets of fate in Chaldæan mythology.[2]

As to Verethraghna, the genius of victory, he was destined to a brilliant destiny in some quarters —*e.g.*, in Armenia, where, under the name of Vahakan, he usurped all the Herculean exploits of a dragon-killer attributed in turn in Īrān to Thraētaona (Pers. Faridūn), Keresāspa, and Rustam.

The *amesha spentas*, 'holy immortal beings,'

[1] *Rigveda*, x. v. 7. [2] *Ib.* II. xxiii. 15.
[3] *Ys.* xlviii. 11. [4] *Ib.* xliv. 6–12.

[1] Cf. *JAOS* xxxvi. 301. [2] Jastrow, p. 537.

however, officially remain at the head of the Zoroastrian pantheon of good gods.[1] They form the court of Ormazd, and, although their moral aspect is not forgotten, their material functions have become paramount. Ahriman is able to neutralize those archangels with a host of arch-demons which incarnate the opposites of the virtues represented by the *amesha spentas*. Among them is Aka Manah, 'bad spirit,' opposed to Vohu Manah, Aēshma daēva, 'violence' (the Asmodeus of Tobit's story), etc.

If the *amesha spentas* may be considered as archangels, protectors of the most important portions of creation, the *fravashi* (Pahl. *fravarti*) are like the guardian-angels of all individual persons.[2] They are a duplicate of the soul, existing before birth and uniting themselves to the soul after death. The name seems to mean 'confession,' 'conscience,' and may be an equivalent of *daēnā*, 'conscience,' 'religion,' which survives a man and is shaped after his conduct during life. In origin, however, the *fravashi* probably are *dii manes*, and their festival among the Parsis has all the characters of an all-souls' day. *Gēush urvan*, 'the soul of the ox,' is to be considered as the *fravashi*, the deified soul, of the ox, and as such the protector of cattle and of all the good things of which it is the symbol. The *fravashi* of all creatures existed already before creation proper. Moreover, the creation of all living things was dependent upon the production of a prototype. The 'tree of all seeds' and the *gaokerena*, 'ox-horn,' 'tree of life,' growing in the sea Vourukasha, are causing all plants to grow and thrive. The primeval bull contained the germs of all animals, and, as mentioned above, its soul nourishes and protects the animal world. The first man, Gaya Maretan, born from the sweat of Ormazd, perished, but his seed brought forth the first pair, Mashya and Mashyoi, from whom all mankind has descended. The soul of Gaya is invoked with that of the bull.

Against all those prototypes of good creation Ahriman spent his rage. Against the *gaokerena*-tree he formed a lizard in the deep water of Vourukasha, that it might injure the tree, but the marvellous *kar*-fish protected it. The primeval ox was also killed by Ahriman, according to the *Bundahishn*, while another myth represents Mithra as the slayer of the animal. Gaya Maretan was a victim of the demons. His seed only escaped, preserved by Ārmaiti as goddess of the earth.

The cosmogonic struggle is thus found in all aspects of the Zoroastrian creed. As said before, it is also the leading feature in the moral and religious life of the faithful. By the practice of virtue man places himself on the side of Mazdāh. By sin he makes himself a prey to evil spirits. The duties of the righteous are the upkeep of the worship of Ormazd and the *yazatas*, the preservation of the sacred fire, and the veneration of the dead.

Of personal virtues it is honesty and straightforwardness that are most highly valued. Scrupulous purity is demanded, and this consists not only in abstinence from adultery, rape, unnatural vice, and the like, but also in all manner of ritual performances relating to sexual relations and to all contact with ceremonially unclean persons or objects, especially corpses.[3] Charity towards the poor and hospitality towards the stranger are likewise preached as virtues. In the sphere of social virtues, down from Zoroaster's time, the duty of the tillage of the soil and of cattle-breeding is exalted to the rank of a primary virtue. The tenderest care surrounds the ox and the dog. This extremely moral code is marred to a certain extent by the childish character of some minute observances for which, in the *Vendīdād*, sanctions are provided as grave as those which refer to genuinely criminal actions. Thus it is as grave an offence, *e.g.*, to refuse food to a dog as to allow a priest to die of starvation.[1] For a Western conscience the code is also disfigured by the canonization as a virtue in the Pahlavi books of the *khvetukh-dāh*, 'incestuous marriage.' This curious aberration was probably due to a custom of the nobility desirous to preserve purity of blood and breeding. Parsis to-day deny that the word in question is to be translated in this way at all.[2]

The penances imposed for the expiation of sins or the removal of pollution are manifold. They are indicated at length in the *Vendīdād*, which enlarges especially on the number of blows with an ox-goad. Offerings later replaced those bodily penances. Certain crimes, such as cremation and sins against nature, cannot be expiated and make the guilty *pesho-tanu*, 'lost body,' *i.e.* irretrievably the prey of the *druj*. This should be understood to mean that no good acts could make up for those great sins, since Zoroastrianism in its doctrine of merits accepts the principle of compensation.

5. Zoroastrian worship. — The Zoroastrian temples contain the urn in which the holy fire burns. Over it perfumes are sprinkled from time to time. Five times a day a *mobed*, 'priest,' enters the room. The lower part of his face is covered with a veil (Av. *paitidāna*), preventing his breath from polluting the sacred fire, and his hands are gloved. He lays down a log of sandal-wood and recites three times the words *duzhmata, duzhukhta, duzhvarshta*, to repel 'evil thoughts, evil words, evil deeds.' Every Zoroastrian has, moreover, a sacred fire in his own house.

The liturgy includes the daily recitation of a few verses of the Avesta. For this purpose the sacred book has been divided into short portions which are arranged according to the date on which they must be recited, not according to their natural interrelation, exactly like the Gospels in a Missal. While he recites the prayers, the priest holds in his hands the *baresman*, or bundle of twigs.

Each month and each day has its patron. The chief feasts are the New Year (Pers. *naurōz*), the equinoxes consecrated to Mithra, the *gahanbars* at the change from one season to another, the days of the dead at the end of the year, the days of full moon and new moon. The sacrifice consists of an oblation of bread and *myazda* (this term, applied originally to solid offerings, was later applied to milk). Besides this there was, despite Zoroaster's ban upon it, the sacrifice of the *haoma* (=Skr. *soma*), an intoxicating plant of which the stems were crushed in a mortar and the juice strained off; this was presented before the fire and drunk by the officiating priest (Av. *zaotar*, Pers. *zōt*) and his acolytes (*raspi*).

A child at birth has his lips steeped in *haoma*, but he does not become a full Zoroastrian until, between the ages of twelve and fifteen years, he receives the girdle (*kushtī*), which he will always wear thenceforward except at night. The presentation of this girdle forms the centre of a ceremony which lasts nine days.[3] On this occasion the young man makes choice of a director of conscience (*ratu*).

Marriage is a duty for the Zoroastrian, and its ritual, as celebrated to-day, is borrowed from Hindu customs. The customs and rites connected with death and the exposure of the corpse on *dakhmas*, 'towers of silence,' are described in artt. DEATH AND DISPOSAL OF THE DEAD (Parsi) and

[3] See art. INITIATION (Parsi).

PURIFICATION (Iranian). For three days the soul of the Mazdæan haunts his home, and then takes wing for the judgment tribunal (*ākā*), where it presents itself before Mithra, Sraosha, and Rashnu. Its merits and demerits are weighed in the balance. If neither scale sinks, the soul proceeds to the *hamēstakān*, 'equilibrium.' Otherwise it must take its way to the abode of bliss (Pers. Behesht= Av. *vahishta*, 'best,' or *garōnmāna*, 'house of songs,' home of eternal light, lovely dwelling of Vohu Manah, where the souls rest upon the rugs of gold), or, if it is to be damned, it falls from the bridge of Chinvat into the abyss of darkness with its great variety of torments described in the vision of Arṭa i-Virāf, the Persian Dante. But that hell is not eternal. There will be a general resurrection when the molten metal will have purified everything and everybody.[1]

6. **Influence of Zoroastrianism.**—The teaching of Zoroaster, after having spread among the Magians, eventually took hold of the whole of Irān. Did it extend beyond the borders of the Persian world? There is still surprisingly great uncertainty on this point, due not only to the fact that few persons have a real knowledge of Mazdæism but also to the difficulty of drawing a line between direct borrowing from Zoroastrianism proper and the more subtle penetration of ancient thought by Iranian (or Magian) conceptions in general. As said above, the probabilities are that Zoroaster preached in Eastern Īrān and that the ideas especially associated with him can hardly have reached either Jews or Greeks in a pure form. In the question of the relation of Judaism to Mazdæism one must distinguish between Gāthism, late Zoroastrianism, the doctrines which are transmitted only through Pahlavi books of Sasanian times, and the doctrines which are common to Magism and to the various sects of Īrān. As Gaster, after Söderblom, Böklen, etc., shows, there is little in Judaism that can be shown to have been actually borrowed from Zoroastrianism.[2] Yet this does not exclude a mutual interpenetration—especially in exilic times—between the ideas of Jews who had gone far into the Persian empire and those of the Persians with whom they appear to have felt themselves in real sympathy. It is, however, impossible in our present state of knowledge to obtain any certainty on any particular detail. An important angelology and the idea of a resurrection and of a kingdom of God are found at an earlier period in Īrān than in Israel, but the development of those conceptions among the Jews, according to most Semitic scholars, can be accounted for without Persian influence. It is, however, hardly doubtful that this cause acted at least as a ferment.

The only part of the Bible which is directly inspired by Mazdæan (not Zoroastrian) ideas is the book of Tobit.[3]

As to the similarities of all kinds existing between Christian or late Jewish eschatology and cosmogony and the Mazdæan accounts as found in Pahlavi books, they of course are explainable by the interpenetration of all religious ideas in the near East at the beginning of our era. The Jews here have probably given much to the Zoroastrians, while, in other cases, both may have been submitted to the same influences.

Greek philosophy offers an analogy. Here also up to Hellenistic times one is confronted with an evolution which does not seem to be dependent upon any external factors. Yet, although the originality of Greek thought—as a whole—can hardly be questioned, it is probable that, if we knew more about the movement of ideas in Asia at that time, we should be able to discover various connexions which do not appear at present. As things are, one can only suspect the influence of the East in a general way on the old philosophers of the Ionian coast. Did Heraclitus, *e.g.*, who was born in Ephesus, hear indirectly of some Magian conceptions? There is in any case a curious resemblance between the conception of *asha* (=*arta*), 'law of the universe,' 'moral law, which manifests itself in fire,' and Heraclitus's first principle, which is a fire, a law of order (λόγος), a moral law (man's perfection is in his conformity to the law of the universe), and a manifestation of the godhead, opposed to darkness. He, moreover, believed in a world-conflict tending to greater order (*πόλεμος πάντων μὲν πατήρ ἐστι, πάντων δὲ βασιλεύς*). It is not without interest to point out the fact that Heraclitus's conceptions are recognizable in the complex system of the Stoics. It is admitted by all historians of philosophy that, although this doctrine has to a large extent been derived from the teachings of Greek sages, it has been seriously influenced by Eastern thought. Now the founders of the school, with very few exceptions, came from Cilicia (Chrysippus of Soli, Zeno of Tarsus, Antipater of Tarsus) or Cyprus (Zeno of Citium). Tarsus, a great commercial and intellectual centre, was perhaps the most cosmopolitan city of the Mediterranean. With Hittite and Assyrian antecedents, it became for centuries the capital of a province of the Persian empire. It had a Greek and a Jewish colony. In common with Iranian thought (although one can hardly speak of real borrowing), Stoicism has a prevalent ethical preoccupation, a striving for submission to the law of nature (*asha=arta*). Φύσις for the Stoics is identical with λόγος. This cosmic law is identified with fire, which is God. Men are either wise and good (σπουδαῖοι) or fools and bad (φαῦλοι), just as Zoroastrianism only knows of *ashavan* and *dregvan*. Fire will finally consume the whole world in an *ἐκπύρωσις*, which is the exact equivalent of the *mazē yāh* of the Mazdæans. The ethical dualism of the Stoics is in contradiction with their cosmic pantheism, a fact that could be accounted for only by admitting that it has been imitated from an Eastern (Magian?) doctrine.

At Alexandria Hellenistic philosophy was in closer contact with Jewish than with Iranian conceptions. Philo, however, certainly heard of the Magian system. His *δυνάμεις*, or potencies, intermediary between God and the world, in spite of their Greek colouring, are reproducing the idea of the *amesha spentas*. Just as *asha*, 'law of the world,' is the greatest of the latter, the λόγος, who at the same time is a *σοφία*, is at the head of the *δυνάμεις*. In man the *νοῦς*, 'spirit,' works in the flesh to raise him through virtue to identify him with the pure spirit of God, just as Vohu Manah, the spirit of Mazdāh, brings man to salvation. This Iranian aspect of conceptions that were mostly Greek has struck Darmesteter to the extent of making him think that Zoroastrianism had developed out of Philonian philosophy. This, we have shown, is impossible, but there is some connexion in the reverse order.

The Neo-Pythagoreans have been most directly under Magian influence, although the fact does not seem to have sufficiently attracted the attention of the historians of philosophy. The fact had probably already struck the ancients, and this may be the origin of the tradition that represents Pythagoras as receiving at Babylon the teaching of the Magians. Although it would be impossible to verify this statement, the case is very different with those who in the 1st cent. B.C. tried to revive his teachings. They were Orientals, and the best

[1] *Cf.* art. STATE OF THE DEAD (Iranian).
[2] See art. PARSIISM IN JUDAISM. [3] Moulton, p. 332 ff.

known of them, Apollonius, was from Tyana, in that province of Cappadocia which received a peculiarly strong Iranian influence. A sharp dualism of spirit and matter was the fundamental postulate of their theory in the sense that the former was the good principle in life and the latter the bad, unholy principle. God is the πνεῦμα (cf. Spenta Mainyu).[1] Between Him and the world there are mediating dæmons. In substance they are Plato's ἰδέαι, but they are regarded as 'thoughts of the divine mind,' which makes them the equivalent of the *amesha spentas*. Man's spirit is in a corporeal prison and has to free itself through purification. It is immortal. Neo-Pythagoreanism is the first Greek system which expressed the principle of authority in the form of divine revelation,[2] and in this especially it is inspired by Zoroastrianism. Its saints are divinely favoured men who have had the intuition of the divine good mind (cf. Vohu Manah), like Zoroaster and in general all the *ratu*.

Gnosticism with its syncretic tendencies could hardly have escaped absorbing Zoroastrian ideas. There are many systems of γνῶσις[3] which have a dualistic theory of the world in which matter is eventually bad. They all have mediating potencies between God and the world (αἰῶνες). Σοφία, one of the æons, attempts a union with God. Now in Plutarch's enumeration of the *amesha spentas*[4] σοφία is the translation of Ārmaiti, the genius of wisdom and the earth. There is a tradition of Ārmaiti as the spouse (or daughter) of Ahura Mazdāh and the mother of all creatures,[5] which is nothing but a Magian interpretation of the old mythical marriage of 'heaven and earth.' Christ's 'æon' has joined corporal Christ in the manner of a *fravashi*.[6] Christ saves the world through science (γνῶσις) from ignorance and deception (cf. *drujˇ*).

As to Manichæism (*q.v.*), its relation to Iranian religion has never been doubted. The recent discovery of an important Manichæan literature in Eastern Turkestan, no doubt, will throw much light on the problems connected with that sect which had such a hold on the ancient world. Manichæan dualism is as radical and as cosmological as that of Mazdæism. It recognizes two principles eternally contiguous, distinct and separate. The kingdom of light is guarded by the æons (=good angels=*amesha spentas*). The good spirit has a series of virtues. The equilibrium is broken by an attack of the evil spirit, just as in Zoroastrian cosmogony. Man has to fight for the kingdom of God (cf. Xshathra Vairya). A great catastrophe (cf. *mazē yāh*) will restore the cosmic order. Jesus 'patibilis' is like a light diffused in the world (cf. Mithra). He is accompanied by a Jesus 'impatibilis' (*fravashi*). Salvation, as for the Gnostics, is operated by knowledge. In the ascetic rule of the Manichæan there is a threefold seal of mouth, hands, and bosom, corresponding to the Zoroastrian triad of good words, good works, and good thoughts. There is the same emphasis on purity as in Zoroastrianism, and the head of the society is supposed to represent Mani, just as the head of the *mobeds* was Zarathushtrotema. Manichæism, in fact, should be considered as a Mazdæan sect contaminated with Christian ideas. Mithraism (*q.v.*) is another scion from the Iranian religious stem. It should be considered, however, as a rival to Zoroastrianism—even to Mazdæism—rather than to one of its aspects.

[6] The Gnostics, like the Mazdæans, gave two souls to man.

As to the doctrine of Mazdak (*q.v.*), which was presented in the 6th cent., it was more social than religious. It advocated State socialism with a communism extending even to women. These theories were associated with asceticism.

Although this review of the influence of Mazdæism is necessarily superficial, and in some parts only tentative, it shows how important has been the part played by that doctrine in the elaboration of the syncretic religious mentality of the near East. The seduction exerted by the Iranian conceptions is to be found in the simple solution which they give to the problem of evil. While the philosopher finds himself almost invariably attracted by some form of a more or less radical monism, the ethical man will find a simple and inspiring background sufficient for practical purposes in the doctrine of the conflict between the good principle and the powers of darkness. Iranian religion is ethical and pragmatic. It furthers activity, productivity, industry. It is decidedly unfanatical. It stands in sharp contrast to Indian faith, which out of the very same original data developed in a metaphysical direction towards pantheism and mysticism.

On both sides popular polytheism has been absorbed into a much more exalted doctrine, which is for the wise men. The Mazdæan system is much less profound, but much more intelligible. It makes for piety and good conduct, while the other is better adapted to meditation and asceticism. The aim of the former is the 'righteous man.' The ideal of the latter is the 'holy man.' The principle of revelation and of spiritual direction, so essential in Zoroastrianism (Zoroaster calls himself *ratu*, 'spiritual director,' or *saoshyant*, 'the coming helper'), is another aspect of its practical nature. The Zoroastrian not only has a clear vision of life after death, and of the means of reaching eternal happiness, but he is striving for the immediate realization in this world of a social, ethical, and religious organization of a very concrete character. This explains both why his religion extended by proselytism and why it gradually became closely associated with one nationality. All the characteristics had prepared it to be a State religion, and so it was under the Sasanian dynasty.

Its religious literature during that period is extensive, but not very appealing. There is no philosophy in it, no poetry, no religious transport, no sentiment. It is a collection of didactic, moralizing, interpretative considerations in which some myths, genealogies, and cosmological and eschatological considerations are enclosed. The translations and commentaries to the Avesta form a large part of it.

On account of its simplicity of cult and doctrine, its lack of mysticism, its belief in a revelation made by a prophet and preserved in a book, Zoroastrianism did not differ enough from Muhammadanism to be able to offer to it the long resistance displayed during so many centuries by Christians in Turkish and Arabic lands. The history of the conversion of Persia is not very well known, because it is to a large extent the story of an adaptation of a religious mentality to new forms without giving up any essential elements of the previous creed. All the traditions of Irān were preserved in Persia under a thin cover of Muhammadanism. Moreover, Zoroastrianism never completely disappeared from Persia, where it is still practised by the Gabars around Yazd. Other orthodox Zoroastrians resorted to emigration and formed in Western India, especially at Bombay, the community of the Parsis which has survived up to the present time.[1]

ZULUS.—See BANTUS.

ZUÑI.—The religion of the Zuñi in the town of that name in western New Mexico is, like the religion of the other Pueblos, a highly ritualized structure elaborated upon the primitively animistic religion of the American Indians generally. This Pueblo religion is perhaps the most complex and also most closely welded system of native cults north of central Mexico. Within its compass the Zuñi have evolved an organization even more intricate at some points than that of the Hopi, Keres, and Tanoan groups. Being nearer the heart of Pueblo civilization on the Rio Grande, their religion is more representatively Pueblo in its forms, and more sharply crystallized, than that of the peripheral Hopi. Less exposed, on account of comparative remoteness, to the pervading competition of Roman Catholicism and the inevitably disintegrating influences of Caucasian civilization, than the Keres and Tanoans, the Zuñi have preserved their cults in greater intactness. And their concentration under Spanish influence for over two centuries in a single large town has provided the occasion or stimulus for a special set of elaborations that would not have been feasible while they lived, as the other Pueblos still do, in smaller settlements.

This religion may be examined as to the beliefs upon which it rests, as to the ritual apparatus which it uses, and as to its machinery for relating individuals to the national cults.

I. *BELIEFS.*—1. **Maize.**—The most pervading concept in Zuñi religion is a group of ideas connected with the fertilization and growth of maize. This lends a strong symbolic value to all parts of the plant, but especially the pollen, the ripe ear, and the meal; to water, springs, streams, lakes, which promote the growth of maize; to animals associated with water, such as frogs, tadpoles, turtles, dragon-flies; to the mythical horned serpent, inhabitant of waters; to the squash blossom, as the most conspicuous of the fertilizing mechanisms of cultivated plants; to rain, mist, clouds, and therefore to their accompaniments thunder, lightning, rainbow; to the sun as germinator and vivifier; and to the genital parts and functions and indications of the two sexes. A few random examples must suffice out of the thousands that might be cited.

The rooms where maize is stored are entered only after prayer and barefoot. Corn meal is sprinkled on altars, on dancers who impersonate gods, and as an offering generally; pollen enters as an ingredient into fetishes and medicines. Most flowing springs are shrines; the *kokko* gods and the Zuñi dead live in a lake; ceremonial objects are destroyed by burial in the Zuñi river. Yucca suds are raised by priests to denote and bring foam and clouds; their bowls bear tadpole and dragonfly symbols. A whole series of summer dances, and of penitential retreats by the priests, is designed to bring rain. The squash blossom, lightning, and rainbow appear on masks and dancers' accoutrements. The *Ololowishkya* dance is a frankly phallic, though decent, representation referring to maize.

This wealth of symbolic ideas and acts, being organized into a definitely centred system, differs from the equally magical but much more miscellaneous beliefs and practices of most non-Pueblo Indians. The coherence goes far to indicate the developmental antiquity of Zuñi and Pueblo religion; for an unsystematized condition must have preceded the existing interconnected one.

2. **Ancestor-worship.**—The dead, at least those of them who were Zuñi and tribally initiated, are thought to become *kokko* gods; the first of these originated, long ago, from Zuñi children that fell from their migrating mothers' backs. The *kokko* are the *kachina* or *katsuna* of the other Pueblos—a large and varied class of gods impersonated by masked dancers, whose appearance is thought to bring rain and other benefits. The Zuñi therefore are ancestor-worshippers; but in general it is the undifferentiated mass of the dead that is prayed to or honoured, and there exist no cults of family and lineage.

3. **Animal-gods.** — The practice of deifying animals the Zuñi share with all other Indians, but work out in peculiar Pueblo form. Since they possess no true shamans, they do not as individuals dream of animals or pretend to receive supernatural potence directly from them. They do, however, associate animals with medicine. The curative fraternities are thought to have been instituted with the help of animal-gods. The fetishes which these societies employ on their altars comprise figures of beasts, especially beasts of prey.

4. **Witchcraft.**—The belief in black magic and witches is very deeply rooted in the Pueblo and Zuñi mind. Witches are members of the community, often whole families, who practise in secret to the harm and death of other Zuñi or even the entire community. There is some idea that they constitute a society parallel to the recognized curative societies, but of course meeting only in the deepest secrecy. Besides producing epidemics and individual sickness, they cause accidents, blast crops, and neutralize the efforts of the constituted priests to bring rain-clouds. Public sentiment often runs mutteringly against a witch for many years and then suddenly crystallizes. Once an open charge has been made, the victim is tried and often executed by the Bow Priests of the Warrior society. Usually an attempt is first made to extort a confession by suspension by the thumbs or other torture. Until the suspect is accused, he is avoided as much as possible without any open giving of offence, and takes part in public and ritualistic acts as if he were not under the most threatening of clouds. No non-Pueblo Indians possess beliefs as to witchcraft that are so standardized or that so enter into daily life as those of the Zuñi. Among other tribes the evil wizard and the beneficent shaman are often not seriously differentiated. An individual is believed to use the identical spirit or magical power according to circumstances: every shaman is a potential witch and every witch *ipso facto* possesses shamanistic power. This is the attitude of the Pacific Coast tribes. For the central and eastern portions of the continent there does not seem to be so complete a merging of the two sets of powers as this, but the antithetical differentiation which the Pueblos make is also lacking. The causes of the anomalous specialization of Pueblo witchcraft beliefs appear to be twofold: (1) they have outgrown the normal American belief in the shaman, medicine being practised by the heads of highly organized and ritualistic societies, whose leaders enjoy their faculties by virtue of election to their offices instead of receiving them in personal communication with the spirit world; as the beneficent shaman has been replaced by these society heads, so the

evilly-minded shaman has crystallized among the Pueblos into the more or less professional although concealed witch; (2) influence of Spanish civilization must be reckoned with. The whole cast of Zuñi witchcraft suggests that of Europe a few centuries ago—the innate and persistent malignity of the witches, the complete secrecy of their operations, the legalized system of accusation, torture, and punishment. As yet there has been no demonstration of derivation from European sources. At the same time it is probable that, when the Spaniard settled among the Pueblos more than three hundred years ago, he was able to strengthen and solidify their beliefs as to witchcraft precisely because these beliefs were already tending towards a status more nearly resembling that of contemporary Europe than that of the other American Indians.

5. Supreme being. — Awonawilona has been described as 'the supreme life-giving bisexual power, the symbol and initiator of life pervading all space.'[1] The Zuñi do seem to regard Awonawilona as a sort of ultimate power, but the word appears to mean 'those who hold the roads'—'of life' being understood. Awonawilona is therefore not so much a defined single chief deity as a group or class of vague powers.

6. Origin beliefs.—The Zuñi have a long origin story. In the beginning of things there existed Awonawilona, Sun father and Moon mother, and Shiwani and his wife. *Shiwani* is the Zuñi word for 'priest,' but in other Pueblo languages the word denotes 'lightning' or 'thunder,' and in the present connexion it appears to express a deification of the power of priests. Shiwani and his female counterpart are said to have been the parents of the Zuñi, who were born in the lowermost of four subterranean worlds, called the fourth or Soot World. They were led out of this by a ladder cut from a pine-tree by two sons of the sun, Kowituma and Watsusi. From the third or Watermoss World they climbed by a spruce to the second or Mud World, and from this up an aspen to the first or highest of the subterranean levels, the Feather or Sunray World, where they first saw faint light. The two guides then led them by a silver-spruce to this world, the place of light of day, the spot of emergence, Chimikyanapkyatea, being located by the Zuñi in the west or northwest. They already had priests and fetishes in the lower world and brought with them witches and maize. In fact it was the witches who carried the seeds of things with them, and the Zuñi were forced to accept the death-bringers in order not to be deprived of maize. Kowituma and Watsusi appointed Yanowuluha as *pekwine*, or deputy of the sun—the spiritual leader of the nation. The people at first were human but with tails, long ears, webbed hands and feet, and a body-covering of moss. They travelled in a general easterly direction through a long series of places, staying in each four years (time periods), and were closely followed from the lower worlds by the Hopi, Havasupai, and Navaho tribes. Their first stop was at Awisho ('moss'), where their leaders cut their webbed hands and feet and organized the earliest of the ritual societies.

After long wanderings, the head priest sent out his son and daughter Siwulutsiwa and Siwulutsitsa to look for a new abode. The pair, however, committed incest, with the result that ten children of deformed appearance were born, nine of whom, together with their father, are impersonated by the Zuñi of to-day as the *koyemshi*, clowns who wear knobbed masks, act as attendants on the other masked dancers, and perform interludes of buffoonery. Siwulutsiwa also made the Little Colorado and Zuñi rivers, and near their junction a lake and in its depths a town, Kotluwalawa ('god-town'), which became the home of the *kokko* gods and the Zuñi dead.

In their farther journeyings, as the people crossed the river, the members of the *Tlewekwe*, or Staff society, preceding, the children scratched and bit their mothers' backs until the frightened women dropped them into the water. The children were transformed into tadpoles, turtles, frogs, and watersnakes, and then, swimming to Kotluwalawa, took on human form again and became the first of the *kokko*. The two divine leaders visited Kotluwalawa, found the children adult and masked, and returned to report that they had not really died.

Next Hantlipinkya was reached, where Kowituma and Watsusi assigned clan names to groups of the people. Their place as guides and directors now began to be taken by the diminutive war-god twins, Üyuyewi and Matsailema, sons of the sun and the waterfall. The war-gods soon led the Zuñi and allied *kokko* into battle against a group of hostile gods known as the Kyanakwe, the conflict with whom is dramatized in a quadrennial ritual of the same name. Two survivors of the Kyanakwe who possessed fetishes and maize-seeds were adopted into the Zuñi maize clan. Still continuing their search for the spot which was to be their ultimate home, the people finally reached the vicinity of modern Zuñi, and, after several tentative settlements, found the sought-for middle-place when Waterskate stretched his legs to the ends of the four directions and declared the centre of the world to be beneath his heart. Here Zuñi was built, which the Zuñi still call indifferently Itiwanna, 'the middle,' or Halonawa, 'ant place,' or Shiwanakwe, 'Zuñi place.'

The settlement of the people in this town was followed by the gradual completion of their religious institutions. The *kokko* came from God-town to organize the performance of the masked dances, including the great *shalako* ritual. Then the corn maidens—divinities who had brought maize with them from the lower world—were discovered, frightened and driven away, found again after witches had reduced the Zuñi to famine, brought to the town, and induced to institute the *Tlahewe* ceremonial and leave their seed treasures. Kowituma and Watsusi visited Shipapolima, where lived Poshayanki, the great juggler. From him the existing societies received additional powers, and new ones were founded by him. The divine beings who had accompanied Poshayanki in his emergence from the lower worlds were converted into animals to preside over the six directions and to serve as fetishes in the society rituals. The twin war-gods, having taken the first scalp, instituted the victory dance and Warrior society.

Finally a flood drove the people to the summit of the mountain Towayalana until it was stayed by the sacrifice of the son and daughter of the high-priest. Redescending, the Zuñi lived in a number of villages (as the Spaniards found them in the 16th cent.); but one after the other these were destroyed by divine anger, until only Zuñi proper remained.

The striking elements and traits of this origin story are (1) the ideas of birth from the earth and wandering in search of a final abode; (2) the pseudo-historical cast of the entire myth; (3) the centring of its interest in the tribe as such, balanced by an indifference to speculations on the origin of mankind or animal life; (4) the fullness with which ritual institutions are explained and the contrasting lack of interest in non-ritualized divinities.

II. *APPARATUS.*—The concrete apparatus of Zuñi religion, both physical and intangible, is exceedingly elaborate, and only a few of the more striking developments can be touched upon. The

[1] M. C. Stevenson, *23 RBEW* [1904], p. 22.

content of their religion is essentially that of the other Pueblos, but is modified in many details.

1. Numbers, colours, directions.—Number symbolism is introduced into every aspect of ritual with monotonous insistence, but is enriched by linkage with reference to colour and direction. The directions are always thought of in a fixed order: north, west, south, east, above, below, to which the middle or whole is sometimes (although usually by implication rather than explicitly) added as the seventh. The corresponding colours are yellow, blue, red, white, variegated, and black. There are prey animals, birds, trees, and a variety of other classifiable natural objects identified with these directions and colours. Maize is actually grown in an astounding variety of colours of the grain, but these are reduced in the Zuñi mind and religious practice to the standard six varieties. Where six is not used, the ritual number is four, the above and below being in this case omitted. Periods of time are usually grouped by fours or multiples thereof. Thus certain ceremonials are performed quadrennially, and the number of days for which the priesthoods go into retreat is either four or eight.

2. Prayers.—Highly formalized prayers are much used by the Zuñi. They are definitely standardized, couched in a language which may be more or less archaic and is certainly ritualized, and are recited in a rapid muttering drone. Certain prayers belong to the constituted priests alone, others are spoken by religious officials or laymen. The tenor is understood even when many of the words are difficult of explanation by the speaker.

3. Feather sticks.—The visible embodiment of prayer, and at the same time the most important form of offering, is prayer sticks (*telikyinawe*), short rods to which feathers are tied according to exact rules and which are then set out in shrines or buried in the ground. These feather sticks are 'planted' by every priesthood before every ceremony, by the officials of all societies, for the dead, and on regular occasions such as the recurrent year or moon. They have many slightly differing forms according to their purpose. They are always deposited privately.

4. Altars.—Altars of some sort enter into all major rituals. The most elaborate are those of the curing societies. These consist of a painting made on the floor in coloured earths, behind which is set up an elaborate screen of slats which is carved or painted with symbols; and of animal images, stone concretions, sacred corn ears, offerings in bowls, and similar paraphernalia deposited on or about the ground painting. Priests' altars are simpler: the screen is wanting and the sand painting is replaced by one of coloured maize meal. In general, altars are set up indoors for esoteric portions of ceremonies, and put away at their conclusion. Allied to altars are shrines—nearly always out of doors—at which offerings, especially of prayer sticks, are made. These shrines may be springs, clefts in the rocks, or small stone cysts on the summit of knolls. They are visited by priests, by society officials, and by dance impersonators.

5. Masks.—The most spectacular apparatus of Zuñi ritual is the mask, which is made in enormous variety of elaborate and standardized forms. There are probably a hundred kinds, each with a name and definite place in cult. With a mask go a specific costume and style of body paint, although these are not as diversified as the masks. Every mask represents a deity, and the dancer who has donned one is himself called *kokko*, or god. These *kokko* being the *kachina* of the other Pueblos, many Zuñi masks recur among the Hopi or on the Rio Grande. The names are sometimes the same in towns of different stock; at other times they are as different as the masks themselves are similar. In some instances importation of a mask from one Pueblo to another can be traced by indirect evidence, or is admitted by the natives themselves. In this interchange the Zuñi seem to have given and received about equally. Most of the masks are monstrous, some animal-like. This does not argue that the Zuñi look upon their gods as terrifying rather than beneficent. It seems that limitations of technical skill prevented the Pueblos from making their masks representatively beautiful, but did not prevent their attaining effects that are grotesquely interesting and decoratively pleasing. In other words, their conceptions of the *kokko* are the result of the masks which it was within the powers of the Zuñi to make. Manual ability directed beliefs more than the reverse. This comes out clearly in the fact that many of the masks representing goddesses are bearded. The beard simplifies the construction and allows the wearer's song to issue unimpaired while effectually concealing his identity. It may be added that masks are regarded as extremely sacred, and that the uninitiated children and younger women seem to believe the wearers to be true gods.

6. Fetishes.—The most sacred of all material objects in the Zuñi religion are certain fetishes called *ettonne* (plural *ettowe*), and these they have developed to a greater extent than the other Pueblos. The *ettonne* shows a fundamental relationship to another class of fetishes called *mi'le* (plural *miwe*), 'maize ear,' which is the form more current elsewhere in the region. The *mi'le* is an ear of maize sheathed in feathers and otherwise specially prepared. It is the badge of membership in the curing orders of the societies. These *miwe* are individual property and are buried at the owner's death. The *ettowe*, on the contrary, are supposed to have been brought up in their present physical form from the lower world, and appertain to groups—priesthoods, societies, clans, etc. They are guarded with extreme care, 'fed' with offerings, never exposed except when ritual definitely provides; and even the room in which they are kept is tabu. They seem to consist of several reeds bundled together and filled with materials that are either precious in themselves or symbolic of the precious things of life: meal, pollen, seeds, turquoise, and the like. The *ettowe* are enclosed in native cotton and kept in wrappings. They number about fifteen each for the priesthoods, the societies, and the clans, besides a few of more special reference.

III. *ORGANIZATION.*—On the side of organization or hierarchy of functioning individuals, Zuñi religion has developed in three principal directions: (1) there is a series of thirteen societies or fraternities whose most distinctive function is the religious curing of disease; (2) there is a communal organization which conducts the dances in which the *kokko* are impersonated; (3) there is a series of priests, or rather priesthoods, devoted to the spiritual welfare of the nation. The communal society and the priesthoods are linked by the fact that their objectives, such as rainfall for the crops and other general blessings, are the same. This does not of course imply that they are the historical result of the same impetus. They share, however, in native theory a devotion to the interests of the community at large, whereas the factor of individual benefit enters more definitely into the scheme of the fraternities.

1. The fraternities.—The fraternities are thirteen in number and are treated by the Zuñi as full equivalents of one another. They are all organized on the same pattern, with membership by initiation, secret meetings, and esoteric rites; and in general they are open to men, women, and children

alike. The only exception is that one Hunters' and two Warriors' societies are entered by men only. These three bodies nevertheless are very similar in organization, rites, and paraphernalia to the curative bodies, thus evidencing the strong tendency of the Zuñi to equate all societies, irrespective of differences in their origin or avowed purpose. For instance, the Cholla-cactus people are a Warrior society secondary to that of the Bow Priests. They admit men who have not yet scalped an enemy and thereby attained to membership among the Bow Priests, but who have fought in battle or been wounded. At the same time they resemble the curing societies in that they heal wounds.

(*a*) *Warrior societies.*—The most unique of all the societies is that of the Bow Priests, not only on account of the limitation of membership, but especially because the members are looked upon as the guardians and physical executors of the decisions of other religious officials. They are the soldiers, as it were, who enforce the decrees of the paramount theocracy and guard the masked dancers. At least one of their number—and if possible two—is chosen as a member by each of the other fraternities to protect the altar and keep out intruders. This is the only case of an individual being an active member of more than one society. The Bow Priest fraternity is also unique in that it alone possesses two heads. These two are the representatives of the twin war-gods, and in this capacity sit with the supreme council of priests as watchers and administrators. It is to them that the execution of witches, *e.g.*, or the taking away of his staff of office from a deposed governor would be delegated.

A Warrior society corresponding to the Zuñi Bow Priests appears to have existed in every Pueblo, the development of the institution among the Tanoans and Keresans being very similar to that of the Zuñi, whereas among the Hopi the organization was less important, probably because Hopi religion was less centralized.

(*b*) *Hunters' society.*—The *Saniakyakwe*, or Coyote society, spiritually fosters the hunting interests of the tribe and supervises the rabbit hunts which are a conspicuous feature of the *kokko* worship. It does not treat illness, but its organization and ritual are wholly of a pattern with that of the curing societies.

(*c*) *Curing societies.*—The remaining societies all heal. They are, however, diverse in origin, according both to Zuñi belief and to comparative analysis. The oldest societies, according to native tradition, are the *Ne'wekwe* and *Shi'wanakwe*, which correspond to the Clown and Dancing societies of the Rio Grande, the *Koshairi* and *Kwirana*. The *Ne'wekwe* have kept the clown features of the *Koshairi*, and sometimes appear in public dances. They also cure, however; and the *Shi'wanakwe* have become purely a curing society, scarcely to be distinguished from any other. The *Tlewekwe*, or 'Wood' (*i.e.* Staff-swallowing) society, with the two foregoing, and the Hunters, are the four earliest fraternities in native belief. The *Tlewekwe* is given a special position in mythology (see above), and has particular rain-making functions. The Little Fire-brand and the Great Fire-brand societies are said to have originated later, the former being derived from the Hopi and the latter instituted in the period after the mythical Poshayanki began to instruct the societies in medicine. The *Uhuhu*, *Ant*, and *Shuma'* groups are also thought to owe their origin at least in part to Poshayanki. The first of these has no known equivalents among other Pueblos. The second seems to be a local equivalent of the Rio Grande Knife societies; and the *Shuma'* is the equivalent of a *Sayapa* or *Shumaikoli* society elsewhere, which is distinguished by the possession of masks. The last two Zuñi fraternities, the Rattlesnake-medicine-water and Bedbug, must be of comparatively recent origin, since tradition recalls that they arose as the result of splits within the *Uhuhu* and the Little Fire-brand bodies. A close parallelism of ritual confirms tradition on this point.

Each of these fraternities has a head or chief, a speaker or deputy to the chief, a medicine chief, and usually other functionaries. They are divided into orders, the most important distinction being between members who know medicine mystery and those who do not; in most societies only the former possess *mi'le* fetishes. There are special orders for fire-eating, staff-swallowing, and feats of jugglery which vary from society to society. Yet the orders recur: it is not only the Fire-brand societies that eat fire, and not only the Staff society that swallows.

Initiation into the societies takes several forms. The commonest is by sickness. A person seriously ill is 'given' to one of the officials and after cure by him remains almost in the position of an adopted child. If he can afford the necessary payments, he becomes a member. This idea that the purpose of the societies is to cure and that it is curing that constitutes membership is deeply impressed on Zuñi consciousness. Another method of admission is by trespass: a man breaks into an esoteric ritual, has seen what he should not see, and can expiate the offence, in fact save himself from the consequences, only by learning the remainder of the mysteries. In practice admission by trespass seems to be a means of legal fiction through which adults can quickly enter a society while in good health. It is also a rule that a member of any society can transfer from one to the other with only a nominal re-initiation. Such transfers are numerous as a result of personal disagreements.

2. **The communal Dancing society.**—Dances, or, it would be better to say, ritualistic exhibitions by masked performers representing *kokko*, are very numerous, and there is scarcely a month when they cannot be witnessed in the streets and plazas of the town. An elaborate set of exhibitions begins at the winter solstice, when a sequence of gods not seen at other times appears. Shortly after follows a series of rites known as the 'cleansing the earth.' Thereupon comes a series of dances called *koyupchunawe*, in which the members of the six estufas synchronously dance on six occasions for one to eight nights. A sort of aftermath are the 'little dances,' which continue irregularly for a couple of months. At about the same period, during spring, occurs the quadrennial initiation with the image of the sacred horned serpent. Towards the end of spring comes the rabbit hunt, participated in by masked performers and the people at large. At the summer solstice a visit is made to the sacred lake of the dead. The return from this is in masks and initiates the series of summer dances, six in number. In late summer and early autumn there fall three ceremonies: the *Owinawe*, a harvest festival under the direction of the Bow Priests, the *Tlahewe*, a maize ceremony performed quadrennially without masks, and the *Kyanakwe*, also quadrennial, which is an elaborate dramatization of a myth and introduces masks not worn on other occasions. The year is brought to a close in the month preceding the winter solstice by the *Shalako*, which from the exoteric aspect is the most sumptuous and elaborate of all Zuñi rituals.

These ceremonies are performed by the adult, *i.e.* initiated, males of the Zuñi nation, as constituted into the *Ko-tikyili*, or '*kokko* fraternity,' *i.e.* God society. It is interesting that the Zuñi name this organization as if it were a restricted curing society. Boys are initiated twice, in what

may be described as the involuntary and the voluntary initiations. After the second they wear masks in ceremonies. Women become members only under very exceptional circumstances. The membership is grouped into six sub-organizations about equal in numerical strength, each of which has its own *kiwitsine*, or 'estufa,' *i.e.* ceremonial chamber. Membership in these estufas is arranged on a criss-crossing plan. A man after initiation joins that estufa to which belongs the husband of the woman who first touched him at birth. This brings it about that estufa affiliation does not follow the lines of cleavage formed by clans, curing societies, or other groups, and normally puts father and son in different estufas. Each estufa makes its dances separately; and, even in what may be called strongly communal rituals, the mask allotment and other functions are on an estufa basis. The entire God society is under the direction of a 'god chief' and a 'god speaker' who must be members of certain clans. The whole organization is intricate, as is necessary for the continuous practice of so elaborate a ritual. At the same time it obviously is closely knit, as if designed to prevent its breaking apart into conflicting units. Even the competitive rivalry which the six estufas evince tends to make them feel themselves parts of a whole.

3. Priests.—Above and apart from the societies and the communal God society stand the 'rain priests,' *shiwani* (plural *ashiwani*), to whom is entrusted the spiritual welfare of the nation. They take as little part as possible in mundane affairs, do not dance, go into fixed retreats for fasting, penitence, and meditation, and by the blamelessness of their conduct, concentration of mind, and sacredness of office, are thought to keep peace, cause the community to prosper, and above all bring the rains upon which the crops and sustenance of the people depend. In Zuñi theory public ceremonies are largely only an exoteric accompaniment to the still more important esoteric activities of these priests. They are organized into fifteen sets, each of which consists in theory of a priest proper, his associate and prospective successor, two assistants, and a female associate. The last, in spite of her venerability, is not properly a priest, but has special duties connected with the care of the fetish which is the vehicle of continuity of each priesthood through the generations. In practice the constituted membership of each priesthood is sometimes greater or less than this scheme demands.

The first four of these fifteen priesthoods, those which 'go in' first in the series of penitential retreats, and represent the north, east, south, and west, are the most sacred. Among these the first, the 'house-chiefs,' again have the primacy. The fifth priesthood is anomalous in consisting only of the *pekwine*, or 'speaker,' of the sun, who is the regulator of the calendar and the guardian of public sanctity, and is expected to be the individual removed above all others from worldly affairs. He typifies the 'above,' whereas the 'below' is represented by the two head Bow Priests, representatives of the war-gods. Strictly, neither *pekwine* nor the Bow Priests are priests like the others; but they are so reckoned by the Zuñi, and, on occasions such as the retreats spoken of, function like them.

The source of government in Zuñi is theocratic. There are a governor and other civil officials; the priests do not interfere in the affairs of men. The civil officials, however, are chosen or nominated and can be deposed by a supreme council of six priests—the 'daylight people,' as they are called. These consist of the chief priests of the four first sets, with two additional priests from the first priesthood. The Bow Priests sit with the council as guardians and execute all its decisions. The head of the council, and in fact of the entire Zuñi hierarchy, is the *kyakwemosi*, or house-chief proper, whose power is almost that of a pope.

4. Origin of the hierarchical system.—This intricate hierarchical organization has parallels among other Pueblos, but has nowhere else attained the same degree of elaboration. Its power and sanctity are so great as to leave a first impression that the hierarchy is the basis of all Zuñi religious organization. Analysis and comparison, however, reveal that it is of secondary and probably rather late origin. The 50 or 60 priests represent an elaboration of a smaller number; probably this nucleus was the six 'daylight people,' since such a body functions on the Rio Grande without the accompaniment of additional priesthoods. The kernel of this group of six appears to be its primate, the house-chief, who in authority and sanctity corresponds to the *tiamoni*, or 'cacique,' of the Rio Grande Pueblos. There too he always has a speaker or deputy, has his decisions executed, if need be, by the heads of the Warrior society, and is aided in council by associates, who are normally the heads of the leading fraternal societies. This simpler organization of the Rio Grande obviously makes a less sharp distinction than the Zuñi one between priests, curing societies, and the communal dance organization. The course of development at Zuñi seems to have been that the concept of the cacique, or of the cacique *plus* deputy, was reduplicated first into a group of four or six priests; that then these were given associates and assistants; and that finally still other priests and associates were added, until the present large number had been attained. The luxuriance of this development led to such abundance of material for specific priestly purposes that the curing society heads became unnecessary in this connexion and came to withdraw from the hierarchical organization, restricting themselves almost exclusively to the functioning of their respective societies. The same process carried further probably led to a more complete separation of the communal, or *kokko*, society. As this grew in independence, it came to need more organization of its own. One result of this process of differentiations seems to have been the limitation of the estufas to the communal society—a condition which occurs only at Zuñi. In general, then, the special traits of Zuñi ritual organization are a greater functional differentiation and consequent greater elaborateness than elsewhere, but without loss of coherence.

The principal cause in this development is likely to have been the size of Zuñi Pueblo. It may be suspected that, while this people lived scattered in half-a-dozen independent towns, the organization of each was more similar to that of the Keresans and Tanoans. When, however, under the influence of the Spaniards and perhaps of Navaho and Apache raids, the Zuñi more than two centuries ago assembled in a single town, the concentration in numbers may have forced, and certainly stimulated, a tendency towards systematization. Where half-a-dozen ill-defined priests had sufficed for a population of a few hundreds, a larger number with more specialized functions would be called for in a closely compacted community of two or three thousand. It is also possible that the example of the ever-present Roman Catholic priest may have aided in this development, especially as regards the rain-priest as distinguished from the society heads and dance directors. It does not appear, however, that this influence was more than secondary at best. Both the nature of the priestly office in the Zuñi mind and the fact that a similar development failed to take place on the Rio Grande,

where Roman Catholic influence was even stronger, point in this direction.

A. L. KROEBER.

ZWINGLI.—1. Early years.—Ulrich (Huldreich) Zwingli was born on 1st Jan. 1484, in the little township of Wildhaus—the highest village in the Toggenburg valley. He sprang from its most prominent family. His father was a leading farmer and the chief magistrate. His uncle Bartholomew was the parish priest, and afterwards (1487) dean of Wesen. The clerical traditions of the family on both sides determined the boy's career. His education, begun at Wesen with his uncle, was continued at Basel and Bern. In his school-days his progress in learning seems to have been less conspicuous than his proficiency in music. In fact, his musical gifts nearly made him a monk. At fourteen he was sent to the University of Vienna, apparently because it was a centre of the Humanists. He may have spent at least one term in the University of Paris.[1] But neither Vienna nor Paris was to be his real Alma Mater. In 1502 he returned to Basel. For four years he studied there, supporting himself by teaching, and graduated in 1504 as Bachelor and in 1506 as Master. So ended his school and university career, spent in Humanist schools and universities, but following the familiar Scholastic routine, for which there was as yet no substitute. It was not till later, during his first cure of souls, that the Humanist impulse was to become so strong that it burst the old bottles.

2. Early ministry.—Immediately on graduation he was appointed parish priest of Glarus, where he remained for ten years (1506–16). There his effective education began. He seems at first to have been absorbed in classical studies, in music, and in the history of his native land. Typical of those days is the *Fable of the Ox*, his first literary effort, a somewhat crude warning against the dangers that lurked in the popular mercenary service. But that his opposition was not irreconcilable is manifest from the fact that in the campaigns of 1513 and 1515 he served as chaplain with his own men from Glarus, being with them both at Novara and at Marignano. His experiences in Italy undermined some of his accepted tenets about the authority of the Church, and just at the moment when doubts and questions were jostling in his mind he came into contact with a whole new world of thought through Erasmus. Erasmus's programme of a 'restitution of Christianity' through the *philosophia Christi* fired his imagination. He caught at once his contempt for Scholasticism and his conviction that the true Christian philosophy was to be found only in the moral teaching of Jesus and of His great disciple, Paul. '*Ad fontes*' became his motto. So in 1516, when Erasmus published his Greek New Testament, Zwingli was an early reader, and very soon most of it was transcribed into note-books to be learned by heart. Acquaintance with it revealed how far the Church which he had so lately imagined unchanged and unchangeable had really fallen away from the NT standard. With an alert and critical mind he began to study what traces he could find of the stages of this decline in Christian history.

[1] So W. Köhler, *Zwingliana*, Gedenknummer auf Neujahr 1919, p. 7.

Meanwhile his hostility to the mercenary service had been growing, and a second poem called *The Labyrinth* proved unacceptable to the warlike parish of Glarus. Zwingli, therefore, accepted the position of preacher at Einsiedeln, the great pilgrimage resort of Switzerland. Here he came to know at first hand superstition, saint-worship, relic-worship, and the abuse of indulgences. During his two years at Einsiedeln Zwingli was advancing steadily towards the Reformed position. Can we say further, with some of the early historians of the Reformed Church, and as Zwingli himself more than once asserted, that in those days at Einsiedeln he had already reached his full Reformed position, and that, in consequence, he anticipated Luther? We cannot. The papal pension (continued till 1520) and the pilgrimage to Aachen (1517) are conclusive. But it is clear that, if his conscience was not yet touched, his mind was awake, and the amount of Scriptural and Patristic knowledge he acquired during those two years is a real matter for wonder. Alike in moral life and in teaching he was still Humanist rather than Reformer.

3. Work in Zürich.—On 27th Dec. 1518 Zwingli removed to Zürich, which was to be henceforward the centre of his activities. He went as people's priest in the Great Minster. At the beginning of the year he announced his programme from the pulpit. He was going to expound the Scriptures, book by book and chapter by chapter. He began with St. Matthew's Gospel, the favourite book of the Humanists because it contained the Sermon on the Mount, the basis of the *philosophia Christi*. Then came the Acts of the Apostles, that in the primitive Church men might see after what pattern the Church ought to be. Then followed Galatians and 1 and 2 Timothy, to make Paul's teaching familiar; then the two Epistles of Peter, to show how Peter agreed with Paul. By 1525 Zwingli had preached through the whole of the NT. Long before that, however, the Reformation had been established. From the first his preaching was so fresh, so full of new ideas, that the services were thronged. Very soon he had to begin a market-day series, on Fridays, on the Psalms. One of the strongest proofs of his popularity and influence is that, in the very first year of his preaching (1519), a bookseller came to Zürich and placed his printing-press at the service of the new movement. This was Christopher Froschauer; round Zwingli and him there gathered at Zürich a literary circle comparable to that already assembled at Basel round Erasmus and Froben.

The year 1519 saw a deepening of Zwingli's convictions. This was due partly to the early works of Luther and partly to the coming of the plague, with which Zwingli, who had fearlessly returned to duty after its outbreak, was attacked. These two together seem to have hastened him along the road he was unconsciously travelling, from Erasmian to Reformer. Simplification of the liturgy and drastic action in regard to mercenary service were premonitory symptoms of the breach that was coming. The first definite move in the religious revolution came in the Lent of 1522, as a result of Zwingli's preaching, though he himself took no part in it. The form it assumed was a revolt against the law of the Lenten fast. Zwingli was not slow in justifying the action of his friends. In their defence he published his first Reformation tract *Von Erkiesen und Freiheit der Speisen* ('Concerning Selection and Liberty in Foods'). The City Council incurred the anger of the bishop of Constance by dealing, and dealing leniently, with the offenders. In August 1522 Zwingli issued his first Reformation treatise of any length, the *Archeteles*, which did in Latin and for the learned

what his next works, the *67 Articles*, and their *Exposition*, did in German and for the common people. In the beginning of 1523 took place the first Zürich disputation, of which the *67 Articles* formed the programme. It was a triumph for the party of reform, and a great personal triumph for Zwingli. At its close the Great Council pronounced its decision that the accusations of heresy against Zwingli were unfounded, and that he was 'to continue as before to proclaim the Holy Gospel, and the true, Divine Scriptures.' Further it declared that all other preachers and pastors in the city and the country were 'not to preach anything which they could not establish by the Holy Gospel, and the pure, Divine Scriptures'; and that they were to refrain from personal controversy and bitter names. The victory of the Reformation in Zürich was thus assured. But the practical steps remained to be taken, and these involved divisions of policy and further disputations. The monasteries began to empty. Better uses were at once found for them as hospitals and academies. The Great Minster was transformed into something not unlike a Theological College. The energy spent in the performance of innumerable masses was transferred to Biblical and Biblico-theological instruction. A vernacular ritual came into use, first in the Sacrament of Baptism. Change in the Lord's Supper was much slower. The old service held its place in Zwingli's own Church till April 1525.

Sporadic and unauthorized removal of images and the imprisonment of the offenders led to the second disputation in Oct. 1523. The programme of removal and the gradual change of ritual were put into the hands of a committee of laymen and ministers whose business was to devise means 'for moving forward the work of Christ.' The line along which they moved forward proved unacceptable to the few remaining adherents of traditionalism in Zürich, and their protest was the occasion of the third disputation, in Jan. 1524. Its decision was an order to these Scholastics to carry out loyally the line of action of the Council. The breach with the old order was complete, and the new order rapidly took shape. The temporary committee gave place, in 1525, to church courts for discipline and for marriage cases. By 1527 a synodical organization was complete. During all these revolutionary actions the pope pronounced no anathema. He was still not without hope of military help from Zürich. Zürich, in turn, encouraged the hope, for it was waiting for arrears of military pay. The Swiss mercenary service had made the path of Reformation much smoother than in Saxony.

4. **His varied activities.**—During the third decade of the 16th cent. there can have been few busier men in Europe than Zwingli. One might thus catalogue his manifold labours.

A. He had to think out his plan of Reformation, and to communicate the conclusions he had reached to a great host of active sympathizers in other centres by letter and to the general public in book and pamphlet.

In addition to the works referred to above, mention should be made of the *Short Christian Introduction*, the nature and intention of which are fully indicated in its extended title, 'A short Christian introduction which the honourable Council of the city of Zürich has sent to the pastors and preachers, living in its cities, lands, and wherever its authority extends, so that they may in unison henceforth announce and preach the true Gospel to their dependants'; *Der Hirt* (1524), or, as it is called in the English translation of 1550, *The Image of Both Pastors*, an expansion of a sermon preached to the pastors present at the second disputation; the *Commentary on the True and False Religion*, the most comprehensive summary of his mature teaching; the treatise *On Divine Providence*; and the *Confession of Faith* presented to the Diet of Augsburg (1530), generally known as *Ratio Fidei*.

B. From the pulpit and by private interview he had so to educate the people of Zürich and, in particular, the members of its governing bodies, that they would be prepared to take action along the line of Reformation, no matter what it should cost.

Although Zwingli's official position from 1525 was that of head of the Carolinum, the theological college of Zürich, he continued his public expositions of Scripture, passing to the OT—especially the Prophets—when he had run through most of the NT.

C. In order that the Evangelical reforms might be firmly rooted in the intelligent sympathy of the people, it was necessary that the Bible should be put into their hands in the vernacular.

Here his task was lightened by the industry of Luther. Luther's NT, finished in the Wartburg in 1522, was being printed in Zürich in 1524. This was speedily followed by the historical books of the OT. But Zwingli could not wait for Luther's translation of the Prophets. So an independent translation was begun, and finished in 1529. A complete German Bible appeared in Zürich in 6 volumes by 1529, and a single-volume edition in 1530. Switzerland, therefore, had the Bible complete several years before Germany. Though the main burden of translation fell on his friend and colleague, Leo Jud, Zwingli's share in it is by no means negligible.

D. He had to defend his Reformation against radicals who thought that Zürich had not gone half far enough.

This radical element, which was to develop into Anabaptism, made its first public appearance at the second disputation. Conrad Grebel was their leader, and their point of view was that a clean sweep ought to be made at once of images and ritual and all the disastrous accumulations of fifteen centuries, and that this was Zwingli's esoteric teaching. In particular, they challenged Zwingli to produce any Scriptural warrant for tithes or infant baptism. In 1524 these dissidents were confirmed in their positions by two visitors from the Anabaptists of Germany, Thomas Münzer and Andreas Carlstadt. This widened the breach. Zwingli saw the Reformation movement slowly disintegrating into two, and saw some of his friends taken captive by what they felt to be the purer Biblicism of the new movement. He appealed to them not to form a separate body. The appeal was in vain. The separation took place. For the healing of the breach Zwingli proposed the inevitable public disputation. The first took place in Jan. 1525. The decision was against the Anabaptists. And it was followed by a decree that all unbaptized children must be baptized within a week, or their parents would be banished from Zürich. The council soon proceeded to severer measures. One of the leaders suffered death by drowning, and others were banished.

No movement could have given more trouble to Zwingli. As they took their stand on Scripture, and as Zwingli claimed to do the same, the controversy was the fiercest he was ever called upon to face. The impression left by his numerous treatises is that, to find grounds for condemning them and their practices, he was driven to exaggerate the non-essential peculiarities of the movement. It was not these writings, but the fate of the Peasants' Revolt in Germany, that eased the strain.

E. At the same time as he was called upon to encounter radicals within the movement he had to deal with champions of the old order. The most prominent phase of this was the disputation which, after long negotiation, took place at Baden in 1526. Œcolampadius of Basel and John Eck were the protagonists. Zwingli was not present. But

much of the work fell on him. Messengers were constantly coming and going. Thomas Platter's autobiography gives a vivid picture of the extent of his assistance. The disputation served Eck's purpose, in increasing Lutheran suspicion of the unsoundness of the Zwinglians in regard to the Lord's Supper. We note here also the more important of the relevant controversial works: the *Antibolon* (1524) against Jerome Emser, 'defender of the canon of the Mass'; and the *Answer to Valentin Compar* (1525).

F. He had to take a large part in the first phase of the prolonged controversy between Lutherans and Reformed concerning the Lord's Supper. For details see art. EUCHARIST (Reformation and post-Reformation period).

G. During those years Zwingli was drawn more and more into the main stream of federal politics. The rival confessions within the confederacy and their rival leagues created a situation which demanded the constant vigilance of a statesman. And it was on Zwingli that Zürich leaned.[1]

H. In the midst of all these labours Zwingli maintained his Humanist studies. In 1526 there was published in Basel Ceporin's edition of the poems of Pindar, with a preface and a conclusion by Huldrychus Geminius.

I. But the main concern of Zwingli during the later 20's was to secure the Reformation in Zürich by introducing Reformation teaching and practice into every city and canton of the confederacy.

In Bern the value of the preparatory work of Berthold Haller was revealed by the thoroughness of the Reformed victory in its disputation in Jan. 1528, in which Zwingli took the leading part. This same disputation brought to a head the new movement in Basel, where Œcolampadius had long been actively at work. Vadianus was his correspondent in St. Gall, which, with Glarus, Schaffhausen, and Appenzell, followed Zürich's example in Zwingli's lifetime. A certain measure of success was attained in the allied Graubund, but elsewhere the results were meagre.

5. The last years.—Certain of the cantons were untouched by the Reformation, and were as keen to retain the 'common lands' as Zwingli was to win them. A cleavage within the confederacy appeared, and deepened into uncompromising hostility. The League of the Forest Cantons, formed at Beckenried in 1524, was soon faced by a counter-alliance. Both parties made a strong bid for outside help, but, before any effective assistance had been secured by either, the first Civil War broke out. It was short and bloodless. There was no battle. The two armies which came face to face at Cappel (1529), instead of fighting, negotiated terms of peace. The terms were a triumph for Zürich, but it speedily appeared that there were more than one possible interpretation of them. The civil war had only been postponed. The feverish search for outside alliances continued. The Marburg Colloquy, in Zwingli's mind, was no unimportant part of this quest. More time was spent by Zürich and by Zwingli in fruitless foreign negotiations than in independent preparation. Amid all this talk of help from outside it ceased to manifest the old self-help. The war began by a blockade of the Forest Cantons, which only served to rouse them to more vigorous action. They took the field in force. Zürich's improvised resistance was a failure. For Zürich the battle of Cappel (1531) was a veritable Flodden. Zwingli was among the slain. In his forty-eighth year this great pacifist and patriot fell on the field of battle. The second treaty of Cappel reversed the first. But under Henry Bullinger and his associates the work of reformation continued, though the leadership of the Swiss Reformation soon passed into the hands of Geneva.

6. Appreciation.—Very diverse judgments have been passed on Zwingli's doctrine and work. Apart altogether from those who know him only from some inadequate statement of his doctrine of the Lord's Supper and who, in consequence, use the name Zwinglian almost as equivalent to rationalist, among those who are professed students of his teaching there is a sharp division of opinion. On the one hand it is said: 'His world of thought, as a whole, and also in its inner component parts, is more mediæval' [than Luther's].[1] The opposite is just as confidently maintained: 'Luther took up his station on the ground already occupied by the Latin church: his desire was only to purify; to put an end to the contradictions between the doctrines of the church and the gospel. Zwingli, on the other hand, thought it necessary to restore, as far as possible, the primitive and simplest condition of the Christian church: he aimed at a complete revolution.'[2] Now, without doubt, in the collected works of Zwingli, written at different times, out of the heart of widely different controversies, it would be easy to find material for justifying either of these conclusions, but not much progress is made by bandying about the word 'mediæval' as a term of reproach. In essentials Zwingli and Luther were nearer each other than they let themselves believe, as Martin Bucer saw. Having regard to its purpose, one must call the Marburg Colloquy a failure, but it did reveal how much at one the protagonists were. There was, certainly, a difference of emphasis. Zwingli had not the same all-transforming, world-renewing experience to drive him onwards. His theology was more Biblical than experimental. Even when he had caught the thrill of Luther's protest, it came to deepen rather than to change the direction of the impulse he had received from Erasmus, the desire to explore the sources, to get back to the simplicities of primitive Christianity, to the pure, untainted Church of the NT. It is significant that the Zürich Reformation followed hard after Zwingli's exposition of the Acts of the Apostles, interpreted as historically as the knowledge of that day would permit. It is significant also that the full programme of the *67 Articles* has this preface:

'The articles and opinions below, I, Ulrich Zwingli, confess to have preached in the worthy city of Zürich *as based upon the Scriptures* which are called inspired by God, and I offer to protect and conquer with the said articles, and where I have not now correctly understood said Scriptures I shall allow myself to be taught better, but only from said Scriptures.'[3]

Further, largely in consequence of this Biblicism, the reformation he directed was more radical. What Zwingli specially detested in the later growths which had buried this early Christianity was anything that could be called 'the worship of the creature.' Worship belonged to God alone, 'the God and Father of our Lord and Saviour Jesus Christ.' He did not undervalue art or music in themselves—far from it—but, when they were so employed as to hinder an intelligent approach to the Creator, then to him they were anathema. The most conspicuous feature of Luther's protest against mediævalism was its anti-Judaic side—his hostility to its conception of work-righteousness: in Zwingli's it was the anti-pagan—his hostility to its idolatrous corruptions.

This note was dominant at the beginning, and, despite all alterations and deepenings, it remained dominant to the end.

[1] For these political movements see an excellent brief account in *Cambridge Modern History*, ii. 326 ff.

[3] S. M. Jackson, *Selections from Zwingli*, Philadelphia, 1901, p. 111.

'Eight or nine years ago,' he wrote in 1523, 'I read a comfortable fiction written on the Lord Jesus by the learned Erasmus of Rotterdam: in which Jesus complains that men do not seek all good things from Him, whereas He is the fountain of all good. Then I thought if this be the case, why do we seek help from the creature? I began to search in Scripture, and the works of the fathers: whether I could find there any certain information with regard to prayer to Saints. In short I found nothing of it in the Bible at all; amongst the ancients I found it in some, and not in others. However, it did not much move if *they* did teach prayer to saints. For they always stood on testimony alone. And when I read the Scriptures which they quoted for this purpose, in the original, they had no such meaning as they wished thrust upon them; and the more I considered this doctrine of opinion, the less authority I found for it in Scripture, but rather more and more against it.'[1]

This and similar autobiographic reminiscences can be too strongly stressed. We must ever remember that most of them are influenced by his claim to independence of, and priority to, Luther. But in them all there appears, undesignedly, this anti-pagan interest.

Zwingli's radicalism is perhaps most apparent in his keen eye for, and his strong detestation of, what the Scottish Reformers were accustomed to call the 'dregs of papistry.'

Still further, this difference of emphasis is apparent in the doctrine of God, not so much in its content as in the place it occupies in the system. Though Zwingli doubtless owed here something both to Seneca and to Pico della Mirandola, his doctrine, like Luther's, is accurately enough described as Pauline and Augustinian. No one, however, would be likely to seek in his doctrine of God Luther's fundamental conception: it is otherwise with Zwingli.

'While Lutheran Protestantism protested against the Judaising righteousness by works, it asked the question, What is it in man that wins salvation? and gave the answer, Not works but faith, whereas the Reformed Protestantism asked, Who is it that saves, the creature or God?, and answered, God alone, salvation being referred to its ultimate source in the fore-ordaining and determining will of God.'[2]

This trend of Reformed Protestantism is not to be traced to Calvin alone; it goes back to Zwingli. Though not so evident in his earliest Reformation treatises, it began to be increasingly evident in the controversies with the Anabaptists. One of their strongest arguments against baptism as practised by the Reformers was that the infant was incapable of the faith which alone could give it meaning; to which Zwingli replied that baptism might easily precede faith, for election does: 'antecedit igitur electio fidem';[3] indeed, 'ii qui electi sunt, filii dei sunt anteaquam credant.'[4]

From all this, leaving out of account their great divergence on the doctrine of the Lord's Supper,[5] it is evident that Zwingli was no mere echo of Luther from the mountains of Switzerland, but that he evolved a type of reformation, pursuing a parallel path, which was determined largely before ever the news of Luther's heroic stand at Wittenberg gave it the momentum which carried it to victory. What Zwingli contributed to it was the Humanist training and the Humanist outlook.

Nor did he ever forget them. One of the things which made Luther doubtful if Zwingli were a fellow-worker or, indeed, a fellow-Christian was his continued regard for the heroes of classical antiquity, whom, in his very last writing, the *Fidei Expositio* (1531), addressed to Francis I., he placed along with the OT worthies and the saints and fathers of the Church in the heaven he hoped to reach.

'Denique non fuit vir bonus, non erit mens sancta, non est fidelis anima, ab ipso mundi exordio usque ad ejus consummationem, quem non sis isthic cum deo visurus.'[1]

Humanist, Biblical scholar, protestant, liberal, patriot as he was, Zwingli could never have been the main agent in carrying through an epoch-making reformation, even with the conditions to help him: he lacked the passionate earnestness and driving force of Luther; but, with the aid of Luther's work, he did accomplish a reformation to which many in our generation feel more strongly attracted than to either its great German counterpart or even its Genevan completion.

LITERATURE.—The best guide to all but the most recent Zwingli literature is to be found in G. Finsler, *Zwingli-Bibliographie*, Zürich, 1897. Later studies are fully dealt with in *Zwingliana*, do. 1897 ff.

i. *Works.*—The earliest collected ed. was that of R. Gualther, Zürich, 1545, which was superseded by the excellent ed. of M. Schuler and J. Schulthess, 8 vols., do. 1828–42 (Supplement, 1861), which in turn is now giving way to the ed. in progress in the *Corpus Reformatorum*, vol. 88 ff., ed. E. Egli, G. Finsler, and W. Köhler, Berlin, 1905 ff. An English tr. was begun under the editorship of S. M. Jackson, vol. i., New York, 1912, to whom also we are indebted for *Selections from Zwingli*, Philadelphia, 1901. An admirable summary of the contents of Zwingli's writings is that of P. Wernle, *Der evangelische Glaube nach den Hauptschriften der Reformatoren*, vol. ii. 'Zwingli,' Tübingen, 1919. A popular ed. in modern German of Zwingli's main writings is that of G. Finsler, W. Köhler, and A. Rüegg, Zürich, 1918. Mention should be made, too, of O. Farner's similar ed. of Zwingli's letters, Zürich, 1918.

ii. *Life and teaching.*—Among the older biographies and the more recent treatments the most valuable are: J. C. Mörikofer, *Ulrich Zwingli nach den urkundlichen Quellen*, 2 vols., Leipzig, 1867–69; A. Baur, *Zwinglis Theologie*, 2 vols., Halle, 1888–89; R. Stähelin, *Huldreich Zwingli; sein Leben und Wirken nach den Quellen dargestellt*, 2 vols., Basel, 1895–97; S. M. Jackson, *Huldreich Zwingli, 1484–1531*, New York, 1901; S. Simpson, *Life of Ulrich Zwingli*, London, 1903; T. M. Lindsay, *A Hist. of the Reformation*, vol. ii., Edinburgh, 1907; E. Egli, *Schweizerische Reformationsgeschichte*, ed. G. Finsler, vol. i., Zürich, 1910; A. Lang, *Zwingli und Calvin*, Bielefeld, 1913; W. Köhler, in *Unsere religiösen Erzieher*[2], Leipzig, 1917; O. Farner, *Huldreich Zwingli*, Zürich, 1917; P. Burckhardt, *Huldreich Zwingli, eine Darstellung seiner Persönlichkeit und seines Lebenswerkes*, do. 1918; W. Köhler, *Ulrich Zwingli und die Reformation in der Schweiz*, Tübingen, 1919, *Die Geisteswelt Ulrich Zwinglis*, Gotha, 1920.

iii. *Discussions on special points.*—W. Cunningham, *The Reformers and the Theology of the Reformation*[2], Edinburgh, 1866; A. Schweizer, *Zwinglis Bedeutung neben Luther*, Zürich, 1884; J. M. Usteri, *Zwingli und Erasmus*, do. 1885; E. Nagel, *Zwinglis Stellung zur Schrift*, Freiburg, 1896; C. von Kügelgen, *Zwinglis Ethik*, Leipzig, 1902; W. Hastie, *The Theology of the Reformed Church in its Fundamental Principles*, Edinburgh, 1904; J. Kreutzer, *Zwinglis Lehre von der Obrigkeit*, Stuttgart, 1909; G. von Schulthess-Rechberg, *Luther, Zwingli, und Calvin in ihren Ansichten über das Verhältnis von Staat und Kirche*, Aarau, 1909; J. I. Good, *The Reformed Reformation*, Philadelphia, 1916; E. Vischer, in *Zum Gedächtnis der Reformation*, Basel, 1917; P. Wernle, *Das Verhältnis der schweizerischen zur deutschen Reformation*, do. 1918; T. Pestalozzi, *Die Gegner Zwinglis am Grossmünsterstift in Zürich*, Zürich, 1918; O. Farner, *Zwinglis Bedeutung für die Gegenwart*, do. 1919; A. Lang, *Reformation und Gegenwart*, Detmold, 1918; and the special studies in the memorial volume, *Ulrich Zwingli, 1519–1919, Zum Gedächtnis der Züricher Reformation*, Zürich, 1919.
